*February 2014
Edition 1.0*

Data for the graphs and tables on the following pages are provisional and may be updated as additional information becomes available.

Purpose

The purpose of this report is to provide an overview of and statistics for the influenza season in Nevada for the local public health authorities, sentinel providers and the public.

Influenza-Like Illness Network Surveillance (ILINet)

Respiratory specimens tested for influenza by the World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NRVESS) collaborating laboratories by sub-type. There were 7,562 specimens collected nationally during week 6 that were tested for influenza; of these 1,268 tested positive or the percent positive was 22.7%.

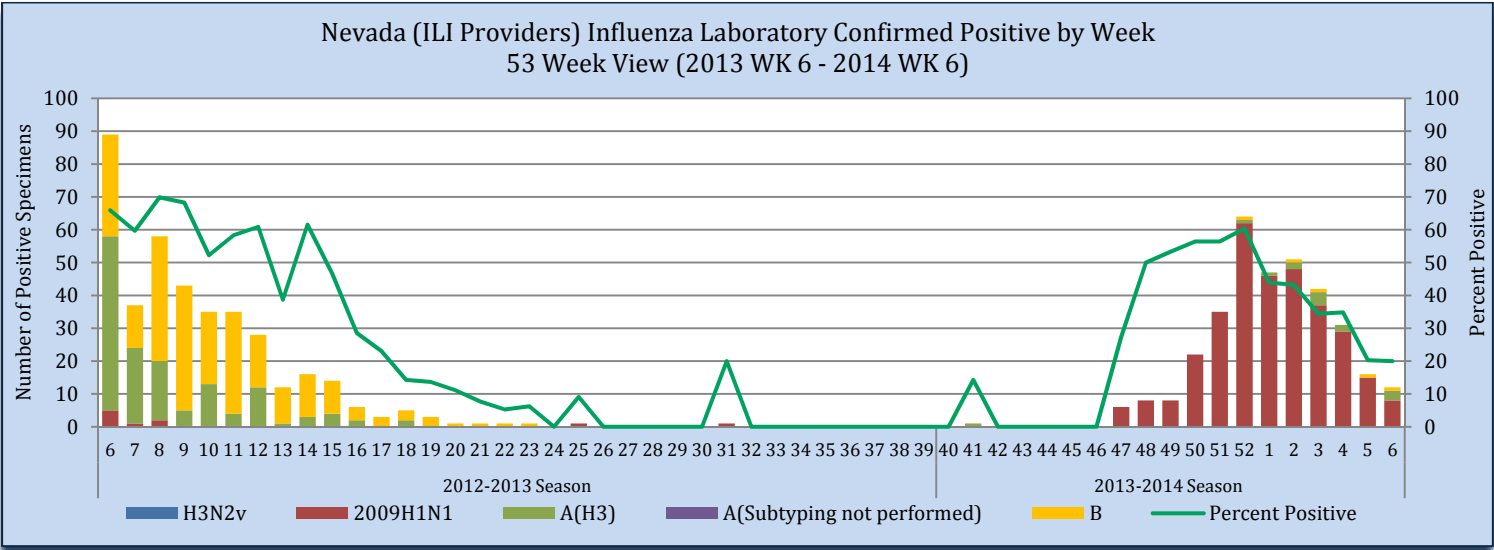

Figure 1

Source of Data: CDC: FluView Weekly Report.

Of the 60 specimens tested for influenza at both the Nevada State Public Health Laboratory and Southern Nevada Public Health Laboratory for sentinel providers, 12 were positive for influenza during week 6 or 20.0%.

Figure 2

Source of Data: CDC: ILINet.

