

2017 Ambulatory Health Care National Patient Safety Goals

The purpose of the National Patient Safety Goals is to improve patient safety. The goals focus on problems in health care safety and how to solve them.

Identify patients correctly

- NPSG.01.01.01 Use at least two ways to identify patients. For example, use the patient's name *and* date of birth. This is done to make sure that each patient gets the correct medicine and treatment.
- NPSG.01.03.01 Make sure that the correct patient gets the correct blood when they get a blood transfusion.

Use medicines safely

- NPSG.03.04.01 Before a procedure, label medicines that are not labeled. For example, medicines in syringes, cups and basins. Do this in the area where medicines and supplies are set up.
- NPSG.03.05.01 Take extra care with patients who take medicines to thin their blood.
- NPSG.03.06.01 Record and pass along correct information about a patient's medicines. Find out what medicines the patient is taking. Compare those medicines to new medicines given to the patient. Make sure the patient knows which medicines to take when they are at home. Tell the patient it is important to bring their up-to-date list of medicines every time they visit a doctor.

Prevent infection

- NPSG.07.01.01 Use the hand cleaning guidelines from the Centers for Disease Control and Prevention or the World Health Organization. Set goals for improving hand cleaning. Use the goals to improve hand cleaning.
- NPSG.07.05.01 Use proven guidelines to prevent infection after surgery.

Prevent mistakes in surgery

- UP.01.01.01 Make sure that the correct surgery is done on the correct patient and at the correct place on the patient's body.
- UP.01.02.01 Mark the correct place on the patient's body where the surgery is to be done.
- UP.01.03.01 Pause before the surgery to make sure that a mistake is not being made.

Policy: Quality Management and Improvement

Subject: SENTINEL EVENT REPORTING

Effective Date: 2-06

Revised: 2-07, 2-08

**Reviewed: 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15
3-16, 3-17**

Page 1 of 3

PURPOSE:

To comply with mandatory reporting requirements in the State of Nevada for sentinel event healthcare occurrences. To define a sentinel event and incorporate root cause analysis documentation into the risk management program of the surgical center. This policy is also an adjunct to the adverse event policy.

DEFINITIONS:

- A. A sentinel event is an unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof. Serious injury specifically includes a loss of limb or function. The phrase, "or the risk thereof" includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. The term includes loss of limb or function. Such events are called "sentinel" because they signal the need for immediate investigation and response.
- B. Root cause analysis is a process for identifying the basic or causal factors that underlies variation in performance, including the occurrence or possible occurrence of a sentinel event. A root cause analysis focuses primarily on systems and processes, not individual performance. It progresses from special causes in clinical processes to common causes in organizational processes and identifies potential improvements in processes or systems that would tend to decrease the likelihood of such events in the future, or determines, after analysis that no such improvement opportunities exist.
- C. Sentinel events include but may not be limited to the following (even if the outcome was not death or major permanent loss of function):
- Suicide of a patient in a setting where the patient receives around-the-clock care (e.g., hospital, residential treatment center, crisis stabilization center)
 - Infant abduction or discharge to the wrong family
 - Rape
 - Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities.
 - Surgery on the wrong patient or wrong body part
 - Loss of limb or function

Page 2 of 3

3-16, 3-17

PROCEDURAL DOCUMENTATION:

- A. Any event will be handled as described in the Center's incident reporting policy.
- B. If an event is verified as a Sentinel Event (as noted above), a root cause analysis will be initiated by the Administrator and Clinical Managers within 72 hours of the incident in coordination with the attending physician, the unit staff and the administrator, and any other providers identified by the facility who should participate. The root cause analysis will be completed within thirty days. All other incidents will follow the center's policies on investigation and documenting an occurrence or incident that requires analysis and peer review.
- C. Sentinel Events as identified above will be reported to the Administrator, Director/Clinical Managers, Medical Director, and legal counsel as per policy as soon as the facility discovers that the event occurred. A root cause analysis will be completed within 30 days and will be available for peer review.
- D. Qualifying sentinel events will be reported through Peer Review of the Medical Staff and monitored through that committee's discussions and recommendations as reflected in their meeting minutes.
- E. Intensive assessment, action plan and evaluation of the action plan will be completed by the Incident Team on the Root Cause Analysis form. A performance improvement plan should be initiated to improve individual and organizational performance where the need is identified.
- F. Root cause analysis action plan and documentation of the investigation will be maintained by the Risk Manager. All related documents are considered documents protected under peer review and are not to be released without an accompanying court order.
- G. Aggregate statistics will be maintained by the Administrator and reported to the Board of Directors.
- H. Per (NRS) 439.800-890 and (NAC) 439.900-920, mandatory reporting of sentinel events are required by ambulatory surgery centers in the state of Nevada. See attached reporting guide, forms to be completed, and contact information.

ENVIRONMENT OF CARE MANAGEMENT PROGRAMS AND EMERGENCY PLAN

POLICY:

The SCOR QI Committee and Medical Executive Committee will support the establishment and maintenance of an effective and comprehensive Environment of Care Management Program reflected in the Regent Surgical Health – Risk Management Manual – May 2008. The QI Committee and MEC will do so by providing:

- Communication regarding general policies and procedures.
- Review reports of key incidents, accidents and trends that may compromise the safety of patients, visitors or staff; actions taken; and the effectiveness of actions taken.
- The Environment of Care Management Programs incorporates all aspects of operations at SCOR. They are based on the monitoring and evaluation of seven (7) main Environment of Care Plans and respective policies and procedures as outlined in the Risk Management Manual. These plans are reviewed at least annually or as various issues arise on an ongoing basis. The objectives, scope, performance, and effectiveness of the Center's Emergency management program are evaluated annually and changes are made to improve the plan are based on committee recommendations.

- I. Safety Management Plan
- II. Security Management
- III. Hazardous Materials and Waste Management
- IV. Emergency Preparedness Program
- V. Fire Prevention Management Plan
- VI. Medical Equipment Management
- VII. Utilities Management

- **CODE RED – FIRE**
- **CODE BLUE – CARDIAC ARREST**
- **CODE YELLOW – INTERNAL / EXTERNAL DISASTER, BIOTERRORISM**
- **CODE BLACK – BOMB THREAT**
- **CODE GREY – SEVERE / INCLEMENT WEATHER** (Thunderstorm, Snow & Ice Storms, Tornado Warning)
- **CODE WHITE – EMERGENCY ASSISTANCE** (Disorderly or Violent Behavior)
- **CODE PURPLE – PLANT EMERGENCY / UTILITY INTERRUPTION** (EOC – Utilities Mgmt.)
- **CODE MH – Malignant Hyperthermia Crisis Code**
- **CODE PINK – CHILD ABDUCTION & MISSING CHILD** (EOC – Security Mgmt.)
- **CODE SILVER – ACTIVE SHOOTER**

Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15,
3-16, 3-17

PROCEDURE:

- A. The SCOR's Administrator and Medical Director in collaboration with the QI Committee / MEC are responsible to oversee and ensure the objectives of all seven (7) programs are being met.
- B. The QI Committee will analyze identified environment of care management issues and develop recommendations for resolving them. The Committee's will meet on a quarterly basis and forward any recommendations on to the Governing Board as appropriate.
- C. The plan provides processes for:
 - a. Identifying specific procedures in response to a variety of disasters based on a hazard vulnerability analysis performed by the administrator/safety officer/DON;
 - b. Initiating the plan (including a description of how, when, and by whom the plan is activated);
 - c. Defining and, when appropriate, integrating with the surgery center's role in community wide emergency response agencies (including the identification of who is in charge of what activities and when they are in charge) to promote interoperability between the center and the community;
 - d. Coordination and sharing of resources between facilities through HAVBED/IHCC.
 - e. Notifying external authorities of emergencies;
 - f. Notifying personnel when emergency response measures are initiated;
 - g. Identifying personnel during emergencies;
 - h. Assigning available personnel in emergencies to cover all necessary staff positions;
 - i. Managing the following during emergencies and disasters:
 - Patients' activities including scheduling, modifying, or discontinuing services, control of patient information, and patient transportation;
 - Staff activities (for example, housing, transportation, and incident stress debriefing);
 - Staff-family support activities;
 - Logistics of critical supplies (for example, pharmaceuticals, medical supplies, food supplies, linen supplies, water supplies);
 - Security (for example, access, crowd control, traffic control); or
 - Interaction with the news media;
 - j. Evacuating the entire facility when the environment cannot support adequate patient care and treatment;
 - k. See attached emergency phone list and SCOR staff phone list for contact information
 - l. Establish an alternative care site that has the capabilities to meet the clinical needs of patient population served within the center when the environment cannot support adequate patient care including processes that address, when appropriate:

SURGERY CENTER OF RENO

Section 8, D Environment of Care Management Plan

Policy: Facilities and Environment

Subject: Environment of Care Emergency Management Plan, Codes

Effective Date: 2-06

Revised: 2-08, 5-17, 8-17, 10-17

Page 3 of 5

Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

-
- Management of patient necessities such as medications and medical records to and from the alternative care site
 - Patient tracking to and from the alternative care site
 - Inter-facility communication between the hospital and the alternative care site
 - Transportation of patients, staff and equipment to the alternative care site.

D. As appropriate, the plan may be activated by the Administrator, the Safety Officer or the person of highest authority. This individual will establish a centralized command post (generally pre op), which will be announced to all staff members. The facility Administrator will serve as the coordinator of all disaster-related activities. If the facility administrator is not available, the Director of Nursing or Safety Officer shall assume the role of the coordinator, followed by the person of highest authority. The command post will serve as a clearinghouse for information and assignments regarding the disaster. Supply, space, security, and patient management will be directed by the command post coordinator, as appropriate, based on the size, type, and complexity of the disaster. The disaster coordinator will assign an individual to handle all interactions with the news media regarding the disaster as well as the release of any information to the families of patients and/or victims.

E. Through HAVBED, the disaster coordinator will communicate with the local Emergency Management Department officials to determine, based on the size and scope of services, if SCOR will participate in local Emergency Preparedness Drills and disasters. The Administrator and DON are registered with the Washoe County IHCC for emergency notifications via email, home and cell phones, on situations affecting the community. Notifying the local 911 services typically does this. Attached is the Washoe County Medical Unit leader contact list for direct notification to community leaders. Alternate methods of communication have been identified in the event there is a loss of telephone service. These include, but are not limited to, the use of digital pagers, cellular telephones, battery-operated radios, etc. Provided there is no danger to employees by leaving the building, Business Office personnel will be assigned, as appropriate, to travel by personal car to locate public telephones or to notify appropriate authorities such as Police, Fire and Emergency Medical Services of needed assistance.

F. At the discretion of the facility administrator, or designee, off-duty personnel will be notified to report to the facility as needed (see SCOR employee phone list). For security purposes, i.e., access, crowd control, traffic control, etc., personnel will be identified by the use of their name badge. All personnel will report to the command post for specific assignments.

G. In the event of an actual disaster, the facility Administrator or designee will make the determination as to whether services will be continued, modified, or discontinued as appropriate. When it is determined that the environment cannot support adequate patient care and treatment, the decision will be made to evacuate the entire facility. The Administrator and/or safety officer

SURGERY CENTER OF RENO

Section 8, D Environment of Care Management Plan

Page 4 of 5

**Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15,
3-16, 3-17**

will make this decision. The emergency management plan addresses specific procedures to be followed in the event an evacuation of the facility is deemed appropriate, as well as alternate roles and responsibilities of key personnel. See individual policies on each disaster scenario under facilities and environment. Communication of Center closure or surgery cancellations will be performed by the management team. In the event of an emergency during operational hours, the receptionist will keep a detailed log of each patient and their families disposition, by referencing the surgical schedule for that day and report to the Administrator or Alternate of any persons not accounted. Referencing the staffing schedule, the nurse manager will validate the location and safety of all staff members and track their location in the event of an evacuation.

H. SCOR provides orientation and annual training for personnel in emergency preparedness. Drills, roles, communication, evacuation training and supplies are reviewed in the annual training and during mock disaster drills. Participation in a community based disaster drill will be conducted annually in coordination with the IHCC Inter-Hospital Coordinating Council. The Center will, in addition to the community based drill, conduct a full scale drill that is facility based. The drills will be documented and analyzed for the facilities response and revise the emergency plan as needed.

I. Medical records will be maintained in the current manner in paper. All medical records will preserve patient information, protect confidentiality and be kept in a secure manner. Copies of the medical record will be sent with the patient in the event of an emergent transfer.

J. The surgery center has initiated a transfer agreement with Saint Mary's Hospital, Northern Nevada Medical Center and Renown Medical Center to establish an alternative care site in the event that the environment cannot support adequate patient care and treatment. The safe transportation of patients, staff and equipment, as well as any patient necessities will be coordinated with local authorities and Emergency Medical Service providers. Staff responsibilities will be assigned according to the staff members competency and department. Inter-facility communication between the facility and the alternative care site will be managed with the assistance of local authorities in the event normal communications are interrupted. The Surgery Center is not designed or licensed to shelter. In the event of an emergency, such as inclement weather, the policy and procedure is to cancel surgeries, cease all operations, and close (meaning there will be no patients or staff in the facility) upon first notification of any event that would normally call for sheltering. All patients would be considered discharged or evacuated per arrangements detailed in our transportation and transfer agreements. It is not the primary goal of the ASC to Shelter in place. Transfer of patients and staff will be the initial emergency plan. In the event that the transfer of staff and patients is deemed not safe, the Administrator will contact the community and county emergency management officials to coordinate the length of time and needs of staff and patients within the ASC. The Center is supplied with emergency food and water in the event of a shelter in place scenario.

3-16, 4-16, 3-17

IV. CARDIOPULMONARY ARREST – CODE BLUE

POLICY:

- To perform resuscitative measures to re-establish the cardiopulmonary functions on a patient with a cardiac arrest or respiratory arrest.

PROCEDURE:

- A. The anesthesiologist will be primarily responsible for conducting Code Blue. If an anesthesiologist is not available, the physician performing the surgery or procedure will be responsible, as well as ACLS nurses responding to and readily available within the facility. In the event that there is not a physician present, ACLS guidelines will be followed and 911 dispatched.
- B. The receptionist/nursing personnel will:
 1. Call **911** at the direction of nursing personnel.
 2. Copy patient chart in preparation for transfer to hospital, by other available personnel.
- C. The nursing personnel will:
 1. Verify cardio-pulmonary arrest, note time and alert fellow staff. Call “Code Blue” with location using the overhead paging system. Begin emergency resuscitation procedures (CPR).
 2. Notify patient’s physician and/or on-call physician.
 3. Emergency department or appropriate receiving department of receiving hospital will be notified of impending arrival and physician to physician report provided.
 4. Administer medications as ordered by physician or per ACLS guidelines. SCOR will keep first line emergency ACLS drugs stocked on cart.
 5. Record events on appropriate record sheet.
 6. Oversee activity of code.
 7. Assign personnel to care for family and other patients.
 8. Draw any blood work requested.
 9. Manage patient care until 911 arrives or resolution of code as determined by physician responsible for the code.
 10. Give report and copies of patient chart to ambulance personnel. Complete the consent to transfer form and attach any Advance Directives if available.
 11. Check equipment and replace stock used after code (see crash cart contents)
- D. Surgical Technicians will assist as directed and assigned by nursing personnel (i.e., runners for supplies).

-
- E. In most instances it is a PACU nurse who is responsible to bring the crash cart in the event of Code Blue being called. The crash cart is to be taken to the site where the code is called. Additional nursing staff will remain with other patient's.
 - F. Signs shall be posted at all patients entrances, indicating the *Surgery Center of Reno* is not equipped to handle, and therefore does not provide emergency assistance. If persons from the community present themselves to SCOR requiring emergency services, staff will administer appropriate temporary emergency treatment and BLS to stabilize the patient and will IMMEDIATELY call "911" for the appropriate emergency response team. The Nurse/staff member will complete any required forms and a Facility Occurrence Report. All documentation will be forwarded to the Administrator.

IV.B.2 BOMB THREAT –Code Black

POLICY:

- A bomb threat against SCOR may be received at any time by phone, mail or message. Any employee receiving a telephone bomb threat will make every effort to follow the procedure outlined below.

PROCEDURE:

Any employee receiving a bomb threat call will follow procedure A and B as outlined below:

A. Employee receiving the call will:

1. Make every effort to obtain detailed information from the caller using the *SCOR's Bomb Threat Checklist* as a guide.
2. Notify the Administrator immediately if he/she is in SCOR; otherwise notify the next person in the chain of command.
3. Dial *911* and notify the local authorities. Answer all questions and stay on the line until they tell you to hang up.
4. Once you are off the phone with the authorities, immediately relay any instructions to the Administrator or person in charge.
5. Call Welltower to notify the other building occupants at 916-682-4492 or after hours service at 866-568-5855.

B. Administrator or Acting Person in Charge will:

1. While the employee is on the phone with local authorities, notify the Medical Director of the bomb threat.
2. Make plans to evacuate or when advised by the police and/or fire department.
3. Announce over the intercom three (3) times; "*CODE BLACK*".
4. Notify Physicians in the surgery suite of situation. The surgeon and anesthesiologist will determine timeliness of evacuation for any patient under anesthesia.

C. All Personnel:

1. Those employees involved with patient care will remain with the patient. All others will perform a spot check in their area for unidentified packages and report to the department manager for further instructions.
2. Follow evacuation plan. All visitors and ambulatory patients will be evacuated to the safe zone.

D. Following the evacuation:

1. Administrator and Medical Director will:
 - a) Make a coordinated decision whether to search the grounds.
 - b) Organize a search of the Surgical Center if appropriate.

IV. B.3. EARTHQUAKE, FLOOD, HEAT WAVE, THUNDERSTORMS – Code Grey

POLICY:

- Natural disasters can be a serious threat to the safety of SCOR facility and to all persons present, during its occurrence. The SCOR'S staff will be prepared to handle the situation and safely care for patients and for each other in accordance with the following procedures.

PROCEDURE:

The Administrator, Director/Clinical Manager, and the Safety Officer and their designated help will coordinate the activities during internal disasters in order to maintain and promote an organized, safe, and calm situation. HAVBED will be updated in the event of a community wide disaster with available resources. In the event of an internal disaster, HAVBED can be accessed to notify the community and State of Nevada via web address:
<https://www4.emssystem.com/EMSystem>.

I. Earthquake: Because there is usually no warning and earthquakes can occur suddenly, staff must protect themselves and patients.

A. During the earthquake:

1. Stay where you are -- don't run indoors or outdoors.

a) If you are indoors:

- (1) Stay near the center of the building, in hallways, or in a doorway. Choose a location which will allow you air to breathe in the event the building collapses around you.
- (2) If you are near the outer perimeter of building, get away from windows and under desk, table, or heavy, sturdy furniture. Be prepared to hold onto these sturdy items and move with it during the earthquake.
- (3) Stay away from windows, shelving, or areas where objects might fall from the ceiling or walls.
- (4) Stay calm.
- (5) Since SCOR is on the first floor, the staff can expect the fire alarms and sprinklers may go off during a quake.

b) If you are outdoors:

- (1) Stay away from buildings, power lines, towers, poles, trees, etc.
- (2) Lie flat on the ground until shaking stops.
- (3) Remain in a clear area and do not enter buildings until they are inspected and declared safe to enter.
- (4) Don't use open flames until you are advised that is safe to do so.

SURGERY CENTER OF RENO

Section 8, D-IV B.3. Environment of Care Management Plan

Policy: Emergency Preparedness Plan

Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15,
3-16, 3-17

(5) Stay calm.

2. Staff should protect patients:

- a) Keep patients calm and prevent hysteria.
- b) Instruct ambulatory patients to move as little as possible to a nearby safe place - stand in hallways near center of building or in a doorway and away from windows.
- c) If patients unable to get out of gurneys, pull privacy curtains around beds and either pull covers completely over themselves (including face and head) to protect from flying glass and objects. Both staff and patients should protect their eyes by pressing their faces against their arm.
- c) For patients in the O.R. staff will cover any open incisions with a sterile towel or sheet until quake has ceased.
- d) At that time the O.R. team will evaluate status of facility to determine safety in continuing procedure. All attempts will be made to close as soon as possible.
- e) The O.R. staff will remain in the O.R. suite with their team until evaluation and determination has been given by one of those 3 people in charge (the Safety Officer, Clinical Manager, or Administrator) will report to each O.R. room to give instructions on how to proceed.
- f) In the event the facility/situation is deemed unstable the staff and surgeon will close the patient and begin waking patient.

B. After an earthquake:

1. Immediately check for injuries. Staff are to check themselves for injuries and check patients for injuries.
2. Give first aid for serious injuries. If necessary, transfer staff or patients to the hospital for life threatening emergencies. Look for and extinguish small fires. Eliminate fire hazards.
3. Listen for alerts and/or instructions via cellular phones, if available.
4. Expect after shocks. Every time a shock is felt, follow procedures for an active earthquake.

C. Take aftershock precautions for at least seventy-two (72) hours:

1. Keep all privacy curtains closed around all beds (unoccupied as well as occupied).
2. Remove all loose objects from shelving, walls, sills, etc. in all patient areas of the building.
3. Restrict patient and visitor movements to areas where precautions are being enforced.

D. Inspect facilities and prevent further damage:

1. Check utility connections for damage or leaks. Repair essential utilities if possible. Secure and tag all non-essential utilities.
2. Take steps to restore essential services, if necessary.

SURGERY CENTER OF RENO

Section 8, D-IV B.3. Environment of Care Management Plan

Policy: Emergency Preparedness Plan

Subject: Earthquake, flood, heat wave, thunderstorms, Code Grey

Effective Date: 2-06

Revised: 6-08, 8-11

Page 3 of 4

Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

3. Establish communication channels with authorities and advise of:
 - a) Numbers and types of casualties, internally.
 - b) Extent of damage to SCOR's facilities.
 - c) Determine possible options for the most efficient use of available facilities and services in the open.
4. Inspect SCOR to determine if evacuation of patients and staff is necessary.
5. Minimize required traveling and transport needs.

E. Reduce post-quake environmental hazards:

1. Secure areas in or around building which pose a danger to pedestrians because of falling objects or other damage.

II. Floods:

A. When a Flood Watch is issued and it affects the SCOR:

1. Be alert to signs of flash flooding
2. Listen to local radio and TV stations for information and advice.

B. When a Flood Warning is issued:

1. Be prepared to evacuate staff and patients if evacuation for the area is issued by the State Emergency System. Depending on the progress of the surgery or procedure, the physician will abort or complete the on-going surgery or procedure. All patients in PACU will be recovered until the discharge criteria has been met and the patient can safely be discharged. All remaining surgeries or procedures will be cancelled.

III. Heat Wave:

A. If the State Emergency System issues a heat wave advisory, the occupants of the SCOR will be warned of the Advisory and are instructed on safety measures when leaving the SCOR. Water and non caffeinated fluids are offered to occupants as they leave.

B. Window coverings in the SCOR will be drawn to help decrease the penetration of the heat into the facility.

IV. Thunderstorms:

A. During a thunderstorm, the occupants are encouraged to remain in the SCOR until it is safe to leave SCOR. Move occupants away from windows.

B. Unused and unnecessary equipment will be unplugged. Avoid using the telephone, including cell phones, unless absolutely necessary. Avoid using electrical appliances.

D-IV.B.4 MALIGNANT HYPERTHERMIA – Code MH

POLICY:

The following techniques are used to prevent, define, reverse, and manage fulminant hypermetabolism of skeletal muscles, Malignant Hyperthermia (MH). All clinical personnel will be knowledgeable of the procedure for the treatment of malignant hyperthermia so immediate, appropriate action may be initiated in the event of an episode. A Malignant Hyperthermia in-service training with a mock malignant hyperthermia drill is performed yearly at minimum. The decision to allow surgery on known malignant hyperthermia susceptible patients will be on a case-by-case basis per the direction of the Medical Director, attending Anesthesiologist, and Surgeon and will proceed only without the utilization of agents known to trigger MH.

The SCOR's clinical staff will be aware of the causative drug agents that trigger MH and are not safe for patients susceptible to Malignant Hyperthermia:

1. Inhaled general anesthetics: Desflurane, enflurane, halothane, isoflurane, methoxyflurane, sevoflurane, trichloroethylene, Xenon (rarely used).
2. Depolarizing muscle relaxants trigger MH (i.e. succinylcholine).

PROCEDURES:

A. Treating the known or suspected MH-SUSCEPTIBLE patient.

1. Anesthesia machine: Ensure that anesthetic vaporizers are disabled by removing or taping in the "OFF" position.
2. Change CO₂ absorbent (soda lime).
3. Flow 15L/m O₂ or air through new circuit via the ventilator for at least 30 minutes.
4. A new disposable breathing bag will be attached to the Y-piece of the circle system and the ventilator set to inflate the bag periodically.
5. A new disposable breathing circuit will be used.
6. The expired gas analyzer will indicate absence of volatile agents in the anesthesia circuit.
7. The MH cart will be immediately available.

B. Patient with MH Crisis

1. Malignant hyperthermia is life threatening and time is of the essence. Upon first indication, with the orders of the physician in charge of this crisis, call MH HOTLINE 1-800-644-9737 and 911.

2. The SCOR keeps 36 vials of Dantrolene on hand for the purposes of treating malignant hyperthermia.

The patient will be transferred once the malignant hyperthermia treatment has been initiated and the patient has been stabilized.

C. Responsibility

1. Anesthesiologist: Team Leader: direct diagnosis, treatment, and transfer
2. Surgeon: manage wound closure as soon as possible
3. Scrub: assist surgeon until wound is closed, then assist team
4. Circulator:
 - a. Call out for help, over head page "Code MH in OR # __" (# of OR crisis is taking place). If a MH drill is taking place state "Mock Code MH in OR # __" Repeat page three times.
 - b. When PACU nurse arrives, OR personnel will change anesthesia circuit and sodasorb, and place temperature monitor.
 - c. Start mixing Dantrolene: all available nurses will report to the OR to assist with mixing Dantrolene.
 - d. Document events on MH documentation record until a second licensed nurse arrives, then reassign documentation to him/her.

SURGERY CENTER OF RENO

Section 8, D-IV. B.4

Policy: Facilities and Environment

Subject: Emergency Preparedness –Malignant Hyperthermia

Effective Date: 2-06

Revised: 2-08

Page 2 of 3

Reviewed: 2-07, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

- e. Circulator or available nurse to call MH Hotline for additional management advice as instructed by the anesthesiologist.
5. PACU Nurse:
 - a. Retrieve Crash Cart and MH cart (if not already present)
 - b. Designate/delegate duties according to color coded assignment cards:
White cards= non clinical staff and Pink cards= licensed clinical staff.
 - c. Assist in mixing Dantrolene.
 - d. Start cooling measures (ice to groin and axilla, cold IVs, cold saline irrigation-provide cold saline to anesthesiologist for nasal gastric irrigation). **DO NOT OVERCOOL** (stop active cooling measures when patient reaches a core temp of 38°C or 100.4°F.)
6. OR personnel or designee
 - a. Call Administrator and Director/Clinical Managers for additional help in OR.
 - b. OR cases in progress will proceed if an MH crisis is in progress, but no further cases will be started until after the MH crisis has stabilized.
 - c. Assist in making ice packs; bring bags of ice from lounge freezer; check with circulator and, if necessary, obtain more bags of ice as instructed.
 - d. Call 911 as instructed by the anesthesiologist when transfer arrangements have been completed.
7. The licensed nurse will follow transfer policy and copy chart appropriately.
8. An Occurrence Report is to be filled out in the event of an MH episode.
9. A meeting will be scheduled by Nursing Leadership including those present during MH episode to critique and evaluate the response.

D. Equipment

1. Malignant hyperthermia cart; see list for inventory, retrieve cold Saline solutions from PACU MH refrigerator and ice.

E. Signs and Symptoms

1. Unanticipated doubling or tripling of end-tidal carbon dioxide.
2. Skeletal muscle rigidity (even in presence of neuromuscular blockage).
*NOTE: Masseter muscle spasm after use of Succinylcholine may be associated with malignant hyperthermia.
3. Tachypnea, tachycardia, unstable blood pressure, cyanosis
4. Hypoxemia
5. Myoglobinuria (cola-colored urine)
6. Increased temperature, fever (may be a late sign)

F. Treatment

1. As outlined in Emergency Treatment for Malignant Hyperthermia (See below)
2. Documentation: On-going documentation will be completed by an RN

General Outline of Emergency Treatment for Malignant Hyperthermia

PROCEDURE: Acute Phase

1. Notify the Surgeon
 - Discontinue all volatile agents and Succinylcholine.
 - Hyperventilate with 100% oxygen. Increase O₂ to 10L/minute.
 - Halt the procedure as soon as possible; if emergent, use non-triggers.
2. Administer Dantrolene Sodium 2.5mg/kg rapidly IV through large bore IV, if possible

SURGERY CENTER OF RENO

-
- Repeat until there is control of the signs of MH.
 - Sometimes more than 10mg/kg (up to 30 mg/kg) is necessary.
 - Dissolve the 20 mg in each vial with at least 60 ml sterile preservative free water for injection. Prewarming (not to exceed 38 °C) the sterile water will speed solubilization of Dantrolene. The crystals also contain NaOH for a pH of 9; each 20 mg bottle has 3 Gm Mannitol for isotonicity.
 - 3. Administer Sodium Bicarbonate for metabolic acidosis (1-2 mEq/kg IV if blood gas values are not available).
 - 4. Cool the patient with core temperature greater than 39 ° C (102.2°F). Lavage open body cavities, stomach, or bladder. Apply ice to surface. Infuse cold saline intravenously. Stop cooling if temperature is less than 38 ° and falling to prevent drift less than 36 °C.
 - 5. Dysrhythmias usually respond to the treatment of acidosis and hyperkalemia.
 - Use standard drug therapy except calcium channel blockers, which may cause hyperkalemia or cardiac arrest in the presence of dantrolene.
 - 6. Hyperkalemia-Treat with hyperventilation, bicarbonate, glucose/insulin, calcium Bicarbonate 1-2 mEq/kg IV.
 - For pediatric, 0.1 units insulin/kg and 1ml/kg 50% glucose or for adult, 10 units Regular Insulin IV and 50 ml 50% glucose.
 - Calcium chloride 10mg/kg or calcium gluconate 10-50 mg/kg for life threatening hyperkalemia.
 - Check/monitor glucose levels and collect blood for labwork as directed by physician running code.
 - 7. Follow core temperature, urine output and color.
 - Place Foley catheter and monitor urine output (at least 2-3cc/kg/hr).

Section Appendix Medication Management

Policy: Medication Management

Subject: Adverse Drug Reaction

Effective Date: 2-06

Review / Revision: 2-07, 2-08, 4-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 1 of 1

POLICY:

All suspected adverse reactions to medications will be reported to the physician responsible for the patient and Clinical Managers. The Consulting Pharmacist and the QI Committee will also be notified of the occurrence.

Definition:

Adverse drug reaction (abbreviated ADR) is a term to describe the unwanted, negative consequences associated with the use of medication(s). ADR is a subset of an adverse incident.

PROCEDURE:

- A. The licensed nurse will verify with the patient any allergies in the PreOp, OR, and PACU area and will document no known allergies (NKA). In the PACU area, the licensed nurse may need to reference the patient's chart for status of allergies.
- B. The nurse will notify the responsible or attending physician immediately of any suspected adverse drug reaction(s), and document the event in the patient's medical record, including but not limited to the signs and symptoms of the reaction. The responsible or attending physician(s) will treat the patient accordingly, to control and/or manage the signs and symptoms of the ADR.
- C. The nurse will notify the Clinical Manager and submit a completed incident report and an Adverse Drug Reaction Report. The Clinical Manager will complete the FDA Med Form and forward it to the appropriate agency and complete any other process as required by other external regulatory agencies. See Adverse Drug Reaction Report following this policy.
- D. The Clinical Manager will conduct a thorough investigation and analysis of the adverse drug reaction by auditing the chart, interviewing staff members caring for the patient in regards to medications, and consulting with the attending physician and Consulting pharmacist.
- E. The Clinical Manager will submit the incident report and the results of the investigation and analysis with potential improvements in processes or systems that would tend to decrease the likelihood of such incidents in the future, or determine that no such improvement opportunities exist to the QI Committee and to the GB.

SURGERY CENTER OF RENO

Section: Appendix OSHA

Policy: Bloodborne Pathogens Standard, 29 CFR 1910.1030 (g)(2),

Subject: Bloodborne Pathogens Exposure Plan, Attachment A: Methods of Compliance

Effective Date: 2-06

Review / Revision: 2-07, 2-08, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 1 of 8

Attachment A Methods of Compliance

A. Universal Blood and Body Fluid Precautions:

1. Blood and body fluid precautions will be used by all employees who come in contact with human blood, body fluids or OPIM. OSHA's definition of body fluid is limited to blood, semen, vaginal secretions, breast milk, cerebrospinal, amniotic, pleural, pericardial, synovial, or other fluids that contain visible blood. Recognizing that blood is not always visible in body fluids, or until and exposure has occurred, universal precautions must be used with all blood and body fluids, regardless of the perceived status of the source individual. Health care workers in SCOR will consider all human blood and body fluids as potentially infectious and must use appropriate protective measures to prevent possible exposures.

OSHA mandates that universal blood and body fluid precautions be implemented as part of an exposure control plan (29CFR1910.1030). The Nevada Administrative Code (NAC441A.025) mandates compliance with universal precautions in the healthcare setting as of 1/24/92. The Infection Control Committee, Safety Committee, and the Governing Board have approved the implementation of universal precautions.

B. Engineering and Work Practice Controls:

When possible, engineering and work practice controls will be used to eliminate or decrease employee exposures to Bloodborne pathogens. Where occupational exposure remains after institution of these controls, personal protective equipment will also be used. Examples of these engineering controls at the SCOR are use of Sharps containers, self-sheathing needles, and safer medical devices such as sharps with engineered sharps injury protections. These devices will be used as a first line of defense against bloodborne pathogens exposure.

The SCOR will participate in the evaluation of safety engineered sharp/medical devices. The Director/Clinical Manager and Administrator will coordinate the evaluation, consideration, and implementation of these safety engineered devices. These devices will be updated as necessary to reflect changes in technology that eliminate or reduce exposure to bloodborne pathogens.

Documentation of consideration and implementation of appropriate and effective safer medical devices will be maintained by SCOR.

Interactive training will be provide whenever new engineering and work practice controls are introduced into the work area.

Employees are responsible for direct patient care will participate in the evaluation and selection of safer devices.

SURGERY CENTER OF RENO

Section: Appendix OSHA

Policy: Bloodborne Pathogens Standard, 29 CFR 1910.1030 (g)(2),

Subject: Bloodborne Pathogens Exposure Plan, Attachment A: Methods of Compliance

Effective Date: 2-06 Review / Revision: 2-07, 2-08, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 2 of 8

1. Needle-stick/puncture precautions:
 - a. All employees must take precautions to prevent injuries when using needles, scalpels, scissors, and other sharp instruments/devices during procedures, when cleaning instruments, during disposal of used needles and sharps, and when handling sharp instruments after procedure.
 - b. Needles must not be recapped, sheared, bent, broken, or removed from disposable syringes, or manipulated by hand. EXCEPTION: If the procedure requires that the contaminated needle be recapped for procedures or treatments where the reuse of needle on the same patient occurs. If such action is required, then the recapping or removal of the needle must be by the one-handed technique or a mechanical device.
 - c. Broken or contaminated glassware must be cleaned up with mechanical devices, i.e.: brushes, dust pans, or forceps.
 - d. All disposable syringes, needles, scalpel blades, scissors, slides, and other sharps items are to be placed in puncture resistant containers for disposal.
 - e. Puncture resistant sharps/needle disposal containers are to be leak-proof and are to be located as close as practical to areas where they are used.
 - f. All puncture resistant/needle disposal containers are to be replaced when they are 3/4th full.
2. Handwashing:
 - a. Hands and other skin surfaces must be washed as soon as possible if they become contaminated with blood or body fluids, after gloves or other PPE are removed, and when leaving the work area. The SCOR provides hand-washing facilities to the employees who incur exposure to blood or other potentially infectious materials. These facilities are readily accessible throughout the surgical center and located at the nursing station, the scrub sinks in the surgery corridor, the sterilization area, the clean/decontamination rooms, the employees' lounge, and the employees changing areas and bathroom facilities, and the patient's bathrooms. If a malfunction occurs with the hand washing facilities, the SCOR provides an appropriate antiseptic hand cleanser that doesn't require rinsing with water. The cleanser may be used in conjunction with clean cloth or paper towels. When antiseptic hand cleansers are used, hands will be washed with soap and running water as soon as feasible. The alcohol based cleansers are located at multiple sites throughout the facility.
 - b. The Director/ Clinical Manager and/or Administrator is responsible to ensure that these hand cleansers are available and appropriately mounted.

SURGERY CENTER OF RENO

Section: Appendix OSHA

Policy: Bloodborne Pathogens Standard, 29 CFR 1910.1030 (g)(2),

Subject: Bloodborne Pathogens Exposure Plan, Attachment A: Methods of Compliance

Effective Date: 2-06 Review / Revision: 2-07, 2-08, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 3 of 8

- c. If employees incur exposure of their skin or mucous membranes to blood or other potentially infectious materials, those areas shall be washed or flushed with water as appropriate, as soon as feasible following contact.
3. Work Practice Controls:
 - a. In work areas where there is a reasonable likelihood of exposure to blood or other potentially infectious materials or where body fluid specimens are handled, employees are not to eat, drink, smoke, apply cosmetics or lip balm, or handle contact lenses
 - b. Food and drink will not be stored in refrigerators, freezers, shelves, cabinets, or on countertops or bench tops where blood or other potentially infectious materials are present
 - c. All procedures involving blood or other potentially infectious materials will be performed in such a manner as to minimize splashing, spraying, spattering, and generation of droplets of these substances.
 - d. Mouth pipetting/suctioning of blood or other potentially infectious materials is prohibited.
 - e. Specimens of blood or other potentially infectious materials will be placed in a container, which prevents leakage during collection, handling, processing, storage, transport, or shipping. The container used for this purpose will be labeled or color-coded in accordance with the requirements of the OSHA standard. The SCOR does not have any specimens that could puncture a primary container. If the outside of the specimen container becomes contaminated, the container will be placed within a secondary container which prevents leakage during the handling, processing, storage, transport, or shipping of the specimen. Requisition slips will be attached to the outside of the secondary container.
 - f. The surgeon and the assisting scrub technician use extreme caution when passing sharps between each other. In certain surgical procedures, the surgeon may or may not operate under the use of a microscope and is unable to look away to obtain instruments, including sharps, from the scrub technician. Thus, the passing of sharps in a covered state or in a holding container is unsafe in these specific situations. The sharps will be passed to the surgeon by the scrub technician, who will hold the handle of the sharps with the sharp edge pointed down and under his/her hand and never toward the surgeon. The position of the scrub technician's hand will be in the pronated position as the sharp is placed into the surgeon's hand. The scrub technician will then release the sharp after the surgeon obtains the sharp and remove his/her hand down and away from the sharp. The surgeon will pass the sharp back to the scrub technician in the same

Page 4 of 8

fashion or may lay the sharps down and verbally communicate “sharp down, blade down, etc.” to inform the scrub technician of the location of the sharp.

g. When moving containers of contaminated sharps from the area of use, the containers will be: closed immediately prior to removal or replacement to prevent spillage or protrusion of contents during handling, storage, transport.

h. Containers that have decontaminated items need not be labeled or color-coded.

4. Laundry:

- a. Soiled linens or reusable protective clothing must be handled as little as possible.
- b. All used laundry will be considered potentially infectious and will be placed in standard laundry bags. Linens soaked with blood or body fluids must be double bagged. PPE will be worn in order to prevent/reduce contact to blood or OPIM.
- c. The SCOR has a contract with a company for linen and laundry service that also practices Universal Precautions. SCOR staff will place contaminated laundry in labeled red bags to communicate the contents of the bags to the laundry service.

5. Environmental Controls:

- a. General housekeeping - SCOR will ensure that the SCOR worksite is maintained in a clean and sanitary condition. Work surfaces are to be decontaminated with an appropriate disinfectant after completion of procedures or as soon as possible when contamination with blood or body fluids and at the end of the day.
- b. Blood or body fluid spills must be decontaminated as soon as possible. Spills should be soaked up with an absorbent material and disinfected with an EPA approved tuberculocidal or microbacterial viral disinfectant. Broken glassware, which may be contaminated, must not be picked up directly with hands. Tools used for cleanup must be decontaminated or disposed. All broken equipment capable of inflicting percutaneous injury must be disposed of in appropriate sharps container.
- c. Protective coverings used to cover surfaces must be removed as soon as possible when contaminated with blood or body fluids and either appropriately decontaminated or disposed.
- d. Contaminated disposable items (disposable gloves, gauze, dressings, etc.) should be placed in a sturdy, leak-proof plastic containers or bags and closed tightly for transport.

SURGERY CENTER OF RENO

Review / Revision: 2-07, 2-08, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 5 of 8

- e. Blood or body fluids in pleuravacs, blood bags, suction liners, materials dripping or saturated with blood, etc., are regulated waste and must be terminally placed in biohazard boxes.
- f. Contaminated, reusable equipment must be decontaminated with an EPA approved tuberculocidal or microbacterial viral disinfectant.
- g. Biohazard signs must be placed on containers of regulated medical waste, containing blood or OPIM and other containers used to store or transport contaminated materials.
- h. Contaminated Equipment to be serviced: Unless SCOR demonstrates decontamination of the equipment or portions of the equipment is not feasible, equipment which may become contaminated with blood or other potentially infectious materials will be examined prior to servicing or shipping and a readily observable tag or label will be attached to the equipment stating which portions remain contaminated. SCOR will ensure that this information is conveyed to all affected employees, the servicing representative, and/or the manufacturer, as appropriate, and prior to handling, servicing, or shipping so that appropriate precautions will be taken.
- i. All buckets, bins, cans, and similar receptacles intended for reuse which have a reasonable likelihood for becoming contaminated with blood or other potentially infectious materials will be inspected and decontaminated on a weekly basis and cleaned and decontaminated immediately as soon as feasible upon visible contamination.

6. Personal Protective Equipment (PPE):

- a. Employees must use appropriate PPE and precautions to prevent skin and mucous membrane contact with any blood or any body fluid.
- b. Training will be provided to each employee as to the appropriate selection, location, use, and disposal of PPE during their clinical orientation.
- c. The type of PPE available to employees are as follows: Gloves, gowns, masks, goggle, eye shields, foot protection, head protection.
- d. Each employee is instructed to critically review their work responsibilities to make informed decisions or recommendations regarding appropriate use of PPE.
- e. When there is an occupational exposure, the SCOR will provide, at no cost to the employee, appropriate personal protective equipment.

SURGERY CENTER OF RENO

Section: Appendix OSHA

Policy: Bloodborne Pathogens Standard, 29 CFR 1910.1030 (g)(2),

Subject: Bloodborne Pathogens Exposure Plan, Attachment A: Methods of Compliance

Effective Date: 2-06

Review / Revision: 2-07, 2-08, 2-09, 3-10, 3-11, 3-12, 3-13, 3-14, 3-15, 3-16, 3-17

Page 6 of 8

Personal protective equipment will be chosen based on the anticipated exposure to blood or other potentially infectious material. Personal protective equipment will be considered “appropriate” only if it does not permit blood or other potentially infectious materials to pass through to or reach the employee’s surgical attire, undergarments, skin, eyes, mouth, or other mucous membranes under normal conditions of use and for the duration of time that the protective equipment is used. The SCOR will ensure that appropriate PPE in the appropriate sizes are readily accessible at the SCOR in the respective changing areas for employees, at the nursing and patient care areas, and in the surgical suites.

1. Gloves: Gloves will be worn when it can be reasonably anticipated that the employee may have hand contact with blood, body fluids, or OPIM, mucous membranes, non-intact skin, when performing vascular access procedures, when the employee has cuts, scratches, or other breaks in his or her skin, and when handling or touching contaminated items or surfaces. Wash hands immediately after removing gloves. Never wash or decontaminate disposable gloves for reuse. Replace gloves if torn, punctured, contaminated, or their ability to function as their barriers are compromised.
2. Masks, Eye Protection, and Face Shields. Masks in combination with eye protection devices, such as goggles or glasses with solid side shields, or chin-length face shields, will be worn whenever splashes, spray, spatter, or droplets of blood or other potentially infectious materials may be generated and eye, nose, or mouth contamination can be reasonable anticipated.
3. Gowns, Aprons, or Other Protective Body Clothing. Appropriate protective clothing such as, but not limited to, gowns, aprons, clinic jackets, or similar outer garments will be worn in occupational exposure situations. The type and characteristics will depend upon the task and degree of exposure anticipated.
4. Surgical caps or hood and/or shoe covers will be worn in instances when gross contamination with blood or body fluids can reasonable be anticipated.
- f. Resuscitation bags or other ventilation devices should be available in areas where resuscitation is anticipated.
- g. Alternative gloves/PPE will be provided to employees who are sensitive or allergic to the gloves normally provided.
- h. All non-disposable PPE will be maintained, cleaned, and disposed of by SCOR.

Page 7 of 8

i. Utility gloves will be decontaminated for re-use if the integrity of the glove is not compromised. However, the gloves must be discarded if they are cracked, peeling, torn, punctured, or exhibits other signs of deterioration or when their ability to function as a barrier is compromise.

j. When personal protective equipment is removed, it will be placed in an appropriately designated area or container for storage, washing, decontamination or disposal.

k. All personal protective equipment will be removed prior to leaving the work area.

7. Hepatitis B Vaccination:

Employees with occupational exposures to blood or OPIM must be offered and encouraged to participate in the Hepatitis B vaccination program. This is offered at no cost to the employee designated to have a potential risk of exposure to blood or OPIM.

8. Post Exposure Evaluations:

All blood or body fluid exposures must be reported immediately to the Administrator or clinical supervisor.

1. Post Exposure Evaluation Procedures:

A. First aid. Clean/rinse exposed area.

B. Report incident to supervisor.

C. Supervisor to ask source patient to be tested.

D. Employee to be evaluated and or treated within 2 hour window as recommended by CDC, or as soon as possible by the designated workman compensation health care provider.

E. Post exposure prophylaxis (PEP) will be addressed at the designated health care provider, which the employee is referred to.

F. Evaluations by the designated health care provider at date of injury, 6, 12, 24 weeks or as ordered by the health care provider..

G. The employee will complete related sections of the SCOR's occurrence report and Exposure to blood and body fluid report. The Safety Officer and the Administrator will review and finalize these reports. The report, when completed, will become a confidential health file of the employee, as well as the Annual OSHA 300 Log, and satisfy federal OSHA reporting requirements.

Policy:

SCOR abides by OSHA’s Bloodborne Pathogen Regulations, which include the Exposure Control Plan. The following includes, but is not limited to, tasks and procedures that are performed at SCOR. The SCOR continuously strives to provide a safe work environment for its employees.

Purpose:

To inform staff members regarding the needed personal protective equipment (PPE) for tasks and procedures performed in SCOR.

To practice the control measures as expounded in the BBPE Control Plan to protect employees from exposure to potentially infectious materials.

To provide a safe work environment for the staff members of SCOR.

Page 1 of 2

Attachment C

Determination of Employee's Exposure Category

The BBPE Control Plan of SCOR requires that each employee receives a determination of exposure according to his/her responsibilities. The SCOR will use the categories of exposure as stated by OSHA as follows: The most appropriate category with the highest possibility of exposure has been determined for you and has been checked as follows:

Category I: Job position, responsibilities, and tasks required of the employee to perform as a condition of employment involve exposure to blood, body fluids or tissues. All procedures or other job related tasks that involve an inherent potential for mucous membrane or skin contact with blood, body fluids or tissues, or a potential for spills or splashes of blood, body fluids or tissues are Category I tasks. The employee is required to use appropriate protective measures according to the task being performed. Category I includes licensed nurses (to include PreOp, Circulating, PACU,) and scrub techs, and central core employees.

Category II: Job position, responsibilities, and tasks required of the employee to perform, as a condition of employment does not involve exposure to blood, body fluids or tissues. However, unplanned Exposure Category I tasks, which involve exposure to blood, body fluids or tissues, may be performed. When this occurs, the employee is required to use appropriate protective measures according to the task being performed. Licensed radiologic technicians may be in this category.

Category III: Job position, responsibilities, and tasks required of the employee to perform as a condition of employment do not involve exposure to blood, body fluids or tissue. Category III includes administrative employees: surgery scheduler, front office, medical records, and the Administrator. When performing administrative responsibilities and not delivering direct patient care, the supervisors of the clinical areas and Administrator are in this category.

SURGERY CENTER OF RENO

Policy: Bloodborne Pathogens Standards, 29 CFR 1910.1030 (g)(2)

Subject: Bloodborne Pathogens Exposure Control Plan, Attachment C:

Determination of Employee's Exposure Category

Exposure to Blood/Body Fluids

Employee:
Name, Last: _____ First: _____ Middle: _____
Gender: F M Other Date of Birth: ____ / ____ / ____
Work Location: _____
Occupation: _____ If occupation is physician, indicate clinical specialty: _____

Section I – General Exposure Information

1. Date of exposure: ____ / ____ / ____

2. Number of hours on duty: _____ 3. Time of exposure: _____ AM PM

6. Location where exposure occurred: _____ 5. Is exposed person a temp/agency employee? Y N

7. Type of exposure: (Check all that apply)

- 7a. Percutaneous: Did exposure involve a clean, unused needle or sharp object?
 Y N (If No, complete Q8, Q9, Section II and Section V-XI)
- 7b. Mucous membrane (Complete Q8, Q9, Section III and Section V-XI)
- 7c. Skin: Was skin intact? Y N Unknown (If No, complete Q8, Q9, Section III & Section V-XI)
- 7d. Bite (Complete Q9 and Section IV-XI)

8. Type of fluid/tissue involved in exposure: (Check one)

- Blood/blood products
- Solutions (IV fluid, irrigation, etc.): (Check one)
 - Visibly bloody
 - Not visibly bloody
- Tissue
- Other (specify): _____
- Unknown

If body fluid, indicate one body fluid type:

- Amniotic
- CSF
- Pericardial
- Peritoneal
- Pleural
- Semen
- Synovial
- Vaginal fluid
- Saliva
- Sputum
- Tears
- Urine
- Feces/stool
- Other (Specify): _____

9. Body site of exposure: (Check all that apply)

- Hand/finger
- Eye
- Arm
- Leg
- Foot
- Mouth
- Nose
- Other (specify): _____

Section II – Percutaneous Injury

1. Was the needle or sharp object visibly contaminated with blood prior to exposure? Y N

2. Depth of the injury: (Check one)

- Superficial, surface scratch
- Deep puncture or wound
- Moderate, penetrated skin
- Unknown

3. What needle or sharp object caused the injury (Check one)

Device (select one) Non-device sharp object (specify): _____ Unknown sharp object

Hollow-bore needle

- Arterial blood collection device
- Biopsy needle
- Bone marrow needle
- Hypodermic needle, attached to syringe
- Hypodermic needle, attached to IV tubing
- Unattached hypodermic needle
- IV catheter – central line
- IV catheter – peripheral line
- Huber needle
- Prefilled cartridge syringe
- IV stylet
- Spinal or epidural needle
- Hemodialysis needle
- Dental aspirating syringe w/ needle
- Vacuum tube holder/needle
- Winged-steel (Butterfly™ type) needle
- Hollow-bore needle, type unknown
- Other hollow-bore needle

Suture needle

- Suture needle

Other solid sharps

- Bone cutter
- Bur
- Electrocautery device
- Elevator
- Explorer
- Extraction forceps
- File
- Lancet
- Microtome blade
- Pin
- Razor
- Retractor
- Rod (orthopedic)
- Scaler/curette
- Scalpel blade
- Scissors
- Tenaculum
- Trocar
- Wire

Glass

- Capillary tube
- Blood collection tube
- Medication ampule/vial/bottle
- Pipette
- Slide
- Specimen/test/vacuum tube

Plastic

- Capillary tube
- Blood collection tube
- Specimen/test/vacuum tube

Non-sharp safety device

- Blood culture adapter
- Catheter securement device
- IV delivery system
- Other known device (specify): _____

4. Manufacturer and Model: _____

Exposure to Blood/Body Fluids

Page 3 of 7

5. Did the needle or other sharp object involved in the injury have a safety feature? Y N

5a. If Yes, indicate type of safety feature: (Check one) If No, skip to Q6.

