The report indicates the number of out-of-state Fee for Service RTC patients. Patients appear on this historical data report only if the billing and/or service provider indicated a principle diagnosis on the submitted claim form. Diagnosis information may or may not appear on claim forms for patients with long-term medical conditions (e.g., diabetes). Patient counts are based upon when the service occurred and not when the service was paid.

The DHCFP data warehouse is comprised of claims data submitted by over 15,000 Medicaid providers from within Nevada and across the country. While DHCFP staff conscientiously makes their best efforts to validate this data through continuous provider education and the use of a highly experienced audit staff, the Division heavily relies on its providers to submit accurate and complete information on our Medicaid patients.

It should therefore be understood by the users of DHCFP reports on disease morbidity and patient health that the data source for these reports is based solely on patient claims data and may not be a complete and comprehensive health record.