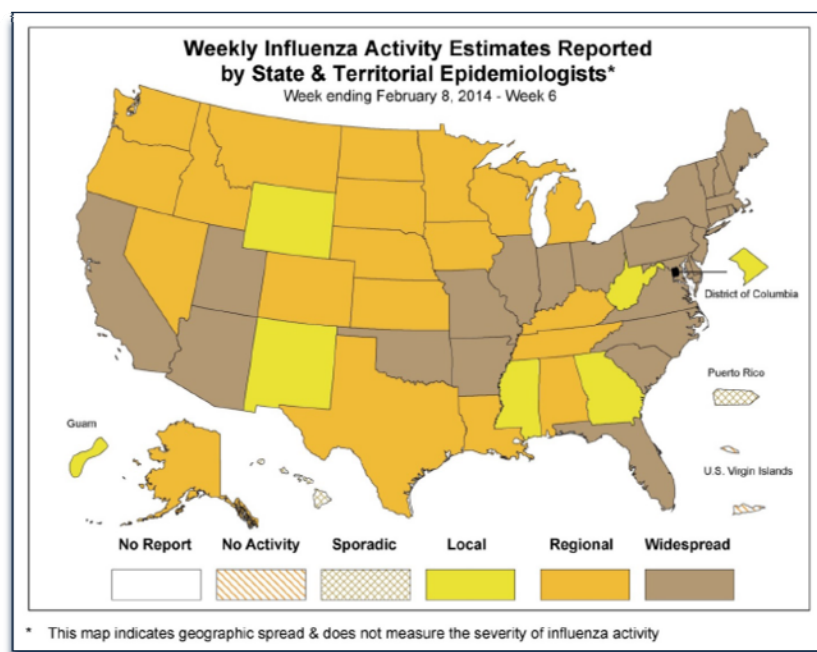

Nevada State Public Health Laboratory (NSPHL) has tested 653 specimens this season with 299 positive from sentinel providers (46.1% positive). Southern Nevada Public Health Laboratory (SNPHL) has reported 42 positive influenza specimens through the Pediatric Early Warning Sentinel Surveillance (PEWSS). Nationally, there have been 189,123 specimens sent to the WHO and NERVS laboratories with 36,619 positive or 19.4%. The national numbers in table 1 are reflected in figure 1. The state of Nevada data in table 1 is reflected in figure 2.

Table 1

ILINet Surveillance: Influenza Specimens Tested State and Nationally										
	NSPHL	SNPHL	State of Nevada (Week 6)		State of Nevada (Season)		National (Week 6)		National (Season)	
			#	%	#	%	#	%	#	%
Specimens Tested	653	240	60		893		7,562		189,123	
Positives to Influenza	301	42	12	20.0	343	38.4	1,268	16.8	36,619	19.4
Influenza A:	299	39	11	91.7	338	98.5	1,154	91.0	35,365	96.6
A(2009 H1N1)	286	38	8	72.7	324	95.9	708	61.4	22,265	63.0
A(Sub-typing not performed)	0	0	0	0.0	0	0.0	401	34.7	12,254	34.7
A(H3)	13	1	3	27.3	14	4.1	45	3.9	845	2.4
Influenza B:	2	3	1	8.3	5	1.5	114	9.0	1,254	3.4

Source of Data: CDC: FluView Report and CDC: ILINet.

For week 6, Nevada reported regional activity to the CDC, along with 19 states (Alabama, Alaska, Colorado, Idaho, Iowa, Kansas, Kentucky, Louisiana, Michigan, Minnesota, Montana, Nebraska, North Dakota, Oregon, South Dakota, Tennessee, Texas, Washington, and Wisconsin). Activity level¹ is derived from data analyzed from Influenza-like Illness (ILI) surveillance (laboratory and sentinel data), and data reported to the state through NBS/NETSS.

Figure 3

Source of Maps: CDC: FluView Report.

Influenza-like Illness (ILI) Network Surveillance has each sentinel providers report the number of patients that meet the ILI case definition² and number of patients that visit the provider weekly, which decreased from 17,512 (week 5) to 16,558 (week 6). The “percentage of visits” is the number of ILI patients divided by the total number of patient visit per week. Nevada’s ILI percentage of visits to providers decreased to 2.0% during week 6, and is below the state baseline of 2.3%. Region 9 decreased in ILI to 4.2% from 4.3%, and includes the following states/territories: Arizona, California, Guam, Hawaii, and Nevada. The nation decreased from 3.2% to 3.0% during week 6.

1: Activity level: Appendix Table 4.

2: ILI case definition: Technical Notes.

Figure 4

Source of Data: CDC: Flu View Report and CDC: ILINet.

During week 6, 2.0% of visits to sentinel providers were due to ILI. This is a 1.6% point decrease from week 6 of the 2012-2013 influenza season.

Figure 5

Source of Data: CDC: ILINet.

The number of ILI patients and rate decreased from week 5 to week 6, from 394 to 325, and 14.0 to 11.5 per 100,000 population. The rate is calculated by the number of patients presented with ILI divided by the state population multiplied by 100,000. The estimated state population for 2014 is 2,819,321.