- | | |
|---|--|
| <input type="checkbox"/> Blunable needle, sharp | <input type="checkbox"/> Needle/sharp ejector |
| <input type="checkbox"/> Hinged guard/shield | <input type="checkbox"/> Mylar wrapping/plastic |
| <input type="checkbox"/> Retractable needle/sharp | <input type="checkbox"/> Other safety feature (specify): _____ |
| <input type="checkbox"/> Sliding/gliding guard/shield | <input type="checkbox"/> Unknown safety mechanism |

5b. If the device had a safety feature, when did the injury occur? (Check one)

- | | |
|--|--|
| <input type="checkbox"/> Before activation of the safety feature was appropriate | <input type="checkbox"/> Safety feature failed, after activation |
| <input type="checkbox"/> During activation of the safety feature | <input type="checkbox"/> Safety feature not activated |
| <input type="checkbox"/> Safety feature improperly activated | <input type="checkbox"/> Other (specify): _____ |

6. When did the injury occur? (Check one)

- | | |
|--|---|
| <input type="checkbox"/> Before use of the item | <input type="checkbox"/> During or after disposal |
| <input type="checkbox"/> During use of the item | <input type="checkbox"/> Unknown |
| <input type="checkbox"/> After use of the item before disposal | |

7. For what purpose or activity was the sharp device being used? (Check one)

Obtaining a blood specimen percutaneously

- | | |
|---|--|
| <input type="checkbox"/> Performing phlebotomy | <input type="checkbox"/> Performing a fingerstick |
| <input type="checkbox"/> Performing arterial puncture | <input type="checkbox"/> Other blood-sampling procedure (specify): _____ |

Giving a percutaneous injection

- | | |
|---|--|
| <input type="checkbox"/> Giving an IM injection | <input type="checkbox"/> Placing a skin test (e.g., tuberculin, allergy, etc.) |
| <input type="checkbox"/> Giving a SC injection | |

Performing a line related procedure

- | | |
|--|--|
| <input type="checkbox"/> Inserting or withdrawing a catheter | <input type="checkbox"/> Injecting into a line or port |
| <input type="checkbox"/> Obtaining a blood sample from a central or peripheral I.V. line or port | <input type="checkbox"/> Connecting an I.V. line |

Performing surgery/autopsy/other invasive procedure

- | | |
|-----------------------------------|---|
| <input type="checkbox"/> Suturing | <input type="checkbox"/> Palpating/exploring |
| <input type="checkbox"/> Incising | <input type="checkbox"/> Specify procedure: _____ |

Performing a dental procedure

- | | |
|---|--|
| <input type="checkbox"/> Hygiene (prophylaxis) | <input type="checkbox"/> Oral surgery |
| <input type="checkbox"/> Restoration (amalgam composite, crown) | <input type="checkbox"/> Simple extraction |
| <input type="checkbox"/> Root canal | <input type="checkbox"/> Surgical extraction |
| <input type="checkbox"/> Periodontal surgery | |

Handling a specimen

- | | |
|---|--|
| <input type="checkbox"/> Transferring BBF into a specimen container | <input type="checkbox"/> Processing specimen |
|---|--|

Other

- | | |
|---|----------------------------------|
| <input type="checkbox"/> Other diagnostic procedure (e.g., thoracentesis) | <input type="checkbox"/> Unknown |
| <input type="checkbox"/> Other (specify): _____ | |

Exposure to Blood/Body Fluids

Page 4 of 7

8. What was the activity at the time of injury? (Check one)

- | | |
|--|--|
| <input type="checkbox"/> Cleaning room | <input type="checkbox"/> Collecting/transporting waste |
| <input type="checkbox"/> Decontamination/processing used equipment | <input type="checkbox"/> Disassembling device/equipment |
| <input type="checkbox"/> Handling equipment | <input type="checkbox"/> Opening/breaking glass container (e.g., ampule) |
| <input type="checkbox"/> Performing procedure | <input type="checkbox"/> Placing sharp in container |
| <input type="checkbox"/> Recapping | <input type="checkbox"/> Transferring/passing/receiving device |
| <input type="checkbox"/> Other (specify): _____ | |

9. Who was holding the device at the time the injury occurred? (Check one)

- Exposed person
- Co-worker/other person
- No one, the sharp was an uncontrolled sharp in the environment

10. What happened when the injury occurred? (Check one)

- | | |
|--|---|
| <input type="checkbox"/> Patient moved and jarred device | <input type="checkbox"/> Contact with overfilled/punctured sharps container |
| <input type="checkbox"/> Device slipped | <input type="checkbox"/> Improperly disposed sharp |
| <input type="checkbox"/> Device rebounded | <input type="checkbox"/> Other (specify): _____ |
| <input type="checkbox"/> Sharp was being recapped | <input type="checkbox"/> Unknown |
| <input type="checkbox"/> Collided with co-worker or other person | |

Exposure to Blood/Body Fluids

Page 5 of 7

Section III – Mucous Membrane and/or Skin Exposure

1. Estimate the amount of blood/body fluid exposure: (Check one)

- | | |
|--|--|
| <input type="checkbox"/> Small (<1 tsp or 5cc) | <input type="checkbox"/> Large (> ¼ cup or 50cc) |
| <input type="checkbox"/> Moderate (>1 tsp and up to ¼ cup, or 6-50 cc) | <input type="checkbox"/> Unknown |

2. Activity/event when exposure occurred: (Check one)

- | | |
|---|--|
| <input type="checkbox"/> Airway manipulation (e.g., suctioning airway, inducing sputum) | <input type="checkbox"/> Patient spit/coughed/vomited |
| <input type="checkbox"/> Bleeding vessel | <input type="checkbox"/> Phlebotomy |
| <input type="checkbox"/> Changing dressing/wound care | <input type="checkbox"/> Surgical procedure (e.g., all surgical procedures including C-section) |
| <input type="checkbox"/> Cleaning/transporting contaminated equipment | <input type="checkbox"/> Tube placement/removal/manipulation (e.g., chest, endotracheal, NG, rectal, urine catheter) |
| <input type="checkbox"/> Endoscopic procedures | |
| <input type="checkbox"/> IV or arterial line insertion/removal/manipulation | <input type="checkbox"/> Other (specify): _____ |
| <input type="checkbox"/> Irrigation procedures | <input type="checkbox"/> Unknown |
| <input type="checkbox"/> Manipulating blood tube/bottle/specimen container | |

3. Barriers used by the worker at the time of exposure: (Check all that apply)

- | | |
|--------------------------------------|---|
| <input type="checkbox"/> Face shield | <input type="checkbox"/> Mask/respirator |
| <input type="checkbox"/> Gloves | <input type="checkbox"/> Other (specify): _____ |
| <input type="checkbox"/> Goggles | <input type="checkbox"/> No barriers |
| <input type="checkbox"/> Gown | |

Section IV – Bite

1. Wound description: (Check one)

- | | |
|--|---|
| <input type="checkbox"/> No spontaneous bleeding | <input type="checkbox"/> Tissue avulsed |
| <input type="checkbox"/> Spontaneous bleeding | <input type="checkbox"/> Unknown |

2. Activity/event when exposure occurred: (Check one)

- | | |
|---|---|
| <input type="checkbox"/> During dental procedure | <input type="checkbox"/> Assault by patient |
| <input type="checkbox"/> During oral examination | <input type="checkbox"/> Other (specify): _____ |
| <input type="checkbox"/> Providing oral hygiene | <input type="checkbox"/> Unknown |
| <input type="checkbox"/> Providing non-oral care to patient | |

Exposure to Blood/Body Fluids

Page 6 of 7

Note: Section V-IX are required when following the protocols for Exposure Management.

Section V – Source Information

1. Was the source patient known? Y N
2. Was HIV status known at the time of exposure? Y N
3. Check the test results for the source patient (P=positive, N=negative, I=indeterminate, U=unknown, R=refused, NT=not tested)

| Hepatitis B | P | N | I | U | R | NT |
|-----------------------|---|---|---|---|---|----|
| HBsAg | | | | | | |
| HBeAg | | | | | | |
| Total anti-HBc | | | | | | |
| Anti-HBs | | | | | | |

| Anti-HCV supplemental | | | | | | |
| PCR-HCV RNA | | | | | | |
| HIV | | | | | | |
| EIA, ELISA | | | | | | |
| Rapid HIV | | | | | | |
| Confirmatory test | | | | | | |

Section VI – For HIV Infected Source

1. Stage of disease: (Check one)

| | |
|--|--|
| <input type="checkbox"/> End-stage AIDS | <input type="checkbox"/> Other symptomatic HIV, not AIDS |
| <input type="checkbox"/> AIDS | <input type="checkbox"/> HIV infection, no symptoms |
| <input type="checkbox"/> Acute HIV illness | <input type="checkbox"/> Unknown |
2. Is the source patient taking anti-retroviral drugs? Y N U
 - 2a. If yes, indicate drug(s): _____
3. Most recent CD4 count: _____ mm³ Date: ____ / ____ (mo/yr)
4. Viral load: _____ copies/ml _____ undetectable Date: ____ / ____ (mo/yr)

Section VII – Initial Care Given to Healthcare Worker

1. HIV postexposure prophylaxis:

| | |
|---|---|
| Offered? <input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> U | Taken: <input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> U (If Yes, complete PEP form) |
|---|---|
2. HBIG given? Y N U Date administered: ____ / ____ / ____
3. Hepatitis B vaccine given: Y N U Date 1st dose administered: ____ / ____ / ____
4. Is the HCW pregnant? Y N U
 - 4a. If yes, which trimester? 1 2 3 U

Exposure to Blood/Body Fluids

Page 7 of 7

Section VIII – Baseline Lab Testing

Was baseline testing performed on the HCW? Y N U If Yes, indicate results

| Test | Date | Result | | | | Test | Date | Result |

Attachment F

INFORMED CONSENT FOR HEPATITIS B VACCINE

I understand the benefits and risks of the vaccination. I understand that vaccination is not mandatory but highly recommended. I understand that the vaccine should not be given to anyone that is immunocompromised, allergic to yeast or any of component of the vaccine, pregnant or nursing mothers unless clearly necessary. Relative contraindications include any serous active infection, severely compromised cardiopulmonary function, or any person to whom a febrile or systemic reaction could cause a serious health risk. I certify that to the best of my knowledge I do not have any of the above listed conditions, have been informed of the potential risks and benefits of the Hepatitis vaccination, and request to receive the vaccination.

I understand that I must have three doses of the vaccine over the next 6 months to confer immunity. I know that there is no absolute guarantee that I will become immune or that I will not have adverse reaction from the vaccine.

I REQUEST THAT THE HEPATITIS B VACCINE BE GIVEN TO ME:

DECLINATION

I understand that due to my occupational exposure to blood or OPIM I may be at risk of acquiring Hepatitis B infection. I have been given the opportunity to be vaccinated with the Hepatitis B vaccine, at no charge to myself. However, I DECLINE TO RECEIVE THE HEPATITIS B VACCINE and understand that I may be at risk of acquiring the Hepatitis B Virus, as serious disease. If I change my mind at a later date I will be able to receive the Hepatitis B vaccine at no charge to me.

I decline the Hepatitis B vaccine as I have received the vaccine in the past. I received the vaccine in _____ (year).

Transfer switches shall be subjected to a maintenance and testing program that includes the following:

- Monthly testing and operation
- Annually
- Checking of connections
- Inspection or testing for evidence of overheating and excessive contact erosion
- Removal of dust and dirt.
- Replacement of contacts when required (8.3.5)

Maintenance Requirements Testing

EPSS, Including all appurtenant components, shall be inspected WEEKLY and exercised under load MONTHLY (8.4.1).

A log should be kept of the weekly and monthly checks / exercises.

Sample maintenance logs are available in the contents of the NFPA-110 documents.

Routine Maintenance program shall be over seen by a properly instructed individual (8.4.5).

Maintenance Requirements Monthly Testing

Section 8.4.2) Diesel generator sets in service shall be exercised at least once monthly, for a minimum of 30 minutes, using one of the following methods.

- 1) Loading that maintains the minimum exhaust gas temperatures as recommended by the manufacturer.
- 2) Under operating temperature conditions and at not less than 30 percent of the EPS nameplate kW rating.
- 3) If the engine cannot be operated until the water temperature and the oil pressure have stabilized and then the test shall be terminated before the 30 minute time period expires.

Maintenance Requirements Annual Load Bank Testing

Section 8.4.2.3 Diesel-powered EPS installation that do not meet the requirements of 8.4.2 shall be exercised monthly with the available EPSS load and exercised annually with supplemental loads at

25% of nameplate rating for 30 minutes, followed by 50% of nameplate for 30 minutes followed by 75% of nameplate for 60 minutes, for a total of 2 continuous hours.

Maintenance Requirement 36 Month Load Bank Testing

Section 8.4.9 Level 1 EPSS shall be tested for the duration of its as-assigned class (see Section 4.2), for at least 4 hours, at least once within every 36 months.

Section 8.4.9.1 The load shall be the EPSS system load running at the of the test. The test shall be initiated by opening all switches or breakers supplying normal power to the EPSS

Maintenance Requirements Time Delays

Load tests of generator shall include complete cold start (8.4.4).

Time Delays should be set as follows:

On start: 1 second minimum

Transfer to emergency: no minimum

Return to normal: 5 minutes minimum

Shutdown: 5 minutes minimum

Transfer switches shall be operated monthly (8.4.6)

Maintenance Requirements

Section A-5.6.4.5.1 recommends that lead-acid starting batteries be replaced every 24 to 30 months.

Transfer Time

For any generator serving emergency lighting, the load must be picked up by the generator in less than 10 seconds. See section 7.9.1.2 of the Life Safety Code

Fire Extinguisher

A fire Extinguisher should be kept in close proximity to the generator and should be a type for the hazard. Typically a minimum 3A, 40B, C extinguisher within 30 feet of the generator and in the path of egress

SURGERY CENTER OF RENO
INCIDENT REPORT
CONFIDENTIAL - NOT A PART OF MEDICAL RECORD

PATIENT LABEL _____

BRIEF DESCRIPTION (Attach additional sheet, if needed)

Patient/Family aware of incident? Yes ___ No ___

A. LOCATION OF INCIDENT: _____

Type of Incident (Check only one that most applies)

B. FALLS

- Slip/fall Found on floor Other

C. MEDICATION VARIANCE

- Contraindicated Omission of dose Wrong patient MD order variance
 Extra doses Wrong dose Wrong route Wrong site
 Confirmed adverse drug reaction Wrong drug/IV solution Wrong time

D. TREATMENT OR PROCEDURE VARIANCE

- Consent/not Documented Complications following procedure Surgical Count/retained FB
 Consent/Different procedure or site Cancellation - post induction Unscheduled return to OR
 Unplanned transfer to hospital Delayed treatment Inability to complete procedure due to complications
 Not ordered Specimen handling error Received unplanned blood/products
 Omitted Surgical count unresolved Cancellation after admission to pre-op
 Technique Undesired Other _____

E. INFECTION SURGERY CENTER

- Infection/Nosocomial confirmed

F. EQUIPMENT/PRODUCT-RELATED INCIDENT

- Defective Electrical shock Improper use Wrong equipment
 Electrical Problem Equipment unavailable Malfunction Other _____

LOT # _____

EQUIPMENT TYPE: _____ MODEL #: _____

MANUFACTURER: _____ SERIAL #: _____

G. MISCELLANEOUS

- AMA/Elopement Fire/thermal Patient injury Patient /family complaint
 Contraband possession Loss/Theft/damaged property Struck by object
 Exposures/biohazard/chemical Patient abuse Security issues Other _____

H. MEDICAL TREATMENT

- N/A Offered Refused Referred for further TX ER visit post-op

Physician Name: _____

Notified Date: _____ Time: _____

Address: _____

I. NATURE OF INJURY SUSTAINED (Check only one that most applies)

- Abrasion, bruise, contusion Back injury Skin irritation
 Aggravation/pre-exist. Cond. Electric shock Sprain/strain
 Fracture Phlebitis Vascular impairment
 Burn Hemorrhage Wound disruption
 Cardiopulmonary arrest IV infiltration/extravasate Unable to determine
 Concussion Laceration None/NA
 Contagious disease Neurological impairment Other _____
 Death/at facility Pulmonary embolism - DVT
 Death/ following hospital transfer Puncture
 Death/ within 72 hours discharge Respiratory impairment

J. RELATED FACTORS (check all that apply)

- Bowel/bladder problem
- Improper footwear
- Unable to follow orders
- Seeking attention
- Vision impaired
- Horseplay/rowdiness
- Medical/surgical condition
- Visitor assisting patient
- Language barrier
- Refused orders
- Floor wet/obstructed
- Safety device used improperly
- Employee did not follow procedure
- Siderails down
- Bed position Hi ___ Lo ___
- Safety device not ordered
- Call light not in reach
- Unexpected movement
- NA
- Other _____

K SEVERITY LEVEL

- LEVEL 1 EVENT IS NOT RELATED TO ILLNESS OR INJURY/NO APPARENT INJURY
- LEVEL 2 OCCURRENCE THAT CAUSES TEMPORARY ILLNESS OR INJURY; WHETHER OR NOT PHYSICIAN INTERVENTIONS REQUIRED
- LEVEL 3 INJURY WITH POTENTIAL FOR COMPLICATION/FOLLOW UP REQUIRED BY MD
- LEVEL 4 MAJOR INJURY; OCCURRENCE IS POTENTIALLY LIFETHREATENING; IMMEDIATE PHYSICIAN INTERVENTIONS REQUIRED
- LEVEL 5 OCCURRENCE RESULTING IN DEATH WITHIN 72 HOURS

WITNESSES

Surgery Center of Reno

Quality Improvement Plan

Purpose:

This organization provides ongoing monitoring of important aspects of the care provided. Health care professionals participate in the development and application of the criteria used to evaluate the care they provide. The Quality Improvement (QI) program addresses clinical, administrative and cost-of-care issues, as well as actual patient outcomes. Data related to established criteria are collected in an ongoing manner. Collected data are periodically evaluated to identify unacceptable or unexpected trends or occurrences that influence patient outcomes. Information will be gathered, logged and identified on a quarterly basis by the Quality Improvement Committee. This will include the laboratory consultant who will review all logs kept (i.e. blood glucose). The radiology safety officer will monitor the radiation safety issues for the facility including radiation badge levels. The pharmacy consultant will review all pertinent pharmacy data including narcotic review monthly. In addition, the contract service providers may provide appropriate in-service education for the staff of the facility as requested by the facility.

QI Indicators to be monitored may include but are not limited to:

- 1) Patient Satisfaction, Employee Satisfaction, Physician Satisfaction
- 2) Patient Follow-up: a) post op phone calls b) post -op complications
- 3) Post Operative Occurrences
- 4) Medication Use , Pharmacist review, Adverse Reaction Log & Medication Error Log per occurrence reporting system
- 5) Cancellations on Day of Surgery
- 6) Medical Record Review
- 7) Safety
- 8) Infection Control
- 9) Credentials
- 10) Employee Files
- 11) Ancillary Services
- 12) Employee Blood Borne Pathogen Exposures
- 13.) Patient Complications – Transfers, Returns to Surgery

Quality Improvement Issues:

In addition to the on-going monitoring of QI indicators, staff and department managers will be encouraged to develop and assess “Quality Improvement Issues” to ensure department concerns are addressed and corrected. QI activities are consistent with the characteristics of the organization’s overall QI program. QI activities will follow the five steps of “closing the QI loop”.

Routine monitoring will also include:

Emergency Cart / Defibrillator checks

Refrigerator and Fluid warmer temperature checks.

The Quality Improvement Plan, the Peer Review Plan and Processes and the Risk Management Plan are all integrally inter-related in the overall quality processes of the ASC. When one process is affected all subsequent processes and plans can be affected and may require follow-up and/or evaluation of the quality of care provided and the risks to the facility.

QUALITY IMPROVEMENT, RISK MANAGEMENT, AND PATIENT SAFETY PLAN

Las Vegas Surgery Center 2018

The mission of Las Vegas Surgery Center is focused on delivering the highest quality, cost effective healthcare that effectively responds to the needs and safety of our patients by minimizing the possibility for injury or harm to our patients. We are committed to the care, dignity and improvement of human life to the patient populations we serve.

In keeping with the mission of the Las Vegas Surgery Center community, HCA initiatives, and regulatory standards for ambulatory surgical care, this plan allows for a planned, systematic, organization-wide approach to the quality improvement process, and assessing opportunities to reduce risk. This is accomplished through an effective risk and quality program, as well as a medication and radiation safety plan that are all targeted toward improving patient safety. The activities will be carried out in a collaborative and interdisciplinary manner. When identified, individual competency issues and process changes will be coordinated with management team and human resources. The overall strategies of the program include

- Improving patient safety and reducing risk to patients which includes, but not limited to medication and radiation safety, safe quality care and reducing risk of injury to patients and staff;
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety;
- Assuring that quality improvement initiatives continue to focus on high priority areas of clinical care, monitoring of process and outcome indicators; redesigning processes and systems and providing education to foster improvement;
- Positioning the Las Vegas Surgery Center to achieve earning expectations and maintain effective cost-containment strategies while providing high quality of patient care, and
- Meeting the expectations of the HCA internal initiatives, as well as the external regulatory and accrediting bodies through the identification of opportunities to improve patient care, demonstration of appropriate action taken, and follow up on the effectiveness of action taken.

Strategies will be incorporated in each of the following areas to identify opportunities and set goals to achieve and sustain the desired results:

- Performance Improvement Processes
- Quality studies
- Risk Management Strategies
- Patient Safety Initiatives
- Infection Control Strategies
- Medication Safety Strategies
- Radiation Safety Initiatives

HCA Patient Safety Organization (PSO), LLC

HCA established a Patient Safety Organization, LLC in spring of 2014 in accordance with provisions of the Patient Safety and Quality Improvement Act (Public Law 109-41). The PSO is a component of its parent entity, HCA. The mission of the PSO is to conduct activities to improve patient safety and the quality of healthcare delivery. The vision is to assist participating providers in the elimination of preventable patient harm. The activities of the organization include:

- Improve patient safety and the quality of health care delivery
- Collect and analyze Patient Safety Work Product (PSWP)

- Develop and disseminate information regarding patient safety
- Utilize PSWP to encourage a culture of safety and provide assistance to effectively minimize patient risk
- Maintain procedures to preserve confidentiality and provide appropriate security of PSWP
- Utilize qualified medical personnel
- Operate a patient safety evaluation system (PSES) and provide feedback to participants of the PSO
- Utilizing the Serious Event Analysis (SEA) process to identify the root causes of adverse events

In early 2016 Las Vegas Surgery Center will begin to participate as a member of the HCA Patient Safety Organization (PSO), LLC. The Administrator will serve as the designated PSO Contact and oversees all activities of the PSO for the center. The Risk/Quality Manager shall serve as the Contact Designee, and the Administrator shall serve as the alternative. The Center will provide patient safety work products (PSWP) documents as requested by the PSO. The center will receive information from the PSES to evaluate opportunities for improving patient safety and quality care. All information submitted will remain confidential within the PSO.

Quality Improvement Plan

The Center maintains an ongoing quality improvement program that has a broad scope to address administrative, clinical, and cost effective performance. The program also addresses patient outcomes, patient care processes, as well as medication, radiation and patient safety. Elements of the program include, but are not limited to a:

- Written plan that addresses the scope of health care services provided by the Center and how the quality improvement plan for these services is assessed
- Interdisciplinary QI committee for the development, implementation, review and oversight of the program. The committee has administrative, clinical and physician participation
- Set of goals and objectives that are reviewed and updated at least annually
- Quality improvement activities such as audits and studies to identify problems with processes or patient care, evaluate them, and develop action plans when indicated. The studies will be done utilizing the ten (10) step process that is current practice in quality performance improvement
- Measurement of data against internal and external benchmarking sources
- Annual reviews of the effectiveness of the program
- Periodic reports to Governing Body that encompasses a summary of the quality improvement activities, findings and process changes if indicated

Risk Management and Patient Safety

Definitions of Potential Risk Issues:

Event: A discrete, auditable and clearly defined occurrence (NQF)

Occurrence: The action, fact, or instance of something that happens synonymous with an event; An event, situation, or process that contributes to, or has the potential to contribute to, a patient or visitor injury, or degrade our ability to provide optimal patient care. Reportable occurrences can generally be divided into the following types based on severity: Sentinel events, patient and visitor injuries, [adverse events], near misses (close calls, good catches), and safety concerns.(NPSF)

Incident: Synonymous with occurrence or event. An occurrence or event that interrupts normal procedure and can precipitate an untoward or unplanned outcome, or an unusual event that occurs at the facility, such as an injury to a patient. Involved damage that is limited to parts of a unit, whether the failure disrupts the system or not. (NPSF). A patient safety event that reached the patient, whether or not the patient was harmed (NQF).

Adverse Event: Any deviation from usual medical care that causes an injury to the patient or poses a risk of harm. Events include errors, preventable adverse events, and hazards. An incident in which a patient is harmed (WHO). An injury or the risk thereof caused by medical management rather than the underlying disease. An untoward, undesirable, and usually unanticipated occurrence. An act of commission or omission arising during clinical care which causes physical or psychological injury to a patient regardless of severity, (NQF & NPSF). Any injury caused by medical care. An adverse event does not imply "error," "negligence," or poor quality care. It simply indicates that an undesirable clinical outcome resulted from some aspect of diagnosis or therapy, not an underlying disease process (AHRQ). Adverse events may be preventable or non-preventable (WHO).

Serious Preventable Adverse Events (SPAEE) / Sentinel event: A sentinel event is a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches the patient and results in any of the following (HCA policy definition):

- Death
- Permanent harm
- Severe temporary harm

In the ambulatory surgical setting, an event is also considered sentinel if it is one of the following:

- Discharge of an infant to the wrong family
- Abduction of any patient receiving care, treatment, and services
- Any elopement (that is, unauthorized departure) of a patient, leading to death, permanent harm, or severe temporary harm to the patient
- Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities (ABO, Rh, other blood groups)
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any patient receiving care, treatment, and services while on site at the hospital
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor, or vendor while on site at the hospital
- Invasive procedure, including surgery, on the wrong patient, at the wrong site, or that is the wrong (unintended) procedure
- Unintended retention of a foreign object in a patient after an invasive procedure, including surgery
- Prolonged fluoroscopy with cumulative dose >1,500 rads to a single field
- Fire, flame, or unanticipated smoke, heat, or flashes occurring during an episode of patient care

Close Call / Near Misses / Good Catches: Events or situations that could have resulted in an adverse event (accident, injury, or illness), but did not, whether by chance or through timely intervention. Such events have also been referred to as "near miss" incidents. An example of a close call would be a surgery or other procedure almost performed on the wrong patient due to lapses in verification of patient identification, but caught prior to the procedure (Source: VA Patient Safety Program).

Reportable Event: Any event that is mandated to report by regulatory agencies or corporate within defined time frame. (HCA, CMS, FDA, SMDA, and/or local /state agencies).

Serious Event Analysis (SEA): A method of problem solving that tries to identify the root causes of faults or problems. The SEA process evaluates the underlying "why's" for the variance and solve problems by attempting to identify and correct the root causes of events, as opposed to simply addressing their symptoms. By focusing on the correction on root causes, problem recurrence can be prevented. An analysis is done *after* an event has occurred. All staff members involved, as well as, the Risk Manager, physicians involved shall participate in the SEA analysis. The SEA process is typically used as a reactive method of identifying event(s) causes, revealing problems and identifying opportunities to reduce the risk of future occurrences. The SEA action plan is reported at the quality meetings, MEC and GB meetings. In 2016 the ASD will be move toward an online program for analysis of serious events called Serious Event Analysis (SEA).

Risk Management: The Center maintains an ongoing risk management program that is designed to protect the life, safety and welfare of the patients and employees. Risk management addresses strategies from the organizational, operational, human resource and liability areas of the organization. Goals of the program include:

- Improving patient safety and reducing risk to patients
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety
- Reviewing and tracking of all variance reports and litigations for trends
- Reviewing and tracking of all adverse outcomes, near misses (close calls) or sentinel events to identify gaps or opportunities for improvement
- Maintaining a strong credentialing and privileging process and current bylaws that meet community standards
- Keeping abreast of current standards for risk management and adapting practice and policies that are compliant with standards

It is evident through the goals, activities and processes that the quality improvement and risk management programs intertwine and cross all spectrums of the organization. Quality care, as well as patient and employee safety is at the center focus of both programs. The operational linkage between Risk management, Safety, Quality and Infection Control is accomplished through the following mechanisms:

- Issues or trends identified through chart reviews, peer reviews, safety, radiation and infection control rounds are discussed and referred to the appropriate department for evaluation and/or corrective action
- Data from variances, identified trends, adverse events or any events that impact the quality or safety of patient care will be reviewed and referred to appropriate risk and leadership personnel for investigation, analysis and corrective action
- The Risk Manager will review current issues and risk reduction strategies with appropriate personnel and develop a plan of action. This action plan will be reported to MEC/GB.
- The Quality Committee will serve as the oversight committee for Patient Safety and Risk management. Medication Safety and Radiation Safety fall within a subsection of the Quality Committee and will be addressed as indicated.

These plans engage active involvement of all members of the healthcare team, as well as patients, families and physicians, addressing an environment which:

- Encourages recognition and acknowledgment of opportunities to improve quality performance and to reduce risks to patient safety
- Initiates actions to improve processes or reduce these risks
- Encourages internal reporting of what has been found and the actions taken
- Focuses on processes and system
- Minimizes individual blame or retribution for involvement in a medical/health care error; and
- Challenges leaders of the organization to be responsible for fostering a "non punitive" culture of continuous improvement, reducing risk, and creating a safe environment for patients, employees and physicians.

Medication Safety: The Regional HCA Pharmacist oversees the medication practices and processes at the center. Their duties include, but not limited to:

- Conducting medication rounds and audits providing feedback on areas of opportunities. This includes validation of safety medication practices
- Collaborating with the center on choice of pharmaceutical vendors and formularies
- Collaborating with the center on policy review and development
- Participating in review of any medication error or diversion
- Assuring controlled substance ordering and monitoring is in accordance to state and federal regulations

All relevant activities are reported through QI/MEC/GB committees

Radiation Safety: This facility utilizes radiation emitting equipment and therefore, by direction of the Governing Body/Board. Radiation Safety will be a subgroup of representatives will be included under the QI/Safety/Risk committee to report radiation safety activities. Key activities are established by the Radiation Right policies identified as CSG.MI.001 Governance and CSG.MI.003 Fluoroscopy:

- Designate an individual that is approved by MEC/GB to oversee the program
- Oversee ongoing measurement, periodic review, and improvement of key radiation safety practices and provide a quarterly report to the QI/Risk/Safety committee
- Periodic maintenance of equipment
- Maintaining exposure time logs
- Communicate relevant radiation safety activities, as necessary, to the staff.
- Serve as a resource for radiation safety as it relates to staff and patient safety/regulatory issues and for the regulatory component of accrediting agencies.
- Educate staff on radiation safety practices

Infection Control: The center conducts an **annual** infection control risk assessment (ICRA) to identify areas of opportunities to reduce the risk of infections. The ICRA is completed annually and reviewed annually by QI/MEC/GB. (See Infection Control Plan) All infection control activities are reported though QI/MEC/GB.

Peer Review: Ambulatory Surgery Centers are required by AAAHC, CMS, and other regulatory agencies to conduct quality improvement and peer review on Medical Staff and Dependent Healthcare Practitioners (DHP). Peer review activities include ongoing random review, specialty specific review and review of events / complications. Whenever possible, peer review is done by a physician of like specialty.

Whenever possible to avoid conflict of interest, peer review cases will be referred to physicians who are not affiliated with the practitioner being reviewed, and no physician will review a patient's care in which she/he has been professionally involved. Provisions are made to have cases evaluated by an outside expert when necessary.

Confidentiality: All quality improvement and peer review activities and data are considered confidential. Any requests for outside sources for any QI, Risk management, Peer Review or credentialing information or reports will be forwarded to the appropriate HCA administrative/corporate staff when indicated.

ORGANIZATION STRUCTURE AND PROCEDURE

Role of Leadership: Leaders play a key role in facilitating improvement and ensuring a safe environment. The Las Vegas Surgery Center leadership includes the Governing Body, Medical Executive Committee; the facility based Medical Directors, Administrators, Risk/Quality/Safety/Infection Control designees and Clinical Managers. Leaders foster quality improvement through planning, educating, setting priorities, providing support such as time and resources, and empowering staff as appropriate.

Governing Board/Medical Executive Committee: The Board has the ultimate authority and accountability for the quality and risk programs to ensure that the quality of patient care is provided in an efficient, timely and cost-effective manner. The Governing Body provides support for the improvement strategies and delegates to the Medical Executive Committee and leaderships at each facility, the authority to perform assessment and improvement activities through committees and teams. Quarterly, the Governing Body shall receive a report on the activities of the quality and risk management programs.

These functions include, but not limited to:

- Assure QI/Risk/Radiation/Medication/Patient Safety is an integral part of the Center's objectives, plans and management structure
- Provide resources to support the QI/Risk/Patient Safety programs.
- Assure that improvements are sustained and evaluated for effectiveness

- Review and approve policies, reports, QI/Risk/Safety/IFC data collection and analysis, the QI/Risk/Patient Safety plans and annual evaluation.

Administration: The facility Administrators are responsible for providing qualified personnel to support the proper functioning of quality improvement and risk management activities. Administration will participate in performance improvement activities and in the assignment of priorities to the functions identified by performance improvement activities.

Key Goals:

- Assure patient care is delivered safely
- Ensure the ongoing competencies of the staff
- Support an environment that promotes process improvement, quality outcomes, reduction in risk, patient and employee safety and customer satisfaction
- Oversee reviewing and keeping current with regulatory standards (CMS,CDC, state and AAAHC)

Key Activities:

- Develop specific goals, objectives, and targets for quality improvement, risk management, infection control and radiation/medication/patient safety
- Designate responsibility to qualified individuals or an interdisciplinary committee for ensuring that quality and risk goals/objectives, as well as patient safety are achieved
- Provide adequate time and training, as well as resources, for personnel to participate in quality improvement activities and to improve patient safety
- Assure clear systems and policies/procedures for internal and external reporting of information relating to performance indicators/measures and medical/health care errors are designed
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors. Actively encouraging all staff to identify and report hazardous conditions and errors in a blame-free environment
- Establish or supporting changes in processes, functions and services to sustain improved performance and to prevent recurrence and reduce risk to patients
- Assure the effectiveness of the quality and risk management goals/objectives and contributions to improving patient safety are measured and assessed annually

Quality Improvement/ Risk/Infection Control/Patient Safety Committee: Each facility has a quality improvement committee which derives goals from the Governing Body, Medical Executive Committee, Administration, staff and other sources. Primary responsibility of this committee is to maintain a culture of patient safety throughout all patient care processes and organizational functions. This committee is interdisciplinary and includes, but not limited to the QI/Risk/IFC Manager, Facility Administrator, Medical Director and Clinical Managers. Other members such as supervising radiologist, pharmacy nurse etc will be added to the committee as indicated by the agenda. The committee is designed to provide upper management support and direction for improvement efforts.

The following staff members will be assuming the following roles for the year 2018, upon approval from the MEC and Governing Body:

Quality Improvement Committee Chair:

Risk Manager:

Infection Control Coordinator:

Patient Safety Committee Chair:

Radiation Safety Officer

Key activities:

- Establish and oversee ongoing measurement, periodic review, and improvement of key processes
- Assist in identifying opportunities for improvement and participate in QI studies. In addition conduct re-audits to assure the changes have remained effective
- Participate in Ambulatory Surgery Division quality, risk and patient safety initiatives including Best Practices
- Communicate relevant activities, as necessary, to the staff
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors
- Serve as a resource for patient safety/regulatory issues and for the regulatory component of accrediting agencies
- Provide periodic reports on quality improvement activities to Medical Executive Committee and Governing Board
- Educate staff on quality, risk and patient safety activities

Quality Studies: Quality studies will reflect the scope of services, priorities and findings from performance monitoring or other sources. Studies will address clinical, administrative, and/or cost of care issues and will be documented in the (10) step format which includes:

- State the purpose of the process improvement opportunity/purpose of the study
- Identify the goal of the study
- Description of data to be collected and established criteria
- Evidence of Data Collected
- Data analysis
- Comparison of actual data to goal
- Development of corrective action and execution timeline
- Re-measurement and monitoring to determine if actions have been achieved and improvements are sustained
- Development of additional corrective actions if needed
- Communication of results to appropriate personnel, MEC and Governing Board

Staff Education: The staff receives an orientation on quality improvement, risk management, infection control and patient/employee safety initiatives to be completed within 30 days of employment as part of new employee orientation. At least annually, a review of the process and accomplishments will be conducted through an appropriate mechanism. Clinical leaders will receive periodic training on any updates to initiatives, new statistical reporting or other information as indicated.

Ongoing Measurement: Ongoing measurement is overseen by the Quality/Risk Manager in collaboration with the Facility Administrator and Medical Director. These are outlined on the addendum to this plan.

Design of New Processes: When Las Vegas Surgery Center is considering a new process (for example, providing a new patient service, constructing a new facility, or redesigning an existing service), a multidisciplinary team will be convened to ensure that the process considers:

- The organization's mission, vision and strategic plans
- Patient and community needs
- Information about performance and outcomes of the process (including information from reference data bases)
- Current evidence based practice and research
- Current regulatory standards

Periodic Assessment and Improvement: Based on ongoing review of measurement data, this plan provides for assessment of data against historical trends and available benchmarks whenever possible. All measures are reviewed quarterly by the Quality Committee, Medical Executive Committee and Governing Board.

Assessment is automatically triggered for any of the following:

- By any sentinel event
- By important undesirable single events, which include at a minimum:
 - Credentialing or bylaw violation
 - "Close call / Near miss" event
 - Significant injury or death
 - Any significant untoward event during moderate sedation or anesthesia
 - Any serious adverse drug or medication error event
 - Any significant hazardous condition
 - Any significant infection control breach or trend
- By important undesirable patterns or trends, which include at a minimum:
 - Staffing effectiveness or clinical issues
 - Any quality measure that varies substantially from an expected range
 - When the organization's performance significantly varies below that of other ambulatory surgery settings or recognized standards

Select quality data is submitted to corporate and trended with internal benchmarks across the company. This information is shared at the facility, division and corporate level. This information is used to develop corporate wide quality and risk initiatives and for external benchmarking in the ambulatory surgery arena.

In addition to ongoing measurement, the Center may at any time proactively assess its culture of patient safety as well as specific processes of care that have been within the healthcare industry as having the potential to harm patients. Also the Center may periodically assess processes using tools provided from a variety of outside sources to identify potential risks to patients and opportunities for improvement.

ONGOING QUALITY AND RISK MANAGEMENT - PERFORMANCE MEASUREMENTS

Customer Satisfaction Surveys

- Patient surveys done after discharge (written survey, call, email)
- Post op phone calls
- Employee Surveys as designated by corporate
- Physician surveys as designated by corporate
- Patient complaints (response and corrective action)
- Physician complaints (response and corrective action)

Patient Flow

- On time start of surgical cases
- Consistent delays in surgeries
- Turn around time
- Cases pulled correctly
- Equipment issues
- Cancelled cases (pre and intra-op)

Anesthesia Care

- Conscious sedation monitoring standards are standardized and consistent
- Anesthesia Care: complication rates for general/regional, assessment and plan of care developed prior to the start of anesthesia, physiological monitoring
- Annual malignant hyperthermia drill

Pre-op Care

- Completion of One Medical Passport prior to day of procedure
- Use of anesthesia alerts to evaluate patient medical history to determine if patient a candidate for the ambulatory surgery setting
- Appropriate follow through on obtaining pre-op diagnostic studies per anesthesia guidelines and follow up on abnormal reports
- Pre op instructions
- DVT assessment –including use of SCD when indicated
- Falls Assessment
- Sleep Apnea assessment and Incentive Spirometer started on designated patient population (if applicable)

Intra-op Care and Processes

- Time Out/correct site process
- Retained foreign bodies
- Wrong sites
- Near misses / close calls
- Blood usages
- Complications

Complications

- Unexpected complications
- Post op DVT/PE
- Transfers to acute care (Direct Hospital Admits/ ER Transfers)
- Hospitalization or ED visit within 72 hours of discharge (Indirect Hospital Admits / ER visits)
- Variances of expected performance through clinical record review
- Mortality within 7 days of procedure or related to procedure.
- Falls
- Burns
- Loss of Vision
- Unplanned vitrectomy following cataract surgery

Resuscitation / Emergency Response

- Code blue drill(s) - Adult and Pediatric if there is a pediatric population
- Malignant Hyperthermia drill
- Emergent Blood drill
- Crash carts, Malignant Hyperthermia carts checked according to policy
- Lipid rescue drill

Diagnostics Results

- Pre-op diagnostic studies clinically reviewed and documented.
- Pre- and post operative diagnosis agreement

Medication Usage

- Utilize "One Source" truth for allergy documentation
- Medication Reconciliation process
- Use of Medication Administration Record (MAR) for consistency in medication documentation
- Medication errors
- Adverse drug reactions
- Appropriate labeling of high alert and look alike/sound alike medications

- Independent double checks with administration of designated high risk medications
- Controlled substance audits
- External pharmacy audits
- Surveillance of security of medications and needles
- Verbal and telephone orders are read back and verified
- Appropriate medication ordering, preparation and administration of medications.
- Utilizing approved compounding pharmacies and continual monitoring for FDA alerts.

Infection Control

- Annual infection control risk assessment (ICRA)
- Proactive influenza vaccination program
- Compliance with hand washing standards- direct observation.
- Monitor compliance with cleaning protocols
- No use of razors except for urology cases
- Appropriate timing of pre-op prophylactic antibiotic administration
- Post-op infections (rate, type of organism, environmental causes) within 30 days of surgery
- Implant monitoring for 90 days
- OSHA training during orientation and annually
- Employee, physician, allied health and patient exposures
- Appropriate sterilization processes for instrumentation (quarterly audits – HCA BoosterPak)
- Appropriate endoscopy re-processing (quarterly audits – HCA BoosterPak)
- Monitoring IUSS rates monthly
- 24/7 Monitoring of temperature and humidity of designated rooms

Provision of Care/ Medical Record Review

- Appropriate credentialing of medical staff
- Physician H&P on chart prior to start of surgery
- H&P reviewed on day of surgery and updated if indicated to include patient acceptable candidate for ASC setting
- Required elements of assessment documented
- Pain assessment on admission, during Phase I and prior to discharge
- Fall assessment during admission process and discharge
- Operative reports: timeliness, content, intra-operative progress note completion
- Appropriate monitoring during IV conscious sedation by non-anesthesia personnel
- Timely medical record completion
- Medication Reconciliation completed

Equipment

- Routine preventive maintenance
- Compliance with process of notification and removal of malfunctioning equipment.
- Initial and annual competencies
- Utilize "One Source" to verify appropriate use of equipment

Safety

- Surveillance rounds and corrective follow up on deficiencies
- Process for notifying and following through on recalls
- Periodic checks for life safety and environmental equipment
- Fire drills
- Emergency preparedness drills
- Infant/child abduction drill

- Sharps prevention program
- Incapacitated healthcare provider drill
- Active Shooter drill

Emergency Preparedness

- Develop a Hazardous Vulnerability Analysis (HVAC) grid
- Written emergency preparedness plan that incorporates community resources
- Emergency preparedness drills and critiques
- Active Shooter Drill
- Incapacitated and/or Impaired healthcare provider

Radiation Safety

- Staff and physician training in radiation safety
- Physician and staff training in use of C-arms
- Compliance with radiation safety measures- direct observation
- Appropriate use of radiology equipment and shielding
- Dosimeter badge reports

Patient Safety

- Use of two patient identifiers- direct observation
- One source truth for allergies noted and communicated
- Time out verification for procedures
- Surgical Site marking
- Appropriate use of abbreviations
- Latex allergy precautions
- Falls prevention guidelines
- DVT assessment
- Close calls
- Hand off communication

EVALUATION OF THE 2017 QUALITY PROGRAM

1. Evaluation of 2017 Quality/Risk/Patient Safety Plan

- 100% Grievances entered into Risk Management workbook **and addressed** within time frame dictated by policy in 2017. (# grievances within time frame / #total grievances entered)
- 100% staff that received annual Risk Management In-service in 2017. (#33)
- 100% compliance with 2017 Clinical Safety Improvement Program - CSIP
- 100% of the HCA High Level Disinfection & Central Sterile Processing Boosterpak deliverables met
- 100% (3) Sentinel Events in 2017 and SEA completed for each adverse event.
- List Quality Studies completed in 2017:
 - Hypertension following a nasal procedure on a specific physician
 - IUSS rates
 - Patient falls
- Comments:

2. Evaluation of 2017 Goals – met / not met (if not met – Explain)

A. Division Goals

- To reduce the number of sharp occurrences - not met.

- All FWD centers reported a sharp occurrence in 2017 – 37 total occurrences. All but one occurred in the OR.
- To reduce the number of patient falls – not met.
 - Centers reporting patient falls in 2017 have deviated from the falls prevention practices as specified in the falls prevention toolkit.
- To increase the OMP usage - met
- 100% compliance in Prophylactic IV antibiotic administration - met.
- To complete the 2017 Risk Reduction Program Initiatives. – not met.
 - All but 1 FWD ASC reported a 100% compliance.
- To meet the 2017 ASD Clinical Objectives - met.

B. Center specific Goals

- List your 2017 center specific goals here – explain if not met
- To decrease the IUSS rate by 25%. – The center decreased IUSS by 19% from 12/16 – 12/17. The center continues to order additional instruments to further reduce the percentage.
- Continue using the Infection Control Rounding Tool monthly.
- To encourage the use of One Medical Passport to increase our percentage rate to 85%. The result was 67%. This was not met due to patient population and not having sufficient staff to create the passport over the telephone.
- The Passport and the Time Out process must be followed accurately and completely.
- The process of intraocular instrumentation must be evaluated monthly using the audit form and be completed by the OR Charge nurse and Sterile Supply Technician.

2018 QUALITY / RISK GOALS

2018 ASD Clinical Agenda

- Industry leading quality and service
 - Assessment and promotion of a patient safety culture through the Culture of Safety Survey (CSIP)
 - Continued verification of clinical standards through perpetual Survey Readiness
 - Prevention of serious events through ASD wide shared learning calls (CSIP)
- Profitable growth through distinctive MD and patient relationships and value
 - Support and develop physician leaders through the Medical Directors' engagement program (CSIP)
 - Provide specific clinical guidance to expand service lines through:
 - Total Joint Replacement Program Workbook
 - Partner with local GME programs
 - Initiate Professional Performance Evaluation Program for medical staff and advanced practice providers
- Efficiency levels that continue to lead the industry
 - Facilitate safe Medication Management strategies (CSIP)
 - Ensure accurate and timely Clinical Records
 - Analysis/transparency of data through:
 - Quarterly Clinical Operations calls (Division)
 - SQI enhancements (Division)
- A well-informed response to evolving market environment
 - Assessment and support of post-operative Normothermia to reduce untoward outcomes

- Evaluate ophthalmologic outcomes through reporting and assessment of unplanned vitrectomies
- Enhance Patient Experience by utilization of a standardized patient experience of care survey
- Unparalleled development of future leaders
 - Expedite the development of new leaders through:
 - CSP and Endoscopy Reprocessing ongoing certification
 - CSG ASD Orientation (3 times: February, May, August)
 - Quality and Risk Management Manual

2018 Division Goals

- To continue to reduce the number of sharp occurrences by implementing & sustaining the practices in the sharps safety toolkit.
- To implement the Burn Prevention Toolkit division - wide.
- To complete the 2018 Clinical Safety Improvement (CSIP) Program.
- To meet the 2018 ASD Clinical Objectives

2018 Center Goals

- To continue to identify areas of opportunity to reduce the IUSS rate, and to sustain the IUSS rate \leq 10% (as per HCA recommendation).
- To complete the 2018 Clinical Safety Improvement (CSIP) Program.
- To meet the 2018 ASD Clinical Objectives
- To decrease the amount of in-direct hospital admits by 25%

PRESENT TO QI/MEC/GB - FIRST MEETING OF 2018

QUALITY IMPROVEMENT, RISK MANAGEMENT, AND PATIENT SAFETY PLAN

FLAMINGO SURGERY CENTER 2017

The mission of Flamingo Surgery Center is focused on delivering the highest quality, cost effective healthcare that effectively responds to the needs and safety of our patients by minimizing the possibility for injury or harm to our patients. We are committed to the care, dignity and improvement of human life to the patient populations we serve.

In keeping with the mission of the, Flamingo Surgery Center community, HCA initiatives, and regulatory standards for ambulatory surgical care, this plan allows for a planned, systematic, organization-wide approach to the quality improvement process, and assessing opportunities to reduce risk. This is accomplished through an effective risk and quality program, as well as a medication and radiation safety plan that are all targeted toward improving patient safety. The activities will be carried out in a collaborative and interdisciplinary manner. When identified, individual competency issues and process changes will be coordinated with management team and human resources. The overall strategies of the program include

- Improving patient safety and reducing risk to patients which includes, but not limited to medication and radiation safety, safe quality care and reducing risk of injury to patients and staff;
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety;
- Assuring that quality improvement initiatives continue to focus on high priority areas of clinical care, monitoring of process and outcome indicators; redesigning processes and systems and providing education to foster improvement;
- Positioning the Flamingo Surgery Center to achieve earning expectations and maintain effective cost-containment strategies while providing high quality of patient care, and
- Meeting the expectations of the HCA internal initiatives, as well as the external regulatory and accrediting bodies through the identification of opportunities to improve patient care, demonstration of appropriate action taken, and follow up on the effectiveness of action taken.

Strategies will be incorporated in each of the following areas to identify opportunities and set goals to achieve and sustain the desired results:

- Performance Improvement Processes
- Quality studies
- Risk Management Strategies
- Patient Safety Initiatives
- Infection Control Strategies
- Medication Safety Strategies
- Radiation Safety Initiatives

HCA Patient Safety Organization (PSO), LLC

HCA established a Patient Safety Organization, LLC in spring of 2014 in accordance with provisions of the Patient Safety and Quality Improvement Act (Public Law 109-41). The PSO is a component of its parent entity, HCA. The mission of the PSO is to conduct activities to improve patient safety and the quality of healthcare delivery. The vision is to assist participating providers in the elimination of preventable patient harm. The activities of the organization include:

- Improve patient safety and the quality of health care delivery
- Collect and analyze Patient Safety Work Product (PSWP)
- Develop and disseminate information regarding patient safety
- Utilize PSWP to encourage a culture of safety and provide assistance to effectively minimize patient risk
- Maintain procedures to preserve confidentiality and provide appropriate security of PSWP
- Utilize qualified medical personnel
- Operate a patient safety evaluation system (PSES) and provide feedback to participants of the PSO
- Utilizing the Serious Event Analysis (SEA) process to identify the root causes of adverse events

In early 2016 Flamingo Surgery Center will begin to participate as a member of the HCA Patient Safety Organization (PSO), LLC. The Administrator will serve as the designated PSO Contact and oversees all activities of the PSO for the center. The Risk/Quality Manager shall serve as the Contact Designee, and the Administrator shall serve as the alternate. The Center will provide patient safety work products (PSWP) documents as requested by the PSO. The center will receive information from the PSES to evaluate opportunities for improving patient safety and quality care. All information submitted will remain confidential within the PSO.

