

HIV MODERNIZATION

KNOW YOUR ROLE TO STOP THE STIGMA!

Medical professionals must ask patients 15 years and older - and document - if they want HIV and other STI testing in primary care and emergency medical settings.

Exceptions are limited:

- Life-threatening emergency treatment
- Patients recently offered or received testing, or
- Incapacitated patients.

Why is testing important?

- HIV affects all populations and persons.
- Keeps patients and their partners healthy.
- Reduces community transmission.
- Empowers patients to make informed healthcare decisions.
- Routine testing reduces stigma.
- Testing leads to open discussions about sexual health.