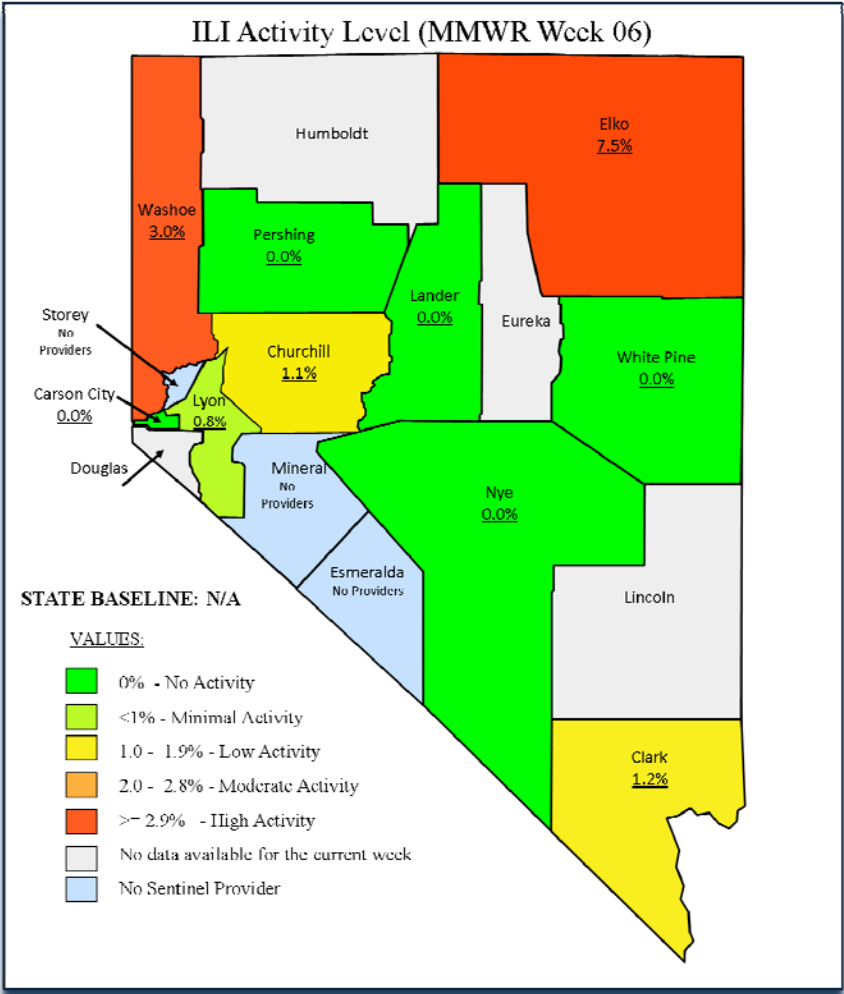

Figure 6

Source of Data: CDC: ILINet.

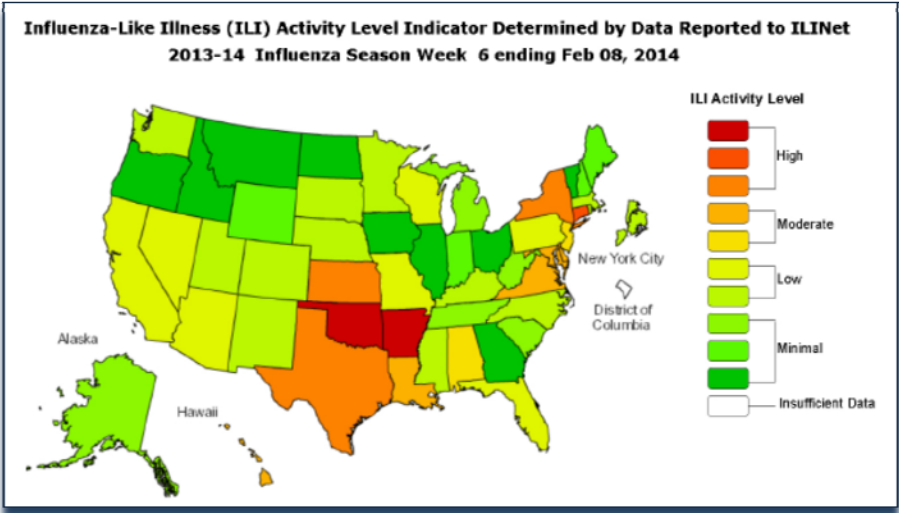

Providers for the sentinel surveillance are grouped by county, then the percent is calculated by ILI visits and total patient visits. During week 6, Elko, and Washoe counties had high activity; Douglas, Eureka, Humboldt, and Lincoln counties did not report for week 6 (Figure 7). Overall, Nevada had low activity monitored through ILINet (Figure 8).

Figure 7

Source of Data: CDC: ILINet.

Figure 8

Source of Map: CDC: FluView Report.

Influenza Positive Surveillance (NBS and NETSS)

Positive cases of influenza are reported to the state health division for surveillance purposes. Figure 10 and 11 reflect all positive influenza cases reported to the state. Types of influenza testing include commercial rapid diagnostic test (rapid), viral culture, fluorescent antibody, enzyme immunoassay, RT-PCR (PCR), and Immunohistochemistry. The two most common test types in Nevada are Rapid and PCR tests. During week 6, there were 18 H1N1 cases and 104 Influenza A cases. There were 24 positive Influenza B cases. Overall, there were 158 influenza positive tests in Nevada, whereas during the previous season for week 6, there were 405 cases.