Quality Improvement Plan

The Center maintains an ongoing quality improvement program that has a broad scope to address administrative, clinical, and cost effective performance. The program also addresses patient outcomes, patient care processes, as well as medication, radiation and patient safety. Elements of the program include, but are not limited to a:

- Written plan that addresses the scope of health care services provided by the Center and how the quality improvement plan for these services is assessed
- Interdisciplinary QI committee for the development, implementation, review and oversight of the program. The committee has administrative, clinical and physician participation
- Set of goals and objectives that are reviewed and updated at least annually
- Quality improvement activities such as audits and studies to identify problems with processes or patient care, evaluate them, and develop action plans when indicated. The studies will be done utilizing the ten (10) step process that is current practice in quality performance improvement
- Measurement of data against internal and external benchmarking sources
- Annual reviews of the effectiveness of the program
- Periodic reports to Governing Body that encompasses a summary of the quality improvement activities, findings and process changes if indicated

Risk Management and Patient Safety

Definitions of Potential Risk Issues:

Event: A discrete, auditable and clearly defined occurrence (NQF)

Occurrence: The action, fact, or instance of something that happens synonymous with an event; An event, situation, or process that contributes to, or has the potential to contribute to, a patient or visitor injury, or degrade our ability to provide optimal patient care. Reportable occurrences can generally be divided into the following types based on severity: Sentinel events, patient and visitor injuries, [adverse events], near misses (close calls, good catches), and safety concerns. (NPSF)

Incident: Synonymous with occurrence or event. An occurrence or event that interrupts normal procedure and can precipitate an untoward or unplanned outcome, or an unusual event that occurs at the facility, such as an injury to a patient. Involved damage that is limited to parts of a unit, whether the failure disrupts the system or not. (NPSF). A patient safety event that reached the patient, whether or not the patient was harmed (NQF).

Adverse Event: Any deviation from usual medical care that causes an injury to the patient or poses a risk of harm. Events include errors, preventable adverse events, and hazards. An incident in which a patient is harmed (WHO). An injury or the risk thereof caused by medical management rather than the underlying disease. An untoward, undesirable, and usually unanticipated occurrence. An act of commission or omission arising during clinical care which causes physical or psychological injury to a patient regardless of severity, (NQF & NPSF). Any injury caused by medical care. An adverse event does not imply "error," "negligence," or poor quality care. It simply indicates that an undesirable clinical outcome resulted from some aspect of diagnosis or therapy, not an underlying disease process (AHRQ). Adverse events may be preventable or non-preventable (WHO).

Serious Preventable Adverse Events (SPAE) / Sentinel event: A sentinel event is a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches the patient and results in any of the following (HCA policy definition):

- Death
- Permanent harm
- Severe temporary harm

In the ambulatory surgical setting, an event is also considered sentinel if it is one of the following:

- Discharge of an infant to the wrong family
- Abduction of any patient receiving care, treatment, and services
- Any elopement (that is, unauthorized departure) of a patient, leading to death, permanent harm, or severe temporary harm to the patient
- Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities (ABO, Rh, other blood groups)
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any patient receiving care, treatment, and services while on site at the hospital
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor, or vendor while on site at the hospital
- Invasive procedure, including surgery, on the wrong patient, at the wrong site, or that is the wrong (unintended) procedure
- Unintended retention of a foreign object in a patient after an invasive procedure, including surgery
- Prolonged fluoroscopy with cumulative dose >1,500 rads to a single field
- Fire, flame, or unanticipated smoke, heat, or flashes occurring during an episode of patient care

Close Call / Near Misses / Good Catches: Events or situations that could have resulted in an adverse event (accident, injury, or illness), but did not, whether by chance or through timely intervention. Such events have also been referred to as "near miss" incidents. An example of a close call would be a surgery or other procedure almost performed on the wrong patient due to lapses in verification of patient identification, but caught prior to the procedure (Source: VA Patient Safety Program).

Reportable Event: Any event that is mandated to report by regulatory agencies or corporate within defined time frame. (HCA, CMS, FDA, SMDA, and/or local /state agencies).

Serious Event Analysis (SEA) : A method of problem solving that tries to identify the root causes of faults or problems. The SEA process evaluates the underlying "why's" for the variance and solve problems by attempting to identify and correct the root causes of events, as opposed to simply addressing their symptoms. By focusing on the correction on root causes, problem recurrence can be prevented. An analysis is done *after* an event has occurred. All staff members involved, as well as, the Risk Manager, physicians involved shall participate in the SEA analysis. The SEA process is typically used as a reactive method of identifying event(s) causes, revealing problems and identifying opportunities to reduce the risk of future occurrences. The SEA

action plan is reported at the quality meetings, MEC and GB meetings. In 2016 the ASD will be move toward an online program for analysis of serious events called Serious Event Analysis (SEA).

Risk Management

The Center maintains an ongoing risk management program that is designed to protect the life, safety and welfare of the patients and employees. Risk management addresses strategies from the organizational, operational, human resource and liability areas of the organization. Goals of the program include:

- Improving patient safety and reducing risk to patients
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety
- Reviewing and tracking of all variance reports and litigations for trends
- Reviewing and tracking of all adverse outcomes, near misses (close calls) or sentinel events to identify gaps or opportunities for improvement
- Maintaining a strong credentialing and privileging process and current bylaws that meet community standards
- Keeping abreast of current standards for risk management and adapting practice and policies that are compliant with standards

It is evident through the goals, activities and processes that the quality improvement and risk management programs intertwine and cross all spectrums of the organization. Quality care, as well as patient and employee safety is at the center focus of both programs. The operational linkage between Risk management, Safety, Quality and Infection Control is accomplished through the following mechanisms:

- Issues or trends identified through chart reviews, peer reviews, safety, radiation and infection control rounds are discussed and referred to the appropriate department for evaluation and/or corrective action
- Data from variances, identified trends, adverse events or any events that impact the quality or safety of patient care will be reviewed and referred to appropriate risk and leadership personnel for investigation, analysis and corrective action
- The Risk Manager will review current issues and risk reduction strategies with appropriate personnel and develop a plan of action. This action plan will be reported to MEC/GB.
- The Quality Committee will serve as the oversight committee for Patient Safety and Risk management. Medication Safety and Radiation Safety fall within a subsection of the Quality Committee and will be addressed as indicated.

These plans engage active involvement of all members of the healthcare team, as well as patients, families and physicians, addressing an environment which:

- Encourages recognition and acknowledgment of opportunities to improve quality performance and to reduce risks to patient safety
- Initiates actions to improve processes or reduce these risks
- Encourages internal reporting of what has been found and the actions taken
- Focuses on processes and system
- Minimizes individual blame or retribution for involvement in a medical/health care error; and
- Challenges leaders of the organization to be responsible for fostering a "non punitive" culture of continuous improvement, reducing risk, and creating a safe environment for patients, employees and physicians.

Medication Safety

The Regional HCA Pharmacist oversees the medication practices and processes at the center. Their duties include, but not limited to:

- Conducting medication rounds and audits providing feedback on areas of opportunities
- Collaborating with the center on choice of pharmaceutical vendors and formularies
- Collaborating with the center on policy review and development
- Participating in review of any medication error or diversion

- Assuring controlled substance ordering and monitoring is in accordance to state and federal regulations
- All relevant activities are reported through QI/MEC/GB committees

Radiation Safety

This facility utilizes radiation emitting equipment and therefore, by direction of the Governing Body/Board. Radiation Safety will be a subgroup of representatives will be included under the QI/Safety/Risk committee to report radiation safety activities. Key activities are established by the Radiation Right policies identified as CSG.MI.001 Governance and CSG.MI.003 Fluoroscopy:

- Designate an individual that is approved by MEC/GB to oversee the program
- Oversee ongoing measurement, periodic review, and improvement of key radiation safety practices and provide a quarterly report to the QI/Risk/Safety committee
- Periodic maintenance of equipment
- Maintaining exposure time logs
- Communicate relevant radiation safety activities, as necessary, to the staff.
- Serve as a resource for radiation safety as it relates to staff and patient safety/regulatory issues and for the regulatory component of accrediting agencies.
- Educate staff on radiation safety practices

Infection Control

The center conducts an annual infection control risk assessment to identify areas of opportunities to reduce the risk of infections. (See Infection Control Plan) All infection control activities are reported though QI/MEC/GB.

Peer Review

Ambulatory Surgery Centers are required by AAAHC, CMS, and other regulatory agencies to conduct quality improvement and peer review on Medical Staff and Dependent Healthcare Practitioners (DHP). Peer review activities include ongoing random review, specialty specific review and review of events / complications. Whenever possible, peer review is done by a physician of like specialty.

Whenever possible to avoid conflict of interest, peer review cases will be referred to physicians who are not affiliated with the practitioner being reviewed, and no physician will review a patient's care in which she/he has been professionally involved. Provisions are made to have cases evaluated by an outside expert when necessary.

Confidentiality

All quality improvement and peer review activities and data are considered confidential. Any requests for outside sources for any QI, Risk management, Peer Review or credentialing information or reports will be forwarded to the appropriate HCA administrative/corporate staff when indicated.

ORGANIZATION STRUCTURE AND PROCEDURE

Role of Leadership

Leaders play a key role in facilitating improvement and ensuring a safe environment. The Flamingo Surgery Center leadership includes the Governing Body, Medical Executive Committee; the facility based Medical Directors, Administrators, Risk/Quality/Safety/Infection Control designees and Clinical Managers. Leaders foster quality improvement through planning, educating, setting priorities, providing support such as time and resources, and empowering staff as appropriate.

Governing Board/Medical Executive Committee

The Board has the ultimate authority and accountability for the quality and risk programs to ensure that the quality of patient care is provided in an efficient, timely and cost-effective manner. The Governing Body provides support for the improvement strategies and delegates to the Medical Executive Committee and leaderships at each facility, the authority to perform assessment and improvement activities through

committees and teams. Quarterly, the Governing Body shall receive a report on the activities of the quality and risk management programs. These functions include, but not limited to:

- Assure QI/Risk/Radiation/Medication/Patient Safety is an integral part of the Center's objectives, plans and management structure
- Provide resources to support the QI/Risk/Patient Safety programs.
- Assure that improvements are sustained and evaluated for effectiveness
- Review and approve policies, reports, QI/Risk/Safety/IFC data collection and analysis, the QI/Risk/Patient Safety plans and annual evaluation.

Administration

The facility Administrators are responsible for providing qualified personnel to support the proper functioning of quality improvement and risk management activities. Administration will participate in performance improvement activities and in the assignment of priorities to the functions identified by performance improvement activities.

Key Goals:

- Assure patient care is delivered safely
- Ensure the ongoing competencies of the staff
- Support an environment that promotes process improvement, quality outcomes, reduction in risk, patient and employee safety and customer satisfaction
- Oversee reviewing and keeping current with regulatory standards (CMS, CDC, state and AAAHC)

Key Activities:

- Develop specific goals, objectives, and targets for quality improvement, risk management, infection control and radiation/medication/patient safety
- Designate responsibility to qualified individuals or an interdisciplinary committee for ensuring that quality and risk goals/objectives, as well as patient safety are achieved
- Provide adequate time and training, as well as resources, for personnel to participate in quality improvement activities and to improve patient safety
- Assure clear systems and policies/procedures for internal and external reporting of information relating to performance indicators/measures and medical/health care errors are designed
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors. Actively encouraging all staff to identify and report hazardous conditions and errors in a blame-free environment
- Establish or supporting changes in processes, functions and services to sustain improved performance and to prevent recurrence and reduce risk to patients
- Assure the effectiveness of the quality and risk management goals/objectives and contributions to improving patient safety are measured and assessed annually

Quality Improvement/ Risk/Infection Control/Patient Safety Committee

Each facility has a quality improvement committee which derives goals from the Governing Body, Medical Executive Committee, Administration, staff and other sources. Primary responsibility of this committee is to maintain a culture of patient safety throughout all patient care processes and organizational functions. This committee is interdisciplinary and includes, but not limited to the QI/Risk/IFC Manager, Facility Administrator, Medical Director and Clinical Managers. Other members such as supervising radiologist, pharmacy nurse etc will be added to the committee as indicated by the agenda. The committee is designed to provide upper management support and direction for improvement efforts.

The following staff members will be assuming the following roles for the year 2017, upon approval from the MEC and Governing Body:

Quality Improvement Committee Chair:

Risk Manager:

Infection Control Coordinator:

Patient Safety Committee Chair:

Radiation Safety Officer

Key activities:

- Establish and oversee ongoing measurement, periodic review, and improvement of key processes
- Assist in identifying opportunities for improvement and participate in QI studies. In addition conduct re-audits to assure the changes have remained effective
- Participate in Ambulatory Surgery Division quality, risk and patient safety initiatives including Best Practices
- Communicate relevant activities, as necessary, to the staff
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors
- Serve as a resource for patient safety/regulatory issues and for the regulatory component of accrediting agencies
- Provide periodic reports on quality improvement activities to Medical Executive Committee and Governing Board
- Educate staff on quality, risk and patient safety activities

Quality Studies

Quality studies will reflect the scope of services, priorities and findings from performance monitoring or other sources. Studies will address clinical, administrative, and/or cost of care issues and will be documented in the (10) step format which includes:

- State the purpose of the process improvement opportunity/purpose of the study
- Identify the goal of the study
- Description of data to be collected and established criteria
- Evidence of Data Collected
- Data analysis
- Comparison of actual data to goal
- Development of corrective action and execution timeline
- Re-measurement and monitoring to determine if actions have been achieved and improvements are sustained
- Development of additional corrective actions if needed
- Communication of results to appropriate personnel, MEC and Governing Board

Staff Education

The staff receives an orientation on quality improvement, risk management, infection control and patient/employee safety initiatives to be completed within 30 days of employment as part of new employee orientation. At least annually, a review of the process and accomplishments will be conducted through an appropriate mechanism. Clinical leaders will receive periodic training on any updates to initiatives, new statistical reporting or other information as indicated.

Ongoing Measurement

Ongoing measurement is overseen by the Quality/Risk Manager in collaboration with the Facility Administrator and Medical Director. These are outlined on the addendum to this plan.

Design of New Processes

When Flamingo Surgery Center is considering a new process (for example, providing a new patient service, constructing a new facility, or redesigning an existing service), a multidisciplinary team will be convened to ensure that the process considers:

- The organization's mission, vision and strategic plans
- Patient and community needs
- Information about performance and outcomes of the process (including information from reference data bases)
- Current evidence based practice and research
- Current regulatory standards

Periodic Assessment and Improvement

Based on ongoing review of measurement data, this plan provides for assessment of data against historical trends and available benchmarks whenever possible. All measures are reviewed quarterly by the Quality Committee, Medical Executive Committee and Governing Board.

Assessment is automatically triggered for any of the following:

- By any sentinel event
- By important undesirable single events, which include at a minimum:
 - Credentialing or bylaw violation
 - "Close call / Near miss" event
 - Significant injury or death
 - Any significant untoward event during moderate sedation or anesthesia
 - Any serious adverse drug or medication error event
 - Any significant hazardous condition
 - Any significant infection control breach or trend
- By important undesirable patterns or trends, which include at a minimum:
 - Staffing effectiveness or clinical issues
 - Any quality measure that varies substantially from an expected range
 - When the organization's performance significantly varies below that of other ambulatory surgery settings or recognized standards

Select quality data is submitted to corporate and trended with internal benchmarks across the company. This information is shared at the facility, division and corporate level. This information is used to develop corporate wide quality and risk initiatives and for external benchmarking in the ambulatory surgery arena.

In addition to ongoing measurement, the Center may at any time proactively assess its culture of patient safety as well as specific processes of care that have been within the healthcare industry as having the potential to harm patients. Also the Center may periodically assess processes using tools provided from a variety of outside sources to identify potential risks to patients and opportunities for improvement.

ONGOING QUALITY AND RISK MANAGEMENT PERFORMANCE MEASUREMENTS

Customer Satisfaction Surveys

- Patient surveys done after discharge (written survey, call, email)
- Post op phone calls
- Employee Surveys as designated by corporate
- Physician surveys as designated by corporate
- Patient complaints (response and corrective action)
- Physician complaints (response and corrective action)

Patient Flow

- On time start of surgical cases
- Consistent delays in surgeries
- Turn around time
- Cases pulled correctly
- Equipment issues
- Cancelled cases (pre and intra-op)

Anesthesia Care

- Conscious sedation monitoring standards are standardized and consistent
- Anesthesia Care: complication rates for general/regional, assessment and plan of care developed prior to the start of anesthesia, physiological monitoring
- Annual malignant hyperthermia drill

Pre-op Care

- Completion of One Medical Passport prior to day of procedure
- Appropriate follow through on obtaining pre-op diagnostic studies per anesthesia guidelines and follow up on abnormal reports
- Pre op instructions
- DVT assessment –including use of SCD when indicated
- Falls Assessment
- Sleep Apnea assessment and Incentive Spirometer started on designated patient population (if applicable)

Intra-op Care and Processes

- Time Out/correct site process
- Retained foreign bodies
- Wrong sites
- Near misses / close calls
- Blood usages
- Complications

Complications

- Unexpected complications
- Post op DVT/PE
- Transfers to acute care (Direct Hospital Admits/ ER Transfers)
- Hospitalization or ED visit within 72 hours of discharge (Indirect Hospital Admits / ER visits)
- Variances of expected performance through clinical record review
- Mortality within 7 days of procedure or related to procedure.
- Falls
- Burns
- Loss of Vision

Resuscitation / Emergency Response

- Code blue drill(s) - Adult and Pediatric if there is a pediatric population
- Malignant Hyperthermia drill
- Emergent Blood drill
- Crash carts, Malignant Hyperthermia carts checked according to policy

Diagnostics Results

- Pre-op diagnostic studies clinically reviewed and documented.

- Pre- and post operative diagnosis agreement

Medication Usage

- Utilize "One Source" truth for allergy documentation
- Medication Reconciliation process
- Use of Medication Administration Record (MAR) for consistency in medication documentation
- Medication errors
- Adverse drug reactions
- Appropriate labeling of high alert and look alike/sound alike medications
- Independent double checks with administration of designated high risk medications
- Controlled substance audits
- External pharmacy audits
- Surveillance of security of medications and needles
- Verbal and telephone orders are read back and verified
- Appropriate medication ordering, preparation and administration of medications.
- Utilizing approved compounding pharmacies and continual monitoring for FDA alerts.

Infection Control

- Annual infection control risk assessment (ICRA)
- Proactive influenza vaccination program
- Compliance with hand washing standards- direct observation.
- Monitor compliance with cleaning protocols
- No use of razors except for urology cases
- Appropriate timing of pre-op prophylactic antibiotic administration
- Post-op infections (rate, type of organism, environmental causes) within 30 days of surgery
- Implant monitoring for 90 days
- OSHA training during orientation and annually
- Employee, physician, allied health and patient exposures
- Appropriate sterilization processes for instrumentation (quarterly audits – HCA BoosterPak)
- Appropriate endoscopy re-processing if applicable (quarterly audits – HCA BoosterPak)
- Monitoring IUSS rates
- 24/7 Monitoring of temperature and humidity of designated rooms

Provision of Care/ Medical Record Review

- Appropriate credentialing of medical staff
- Physician H&P on chart prior to start of surgery
- H&P reviewed on day of surgery and updated if indicated to include patient acceptable candidate for ASC setting
- Required elements of assessment documented
- Pain assessment on admission, during Phase I and prior to discharge
- Fall assessment during admission process and discharge
- Operative reports: timeliness, content, intra-operative progress note completion
- Appropriate monitoring during IV conscious sedation by non-anesthesia personnel (if applicable)
- Timely medical record completion
- Medication Reconciliation completed

Equipment

- Routine preventive maintenance
- Compliance with process of notification and removal of malfunctioning equipment.
- Initial and annual competencies

Safety

- Surveillance rounds and corrective follow up on deficiencies
- Process for notifying and following through on recalls
- Periodic checks for life safety and environmental equipment
- Fire drills
- Emergency preparedness drills
- Infant/child abduction drill
- Sharps prevention program
- Incapacitated healthcare provider drill
- Active Shooter drill

Radiation Safety

- Staff and physician training in radiation safety
- Physician and staff training in use of C-arms
- Compliance with radiation safety measures- direct observation
- Appropriate use of radiology equipment and shielding
- Dosimeter badge reports

Patient Safety

- Use of two patient identifiers- direct observation
- One source truth for allergies noted and communicated
- Time out verification for procedures
- Surgical Site marking
- Appropriate use of abbreviations
- Latex allergy precautions
- Falls prevention guidelines
- DVT assessment
- Close calls
- Hand off communication

EVALUATION OF THE 2016 QUALITY PROGRAM

1. Evaluation of 2016 Quality/Risk/Patient Safety Plan

- 0 % Grievances entered into Risk Management workbook **and addressed** within time frame dictated by policy in 2016. (# grievances within time frame / #total grievances entered)
- 100 % staff that received annual Risk Management In-service in 2016. (# staff with in-service/ total number staff at time of in-service)
- 100 % compliance with 2016 Risk Reduction Program (#components completed/#components required)
- 100 % of the HCA High Level Disinfection & Central Sterile Processing Boosterpak deliverables met
- 1 (#) Sentinel Events in 2016 and SEA completed.
- Comments:

2. Goals – met / not met (if not met – Explain)

Division Goals

- To continue to reduce the number of sharp occurrences. (In 2014 the Division reported 20 occurrences and in 2015 the Division reported 17 sharp occurrences)
- To continue to reduce the number of falls. (In 2014 there were 25 falls reported within the division and in 2015, with the implementation of the falls toolkit, the falls reported decreased to 14 reported falls in 2015.
- To complete the 2016 Risk Reduction Program Initiatives.
- To meet the 2016 ASD Clinical Objectives.

Center specific Goals

- All 2016 Center specific goals have been met

2017 QUALITY / RISK GOALS

2017 Clinical Agenda -- see attached.

2017 Division Goals

- To continue to reduce the number of sharp occurrences by implementing the sharps safety toolkit. In 2016 the Division reported an increase in sharp occurrences, in 2015 the Division reported 15 sharp occurrences.
- To decrease the Direct Hospital Admission rate per thousand by identifying commonalities/trends and increasing the use of One Medical Passport at the centers
- To sustain 100% compliance with IV Prophylactic Antibiotic Administration during 2017
- To complete the 2017 Clinical Safety Improvement (CSIP) Plan (Risk Reduction Program Initiatives).
- To meet the 2017 ASD Clinical Objectives

• **2017 Center Goals**

- **To reduce falls**
- **To reduce the amount of IUSS**
- **To continue to monitor the processing time of intraocular instruments**
- **To complete the CSIP components by their deadlines**
- **Re-Syndication of Partnerships**

QUALITY IMPROVEMENT, RISK MANAGEMENT, AND PATIENT SAFETY PLAN

Sahara Surgery Center 2018

The mission of Sahara Surgery Center is focused on delivering the highest quality, cost effective healthcare that effectively responds to the needs and safety of our patients by minimizing the possibility for injury or harm to our patients. We are committed to the care, dignity and improvement of human life to the patient populations we serve.

In keeping with the mission of the Sahara Surgery Center, community, HCA initiatives, and regulatory standards for ambulatory surgical care, this plan allows for a planned, systematic, organization-wide approach to the quality improvement process, and assessing opportunities to reduce risk. This is accomplished through an effective risk and quality program, as well as a medication and radiation safety plan that are all targeted toward improving patient safety. The activities will be carried out in a collaborative and interdisciplinary manner. When identified, individual competency issues and process changes will be coordinated with management team and human resources. The overall strategies of the program include

- Improving patient safety and reducing risk to patients which includes, but not limited to medication and radiation safety, safe quality care and reducing risk of injury to patients and staff;
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety;
- Assuring that quality improvement initiatives continue to focus on high priority areas of clinical care, monitoring of process and outcome indicators; redesigning processes and systems and providing education to foster improvement;
- Positioning the Sahara Surgery Center to achieve earning expectations and maintain effective cost-containment strategies while providing high quality of patient care, and
- Meeting the expectations of the HCA internal initiatives, as well as the external regulatory and accrediting bodies through the identification of opportunities to improve patient care, demonstration of appropriate action taken, and follow up on the effectiveness of action taken.

Strategies will be incorporated in each of the following areas to identify opportunities and set goals to achieve and sustain the desired results:

- Performance Improvement Processes
- Quality studies
- Risk Management Strategies
- Patient Safety Initiatives
- Infection Control Strategies
- Medication Safety Strategies
- Radiation Safety Initiatives

HCA Patient Safety Organization (PSO), LLC

HCA established a Patient Safety Organization, LLC in spring of 2014 in accordance with provisions of the Patient Safety and Quality Improvement Act (Public Law 109-41). The PSO is a component of its parent entity, HCA. The mission of the PSO is to conduct activities to improve patient safety and the quality of healthcare delivery. The vision is to assist participating providers in the elimination of preventable patient harm. The activities of the organization include:

- Improve patient safety and the quality of health care delivery
- Collect and analyze Patient Safety Work Product (PSWP)

- Develop and disseminate information regarding patient safety
- Utilize PSWP to encourage a culture of safety and provide assistance to effectively minimize patient risk
- Maintain procedures to preserve confidentiality and provide appropriate security of PSWP
- Utilize qualified medical personnel
- Operate a patient safety evaluation system (PSES) and provide feedback to participants of the PSO
- Utilizing the Serious Event Analysis (SEA) process to identify the root causes of adverse event

In early 2016 Sahara Surgery Center began to participate as a member of the HCA Patient Safety Organization (PSO), LLC. The Administrator serves as the designated PSO Contact and oversees all activities of the PSO for the center. The Risk Manager serves as the Contact Designee, and the Administrator serves as the alternative. The Center will provide patient safety work products (PSWP) documents as requested by the PSO. The center will receive information from the PSES to evaluate opportunities for improving patient safety and quality care. All information submitted will remain confidential within the PSO.

Quality Improvement Plan

The Center maintains an ongoing quality improvement program that has a broad scope to address administrative, clinical, and cost effective performance. The program also addresses patient outcomes, patient care processes, as well as medication, radiation and patient safety. Elements of the program include, but are not limited to a:

- Written plan that addresses the scope of health care services provided by the Center and how the quality improvement plan for these services is assessed
- Interdisciplinary QI committee for the development, implementation, review and oversight of the program. The committee has administrative, clinical and physician participation
- Set of goals and objectives that are reviewed and updated at least annually
- Quality improvement activities such as audits and studies to identify problems with processes or patient care, evaluate them and develop action plans when indicated. The studies will be done utilizing the ten (10) step process that is current practice in quality performance improvement
- Measurement of data against internal and external benchmarking sources
- Annual reviews of the effectiveness of the program
- Periodic reports to Governing Body that encompasses a summary of the quality improvement activities, findings and process changes if indicated

Risk Management and Patient Safety

Definitions of Potential Risk Issues:

Event: A discrete, auditable and clearly defined occurrence (NQF)

Occurrence: The action, fact, or instance of something that happens synonymous with an event; An event, situation, or process that contributes to, or has the potential to contribute to, a patient or visitor injury, or degrade our ability to provide optimal patient care. Reportable occurrences can generally be divided into the following types based on severity: Sentinel events, patient and visitor injuries, [adverse events], near misses (close calls, good catches), and safety concerns (NPSF).

Incident: Synonymous with occurrence or event. An occurrence or event that interrupts normal procedure and can precipitate an untoward or unplanned outcome, or an unusual event that occurs at the facility, such as an injury to a patient. Involved damage that is limited to parts of a unit, whether the failure disrupts the system or not. (NPSF). A patient safety event that reached the patient, whether or not the patient was harmed (NQF).

Adverse Event: Any deviation from usual medical care that causes an injury to the patient or poses a risk of harm. Events include errors, preventable adverse events and hazards. An incident in which a patient is

harmed (WHO). An injury or the risk thereof caused by medical management rather than the underlying disease. An untoward, undesirable, and usually unanticipated occurrence. An act of commission or omission arising during clinical care which causes physical or psychological injury to a patient regardless of severity (NQF & NPSF). Any injury caused by medical care. An adverse event does not imply "error," "negligence," or poor quality care. It simply indicates that an undesirable clinical outcome resulted from some aspect of diagnosis or therapy, not an underlying disease process (AHRQ). Adverse events may be preventable or non-preventable (WHO).

Serious Preventable Adverse Events (SPAEE) / Sentinel event: A sentinel event is a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches the patient and results in any of the following (HCA policy definition):

- Death
- Permanent harm
- Severe temporary harm

In the ambulatory surgical setting, an event is also considered sentinel if it is one of the following:

- Discharge of an infant to the wrong family
- Abduction of any patient receiving care, treatment and services
- Any elopement (that is, unauthorized departure) of a patient, leading to death, permanent harm, or severe temporary harm to the patient
- Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities (ABO, Rh, other blood groups)
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any patient receiving care, treatment and services while on site at the surgery center
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor, or vendor while on site at the surgery center
- Invasive procedure, including surgery, on the wrong patient, at the wrong site, or that is the wrong (unintended) procedure
- Unintended retention of a foreign object in a patient after an invasive procedure, including surgery
- Prolonged fluoroscopy with cumulative dose >1,500 rads to a single field
- Fire, flame, or unanticipated smoke, heat, or flashes occurring during an episode of patient care

Close Call / Near Misses / Good Catches: Events or situations that could have resulted in an adverse event (accident, injury, or illness), but did not, whether by chance or through timely intervention. Such events have also been referred to as "near miss" incidents. An example of a close call would be a surgery or other procedure almost performed on the wrong patient due to lapses in verification of patient identification, but caught prior to the procedure (Source: VA Patient Safety Program).

Reportable Event: Any event that is mandated to report by regulatory agencies or corporate within defined time frame. (HCA, CMS, FDA, SMDA, and/or local /state agencies).

Serious Event Analysis (SEA): A method of problem solving that tries to identify the root causes of faults or problems. The SEA process evaluates the underlying "why's" for the variance and solve problems by attempting to identify and correct the root causes of events, as opposed to simply addressing their symptoms. By focusing on the correction of root causes, problem recurrence can be prevented. An analysis is done *after* an event has occurred. All staff members involved, as well as, the Risk Manager, physicians involved shall participate in the SEA analysis. The SEA process is typically used as a reactive method of identifying event(s) causes, revealing problems and identifying opportunities to reduce the risk of future occurrences. The SEA action plan is reported at the quality meetings, MEC and GB meetings. In 2016 the ASD moved toward an online program for analysis of serious events called Serious Event Analysis (SEA).

Risk Management: The Center maintains an ongoing risk management program that is designed to protect the life, safety and welfare of the patients and employees. Risk management addresses strategies from the

organizational, operational, human resource and liability areas of the organization. Goals of the program include:

- Improving patient safety and reducing risk to patients
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff and medical staff are able to identify and manage actual or potential risks to patient safety
- Reviewing and tracking of all variance reports and litigations for trends
- Reviewing and tracking of all adverse outcomes, near misses (close calls) or sentinel events to identify gaps or opportunities for improvement
- Maintaining a strong credentialing and privileging process and current bylaws that meet community standards
- Keeping abreast of current standards for risk management and adapting practice and policies that are compliant with standards

It is evident through the goals, activities and processes that the quality improvement and risk management programs intertwine and cross all spectrums of the organization. Quality care, as well as patient and employee safety is at the center focus of both programs. The operational linkage between Risk management, Safety, Quality and Infection Control is accomplished through the following mechanisms:

- Issues or trends identified through chart reviews, peer reviews, safety, radiation and infection control rounds are discussed and referred to the appropriate department for evaluation and/or corrective action
- Data from variances , identified trends, adverse events or any events that impact the quality or safety of patient care will be reviewed and referred to appropriate risk and leadership personnel for investigation, analysis and corrective action
- The Risk Manager will review current issues and risk reduction strategies with appropriate personnel and develop a plan of action. This action plan will be reported to MEC/GB.
- The Quality Committee will serve as the oversight committee for Patient Safety and Risk management. Medication Safety and Radiation Safety fall within a subsection of the Quality Committee and will be addressed as indicated.

These plans engage active involvement of all members of the healthcare team, as well as patients, families and physicians, addressing an environment which:

- Encourages recognition and acknowledgment of opportunities to improve quality performance and to reduce risks to patient safety
- Initiates actions to improve processes or reduce these risks
- Encourages internal reporting of what has been found and the actions taken
- Focuses on processes and system
- Minimizes individual blame or retribution for involvement in a medical/health care error; and
- Challenges leaders of the organization to be responsible for fostering a “non punitive” culture of continuous improvement, reducing risk, and creating a safe environment for patients, employees and physicians.

Medication Safety: The Regional HCA Pharmacist oversees the medication practices and processes at the center. Their duties include, but are not limited to:

- Conducting medication rounds and audits providing feedback on areas of opportunities. This includes validation of safe medication practices.
- Collaborating with the center on choice of pharmaceutical vendors and formularies
- Collaborating with the center on policy review and development
- Participating in review of any medication error or diversion
- Assuring controlled substance ordering and monitoring is in accordance with state and federal regulations

All relevant activities are reported through QI/MEC/GB committees

Radiation Safety: This facility utilizes radiation emitting equipment and therefore, by direction of the Governing Body/Board. Radiation Safety will be a subgroup of representatives will be included under the QI/Safety/Risk committee to report radiation safety activities. Key activities are established by the Radiation Right policies identified as CSG.MI.001 Governance and CSG.MI.003 Fluoroscopy:

- Designate an individual that is approved by MEC/GB to oversee the program
- Oversee ongoing measurement, periodic review, and improvement of key radiation safety practices and provide a quarterly report to the QI/Risk/Safety committee
- Periodic maintenance of equipment
- Maintaining exposure time logs
- Communicate relevant radiation safety activities, as necessary, to the staff.
- Serve as a resource for radiation safety as it relates to staff and patient safety/regulatory issues and for the regulatory component of accrediting agencies.
- Educate staff on radiation safety practices

Infection Control: The center conducts an **annual** infection control risk assessment (ICRA) to identify areas of opportunities to reduce the risk of infections. The ICRA is completed annually and reviewed annually by QI/MEC/GB. (See Infection Control Plan) All infection control activities are reported though QI/MEC/GB.

Peer Review: Ambulatory Surgery Centers are required by AAAHC, CMS, and other regulatory agencies to conduct quality improvement and peer review on Medical Staff and Dependent Healthcare Practitioners (DHP). Peer review activities include ongoing random review, specialty specific review and review of events / complications. Whenever possible, peer review is done by a physician of like specialty.

Whenever possible to avoid conflict of interest, peer review cases will be referred to physicians who are not affiliated with the practitioner being reviewed, and no physician will review a patient's care in which she/he has been professionally involved. Provisions are made to have cases evaluated by an outside expert when necessary.

Confidentiality: All quality improvement and peer review activities and data are considered confidential. Any requests for outside sources for any QI, Risk management, Peer Review or credentialing information or reports will be forwarded to the appropriate HCA administrative/corporate staff when indicated.

ORGANIZATION STRUCTURE AND PROCEDURE

Role of Leadership: Leaders play a key role in facilitating improvement and ensuring a safe environment. Sahara Surgery Center leadership includes the Governing Body, Medical Executive Committee; the facility based Medical Directors, Administrators, Risk/Quality/Safety/Infection Control designees and Clinical Managers. Leaders foster quality improvement through planning, educating, setting priorities, providing support such as time and resources, and empowering staff as appropriate.

Governing Board/Medical Executive Committee: The Board has the ultimate authority and accountability for the quality and risk programs to ensure that the quality of patient care is provided in an efficient, timely and cost-effective manner. The Governing Body provides support for the improvement strategies and delegates to the Medical Executive Committee and leaderships at each facility, the authority to perform assessment and improvement activities through committees and teams. Quarterly, the Governing Body shall receive a report on the activities of the quality and risk management programs.

These functions include, but not limited to:

- Assure QI/Risk/Radiation/Medication/Patient Safety is an integral part of the Center's objectives, plans and management structure
- Provide resources to support the QI/Risk/Patient Safety programs.
- Assure that improvements are sustained and evaluated for effectiveness

- Review and approve policies, reports, QI/Risk/Safety/IFC data collection and analysis, the QI/Risk/Patient Safety plans and annual evaluation.

Administration: The facility Administrator is responsible for providing qualified personnel to support the proper functioning of quality improvement and risk management activities. Administration will participate in performance improvement activities and in the assignment of priorities to the functions identified by performance improvement activities.

Key Goals:

- Assure patient care is delivered safely
- Ensure the ongoing competencies of the staff
- Support an environment that promotes process improvement, quality outcomes, reduction in risk, patient and employee safety and customer satisfaction
- Oversee reviewing and keeping current with regulatory standards (CMS,CDC, state and AAAHC)

Key Activities:

- Develop specific goals, objectives, and targets for quality improvement, risk management, infection control and radiation/medication/patient safety
- Designate responsibility to qualified individuals or an interdisciplinary committee for ensuring that quality and risk goals/objectives, as well as patient safety are achieved
- Provide adequate time and training, as well as resources, for personnel to participate in quality improvement activities and to improve patient safety
- Assure clear systems and policies/procedures for internal and external reporting of information relating to performance indicators/measures and medical/health care errors are designed
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors. Actively encouraging all staff to identify and report hazardous conditions and errors in a blame-free environment
- Establish or supporting changes in processes, functions and services to sustain improved performance and to prevent recurrence and reduce risk to patients
- Assure the effectiveness of the quality and risk management goals/objectives and contributions to improving patient safety are measured and assessed annually

Quality Improvement/ Risk/Infection Control/Patient Safety Committee: Each facility has a quality improvement committee which derives goals from the Governing Body, Medical Executive Committee, Administration, staff and other sources. Primary responsibility of this committee is to maintain a culture of patient safety throughout all patient care processes and organizational functions. This committee is interdisciplinary and includes, but not limited to the QI/Risk/IFC Manager, Facility Administrator, Medical Director and Clinical Managers. Other members such as supervising radiologist, pharmacy nurse etc will be added to the committee as indicated by the agenda. The committee is designed to provide upper management support and direction for improvement efforts.

The following staff members will be assuming the following roles for the year 2018, upon approval from the MEC and Governing Body:

- | | |
|--------------------------------------|--------------|
| Quality Improvement Committee Chair: | Name Here RN |
| Risk Manager: | Name Here RN |
| Infection Control Coordinator: | Name Here RN |
| Patient Safety Committee Chair: | Name Here RN |

Key activities:

- Establish and oversee ongoing measurement, periodic review, and improvement of key processes
- Assist in identifying opportunities for improvement and participate in QI studies. In addition conduct re-audits to assure the changes have remained effective
- Participate in Ambulatory Surgery Division quality, risk and patient safety initiatives including Best Practices
- Communicate relevant activities, as necessary, to the staff
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors
- Serve as a resource for patient safety/regulatory issues and for the regulatory component of accrediting agencies
- Provide periodic reports on quality improvement activities to Medical Executive Committee and Governing Board
- Educate staff on quality, risk and patient safety activities

Quality Studies: Quality studies will reflect the scope of services, priorities and findings from performance monitoring or other sources. Studies will address clinical, administrative, and/or cost of care issues and will be documented in the (10) step format which includes:

- State the purpose of the process improvement opportunity/purpose of the study
- Identify the goal of the study
- Description of data to be collected and established criteria
- Evidence of Data Collected
- Data analysis
- Comparison of actual data to goal
- Development of corrective action and execution timeline
- Re-measurement and monitoring to determine if actions have been achieved and improvements are sustained
- Development of additional corrective actions if needed
- Communication of results to appropriate personnel, MEC and Governing Board

Staff Education: The staff receives an orientation on quality improvement, risk management, infection control and patient/employee safety initiatives to be completed within 30 days of employment as part of new employee orientation. At least annually, a review of the process and accomplishments will be conducted through an appropriate mechanism. Clinical leaders will receive periodic training on any updates to initiatives, new statistical reporting or other information as indicated.

Ongoing Measurement: Ongoing measurement is overseen by the Quality/Risk Manager in collaboration with the Facility Administrator and Medical Director. These are outlined on the addendum to this plan.

Design of New Processes: When Sahara Surgery Center is considering a new process (for example, providing a new patient service, constructing a new facility, or redesigning an existing service), a multidisciplinary team will be convened to ensure that the process considers:

- The organization's mission, vision and strategic plans
- Patient and community needs
- Information about performance and outcomes of the process (including information from reference data bases)
- Current evidence based practice and research
- Current regulatory standards

Periodic Assessment and Improvement: Based on ongoing review of measurement data, this plan provides for assessment of data against historical trends and available benchmarks whenever possible. All measures are reviewed quarterly by the Quality Committee, Medical Executive Committee and Governing Board.

Assessment is automatically triggered by any of the following:

- Any sentinel event
- By important undesirable single events, which include at a minimum:
 - Credentialing or bylaw violation
 - “Close call / Near miss” event
 - Significant injury or death
 - Any significant untoward event during moderate sedation or anesthesia
 - Any serious adverse drug or medication error event
 - Any significant hazardous condition
 - Any significant infection control breach or trend
- By important undesirable patterns or trends, which include at a minimum:
 - Staffing effectiveness or clinical issues
 - Any quality measure that varies substantially from an expected range
 - When the organization’s performance significantly varies below that of other ambulatory surgery settings or recognized standards

Select quality data is submitted to corporate and trended with internal benchmarks across the company. This information is shared at the facility, division and corporate level. This information is used to develop corporate wide quality and risk initiatives and for external benchmarking in the ambulatory surgery arena.

In addition to ongoing measurement, the Center may at any time proactively assess its culture of patient safety as well as specific processes of care that have been within the healthcare industry as having the potential to harm patients. Also the Center may periodically assess processes using tools provided from a variety of outside sources to identify potential risks to patients and opportunities for improvement.

ONGOING QUALITY AND RISK MANAGEMENT - PERFORMANCE MEASUREMENTS

Customer Satisfaction Surveys

- Patient surveys done after discharge (written survey, call, email)
- Post op phone calls
- Employee Surveys as designated by corporate
- Physician surveys as designated b corporate
- Patient complaints (response and corrective action)
- Physician complaints (response and corrective action)

Patient Flow

- On time start of surgical cases
- Consistent delays in surgeries
- Turn around time
- Cases pulled correctly
- Equipment issues
- Cancelled cases (pre and intra-op)

Anesthesia Care

- Conscious sedation monitoring standards are standardized and consistent
- Anesthesia Care: complication rates for general/regional, assessment and plan of care developed prior to the start of anesthesia, physiological monitoring
- Annual malignant hyperthermia drill

Pre-op Care

- Completion of One Medical Passport prior to day of procedure
- Use of anesthesia alerts to evaluate patient medical history to determine if a patient is a candidate for the ambulatory surgery setting
- Appropriate follow through on obtaining pre-op diagnostic studies per anesthesia guidelines and follow up on abnormal reports
- Pre op instructions
- DVT assessment –including use of SCD when indicated
- Falls Assessment

Intra-op Care and Processes

- Time Out/correct site process
- Retained foreign bodies
- Wrong sites
- Near misses / close calls
- Blood usages
- Complications

Complications

- Unexpected complications
- Post op DVT/PE
- Transfers to acute care (Direct Hospital Admits/ ER Transfers)
- Hospitalization or ED visit within 72 hours of discharge (Indirect Hospital Admits / ER visits)
- Variances of expected performance through clinical record review
- Mortality within 7 days of procedure or related to procedure.
- Falls
- Burns
- Loss of Vision

Resuscitation / Emergency Response

- Code blue drill(s) - Adult and Pediatric
- Malignant Hyperthermia drill
- Emergent Blood drill
- Lipid rescue drill
- Crash carts, Malignant Hyperthermia carts checked according to policy

Diagnostics Results

- Pre-op diagnostic studies clinically reviewed and documented.
- Pre- and post operative diagnosis agreement

Medication Usage

- Utilize “One Source” of truth for allergy documentation
- Medication Reconciliation process
- Use of Medication Administration Record (MAR) for consistency in medication documentation
- Medication errors
- Adverse drug reactions
- Appropriate labeling of high alert and look alike/sound alike medications
- Independent double checks with administration of designated high risk medications
- Controlled substance audits
- External pharmacy audits

- Surveillance of security of medications and needles
- Verbal and telephone orders are read back and verified
- Appropriate medication ordering, preparation and administration of medications.
- Utilizing approved compounding pharmacies and continual monitoring for FDA alerts.

Infection Control

- Annual infection control risk assessment (ICRA)
- Proactive influenza vaccination program
- Compliance with hand washing standards- direct observation.
- Monitor compliance with cleaning protocols
- No use of razors
- Appropriate timing of pre-op prophylactic antibiotic administration
- Post-op infections (rate, type of organism, environmental causes) within 30 days of surgery
- Implant monitoring for 90 days
- OSHA training during orientation and annually
- Employee, physician, allied health and patient exposures
- Appropriate sterilization processes for instrumentation (quarterly audits – HCA BoosterPak)
- Monitoring IUSS rates monthly
- 24/7 Monitoring of temperature and humidity of designated rooms

Provision of Care/ Medical Record Review

- Appropriate credentialing of medical staff
- Physician H&P on chart prior to start of surgery
- H&P reviewed on day of surgery and updated if indicated to include patient acceptable candidate for ASC setting
- Required elements of assessment documented
- Pain assessment on admission, during Phase I recovery and prior to discharge
- Fall assessment during admission process and discharge
- Operative reports: timeliness, content, intra-operative progress note completion
- Appropriate monitoring during IV conscious sedation by non-anesthesia personnel
- Timely medical record completion
- Medication Reconciliation completed

Equipment

- Routine preventive maintenance
- Compliance with process of notification and removal of malfunctioning equipment.
- Initial and annual competencies

Safety

- Surveillance rounds and corrective follow up on deficiencies
- Process for notifying and following through on recalls
- Periodic checks for life safety and environmental equipment
- Fire drills
- Emergency preparedness drills
- Infant/child abduction drill
- Sharps prevention program
- Incapacitated healthcare provider drill
- Active Shooter drill

Emergency Preparedness

- Develop a Hazardous Vulnerability Analysis (HVAC) grid

- Written emergency preparedness plan that incorporates community resources

Radiation Safety

- Staff and physician training in radiation safety
- Physician and staff training in use of C-arms
- Compliance with radiation safety measures- direct observation
- Appropriate use of radiology equipment and shielding
- Dosimetry badge reports

Patient Safety

- Use of two patient identifiers- direct observation
- One source of truth for allergies noted and communicated
- Time out verification for procedures
- Surgical Site marking
- Appropriate use of abbreviations
- Latex allergy precautions
- Falls prevention guidelines
- DVT assessment
- Close calls
- Hand off communication

EVALUATION OF THE 2017 QUALITY PROGRAM

1. Evaluation of 2017 Quality/Risk/Patient Safety Plan

- 100% Grievances entered into Risk Management workbook **and addressed** within time frame dictated by policy in 2017.
- 89 % staff that received annual Risk Management In-service in 2017.
- 100 % compliance with 2017 Clinical Safety Improvement Program - CSIP
- 100 % of the HCA High Level Disinfection & Central Sterile Processing Boosterpak deliverables met
- 0 (#) Sentinel Events in 2017.
- List Quality Studies completed in 2017:
 - Daily OR Narcotic Logs
 - "OR IN" Time
 - Throat Pack Insertion and Removal for Dental Procedures
- Comments: Completion of Daily OR Narcotic Logs study in the first quarter of 2018.

2. Evaluation of 2017 Goals – met / not met (if not met – Explain)

A. Division Goals

- To continue to reduce the number of sharp occurrences by implementing the sharps safety toolkit.
All FWD centers reported a sharp occurrence in 2017 – 37 total occurrences. All but one occurred in the OR. Sahara Surgery Center had a 40% decrease in sharps occurrences. Met.
- To decrease the Direct Hospital Admission rate per thousand by identifying commonalities/trends and increasing the use of One Medical Passport at the centers. Sahara Surgery Center had a 73% decrease in Direct Hospital Admissions. Met. Staff has been educated to encourage patients during the pre-op phone call, to go online to complete One

Medical Passport. Sahara Surgery Center has 100% compliance with the use of One Medical Passport.

- To sustain 100% compliance with IV Prophylactic Antibiotic Administration during 2017. Met.
- To complete the 2017 Clinical Safety Improvement (CSIP) Plan (Risk Reduction Program Initiatives). Met.
- To meet the 2017 ASD Clinical Objectives. Met.

B. Center specific Goals

- Update the Central Sterile Processing Department by adding an instrument washer/disinfector. Not met. Washer not purchased.
- Improve temperature and humidity monitoring in all required departments. Met.
- Enroll a PACU staff member in the AORN Perioperative 101 for ASC's course. Not met. New OR personnel were hired. The PACU staff member who expressed an interest in the program was needed to staff Pain/PACU. He also had an extended (5 week) vacation in 2017.

2018 QUALITY / RISK GOALS

2018 ASD Clinical Agenda

- Industry leading quality and service
 - Assessment and promotion of a patient safety culture through the Culture of Safety Survey (CSIP)
 - Continued verification of clinical standards through perpetual Survey Readiness
 - Prevention of serious events through ASD wide shared learning calls (CSIP)
- Profitable growth through distinctive MD and patient relationships and value
 - Support and develop physician leaders through the Medical Directors' engagement program (CSIP)
 - Provide specific clinical guidance to expand service lines through:
 - Total Joint Replacement Program Workbook
 - Partner with local GME programs
 - Initiate Professional Performance Evaluation Program for medical staff and advanced practice providers
- Efficiency levels that continue to lead the industry
 - Facilitate safe Medication Management strategies (CSIP)
 - Ensure accurate and timely Clinical Records
 - Analysis/transparency of data through:
 - Quarterly Clinical Operations calls (Division)
 - SQL enhancements (Division)
- A well-informed response to evolving market environment
 - Assessment and support of post-operative Normothermia to reduce untoward outcomes
 - Evaluate ophthalmologic outcomes through reporting and assessment of unplanned vitrectomies
 - Enhance Patient Experience by utilization of a standardized patient experience of care survey
- Unparalleled development of future leaders
 - Expedite the development of new leaders through:
 - CSP and Endoscopy Reprocessing ongoing certification
 - CSG ASD Orientation (3 times: February, May, August)
 - Quality and Risk Management Manual

2018 Division Goals

- To continue to reduce the number of sharp occurrences by implementing & sustaining the practices in the sharps safety toolkit.
- To implement the Burn Prevention Toolkit division - wide.
- To complete the 2018 Clinical Safety Improvement (CSIP) Program.
- To meet the 2018 ASD Clinical Objectives

2018 Center Goals

- To continue to identify areas of opportunity to reduce the IUSS rate, and to sustain the IUSS rate \leq 10% (as per HCA recommendation).
- To complete the 2018 Clinical Safety Improvement (CSIP) Program.
- To meet the 2018 ASD Clinical Objectives
- Update the Central Sterile Processing Department by adding an instrument washer/disinfector.
- Add "One Source" to Central Sterile Processing for immediate access to MIFU's.
- Sustain lower Direct Hospital Admission rates by continuing the current process of pre-op phone calls and use of One Medical Passport.
- Under the guidance of the Regional Pharmacist continue to refine the accountability process of controlled substances in the OR and Pain departments.
- Increase Risk Management in-service participation to 100%

FALLS PREVENTION

POLICY:

The Center's patients are at greater risk for falls when they are given anesthesia. Therefore, all patients are considered a fall risk and will be assessed to minimize their risk of falling. The Center's staff will work to actively reduce the risk of falls across the continuum of care by ensuring a safe physical environment and appropriate identification of fall risk patients.

PROCEDURE:

Standard Fall Risk Interventions:

- a. Orient patient/family to environment and routines.
- b. Ensure that patient bed is in low position and the brake is on.
- c. Place patient's necessary items within reach.
- d. Provide non-skid footwear for patient as needed.
- e. Minimize environmental trip/slips hazards.
- f. Round frequently (approximately every hour) and assess for safety and comfort.

Reporting Patient Falls:

Patient falls must be reported through the standard incident reporting process as patient falls are identified as an Incident.

SECURITY

POLICY

The Governing Body is responsible for creating a suite that can be secured. The Clinical Supervisor is responsible for ensuring that the suite is secure throughout the day and after each surgical day.

PROCEDURE

1. The number of people with access shall be kept to a minimum. Only those employees *requiring* access will be issued keys. The Administrator is responsible for all keys/authorization.
2. Emergency assistance can be summoned by calling the front desk from any phone, or dialing 911 for fire or police assistance. In addition, direct emergency numbers are included on the Emergency Phone List.
3. Signs will be posted "Authorized Personnel Only" leading into the recovery and reception area.
4. All visitors shall check in the reception area. The receptionist will notify the appropriate personnel.
5. The Center will control and identify security sensitive areas to prevent all unauthorized entries.
6. During hours of non-operation, security is provided by a monitored security system.
7. A keypad will be utilized to arm and dis-arm the security system. The Clinical Supervisor is responsible for ensuring that the system is armed at the end of each day and dis-armed at the beginning of each day. The Clinical Supervisor is also responsible for ensuring that appropriate staff know how to arm and dis-arm the security system.

SMOKING

POLICY:

The Center is a smoke-free facility and does not permit smoking or vape smoking inside the facility or near any entrances to the facility. There shall be signs posted throughout the center to inform the staff, patients and visitors of our “NO SMOKING” policy.

PROCEDURE:

1. Management personnel are responsible for enforcing the no smoking policy of the Center.
2. Employees are informed of the Center’s policy at time of hire.
3. Management personnel are responsible for ensuring that the No Smoking signage remains posted and visible to staff, patients and visitors.

RECALL- EQUIPMENT, SUPPLIES AND FOOD

OVERVIEW

A recall is a method of removing or correcting products that are in violation of laws administered by the Food and Drug Administration (FDA). Recall is a voluntary action that takes place because manufacturers and distributors carry out their responsibility to protect the public health and well-being from products that present a risk of injury or gross deception or are otherwise defective.

POLICY

There shall be a policy and procedure in place to ensure that the Center does not utilize any recalled or discontinued, medical devices, equipment and supplies or food products. In addition, there shall be a mechanism whereby the Center locates recalled or discontinued equipment, supplies and food products. When the Center is notified (e.g., by the manufacturer or FDA) of such a recall for an item it is not to be utilized for safety reasons and the Center is to notify the appropriate individuals and organizations regarding the notification, if appropriate (ie, the item has been used beyond the date of the recall).

PROCEDURE

1. The Clinical Supervisor will register with FDA Recalls & Alerts website to monitor any notifications.
2. When a notice is received from the FDA or the manufacturer that, for safety reasons, the specific item should be not utilized:
 - a. The notice shall be forwarded to the Clinical Supervisor
 - b. The Clinical Supervisor will check to see if the equipment or supplied was utilized at the Center.
 - c. If the equipment or supply listed is/was used, the Clinical Supervisor shall refer to the inventory list to determine if the recalled/discontinued item matches the recall listed in the notification. If it does not match, no action need be taken.
 - d. If there is a match, the Clinical Supervisor shall notify the Medical Director and take the following action:
 - i. If there is any existing stock of the recalled/discontinued item, the Clinical Supervisor shall follow the directions of the notification.
 - ii. If the recalled/discontinued item was utilized, the Clinical Supervisor will notify members of the medical staff regarding the recall.
 - iii. If the notification instructs that patients are to be notified, the Clinical Supervisor is responsible for ensuring that medical records are reviewed and patients notified in the manner prescribed.

HAZARDOUS MATERIALS AND WASTE-INVENTORY OF HAZARDOUS SUBSTANCES

POLICY:

An inventory of all known hazardous substances used in this Center shall be kept in a location known to all employees. All hazardous materials shall be identified and labeled with hazard warnings according to the Centers Hazard Communication Program. (Please refer to Hazard Communication Program/OSHA Manual)

Specific information on each noted hazardous substance can be obtained by reviewing the Material Safety Data Sheet for that substance.

NOTE: The Center shall have all the required permits, licenses, manifests, and safety data sheets required by law and regulation for managing hazardous materials and waste.

APPROPRIATE ATTIRE-PPE

POLICY

There shall be a standardized policy of what attire shall be worn for specific tasks. Staff shall be informed of specific personal protective equipment (PPE) to be worn for specific tasks involving blood or hazardous waste.

PROCEDURE

1. Staff shall be aware of the location of all PPE items (gloves, gowns, face shields).
2. Staff shall be provided appropriate training regarding the use of all PPE.
3. Specific PPE shall be donned during the performance of tasks involving blood, hazardous material or potentially hazardous materials according to the table below:

| Task | PPE Item(s) |
|--|---|
| Instrument cleaning | Protective Gown Gloves Face Shield |
| Cleaning of spills | Protective Gown Gloves Face Shield |
| Cleaning of the Surgical Suite while using toxic cleaning agents (virucidal, fungicidal, bleach) | Protective Gown Gloves Face Shield |
| Using glutaraldehyde | Protective Gown Gloves Face Shield |
| Disposal of Biological Waste | Protective Gown Gloves Face Shield |
| During Surgery | As appropriate for the procedure: Protective Gown Gloves Face Shield |

HAZARDOUS MATERIALS AND WASTE-BIOHAZARDOUS WASTES – HANDLING OF

BACKGROUND AND DEFINITIONS

This Center must comply with all state and federal regulations regarding handling and disposal of waste. Depending on the classification of the Center (“large volume” or “small generator”), there will be different regulations and reporting requirements.

Biohazardous waste, also called infectious waste or biomedical waste, is any waste containing infectious materials or potentially infectious substances such as blood. Of special concern are sharp wastes such as needles, blades, glass pipettes, and other wastes that can cause injury during handling.

Biohazardous waste includes the following materials:

1. **Human blood and blood products:** All human blood, blood products (such as serum, plasma, and other blood components) in liquid or semi-liquid form. Items contaminated with blood that, if compressed, would release blood in a liquid or semi-liquid form, or items caked with dried blood capable of being released during handling. Other body fluids or tissues containing visible blood.
2. **Human Body Fluids:** Human body fluids in a liquid or semi-liquid state, including: semen, vaginal secretions, cerebral spinal fluid, synovial fluid, pleural fluid, pericardial fluid, peritoneal fluid and saliva from dental procedures. Also includes any other human body fluids visibly contaminated with blood, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids.
3. **Pathological waste:** All human tissues, organs, and body parts, including waste biopsy materials, tissues, and anatomical parts from surgery, procedures. Any unfixed human tissue, except skin.
4. **Sharps waste:** Sharps waste must be packaged as described in Sharps policy.

Responsibilities of Biohazardous Waste Generators

Surgery centers that generate biohazardous waste are responsible for:

1. Ensuring that the waste is properly packaged and transferred to the contracted hazardous waste hauler;
2. Packaging the waste as directed to prevent exposure or injury (needlesticks, cuts) to anyone handling the waste; and
3. Packaging the waste in the appropriate packaging (sharps in sharps containers, other waste in red bags).

Biohazard Waste Minimization

Although biohazard waste bags are often conveniently placed throughout the Center, it is important to remember that these bags are for **biohazard and contaminated wastes only**, and are not to be used for regular trash. Disposal of non-biohazard waste in a biohazard waste container adds significant costs to waste management.

The following are examples of items that do **not** need to be disposed as biohazard waste:

1. Gloves used to handle containers of blood or body fluids;
2. Paper towels or bench paper on which containers of blood or body fluids may have been placed but did not spill; and
3. Any other material used to handle blood indirectly but that did not come into direct contact with the blood.

BIOHAZARDOUS WASTES - HANDLING OF

Page 2

POLICY:

1. There is to be a standardized, safe and effective method for disposing of bio-hazardous waste.
2. All bio-hazardous waste shall be handled and packaged appropriately while ensuring that proper labeling is present for the containers or bags and the areas that house these wastes.
3. All personnel shall be informed of the proper methods for handling bio-hazardous waste through periodic inservices.
4. **Universal/Standard precautions must be adhered to at all times which includes the required use of eye protection, barrier materials and gloves when handling bio-hazardous materials, including bags and tubs**

PROCEDURE:

1. Wastes are accumulated in those containers with a red bag insert. Only those waste materials deemed appropriate shall be placed in the red bags (see Sharps policy for sharps handling and disposal).
2. Red bags and their contents are then transferred to the biohazardous waste storage area in the designated containers (that are labeled).
3. The biohazardous wastes pick-up company will then pick up these wastes regularly (as frequently as required, see agreement).

BIOHAZARDOUS WASTES - RED BAG CONTENTS

(WHAT MUST I PUT INTO THE RED BAG?)

The following materials are to be placed in the Red Bags for pick-up by the biohazardous waste company.

- I. **INFECTIOUS WASTE:** This includes any disposable item that has been soiled by any bodily fluid of the patient and would include such items as:
- | | |
|------------------------|--|
| Surgical Gloves | Waste from Isolation Rooms |
| Dressings and Packings | Suction Tubing |
| Swabs | Laboratory Wastes: |
| Specula | -Culture Dishes |
| Soiled Gowns | -Pasteur Pipettes* |
| Drapes | -Vacutainers & other vials contaminated by specimens* |
| | -Slides* |
| | -Lancets* |
| | -Capillary Tubes* |
| Catheters & Canulae | -Discarded live & attenuated vaccines |
| | -Any residual specimen from medical or pathological laboratories |

II. **SHARPS:**

Used hypodermic equipment (including syringes)
Scalpel blades
Lancets
Suture needles
Broken glass
Pipettes
Any item in other category marked with *

Sharps MAY NOT be placed directly into a Red Bag. They must be deposited into leakproof, rigid, puncture resistant containers that are tightly lidded or taped closed prior to being put into Red Bag containers.

Universal precautions must be adhered to at all times which includes the required use of eye protection, barrier materials and gloves when handling bio-hazardous materials, including bags and tubs.

BLADES, GLASS, NEEDLES, SHARPS, AND SYRINGES – HANDLING AND DISPOSAL OF

This policy is designed to meet all state, city and county regulations and to protect all staff who are at risk in the handling of waste sharps. Procedures for non-sharp waste (e.g., non-sharp infectious, chemical, radioactive, unbroken glassware, and non-hazardous waste) are not affected by this policy.

DEFINITION:

Sharps include:

1. Needles (whether or not attached to a syringe or covered by a plastic guard);
2. IV tubing with needle attached;
3. Glass slides and cover slips;
4. Scalpels, razor blades, and lancets; and
5. Broken glass and splintered plastic, *when contaminated with blood or other potentially infectious material.*

Non-contaminated broken glass and plastic are NOT considered sharps for disposal purposes.

SHARPS WASTE MINIMIZATION:

Although sharps containers are often conveniently placed throughout the Center, it is important to remember these containers are for **sharps waste only**, and are not to be used for non-sharp biohazard waste or regular trash. Disposal of non-sharp biohazard waste in a sharps container adds significant costs to waste management.

The following are examples of items that should **not** be disposed of as sharps waste:

1. Gloves;
2. Paper towels;
3. Plastic vials and conical tubes;
4. Pillow covers, paper sheets

SHARPS WASTE DISPOSAL PROCEDURES:

Sharps are collected in standard sharps containers. These sharps containers are available in multiple sizes.

The **standard (non-chemical) sharps waste** pickup procedure is as follows:

1. When sharps container is 2/3 to 3/4 full, secure the lid. At no time shall containers be filled past the "fill line".
2. Place the sharps container in the appropriate location (with the biohazard label) for pickup by the contracted purveyor.

POLICY:

One of the greatest causes of skin punctures in the Operating Room is careless handling of needles left on syringes and surgical blades left on handles.

1. Any syringe with a needle that is used by personnel should be properly placed in the designated receptacle for needles and syringes. Needle caps must never be re-placed on the needle on the syringe.
2. Any syringe with a needle that is used on the sterile field should be disposed of at the end of the surgical procedure.
3. All used needles, blades and syringes shall be placed in the designated containers throughout the Center.

BLADES, GLASS, NEEDLES, SHARPS, AND SYRINGES – HANDLING AND DISPOSAL OF
Page 2

PROCEDURE:

1. When finished with syringes and needles, place them into the designated plastic container. **Never re-cap any used needle or any syringe.**
2. Place closed needle and syringe containers in the appropriate, labeled receptacles.
3. Emptied glass bottles are to be discarded in regular trash containers if they do not contain chemicals.
4. All sharps are to be put into an appropriate, puncture-resistant, labeled container.
5. At end of the procedure, all blades, needles and sharps are disposed of in the manner described previously. Infectious waste will be stored in the infectious waste container and will be picked up regularly by the bio-hazardous wastes pick-up company. See “Red Bag Contents” policy for those items that should be placed in the red bags and in hazardous waste containers.

SPILLS POLICY

PURPOSE:

1. To prevent spread of infection through the Center and to maintain an aseptic environment.
2. To provide a safe environment for both patients and staff members, and provide protection from possible injury or exposure to hazardous material.

POLICY:

Any staff member who spills fluid or witnesses a spill in the Operating Room or perioperative areas shall adhere to the following procedures.

PROCEDURE:

1. Any staff member who spills fluid or the first staff member to see a spill on any surface of the facility shall first notify all personnel in the immediate area of the spill and warn them of its location.
2. The staff member shall then notify the Clinical Supervisor of the spill. The Clinical Supervisor shall inspect the spill site and determine whether the spill should be considered toxic or hazardous according to OSHA SDS standards. Should the spill be determined to be hazardous or toxic according to SDS standards, the disposal and ventilation procedures contained in the SDS manual shall be followed. **THE MSDS MANUAL SHALL BE AVAILABLE AT ALL TIMES IN THE CENTER AS A REFERENCE.** The spill shall be handled in accordance with the Material Safety Data Sheet. If the spill contains, or may contain, body fluids, the spill shall be cleaned with a germicide, observing Universal/Standard Precautions and donning personal protective clothing and disposing of the disposable cleaning materials in the red bags and re-useable materials in the soiled linen container.
3. If the spill is determined by the Clinical Supervisor to be environmentally hazardous or toxic to staff and/or patients in the immediate area, evacuation procedures shall be initiated as outlined in the Safety Section of the Policies & Procedures.
4. **ALL SPILLS SHALL BE CONSIDERED POTENTIALLY INFECTIOUS AND UNIVERSAL PRECAUTIONS ADHERED TO AT ALL TIMES.**

In the presence of large blood spills, an EPA-registered disinfectant or a 1:10 final dilution of EPA-registered hypochlorite (bleach) solution initially should be used to inactivate bloodborne viruses to minimize risk for infection to health-care personnel from percutaneous injury during cleanup.

Reference: CDC Sterilization and Disinfection in Healthcare Facilities, 2008

5. The Clinical Supervisor shall assign an appropriately trained staff member to the clean-up of the spill. The Staff member shall first carefully observe the area for any sharps or broken glass material which may cause injury during clean-up. This material shall be disposed of according to the Red Bag Policy on sharps.
6. Any applicable SDS procedures shall be reviewed and followed. In the absence of applicable SDS procedures, the staff member shall proceed to clean the area with appropriate germicide and hot water as outlined under the Terminal Cleaning Policy.
7. If the spill contains bodily fluids, or *may contain* bodily fluids, the spill shall be cleaned with a mop and germicide. After the mop is used for this purpose, it shall be placed in a red bag for disposal with other hazardous waste.
8. If the spill area is a floor space where there is ongoing traffic and the area remains wet, the area will be cordoned off with "Wet Floor" warnings to other personnel. The area shall be checked regularly until it is dry and warnings can then be removed.
9. The Clinical Supervisor shall inform the janitorial service of the area of the spill, and ask that it receive added attention during regular cleaning service

RADIATION SAFETY

Purpose:

To provide a safe environment for patients, physicians and employees during fluoroscopy procedures in accordance to state law and regulations.

Policy:

A licensed X-Ray Tech may operate or direct operation of fluoroscopy equipment.

1. Radiologic Technologists shall not independently perform diagnostic fluoroscopic procedures for the purpose of interpretive diagnosis. Fluoroscope for diagnosis is performed, by a licensed X-Ray Tech.
2. If a nurse or surgical tech does not possess a fluoroscopy certificate or permit, they may only do the following under the supervision of the licensed operator:
 - Place the patient on the table,
 - Move the C-Arm from storage to the operating room and move the equipment over the patient,
 - Plug in and turn on the power for the fluoroscopy unit

The supervisor shall ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation. The supervisor's specific duties shall include:

- Establishing and overseeing operating and ALARA (As Low As Reasonably Achievable) procedures.
- Ensuring that radiation operations are conducted safely and assuming control and authority to institute corrective actions.
- Ensuring that the patient will be protected from unnecessary radiation exposure.
- Ensuring that measures will be taken to protect patients during the procedure from the risks of direct and indirect radiation exposure. Any direct or indirect radiation exposure will be documented in the health care record.

Procedure:

Protecting the Patient from Unnecessary Exposure

- Care will be taken to keep extraneous patient body parts out of the radiation beam to prevent injury.
- Before any radiological exposure, female patients of childbearing age will be questioned about the possibility of pregnancy.
 - If the possibility of pregnancy exists, the surgeon will be notified to determine the advisability of continuing or postponing the procedure.
- Signs will be posted throughout the Center.
- Lead shielding will be placed between the patient and the source of radiation whenever possible to reduce unintended radiologic exposure.
- Lead shielding will not be in the beam during procedures using fluoroscopy (eg, hand surgery).
- Lead shielding will be used, when possible, to protect the patient's ovaries or testes during x-ray studies, including those performed on the hips and upper legs.
- Lead shielding will be used, when possible, to protect the patient's thyroid during x-ray studies of the upper extremities, trunk, and head.

Minimizing Occupational Exposure

- The fluoroscopy equipment shall be located in a restricted area. The restricted area is designated by "Caution X-Ray" signs.
- Only authorized personnel are allowed in the room during fluoroscopy examination.
- Warning signs must be posted to alert health care personnel to potential radiation hazards at entrances to ORs and other procedure rooms where radiological equipment is in use in accordance with Title 17.
- Health care personnel will limit the amount of time spent in close proximity to the radiation source when exposure to radiation is possible. The radiation equipment operator must notify personnel present in the treatment room before activating the equipment.
- During fluoroscopic procedures, health care personnel will keep the patient as close as possible to the image intensifier side of the fluoroscopic unit and away from the tube side of the unit.
- Health care personnel involved in fluoroscopic procedures will stand on the image intensifier side of the fluoroscopic unit, whenever possible, to reduce exposure (ie, standing on the same side as the image intensifier experience decreases radiation intensity). Minimize fluoroscopy exposure time and use pulse exposure whenever necessary or possible adhering to the principles of ALARA.
- Health care personnel assisting with radiological procedures will not hold the patient manually for a radiographic study because of the risk of direct beam exposure.
- Shielding will be available at all times when radiation is being delivered to the health care personnel who may be potentially exposed. The following shielding will be available:
 - aprons and thyroid shields,
- Health care personnel who may have to stand with their backs to the radiation beam will wear wrap-around aprons to decrease the risk of exposure.
- Health care personnel near the radiation beam (eg, oblique imaging with the x-ray tube in close proximity to the lower body of the operator) will wear aprons of sufficient length to shield the upper legs and protect the long bones and bone marrow from increased doses of radiation.

- Thyroid shields will be worn by health care personnel to protect the thyroid whenever the likelihood of the procedure (eg, orthopedic spinal fixation procedures) places them at higher risk because of increased exposure.
- Female health care personnel will protect their breasts from radiation exposure by using aprons that cover the area completely.
- Health care personnel will keep all body parts out of the direct x-ray beam.

Pregnant Health Care Personnel

- Health care personnel will not be required to disclose pregnancy, even if their condition is obvious; however, personnel are strongly encouraged to declare this condition to the Clinical Supervisor. In accordance with Title 17, the following will occur:
 - The healthcare worker will be reassigned during the pregnancy and will not be allowed in the OR when the fluoroscopy is in use.

Radiation Monitors

- Health care personnel who are involved routinely in fluoroscopic procedures will wear at least one radiation dosimeter badge.
- The monitors will be read on a quarterly basis. Results will be reviewed to ensure staff has not exceeded the occupational dose limits.

Documentation

- Any x-ray procedure performed in the operating room must be documented in the fluoroscopy log.
- The Center will provide documentation of records such as Notice to Employees posting and Notice of Registration.
- An incident report will be completed wherein the procedures and interventions in this policy were not followed where unintended radiological exposure occurred.
- Documentation of the readings of the dosimeters will be provided on, at least, a quarterly basis and maintained by the Center.
- Records of the provisions of the radiation safety program (including personnel radiation exposure monitoring records) will be maintained at this facility until the registration is terminated. Records of audits and other reviews of program content and implementation will be maintained at the facility for three years after the record was created.

Shielding Devices

- Before use, newly purchased leaded devices will be tested for any cracks and for shielding properties to ensure no damage (eg, cracks or holes) occurred during transit.
- Leaded aprons and thyroid shields will be stored flat or hung vertically and will not be folded.
- Protective devices will be cleaned with an EPA-registered disinfectant after every use.

These procedures have been developed to ensure safe radiological working conditions. Everyone must adhere to these procedures. In-services regarding Radiation Safety will be conducted on an annual basis.

Spacer Cone

The spacer cone of the fluoroscopy unit shall never be removed. If, the spacer cone is requested to be removed the following must be implemented:

- A list of procedures shall be approved by the Governing Body for which the physician deems necessary for the spacer cone be removed.
- The manufacture's published precautions shall be available with respect to the spacer cone.
- All physicians and fluoroscopy personnel shall receive training regarding the spacer cone use and restrictions. Documentation of training shall be maintained for inspection.
- The spacer cone shall be reinstalled upon completion of the examination(s) for which removal is authorized.

These procedures have been developed to ensure the safe radiological working conditions. Everyone must adhere to these procedures. In-services regarding Radiation Safety will be conducted on an annual basis.

References: Recommended practices for reducing radiological exposure in the perioperative practice setting. In: Perioperative Standards and Recommended Practices. Denver, CO: AORN, Inc; 2013:295-

The personnel exposure policy shall be reviewed on a regular basis and exchange on a specific time frame. Each individual shall be aware of their accumulated dose. If the dose exceeds the dose limit, the facility must report the dose to the supervisor, and promptly take appropriate corrective action to ensure against recurrence. This corrective action may include reassigning personnel duties. The Clinical Supervisor shall notify the National Council of Radiation Protection (NCRP) Section as required if any of the following annual regulatory exposure limits are exceeded:

ANNUAL OCCUPATIONAL DOSE LIMITS

| | |
|--|-------------|
| Total Effective Dose Equivalent [TEDE] Sum of deep-dose equivalent [DDE, WB] for external exposures and total organ dose equivalent [TODE] for internal exposures, to the whole body [head/neck/torso region of the body] | 5,000 mrem |
| OR | |
| Total Organ Dose Equivalent [TODE] Sum of deep-dose equivalent [DDE] and committed dose equivalent [CDE] to any single organ or tissue other than the lens of the eye | 50,000 mrem |
| Skin [SDE, WB and SDE, ME] | 50,000 mrem |
| Lens of the Eye [LDE] | 15,000 mrem |
| Embryo/Fetus (Declared Pregnant Women) | 500 mrem |
| Minors | 500 mrem |
| General Public | 100 mrem |

FIRE SAFETY-FIRE IN THE OPERATING ROOM

GENERAL INFORMATION

Because of the presence of oxygen in the operating room, the potential for a dangerous fire is constantly present. A fire may be started by a spark from a cautery, from a suddenly malfunctioning piece of equipment or another source. The presence of oxygen means that this spark may be instantly amplified to a fire which will endanger the patient, surgeon and all medical staff.

POLICY

1. All medical staff shall be aware of and trained in the dangers of operating room fires and how to reduce the potential of operating room fires.
2. Physicians shall be advised of the danger of operating room fires and aware of ways to reduce the potential of operating room fires.
3. Precautions shall be taken for every case, every day to reduce the potential of operating room fires.
4. Inservices shall be held to educate Medical staff on the preventive measures used to reduce the risk of oxygen-aided fires in the operating room.
5. As part of the orientation program, the Clinical Supervisor and/or the Medical Director shall educate new employees in the dangers of operating room fires and inform them of ways to reduce the risk of these oxygen-aided fires.
6. Because of the constantly changing and advancing field of operating room instrumentation and because of the importance of this issue, Inservices for the medical staff shall be held at regular intervals (at least annually) to re-educate staff on the constant danger of these fires, ways to reduce the risk and ways of fires occurring and how to recognize potential causes

PROCEDURE

During head and neck procedures particular attention must be given to prepping, draping and positioning the patient, as patients with their heads draped are more susceptible to fire because supplemental oxygen can accumulate under the drapes. To decrease the risk of fire, the prep solution must be given adequate time to dry (3 minutes) - especially if there is alcohol in the solution. Draping and positioning the patient should be performed in a manner that does not allow pooling of oxygen under the drapes. Every effort should be made to use no more oxygen than is necessary to maintain adequate oxygen levels. If possible, provide room air or less than or equal to 30% oxygen, depending on patient needs. Oxygen can also be combined with air to decrease the risk of fire. If facial hair is exposed, coat the hair with a water-soluble surgical lubricating jelly to make it nonflammable. Additionally, moisten sponges, gauze and pledgets (and their strings) to render them ignition resistant. This is also true for chest procedures, where oxygen may pool in the open body cavity.

During all procedures, as a proactive safety measure, sterile water or saline must be on the back table prior to ESU, argon beam coagulator (ABC) or lasers being used. Additional

safety measures that should be taken when performing electrosurgery, electrocautery or laser surgery are as follows:

- Stop supplemental O2 at least one minute before and during use of the unit, if possible. (Surgical team communication is essential.)
- Activate the unit only when the active tip is in view, especially if looking through a microscope
- Deactivate the unit before the tip leaves the surgical site
- Place electrosurgical electrodes in a holster or another location off the patient when not in active use (i.e., when not needed within the next few moments)
- Place lasers in standby mode when not in active use
- Do not place rubber catheter sleeves over electrosurgical electrodes

Fiberoptic Light Sources

Fiberoptic light sources can start fires. Complete all cable connections before activating the source. Place the light source in standby mode, or turn the unit off when disconnecting cables. Never leave a light cord that is still luminating on top of the patient drapes. Although surgical drapes are fire retardant, they are still flammable.

In Case of a Fire in operative or procedural areas the following steps should be taken in order initiate RACE:

1. Announce the fire.
2. Remove the burning material from contacting the patient (drapes, ETT, etc.)
3. Have the anesthesiologist stop the flow of gases (i.e., O2, N2O, Desflurane, etc.)
4. Immediately smother/put out the fire (when safe to do so).
 - Attempt to extinguish with water or saline aim at the base of the fire.
 - To smother a fire hold a towel between fire and the patients airway, drop one end of the towel toward the patients head, drop the other end of towel over the fire, sweep your hand over the towel and raise the towel and keep your body away from the fire. **DO NOT PAT** the fire.
 - Obtain fire extinguisher as last response and Extinguish on floor.
5. Set off the fire alarm (Code Red)
6. Evacuate the patient, if necessary
7. Save any material/devices for follow-up investigation

Fighting Fires Involving an Endotracheal Tube

1. Announce the fire.
2. Collaborate and assist the anesthesia professional with:
 - disconnecting and removing the breathing circuit
 - turning off the flow of oxygen
 - pouring saline or water into the airway
 - removing the endotracheal tube and any segments of the burned tube
 - examining the airway
 - re-establishing the airway

Fighting Fires On or In Equipment

1. Communicate the presence of the fire to team members.
2. Disconnect equipment from its electrical source.
3. Shut off electricity to the piece of equipment at the electrical panel.

4. Shut off gases to equipment, if applicable.
5. Assess fire size and determine if equipment can be removed safely or if evacuation is needed.
6. Extinguish fire with extinguisher, if appropriate
7. Activate alarms, if necessary.
8. Notify the appropriate personnel.

Reference: Fire Prevention in the Perioperative Practice Setting 2013

FIRE SAFETY-FIRE WATCH/SYSTEM IMPAIRMENT

PURPOSE

To provide a mechanism for monitoring a building or portions of a building for potential or actual fire and smoke conditions during fire protection system shutdown or operational failure.

CAUSES

Fire alarm system or sprinkler system outages can occur during construction, maintenance, renovation, electrical storms, heat waves that cause overloads, brown-outs or other unplanned events which eliminate part or all of the fire alarm system. The sprinkler system may also be made inoperable by a variety of planned or unplanned events.

POLICY

There shall be a policy and procedures in place to protect the safety of the Center's staff, patients and visitors as well as the physical facility in the unlikely event that the fire alarm or sprinkler system is out of order for an extended period of time (greater than ten hours).

PROCEDURES

I. Implementation

- A. In the event that the fire alarm system or sprinkler system must be shut down by the building or is out of service due to unforeseen circumstances, the fire protection system impairment policy will be implemented.
- B. Upon notification or identification of a system outage that is anticipated to last more than four hours in a 24 hour period, the following fire watch procedures will be initiated:
 1. The Medical Director will notify the local Fire Department to alert them to the condition.
 2. The Clinical Supervisor will notify the fire alarm monitoring company of the situation.
 3. The Medical Director (or Clinical Supervisor in his/her absence) will conduct the fire watch. Fire watch tours shall be conducted every 15 minutes until the source is identified or the system reinstated. The Medical Director shall be solely dedicated to fire watch duties and not perform any other Center-related activities.
 4. A patrol of the area shall be performed by the Medical Director. During the patrol of the area, the fire watch procedure should not only be looking for fire or hazardous conditions which could start a fire, but ensure that the other fire protection features of the building such as egress routes and any other fire protection systems are available and functioning properly.
 5. Fire watch inspection tour should check and document the following:
 - Mechanical and Electrical rooms – remove all combustible or flammable materials.
 - Access – ensure that the fire department can reach the building and entrances are not blocked.
 - Exit access – All exit pathways are unobstructed
 - Fire/Smoke separations – All fire and smoke doors are closed properly.
 - Machinery unnecessary to be run continuously is turned off.
 - Any construction or renovation work is halted.
 - Fire extinguishers are charged and unobstructed

- C. If a fire or smoke condition is identified, RACE (Rescue/Alarm/Contain/Extinguish/Evacuate) will be initiated and the Medical Director will notify the local Fire Department.
- D. If there is a fire behind a door:
 - DO NOT OPEN THE DOOR
 - Touch door handle and door frame and verify raised temperature.
 - Smell for smoke or fumes
 - Implement RACE program
 - Remove patients from immediate danger and evacuate the building, if possible.
 - Activate a call to the local fire department (9-1-1).
 - Contain fire by shutting doors ONLY IF YOU CAN SAFELY DO SO
 - Extinguish fire ONLY if it is small (small trash can). Otherwise, evacuate the area.

II. Closeout

- A. The local fire department will determine if there is a need to extend the fire watch into the following day.
- B. During routine construction and maintenance system outages, every effort will be made to accomplish work within the operational shift period so that the need for fire watch won't exceed an 8 hour period, re-enabling the system(s) for the off-shift.
- C. When the system is restored to normal operation, a Fire Marshal will close out the system impairment and confirm that the fire watch activities may be discontinued.

MEDICAL EQUIPMENT- ELECTRICAL EQUIPMENT - SAFE USE OF

POLICY:

All electrical equipment must be used in a safe and orderly fashion. All electrical wires on equipment must be in a good and proper order, have no frayed ends or uncovered wires, broken plugs, etc. Any observation of this should be reported to the physician immediately, and immediate repairs undertaken.

PROCEDURE:

1. Only standard and UL approved electrical plugs should be put in any electrical outlet.
2. All electrical outlets in the operating room(s) must be hospital grade and be checked for proper polarity and adequate grounding. All equipment fittings shall be hospital grade.
3. Always grasp electrical wiring on the plug head itself when pulling a plug out of a receptacle to avoid breaking the wire. Never pull on the wire itself.
4. Any evidence of shorting of equipment should be reported immediately to the surgeon and Clinical Supervisor.
5. Flashlights will be available.

MEDICAL EQUIPMENT - ELECTROSURGICAL UNIT (ESU) SAFETY

POLICY:

All personnel will follow safety guidelines in order to reduce the potential for injury to the patients, surgeons and employees who use cautery equipment.

PROCEDURE:

- A. The ESU, dispersive electrode and active electrode shall be used according to the manufacturer's written instruction.
- B. Perioperative personnel will be instructed in the proper operation, care and handling of the ESU during their orientation period. Return demonstration after instruction must be documented for the perioperative employee.
- C. The ESU must be inspected before each use and checked at least annually by the biomedical service.
- D. Damaged or malfunctioning ESUs must be removed immediately and reported to the management.
- E. The ESU shall be assigned an identification number. The identification/serial number of the ESU is to be documented on the OR record.
- F. To prevent injury, patients will be instructed to remove as much jewelry as possible before their surgical procedure.
- G. The ESU shall be used in a manner that reduces the potential for injuries.
 1. Following use, the ESU shall be turned off and the unit and all its reusable parts cleaned according to the manufacturers written instructions. The surface of the ESU shall not be saturated with or have fluids poured over it.
 2. The ESU shall not be used in the presence of flammable agents (e.g., alcohol, tincture-based fluids)
 3. Safety features (e.g., lights, activation sound indicator) shall be present and tested before each ESU use.
 4. Power settings shall be confirmed verbally between the operator and the user before activation and determined in conjunction with the manufacturers written recommendations and the patients' size.

The ESU shall be operated at the lowest effective power setting to achieve the desired effect for coagulation and cutting. Personnel shall check the entire ESU circuit if the operator requests a continual increase in power because of ineffectual usage results.
 5. The ESU shall be protected from spills. Fluids shall not be placed on top of the ESU.
- H. The ESU active electrode shall be used in a manner that minimizes the potential for injuries.
 1. The active electrode shall be connected directly into a labeled, stress-resistant receptacle of the ESU. If an adapter is used, it shall be one that is approved by the manufacturer and does not compromise the generator's safety features.

2. The active electrode shall be inspected for damage, including impaired insulation, at the operative field before use.
 3. The active electrode shall be placed in a clean, dry, well-insulated safety holster when it is not in use.
 4. The active electrode shall be disconnected from the ESU and replaced if it drops below the sterile field.
 5. The active electrode shall have a tip that is secure and easy to clean.
- I. The dispersive electrode shall be used in a manner that minimized the potential for injuries.
1. The patient's skin integrity shall be evaluated and documented before and after ESU use.
 2. The dispersive electrode shall not be placed over bony prominences, scar tissue, skin over an implanted metal prosthesis, hairy surfaces, or areas distal to tourniquets and pressure points.
 3. The dispersive electrode shall be the appropriate size for a patient (i.e., neonate, infant, pediatric, adult) and never be cut to reduce its size.
 4. After positioning the patient, the dispersive electrode shall be placed on a clean, dry skin surface over a large, well-perfused muscle mass and as close to the operative site as possible.
 5. Patients' jewelry shall be removed.
 6. Excessive hair shall be removed before applying the dispersive electrode.
 7. The dispersive electrode shall connect directly into a labeled, stress-resistant receptacle of the ESU. If an adapter is used, it shall be approved by the manufacturer and not compromise the ESU generator's safety features.
 8. The dispersive electrode shall maintain uniform body contact to avoid tenting, gaping, and moisture that interferes with complete adhesion with the patient's skin.
 9. The dispersive electrode shall be removed carefully to avoid denuding the surface of the skin.
 10. The dispersive electrode and its connection to the ESU shall be checked if any tension is applied to the dispersive electrode cord or if the surgical team repositions the patient.
- J. Bipolar active electrodes function differently than monopolar active electrodes and shall be used according to the manufacturers written instruction.
1. In bipolar electrosurgery, a forceps is used for the coagulation of body tissue. One side of the bipolar forceps is the active electrode, and the other side is the return or ground electrode.
 2. A dispersive electrode is not needed because current flows between the two tips of the bipolar forceps rather than through the patient.

Reference AORN Standards, Recommended Practices and Guidelines (1999, 2000)

- 1 Use of the ESU with an operating laparoscope requires personnel to:
 - Examine all electrodes for impaired insulation before use,
 - Ensure proper connection of equipment,
 - Ensure that the active electrode is not activated until it is in close proximity to the tissue,
 - Use the low-voltage cutting wave form setting whenever possible,
 - Avoid open-circuit activation of the active electrode,
 - Use the lowest power setting that achieves the desired result, and
 - Use all metal or all plastic cannulas and not a hybrid cannula system (i.e., a combination of plastic and metal cannulas).
- L. If patient or personnel injuries or equipment failures occur, the ESU and the active and dispersive electrodes shall be handled in accordance with the Safe Medical Devices Act of 1990.
- M. Personnel shall take special precautions when using the ESU with patients who have pacemakers and/or automatic defibrillators.
 1. Patients with pacemakers shall have continuous ECG monitoring during ESU use.
 2. Patients with an automatic implantable cardioverter/defibrillator (AICD) shall:
 - Have the AICD device deactivated before the ESU is activated
 - Have a defibrillator immediately available, and
 - Have continuous ECG monitoring.
- N. Exposure to smoke plume generated during electrosurgery shall be reduced.

MEDICAL EQUIPMENT MANAGEMENT, MAINTENANCE & REPAIR

POLICY:

1. Each piece of operating room and recovery room equipment shall be checked prior to any procedures commencing. This is to ensure proper operation of the equipment and reduce the possibility of malfunction and/or injury to patients or staff during any procedure or the recovery period.
2. Equipment used by the Center for the provision of patient care shall be maintained and serviced only by a contracted bio-medical company approved by the Governing Body.
3. All equipment be properly maintained so that it functions as intended and that services for maintenance and repair be obtained in a cost effective and timely manner.
4. The Center shall have documentation of the pre-cleaning, transport, and handling of medical devices intended for external vendor reprocessing, inspection, or repair.

PROCEDURE:

1. The designated operating room staff member will check each piece of equipment to be used during the day by turning on the apparatus and checking to see that the functions of the unit work properly. With some machinery, it may not be possible for the equipment to run through all of its functions, but the safety of the machinery should be able to be determined by this exercise.
2. A bio-medical person will check each piece of equipment and perform electrical safety checks (preventive maintenance or PM) at least semi-annually and attach labels to the equipment to verify these checks.
3. Documentation of bio-medical/safety checks shall be kept for at least three years.
4. Obvious hazards are reported. Any suspect equipment is immediately pulled from service until cleared. Should there be a suspect piece of equipment, the following procedures shall take place:
 - The Clinical Supervisor or designee shall be notified of the potential equipment malfunction.
 - The Clinical Supervisor shall make the decision to pull the equipment from service. Each staff member has the authority to refrain from using any equipment if they have a valid basis for the belief that the equipment is not functioning properly and/or may cause a hazard for the patient and/or a staff member.
 - The Governing Body-approved bio-medical engineer will be contacted to come out and inspect the equipment. If appropriate, the manufacturer may also be contacted.
 - The suspect equipment shall remain out of service until the bio-medical engineer has inspected, tested and approved the equipment. If the manufacturer inspected the equipment first, the bio-medical engineer must inspect, test and approve the equipment and deem the equipment functioning properly and safe before it is returned to service.
 - The Clinical Supervisor is responsible for ensuring that written documentation is provided by the bio-medical engineer and that the documentation is filed appropriately and retained according to #3 above.

MEDICAL EQUIPMENT MALFUNCTION

POLICY:

In any situation involving a medical device failure or malfunction, immediate steps shall be taken to ensure the health and safety of the patient. Immediate action shall also be taken to preserve the medical device as it was at the time of the occurrence to document the condition/status of the device and to immediately remove the device from service.

PROCEDURE:

At the moment of a medical device failure or malfunction:

1. Attend to the medical needs of the patient or the injured parties, removing them from the area if necessary.
2. The malfunctioning equipment is immediately pulled from service and labeled as NOT IN USE. Do not change any settings or disconnect any attachments.
3. The Clinical Supervisor or Medical Director is to be notified immediately.
4. The bio-med company is to be notified to perform an inspection and diagnosis on the equipment.
5. An incident report is to be filled out. If it is determined that the medical device caused or contributed to a patient or healthcare worker's death or resulted in serious injury or illness, a report will be submitted to the FDA and/or product manufacturer.
(See Incident Report Policy)

MEDICAL EQUIPMENT – USE OF DIRTY EQUIPMENT

POLICY

Equipment that is stored outside the surgical suite (Operating room, Recovery area) shall be considered dirty and shall be cleaned prior to use in the Operating room.

PROCEDURE

1. When it is determined that a piece of equipment stored outside of the surgical suite is to be used in a procedure, the Clinical Supervisor or designee and the Scrub Technician involved in the case shall be notified.
2. The Scrub Technician working in the Operating room on the case utilizing the “dirty” equipment shall ensure that the equipment is wiped down with an anti-bacterial solution prior to the equipment being moved into the Operating room.
3. The Scrub Technician shall also check the equipment to ensure that the equipment has a current preventive maintenance (“PM”) sticker on the equipment. All equipment used in the Operating room and Recovery Room or having patient contact shall be checked by a bio-medical technician at least twice per year (every six months).

MEDICAL EQUIPMENT - SUCTIONING EQUIPMENT

POLICY:

The Nurse Manager is responsible for the correct functioning of the suction system. The Nurse Manager shall familiarize himself/herself with the suction system and be aware of how it performs.

PROCEDURE:

- A. Every case is to be treated as a “dirty” case, using Universal Precautions, including the proper use of protective barrier apparatus.
- B. Following a dirty case, the suction bottles containing aspirate (plus and/or germicide) should be emptied.
- C. A disinfecting agent shall then be used to clean the suction bottle followed by thorough washing with a germicide, rinsing and sterilization.
- D. The disposable suction unit shall be placed in the red bags for infectious waste.
- E. The suction racks and regulator shall be wiped down with a germicidal solution.

STORAGE AND HANDLING OF MEDICAL GASES POLICY

POLICY

All medical gases shall be stored in a designated area and handled in a safe manner as described below.

PROCEDURE:

Delivery

1. Contracted medical gas distributor will deliver medical gases.
2. Upon delivery gases should be placed in designated holders.
3. Cylinders shall be examined upon delivery to determine that tanks are labeled correctly, and to inspect for signs of damage.
4. Return any defective cylinders to distributor immediately if necessary.
5. Delivery schedule should be made in accordance with the needs of the facility.

Storage

1. Cylinders shall be stored upright and secured.
2. All cylinders should be labeled with contents, dangers, and also have a tag to designate whether the tanks are full or empty at all times.
3. When in storage protective steel cap shall remain on the tank.
4. Compressed gas should be in a well ventilated, dry area away from exits and stairways.
5. Group the cylinders by types of gas. Mark empty cylinders and group them together in storage.
6. Oxygen cylinders should be stored at least 20 feet from flammables or combustibles.

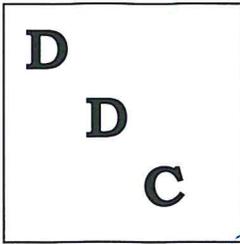

Handling

1. Specifically designed regulators, pressure release valves, hoses and other auxiliary equipment for each gas should be used.
2. Do not drop, bang, slide. Clank, or roll cylinders.
3. Cylinders should be kept in appropriate holder at all times. Holders should be in proper working order.
4. Valves should be closed when not in use.
5. Cylinders should be kept upright.

Usage

1. Leaking containers shall be removed to a well ventilated area. Shut the leaking valve and retighten the valve gland or not.
2. Labels should be legible before cylinders is used, otherwise return cylinder to distributor.
3. Tanks should be kept away from fire, sparks and electricity.

When empty, close and return cylinders to designated area. Empty cylinders shall be tagged as "**EMPTY.**"

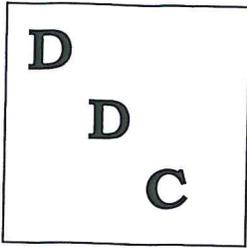

**P A T I E N T S A F E T Y
P O L I C Y & P R O C E D U R E**

Policy:

The policy set forth by the Digestive Disease Center (DDC) is to ensure patient safety, before, during, and after a patient's procedure.

Procedure:

- A. Each patient will have a history & physical examination documented in their chart within 7 days prior to their procedure.
- B. Each patient will complete the Medical History Questionnaire prior to his or her procedure.
- C. All patients will receive a copy of the Patient Rights and Responsibilities at the time of scheduling of procedure.
- D. All medical staff is CPR certified, and aware of the location and use of all emergency equipment. All DDC Physicians are ACLS certified.
- E. At least one ACLS certified Registered Nurse is staffed when patients are present in the facility, along with ACLS trained Anesthesiologist is present with sedated patients.
- F. Once a patient has been admitted to the facility, non-sedated patients are visualized frequently to ensure needs are met. Sedated patients are monitored closely checking vital signs with observation to assure patients are free from complications related to the procedure and /or medical problems
- G. Each patient will meet the required discharge criteria set forth by DDC, and ANOR anesthesia standard, prior to being discharged. The physician will have the final decision, to discharge the patient, which will be documented, signed and become part of the patient's record.
- H. A written physician discharge order will be issued to each patient post procedure, providing them with post procedure instructions, precautions, and contact information in case of an emergency. A copy of this document will become part of the patient's record.
- I. The facility staff will make a follow up appointment for the patient as ordered by the physician.
- J. Each patient will be contacted within 24 hours after having their procedure to ensure that they are not experiencing any complications related to the procedure.
- K. A patient safety committee will be formed to include one physician from each site, the nurse manager from each site, the pharmacy consultant, and the medical director. The committee will meet quarterly to discuss patient safety.

Digestive Disease Center

**P A T I E N T S A F E T Y C O M P L I A N C E
P O L I C Y & P R O C E D U R E**

Policy:

The policy set forth by the Digestive Disease Center (DDC) is to ensure that staff, physicians, vendors, and contracted employees are compliant with patient safety including checklists, policies & procedures established by the DDC.

Procedure:

- A. All staff, physicians, vendors & contracted services are required to read and comply with the safety checklists, policies & procedures prior to working in the center.
- B. Policies & checklists will be provided to vendors & contracted services to provide to their employees.
- C. Staff educated upon hire & annually thereafter on the process for reporting violations to the Director of Nursing Services.
- D. Audits performed monthly utilizing the Infection Control Surveillance Tool to ensure compliancy & sanitation.
- E. The safety committee will meet monthly to discuss patient safety issues, review audits & monitor & document effectiveness of the patient identification policy.
- F. Safety Policies & Procedures, checklists will be reviewed at least annually & more often if needed.

| | | | |
|----------------------|-------------------------------|-----------------|---------------|
| Policy Title: | SAFETY Management Plan | | |
| Approved: | 4/11/2013 | Page: | 1 of 2 |
| Effective: | 4/12/2013 | Retired: | |

POLICY:

The Center maintains a Safety Management Plan. A culture of safety is central to the identification and correction of issues related to Patient Safety. Digestive Health Center (DHC) promotes this culture by encouraging open discussion regarding safety issues in order to reduce risk to patients, visitors and employees. The plan focuses on system-wide, integrated performance improvement activities, whenever possible to assure an integrated approach to Patient Safety.

PURPOSE:

To provide for the safety of patients, visitors and employees at DHC

PROCEDURE:

Nevada Revised Statute (NRS 439.865) requires all medical facilities to develop, adopt, implement and monitor patient safety activities to improve the health and safety of patients who are treated at DHC. The Operating Board appoints the Center Director to act as the official Safety Officer. The QAPI Committee monitors Safety Management in the following areas:

- General safety– Life Safety Management Plan, Infection Control Policy Online, Inclement Weather and Emergency Situations
- Security – Security Management Plan Policy Online
- Hazardous waste and materials– Hazard Materials and Wastes Management Plan Policy Online
- Emergency preparedness– Disaster Safety Management Plan Policy Online, Inclement Weather and Emergency Situations, Bomb Threat, Bioterrorism Plan
- Fire safety Fire Plan Policy Online
- Environment of care– Facilities and Environment Policy Online
- Medical equipment management– Medical Equipment Management-Operation-Repair Policy Online
- Life safety– Life Safety, Disaster Safety, Fire Plan Policies Online
- Utility systems– Facilities and Environment Policy Online, Physical Plant Utilities Maintenance, Utilities System Management Plan
- Patient safety– Life Safety, Infection Control, Disaster Safety Policies Online, Risk Management Plan, Information Management Plan
- Pharmacy– Pharmacy Policies Online
- Infection Control - Infection Control Policies Online, Exposure Control Plan, Tuberculosis Exposure Control Plan

All employees are in-serviced on the Safety Management Plan at orientation and annually thereafter.

| Policy Type: | FE_FACILITIES - ENVIRONMENT |
| Center: | Reno GI |
| Center DBA: | Digestive Health Center |

| | | | |
|----------------------|-------------------------------|-----------------|---------------|
| Policy Title: | SAFETY Management Plan | | |
| Approved: | 4/11/2013 | Page: | 2 of 2 |
| Effective: | 4/12/2013 | Retired: | |

It is the responsibility of all employees and physician who see a safety management problem or potential problem to immediately notify the Safety Officer. The Safety Officer investigates the report, takes appropriate corrective action and documents findings. The Safety Officer completes an incident report / follow-up report and submits to the QAPI Committee.

Through the Quality Assessment / Performance Improvement Committee and the Safety Officer, the Center implements this plan by:

- Monitoring and supervising all grounds and equipment
- Monitoring of infection control practices on a continuous basis with quarterly reporting to the QAPI
- Conducting risk assessments that proactively evaluate the impact of buildings, grounds, equipment, occupants and internal physical systems on patient and public safety
- Examining safety issues by appropriate representatives from administration, clinical services and support services
- Reporting and investigating all incidents of property damage, occupational illnesses and patient, personnel or visitor injury
- Conducting ongoing hazard surveillance, including response to product safety recalls
- Appointing the Safety Officer/Center Director to intervene whenever conditions pose an immediate threat to life or health, or threaten to damage equipment or building

Implementing an orientation and education plan that addresses:

- General safety processes
- Area specific safety
- Specific job related hazards
- Safety related information through new employee orientation

Conducting ongoing monitoring of performance to asses:

- Staff knowledge and skills
- Monitoring and inspection activities
- Emergency and incident reporting
- Inspection, preventative maintenance, and testing

The objective, scope of performance, and overall effectiveness of the Safety Management Plan is evaluated annually and revised as necessary by the QAPI Committee as documented on the Facilities and Environment Annual Evaluation Form.

|----------------------|-----------------------------|--------------|---------------|
| Policy Title: | RISK MANAGEMENT Plan | | |
| Approved: | 9/6/2016 | Page: | 1 of 5 |
| Retired: | | | |

POLICY:

The Center has a Risk Management Program in accordance with federal, state, local, and accrediting body regulations and guidelines.

PURPOSE:

- A. To provide a safe environment for patients, visitors, volunteers, employees, and medical staff, and to thereby minimize injury and loss
- B. To improve the quality of services provided by identifying the causes of adverse care events and by instituting corrective actions to minimize and/or eliminate the recurrence of untoward events
- C. To minimize claims against the Center
- D. To follow all regulatory laws, standards, and guidelines to report and document adverse events or other incidents involving patients, visitors, volunteers, employees, and medical staff

SCOPE:

The Risk Management Plan applies to all employees and Licensed Independent Practitioners (LIPs) of the Center.