Figure 9

Source of Data: OPHIE: NBS and SNHD: NETSS.

Table 2

Reporting Jurisdiction	Reported Influenza Cases by County Jurisdiction and Influenza Type									
	Current Week (Week 6)					Cumulative Influenza Season				
	H1N1	A	B	Unknown	Total	H1N1	A	B	Unknown	Total
Carson City Health and Human Services	0	6	2	0	8	16	14	15	15	389
Rural Health Services	4	14	2	0	20	88	26	40	40	381
Southern Nevada Health District	13	71	24	1	109	1413	100	25	25	1,688
Washoe County Health District	1	13	7	0	21	482	27	27	27	711
State of Nevada	18	104	35	1	158	2,466	167	107	107	3,169

Source: OPHIE: NBS and SNHD: NETSS.

Clark County experienced a decrease in influenza from week 5 with 177 to 109 influenza cases during week 6. Washoe County experienced a decrease in influenza from week 5, from 27 to 21 influenza cases. Carson City, Churchill, Douglas, Elko, and Nye counties all had influenza activity during week 5.

Figure 10

Source: OPHIE: NBS and SNHD: NETSS.

Hospitalizations

There have been 320 hospitalizations associated with influenza this season.

Table 3

Reporting Jurisdiction	Influenza Hospitalizations		Cumulative Influenza Season	
	Current Week (Week 6)			
	#	%	#	%
Carson City Health and Human Services	1	6.3	22	6.9
Rural Health Services	0	0.0	7	2.2
Southern Nevada Health District	15	93.8	215	67.2
Washoe County Health District	0	0.0	76	23.8
State of Nevada	16	100	320	100

Source: Reported to Office of Public Health Informatics and Epidemiology from each Jurisdiction.

Pneumonia and Influenza (P&I) Mortality Surveillance

The Pneumonia and Influenza (P&I) mortality percentage is the deaths, where Pneumonia and Influenza is listed as a cause of death, divided by the total deaths in Nevada for each week. There were 14 P&I deaths and 259 total deaths for week 6, as of February 18. The P&I mortality percentage is below the national epidemic threshold at 5.4%, (threshold at 7.3%). Nationally, the P&I mortality has surpassed the national epidemic threshold at 8.4%.

Appendix

Activity level in figure 3 is based on the following information.

Activity Level	ILI Activity*/Outbreaks		Laboratory Data
No Activity	Low	And	
Sporadic	Not Increased	And	Isolated lab-confirmed cases †
			Or
	Not Increased	And	Lab confirmed outbreak in one institution ‡
Local	Increased ILI in 1 region**, ILI activity in other regions is not increased	And	Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI
			Or
	2 or more institutional outbreaks (ILI or lab confirmed) in 1 region; ILI activity in other regions is not increased	And	Recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions
Regional	Recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the affected regions
			Or
	Institutional outbreaks (ILI or lab confirmed) in ≥2 and less than half of the regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the affected regions
Widespread	Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the state

*ILI activity can be assessed using a variety of data sources including ILINet providers, school/workplace absenteeism and other syndromic surveillance systems that monitor influenza-like illness.

† Lab confirmed case = case confirmed by rapid diagnostic test, antigen detection, culture, or PCR.

‡ Institution includes nursing home, hospital, prison, school, etc.

**Region: population under surveillance in a defined geographical subdivision of a state.

Nevada has 5 regions.

Technical Notes

- Influenza-like illness (ILI): a fever greater than or equal 100°F with cough and/or sore throat
- Percent positive: The number of positive influenza laboratory tests divided by the total number of tests performed.
- Incidence rate is per 100,000 population as estimated by the state demographer.
- Rapid influenza diagnostic tests - Rapid Test.
- Real-time reverse transcription polymerase chain reaction - rRT-PCR or PCR.

This report contains information from national and state-level data sources. Influenza surveillance data is collected by a various systems, including:

- Influenza-like Illness Network (ILINet): a sentinel surveillance system in collaboration with the Centers for the Disease Control and Prevention (CDC) where outpatient providers report ILI information weekly.
- National Electronic Telecommunication System for Surveillance (NETSS): a system whereby data is transmits to CDC. Influenza data collected through NETSS does not provide influenza sub-typing information.
- National Electronic Disease Surveillance System (NEDSS): a system for collecting data and monitoring disease trends and outbreaks.
- NEDDS Based System (NBS): an implementation of the NEDSS standards. It provides a secure, accurate, and efficient means of collecting, transmitting, and analyzing public health data.