RISK MANAGEMENT COMPONENTS:

The Risk Management Program incorporates the following components:

- A. Risk Identification from:
 - e-Incident reports (The Online Incident Reporting System)
 - Quality Assessment Performance Improvement (QAPI)/e-Incident data analysis
 - High risk/High volume/problem prone procedures
 - Request for records
 - Legal notices or lawsuits
 - ASC Industry Quality measures
 - State, federal, and accreditation surveys
 - Clinical records and reviews
 - Patient grievances/complaints
- B. Risk Control and Analysis through:

| | |

- Root Cause Analysis (RCA)
- Corrective Action Plans, development and implementation
- Trending Risk management/QAPI variances
- Peer review
- Process Improvement
- In-servicing
- Policies and procedures to include:
 - Infection control
 - Credentialing and peer review
 - Compliance Program
 - Confidentiality HIPAA program
 - Employee health
 - Risk Management
 - QAPI

C. Claims Management

Claims management is coordinated by the Corporate Insurance Department in conjunction with the Center Director. The Insurance Department manages and directs all matters regarding:

Claims (actual and potential) Reporting & Management of the following:

- Professional Liability (Malpractice)
- General Liability (Premises Liability), Property Damage
- Workers' Compensation – Claims are reported at the Center, Insurance Department is a resource in regard to benefit and claims questions

Litigation Matters

- All subpoenas/complaints/monetary demands related to the above insurances are forwarded to Insurance for handling in conjunction with the insurance carriers
- All requests for waiver of co-pays or deductibles involving patients or visitors' bills from the Center or other healthcare facilities are submitted as an incident and then referred to the Insurance Department for handling.

RESPONSIBILITY:

It is the ultimate responsibility of the Operating Board to ensure compliance with the Risk Management Program at the Center. The Operating Board has appointed the QAPI Committee to review and analyze Risk Management data and to make recommendations The Board designates an individual who is responsible for implementation, ongoing management, and consistent application of the Risk Management Program. The Center Director serves as the Risk Manager for the Center.

| Policy Title: | RISK MANAGEMENT Plan | | |
| Approved: | 9/6/2016 | Page: | 3 of 5 |
| Retired: | | | |

The Center Director’s Risk Management duties are to:

- Review, investigate and complete follow-up on all incident reports.
- Coordinate analysis of data for potential trends and outliers.
- Coordinate the analysis of all serious incidents.
- Ensure that incidents are completed and submitted in the online system within 24 hours.
- Present quarterly and annual reports on incidents and Risk Management activities to the QAPI Committee and Operating Board.
- Coordinate the implementation of all action plans developed to reduce risk and improve quality of care.
- Coordinate all staff Risk Management training and in-servicing.
- Provide risk data summaries for credentialing purposes.
- Submit reports as required by the State (if applicable).
- Immediately contact the Corporate Clinical Director for any serious/sentinel event.
- Incorporate Risk Management findings/reports with the QAPI program and initiatives.
- Collaborate with all resources including legal counsel as applicable to coordinate the investigation, processing, and defense of claims against the Center.
- Ensure that the Disclosure Policy is followed regarding serious events.
- Ensure staff participation in incident follow-up including RCA.

Employees’ duties:

In the interest of quality and overall patient safety, employees are responsible to comply with all policies, procedures, and regulations. Each employee has a duty to act on behalf of patients to identify and to report incidents to the Center Director and to participate in the QAPI and Risk Management Programs.

QAPI Committee is responsible to:

- Serve as the oversight committee for the Risk Management Program and is accountable to the Operating Board for implementation.
- Review and evaluate patient care through analysis of the Risk Management reports, to include chart reviews, trends, current issues, and incidents.
- Participate in the identification and resolution of quality or risk issues.
- Utilize risk management and quality data in the credentialing process.
- Review and revise Risk Management policies and reports, including the annual Risk Management Plan, Goals and Evaluation under QAPI.
- Make recommendations to the Operating Board to address quality or risk Issues.

Operating Board has ultimate responsibility for Risk Management, and also to:

- Provide support and resources for the Risk Management Program.
- Ensure Risk Management is an integral component of the Center’s objectives, plans, and management structure.
- Ensure that appropriate actions are taken based on recommendations from the QAPI Committee and the Center Director.
- Review and approve Risk Management policies and reports, including the annual Risk Management Plan, Goals and Evaluation.

The Operating Board’s commitment to the Risk Management Program, including allocation of human and financial resources necessary to implement and maintain the Program, is evidenced by its approval of the Risk Management Plan on an annual basis.

Insurance and Quality Department:

The Insurance Department and Quality Department are responsible to serve as advisor to the Risk Management and QAPI Programs at the Center. All Risk Management/Quality initiatives are communicated through the Operating Board Chair to the Board for adoption and implementation as appropriate.

EXTERNAL REPORTING: *(if applicable in ASC state)

The Center complies with mandatory reporting to applicable regulatory bodies, including the state of Nevada. The Nevada State of Health Division is responsible for maintaining the Sentinel Events Registry (NRS439.840), which is done by the Office of Public Health Informatics and Epidemiology.

CONFIDENTIALITY:

- The data, reports, and committee minutes generated by Risk Management and Quality Improvement activities are confidential and statutorily privileged. They are accessible only to those individuals who participate in the process and to those agencies responsible for ascertaining the existence of ongoing and effective Risk Management and Quality Improvement Programs.
- QAPI Committee members recognize that any and all data reviewed by them shall be held in strict confidence. Any breach of confidentiality may result in disciplinary action, up to and including termination.
- All requests and/or subpoenas from attorneys and regulatory agencies for information pertaining to patient care, Risk Management and/or Quality Improvement activities must be

reviewed by the Center Director and forwarded to the Corporate Compliance/Legal Department.

- The e-Incident system is a secure website and is considered confidential.
- All incidents have the following header: "Prepared in anticipation of litigation in consultation with corporate attorneys and as a mechanism for analysis to improve quality and patient safety. Therefore, information within this document is deemed confidential and undiscoverable."

EDUCATION:

Risk Management education will be provided to staff within 30 days of employment and annually thereafter.

Topics for Risk Management education may include, but are not limited to:

- Purpose and goals of Risk Management
- Employee role in Risk Management
- E-Incident reporting system
- Chain of Command
- Root Cause Analysis
- Reporting sexual misconduct, abuse, neglect, or domestic violence
- Safe Medical Device Act (SMDA) reporting
- Advance Directives
- Informed Consent
- Confidentiality & HIPAA
- Patient Rights and Responsibilities
- Patient Grievances
- QAPI
- Infection Control
- Disclosure of medical errors
- Workers' Compensation

(See also HR in-servicing)

ANNUAL REVIEW AND GOALS:

The Operating Board will review and approve the Risk Management policies and reports, including the annual Risk Management Plan, Goals and Evaluation.

POLICY

The Center maintains a comprehensive Quality Assessment/Performance Improvement (QAPI) Program to measure, monitor, evaluate and improve clinical outcomes, safety, operational efficiencies, and customer satisfaction in accordance with Federal, State and local regulatory requirements as well as accreditation standards.

PURPOSE/OBJECTIVES

The QAPI Program provides an ongoing, systematic approach to plan, measure, evaluate and improve clinical and operational performance, safety, and service. The fundamental objectives of the program are to:

- Provide high quality, cost effective patient care,
- Plan, design, or revise processes of care and service delivery,
- Maintain a safe environment for personnel, patients and visitors
- Identify opportunities for improvement and utilize an interdisciplinary approach to develop and implement solutions and action plans,
- Establish performance measures which are relevant to the facility scope of service and goals, and which include health outcome and patient safety measures,
- Utilize data in the identification and reduction of medical errors
- Utilize evidence-based practice guidelines and clinical standards, as well as internal and external benchmarking as a basis for improvement efforts,
- Demonstrate measurable, sustained improvements,
- Utilize valid data collection techniques and analysis in QAPI initiatives,
- Involve employees, managers and Medical Staff in QAPI initiatives,
- Integrate the Risk Management, Peer Review, and Infection Control program findings and activities into the QAPI Program
- Achieve high-level customer satisfaction,
- Coordinate QAPI activities to minimize duplication of effort, communicate findings and improvements, and be carried out in a cost effective manner.
- Communicate the QAPI Program findings and results of improvement efforts

MISSION

The QAPI program supports the center purpose/mission statement.

Digestive Health Associates/Digestive Health Center provides diagnosis, treatment and education to patients who are referred to the practice from physicians of Northern Nevada and Eastern California. Our essential priority is to provide exceptional quality, cost-effective care in a healing environment. We show respect and empathy in all interactions with patients, families, physicians and each other.

SCOPE OF CARE

The QAPI Program involves all aspects of care delivery. The facility is an Ambulatory Surgery Center which provides clinical and support staff, as well as the facilities and equipment, to support delivery of appropriate, safe and effective care to an outpatient population ranging from age 16 to geriatric age groups.

Services include: GI Endoscopy

Anesthesia services include: Conscious sedation, monitored anesthesia care/propofol sedation.

RESPONSIBILITY FOR QAPI PROGRAM

Governing Board – The Northern NV Endoscopy ASC, LLC

The Governing Board has the ultimate authority and accountability for the QAPI Program. The Governing Board delegates to the Medical Staff and center management the responsibility for implementation of the QAPI program. The Governing Board is responsible to:

- Assure that the QAPI program is defined, implemented, and maintained as an integral component of the Center’s objectives, plans and management structure,
- Provide resources to support the QAPI program,
- Assure that the QAPI program addresses the priorities of the center
- Assure that improvements are evaluated for effectiveness
- Assure that the QAPI program specifies data collection description, methods, and frequency
- Oversee the coordination of Risk Management, Quality Assurance/Performance Improvement, Infection Control and Peer Review
- Assure that services provided by contracted services are provided in a safe and effective manner
- Promote a safety culture
- Review and approve QAPI policies, the QAPI program goals, and annual program evaluation.

Center Director and Management Team

The center management team, supported by the corporate Clinical Director, has overall responsibility for the implementation and maintenance of the QAPI program to:

- Ensure patient care is delivered safely,

| Retired: | | | |

- Ensure the ongoing competence of staff,
- Support an environment that promotes process improvement, quality outcomes, patient safety and customer satisfaction,
- Monitor important aspects of care to identify and address opportunities for improvement,
- Take appropriate actions to address identified quality issues and monitor their effectiveness
- Provide education to employees regarding improvement strategies,
- Foster a blame-free environment in addressing incidents,
- Sustain improvements made to departmental functions,
- Support staff participation in internal and external educational programs,
- Use industry standards, evidence-based practices and benchmarking when available to evaluate performance opportunities,
- Utilize QI findings in policy and procedure development, departmental education and the evaluation of individual performance, and
- Ensure continuous compliance with accreditation standards and Regulatory requirements.

Quality Assessment Performance Improvement (QAPI) Committee

The QAPI Committee is responsible to assure that the QAPI plan is implemented and maintained. The Committee consists of the Center Director, Medical Director or designated medical staff representative, Admitting/Business/Reception, Pharmacy Consultant, Anesthesia representative and other such members that may be approved by the QAPI Chairman. The QAPI Chairperson is a physician who is an active member of the center's medical staff and is not the same person as the Medical Director. (AAHC requires one or more physician leaders be involved in the quality activities of the center)

The QAPI Committee meets on a quarterly basis. The Center Director is responsible for facilitation of the meetings and maintenance of the minutes. *

Specific functions of the Committee include:

- Ensure the QI plan is implemented, maintained and reviewed annually
- Objectively and systematically review the quality of service delivery and related performance measures
- Develop and revise indicators as necessary to evaluate care
- Review data summaries for all identified indicators, as well as other sources of information regarding quality of care, patient safety, and health outcomes
- Review of internal and external benchmarking data to identify opportunities for improvement
 - Oversee all patient safety and risk management activities,
 - Identify opportunities for improvement and assure that appropriate action is taken
 - Develop educational programs based on needs identified through QAPI activities.

| Retired: | | | |

- Support education regarding the principles of continuous improvement and the center’s QAPI program
- Ensure integration of Risk Management and Infection Control activities into the QAPI plan

Quality Improvement Teams

QI Teams may be appointed by the QAPI Committee to address departmental, inter-departmental, multidisciplinary and/or interdisciplinary issues.

QI Teams may be initiated based on the following priorities:

- Support of the Strategic Business Plan
- Customer needs and expectations, patient satisfaction survey results, physician satisfaction survey results
- Important aspects of care
- High volume / high risk occurrences
- Problem prone issues
- Financial opportunities
- Regulatory or compliance requirements
- Patient safety

QI Teams provide progress reports to the QAPI Committee on a quarterly basis.

Employees

Employees are responsible to provide quality care and services to all customers and to comply with Center policies and procedures. Employees actively participate in the facility’s QAPI program and promote communication regarding Quality, Risk, Safety, and Infection Control issues. (See Policy: Quality Measures – Performance Improvement Indicators)

QUALITY MEASURES/PERFORMANCE INDICATORS

Data is collected on an ongoing basis and utilized to prioritize performance activities and focus on high risk, high volume, and problem prone areas.

Categories of indicators include, but are not limited to, the following:

- Case Volume/Procedure Statistics
- Postoperative Infections
- Employee Health

| | |

- Post-op Contacts
- Risk Management/Safety
- Adverse Patient Events
- Patient Satisfaction/Grievances
- Medical Records Process/Documentation Review
- Prep quality
- Cecal Intubation Rate
- Day of Procedure Cancellations
- Competency
- Pathology/Adenoma detection
- Facility Utilization
- Pharmacy/Medication
- Credentialing (# credentialed/re-credentialed only)
- Compliance/Privacy

Endoscopy centers collect assigned data in the following categories as appropriate, as GIQuIC measures are included:

- Adenoma detection rate
- Adequacy of bowel prep
- Adverse events
- Adverse events-incidence of perforation
- Age appropriate screening colonoscopy
- Appropriate follow-up interval for normal colonoscopy in average risk patients
- Appropriate indication for colonoscopy
- ASA category documentation
- Average withdrawal time (min)
- Colonoscopy indication documentation
- Colonoscopy interval for patients with a history of adenomatous polyps-avoidance of inappropriate use
- Photo documentation of the cecum-all colonoscopies
- Photo documentation of the cecum-screening colonoscopies
- Repeat colonoscopy recommended due to poor bowel preparation
- Written discharge instructions rate
- History and physical documentation
- Informed consent documentation
- Incidence of post-polypectomy bleeding

All centers collect data on the following Surgical Care Improvement Project (SCIP) measures as applicable:

| | |
|---------------------|--|
| Policy Type: | QAPI_QUALITY ASSESSMENT PERFORMANCE IMPROVEMENT |
| Center: | Reno GI |
| Center DBA: | Digestive Health Center |

May not be valid after 1/22/2018

| Retired: | | | |

- IV Antibiotic Timing
- Wrong site, side, patient, procedure, or implant
- Patient burn
- Patient fall in the ASC
- All-cause hospital transfer or admission

BENCHMARKING

Benchmarking is integrated into the QAPI program in order to identify best practices and comparative information utilized for improvement. Internal benchmarking compares performance within the facility such as physician or department, or over time. External benchmarking is conducted with other AmSurg facilities through data sharing and dissemination of best practices. Examples of external benchmarking include the Corporate Quality Studies, monthly stat reports, and comparisons with external sources as the ASC Quality Collaboration. Other sources are utilized as applicable to the particular focus area and may include specialty-specific references and standards.

QUALITY STUDIES (FOCUS STUDIES)

The Center conducts at least two QAPI focus studies on an annual basis. At least one study must demonstrate that improvement has occurred. At least two focus studies are conducted each year

Sources of information that can initiate a focus study may include:

- Evaluating trends identified from results of ongoing data monitoring—see QAPI Outline
- Review Center process.
- Evaluation of performance in comparison to industry indicators/benchmarks (i.e., colonoscopy withdrawal time; antibiotic timing; unplanned vitrectomy rates; post-operative infections)

The 10-Step QAPI Focus Study Worksheet is utilized to document each study.*

Quality studies reflect the scope of services, center priorities, and findings from performance monitoring. Studies address clinical, administrative, and/or cost of care issues and are documented in a consistent format which includes:

- Identification of the process improvement opportunity/purpose of the study
- Identification of the performance goal
- Description of the data that will be collected
- Evidence of data collection

- Data analysis that describes findings
- Comparison of the current performance compared to goal
- Implementation of corrective action(s) to resolve identified problem(s)
- Re-measurement to determine whether the corrective actions have achieved and sustained demonstrable improvement
- Implementation of additional corrective action(s) and re-measurement if initial corrective action(s) did not achieve and/or sustain the desired improved performance
- Communication of the findings to the Governing Board and throughout the organization

INTEGRATION WITH RISK MANAGEMENT

Risk Management is linked operationally with QAPI to maximize patient, staff, and visitor safety. Improving the quality of care reduces risk exposure.

The operational linkage between Risk Management, Safety, Quality Improvement, and Infection Control is accomplished through the following mechanisms:

- Issues or trends identified in chart reviews, specialty reviews, infection control reports, and environmental rounds will be referred to the Center Director or designee for evaluation and/or corrective action.
- Data from incidents, identified trends, adverse events or any events that impact the quality or safety of patient care will be referred to the Center Director or designee for investigation, analysis and corrective action. Adverse events analysis are summarized and reported to the QAPI Committee on a quarterly basis.
- The Risk Manager (if applicable) and Center Director review current issues and risk reduction strategies; these are discussed at staff meetings as needed.
- The QAPI Committee serves as the oversight committee for Risk Management and Safety. Risk Management and Safety reports are presented to the QAPI Committee on a quarterly basis. (See Risk Management Toolkit)

REPORTING

QAPI Committee reports are provided to the Governing Board on a quarterly basis.

| | |
|---------------------|--|

| Policy Title: | QUALITY ASSESSMENT PERFORMANCE IMPROVEMENT PLAN | | |
| Approved: | 2/8/2016 | Page: | 8 of 8 |
| Retired: | | | |

CONFIDENTIALITY

All QAPI activities and data are considered confidential. Any requests from outside sources for any QI, Risk Management, Peer Review, Infection Control or credentialing information or reports are forwarded to AmSurg Risk Management. All provider and patient identification is protected in all minutes and reports. Reports and minutes are secured and maintained by the Center Director.

PROGRAM EVALUATION

The QAPI program is evaluated annually to determine its effectiveness and to assure that patient care and/or safety issues were identified and addressed. All recommendations from accreditation surveys, auditors, regulatory agencies and evidence-based sources are considered when evaluating the need for program revision. The Governing Board approves the annual program evaluation.*****

ANNUAL GOALS

The QAPI Committee establishes goals for the QAPI program on an annual basis. Factors identified in the annual program evaluation are considered in the establishment of subsequent goals. The Governing Board approves the annual goals.

PROGRAM APPROVAL

The Governing Board approves the QAPI program on an annual basis. (See QAPI Toolkit)

| Policy Title: | LIFE SAFETY Management Plan | | |
| Approved: | 11/4/2012 | Page: | 1 of 2 |
| Effective: | 1/13/2013 | Retired: | |

POLICY:

The Center maintains a Life Safety Management Plan.

PURPOSE:

To provide safety from fire hazards

PROCEDURE:

The Center has processes for:

- Protection of patients, personnel, visitors and property from fire, smoke and other products of combustion
- Maintenance of building structural requirements for fire protection
- Inspection, testing and maintenance of fire alarm systems, through annual preventative maintenance inspections.
- Inspection, testing of fire alarm / fire detection systems
- Minimize smoke transmission by controlling designated fans and dampers in air-handling and smoke management systems
- Transmits the alarm to the local fire department
- Inspection and maintenance of all fire extinguishers
- Review of proposed acquisitions of fabrics, wall coverings and upholstery, and other decorations
- Reporting of all incidents or Life Safety Code (LSC) and fire protection deficiencies, failures or user errors. Review of all incident reports by the Center Director, who forwards the report to the appropriate committees for discussion and resolution. In addition the Center Director provides a life safety orientation and education plan that addresses:
 - Roles and responsibilities of personnel at fire's point of origin
 - Roles and responsibilities of other staff as needed during a fire or building evacuation
 - Use and function of fire alarm systems
 - Use of equipment for evacuating or transporting patients to areas of refuge
 - Building compartmentalization procedure for containing smoke and fire

Education is provided at new employee orientation and annually. Training in-services may also be conducted at monthly in-services or staff meetings.

|----------------------|----------------------------------|--------------|---------------|
| Policy Title: | INFECTION CONTROL PROGRAM | | |
| Approved: | 9/6/2016 | Page: | 1 of 7 |
| Retired: | | | |

POLICY:

The Center maintains an ongoing Infection Control program that is a result of a formal, documented infection prevention risk assessment, to ensure that the program is relevant to the Center.

PURPOSE:

To prevent, control, and investigate infections and communicable diseases among patients, healthcare workers, and visitors

SCOPE OF THE INFECTION CONTROL PROGRAM:

The Infection Control Program is comprehensive in that it addresses detection, prevention and control of infections among patients and personnel.

COMPONENTS OF THE INFECTION CONTROL PROGRAM:

RESPONSIBILITY:

The Governing Board is the ultimate authority for the Infection Control program. Ongoing responsibility for the program is assigned by the Governing Board to an individual who receives special training regarding Infection Control and the responsibilities of the position. The designated individual is a member of the QAPI Committee and provides quarterly reports regarding the program activities, findings and improvement strategies. The QAPI Committee functions as the Infection Control Committee.

The Center adheres to professionally accepted standards of practice, manufacturer’s recommendations, and state and federal guidelines, including but not limited to the cleaning, disinfection and sterilization of instruments, endoscopes, equipment, supplies and implants.

The Governing Board has approved the adherence to nationally recognized infection control guidelines as outlined by CDC, APIC, OSHA, and SGNA.

Professional guidelines to be utilized in the implementation of the Infection Control Program:

Evidence based policies and procedures based upon CDC, APIC and OSHA guidelines.

| | |

|----------------------|----------------------------------|--------------|---------------|
| Policy Title: | INFECTION CONTROL PROGRAM | | |
| Approved: | 9/6/2016 | Page: | 2 of 7 |
| Retired: | | | |

INFECTION CONTROL COORDINATOR

Responsibility is delegated to the Infection Control Coordinator (ICC) to carry out the daily functions of the Infection Prevention Program. Those functions are described in the ICC job description. The ICC has knowledge and interest in Infection Prevention and has received initial and ongoing training in the principles and methods of infection control. The Infection Control Coordinator is provided adequate time to direct the Infection Control Program. The Infection Control Coordinator serves as a resource for all staff relating to prevention of infections.

SURVEILLANCE:

Surveillance is an active process to identify and analyze outcomes related to infection control, and includes:

- Environmental surveillance to identify and correct practices found in the workplace, i.e., hand hygiene, safe injection practices, use of PPE
- Preventive surveillance such as immunization of staff
- Observation and documentation of sterilization and disinfection practices
- Verification of education and training for staff
- Conformity with safe sharps handling
- Public Health reporting and monitoring of community trends
- Post-procedure surveillance conducted through reports sent to physicians
(See Infection Control Surveillance)

OUTBREAK INVESTIGATION

Systems are in place to facilitate recognition of increases in infections as well as clusters and outbreaks.

PATIENT ASSESSMENT AND TRIAGE

All patients receive a pre-procedure assessment of current and past health history, including a symptom-based evaluation for current communicable disease as evidenced by the nursing

| | |
|---------------------|--------------------------------|

assessment. The ambulatory care setting does not provide for isolation rooms and therefore contact with patients who are potentially contagious must be limited. (See ASSESSMENT Pre Procedure)

HAND HYGIENE

Protocols for proper hand hygiene and surgical hand antisepsis are an essential element of the program (See HAND HYGIENE)

LAUNDRY SERVICES

Center policies and procedures outline the handling, processing, and storage of clean and dirty linen, as well as the use of disposable supplies. (See LAUNDRY Contaminated and SINGLE USE MEDICAL DEVICE)

ENVIRONMENT of CARE

Environmental factors reviewed as part of the Infection Control plan include:

- Workflow to prevent cross contamination
- Sterilization and reprocessing procedures and documentation
- Ventilation
- Temperature and humidity of rooms
- Appropriate ventilation and maintenance of systems
- Housekeeping responsibilities
- Disinfection of surfaces between patients
- Cleaning schedules, and pest management

EDUCATION

Orientation and training regarding infection prevention and control is conducted by the designated Infection Control Professional and includes the topics:

- hand hygiene
- high level disinfection/sterilization
- waste management procedures
- infection prevention principles and practices

| | |
|---------------------|--------------------------------|
| Policy Type: | IC_INFECTION CONTROL |
| Center: | Reno GI |
| Center DBA: | Digestive Health Center |

May not be valid after 1/22/2018

|----------------------|----------------------------------|--------------|---------------|
| Policy Title: | INFECTION CONTROL PROGRAM | | |
| Approved: | 9/6/2016 | Page: | 4 of 7 |
| Retired: | | | |

Information related to employee health is also included.

Documented education in Infection Control Policies and processes is provided to all staff within 10 days of commencement of employment, annually thereafter, and when there is an identified need.

Credentialed providers receive ongoing or, at a minimum, annual infection control training.

QUALITY ASSURANCE/PERFORMANCE IMPROVEMENT STRATEGIES (QAPI)

Monitoring of infection control measures is conducted and variances are reported for specific occurrences. Corrective and preventive measures for improvement are undertaken immediately as needed. Infection Control is a component of the facility's Quality Assurance Performance Improvement Program (QAPI) and infection control reports are made to the QAPI committee. In addition, infection control audits are performed to assess the level of quality provided and actions for improvement are taken as needed.

The QAPI Committee meets on a regular basis and provides input and direction for the Infection Prevention Program. Policies and procedures relating to Infection Prevention are approved by the committee. Reports of infections are presented to the committee which recommends actions and control measures when needed.

REPORTING MECHANISMS FOR INFECTION CONTROL

Patient infection cases are monitored by the ICC. The ICC completes a list of infections, the monthly report forms and:

- Reports to the QAPI Committee
- Reports to the Governing Board
- Reports to health authorities, if appropriate
- Provides feedback to staff as needed.

Employee infections are reported by the employee to the Supervisor and Center Leader, then to the ICC. The ICC completes the employee infection report form and reports:

- Compliance with infection control practices is monitored and documented by:
 - Staff evaluation
 - Observation of Practices
 - The ICC and Center Leader review the compliance monitoring and initiate appropriate actions.

UPDATING THE INFECTION CONTROL PLAN:

The Infection Control Plan is reviewed annually by the Infection Control Committee/QAPI Committee. Revisions, if needed, will be made to the plan based on review.

POLICIES AND PROCEDURES

Policies and procedures for infection prevention are reviewed on a regular schedule and updated as needed.

The following Infection Control policies and procedures are maintained and made part of the Center Infection Control Plan:

- Airborne Precautions
- Annual Evaluation of Infection Control Program
- Asepsis Principles of
- Cleaning New-Repaired or Loaner Equipment
- Cleaning Procedure Room
- Communicable-Infectious Diseases Personnel
- Communicable-Infectious Diseases Patients
- Consent Form to Draw Blood

EYE SURGERY CENTER OF NEVADA

QUALITY AND PATIENT SAFETY PLAN

PATIENT SAFETY COMMITTEE/PROGRAM

EYE SURGERY CENTER OF NEVADA
3839 N CARSON STREET
CARSON CITY NEVADA 89706

CONTACT INFORMATION:

This plan was created and revised by the Eye Surgery Center of Nevada Patient Safety committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting and acknowledgement of risks to patient, visitor and employee safety, as well as reduce the medical/healthcare errors and/or preventable events.

It was last reviewed and revised as needed on March 1, 2018.

EYE SURGERY CENTER OF NEVADA

COMMITMENT TO PATIENT SAFETY

The Eye Surgery Center of Nevada is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive and safe culture for patients, family members, visitors and employees , through continuous learning and improving patient safety policies, systems and processes.

MISSION, VISION AND VALUES

In support of our mission, vision and values, the Eye Surgery Center of Nevada Patient Safety and Quality Improvement program promotes:

- Collaboration of leadership, medical staff, healthcare providers and staff to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, patients and their families to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee and healthcare provider.
- Responsibility for every healthcare related decision and action.
- Focus on continuous learning and improving to bring about the best possible outcomes to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff, healthcare providers and physicians to assure participation of all.

SCOPE AND PURPOSE

The scope of this Quality and Patient Safety Plan is organization wide which includes but is not limited to:

- Patient safety
- Visitor safety
- Employee safety

All staff at the Eye Surgery Center of Nevada are required to fully support and participate in this plan and devote their expertise to the patient safety and healthcare quality improvement process. The plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise as needed to better serve the patients and their families. To this end, the Eye Surgery Center of Nevada has developed this Patient Safety Plan.

EYE SURGERY CENTER OF NEVADA

The plan focuses on the process rather than the individual and recognizes both internal and external customers as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families and visitors
- Promote systems thinking
- Employ well-trained and competent staff

ROLES AND RESPONSIBILITIES

PATIENT SAFETY COMMITTEE RESPONSIBILITIES

- Monitor and document effectiveness of the patient identification policy
- Receive reports from Patient Safety Officer
- Evaluate actions of the Patient Safety Officer in connection with reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out to prevent and control infection.
- Review and evaluate the quality of measures carried out to improve the safety of patients.
- Make recommendations to the governing body to reduce the number of sentinel events and infections that occur.
- Meet quarterly in conjunction with Quality Assurance committee to report any sentinel event or infection occurring in the last quarter and measures taken.
- Adopt and review patient safety checklists and policies annually; revise as needed.

EYE SURGERY CENTER OF NEVADA

PATIENT SAFETY OFFICER RESPONSIBILITIES

- Serve on patient safety committee.
- Supervise the reporting of all sentinel events.
- Take action he determines to be necessary to ensure the safety of patients as a result of investigation into sentinel event.
- Report such investigations to Patient Safety Committee.

INFECTION CONTROL OFFICER RESPONSIBILITIES

- Serve on Patient Safety Committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to patient safety committee concerning the number and severity of infections.
- Take action as necessary to prevent and control infections at facility.
- Carry out the provision of the infection control program and ensure compliance of staff.

RCA LEADER RESPONSIBILITIES

- Organize and coordinate the RCA process.
- Assign investigative and implementation tasks to staff members
- Conduct the RCA, investigation and corrective action plan implementation process.
- Communicate the progress of the investigation and finalized plan to leadership.
- Monitor the goals and progress of the corrective action plans.
- Provide training, education and direction to staff that incorporate the Patient Safety and Quality Improvement elements.

GOVERNING BODY RESPONSIBILITIES

- Provide vision and leadership to Patient Safety and Quality Improvement process, develop and foster a safe learning and improving culture.
- Provide oversight to the quality improvement process.
- Plan, discuss and generate the facility patient safety goals and activities in conjunction with the patient safety action plans.

COMPONENTS AND METHODS

The Eye Surgery Center of Nevada as a licensed facility in the State of Nevada is responsible for reporting any Sentinel event within 45 days. The facility will then conduct an investigation concerning the causes or contributing factors or both of the sentinel event and implement a plan to remedy the causes or contributing factors or both, of the sentinel event.

EYE SURGERY CENTER OF NEVADA

The Eye Surgery Center of Nevada will use the root cause analysis process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study-Act (PDSA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

ROOT CAUSE ANALYSIS

A Root Cause Analysis is a process for identifying the root causes of the problem. It focuses on the process instead of the individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

Root cause analysis and action plan framework table, which was introduced by the Joint Commission, contains 24 analysis questions. It is a guide to the steps in RCA, not all of the questions will apply to all of the events or cases. It will be used with the fishbone diagram.

The 5 Whys techniques will be used at the Eye Surgery Center of Nevada to explore the cause and effect relationship underlying a problem. One can identify the root causes by asking "why" no less than five times. It will be used as part of the fishbone diagram along with the action plan framework table.

MODEL FOR IMPROVEMENT

The Model for Improvement is a collaborative and ongoing effort to improve the product and services quality and process. It provides guidance in identifying the root causes; conducting tests to assess possible changes; and for implementation of the new approaches and solutions. It guides the test of change to determine if the change is an improvement.

| | |
|-------|--|
| PLAN | Develop plan based on the identified root causes |
| DO | Implement the change |
| STUDY | Study process and results |
| ACT | Adjust, adopt or abandon |

EYE SURGERY CENTER OF NEVADA

DEFINITION OF PDSA CYCLE

PLAN--Collect data and establish goals. Identify problem and possible root causes, answer the following questions.

- What is the objective of the test?
- What are the steps for the test-who, what, when?
- How will you measure the impact of the test?
- What is your plan for data collection?
- What do you predict will happen?

DO-- Make changes designed to correct or improve the situation.

- What were the results of the test?
- Was the cycle carried out as planned?
- What did you observe that was unplanned or expected?

STUDY--Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results.

- Did the results match your prediction?
- What did you learn?
- What do you need to do next?

ACT-- If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or further improvements. If the outcome is not successful look for different ways to identify the causes or change the testing process.

DATA COLLECTION AND REPORTING

Data should drive any quality and patient safety effort. The Eye Surgery Center of Nevada will use the data collected from our Quality Improvement Measures for tracking the sentinel and infection events for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety Plan include data from:

- NHSN: National Healthcare Safety Network
- NQF: National Quality Forum
- CDC: Centers for Disease Control and Prevention

EYE SURGERY CENTER OF NEVADA

ONGOING REPORTING AND REVIEW

The Eye Surgery Center of Nevada is an independently physician owned and operated ambulatory surgical facility for ophthalmology related procedures only. It operates only twice a month on Wednesdays for a twelve hour or less surgical day. Data will be collected and reported as follows:

MONTHLY

- 1) Sentinel Event Report
- 2) Infection Report
- 3) RCA assessment

QUARTERLY

- 1) Sentinel event report update
- 2) Severity of infection report
- 3) Review and evaluate the measure of improvement of patient safety
- 4) Review and evaluate the measurement to prevent and control infection

ANNUALLY

- 1) Quality and Patient Safety Plan
- 2) Checklists and Policies review/revise

ASSESSMENT OF THE QUALITY AND PATIENT SAFETY PLAN

The assessment of the Patient Safety plan and Quality Improvement measures will be ongoing and continuous. It will have four essential elements; management, patient safety program, procurement & equipment and safety policies and checklists. Important factors of a quality program include building trust through active listening skills, identifying issue through improved questioning skills and resolving issues with feedback obtained in open environment without instilling blame.

EYE SURGERY CENTER OF NEVADA

PATIENT SAFETY CHECKLISTS AND POLICIES

The Eye Surgery Center of Nevada Patient Safety Plan includes a Patient Safety Checklist and patient safety policies. The Patient Safety policies are developed for the use of Providers of healthcare who provide treatment to patients at the facility and to employees of the facility who provide treatment and who do not provide treatment but whose duties affect the health and welfare of the patients at the facility. The policies are also developed for persons or entities whom the facility contracts with for services which may affect the health or welfare of patients including Pharmacy, BioMed, Laundry and Sanitation.

The patient safety policies include but are not limited to policies on patient identification; hand hygiene; compliance policy; discharge policy.

The patient safety checklists are included as part of the patient permanent record and address treatment specific issues; sanitary environment issues and discharge instructions. They are verified and completed by the registered nurse, timed and dated.

APPROVAL OF PATIENT SAFETY PLAN

The Eye Surgery Center of Nevada will submit its patient safety plan to the governing board for approval. After initial approval the facility is responsible for notifying all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan will be reviewed and updated annually and a copy of the plan will be submitted to the Division of Public and Behavioral Health.

Policy: Safety Plan

Purpose: To provide a safe environment for all patients, employees, and physicians.

Procedure: 1. All electrical equipment is in optimal condition.

2. No frayed cords or loose plugs.
3. Emergency power has been checked.
4. Air conditioner filters will be serviced quarterly.
5. Temperature and humidity checked to be at a comfortable level for the patients and staff.
6. Bio-Med person will check equipment and electrical safety annually.
7. O.R. rooms and electrical equipment checked on surgical days.
8. Emergency call systems are located in O.R., Changing rooms, Pre-Op room, and Post-op Room. They are checked to be in working condition on operative days.
9. Wheelchair is in working condition.
10. Crutches are in working condition.
11. All walkways are clear of debris, and cleared of ice snow, and water.

POLICY AND PROCEDURE MANUAL

Policy: Patient Safety Plan
Owner: Center
Date last updated: Revised 4/2016

Purpose: Gastroenterology Consultants, Ltd (GIC) and affiliated Endoscopy Centers are committed to ensuring the ongoing safety of our patients. To ensure the ongoing safety and care of our patients we follow specific guidelines and policies which, at a minimum, include:

I Infection Control (IC): Refer also to the Infection Control (IC) Policy

Guidelines followed include:

- a. American Society for Gastrointestinal Endoscopy (ASGE) Multisociety Guideline on Reprocessing Flexible Gastrointestinal Endoscopes 2011
- b. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standards of Infection Prevention in Reprocessing Flexible Gastrointestinal Endoscopes 2015
- c. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standard of Infection Prevention in the Gastroenterology Setting 2015
- d. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Guideline for Use of High Level Disinfectants and Sterilants for Reprocessing Flexible Gastrointestinal Endoscopes 2013
- e. American Society for Gastrointestinal Endoscopy (ASGE) Infection Control during GI Endoscopy 2008
- f. Center for Disease Control (CDC) Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings 2007
- g. CDC Guide to Infection Prevention for Outpatient Settings 2014
- h. Association for Professionals in Infection Control and Epidemiology (APIC) Guide to the Elimination of Clostridium difficile in Healthcare Settings 2013
- i. CDC Safe Injection Practices

The IC Policy includes at a minimum processes or guidelines for:

- a. Patient selection and placement within the facility
- b. Infection Control Monitoring and Surveillance, Reporting
- c. Standard and Transmission Precautions, Hand Hygiene, Personal Protective Equipment, Respiratory Hygiene / Cough Etiquette and General Infection Control Practices in Healthcare Facilities as developed by the CDC and APIC
- d. Environmental and Terminal Cleaning
- e. Infection Control Officer

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.117 - 49.123 and NRS 49.265.

- f. Equipment Processing: Cleaning, Disinfection, High Level Disinfection and Sterilization

II □ Patient Selection and Screening: Refer also to the Criteria for Scheduling Patients at ASC Policy.

1. To ensure patients are appropriate for the planned procedure in the planned setting patients undergo:
 - a. Pre-procedure scheduling evaluation with referral for office visit or consultation as appropriate
 - b. Pre-procedure assessment which includes at a minimum:
 - i. Review of past medical & surgical history
 - ii. Medication reconciliation, review
 - iii. Allergy and reaction, review of
 - iv. Physical assessment; assessment for communicable diseases
 - v. Vital signs

III □ Patient Identification: Refer to Patient Identification Policy. Patient identity is verified with at minimum two (2) identifiers at check-in and at multiple points throughout care.

IV □ Safe Surgery Checklist: Refer to Safe Surgery Checklist Policy. Patient and procedure are verified immediately prior to procedures.

V □ Discharge Teaching: Patients are provided with written discharge instructions which are reviewed with patient and driver, as applicable, prior to discharge. Medications are reconciled prior to discharge if any new medications are ordered. Information specific to diagnosis, as best as known, is given to the patient. Patients are educated about signs and symptoms to report and given a twenty-four (24) hour telephone number to call in event of questions or concerns.

VI □ Post Procedure Callbacks: Patients are contacted one (1) to two (2) business days post-procedure for follow up of any concerns and questions regarding discharge instructions.

VII □ Pathology follow up: Patients are notified of pathology results and given information and follow up orders as applicable within two (2) weeks.

VIII □ Pharmaceutical Services: Refer to Pharmaceutical Services Policy. Safe injection practices are strictly followed. Pharmaceutical services are overseen by a contracting pharmacist on a monthly basis.

I □ Quality Assurance and Benchmarking: Refer to the Quality Management Plan. More than one hundred (100) quality assurance checkpoints are monitored on per patient, per case, per day, per week or per month basis as applicable. Benchmarking of multiple facility and nursing care factors are completed on an ongoing basis. In addition, multiple procedure-related factors are tracked and trended in aggregate and specific to individual

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

physicians on an ongoing basis. Incidents, procedure complications/events, adverse and sentinel events are investigated tracked and trended by facility, staff and physician. All data is reported to the Quality Management Committee.

- **Staff Training:** Extensive staff training is done at time of hire. Annual staff retraining is mandatory; ongoing training is provided as applicable. Staff are evaluated for customer service and performance on an ongoing basis.
- I□ **Checklists:** All items above are monitored via specific checklists, logs and or chart documentation.

Refer to:

- Infection Control Policy

Commitment to Patient Safety

(Facility name) is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

Mission, Vision, and Values

In support of our mission, vision, and values, Shepherd Eye Surgicenter Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members , and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

Scope and Purpose

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Shepherd Eye Surgicenter are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Shepherd Eye Surgicenter has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The *Patient Safety and Quality Improvement Plan*

core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

Roles and Responsibilities

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
 - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
 - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
 - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities (please revise as needed)*Patient Safety and Quality Improvement Plan*

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

RCA team leader Responsibilities (please revise as needed)

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

RCA Facilitator Responsibilities

(Please provide the responsibilities here)

Executive or Governing Body Staff Responsibilities (please revise as needed)

Patient Safety and Quality Improvement Plan

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

(Please provide additional responsibilities here if needed)

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

- Report and discuss sentinel events which include:
 - Number of sentinel events from previous calendar month (or quarter).
 - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
 - Evaluate the corrective action plan.
- Patient safety policies and checklists
 - At least annually evaluate Patient Safety policies and checklists
 - Revise the patient safety policies and checklists as needed.
 - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
 - Reviewing and analyzing the data.
 - Reviewing the RCA process and quality improvement related activities and timelines.
 - Brainstorming issues or the potential risks by using the fishbone diagrams.
 - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
 - Identifying the Plan-Do-Study-Act (PDSA) topics.
 - Discussing corrective action process and activities.
 - Discussing and presenting possible changes in procedure to improve areas indicated.
 - Identifying strengths and areas that need improvement.
 - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

Objectives and Goals of the Quality and Patient Safety Plan

| Objective | Goals | Plan | Planned Completion Date | Responsible Party |
|-----------|-------|------|-------------------------|-------------------|
| | | | | |
| | | | | |

| | | | | |
|--|--|--|--|--|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

(Facility name) will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

Root cause analysis and action plan framework table, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

5 Whys technique will be used in Shepherd Eye Surgicenter to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

Fishbone Diagram

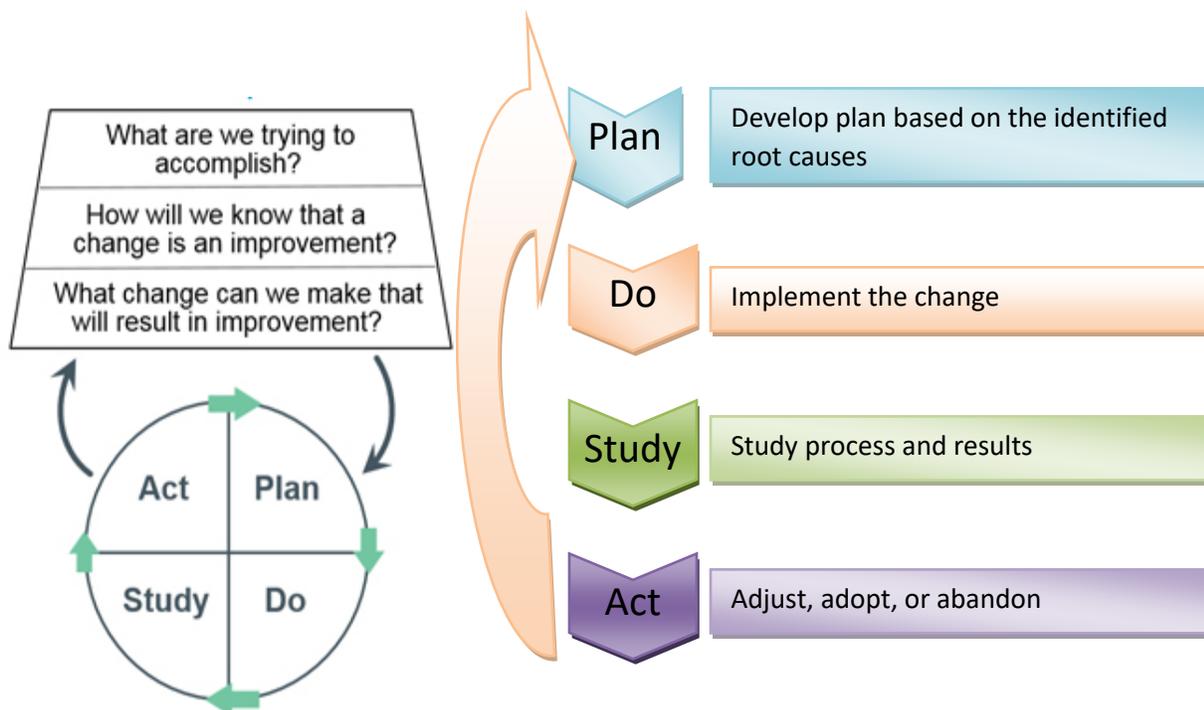

Patient Safety and Quality Improvement Plan

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
 - What is the objective of the test?

- What are the steps for the test - who, what, when?
 - How will you measure the impact of the test?
 - What is your plan to collect the data needed?
 - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
 - What were the results of the test?
 - Was the cycle carried out as designed or planned?
 - What did you observe that was unplanned or expected?
 - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
 - Did the results match your prediction?
 - What did you learn?
 - What do you need to do next?
 - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

Data Collection and Reporting

Data should drive any quality and patient safety effort. (Facility name) is using (data system names) for tracking the sentinel events, healthcare infection data, and (any other database) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly | Quarterly | Annually |
|--|--|--|
| 1) Sentinel event monthly report 2) Severity of infection report 3) RCA assessment | 1) Sentinel event quarterly report 2) Severity of infection report 3) Review and evaluate the measure of improvement of patient safety 4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update 2) Checklists and Policies reviewing and revising |

Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

Patient Safety Checklists and Patient Safety Policies

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - Proper instructions concerning prescription medications;
 - Instructions concerning aftercare;
 - Any other instructions concerning his or her care upon discharge; and
 - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

Approval of Patient Safety Plan

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

Appendix A: Terms and Definitions

Patient Safety: The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”
http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf

Sentinel event ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

Facility-Associated Infection: ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

Medical facility ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

Near miss: An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Mandatory reporting: Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

Risk: Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

Preventable event: Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Catheter Associated Urinary Tract Infection (CAUTI): A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf.)

Central Line Associated Bloodstream Infections (CLABSI): Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

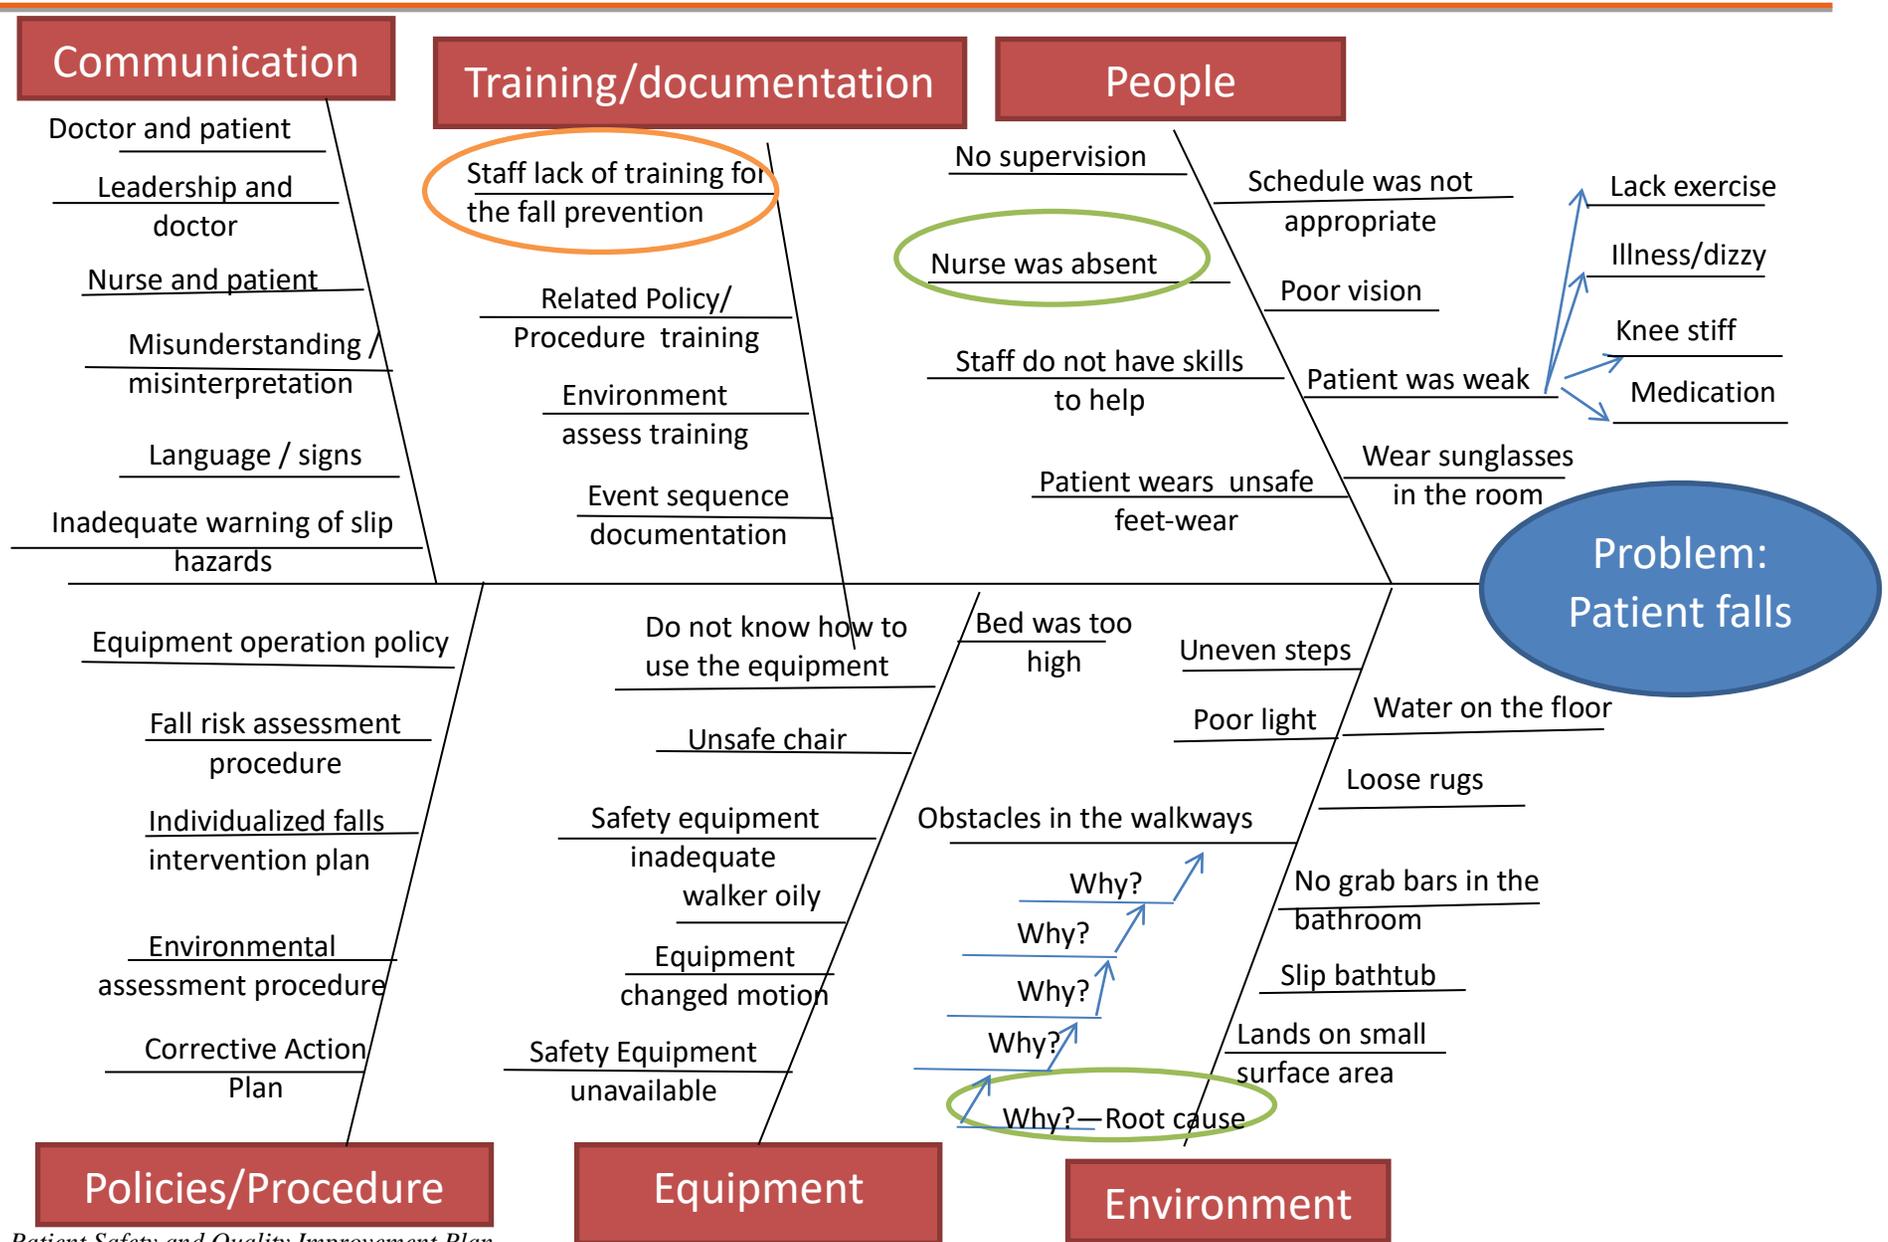

Appendix B: Patient Safety Goals

| OBJECTIVE: | GOAL: | Q3 2014 | Q4 2014 | Q1 2015 |
|---|--|--|--|---|
| ACTION PLAN: | | | | |
| 1. Create Systems that anticipate errors & either prevent or catch them before they cause harm. | a. Enhance retrospective chart review process. b. Establish an automated surveillance process. c. Conduct a proactive risk assessment in a high risk area. | | Complete an in-depth analysis of risk point utilizing the methods of FMEA. | Implement Trigger Tools. Develop automated surveillance reports in Cerner. |
| | | Implemented e-MERS & PSO with UHC. | Create process for reviewing & closing reports in e-MERS. Increase number of events reported by 10%. Create process for communicating outcome of reported events. | |
| 2. Establish Structures for reporting and a process for managing reports in the event reporting system. | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization. b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events. c. Establish a process for providing feedback regarding reported events. | | | |
| | | | | |
| 3. Develop a Culture of Safety where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability. b. Establish a recognition program that rewards safe practices. c. Improve overall perceptions of safety as measured by the Culture of Safety Survey. | | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan. Include patient safety presentation in monthly New Employee Orientation. Develop 'Great Catch' awards program. | Re-evaluate culture of safety and develop action plan. |
| | | | | |
| 4. Establish Safety Priorities & Targets. | a. Develop Patient Safety Dashboard that includes national measures and benchmarks. b. Facilitate the development of action plans associated with measures not meeting benchmarks. c. Assess and improve processes related to hand-off, transition and communication | Complete 2014 Leapfrog Safety Survey. | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee. Establish & implement a plan to improve performance of each leap. | |
| | | Develop method to track & report departmental progress and compliance of RCA action plans. | | |
| 5. Charter Safety Programs through teams, workgroups or projects. | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices. b. Reduce and eliminate variation in care. | | Establish Patient Safety Council. Establish workgroups focused on medication safety, reducing patient falls & hospital acquired pressure ulcers. | |
| | | | Revise or develop policies, procedures and protocols. | |

| Other Medical Staff | | | |
| Other team members | | | |
| Aim: (Describe the overall SMART goal that your team wishes to achieve.) | | | |
| | | | |
| Plan: | | | |
| 1. List the tasks needed to set up this test of change. | | | |
| | | | |
| 2. Predict what will happen when the test is carried out. | | | |
| | | | |

| 3. List the steps to develop the test-who, what, and when. | | | |
|--|---------|---|-----------------|
| Steps | By Whom | By When | Desired Outcome |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| Do: (Describe what actually happened when you ran your test, including any problems and unexpected findings.) | | | |
| | | | |
| Study: (Describe what you learned and did you meet your measurement goal?) | | | |
| Did you meet your measurement goal? Explain. | | Summarize what was learned: success, failure, unintended consequences, etc. | |
| | | | |
| Act: (Describe what you concluded from this cycle.) | | | |
| Based on what was learned, please indicate what action will be considered. | | Describe what modifications to the plan will be made for the next cycle based on what you learned. | |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle | | | |
| <input type="checkbox"/> Adopt: expanding changes throughout organization | | | |
| <input type="checkbox"/> Abandon: change approach and repeat PDSA cycle | | | |

Appendix D-2: PDSA Monthly / Quarterly Progress Report

| | | | |
|---|--------------------|----------------------|--|
| Event: | | | |
| Person Complete Report: | | Date: | |
| Patient Safety Officer | | Contact Information: | |
| Monthly / Quarterly Report | | | |
| Items | Description | | |
| 1. What is your goal? | | | |
| 2. Report on the PDSA cycle | | | |
| 3. What system and practices are working well? Explain. | | | |
| 4. What areas for improvement did the data identify? | | | |
| 5. What barriers or system issues have been encountered implementing action activities? | | | |
| 6. Action plans to address the barriers or system issues | | | |
| 7. Lesson learned | | | |
| 8. Support needed | | | |
| 9. Additional discussion | | | |
| Notes: | | | |

Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission | | | | |
| Reassess risk daily and with changes in patient condition | | | | |
| Implement patient-specific intervention to prevent falls and injury | | | | |
| Communicate risk across the team; use handoff forms, visual cues, huddles | | | | |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) | | | | |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds | | | | |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives | | | | |
| Incorporate multidisciplinary input for falls | | | | |
| Prevention from PT, OT, MD, RN and PharmD | | | | |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient | | | | |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls | | | | |

Appendix F: Policy Example

[Reference: Hospital Policies. MERCY Hospital. <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>]

| | | |
|---|--|--|
|  | HOSPITAL POLICY AND INFORMATION MANUAL | |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY Page 1 of 2</p> | <p>Date Issued: 07/01 08/14 Date Last Revised: 08/17 Next Review Date: Approved By: Policy Committee</p> | |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

| | | |
|--|---|--|
|  | HOSPITAL POLICY AND INFORMATION MANUAL | |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY Page 2 of 2</p> | Date Issued: Date Last Revised: Next Review Date: Approved By: | 07/01 08/14 08/17 Policy Committee |

Implementation:

Risk Management

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

Process

Manager’s Responsibilities

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

**Sierra Center for Foot Surgery's
Patient Safety Plan
Patient Safety Committee**

The goal of the Sierra Center for Foot Surgery's internal patient safety plan is to improve the health and safety of patients who are treated at the medical facility. It is developed in consultation with the actual providers of health care to the facility's patients. The center's safety plan is delineated in the center's policy and procedure manual and includes policies and procedures related to:

Surgical Time Out
Surgical Site Marking
Emergency Call System
Safe Use of Electrical Equipment
Facility Safety Checklist
Facility Maintenance and Safety
Equipment Safety Log
Emergency Drills:

- Fire Drills
- Earthquake Drills
- Bomb Threats
- Medical Emergency Drills

Patient Positioning

The center's Program for The Prevention and Control of Infections and Communicable Diseases, includes policies and procedures related to:

Medication Safety

- Single Dose vials
- Multi-dose vials
- Anesthesia Services

Syringe and Needle Use
IV Infusions
Disinfection
Sterilization
Aseptic Technique
Communicable Diseases and Resistant Infections
Hand Hygiene
Gloves

The center's infection control and patient safety policies and procedures are reviewed and approved at least annually. Infection control, patient safety and communicable disease policies and procedures are also reviewed and reinforced via annual face to face in-services. If new and improved infection control practices, patient safety practices or new information on communicable disease control and/or prevention are discovered before that time they are discussed and reviewed with the Director of Nursing, medical director and any pertinent staff members, in-serviced and put into effect at that time.

The Sierra Center for Foot Surgery has designated Jessica Bell, RN to serve as the center's Patient Safety Officer. She has the responsibility to serve on the patient safety committee, supervise the reporting of all sentinel events, take action as deemed necessary to ensure patient safety at the facility and report any action taken to the patient safety committee.

Patient Safety Committee:

The center's patient safety committee is comprised of all the staff members of the center, including the Director of Nursing and the Medical Director who is considered the "CEO" of the center.

The committee shall meet once annually.

The patient safety committee shall:

Receive reports from the patient safety officer pursuant to NRS 439.870

Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.

Review and evaluate the quality of measures carried out by the medical facility to improve the safety of patients who receive treatment at the medical facility.

**Southwest Medical,
Part of Optum Care**

PATIENT SAFETY PLAN

MARCH 1 2018

Southwest Medical™
Part of OptumCare™

The Southwest Medical Patient Safety committee/team created the plan and revises/updates it annually. Implementation of this plan is intended to optimize healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, and reduce the medical/healthcare errors and /or preventable events

Patient Safety Committee/Program
Southwest Medical, Part of Optum Care
Las Vegas, Nevada

Commitment to Patient Safety

Southwest Medical is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems and processes.

Mission, Vision, and Values

In support of our mission, vision and values, Southwest Medical's Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare
- Open and honest communication to foster trusting and cooperative relationships among healthcare providers, staff members and patients and their families and to ensure accountability for the patient safety priorities
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers
- Responsibility for every healthcare related decision and action
- A focus on continuous learning and improving, system design and the management of choices and changes, bringing the best possible outcomes or performances to the facility
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare
- Education of staff and physicians to assure participation of healthcare providers

Plan Scope and Purpose

The scope of the Patient Safety Committee organizational-wide and includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

The Committee provides oversight for patient safety activities, infection control activities, initiatives to promote patient safety and monitoring and review of medical/healthcare errors/potential errors involving patients, visitors, SMA staff, students and volunteers

All staff members at Southwest Medical are expected to fully support and participate in this plan and devote their expertise, knowledge, vision, skill, and insight to the patient safety and healthcare quality improvement process

Leadership assumes a role in establishing a culture of safety that minimizes hazards and patient harm by focusing on processes of care. The leaders of the organization are responsible for fostering a culture of safety through personal example by:

- Emphasizing patient safety as an organizational priority
- Providing education to medical and facility staff regarding the commitment to reduction of medical errors
- Supporting proactive reduction in medical/health care errors
- Integrating patient safety priorities into the new design and redesign of all relevant organization processes, functions and services

The purpose of the Patient Safety Plan is:

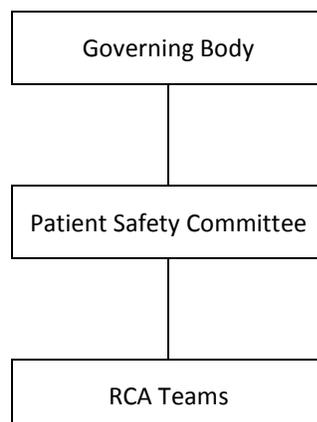

- To address patient safety related concerns and challenges
- To reduce risk
- To respect the dignity of those Southwest Medical serves by assuring a safe environment
- To periodically evaluate and revise the program to better serve patients and their families

Roles and Responsibilities

Southwest Medical created an organization-wide Patient Safety Plan that includes the medical facilities (Surgery Centers) as directed by [NRS 439.875](#) a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully

The Southwest Medical Patient Safety Committee

- Is a standing confidential interdisciplinary committee formed to manage the Southwest Medical’s Patient Safety Program and Infection Prevention and Control Program through a systematic, coordinated, continuous approach
- Will meet monthly to assure maintenance and improvement of patient safety with the establishment of plans, processes and mechanisms involved in the provision of the patient care
- Will report and discuss events including:
 - Number of sentinel events from previous calendar quarter
 - Number of severe infections from previous calendar quarter
 - Corrective action plans
 - Corrective action plan evaluation
 - Patient safety policies and checklists
- Will monitor and document the effectiveness of the patient safety policy
- Will evaluate patient safety policies and checklists at least annually
- Will revise patient safety policies and checklists as needed
- Will convene a RCA meeting/team as necessary
- Review the RCA process and quality improvement related activities and timelines
- Identify barriers and technical assistance needs for supporting the RCA efforts
- Discuss corrective action process and activities

Patient Safety Committee Membership

In accordance with [NRS 439.875](#), the Patient Safety Committee will include:

- The Patient Safety Officer
- The Infection Prevention and Employee Health Medical Director

- At least three providers of healthcare who treat patients , including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff
 - Medical Director Specialties
 - Medical Director Primary Care
 - Medical Director On Demand Medicine
 - Medical Director Clinical Education Programs
 - Medical Director Surgery Centers
 - Associate Vice President Surgery Centers (RN and Administrator)
 - Chief Nursing Officer
 - RN Executive Director On-Demand Medicine
 - RN Director Specialties
 - Director Imaging Services
 - Pharmacy Consultant (PharmD)
 - RN Managers Surgery Centers
 - RN Clinical Quality
 - Infection Prevention RN
- One member of the governing body
- Optum Legal
- Vice Presidents Clinic Operations
- UHG Safety Regional Manager

Patient Safety Committee Responsibilities_(based on [NRS 439.875](#) and [NRS 439.877](#))

The Patient Safety Committee is a standing confidential interdisciplinary committee formed that manages the Southwest Medical’s Patient Safety Program and Infection Prevention and Control Program through a systematic, coordinated, continuous approach

- Evaluating and improving the quality of care rendered by Southwest Medical
- Collecting data and evaluating aggregate data related to individual occurrences in order to utilize performance improvement methodologies to promote patient safety and infection prevention
- Maintaining and improving patient safety with the establishment of plans, processes and mechanisms involved in the provision of the patient care
- Monitoring and documenting the effectiveness of the patient identification policy
- On or before July 1 of each year, submitting a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#)
- Receiving reports from the Patient Safety Officer pursuant to [NRS 439.870](#)
- Evaluating actions of the Patient Safety Officer in connection with all reports of potential or actual sentinel events
- Reviewing and evaluating the quality of measures carried out by Southwest Medical to improve the safety of patients who receive treatment
- Reviewing and evaluating the quality of measures carried out by Southwest Medical to prevent and control infections
- Making recommendations to the governing body to reduce the number and severity of sentinel events and infections that occur
- At least once each quarter, reporting to the governing body regarding
 - The number of sentinel events at the medical facility (Surgery Centers) during the preceding calendar quarter
 - The number and severity of infections at the medical facility (Surgery Centers) during the preceding calendar quarter
 - Any recommendations to reduce the number and severity of sentinel events and infections

- Adopting patient safety checklists and patient safety policies as required by [NRS 439.877](#), reviewing checklists and policies annually and revising the checklists and policies as necessary
- Directing root cause analysis teams when indicated
- Providing oversight/direction for Surgery Centers QAPI program and quality studies
- Providing oversight/direction for the Surgery Centers participation in NHSN
- Providing oversight and monitoring for the Optum Practice Health and Safety Clinical Assessment Process

Patient Safety Officer Responsibilities ([based on NRS 439.870](#))

- Chair the Patient Safety Committee
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#)
- Take such action as necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility
- Report to the Patient Safety Committee regarding any action taken in accordance with the responsibilities above
- Promote compliance with patient safety standards and initiatives
- Reinforce expectations of the Patient Safety Plan
- Accept accountability for measurably improving safety and reducing errors
- Liaison with Southwest Medical clinical leadership including surgery center leadership, other quality committees and the Board of Directors

Infection Prevention Officer Responsibilities ([based on NRS 439.873](#))

- Serve on the Patient Safety Committee
- Liaison with Southwest Medical clinical leadership including surgery center leadership, other quality committees and the Board of Directors
- Provide medical direction as indicated (for both patient and employee infection control issues)
- Monitor the occurrences of infections to determine the number and severity of infections
- Report to the Patient Safety Committee concerning the number and severity of infections
- Take such action as necessary to prevent and control infections alleged to have occurred
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program
- Ensure compliance with current infection prevention and control standards
- Direct infection prevention initiatives
- Reinforce expectations of the Infection Control program
- Complete at least four hours of continuing education each year on topics relating to current practices in infection control and prevention
- Be a certified Infection Preventionist or complete a nationally recognized basic training program in infection control

RCA Team/Meeting

Will meet as needed to:

- Define the healthcare issues or potential risks
- Conduct Root Cause Analysis
- Review and analyze data
- Brainstorm issues or the potential risks by using the fishbone diagrams
- Identify the contributing factors
- Develop Corrective Action Plan
- Identify Plan-Do-Check -Act (PDCA) topics

- Discuss and present possible changes in procedure to improve areas indicated
- Identify strengths and areas that need improvement
- Develop strategies, solutions, and next steps

RCA Team Leader Responsibilities

- Organize and coordinate the RCA process
- Assemble and encourage a supportive and proactive team
- Assign investigative and implementation tasks to the team members
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership
- Monitor goals and progress towards completion of the Corrective Action Plans
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements

Root Cause Analysis (RCA) Team Responsibilities

- Root cause interviews, analysis, investigation and corrective action plan implementations
- Participate in the RCA meetings and discussions
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders

Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process
- Develop and foster a safe learning and improving culture
- Provide oversight to healthcare quality improvement processes and teams
- Plan, discuss and generate patient safety goals and activities

Quality Studies -Process Analysis (Surgery Centers)

The Surgery Centers will complete quality studies each year that include:

1. A statement of the purpose of the QI activity that includes a description of the known or suspected problem and explained significance to the SSC
2. Identification of the performance goal against which SSC will compare current performance
3. Description of the data that will be collected in order to determine the SSC's current performance
4. Evidence of Data Collection
5. Data analysis that describes findings about the frequency, severity and source of issue
6. Comparison of the SSC's current performance against identified performance goal
7. Implementation of corrective action
8. Re-measurement to objectively determine whether corrective actions achieved and sustained improvement
9. Implementation of any additional corrective action to achieve and/or sustain improved performance (and plan for on-going re-measurement)
10. Communication of findings to SSC Leadership, The Patient Safety Committee, the Board of Directors and SSC staff and incorporating findings into educational activities

For quality studies, the Surgery Center(s) may base topic selection on information published by accrediting bodies, National Patient Safety Goals and/or other sources of information including risk management, performance improvement, quality assurance, infection prevention and control, patient/family suggestions/expectations or process outcomes

The Surgery Centers quality studies will focus on redesign or implementation of new processes to incorporate patient safety principles and will place an emphasis on the important facility and patient care functions of:

- Rights of Patients
- Governance
- Administration
- Quality of Care
- Quality Management and Improvement
- Clinical Records and Health Information
- Infection Prevention and Control and Safety
- Facilities and Environment
- Anesthesia Services
- Surgical and Related Services
- Pharmaceutical Services
- Pathology and Medical Laboratory Services
- Diagnostic and Other Imaging Services

Infection Prevention Program

- The purpose of the Infection Control Programs is to prevent and control infections
- The Infection Control Program and the surgery Centers Infection Control Program (SSC and SCT 1600-3 Infection Control Program for Southwest Medical Surgery Center) are components of the Patient Safety Plan
- The Infection Control Programs are based on current guidelines developed by nationally recognized infection control organizations
- The Infection Control Professionals will report regularly on the number and severity of infections that occurred in the prior quarter

Infection Prevention RN

Southwest Medical will maintain at least one Registered Nurse with training and education in infection prevention and control. While supporting the entire organization, the Infection Prevention RN will dedicate specific hours to the SSC

NHSN

- The medical facilities (Surgery Centers) will participate in the CDC's National Healthcare Surveillance Network
- Infection Prevention staff will report aggregate data and patient follow-up to the Patient Safety Committee at regularly scheduled intervals

Medical/Health Care Error

- Staff will immediately report the event to supervisor

The supervisor will:

- Immediately communicate the event through appropriate channels to the Patient Safety Officer; should this occur during off-hours, the supervisor/designee will leave a voice mail message for the Patient Safety Officer
- Initiate investigation and follow-up actions
- Staff will complete the Incident/Occurrence Report or Quality of Care form
- Staff will obtain required orders to support the patient's clinical condition
- Staff/supervisor will notify the UHG Safety Liaison of any situations of potential risk to others
- The Patient Safety Officer will follow usual protocols to investigate the error and coordinate the factual information/investigation for presentation, review and action by the Patient Safety Committee and/or other quality committees as applicable

Identification and Reporting

- SMA Policy # 1600-29 (Sentinel Event Policy) and SMA Policy 190-4 (Incident Occurrence Reporting Policy) will describe the mechanism for identification and reporting a Sentinel Event/other medical error
- Southwest Medical will promote willingness of staff to report and will support a Just Culture that focuses on process not individuals

Root Cause Analysis

- The Patient Safety Committee/Patient Safety Officer will provide oversight and direction for any root cause analysis of facility processes conducted for either Sentinel Events or near miss events
- The Patient Safety Officer will act as the liaison to quality committees and the Board of Directors for review/recommendations

Staff Involvement

As Southwest Medical actively supports the concept that errors occur due to a breakdown in systems and processes, staff involved in an event with an adverse outcome will be supported by:

- A non-punitive approach and without fear of reprisal
- Voluntary participation in the root-cause analysis for educational purposes and prevention of further occurrences

Reporting Requirements/Sentinel Event Reporting

- The Patient Safety Officer will report sentinel events to the Patient Safety Committee
- The Patient Safety Officer will direct reporting of any sentinel event at a medical facility per state of Nevada requirements as defined in NRS (Nevada Revised Statutes) and NAC (Nevada Administrative Code)
- The Patient Safety Officer will report the number of sentinel events and recommendations to reduce the number or severity of sentinel events to the SMA Board of Directors
- The Patient Safety Officer/Committee will provide education and support to providers to ensure providers report the occurrence of a sentinel event resulting from any surgery to the Board within fourteen days after the occurrence of the sentinel event
- The Patient Safety Committee shall evaluate the actions of the Patient Safety Officer in connection with the reporting of sentinel events
- The Patient Safety Committee shall make recommendations to the SMA Board of Directors to reduce the number and severity of sentinel events and infections that occur at the facility

HealthCare Acquired Infections (HAI) Reporting

The Patient Safety Officer/Committee will provide education and support to providers to ensure if a provider identifies a patient with an infection, the provider will notify, within five days or as soon as practicable, the patient or the legal guardian or other person authorized by the patient to receive such information that the patient has an infection

The Patient Safety Officer/Committee will provide education and support to providers so that providers understand the notification may be delayed if the patient does not have a legal guardian, has not authorized any other person to receive such information and:

- Is not capable of understanding the information
- Is not conscious
- In the provider's judgment, the notification is likely to result in the patient harming himself

The Patient Safety Officer/Committee will provide education and support to providers so that providers understand if the notification is delayed, the information must be provided as soon as practicable after:

- The patient is capable of understanding the information

- The patient regains consciousness
- In the judgment of the provider, the patient is not likely to harm himself if informed about the infection
- A legal guardian or other person authorized to receive such information is available

Internal Reporting

The Patient Safety Committee will report internally to provide a comprehensive view of both the clinical and operational safety activity of the organization by submitting Patient Safety Committee minutes/reports to the SMA Board of Directors

The Patient Safety Committee will include ongoing activities such as data collection and analysis, actions taken and monitoring for the effectiveness of actions

External Reporting

The Patient Safety Committee will report externally in accordance with all state, federal and regulatory body rules, regulations and requirements.

- On or before March 1 of each year, The Patient Safety Committee will submit an annual sentinel event report to the Office of Public Health Informatics and Epidemiology, Bureau of Health Statistics, Planning, Epidemiology and Response, Nevada State Health Division
- The Surgery Centers will participate in the CDC National Healthcare Surveillance Network per State of Nevada NRS and NAC

Annual Report

The Patient Safety Officer will report to the SMA Board of Directors and will include:

- Defining the scope of occurrences including sentinel events, near misses and serious occurrences
- Demonstrating a pro-active component of the patient safety program through selection of high risk or problem prone processes for ongoing measurement and analysis
- Reporting results ongoing measurement and analysis of the high-risk or error-prone processes
- Describing how the function of process design incorporates patient safety using specific examples of process design or redesign that include patient safety principles
- Describing the process for soliciting and obtaining input for improving patient safety from patient/families
- Describing staff willingness to report medical/health care errors
- Describing the procedures for communication with patients/families about adverse events or unanticipated outcomes of care
- Describing examples of ongoing in-service, education and training programs to maintain and improve staff competence and support an interdisciplinary approach to patient care

Medical Facility (Surgery Centers) Reporting Requirements

The Patient Safety Officer/Committee will report to the appropriate licensing Board, within five days, after a change in the privileges of a physician, perfusionist, physician assistant or practitioner of respiratory care that is based on:

- An investigation of the mental, medical or psychological competency of the physician, perfusionist, physician assistant or practitioner of respiratory care
- Suspected or alleged substance abuse in any form by a physician, perfusionist, physician assistant or practitioner of respiratory care

Public Disclosure

The Surgery Centers will provide the name of each physician who performed a surgical procedure at the Surgery Centers, the total number of surgical procedures performed by the physician, reported by type of medical treatment, principal diagnosis, if the information is available, by principle surgical procedure and secondary surgical procedure (SB340)

Objectives Patient Safety Plan

| Objective |
|--|
| Encourage organizational learning about medical/health care errors |
| Incorporate recognition of patient safety as an integral job responsibility |
| Include patient safety into job specific competencies |
| Encourage recognition and reporting of medical/health care errors and risks to patient safety without judgment or placement of blame |
| Involve patients in decisions about their health care and promote open communication about medical errors/consequences which occur |
| Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate actions |
| Report internally what has been found and the actions taken with a focus on processes and systems to reduce risk |
| Support sharing of knowledge to effect behavioral changes in and within SMA |

Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Southwest Medical will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. Southwest Medical will use the Plan-Do-Study (check)-Act (PDSA or PDCA) model, developed by the Institute of Health Care Improvement, to test changes

Root Cause Analysis

- A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals
- Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis
- Root Cause Analysis and action plan framework table was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

5 Whys technique will be used at Southwest Medical to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

Fishbone Diagram

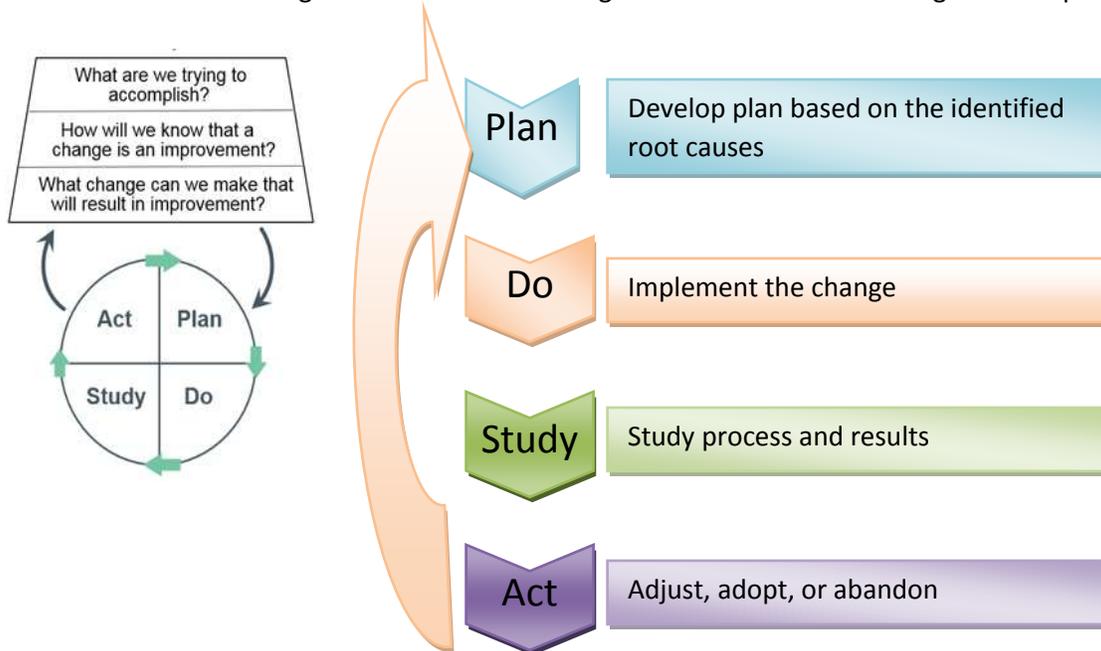

Once the problems are identified, a Fishbone Diagram can be used for analyzing the problems. Southwest Medical can use the fishbone diagram individually to analyze the root causes or can use it with the Root Cause Analysis and action plan framework table

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories include: people, methods, materials, measurements, education, procedures, process, location and environment.

RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes

Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions:
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance:
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance:
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

Data Collection and Reporting

Data should drive any quality and patient safety effort. Southwest Medical will track sentinel events, healthcare infection data and other internal data collection

External data sources are those data sources which are collected outside the supervisory structure of the case. Southwest Medical may use external data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

Ongoing Reporting and Review

The Patient safety committee will review Elements of the Patient Safety Plan at scheduled intervals

| Monthly | Quarterly | Annually |
|---|---|--|
| <ol style="list-style-type: none"> 1. Sentinel event monthly report 2. Severity of infection report 3. RCA assessment 4. Optum Practice Health and Safety Clinical Compliance and Infection Prevention Clinic Assessments | <ol style="list-style-type: none"> 1. Incidents-including sentinel event quarterly report 2. Severity of infection report 3. Review and evaluate the measure of improvement of patient safety 4. Review and evaluate the measurement to prevent and control infections 5. Quality reports including: <ul style="list-style-type: none"> • Environment of Care Standards • GI Staff Performance and HLD • Hand Hygiene • Infection Prevention • Sterilization • Pharmacy Standards | <ol style="list-style-type: none"> 1. Quality and Patient Safety Plan update 2. Checklists and Policies reviewing and revising |

Assessment of the Quality and Patient Safety Plan

Southwest Medical will review and evaluate the Patient Safety Plan at least annually

Patient Safety Checklists and Patient Safety Policies

By [NRS 439.865](#), the Patient Safety Plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility
- Other personnel of the facility who provide treatment or assistance to patients
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, environmental services at any medical facility
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary
- A checklist used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - Proper instructions concerning prescription medications
 - Instructions concerning aftercare
 - Any other instructions concerning his or her care upon discharge
 - Any other checklists which may be appropriate to ensure the safety of patients at the facility

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. The policy will require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers are full patient name and date of birth
- A policy regarding the nationally recognized standard precautionary protocols utilized by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and

Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA)

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist

Approval of Patient Safety Plan

According to [NRS 439.865](#), Southwest Medical will submit its Patient Safety Plan to the Governing Board for approval. After the patient safety plan is approved, Southwest Medical will notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan

Southwest Medical will review and update the plan annually in accordance with State of Nevada requirements

Southwest Medical, according to [NRS 439.843](#), will submit the most current copy of the Patient Safety Plan on or before March 1 of each year, to the Division of Public and Behavioral Health

Terms and Definitions

Patient Safety

The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf

Sentinel event (NRS 439.830)

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum
2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:
 - January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or
 - July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published
3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Medical Harm

The Institute for Healthcare Improvement (IHI) defines medical harm as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

Facility-Associated Infection: (NRS 439.802)

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections
- Ventilator-associated pneumonia
- Central line-related bloodstream infections
- Urinary tract infections
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#)

(Added to NRS by [2005, 599](#); A [2009, 553](#))

Medical Facility (NRS 439.805)

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

Near Miss

An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update)

Mandatory Reporting

Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

Risk

Risk is the possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

Preventable Event

Preventable event describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Catheter Associated Urinary Tract Infections (CAUTI)

A CAUTI is a urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf.)

Central Line Associated Bloodstream Infections (CLABSI)

A CLABSI is a primary bloodstream infection that is associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection

**BATTLE MOUNTAIN GENERAL HOSPITAL
CRITICAL ACCESS HOSPITAL**

535 S. Humboldt Street
Battle Mountain, NV 89820

Developed By: Risk Manager
Department: All Department
Effective: April 9, 2014
Revised: June 30, 2016
Reviewed: February 7, 2018

Page 1 of 4

TOPIC: PATIENT SAFETY PLAN

POLICY:

In compliance with **NRS 439.800-439.890**, Battle Mountain General Hospital shall develop, in consultation with the providers of health care that provide treatment to patients at the medical facility, an internal patient safety plan to improve the health and safety of patients who are treated at this medical facility.

Pursuant to **NRS 439.860**, any report, document and any other information compiled or disseminated pursuant to the provisions of **NRS 439.800-439.890**, inclusive, is not admissible in evidence in any administrative or legal proceeding conducted in this State.

The BMGH Patient Safety Plan must include, without limitation:

- The patient safety checklists and patient safety policies most recently adopted pursuant to **NRS 439.877**.
- An infection control program to prevent and control infections within the medical facility. To carry out the program, the medical facility shall adopt an infection control policy. The policy must consist of:
 - The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, without limitation, the Association for Professionals in Infection Control and Epidemiology, Inc., the Centers for Disease Control and Prevention of the United States Department of Health and Human Services, the World Health Organization and the Society for Healthcare Epidemiology of America.
 - Facility-specific infection control developed under the supervision of a the person who has successfully completed a nationally recognized basic training program in infection control, which may include, without limitation, the program offered by the Association for Professionals in Infection Control and Epidemiology, Inc.

Reviewed by AA/hh

The program to prevent and control infections within the medical facility must provide for the designation of a person who is responsible for infection control when the infection control officer is absent to ensure that someone is responsible for infection control at all times.

Battle Mountain General Hospital shall submit its patient safety plan to its governing board for approval. After the BMGH Patient Safety Plan is approved, BMGH shall notify all providers of health care who provide treatment to patients at BMGH of the existence of the plan and of the requirements of the plan. BMGH shall require compliance with its patient safety plan. The patient safety plan must be reviewed and updated annually in accordance with the requirements for approval set forth in this section.

BMGH shall designate an officer or employee of the facility to serve as the patient safety officer of the medical facility. The person who is designated as the patient safety officer shall:

- Serve on the Patient Safety Committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the medical facility, including, without limitation, performing the duties required pursuant to **NRS 439.835**.
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the medical facility.
- Report to the patient safety committee regarding any action taken in accordance with paragraph (c).

BMGH shall establish a patient safety committee.

- The BMGH Patient Safety Committee must be composed of:
 - The patient safety officer of the medical facility.
 - The infection control officer of the medical facility.
 - At least three providers of health care who treat patients at BMGH, including, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility.
 - One member of the executive or governing body of the medical facility.
- A patient safety committee shall meet at least once each month.
- The patient safety committee shall:
 - Receive reports from the patient safety officer pursuant to **NRS 439.870**.
 - Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.
 - Review and evaluate the quality of measures carried out by BMGH to improve the safety of patients who receive treatment at the medical facility.

- Make recommendation to the executive or governing body of the medical facility to reduce the number and severity of sentinel events that occur at BMGH.
 - At least once each calendar quarter, report to the BMGH executive or governing body of the medical facility regarding
 - The number of sentinel events that occurred at BMGH during the preceding calendar quarter;
 - The number and severity of infections that occurred at the medical facility during the preceding calendar quarter; and
 - Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
 - Adopt patient safety checklists and patient safety policies as required by **NRS 439.877**, review the checklists and policies annually and revise the checklists and policies as the patients safety committee determines necessary.
- The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in **NRS 49.265**

The Patient Safety Committee, established pursuant to **NRS 439.875** by a medical facility, shall adopt patient safety checklists and patient safety policies for use by:

- Providers of health care who provide treatment to patients at BMGH;
- Other personnel of the medical facility who provide treatment or assistance to patients;
- Employees of the BMGH who do not provide treatment to patients but whose duties affect the health or welfare of the patients at BMGH, including, without limitation, a janitor of BMGH; and
- Persons with whom BMGH enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients at BMGH.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - Proper instructions concerning prescription medications;
 - Instructions concerning aftercare; and
 - Any other instruction concerning his or her care upon discharge.

- Any other checklists which may be appropriate to ensure the safety of patients at the medical facility

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of health care. The personal identifiers may include, without limitation, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard of precautionary protocols to be observed by providers of health care at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies, which may include, without limitation, active surveillance. Active surveillance may include, without limitation, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

The patient safety committee shall:

- Monitor and document the effectiveness of the patient identification policy adopted.
- At least annually, review the patient safety checklists and patient safety policies adopted and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at the medical facility.
- Revise a patient safety checklist and patient safety policy as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
- On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted.

No person is subject to any criminal penalty or civil liability for libel, slander or any similar cause of action in tort if the person, without malice:

- Reports a sentinel event to a governmental entity with jurisdiction or another appropriate authority
- Notifies a governmental entity with jurisdiction or another appropriate authority of a sentinel event;
- Transmits information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority;
- Compiles, prepares or disseminates information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority; or
- Performs any other act authorized to **NRS 439.800-439.890** inclusive.

2018 PATIENT SAFETY PLAN FINAL

GOALS

Derived from the mission, vision and values of UHS and West Hills Hospital, the West Hills Hospital Patient Safety Plan is designed to:

- improve patient health and safety;
- provide a frame work that facilitates a culture of patient safety;
- reduce risk of error and harm; and
- Report and act upon avoidable errors, near misses, and injuries during hospitalization and outpatient treatment.
- Review all best practices through alerts and updated standards from all corporate, certification and regulatory bodies.
- Complete Patient Safety Survey

OBJECTIVES

The objectives of the Patient Safety Plan are to:

- Effect behavioral changes that support patient safety, risk reduction, and a living value of respect for the dignity of patients.
- Incorporate recognition of patient safety as an integral job responsibility
- Encourage recognition and reporting of patient care errors, near misses, and risks
- Assure reporting of all sentinel events in compliance with Nevada Revised Statutes (NRS) 439.870
- Assure compliance with NRS 439.875 by adopting/utilizing patient safety checklists.
- At least annually, review the checklists and policies to ensure the checklists or policy reflects the most current standards in patient safety protocols.
- Revise as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
- Assure completion of intensive analysis of all sentinel events using the Joint Commission format and forms, taking into consideration all 6 important variables as potential causes (human, environmental, external, human resources, information management, and leadership)
- Assure development and effective implementation of appropriate action plans resulting from RCA(s).
- Implement and maintain systems which support safe patient care processes and procedures
- Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate actions and ongoing monitoring
- Monitor and document the effectiveness of the patient identification policy
- On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau.

- Report internally to the Patient Safety Council/ Committee, MEC and the Governing Board.

PRIORITIES

Priorities for 2018 are:

1. A Patient Safety Council/Committee in compliance with NRS 439.875
2. Review and evaluate the hospital's quality measures in place
3. Reduce the number and severity of sentinel events.
4. Review and modify organizational processes to ensure compliance with the Joint Commission 2017 National Patient Safety Goals
5. Analysis of one high-risk process for proactive risk assessment
6. Review annually checklists or policy to ensure the most current standards in patient safety protocols are being adhered to with audit revision.
7. Implement all risk alerts to incorporate best practices to the greatest degree possible into the patient safety process and systems already in place.
8. Review, revise and promote patient-safety orientation and education for employees
9. Communicate WHH patient safety commitment to customers, patients and visitors
10. Report quarterly to the WHH Medical Staff (MEC) and at a minimum of annually to the Governing Board the results of progress towards patient safety risk and hazard reduction for the purpose of oversight

ORGANIZATION AND FUNCTIONS

The **Patient Safety Council** is a standing interdisciplinary group that manages the organization's Patient Safety Program through a systematic, coordinated, continuous approach. The council will meet monthly, no less than 10 times per year, to assure the maintenance and improvement of Patient Safety. Membership is required to attend 10 of the 12 meetings held during each year.

1. The scope of the Patient Safety Council includes review and analysis of actual and potential patient care errors involving the patient population of all ages, visitors, hospital/medical staff, and students. Data from internal (PI/RM data collection, incident reports, patient/family complaints, patient satisfaction surveys, Core Measure reports, employee and medical staff suggestions, infection Prevention and external resources (TJC Sentinel Event Alerts, UHS alerts and advisories , customer feedback, licensure and/or accreditation survey results, reports in the literature, etc.) will be used for review and analysis in prioritization of improvement efforts, implementation of action steps and follow-up monitoring for effectiveness. Best Practices will be researched and reviewed for possible implementation.
2. Definitions related to patient care errors include:
 - Adverse Event – Any injury caused by health care; an undesirable outcome resulting from some aspect of diagnosis or treatment
 - Error Chain – A series of events leading to an undesirable outcome

- FMEA (Failure Mode Effects Analysis) – A framework for predicting possible errors, particularly process failure, is combined with an estimate of the relative impact of that error to produce a “criticality index”. This index allows for prioritization of quality improvement targets
- Hazardous Conditions – any set of circumstances, exclusive of disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious adverse outcome
- Near Miss – any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome; a “close call”
- Patient Safety – Freedom from accidental or preventable injuries produced by healthcare
- Root Cause – cause of process variation including (1) failure to follow standard operating procedures; (2) poor leadership; (3) breakdowns in communication or teamwork; (4) overlooking or ignoring individual fallibility; and (5) losing track of objectives.
- Sentinel Event – new definition as of October 1, 2013 per Nevada Revised Statute. An unexpected occurrence involving death or serious physical or psychological injury or the risk thereof. Serious injury specifically includes the loss of limb or function. The phrase “or risk thereof” includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome
- GOOD Catch Program will document and implement strategies to provide a safe environment for our patients.

3. The **Patient Safety Council** will be chaired by the designated **Patient Safety Officer**.

- a. The Patient Safety Council report will be presented by the Director of Performance Improvement / Risk Management.
- b. The responsibilities of the Patient Safety Officer include:
 - i. Serving on the Patient Safety Council/Committee;
 - ii. Supervision of the reporting of all sentinel events alleged to have occurred in the hospital;
 - iii. Taking such action as he/she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event; and
 - iv. Reporting to the Patient Safety Committee regarding any action(s) taken.
- c. Team membership includes (as required by law) in Nevada NRS: at least 3 healthcare providers, including a minimum of one member of the medical staff, nursing, and pharmaceutical staff of the hospital, the infection preventionist (as required by NRS) and one member of the Governing Board. The CEO and Patient Safety Officer also will be voting members, as

required by law. Other organization leaders will be invited to participate on an as-needed basis.

4. The mechanism to insure all components of the organization are integrated into the program is via a collaborative effort throughout the hospital and outpatient services.

This is accomplished by:

- Reporting of potential or actual occurrences through the Incident Reporting system utilizing the Healthcare Peer Review (HPR) format by any employee in all departments.
 - Analysis of complaints or suggestions from patients and families.
 - Obtaining employee and medical staff suggestions for improvements via Process Improvement submissions.
 - Integration of Infection Prevention data in coordination with the infection preventionist.
 - Consideration of ages and developmental levels of the patient populations.
 - Communication between the Patient Safety Officer and the Environment of Care Safety Officer to assure a comprehensive knowledge of not only clinical, but also environmental factors involved in providing an overall safe environment.
 - Reporting of patient safety measurements to the performance improvement coordinating and oversight group.
 - Review of processes, policies and systems in place as alerts and recommendations are received through UHS/TJC/CMS and NRS.
5. A proactive component of the program includes annual selection of at least one high risk or error prone process for concentrated activity, ongoing measurement and periodic analysis. The selection may be based on information published by TJC Sentinel Event Alerts, and/or other sources of information including risk management, performance improvement, quality control, infection control, patient/family suggestions/expectations or process outcomes. The Primary initiative will be the discharge process. The discharge planning process will begin on admission and multidisciplinary staff compiles information to affect a safe discharge plan.
 6. The following **Patient Safety Measures** will be the focus of 2018 Patient Safety activities:
 - Seclusion and Restraint Use: Mechanical restraints were essentially eliminated in 2014. Continue to monitor and evaluate the use of seclusion and physical and chemical restraints. Use of Handle with Care program for interventions.
 - Adverse Drug Events, including Medication Variances and ADRs. Define the ADR as any event that resulted in an unexpected or condition that required medical intervention.

- Healthcare Acquired Infections; report as necessary per the Sentinel event definition adopted in October 2013. Event related reports are submitted when required.
 - Falls: Patient Falls Prevention Program.
 - Elopements with analysis event related.
 - Sentinel Event Reports (including any reportable patient event as they occur)
 - Staff Patient Safety Culture Survey results annually with a plan for improvement.
7. Solicitation of input and participation from patients and families in improving patient safety will be accomplished by:
 - a. Patient / family complaints or suggestions
 - b. Comments from Patient Satisfaction surveys
 8. Methods to assure ongoing education and training programs for maintenance and improvement of staff competence for safe patient care were implemented in 2013 and will be monitored again in 2018 as evidenced by:
 1. Orienting new staff members to WHH values and patient safety commitment and providing information on reporting mechanisms in the orientation training
 2. Providing ongoing education through education sessions, departmental meetings and/or other administrative communications, in-services and meetings
 3. Evaluating staff knowledge levels of patient safety principles through Health stream program and contributions to patient safety in annual performance appraisals
 9. Internal accountability for an effective patient safety program will be demonstrated via reporting to and oversight of the activities and results of the Patient Safety Council to the Medical Executive Committee and to the Governing Board.
 10. A separate Environment of Care committee that addresses EOC safety considerations was instituted as a separate group in 2013 and will continue in 2018.
 11. External Reporting: External reporting will be completed in accordance with all state, federal, and regulatory body rules, regulations and requirements.
 12. An **annual evaluation** of the effectiveness of the Patient Safety Plan will be conducted and reported to the Medical Executive Committee and Governing Board and will include:
 - a. The results of efforts to create and maintain a just and fair culture throughout the organization. *Completed in 2017 and to continue in 2018.*

- b. The scope of occurrences including sentinel events, near misses and serious occurrences and the effectiveness of actions taken to prevent recurrence. *Completed in 2017 and to continue in 2018.*
 - c. Detail of activities that demonstrate the patient safety program has a proactive component by identifying the high-risk process selected. *Completed – ongoing.*
 - d. Performance results of the high-risk or error-prone processes selected for measurement and analysis. *Completed in 2017 and to continue in 2018.*
 - e. The results of input are solicited and participation from patients and families in improving patient safety is obtained and incorporated into the patient safety program. *Completed in 2017 and to continue in 2018.*
 - f. A description of the procedures used and examples of communication occurring with families about adverse events or unanticipated outcomes of care, if applicable during the reporting period-
 - g. A description of ongoing staff education and training programs that are maintaining and improving staff patient safety competence, participation in patient safety activities, and error reporting. *Completed in 2017 and to continue in 2018.*
 - h. Recommendation for any indicated modification of the program organization or functions including incorporation of recognized advancements in patient safety practices.
12. Evaluation or modification of the plan may be undertaken more often than annually if indicated. *Completed in 2017 and to continue in 2018.*
13. The facility's Disaster Response efforts will be incorporated into the overall patient safety efforts of the facility. The Disaster Preparedness approaches will be examined in light of patient safety considerations. The Patient Safety Officer will be charged with evaluating actual or potential patient safety issues arising during a disaster and reporting these to the PI Committee. *Completed in 2017 and to continue in 2018.*

| | | |
|--|---|------------------|
|  Boulder City Hospital <small>Quality care close to home</small> | Patient/Resident Safety Plan | |
| | DEPARTMENT: Administration | |
| APPROVED BY: | REFERENCE # SEP 015 | PAGE: 1 OF: 6 |
| EFFECTIVE: 9/18/2007 | REVISED: 01/26/10; 12/21/2010, 6/1/11; 10/13/14; 9/20/16 | |

Policy Statement:

NOTE: The term Patient will be used throughout this policy to represent patients, residents and clients.

- I. The purpose of the Patient/resident Safety Plan (PRSP) is to improve patient safety and reduce risk to patient/residents through an environment that promotes:
 - a. Recognition and acknowledgment of risks to patient safety and medical/health errors;
 - b. The initiation of actions to reduce these risks;
 - c. The internal reporting of findings and the actions taken;
 - d. A focus on processes and systems;
 - e. Minimization of individual blame or retribution for involvement in a medical / health care error;
 - f. Organizational learning about medical/health care errors and safety factors;
 - g. Support of the sharing of knowledge to effect behavioral changes within Boulder City Hospital (BCH)
 - h. Individual responsibility to identify report and participate in the solution of safety risks.

- II. The PRSP provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through:
 - a. The establishment of mechanisms that support effective responses to actual occurrences;
 - b. Ongoing proactive reduction in medical / health care errors; and
 - c. Integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.
 - d. Zero tolerance for workplace violence. BCH strives to maintain a harmonious work environment free from violence and intimidation. Weapons of any kind are prohibited. Violent acts, threatening, harassing, discriminating, disruptive behavior (conflict that disrupts the work and jeopardizes the safety of individuals) and/or coercing behavior are prohibited and may result in disciplinary action up to and including termination (for employees) and/or legal action as warranted.

- III. As patient care and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the activities to maintain patient safety. This plan works in conjunction with the facility-wide Safety/Emergency Preparedness Manual which has inter-facility and department specific policies as necessary to address safety concerns such as Fire, Emergency Preparedness for Internal and External Disasters, Pandemic Events, etc. The PRSP was developed by the interdisciplinary Safety Committee and approved by the Medical Staff, Board of Trustees and Administration and outlines the components of the organization's PRSP.

Procedure:

- I. Scope of Activities
 - a. Ongoing assessment, monitoring, tracking and trending with analysis using internal and external knowledge and experience to:
 - i. Prevent error occurrence
 - ii. Maintain and improve patient safety
 - b. Patient/resident Safety Occurrence Information:
 - i. Collected from aggregated data reports and individual occurrence reports.
 - ii. Will be reviewed by the Safety Committee.
 - iii. Is used to prioritize organizational patient safety activity efforts.

- II. Types of Patient/resident Safety or Medical/Health Care Errors
 - a. No Harm Errors
 - i. Unintended acts, either of omission or commission;

- ii. Acts that do not achieve their intended outcome; and/or
- iii. Acts that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, to the patient
- iv. Mild to Moderate Adverse Outcome Errors
- b. Any medication error (mindful of the errors that result from: incomplete and/or inaccurate medication orders, transcription and documentation; not adhering to the 5 rights of medication administration; inappropriate labeling as well as in appropriate monitoring and storage of medications)
- c. Any Adverse Drug Reaction (ADR)
- d. Any transfusion reaction
- e. Hazardous Condition
 - i. Any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- f. Any Healthcare Associated Infection (HAI) including but not limited to Central Line Associated Blood Infections (CLABSI); Catheter Related Urinary Tract Infections (CAUTI); c-diff infections
- g. Any Health care Associated Stage III or IV Pressure Ulcer
- h. Any patient fall with injury
- i. Any patient aspiration
- j. Any motor vehicle accident wherein a patient was a passenger
- k. Sentinel Event (SE): Unexpected adverse occurrence involving death or serious injury or psychological injury or the risk thereof. Serious injury specifically includes the loss of limb or function. A sentinel event is an adverse event of a severe and urgent nature that can result in an unexpected and undesirable patient outcome. (Example: Surgery on the wrong patient or removal of the incorrect limb) The phrase “the risk thereof” includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. A Sentinel Event: (Refer to BCH Policy, “Sentinel Events”)
 - o Potentially involves a continuing threat to patient care or safety
 - o Has significant potential for being reflective of serious underlying systems problems within an organization
 - o Potentially undermines public confidence in the organization
- l. A “Near Miss” is any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome. Refer to BCH Policy, “Sentinel Events” For this policy, all reference to Sentinel Events includes Near Miss events as well.

III. Scope of Program

- a. Encompasses:
 - i. Patient, resident and client population;
 - ii. Visitors;
 - iii. Volunteers; and
 - iv. Staff (including Medical Staff)
- b. Addresses:
 - i. Maintenance and improvement in patient/resident safety issues in every department throughout the facility
 - ii. Emphasizes hospital and patient care functions of:

| | |
|---------------------------------|---|
| Ethics, Rights & Responsibility | Management of the Environment of Care |
| Provision of Care | Management of Human Resources |
| Medication Management | Management of Information |
| Improving Organization | Surveillance, Prevention and Control of |
| Performance | Infection |
| Leadership | |
- c. Assures:
 - i. All departments have current Safety Manual available on-line
 - ii. Emergency Preparedness Quick Reference Guide “Red Book” is available in high traffic areas
 - iii. Senior Leaders are FEMA trained and NIMS compliant
 - iv. Hospital Decontamination Program (and related equipment) is available and compliant with current regulations
 - v. Enforced Hand Hygiene policy
 - vi. Adherence to Standard Precautions with implementation of Isolation Precautions when necessary

- vii. Maintenance of a sanitary environment through interdepartmental collaboration, product and service evaluation and monitoring effectiveness

IV. Methodology

a. Responsibility

- i. The Committee meets monthly and is responsible for oversight of the Patient/resident Safety Program
- ii. The Patient Safety Officer will have Administrative responsibility for the program

b. Membership will include but not be limited to:

- | | |
|---|--|
| i. Safety Officer | viii. Acute Nursing Services Representative |
| ii. Physician | ix. Purchasing/Central Supply Representative |
| iii. Chief Nursing Officer/Patient Safety Officer | x. Environmental Services Representative |
| iv. Pharmacy Staff Representative | xi. Chief Executive Officer |
| v. Human Resources Representative | xii. Risk Manager |
| vi. Laboratory Representative | xiii. Infection Control Nurse |
| vii. Long Term Care Representative | xiv. Program Manager |

c. Communication

- i. **All departments**, both patient care and non-patient care are responsible to report patient safety occurrences and potential occurrences to the Risk Manager.
- ii. Risk Manager will aggregate occurrence information and present a report to the Committee on a quarterly basis.
- iii. The report will contain aggregated information related to:
 1. Type of occurrence;
 2. Severity of occurrence;
 3. Number/type of occurrences per department;
 4. Occurrence impact on the patient;
 5. Remedial actions taken; and
 6. Patient/resident outcome.
- iv. The Committee will:
 1. Analyze the report information; and
 2. Determine further patient safety activities as appropriate.
- v. The Committee will make recommendations for action and implementation and will follow-up as appropriate. Safety information is relayed to Department Managers, the Medical Executive Committee and the Board of Trustees who will then share the information during meetings and/or through communiqués.

V. Review of Internal and External Reports

a. To include, but not be limited to:

- i. Sentinel event report information;
- ii. HAI statistical report;
- iii. Fire and Disaster Drill reports;
- iv. Occurrence reporting;
- v. Injury Report;
- vi. Information from state and federal sources;
- vii. Current literature;
- viii. Performance Improvement reports.
- ix. Safety Survey results (performed at least annually)

b. The Committee will select at least one high-risk safety process for an annual proactive risk assessment.

c. The proactive risk assessment will include:

- i. Assessment of the intended and actual implementation of the process.
- ii. Identify the steps in the process if there may be any undesirable variations.
- iii. Identification of possible effects of the undesirable variation on patient/residents.
- iv. How serious the possible effects on the patient/resident could be.
- v. For the most critical effects, conduct a failure mode event analysis (FMEA) to determine why the undesirable variation leading to that effect may occur.
- vi. Redesign the process and/or underlying systems to:
 1. Minimize the risk of that undesirable variation; or

2. Protect patient/residents from the effects of that undesirable variation.
- vii. Test and implement the redesigned process.
- viii. Identify and implement measures of the effectiveness of the redesigned process.
- ix. Implement a strategy for maintaining the effectiveness of the redesigned process over time.

VI. Identification of a Medical/Health Care Error

- a. Note that the following Quality Improvement Policies are pertinent to this section: Medication Errors [HWN 139], Decreasing Medication Errors [HWN 142] and Safe Medication Practices [HWN 145]
- b. The staff member will immediately:
 - i. Perform and/or obtain necessary healthcare interventions to protect and support the patient's clinical condition;
 - ii. As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others – example: immediate removal of any recalled item from stock.
 - iii. Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary;
 - iv. Preserve any information related to the error including physical information such as:
 1. Removal and preservation of blood unit for a suspected transfusion reaction;
 2. Preservation of IV tubing, fluids bags and/or pumps for a patient/resident with a severe drug reaction from IV medication;
 3. Preservation of medication label for medications administered to the incorrect patient/resident;
 4. Documenting the facts regarding the error on an occurrence report and medical record as appropriate to organizational policy and procedure;
 5. Reporting the medical/health care error to Department Director; and
 6. Enter the occurrence report into the Quality Review Report system. Risk Manager will review.
- c. Any individual in any department identifying a potential patient safety issue will:
 - i. Immediately notify his/her supervisor; and
 - ii. Document the findings on an occurrence report.
 - iii. Submit occurrence report to the Risk Manager per policy.
- d. Patient, and family member as appropriate; and officiating agency will be notified timely of safety concerns and/or medical errors including HAI, ADR, SE, etc.

VII. Response

- a. Staff response to medical/health care errors is dependent upon the type of error identified.
- b. Error types:
 - i. Near miss
 1. Report the near miss event to immediate supervisor;
 2. Describe the facts of the near miss on an occurrence report; and
 3. Submit report to the Risk Manager/designee.
 - ii. No harm errors (including "no harm" medication errors)
 1. Document appropriately in the medical record according to policy;
 2. Document the circumstances regarding the no harm error on an occurrence report form;
 3. Submit the report to the Risk Manager; and
 4. Notify the immediate supervisor.
 - iii. Mild to moderate adverse outcome errors (including medication errors)
 1. Perform any necessary clinical interventions to support and protect the patient/resident;
 2. Notify the physician and staff responsible for the patient/resident;
 3. Carry out any necessary physician orders;
 4. Preserve any physical evidence as appropriate;
 5. Notify immediate supervisor;
 6. Document facts appropriately in the medical record and on an occurrence report;
 7. Submit report to the Risk Manager per policy; and
 8. Notify the Pharmacy Manager of medication errors at the time of occurrence/discovery.
 - iv. Adverse Drug Reaction
 1. Perform any necessary clinical interventions to support and protect the patient;
 2. Notify the physician staff responsible for the patient;
 3. Execute any necessary physician orders;
 4. Preserve any physical evidence as appropriate;

5. Notify immediate supervisor;
 6. Document facts appropriately in the medical record and notify patient/resident;
 7. Report ADR to Pharmacy via an ADR form or phone call
- v. Transfusion Reaction
1. Perform any necessary clinical interventions to support and protect the patient;
 2. Notify the physician responsible for the patient;
 3. Carry out any necessary physician orders.
 4. Follow the Administration of Blood and/or Blood Products and the Adverse Reaction to Blood Transfusion policies in House Wide P & P Manual including completion of a QRR
- vi. Hazardous Condition Patient Safety Issue
1. As appropriate, and if possible, staff will:
 - a. Contain the hazardous condition or patient safety issue;
 - b. Immediately notify supervisor;
 - c. Document the findings on an occurrence report;
 - d. Submit report to Risk Manager or designee.
 - e. Notify patient
 - f. Notify agencies as appropriate
 2. BCH has identified three significant clinical safety concerns based on the age of the population we serve and the historical data analyzed:
 - a. Falls with injuries
 - b. Aspiration
 - c. Hospital Acquired Infection
 3. For significant safety concerns, BCH has established:
 - a. A mechanism to identify individuals at risk
 - b. Plans to prevent the occurrence of these safety concerns
 - c. A reporting mechanism using the Quality Review and Report system (internal) to track , trend and analyze data reporting to the appropriate internal committees including the Safety Committee, Quality Improvement Committee, Medical Quality Improvement Committee, Medical Executive Committee, and the Board of Trustees
 - d. Timely forward reporting of pertinent information to applicable agencies including but not limited to the State of Nevada Bureau of Health Care Quality and Compliance, the Ombudsman, the Sentinel Event Registry, the Southern Nevada Health District, etc.
 - e. At a minimum annual staff education regarding these safety concerns
- vii. Sentinel Event
1. Perform any necessary clinical interventions to support and protect the patient;
 2. Notify the physician and staff responsible for the patient;
 3. Carry out any necessary physician orders; and
 4. Notify the patient documenting notification;
 5. Follow the Sentinel Event Policy and Procedure (see BCH Policy "Sentinel Events" in House Wide P & P Manual).
 6. Report event to the appropriate committees including Safety, Quality Improvement and Medical Quality Improvement, Medical Executive and Board of Trustees

VIII. Organizational Response

- a. Established policy and/or the Hospital Quality Improvement Committee will determine the organizational response to medical/health care errors and occurrences.
- b. Sentinel events and "Near Misses" will have a root-cause analysis conducted.
- c. The Committee, based on internal and external data analysis and prioritizing of patient safety criticality, will determine:
 - i. Further remedial action activities necessary for identified occurrences;
 - ii. Proactive occurrence reduction activities; and
 - iii. Necessity and benefit of root cause analysis performance for identified occurrences or proactive reduction activities.
- d. Resolution
 - i. Non-Punitive Approach
 1. An effective Patient/resident Safety Program cannot exist without optimal reporting of medical/health care errors and occurrences.

2. The intent of this institution is to adopt a non-punitive approach in its management of errors and occurrences.
 3. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment.
 4. This organization supports the concept that errors occur due to a breakdown in systems and processes.
 5. Focus will be given on improving systems and processes rather than disciplining those responsible for errors and occurrences.
 6. A focus will be placed on remedial actions to assist rather than punish staff members.
 7. The Committee and the individual department Managers will determine the appropriate course of action to prevent error recurrence.
- ii. Sentinel Events
 1. Staff members involved in a sentinel event occurrence will receive support to facilitate the staff member's professional and emotional reconciliation of the sentinel event.
 2. The staff member will be allowed an active role in process resolution as well as the root-cause analysis and action plan processes.
 3. Any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling as per the Sentinel Event Policy and Procedure and Employee Assistance Program.
- e. Evaluation
- i. The Patient/Resident Safety Program includes an annual survey of patients, their families, volunteers and staff (including medical staff) opinions, needs and perceptions of risks to patients and requests suggestions for improving patient/resident safety.
 - ii. In keeping with a non-punitive philosophy designed to encourage reporting and resolution of errors, the staff will be queried annually regarding safety concerns including their willingness to report medical/health care errors.
- f. Education
- i. Staff will receive education and training:
 1. During their initial orientation process; and
 2. On an ongoing basis regarding job-related aspects of patient safety.
 - ii. Education and training will include:
 1. The need and method to report medical/health care errors and other safety concerns;
 2. Providing the optimal provision of healthcare in an interdisciplinary manner; and
 3. An interdisciplinary approach to patient care.
- g. Reporting
- i. BCH values transparency working together as an organization accountable to the licensing and quality agencies as well as to our patients, staff, medical staff, volunteers and our community
 - ii. Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally per hospital policy and through the channels established by this plan.
 - iii. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements. Refer to House wide policy HWN 135 Reportable Events.
 - iv. Patient safety reports from the Safety Committee will be submitted to the Medical Executive Committee and the Quality Improvement Committee.
 - v. The Board of Trustees has the opportunity to review and ask questions during the monthly meeting as the minutes of committees are contained within the Medical Executive Committee minutes for approval by the board.

 Banner Home Care and Hospice
 Banner Plan Administration
 Banner Pharmacy Services
 Banner Surgery Centers
 Banner Urgent Care Centers
 Occupational Health/Employee Services
 Post-Acute Care Services
 Research
 Rural Health Clinics
 University Physicians Health Plans

I. Purpose/Population:

- A. The purpose of the Banner Health Quality and Safety Plan is by design to outline Banner Health's commitment and systematic approach to quality and patient safety at all levels of the organization consistent with its Mission, Values, and Purpose. Banner Health's quality goal is to continuously improve and increase reliability of our processes and outcomes for the safety and betterment of our patients and other customers, our providers, our partners, our communities and ourselves.
- B. This policy applies to All Employees.
- C. Mission: Making health care easier, so that life can be better.
- D. Values:
 - 1. **Customer Obsessed**
 - a. Puts the need of the customer and team at the center of decision making
 - b. Demonstrates empathy and compassion
 - c. Seeks to consistently enhance interactions and experience by exceeding customer and team members expectations
 - d. Thinks creatively about solutions and takes ownership
 - e. Is passionate about exceptional patient care
 - 2. **Relentless Improvement**:
 - a. Takes action that influences and motivates others
 - b. Instills positive energy and builds a shared vision and purpose
 - c. Ensure that the results of the collective effort aligns with objectives and goals
 - d. Uses data to drive streamlined decision making while also considering the impact on our Mission, people and culture
 - e. Effectively utilizes the organization's decision making process and knows when to collaborate, question or empower
 - 3. **Courageously Innovate**
 - a. Identifies opportunities to create value by introducing new ideas and driving change
 - b. Sees possibilities that don't currently exist Takes risks and challenges the status quo with the intent to strengthen team and organizational performance
 - c. Leverages knowledge and technology to enrich the patient and team member experience and facilitate speed, simplicity and efficiency
 - 4. **Disciplined Focus**
 - a. Is able to assess what is important, balances priorities and creates a clear and effective plan to drive desired outcomes
 - b. Uses time management effectively and measures progress
 - c. Embodies selflessness by always making the team and our Mission the first priority
 - d. Is constantly learning, adapting and paying attention to details
 - 5. **Foster Accountability**
 - a. Takes responsibility and ownership for work
 - b. Actively resolves problems individually and as part of team
 - c. Addresses performance issues with systems and people as opportunities to achieve excellences
 - d. Recognizes and reinforces success and establishes processes for sustainability
 - e. Maintains a team focus and role models servant-leadership
 - 6. **Continuously Earn Trust**

- a. Fosters strong and authentic relationships in every interaction by demonstrating honestly respect and assuming positive intent.
- b. Actively listens to the needs of others, and follows through on commitments
- c. Creates an open culture of communication that honors the truth and values diverse input

E. Purpose:

1. Banner can and will create a new model that answers America's health care challenges today and in the future.
2. Inspired to change the health care landscape in our communities – big and small – our talented and passionate teams care deeply about individuals who are responsive for the needs of their extended families.
3. Taking access and delivery from complex to easy, from costly to affordable and from unpredictable to reliable, we give every individual we serve confidence in their health care experience and its outcome.

II. **Definitions:**

- A. Facility – Any Banner Health hospital, ambulatory surgery center, physician/provider office, home health, hospice, skilled nursing facility, clinic or other setting where care is provided.
- B. Process Owner – A process owner is an individual responsible for their respective level of business operations. A level of business operation could include a whole Facility, a department or a specific service within a department or across a Facility or the organization.
- C. Process Improvement (PI) – Process Improvement is a series of actions taken to identify, analyze and improve existing processes to meet new goals and objectives.
- D. Quality Assurance/Quality Improvement/Clinical Process Improvement/Quality Management Program Activities – For the purpose of this plan, “Quality Assurance/Quality Improvement/Clinical Process Improvement/Quality Management Program” means activities designed and implemented to improve the delivery of care and services.

III. **Policy:**

- A. Banner Health bases its decisions on its values and applies the Guiding Principles throughout the organization in its Quality Management Model. (See **Figure 1: Banner Quality and Safety Management Model**)
- B. Quality Authority/Responsibility
 1. Governance.
 - a. The Banner Health Board of Directors has the ultimate responsibility and accountability for quality of care and services provided by Banner Health. The Clinical Leadership Team and the Care Management and Quality Committee of the Board serve as the oversight bodies for quality management and have the following duties and delegated responsibilities:
 - i. Monitor non-financial measures of organizational quality performance.
 - ii. Ensure use of a systematic approach to quality management and assess ongoing improvement in the quality of services delivered by the corporation.
 - iii. Review and make recommendations to the Board regarding a system-wide quality plan.

- iv. Evaluate and make recommendations to the Board concerning healthcare technologies including, but not limited to, genomics, biotechnology, future clinical services delivery and therapeutics.
 - v. Evaluate and make recommendations to the Board with respect to ethical implications relating to the activities and services of the corporation, including quality and clinical innovation.
 - vi. Act for the Board with respect to proposals of management and the local institutions and their medical staffs concerning medical staff policies, patient care policies, and compliance with standards of government and accreditation agencies having jurisdiction over the corporations' institutions as to such policies which require the involvement of the Board of Directors.
 - vii. Act for the Board of Directors on matters and activities pertaining to the medical staffs of each local institution operated by the corporation to the extent permitted by law and applicable accreditation standards, including any matter which requires action by the Board of Directors, including the adoption, amendment or repeal of medical staff bylaws, rules and regulations, and medical credentialing criteria.
 - viii. Act for the Board of Directors to the extent permitted by law and applicable accreditation standards, and otherwise make recommendations to the Board of Directors on any matter affecting medical staff membership or privileges, including application for appointment to the medical staff; application for reappointment to a medical staff; request for delineated clinical privileges; and denial, curtailment, limitation or revocation of any of the foregoing.
 - ix. Review reports regarding the quality of care being provided in respective Facilities.
 - x. Perform such other duties and responsibilities as the Board may assign to the Committee from time to time.
- b. In some communities, Advisory Boards provide advice and counsel to management and medical staff leadership on a variety of issues, including quality and safety activities and outcomes.
2. Leadership.
- a. Leadership is responsible for setting organizational direction and does this through the establishment of mission, values, and purpose, including annual initiatives. These are turned into actions through the development and execution of the strategic and operational plans that include quality of services and patient safety. Senior leadership communicates organizational direction, reviews and approves plans, provides resources and structure for the execution of the plans, and reviews performance to meet the goals of the plan.
 - b. At Banner Health, Care Management provides oversight for improvement of clinical care and patient safety coordinated across the system. The Clinical Leadership Team, a group of Banner Health Leaders representing patient care and supporting functions, makes decisions related to system-wide quality and safety goals and activities to achieve those goals.
 - c. Leadership for Facility activities related to quality of services and patient safety is directed by Facility administrative teams working with leaders under the oversight of the Quality Council structure. (See **Figure 2: Banner Facility Quality and Safety Structure Template**)
 - d. Quality Councils are responsible for the oversight of:
 - i. Quality leadership:
 - (i) Development and prioritization of Facility quality and patient safety goals and targets in an annual work plan.

- (ii) Facilitation of ongoing quality and patient safety education
 - (iii) Communication of the quality and patient safety commitment, goals, targets and performance.
 - (iv) Alignment of policies with quality and patient safety commitment.
 - (v) Establishment of an engaged workforce.
 - ii. Quality management:
 - (i) Identification of patients and other customer needs.
 - (ii) Identification of key processes; standardization and simplification.
 - (iii) Establishment of measures and monitoring.
 - (iv) Assessment and analysis of processes and outcomes.
 - (v) Identification of improvement opportunities.
 - iii. Performance improvement:
 - (i) Evaluation and prioritization of improvement opportunities.
 - (ii) Identification and replication of proven or evidence-based practices.
 - (iii) Clinical Innovation through the rapid identification and deployment of strategies based on the science of care delivery.
 - (iv) Allocation of resources for improvement.
 - (v) Celebration of success.
 - iv. Evaluation
 - (i) Evaluation of this plan occurs at the local and system levels. Locally, each Facility reviews its progress towards goals identified in the annual work plan using data that measures clinical, financial, resource utilization, and service performance. To assure sustained improvement, this process includes a review of how improvements have been made and will be maintained. Additionally, leaders evaluate their own performance in supporting sustained improvement. Areas failing to meet targets become areas of focused improvement activities. At the system level, performance information is regularly aggregated for review by leadership and governance.
- 3. Process Owner/Department Managers.
 - a. Process owners, individuals who serve in a leadership role in the performance of a process, are responsible for understanding patient and other customer needs, analyzing the processes used to meet those needs, standardizing and simplifying them to reduce variation and waste, measuring important indicators, and using this data to determine appropriate improvement actions based on the organization's goals.
- 4. Employees, Contacted Staff and Volunteers.
 - a. To assure that the organization meets the needs of its patients and other customers as they interact with nursing and other clinical staff as well as support staff, leadership has committed to developing an engaged workforce (staff, contracted staff and volunteers) who:
 - i. Understand job expectations and responsibilities, including service standards;
 - ii. Have access to information to determine if patient and other customer needs are being met, and understand how to respond quickly to resolve problems.
 - iii. Are provided opportunities and skills for meaningful involvement in improving operations;
 - iv. Recognize the need to work together to meet patient and other customer needs; and
 - v. Know how to identify and report incidents.
- 5. Medical Staff

- a. Providers fulfill their Medical Staff delegated peer review responsibilities and take a leadership role in quality and patient safety activities. Medical Staff Departments and Committees routinely review clinical performance measures and identify improvement opportunities. Medical Staff leaders partner with administration in the leadership of quality management through routine interaction with administrative leaders and also serve on Quality Councils. In addition, providers serve in various capacities as team members, collaborating with other members of the health care team, to monitor and improve processes.
 - b. The Board of Directors has delegated responsibility for review of professional practices to the medical staffs as set forth in the Medical Staff Bylaws. The Medical Executive Committees report on their performance of these responsibilities to the Board through the Medical Staff Subcommittee of the Care Management and Quality Committee of the Banner Health Board.
6. Risk Management
- a. Risk Management conducts activities intended to improve the quality of care and reduce errors and omissions. Risk Management may report trends and concerns relating to individual physicians and allied health providers to the appropriate Medical Staffs to determine whether peer review is warranted. Risk Management may report other trends and concerns to the appropriate subcommittee of the Clinical Leadership Team.
- C. Quality management is initiated as leadership sets organizational direction by planning and developing goals, including quality, patient safety and risk priorities that are based on continuous efforts to understand the needs of those we serve as well as improving current levels of performance, utilizing evidence-based and best practices and industry benchmarks. Areas identified for improvement and for achievement of the vision are called strategic initiatives. Strategic and operational planning processes as well as proactive risk assessment and gap analyses are used to identify desired outcomes and actions to achieve those goals at various levels of the organization. Criteria used for establishing priorities may include, but are not limited to, clinical quality, patient safety, customer satisfactions, strategic direction, financial sustainability, regulatory and accreditation compliance, resource utilization, high volume, high risk, or problem prone areas and external forces.
- D. Process owners are expected to identify patient and other customer needs and expectations, understand key processes and safe practices, and establish performance measures for their areas of responsibility. Performance measures encompass different dimensions, including clinical outcomes, patient safety, evidence-based practice, utilization management, and patient satisfaction as well as financial sustainability, and are aligned from the system level (e.g., quarterly patient satisfaction with inpatient care) to the process level (e.g., daily feedback from patients in a nursing unit).
- E. Appropriate improvement action is determined by analyzing and interpreting these data over time, using an understanding of variation principles. Process owners are responsible for continuously standardizing and simplifying processes to increase reliability through the reduction of variation and waste. They are also responsible for proactively recognizing and implementing proven or evidence-based practices for existing processes, using current literature sources and benchmarking activities internally as well as externally.
- F. If processes are unstable, process owners investigate and work to remove the cause of the variation. If the variation results in a significant event, they are analyzed and acted on according to policy.

- G. When data indicates a need to identify and correct the root cause of a problem, or there is an opportunity to move to a new level of performance, improvement projects are established. In these cases, teams, formal and informal, apply improvement processes that systematically move through the following five steps:
 - 1. Define the project
 - 2. Measure current performance
 - 3. Analyze to identify causes
 - 4. Improve
 - 5. Control
- H. To assure that the changes required for improvement are successful, the human aspects of change are also addressed using a change model that addresses the need for effective change leadership, creating a shared need, shaping a shared vision, mobilizing commitment, implementing the change monitoring results, and anchoring the change in systems and structure.
- I. Communication of improvement opportunities, new processes or practices are reported up and down the organization through defined reporting structures which include department, Facility and system-wide councils.
- J. When current processes are not able to achieve customer expectations and/or established performance goals, new processes and services are designed and implemented utilizing evidence-based and innovative practices. A systematic approach involves multiple departments and disciplines working collaboratively, using information from patients, staff, payers, and others, along with current comparative information/data from other organizations.
- K. Data for monitoring the effectiveness and safety of services and the quality of care at each Facility, including clinical outcomes, patient safety, evidence-based practice, utilization management and patient satisfaction, are collected and evaluated on an ongoing basis and reported up to governance for recommendations and actions on at least a quarterly basis.
- L. When performance issues may be related to the professional practice of an individual medical staff member, medical staff committees review such professional practices and determine appropriate action, if any.
- M. All proceedings, records, and materials related to Quality Assurance/Quality Improvement/Clinical Process Improvement/Quality Management and peer review activities are confidential in accordance with federal and state laws. Meetings will be held in confidence and minutes will be maintained separately. Dedicated portals with restricted access will be created to allow the sharing of confidential information.
- N. When performance issues may be related to the performance of a staff member, they will be handled through the appropriate Banner Health Human Resources policies and/or procedures.
- O. New committees and new organization structures may be formed from time to time and the work performed by these groups is intended to be covered under the auspices of the Quality Plan and the protections afforded by federal and state law.

PURPOSE

Sunrise Hospital and Medical Center and Sunrise Children's Hospital develops, implements, and maintains an effective, ongoing, hospital-wide, data-driven quality and patient safety assessment and performance improvement program.

SCOPE

Housewide

POLICY/STRUCTURE

Sunrise Hospital and Medical Center and Sunrise Children's Hospital has a leadership structure to support operations and the provision of care. The structure is formed by three (3) leadership groups: the Board of Trustees (BOT), the organized medical staff which is represented by the Medical Executive Committee (MEC), and Senior Leadership.

A. BOT

The BOT serves as the governing body legally responsible for the conduct of the hospital as an institution. The BOT has ultimate responsibility for safety and quality which is derived from their legal responsibility and operational authority for hospital performance. In this context, the BOT provides for internal structures and resources, including staff that supports safety and quality. Working with the MEC and Senior Leaders, the BOT establishes a mission, vision, and goals of the organization to support safety, quality of care, treatment, and services.

The roles and responsibilities of the BOT in ensuring performance improvement and patient safety activities include:

1. Reflects the complexity of the hospital's organization and services; involves all hospital departments and services (including those services furnished under contract or arrangement); and focuses on indicators related to improved health outcomes and the prevention and reduction of medical errors.
2. Identifies those responsible for planning, management, and operational activities.
3. Identifies those responsible for the provision of care, treatment, and services.
4. Defines in writing its responsibilities.
5. Approves the hospital's written scope of services.
6. Selects and approves the Chief Executive Officer (CEO) responsible for managing the hospital.
7. Works with the Senior Leaders and the MEC to annually evaluate the hospital's performance in relation to its mission, vision, and goals.
8. Ensures the ongoing program for quality improvement and patient safety is defined, implemented, and maintained.
9. Establishes clear expectations for safety.
10. Provides the organized medical staff, represented by the MEC with the opportunity to participate in governance and the opportunity to be represented at BOT meetings.
11. Assumes full legal authority and responsibility for operations of the hospital and medical staff.
12. Establishes a process for making decisions when a leadership group fails to fulfill its responsibilities and/or accountabilities.
13. Provides for the resources needed to maintain safe, quality care, treatment, and services.

14. Provides a system for resolving conflict among individuals working within the organization.
15. Receives and reviews reports summarizing the data, analysis, findings, and recommendations related to hospital-wide organizational performance improvement projects and Clinical Safety Improvement Program (CSIP).
16. Reviews the annual Performance Improvement (PI) and CSIP Appraisal.
17. Approves the annual Performance Improvement and Patient Safety Plan.

B. Medical Staff and MEC

Sunrise Hospital and Medical Center and Sunrise Children's Hospital has an organized medical staff that is accountable to the BOT. The medical staff is represented by the MEC.

The role and responsibilities of the MEC in ensuring performance improvement and patient safety activities include:

1. Organized and accountable to the BOT for the quality and safety of the medical care provided to the patients.
2. Operates under Medical Staff Bylaws and Rules and Regulations approved by the BOT.
3. Oversees the quality of care, treatment and services provided by those individuals with clinical privileges.
4. Approves the Performance Improvement and Patient Safety Plan including the design of performance improvement and patient safety activities.
5. Requires the Medical Staff departments to continuously assess and improve the quality of care and services provided, continue to evaluate the competence of individuals with or without clinical privileges (i.e., allied health providers) and provide information for the re-credentialing process.
6. Requires the Medical Staff to maintain quality control programs, as appropriate.
7. Systematically evaluates the hospital's performance activities of departments, committees and functional teams by the review of minutes, reports, and inquiries directed to/from the departments or committees by the MEC.

C. Senior Leaders

Sunrise Hospital and Medical Center and Sunrise Children's Hospital identifies the responsibilities of its Senior Leaders.

The role and responsibilities of Senior Leaders in ensuring performance improvement and patient safety activities include:

1. A CEO manages the hospital and leads the Senior Leadership group.
2. Senior Leaders work with the organized medical staff and the governing body to define their shared and unique responsibilities and accountabilities.
3. The CEO, MEC, the Chief Nurse Officer (CNO), and the Vice-President (VP) of Quality Management (QM) work together to make certain that the hospital-wide PI and CSIP along with training programs address identified problems.
4. Discuss issues that affect the hospital and the population(s) it serves, including the following:
 - a) PI and Clinical Safety Improvement activities.
 - b) Reported safety and quality issues.
 - c) Proposed solutions and their impact on the hospital's resources.
 - d) Reports on key quality measures and safety indicators.
 - e) Safety and quality issues specific to the population served.
 - f) Input from the population(s) served.
5. Ensures the scope of the safety program includes the full range of safety issues, from potential or no-harm errors (e.g., near misses).
6. Provides and encourages the use of systems for blame-free internal reporting of a system or process failure.
7. Defines sentinel events and ensures the performance of credible serious event analysis in response to sentinel events.

See:

http://fwdvwpwebpmgr01.hca.corpad.net/Policies/Components/PnP/DocTree_ViewFile.aspx?ModuleID=1786&ID=3AA40203-846D-41EB-AC78-88DE4DE2A003

8. Selects one high-risk process and conducts a proactive risk assessment at least every 18 months.
9. Creates and maintains a culture of safety and quality throughout the organization. The organization regularly evaluates the internal culture of safety and quality using the Agency for Healthcare Research & Quality (AHRQ) Hospital Survey on Patient Safety Culture. The survey allows Leaders to:
 - a) Prioritize and implement changes identified by the survey.
 - b) Provide opportunities for all individuals who work in the hospital to participate in safety and quality initiatives.
 - c) Develop a code of conduct that defines acceptable behavior and behaviors that undermine a culture of safety.
 - d) Create and implement a process for managing behaviors that undermine a culture of safety.
 - e) Provide education that focuses on safety and quality for all individuals.

D. Patient Safety Officer (Nevada Revised Statutes [NRS] 439.870)

The organization has designated the Risk Manager as the Patient Safety Officer for the organization. The Patient Safety Officer

1. Serves on the Quality Care and Patient Safety Committees.
2. Promotes a culture of safety and the elimination of avoidable harm.
3. Supervises the reporting of all sentinel events.

See:

http://fwdvwpwebpmgr01.hca.corpad.net/Policies/Components/PnP/DocTree_ViewFile.aspx?ModuleID=1786&ID=3AA40203-846D-41EB-AC78-

4. Reports all sentinel events and the actions taken to ensure the event does not reoccur.
5. Takes action as deemed to be necessary to ensure the safety of patients as a result of an investigation of the event.

E. Department Directors

The Department Directors of each ancillary/nursing service area is responsible for all PI and Patient Safety activities as they relate to their specific areas. The Directors are responsible for the continuous assessment and improvement of their department's performance, promotion of patient safety, and the maintenance of appropriate quality control programs. The Directors are responsible for evaluating the effectiveness of care delivered in their departments and the clinical performance of their staff. Although it is recognized that process issues or deficiencies account for most variances in performance, when performance improvement activities lead to a determination that an individual is unable or unwilling to improve, modification of the individual's job assignment will occur or other appropriate action will be taken. Significant findings of PI or Patient Safety activities will be reported through the appropriate channels.

F. Patient Safety Committee (PSC) and Quality Care Committee (QCC)

The PSC and the QCC are responsible to the BOT, MEC, and Senior Leaders for the overall operation of the PI and Patient Safety Plan. These interdisciplinary committees include but are not limited to, representatives from the BOT, Senior Leaders, Medical Staff, QM, Pharmacy, Nursing Leadership, Infection Control, Ancillary Services Directors, Patient Safety Officer and Facility Safety Officer. On an annual basis the PSC and QCC performs an annual PI appraisal of the PI activities. At this meeting, current performance improvement priorities, patient safety priorities, and associated activities are reviewed and evaluated.

General functions of the PSC and QCC include:

1. Collects data to monitor its performance. The BOT, MEC, and Senior Leaders set priorities for and determine the frequency of data collection.
2. Measures, analyzes, and tracks quality indicators, including adverse patient events, and other

- aspects of performance that assess processes of care, hospital service and operations.
3. Collects data and reports to the MEC, and BOT. The types of data collected includes but is not limited to:
 - a) Operative or other procedures that place patients at risk of disability or death.
 - b) All significant discrepancies between preoperative and postoperative diagnoses, including pathologic diagnoses.
 - c) Adverse events related to using moderate or deep sedation or anesthesia.
 - d) Use of blood and blood components.
 - e) All reported and confirmed transfusion reactions.
 - f) Results of resuscitation.
 - g) Behavior management and treatment.
 - h) Significant medication errors.
 - i) Significant adverse drug reactions.
 - j) The hospital considers collecting data on the following:
 - i. Staff opinions and needs
 - ii. Staff perceptions of risk to individuals
 - iii. Staff suggestions for improving patient safety
 - iv. Staff willingness to report adverse events
 - l) Patient perception of the safety and quality of care, treatment, and services.
 - k) Evaluates the effectiveness of all fall reduction activities including assessment, interventions, and education.
 - l) Effectiveness of its response to change or deterioration in a patient's condition. Note: Measures may include length of stay, response time for responding to changes in vital signs, cardiopulmonary arrest, respiratory arrest, and mortality rates before and after implementation of an early intervention plan.
 4. The PSC shall have oversight of: the Hospital Patient Safety Program, which includes but is not limited to:
 - a) Review the annual Patient Safety Plan and Strategies.
 - b) Collect data to monitor Patient Safety Plan performance. Measure, analyze, and track safety indicators, including adverse patient events, and other aspects of performance that assess processes of care, hospital service and operations. The types of data collected includes but is not limited to:
 - a. Patient safety related to the use of at least two patient identifiers when giving medication, blood products, or before a procedure.
 - b. Infection Prevention as it relates to the use of proven guidelines such as hand cleaning to prevent infections of Catheter Associated Urinary Tract Infections (CAUTI's), Central Line Associated Bloodstream Infections (CLABSI's), Surgical Site Infections (SSI's), and other hospital acquired infections.
 - c. Safe surgical practices by prevention of mistakes made in surgery such as wrong patient, wrong site, and wrong procedure with use of standardized Time Out practices before any treatments or procedures.
 - d. Use of medication safety as it relates to the prevention of significant medication errors.
 - e. Evaluate the effectiveness of all fall reduction activities including assessment, interventions, and education.
 - f. Evaluate the effectiveness of the reduction of all hospital acquired conditions (HAC) to improve health outcomes and reduce length of stay.
 - c) Receive reports from the patient safety officer pursuant to NRS. 439.870
 - d) Review and evaluate the quality of measures carried out by the medical facility to reduce the number of severity of sentinel events and infections that occur at the medical facility.
 - e) Ensures all Patient Safety policies/checklists follow protocols to improve the health outcomes of patients at the medical facility and will include, without limitation:
 - i. Checklists related to specific types of treatment must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care.

- ii. Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary.
 - iii. Checklists to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - i. Proper instructions concerning prescription medications;
 - ii. Instructions concerning aftercare; and
 - iii. Any other instructions concerning his or her care upon discharge.
 - f) Ensure that a policy for appropriately identifying a patient before providing treatment the policy will require the patient to be identified with at least two (2) personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include without limitation, the name and date of birth of the patient.
 - g) Ensure that a policy regarding the nationally recognized standard precautionary protocols to be observed by providers of health care at the facility including, without limitation, protocols relating to hand hygiene.
 - h) Monitor and document the effectiveness of the patient identification policy.
 - i) At least annually, review and revise the patient safety checklists and patient safety policies adopted and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at the medical facility as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
 - j) Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.
 - k) Ensure that on or before July 1 of each year, the Patient Safety officer will submit a report to the Director of Legislation Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision, and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to paragraph (2).
 - l) Evaluate the recommendations provided to the executive or governing body of the medical facility regarding:
 - i. The number of sentinel events that occurred at the medical facility during the preceding calendar quarter;
 - ii. The number and severity of infections that occurred at the medical facility during the preceding calendar quarter; and
 - iii. Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
 - m) Evaluate the role of the Patient Safety Officer in the adoption of patient safety checklists and patient safety policies as required by NRS 439.877, including the review of the checklist and policies annually and revision of the checklists and policies as the patient safety committee determines necessary.
5. The QCC compiles and analyzes data:
The program includes, is but not limited to, an ongoing program that shows measurable improvement in indicators for which there is evidence that it will improve health outcomes and patient safety, including:
- a) Sets expectations for using data and information to improve the safety and quality of care, treatment, and services.
 - b) Responsible for the implementation of successful corrective action plans in affected problem areas.
 - c) Measures, analyzes, and tracks quality indicators, including adverse patient events, and other aspects of performance that assess processes of care, hospital service and operations.
 - d) Develops, implements, and maintains an effective, ongoing, hospital-wide, data-driven quality assessment and performance improvement program.
 - e) Compiles data in usable formats.
 - f) Uses statistical tools and techniques to analyze and display data.
 - g) Analyzes and compares internal data over time to identify levels of performance, patterns,

- trends, and variations.
- h) Compares data with external sources, when available.
 - i) Analyzes its organ procurement conversion rate data as provided by the organ procurement organization (OPO).
 - j) Uses the results of data analysis to identify improvement opportunities.
 - k) In regard to staffing:
 - i. When the hospital identifies undesirable patterns, trends, or variations in its performance related to the safety or quality of care (for example, as identified in the analysis of data or a single undesirable event), it includes the adequacy of staffing, including nurse staffing, in its analysis of possible causes.
 - ii. When analysis reveals a problem with the adequacy of staffing, the Senior Leaders are responsible for the hospital-wide patient safety program are informed, in a manner determined by the safety program, of the results of this analysis and actions taken to resolve the identified problem(s).
 - iii. At least once a year, the leaders responsible for the hospital-wide patient safety program review a written report on the results of any analyses related to the adequacy of staffing and any actions taken to resolve identified problems.
 - l) The QCC considers participation in Quality Improvement Organization (QIO) cooperative projects.
 - m) The Trauma Program manages an intensive Performance Improvement and Patient Safety (PIPS) program regarding its practice. Minutes of the Program's reviews are submitted to the MEC and the BOT through the Department of Surgery. In addition, members of the hospital Quality Assurance Program attend the Trauma Peer Review Committee meetings.
6. The PSC and QCC ensures the organization improves performance on an ongoing basis, including:
- a) Prioritizes the identified improvement.
 - b) Takes action on improvement priorities.
 - c) Evaluates actions to confirm that they resulted in improvements.
 - d) Takes action when it does not achieve or sustain planned improvements.
7. The PSC and QCC drafts priorities for the organization's performance improvement activities, which are recommended for adoption through the MEC and the BOT. QCC considers factors such as:
- a) Focus on high-risk, high-volume, or problem-prone areas,
 - b) Consider the incidence, prevalence, and severity of problems in those areas.
 - c) Affect health outcomes, patient safety, and quality of care.

PATIENT SAFETY ORGANIZATION

Sunrise Hospital & Medical Center, Sunrise Children's Hospital is committed to an organizational environment aimed at improving patient safety and the quality of healthcare provided to the Hospital. To further this objective, the Hospital contracted with Hospital Corporation of America (HCA) Patient Safety Organization (PSO), LLC ("HCA PSO, LLC"), a federally certified PSO, to receive assistance in conducting a wide variety of patient safety activities intended to reduce medical errors in a legally protected environment.

Generally speaking, patient safety work product (PSWP) is not subject to subpoena or discovery in state or federal court, in administrative proceedings, or pursuant to the Freedom of Information Act (FOIA), and cannot be disclosed except as permitted under the Patient Safety and Quality Improvement Act (PSQIA) and its associated regulations. (See 42 [code of federal regulations] CFR § 3.204, *Privilege of patient safety work product*; and 42 CFR § 3.206, *Confidentiality of patient safety work product*.)

The Hospital will be receiving and exchanging patient safety information with the PSO, including event or incident reports and investigations, analytic tools such as root cause analyses, patient safety communications, quality reviews, and other documents aimed at improving patient safety. Documents will be submitted in a standardized

format to allow for comparison with like providers. As part of this effort, the Hospital will operate a Patient Safety Evaluation System (PSES) designed to encourage internal reporting of adverse events, near misses, and unsafe conditions for purposes of reporting to HCA PSO, LLC. The PSES will be the vehicle for collecting, managing, and analyzing information for patient safety purposes.

Designated Hospital personnel will collect patient safety information and report it to HCA PSO, LLC on an ongoing basis for analysis and feedback.

METHODOLOGY

FOCUS-Plan-Do-Check-Act (PDCA) is the methodology used for PI projects. Using this methodology data are systematically aggregated and analyzed on an ongoing basis. Statistical tools used are displayed in diagram II below.

A. FOCUS

1. Find an improvement opportunity:
 - a) Review results of measurement activities and input from staff, patients, medical staff, and other customers.
 - b) How are we doing compared to ourselves/external benchmarks over time?
 - c) What situation yields an opportunity for improvement?
 - d) What processes should be addressed first?
2. Organize a team that knows the process:
 - a) Is there representation from those who work in the process
 - b) Educate the team on the PI process.
 - c) Establish the team purpose, process and measures of team progress.
3. Clarify current knowledge of the process:
 - a) Is the process well defined, including the customers, their needs and expectations?
 - b) Do our perceptions of the process relate to the actual process?
 - c) Flow chart the process to determine the actual flow or sequence of events that the process follows.
 - d) What is the baseline data on the current process? Review recent scientific literature for up to date information regarding the process.
4. Uncover root cause of the process variation:
 - a) Fishbone a cause and effect diagram to allow the team to identify, explore and graphically display, in increasing detail, all of the possible causes related to a problem.
 - b) Are the causes the root cause or just symptoms of the problem?
 - c) What are the causes that have the greatest impact in priority order?
5. Start the improvement cycle:
 - a) What new knowledge have you acquired about the process?
 - b) What changes need to be made to improve the process?

B. PDCA

1. Plan Improvement
 - a) Who, what, when and how are we going to change the process
 - b) Data collection-who, what, where, when and how are we going to track the process change?
 - c) Identify those forces that assist or prevent change-force field analysis.
2. Do Improvement:

- a) Implement change
3. Check Results:
 - a) Do results match the expectations?
 - b) What was learned?
 - c) What does the team want to continue to do?
 - d) What would the team do differently?
 4. Act (to sustain improvement and continue to improve or abandon change and start cycle again)
 - a) What part of the process needs to be standardized?
 - b) What policies/procedures need to be revised?
 - c) Who needs to be trained?
 - d) Determine method for ongoing measurement.

Serious Event Analysis is the primary Performance Improvement methodology utilized for analysis of significant unanticipated outcomes and/or Sentinel Events.

See:

http://fwdvwpwebpmgr01.hca.corpad.net/Policies/Components/PnP/DocTree_ViewFile.aspx?ModuleID=1786&ID=3AA40203-846D-41EB-AC78-

EXTERNAL DATA SOURCES

Data is also collected as indicated for participation in the following external databases or for participation with the following organizations:

Lavanta

The Centers for Medicare & Medicaid (CMS) contracted Quality Improvement Organization (QIO) has developed Healthcare QI Initiatives that examine patterns of practice. Areas for study are suggested by practitioners in the community, university, hospital settings, nationally recognized patient safety and quality improvement organizations and CMS. Studies enable hospitals and medical staff to compare their performance with what may be optimal levels of practice.

Comprehensive Health Outcomes Information System (CHOIS) Reports

CHOIS is designed to identify opportunities for improvement, identify best practices, and manage resources appropriately, effectively, and efficiently. Clinical Outcome Summary Reports are distributed on a quarterly basis. The data captured in this report reflects numerous clinical indicators. These indicators were developed through medical staff focus groups. The data is risk and severity adjusted using CMS's Refined diagnosis-related group (DRG)s and economic cycle research institute (ECRI), a risk index used to adjust complication rates, Risk Adjusted Mortality Index (RAMI) and the risk adjustment specialty algorithm (RASPEC) as appropriate. Each hospital is provided with actual and risk adjusted mortality and complication rates. Rates are compared to the company overall and national statistics. Patient and physician level details are provided to facilitate a detailed analysis of the cases reflected in the data.

The Joint Commission (TJC) Measurement System (ORYX)

This is TJC initiative to integrate performance measures into the accreditation process. It involves a collection of service, process and outcome indicators related to specific patient populations. . Data for this initiative is collected through the Comprehensive Outcomes Measurement Evaluation and Transmission (COMET) database. The information is collected at the facility level and transmitted directly to TJC from HCA, as the chosen vendor for this project.

Data abstracted through the COMET system are also submitted to CMS for public reporting through the Hospital Compare website. The Hospital Compare website was created through the efforts of the CMS, an agency of the U.S. Department of Health and Human Services (DHHS), along with the Hospital Quality Alliance (HQA). The HQA is a public-private collaboration established to promote reporting on hospital quality of care. The HQA consists of organizations that represent consumers, hospitals, doctors and

nurses, employers, accrediting organizations, and Federal agencies. The information on this website can be used by any adult needing hospital care.

Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS)

HCAHPS is a national, standardized, publicly reported survey of patients' perspectives of hospital care.

Vermont Oxford Neonatal Database

Oxford Neonatal Database is a comprehensive database of 600+ neonatal intensive care centers which compares morbidity, mortality, and length of stay data on the very low birth weight infants (501-1500 grams). As part of this network, the neonatal intensive care quality benchmarking project applies a team approach to health care benchmarking with the goal of improving the effectiveness and efficiency of neonatal intensive care.

Cancer Registry

The Cancer Registry submits cancer data on select neoplasms to the State of Nevada Administrative Code (NAC) 457.010 – 457.040. This data is generally requested annually. The Cancer Registry department manages the cancer program and the American College of Surgeon's Commission on Cancer accreditation. The accreditation program maintains a robust set of metrics pertaining to 37 standards for the diagnosis, treatment and follow-up of cancers. As part of the accreditation, the Cancer Registry collects data adhering to the Commission of Cancer (CoC)'s strict criteria and submits data to the Nation Cancer Data Base (NCDB). Data is submitted to the NCDB at schedule intervals. NCDB data is used nationally to identify areas for quality improvement as well as direct other important activities. The NCDB database is available at a facility level providing tools such as hospital comparison benchmarks, survival reports, Cancer Program Practice Profile Reports, Rapid Quality Reporting System, and the Cancer QI Program data reports. The CoC used NCDB data to direct participating organizations to perform special studies throughout the year.

Trauma Registry

Trauma Registry at Sunrise is a State of Nevada database. The Nevada Trauma Registry (NTR) data are collected from all licensed acute care hospitals and trauma centers in Nevada. The NTR can provide information on the incidence, and prevalence, morbidity, and mortality of injuries in Nevada. The data can be broken down to a specific county, specific hospital, specific race, or specific age group, for example. These data are available for state, private or federal entities, grant applicants to measure the impact of trauma on Nevada and initiate health education programs that address traumatic injuries.

The Society of Thoracic Surgeons (STS)

Offers outcome programs in the areas of Adult Cardiac, General Thoracic and Congenital surgery. By committing to collecting outcomes data to the STS National Database, surgeons are committing to improving the quality of care that their cardiothoracic surgery patients receive. Sunrise hospital participates in the STS database, using the national comparisons and benchmarking as an integral part of the PI program for Cardiovascular Services.

American College of Cardiology (ACC)/National Cardiovascular Data Registry (NCDR)

NCDR is the recognized resource for measuring and quantifying outcomes and identifying gaps in the delivery of quality cardiovascular patient care in the United States. Its mission is to improve the quality of cardiovascular patient care by providing information, knowledge and tools, implementing quality initiatives; and supporting research that improves patient care and outcomes.

Perinatal Services Quality Initiative

Perinatal Services Program is an HCA Corporate Initiative to improve perinatal services and reduce the risk associated with the delivery of maternal and infant care.

Emergency Management Risk Initiative

Emergency Management Risk Initiative audit is one of the fundamental elements in the creation of the risk

managed emergency department (ED). This is the most powerful audit tool available in emergency medicine. It is clinically oriented and provides an unprecedented look at the individual practitioner, the emergency practitioners as a group, and emergency department systems. This audit is accomplished through the Sullivan Group via an agreement with HCA hospitals. Sunrise participates on a semi-annual basis.

Get With the Guidelines

Stroke Management Tool (Outcome Sciences) is a comprehensive quality management measurement tool that captures critical information regarding the care and treatment of patients with an acute stroke, with an emphasis of secondary prevention. This database is used to assess and measure internal compliance of treatment standards, and the ability to provide concurrent comparison to external entities and provides national benchmarks.

ACTION Registry®–GWTG™

ACTION Registry is a risk-adjusted, outcomes-based quality improvement program that focuses exclusively on high-risk STEMI/NSTEMI patients. It helps hospitals apply ACC/AHA clinical guideline recommendations in their facilities and provides invaluable tools to measure care and achieve quality improvement goals.

Leapfrog

The Leapfrog Hospital Survey is the public reporting initiative launched in 2001 by the Leapfrog Group. The Leapfrog Group is an independent, not-for-profit organization aimed at mobilizing employer purchasing power to alert America's health industry that big leaps in health care safety, quality and customer value will be recognized and rewarded. Leapfrog strives to make giant "leaps" forward in safety, quality, and affordability of healthcare by promoting transparency.

The Leapfrog Group Survey assesses hospital performance based on 28 different metrics. The Leapfrog algorithm computes a letter grade reflecting the hospital's performance based on these metrics. Currently nine (9) different Safe Practices are assessed. These safe practices, created by the National Quality Forum (NQF), have been found to reduce preventable medical mistakes. Leapfrog works to continually assess safe practices and new practices are added or removed accordingly. The Leapfrog algorithm also analyzes 18 data points from the publically reported data as required by the CMS.

National Healthcare Safety Network (NHSN) Database

The NHSN is a secure, internet-based surveillance system that integrates former Center for Disease Control (CDC) surveillance systems, including the National Nosocomial Infections Surveillance System (NNIS), National Surveillance System for Healthcare Workers (NaSH), and the Dialysis Surveillance Network (DSN). NHSN enables healthcare facilities to collect and use data about healthcare-associated infections, adherence to clinical practices known to prevent healthcare-associated infections, the incidence or prevalence of multidrug-resistant organisms within their organizations, trends and coverage of healthcare personnel safety and vaccination, and adverse events related to the transfusion of blood and blood products.

CY 2016 Patient Safety Program

I. Introduction

Purpose, Scope and Responsibility

- ✓ Purpose:
 - To define the essential components of the Patient Safety Program at MountainView Hospital, which is committed to ensuring a safe environment and reliable care processes.
 - To cultivate a culture of patient safety through the ongoing promotion of a safe practices and personal accountability.
- ✓ Scope: Patient safety is everyone's responsibility. The MountainView Hospital Patient Safety Program covers all activities and functions relating to patient safety at all sites and services within the organization.
- ✓ Responsibility: Leaders, employees, members of the medical staff, students and volunteers are to be familiar with and involved in the Patient Safety Program.

Participation in Patient Safety Organization

- ✓ MountainView Hospital is committed to an organizational environment aimed at improving patient safety and the quality of healthcare provided to the Hospital. To further this objective, the Hospital contracted with HCA Patient Safety Organization, LLC ("HCA PSO, LLC"), a federally certified Patient Safety Organization ("PSO"), to receive assistance in conducting a wide variety of patient safety activities intended to reduce medical errors in a legally protected environment.

Generally speaking, patient safety work product ("PSWP") is not subject to subpoena or discovery in state or federal court, in administrative proceedings, or pursuant to the Freedom of Information Act ("FOIA"), and cannot be disclosed except as permitted under the Patient Safety and Quality Improvement Act ("PSQIA") and its associated regulations. (*See 42 CFR § 3.204, Privilege of patient safety work product; and 42 CFR § 3.206, Confidentiality of patient safety work product.*)

The Hospital will be receiving and exchanging patient safety information with the PSO, including event or incident reports and investigations, analytic tools such as root cause analyses, patient safety communications, quality reviews, and other documents aimed at improving patient safety. Documents will be submitted in a standardized format to allow for comparison with like providers. As part of this effort, the Hospital will operate a Patient Safety Evaluation System ("PSES") designed to encourage internal reporting of adverse events, near misses, and unsafe conditions for purposes of reporting to HCA PSO, LLC. The PSES will be the vehicle for collecting, managing, and analyzing information for patient safety purposes. Designated Hospital personnel will collect patient safety information and report it to HCA PSO, LLC on an ongoing basis for analysis and feedback.

Definition of Terms

Accountability:

An obligation or willingness to accept responsibility for one's actions.

Adverse Event:

Event under the control of a provider which has caused harm and requires a new or modified

physician order for management of the patient's health care. See Policy RM19: Sentinel Event for specific event list and RM13: Disclosure of Adverse Events.

Hazardous condition:

Any set of circumstances (exclusive of the disease or condition in which the patient is being treated), which significantly increases the likelihood of serious adverse outcome.

Healthcare FMEA:

Healthcare Failure Mode and Effects Analysis: A proactive model for addressing potential risks within the organization.

Human Error:

An unintended act, or failure to act, that results in actual or potential patient injury, harm or adverse event in the process of care delivery.

Near miss:

Any process variation that did not affect the patient outcome, but for which a recurrence carries a significant chance of serious adverse outcome.

Non-punitive:

No punishment or disciplinary action imposed for specific error.

Patient injury:

Major permanent loss of function, sensory, motor, or intellectual impairment not present at admission, requiring continued treatment or lifestyle change. When "major permanent loss of function" cannot be immediately determined, patient injury is not established until either the patient is discharged with continued major loss of function, or two weeks have elapsed with persistent major loss of function, whichever occurs first.

Patient safety event:

All adverse events or potential adverse events that are deemed preventable and Healthcare associated infections as defined by the CDC that are deemed to be preventable.

PSQIA

The Patient Safety and Quality Improvement Act (PSQIA) of 2005, Pub. L. 109-41, 42 U.S.C. 299b-21-b-26 (for which the final rule implementing the regulations became effective on January 19, 2009), was enacted in response to growing concern about patient safety in the United States and the Institute of Medicine's 1999 report, *To Err is Human: Building a Safer Health System*. The goal of the Act is to improve patient safety by encouraging voluntary and confidential reporting of events that adversely affect patients.

PSO

A Patient Safety Organization (PSO) means a private or public entity or component thereof that is listed as a PSO by the Secretary of Health and Human Services. A health insurance issuer or a component organization of a health insurance issuer may not be a PSO. The PSO enters into bona fide contracts, each of a reasonable period of time, each with a different provider for the purpose of receiving and reviewing patient safety work product.

PSES

A Patient Safety Evaluation System (PSES) means the collection, management, or analysis of information for reporting to or by a PSO.

PSWP

Patient Safety Work Product (PSWP) (1) Except as provided in (2) below, patient safety work product means any data, reports, records, memoranda, analyses (such as root cause analyses), or written or oral statements (or copies of any of this material) (i) Which could improve patient safety, health care quality, or health care outcomes; and (A) Which are assembled or developed by a provider for reporting to a PSO and are reported to a PSO, which includes information that is documented as within a patient safety evaluation system for reporting to a PSO, and such documentation includes the date the information entered the patient safety evaluation system; or (B) Are developed by a PSO for the conduct of patient safety activities; or (ii) Which identify or constitute the deliberations or analysis of, or identify the fact of reporting pursuant to, a patient safety evaluation system. (2)(i) Patient safety work product does not include a patient's medical record, billing and discharge information, or any other original patient or provider information; nor does it include information that is collected, maintained, or developed separately, or exists separately, from a patient safety evaluation system. Such separate information or a copy thereof reported to a PSO shall not by reason of its reporting be considered patient safety work product. (ii) Patient safety work product assembled or developed by a provider for reporting to a PSO may be removed from a patient safety evaluation system and no longer considered patient safety work product if: (A) The information has not yet been reported to a PSO; and (B) The provider documents the act and date of removal of such information from the patient safety evaluation system. (iii) Nothing in this part shall be construed to limit information that is not patient safety work product from being: (A) Discovered or admitted in a

criminal, civil or administrative proceeding; (B) Reported to a Federal, State, local or Tribal governmental agency for public health or health oversight purposes; or (C) Maintained as part of a provider's recordkeeping obligation under Federal, State, local or Tribal law.

Reliability:

The extent of consistent performance over time.

Sentinel Event:

A patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in death, permanent harm, and/or severe temporary harm (TJC, 2016). (A permanent loss of function related to the natural course of the patient's illness or underlying condition is not a Sentinel Event.) The State of Nevada defines a sentinel event as an event included in Appendix A of "Serious Reportable Events in Healthcare – 2011 Update: A Consensus Report," published by the National Quality Forum (Nevada Revised Statutes NRS §439.830 – effective October 1, 2013).

Sentinel Event Alert Gap Analysis:

A model for prioritizing and addressing potential risks related to publish external sentinel or warning alerts.

Unusual Occurrence:

Any event or condition not consistent with the normal or usual operation of the hospital or department and which has the potential for causing patient or visitor injury or property damage. (See policies – RM19: Sentinel Event and RM13: Disclosure of Adverse Events).

II. Policy

The Board of Trustees delegates responsibility for oversight of the patient safety program to the Patient Safety Committee. The Patient Safety Committee monitors and evaluates the effectiveness of the Patient Safety Program and generates feedback and actions as appropriate. The Patient Safety Committee prepares an annual report to the Quality Council, Medical Executive Committee (MEC), and the Board of Trustees (BOT). The report includes at a minimum, occurrence or trending of patient safety indicators and actions taken in response to actual occurrences as well as proactive assessments of high-risk activities. The Environment of Care Committee oversees non-clinical safety related processes and system issues that affect patients, employees, and visitors in the environment of care.

Risk Management maintains the hospital-wide occurrence reporting system for patients, employees, and visitor occurrences and a referral system for hospital staff and physicians to report potential claims. Risk Management in conjunction with Hospital Quality and Patient Safety Leaders investigate actual and potential safety risk within the organization. They also evaluate occurrences to identify those that may require immediate follow up actions or meet the Sentinel Event, the Safe Medical Device Act, or regulatory agency reporting criteria, including CMS, FDA, OSHA, State of Nevada DHHS, or Joint Commission. Notification is

made to Administration, Risk Management, appropriate regulatory and accrediting agencies, equipment manufacturers and other appropriate individuals as necessary.

The Organization ensures timely coordination and dissemination of reporting and data management of patient safety information at the appropriate medical staff/organizational committees for review and discussion.

III. Culture of Safety

MountainView Hospital is committed to creating a culture of safety by designing or redesigning systems and processes geared to prevent, detect, and minimize the hazards and likelihood of error. MountainView Hospital is focused on prevention, not blaming individuals. Patient safety events are viewed as an opportunity to learn. The Hospital believes in balancing the organization's accountability and the individual's accountability for assuring safe practices and a safe environment to care for patients.

IV. Structure, Roles and Responsibilities

The philosophy guiding the promotion of a culture of patient safety is accountability. To achieve a culture of patient safety the following accountabilities are expected at MountainView Hospital:

| <i>Role</i> | <i>Accountability</i> | <i>Specific Tasks</i> |
|---|--|--|
| Board of Trustees, with Senior Leadership | Set goals, monitor performance & require accountability. | <ul style="list-style-type: none"> • Receive regular and thorough reports on patient safety risks, hazards and progress towards performance improvement objectives from the MEC and Patient Safety Committee. • Receive regular and thorough briefings regarding the results of culture measurement and performance improvement initiatives • Require multi-cause analysis of errors that lead to injury. • Set performance improvement goals for safety improvement. • Hold hospital leaders accountable for achieving the integrated patient safety agenda. • Receive systematic and regular assessment of resource and budget allocations to key systems (patient safety systems, human resources, quality systems, technology) related to the patient safety agenda. |

| Role | Accountability | Specific Tasks |
|---|--|---|
| Administrative (CEO, COO, CNO, VP's, Directors, & Physician Leaders | Set the agenda for the rest of the team | <ul style="list-style-type: none"> • Ensure that an integrated patient safety program is implemented throughout the hospital. • Set performance improvement priorities and identify how the hospital adjusts priorities in response to unusual or urgent events. • Allocate adequate resources for measuring, assessing and improving the hospital's performance and improving patient safety. • Measure and assess the effectiveness of the performance improvement and safety improvement activities. • Monitor implementation for of corrective action of patient safety events. • Ensure remedial activities, identified through analysis of reported patient safety events, are implemented, effective, and do not cause unintended adverse consequences. • Develop a proactive approach to reducing errors. • Encourage an environment of openness & collaboration. • Support a dialogue about outcomes between patients and clinicians including systems to obtain direct feedback from patients regarding performance of the organization • Educate staff about safety. • Support staff and lead by example. |
| Patient Safety Officer / (Chief of Staff) | Lead patient safety initiatives with the medical staff and organizational staff | <ul style="list-style-type: none"> • Lead an integrated patient safety program. • Serve as the primary point of contact for questions about patient safety, and coordinate patient safety for education and deployment of system changes. • Execute performance improvement priorities and adjusts priorities in response to unusual or urgent events. • Assure effectiveness in measuring, assessing and improving the hospital's performance and improving patient safety. • Lead a proactive approach to reducing errors and make recommendation to reduce patient safety events. • Lead in an environment of openness & collaboration. • Assure dialogue about patient safety issues occurs effectively between patients and clinicians. • Report progress regularly, and educate about patient safety • Support staff and lead by example. |

| Role | Accountability | Specific Tasks |
|-----------------------------|--|---|
| Patient Safety Coordinators | Day to day coordination and facilitation of safety initiatives | <ul style="list-style-type: none"> • Implement operational aspects of the patient safety program throughout the hospital. • Implement proactive patient safety management that assures immediate, appropriate response to unusual or urgent events. • Participate in measuring, assessing and improving the hospital's performance and improving patient safety. • Be accountable for patient safety initiatives and strengthening a culture of safety in day to day practice. • Support an environment of openness & collaboration. • Support a dialogue about patient safety issues between patients and clinicians. • Report progress regularly, and educate about patient safety. • Support staff and lead by example. |
| Pharmacists | Ensure safe medication usage | <ul style="list-style-type: none"> • Ensure that authoritative, up-to-date drug information is available in reference form in patient care areas and prescribers' offices. • Periodically examine all drug products stored in patient care areas and procedures on drug storage/distribution to patient care areas. • Minimize the need for nurses to calculate, manipulate, or mix medications. • Establish a pharmacy led interdisciplinary team to spearhead medication safety activities. • Provide leadership to develop safe medication delivery systems. |
| Clinicians & Medical Staff | Monitor, report, & learn. | <ul style="list-style-type: none"> • Medical staff and other employee job descriptions and competency evaluations incorporate accountability for safety. • Medical staff & employees participate in education on the importance of safety, surveillance, and expectations for reporting safety concerns, beginning with orientation. • Medical staff & employees evaluations include an individual's contributions to safety for the organization. • Medical staff & employees are positively acknowledged for disclosing errors, near-misses, and safety concerns. • Employees and physicians work collaboratively assuring responsibilities of the team to the patients are met, and noticing errors before they cause harm. • Participate in the facility reporting system for PS events, both actual and potential event. |

| Role | Accountability | Specific Tasks |
|-------------------|----------------------------------|--|
| Patients/visitors | Involved partners in prevention. | <ul style="list-style-type: none"> • Inform doctors and nurses about medications they take, including prescriptions, over-the-counter drugs and dietary supplements. • Ask for written information about possible side effects. • Inform the doctors and nurses about allergies & adverse reactions. • Ask a relative or friend to be an advocate. • Learn about their medical condition by asking their doctor, nurse, and other reliable sources. • Upon hospital discharge, ask doctors for an explanation of the treatment plan to be used at home. • Provide feedback regarding performance of the organization • Report safety concerns through the Patient Safety hotline and other venues available. |

V. Mechanisms for Coordination

MountainView Hospital Patient Safety Committee

The MVH Patient Safety Committee (PSC) or equivalent is a multidisciplinary team involving department representatives that meets not less than monthly. The Patient Safety committee or equivalent committee, is comprised of various health care professionals including but not limited to physicians, nurses, pharmacists and administrators, and is chartered to oversee the implementation of the Hospital’s Patient Safety Program. The Patient Safety Officer coordinates the PSC. The CEO, Chief of Staff, and Chair of Quality Council appoint medical leadership for the PSC.

Structures that support the Patient Safety Committee or equivalent works in conjunction with other safety committees, including but not limited to:

- Medication Safety
- Quality Council
- Environment of Care
- Falls Committee
- Infection Prevention Committee

The PSC reviews and develops implementation strategies for the NPSG’s. Strategies include assessing and developing a culture of patient safety, encouraging a non-punitive reporting environment, developing a best practice infrastructure to foster the design of safety into our systems, and monitoring of systems risks and improvements. The PSC networks with other committees as appropriate per topic to gain consensus (e.g. Quality Council, Infection Prevention, Pharmacy, other). Sentinel Event Alerts and other industry alerts are routed to the appropriate committee or teams to ensure evaluation of current care processes incorporate recommended changes.

The PSC reviews Sentinel Event Alerts, other industry alerts, compliance to The Joint Commission National Patient Safety Goals, State regulatory requirements, adverse events and potential adverse events that are deemed to be preventable, health care associated infections as defined by the CDC that are deemed to be preventable, and assures recommendations are integrated into processes. Additional resources such as national and local professional organizations/associations are monitored for changes in standards and potential risk events.

Regular summary reports of progress are reported to the designated Quality Council, Medical Executive Committee, and the Board of Trustees.

The PSC reviews and approves plans to address key organizational concerns, such as Falls, Restraint Reduction, Patient/Family Education, Patient Mobility, Blood and Blood Components, Medication Safety, Adverse Drug Reactions (ADR's), Pressure Ulcer Prevalence, Health Care Associated Infections and Environmental issues updates.

The PSC recommends and provides direction for training on key initiatives and educational strategies related to patient safety.

VI. Communicating with Patients about Safety

It is MountainView Hospital's philosophy that accountability for patient safety is imbedded in a collaborative relationship involving our Board of Trustees, administrative leadership, our medical staff, employees, patients and family.

Patient safety awareness information is posted in public areas throughout the hospital. This information contains basic strategies for patients to assist in assuring their safety. The admission and discharge patient information also contains information on the patient role in safety. Patient Guides are provided to in-patients upon admission, and includes strategies prevent untoward events such as falls, medication errors, and infections while in the hospital. Annually, Patient Safety Awareness Week activities are planned to educate and inform staff, patients and the community. The MountainView Hospital consumer web page also includes access to an electronic version of the Patient Guide. Information and additional resources are provided to assure patient involvement in their care.

Patients or their families may contact the hospital to report patient safety concerns as well as to the State of Nevada Department of Health and Human Services or to the Joint Commission. The hospital's website and other patient materials include information on how to report issues internally as well as to the Joint Commission.

Patients are randomly selected to participate in completing the Patient Experience Survey after discharge, which include questions related to the patient safety experience. These results are reported to the hospital.

VII. Education

1. Staff Education

- General orientation, on-going in-service and other education and training programs will emphasize specific job-related aspects of patient safety
- Specific Patient Safety Program training at orientation and annually thereafter will include:
 - An overview of the Patient Safety Program
 - Staff's role and responsibilities in the Patient Safety Program
 - Event reporting, including the events requiring reporting and the process for reporting events.
 - Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care;
 - Examples of specific job-related aspects of patient safety.

2. Physician Education - An overview of the Patient Safety Program is provided to physicians at time of initial appointment and periodically thereafter that describes the program,

emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism and Culture of Safety processes.

3. Organizational Learning: Patient safety is everyone's responsibility. Everyone has a responsibility to report. By reporting concerns, it enables the organization to learn and improve processes, procedures, and systems.
4. Lessons Learned summaries are developed to communicate lessons learned from near misses or actual events. These summaries are shared with the leadership and employees to promote organizational learning and improvement.

VIII. Safety Improvement Activities

Prioritization of Patient Safety Activities

Prioritization elements are defined in the annual performance improvement plan and apply to patient safety initiatives. The PSC annual goals are listed at the end of this plan and meet the prioritization elements.

Routine safety-related data collection analysis

- Unusual Occurrence reporting (see policies RM21 Facility Event and Close Call Reporting, RM13: Disclosure of Adverse Events, and SPAE Guidance Policy)
- Medication Error Reporting
- Infection Surveillance
- Culture of Patient Safety Survey
- Environmental Safety Rounds and Assessment
- Patient Experience Survey
- Leadership Walk-around and Tracers
- National Patient Safety Goal Dashboard
- Annual Leapfrog (NQF Safe Practices) Survey
- Sentinel Event Alert Compliance
- Institute for Safe medication Practices(ISMP) and other industry Alerts
- Employee feedback survey

Identification, reporting, and management of patient safety events

1. To effectively improve processes and systems, health care providers should not be fearful of punishment or retribution for reporting mistakes.
2. An accessible multifaceted non-punitive, just culture reporting system exists .
3. Errors and accidents are tracked in an attempt to establish trends and patterns, to learn from them and prevent reoccurrence.
4. Healthcare providers participate in reporting and developing improved processes to effectively evaluate errors and near misses.
5. Reporting errors and near misses are a critical component of the MountainView Hospital Patient Safety Program.

The Meditech on-line incident reporting system is a tool for the documentation, investigation, and correction of patient safety issues as described in the organizational policy: RM21 Facility Event and Close Call Reporting. The Director of Risk Management coordinates this process.

Organization or Medical Staff committees refer patient safety issues to the Patient Safety Officer for review at the PSC and corrective action.

NRS 439.877 – Monitoring and Compliance

Nevada statute NRS 439.877 requires medical facilities to adopt patient safety checklists and patient safety policies. These patient safety checklists are protocols used to improve the outcomes of patients at the hospital to include:

1. Patient Discharge Process (CP120 – Discharge Planning)
2. Patient Identification Process (CP70 – Patient Identification)
3. Patient room/environment sanitation and cleaning (Sodexo 7-Step Cleaning Process)
4. Additional patient safety checklists which may be appropriate to ensure the safety of patients in the facility. These include, but are not limited to the following:
 - a. Universal Protocol (CP195 – Safe Procedural and Surgical Verification)
 - b. Central Line Insertion Bundle (CP131 – Adult Central Line/PICC (Non-Implanted_ Management)

Monitoring and oversight for compliance with these policies and checklists will be the ongoing responsibility of the Patient Safety Committee.

NRS 439.865– Infection Control Program

Nevada statute NRS 439.865 requires medical facilities have an infection control program to prevent and control infections within the medical facility, as well as an infection control policy. The Hospital's Infection Control Plan is attached as an addendum to the Patient Safety Plan and is reviewed annually. (See Appendix 3 – Infection Prevention and Control Plan)

Proactive Risk Identification and Reduction:

1. Opportunities for improvement regarding patient safety issues and hazardous conditions are identified through trending of actual or potential occurrences involving patients or visitors and/or evidence-based literature (e.g. The Joint Commission Sentinel Event Alerts).
2. When an identified opportunity for improvement is identified, it is analyzed by the involved care providers according to level of severity, frequency of occurrence, potential for harm and liability.
3. At least every 18 months, one high-risk or error-prone process is selected for Failure Mode Effect Analysis (FMEA) process. The underlying systems are examined and modified or redesigned to minimize the risk of the identified failure mode.
4. Trending of adverse events, environmental safety issues, aggregate data collection, and review of intensive assessments are part of the identification and management of risks to safety and are used to prevent reoccurrences.
5. Serious unusual occurrences and sentinel events are reviewed with determination made for intensive assessment and root cause analysis according to the Facility Event and Close Call Reporting and SPAE policies.
6. Near miss events are reviewed and root cause analysis conducted as deemed appropriate.
7. Regular communication about patient safety and risk management is conducted with designated Quality Committee, Medical Executive Committee, and the Board of Trustees. Disclosure of an adverse event to a patient is in accordance with policy. RM13: Disclosure of Adverse Events and the SPAE policy

IX. Reporting Patient Safety Results:

To the PSC:

The Patient Safety Committee reviews and recommends actions on the following reports:

- Audits on Patient Safety

- National Patient Safety Goals and Safe Practices compliance (including accordance with NRS 439.877)
- Culture of Patient Safety Survey
- Leapfrog Survey

To organization staff and medical staff:

Organizational staff receives patient safety results and information on:

- Lessons Learned summaries
- Culture of Safety Survey
- Patient experience survey results on patient safety components.
- National Patient Safety Goals and Safe Practices compliance (including accordance with NRS 439.877)
- Leapfrog Survey

To executive leadership and Board of Trustees:

The Board of Trustees and Executive Leadership receives periodic reports on:

- Culture of Safety Survey
- Leapfrog Survey
- Risk Management dashboard
- Patient Safety dashboard

X. EVALUATION OF CY 17 PSC / Organizational Goals

| GOAL | GOAL MET | GOAL NOT MET |
|--|--|---|
| Attain ≥ 90% compliance with NPSG / Patient Safety Audit Tool. | Goal Met. Maintained ≥90% compliance with NPSG audits. | |
| Reduce preventable falls with injury to zero (utilize daily falls report for data). Re-institute Patient Safety Rounds to identify safety opportunities from front line nursing and support staff. | | Goal not met. Continue to strive for green compliance and/or improvement by 10% for 2018 goals. |
| Attain 3Q17 SHARP Metric “DVT and PE on All Inpatients” in green or improve by 10% from 3Q16 results | | Goal not met. Continue to strive for green compliance and/or improvement by 10% for 2018 goals. |

XI. CY 18 PSC / Organizational Goals:

1. Maintain ≥ 90% compliance with NPSG/Patient Safety Audits.
2. Reduce preventable falls with injury to zero (utilize daily falls report for data). Re-institute Patient Safety Rounds to identify safety opportunities from front line nursing and support staff.
3. Attain 3Q18 SHARP Metric “DVT and PE on All Inpatients” in green or improve by 10% from 3Q17 results.
4. Achieve ≥80% hospital participation in the AHRQ Patient Safety Culture Survey. Assess survey results and develop facility specific action plan(s) based upon opportunities identified.

5. Implement weekly Executive Leadership Safety rounding that encourages discussion of safety issues and fosters a culture of safety through building respect, trust and inclusion in the organization.

XI. Annual Review

The Patient Safety Program is reviewed annually and revised as necessary. It is submitted annually for review and approval by the Medical Executive Committee and the Board of Trustees.

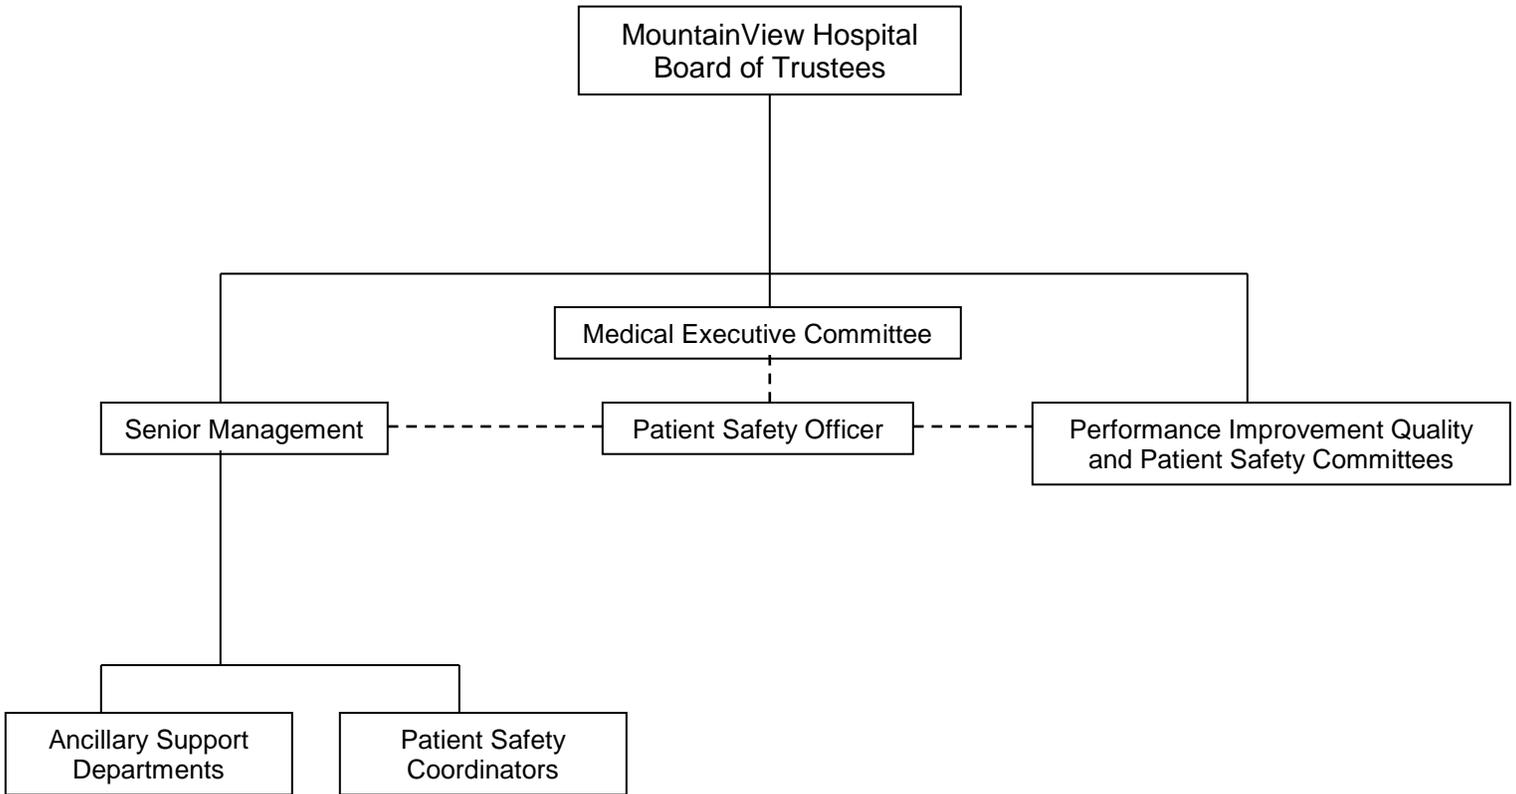

XII. The MountainView Hospital Patient Safety Program

The components of the patient safety program are outlined in Appendix One:

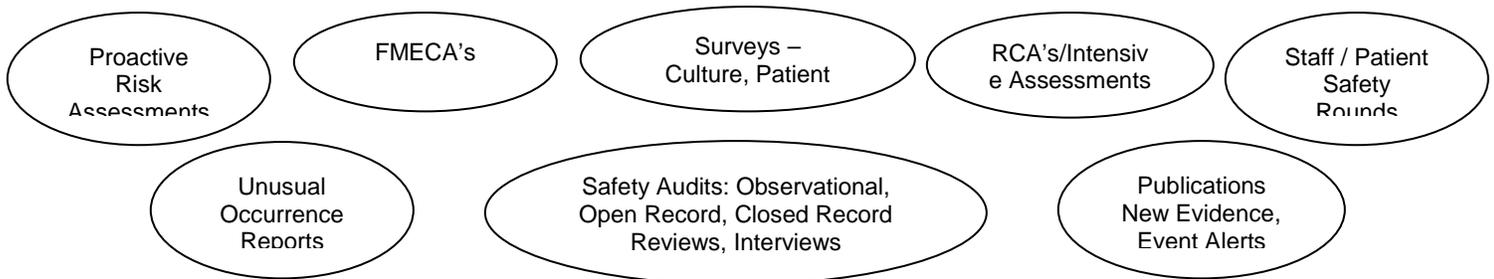

XIII. References/Authority

- HCA Patient Safety Organization PSO Operating Policy and Procedure
- Federal Register - Department of Health and Human Services 42 CFR Part 3 – Patient Safety and Quality Improvement

Patient Safety Program

Sources of Patient Safety Data

2018 National Patient Safety Goals Overview

| The Joint Commission NPSG's | Specific Elements Within Broad Goal (Note #'s same as per The Joint Commission's NPSG's for Hospitals) | Key Content Expert Links to PSC | Audit Methodology (Cross-reference to Patient Safety Dashboard) |
|--|--|-------------------------------------|--|
| #1: Improve the accuracy of patient identification | A: Use at least two patient identifiers when providing care, treatment or services | | |
| | A1 Blood draw and other lab specimen collection | Blood Bank Laboratory Nursing | Random observation audits (Quarterly) |
| | A2 Label containers in presence of patient | Blood Bank Laboratory Nursing | Random observation audits (Quarterly) |
| | B: Eliminate Transfusion Errors | | |
| | B1. Blood transfusion process: match blood or blood component to the order; match the patient to the blood or blood component; use a two-person verification process | Blood Bank Laboratory Nursing | Blood Bank Audits (Quarterly) |
| | B2. Qualified transfusionist part of two-person verification process | Blood Bank Laboratory Nursing | Blood Bank Audits (Quarterly) |
| | B3. Second qualified individual part of two-person verification process | Blood Bank Laboratory Nursing | Blood Bank Audits (Quarterly) |
| #2: Improve the effectiveness of communication among caregivers | A. Report critical results of tests and diagnostic procedures on a timely basis. | | |
| | A1. Evaluate the timeliness of reporting the critical results of tests and diagnostic procedures. | Lab Nursing | Random charts and log audits (Quarterly) |

| The Joint Commission NPSG's | Specific Elements Within Broad Goal (Note #'s same as per The Joint Commission's NPSG's for Hospitals) | Key Content Expert Links to PSC | Audit Methodology (Cross-reference to Patient Safety Dashboard) |
|--|--|------------------------------------|--|
| #3: Improve the safety of using medications | A. Label all medications, medication containers (for example, syringes, medicine cups, basins), or other solutions on and off the sterile field. | Cardiac Imaging OR Nursing | Random observations and audits, all procedure areas (Quarterly) |
| | B. Reduce the likelihood of patient harm associated with the use of anticoagulation therapy. | Pharmacy Nursing | Random chart audits (Quarterly) |
| | C. Maintain and communicate accurate patient medication information. | Pharmacy Nursing | Random chart audits (Quarterly) |
| #6: Improve the safety of clinical alarm systems. | A. Leaders establish alarm safety as a hospital priority. | Patient Safety Officer / PS Plan | Random observations and audits (Quarterly) |
| | B. Identify the most important alarm signals to manage. | Patient Safety Committee | Random observations and audits (Quarterly) |
| | C. Establish policies and procedures for managing alarms as listed above in #B. | Patient Safety Committee | Random observations and audits (Quarterly) |
| | D. Educate staff and LIP's about the purpose and proper operation of alarm systems for which they are responsible. | Patient Safety Committee | Random observations and audits (Quarterly) |
| #7: Reduce the risk of health | A. Comply with current Centers for Disease Control and Prevention (CDC) hand hygiene guidelines | Infection Prevention Nursing | Random observations (Quarterly) |

| The Joint Commission NPSG's | Specific Elements Within Broad Goal (Note #'s same as per The Joint Commission's NPSG's for Hospitals) | Key Content Expert Links to PSC | Audit Methodology (Cross-reference to Patient Safety Dashboard) |
|---|---|--|--|
| care-associated infections | B. Implement evidence-based practices to prevent healthcare associated infections due to multiple drug-resistant organisms (MDRO's) | Infection Prevention | MDRO Tracker (Quarterly) |
| | C. Implement evidence-based practices to prevent central line-associated bloodstream infections (CLABSI's). | Infection Prevention | Targeted Surveillance (Quarterly) |
| | D. Implement evidence-based practices to prevent surgical site infections (SSI's). | Infection Prevention | Targeted Surveillance (Quarterly) |
| | E. Implement evidence-based practices to prevent catheter associated urinary tract infections. (CAUTI's) | Infection Prevention | Targeted Surveillance (Quarterly) |
| #15: The organization identifies safety risks inherent in its patient population | A. The organization identifies patients at risk for suicide. [Applicable to psychiatric hospitals and patients being treated for emotional or behavioral disorders in general hospitals.] | Nursing Risk Management | (Structural process) Random chart audits (Quarterly) |
| Universal Protocol | A. Pre-op verification B. Site marking C. Time-out | Cardiac Medical Imaging Nursing OR | Random observations & chart audits (Quarterly) |

**DESERT SPRINGS HOSPITAL
MEDICAL CENTER**

**Risk Management/
Patient Safety Plan**

Nevada Acute Care Division

I. Overview

Desert Springs Hospital Medical Center endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients. Patient safety is a cornerstone of quality care and is a leadership priority. Desert Springs Hospital Medical Center operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that Desert Springs Hospital Medical Center remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by Desert Springs Hospital Medical Center to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at Desert Springs Hospital Medical Center. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with Desert Springs Hospital Medical Center policies. Desert Springs Hospital Medical Center employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.

- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.
- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

II. Mission and Vision

Desert Springs Hospital Medical Center mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

Desert Springs Hospital Medical Center recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

III. ROLES AND RESPONSIBILITIES

A. Risk Management/Patient Safety Officer

Desert Springs Hospital Medical Center has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

B. Infection Control Officer

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of

Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

C. Patient Safety

Desert Springs Hospital Medical Center has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. Desert Springs Hospital Medical Center has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

Membership:

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of

the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

Meetings:

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

Duties and Responsibilities:

Desert Springs Hospital Medical Center PSC is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility’s claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the “Best Practice.”
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.

- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:
 - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
 - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
 - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
 - Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

II. Patient Safety Advisories

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

Desert Springs Hospital Medical Center is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

C. TERM Program

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

Element I. Administration of the Risk Management Program: The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

Element II. Risk Identification: Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

Element III. Risk Education: Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

Element IV. Patient Safety Initiative: Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

Element V. Patient Safety Priority: Root Cause Analysis (RCA): The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

Element VI. Environment of Care; Safety and Security Programs: The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

Element VII. Claims and Litigation Management: The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

Element VIII. Patient Safety Organization (PSO): Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

Element IX. Measuring the Effectiveness of the Risk Management Program: In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

D. MIDAS

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

E. ClearSight (STARS)

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative

concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

F. Event Notification Site

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

G. Root Cause Analysis (RCA)

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

RCA Responsibilities

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - Proper instructions concerning prescription medications;
 - Instructions concerning aftercare;
 - Any other instructions concerning his or her care upon discharge; and
 - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf

<http://www.who.int/patientsafety/implementation/checklists/en/>

I. Patient Safety Policies

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

K. Training and Education

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

IV. Risk Management Goals and Objectives 2018

- Surgical and Procedural Safety
 - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
 - Goal: Reduction/ Elimination of Maternal Hemorrhage
 - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
 - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
 - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
 - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Reduce 2018 Patient Falls by 10% of 2017 Total Patient Falls
- Increase monthly reporting of Medication Events to at least 8%

V. Monitoring and Accountability

A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

VI. Evaluation/Review:

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

VII. Confidentiality

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

VIII. Approval of Patient Safety Plan

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility’s patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

Appendix A: Terms and Definitions

Patient Safety: The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf

Sentinel event ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

Facility-Associated Infection: ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;

- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

Medical facility ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

Near miss: An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Mandatory reporting: Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

Risk: Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

Preventable event: Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Catheter Associated Urinary Tract Infection (CAUTI): A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at

http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf.)

Central Line Associated Bloodstream Infections (CLABSI): Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Appendix B: Checklist Example: Injuries from Falls and Immobility

| Process Change | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|--|-----------------|-----------------|-------------------|---|
| Conduct fall and injury risk assessment upon admission | | | | |
| Reassess risk daily and with changes in patient condition | | | | |
| Implement patient-specific intervention to prevent falls and injury | | | | |
| Communicate risk across the team; use handoff forms, visual cues, huddles | | | | |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) | | | | |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds | | | | |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives | | | | |
| Incorporate multidisciplinary input for falls | | | | |
| Prevention from PT, OT, MD, RN and PharmD | | | | |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient | | | | |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls | | | | |

Hospital

Patient Safety Plan

SCOPE:

House Wide

PURPOSE:

To build a system for providing safe patient care and for preventing adverse patient outcomes.

DEFINITIONS:

Adverse Event: Harm to a patient as a result of medical care or harm that occurs in a healthcare setting. Although an adverse event often indicates that the care resulted in an undesirable clinical outcome and may involve medical errors, adverse events do not always involve errors, negligence, or poor quality of care and may not always be preventable.

Error: An unintended act, either of omission or commission, or an act that does not achieve its intended outcome.

Facility-acquired Infection: A localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

1. Surgical site infections;
2. Ventilator-associated pneumonia;
3. Central line-related bloodstream infections;
4. Urinary tract infections; and
5. Other categories of infections as may be established by the State Board of Health by regulation pursuant to NRS 439.890.

Hazardous Condition: Any set of circumstances (exclusive of the disease or condition for which the patient is being treated), which significantly increases the likelihood of a serious adverse outcome.

Failure Mode and Effects Analysis (FMEA): A systematic, proactive method for evaluating a process to identify where and how it might fail, and to assess the relative impact of different failures in order to identify the parts of the process that are most in need of change.

Medical Error: Any event (unanticipated outcome) within the control of a provider that results in harm and requires a new or modified practitioner order for management of the patient's medical care.

"Near Miss": Used to describe any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome. Near misses fall within the scope of the definition of a sentinel event, but outside the scope of those sentinel events that are subject to review by The Joint Commission under its Sentinel Event Policy.

"Sentinel Events": Episodes of care that should never happen in any facility, at any time. Examples include patient abduction, wrong site procedure, and procedure on wrong patient.

Root Cause Analysis: A credible process for identifying the basic or causal factors that underlie variation in performance, including the risk of possible occurrence of a sentinel event.

Hospital Acquired Conditions: Conditions that result in the assignment of a case to a DRG that has a higher payment when present as a secondary diagnosis and could reasonably have been prevented through the application of evidence based guidelines. These include, but are not limited to:

1. Catheter-associated urinary tract infections
2. Central line-associated blood stream infection
3. Hospital acquired infections
4. Surgical site infections

Patient Safety Officer (PSO): The person who is designated as such by a medical facility pursuant to NRS 439.870. Northeastern Nevada Regional Hospital (NNRH) shall designate an officer or employee of the facility to serve as the PSO. The PSO will:

- Supervise reporting of sentinel events
- Serve on the patient safety committee
- Take such actions as he/she determines necessary to insure safety of patient as a result of sentinel event activity
- Report any action taken to Patient Safety Committee
- Work under the direction of the Director of Quality, Risk & Safety

POLICY:

The Safety Plan at NNRH is implemented to provide a collaboratively planned, systematic, organization-wide approach to process design and performance measurement, assessment and improvement of patient safety. With a goal of delivering the safest and highest quality health care to the residents of the community, the plan is designed and organized to support the mission, vision and values of the hospital and LifePoint Healthcare Inc.

In formulating the plan, it is recognized that the implementation of an effective patient safety plan is dependent on a participative management approach, including all organization leaders, the Governing Board, senior management, the Patient Safety Committee, departmental management, and medical staff. We believe our plan provides our organization with the mechanisms to achieve patient safety that is expected by our customers and the community we serve.

Senior management is fully committed to the belief that improving patient safety is the most important challenge that we face in the healthcare industry and in our hospital. The purpose of the plan is to develop mechanisms to integrate and coordinate the activities of all of our healthcare staff so that patient safety is the foremost concern at every stage of every process that we conduct. Patient safety is to be the number one priority in the design of new processes, in the evaluation of existing processes and in the re-design of existing processes. The hospital-wide goal is to be proactive in preventing errors and complications.

To accomplish this goal, we are committed to comparing ourselves to national databases, searching for "best practices", studying designs of systems, and always searching for methods of strengthening our existing system designs by adding risk reduction strategies. Senior leaders regularly evaluate the culture of safety and quality using valid and reliable tools and prioritize and implement changes based on such evaluations. All individuals who work in the hospital are able to participate in safety and quality initiatives, either on an individual basis or a team approach. Staff, including the medical staff, is encouraged to discuss any areas of concern that impact patient safety and quality. Relevant literature concerning patient and staff safety is distributed throughout the hospital in the form of flyers, posters, newsletters and through staff meetings. Patients and their family members are encouraged to speak with the hospital staff concerning any safety and quality issues.

PROCEDURE:

INFECTION CONTROL

The patient safety plan is inclusive of the infection prevention and control plan which is based on a yearly risk assessment carried out by the infection control nurse under the direction of the Infection Control, Quality Council and Patient Safety committees. This plan will be developed by a nationally recognized infection control organization as approved by the State Board of Health which may include without limitation, the Association for Professionals in Infection Control and Epidemiology, Inc., The Centers for Disease Control and Prevention (CDC) of the United States Department of Health and Human Services, The World Health Organization, etc.

This facility-specific infection control plan must be developed and reviewed under the supervision of a certified infection preventionist, pursuant to NRS 439.865.

The infection control nurse will be responsible for the implementation of this plan under the approval of the Infection Control, Quality Council and Patient Safety committees. The infection control nurse will be a member of these committees and report on his/her activities at least quarterly.

In the absence of the infection control nurse, the house supervisor or director on call will be responsible for the control of infections at all times.

REPORTING OF PATIENT SAFETY EVENTS

All employees have an affirmative duty to report any occurrence which is not consistent with the routine operation of the hospital and its staff, or the routine care of a particular patient or visitor, or any situation which has potential to cause harm to patients, visitors, or employees. This duty also applies to 'near miss' situations. *Willful failure to report such occurrences may subject the employee to corrective action up to and including termination.*

Patient related occurrences and other abnormal situations will be reported and tracked using an online electronic reporting database developed by **RL Solutions** according to the NNRH Occurrence Report Policy.

NNRH will follow all statutory, regulatory and licensing agency reporting guidelines and NNRH policies.

- A. NRS 439.835 mandates that
 - a. Within 24 hours after becoming aware of a sentinel event, an employee of NNRH will notify the PSO of the event.
 - b. Within 13 days after receiving notification, the PSO shall report the date, time, and a brief description of the sentinel event to the Health Division using their occurrence reporting form.
 - c. If the PSO personally discovers or becomes aware of a sentinel event in the absence of notification by another employee, the PSO shall report the date, time, and a brief description of the sentinel event to the Health Division within 14 days after becoming aware of the sentinel event using their occurrence form.

National Quality Forum List of Serious Reportable Events:

- A. Foreign object retained after surgery
- B. Wrong surgical procedure performed on a patient
- C. Surgery performed on the wrong patient
- D. Intraoperative or immediately postoperative death in an ASA Class I patient
- E. Death or serious disability associated with the use of contaminated drugs, devices, or biologics provided by the healthcare facility
- F. Death or disability associated with the use or function of a device in patient care in which the device is used or functions other than as intended
- G. Patient death or serious disability associated with intravascular air embolism that occurs while being cared for in a healthcare facility
- H. Infant discharged to the wrong person
- I. Patient death or serious disability associated with patient elopement
- J. Suicide, or attempted suicide, resulting in serious disability while being cared for in a healthcare facility
- K. Death or serious disability associated with a medication error
- L. Death or serious disability associated with a hemolytic reaction to the administration of ABO/HLA incompatible blood or blood products
- M. Maternal death or serious disability associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare facility
- N. Stage 3 or 4 pressure ulcers not present on admission
- O. Death or serious disability due to spinal manipulative therapy
- P. Artificial insemination with the wrong donor sperm or wrong egg
- Q. Patient death or serious disability associated with an electric shock while being cared for in a healthcare facility
- R. Any incident in which a line designated for oxygen or other gas to be delivered to a patient contains the wrong gas or is contaminated by toxic substances
- S. Patient death or serious disability associated with a burn incurred from any source while being cared for in a healthcare facility

- T. Patient death or serious disability associated with a fall while being cared for in a healthcare facility. This includes but is not limited to fractures, head injuries, and intracranial hemorrhage.
- U. Patient death or serious disability associated with the use of restraints or bed rails while being cared for in a healthcare facility
- V. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider.
- W. Abduction of a patient of any age
- X. Sexual assault on a patient within or on the grounds of a healthcare facility
- Y. Death or significant injury of a patient or staff member resulting from a physical assault that occurs within or on the grounds of a healthcare facility.

NRS439.837 mandates that the facility shall, upon reporting a sentinel event, conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event. A Root Cause Analysis (RCA) will be performed, with all staff involved with the sentinel event, with an ultimate goal of preventing a recurrence.

Once opportunities for improvement are identified, strategies for change can be developed using evidence based practice. Measures are used to determine the effectiveness of the improvement and ongoing feedback is provided to staff, the Patient Safety Committee and Quality Council.

DISCLOSURE OF EVENT TO PATIENT AND/OR FAMILY

When a sentinel event, hospital acquired condition, or an outcome that differs significantly from the anticipated outcome occurs, the patient, and when appropriate, the patient's family or the patient's designee shall be informed as soon as reasonably possible but within 7 days (NRS 439.855). The disclosure of facts of an event should occur after determination of the surrounding facts and after consultation with the Chief Executive Officer (CEO) or designee or Risk Management.

In most instances, disclosure should be handled by the attending physician who has responsibility for the overall care of the patient. The physician or his/her designee should communicate:

- Acknowledgement of the event
- Data known to date
- That a full analysis will take place
- What is currently taking place as a result of the event
- Additional data on an ongoing basis
- Measures taken to prevent recurrence
- Apologize that an event occurred.

PATIENT SAFETY COMMITTEE

The Patient Safety Committee is the interdisciplinary committee designated to manage the organization-wide patient safety program and shall be organized with strict adherence to NRS 439.875.

The Governing Board is responsible for the oversight of the Patient Safety Plan. The Patient Safety Committee functions under the guidance and with the oversight of the CEO and Quality Council, with the PSO, or designee, serving as Chairperson. The meetings, records, data gathered, and reports generated by the Patient

Safety Committee are protected by the peer review privilege set forth by the Health Care Quality Improvement Act of 1986 (Title IV of Public Law 99-660, as amended, and other applicable Nevada Statutes).

The committee shall be composed of the following members and others as the committee may from time to time add to accomplish specific goals and objectives within the authorized scope of activities outlined herein:

- A. Facility Patient Safety Officer
- B. Chief Nursing Officer and/or Member representing the Governing Board
- C. Director, Quality, Risk & Safety
- D. 2-3 clinical staff members
- E. Nursing Staff member
- F. 2-3 non-clinical staff members
- G. Member representing Pharmacy services
- H. Infection Prevention and Control Practitioner
- I. Facility Safety office or designated representative

At each monthly meeting, a representative from each of the medical, nursing and pharmaceutical staff, executive team or Governing Board, and the PSO or designee, must be in attendance.

Members of the Patient Safety Committee can be called ad-hoc to assist the PSO in analyzing possible sentinel events or adverse outcomes or assist with any other urgent patient safety matter.

The committee shall operate within the following scope of activities (NRS 439.870):

- Receive reports from the PSO
- Evaluate actions of the PSO in connection with all reports of sentinel events alleged to have occurred in the hospital
- Review and evaluate the quality of measures carried out by the hospital to improve the safety of patients who receive treatment at the hospital
- Make recommendations to the Governing Board to reduce the number and severity of sentinel events that occur at the hospital
- Adopt patient safety checklists and patient safety policies according to NRS 439.877 for use by:
 - All providers of health care who provide treatment to patients at the medical facility
 - Other personnel of the medical facility who provide treatment or assistance to patients
 - Employees of the medical facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility
 - Persons with whom the medical facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients at the facility
 - Patient safety checklists must follow best practice protocols to improve the health outcome of patients at NNRH according to NRS 439.877 and must include without limitation:
 - Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care
 - Checklist to ensure employees and contractors follow protocols to ensure that the room and environment of the patient is sanitary

- Checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received discharge instructions regarding medication management
- Instructions concerning aftercare and any other instructions concerning patient's care after discharge
- Checklists adopted by NNRH include:
 - Central Line Insertion (with prompt for practitioner order)
 - Universal Protocol and Surgical Site Fire Risk Assessment/Time Out
 - Safe Surgery Checklist
 - Discharge Instructions (prescription medication instructions, aftercare instructions, any other instructions related to discharge such as follow-up appointments)
 - Daily Room Cleaning (room and environment sanitation)
 - CDC Environmental Checklist for Monitoring Terminal Cleaning
 - Pre-Oxytocin Checklist (with prompt for practitioner order)
- In addition, the Patient Safety Committee will adopt and monitor compliance with our policy for the use of two patient identifiers, hand hygiene and any other patient safety checklist and policy adopted pursuant to this section. This may include active surveillance, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.
- The Patient Safety Committee shall monitor and document the effectiveness of the patient identification policy and at least annually, review the patient safety checklists and patient safety policies adopted and consider any additional patient safety checklist and patient safety policies that may be appropriate for adoption at NNRH.
- On or before July 1st of each year, the committee submits a report to the Director of the Legislative Council Bureau for transmittal to the Legislative Committee on Health Care. The report is to include information regarding the development, revision, and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to paragraph above outlining checklist review (NRS 439.800).
- At least once each calendar quarter, report to the Governing Board regarding:
 - The number of sentinel events that occurred at the hospital during the preceding calendar quarter; and
 - Any recommendations to reduce the number and severity of sentinel events that occur at the hospital.

October 3, 2017

Received reports on 10/02/2017 that patient; Dorla Crothers had fallen out of bed and was found on the floor by CNA, T. Barton. Patient was found lying parallel to the bed. No blood on the patient. Vital signs were taken by charge nurse K.C. Luchessi, RN; assessment showed bruising on left leg and arm. Patient stated she was in no pain and was placed back into bed by staff and monitored. Patient did state that her spouse was trying to help her get out of bed at the time of the fall. Approximately 2 hours later, patient reported pain in hip at which time Dr. Jensen was again contacted and he did place orders for a hip x-ray which revealed a mildly displaced left subcapital femoral neck fracture.

Both Dr. Jensen and Dr. Katschke have met with the patient and family and have determined that surgery may cause more harm. Determined to keep the patient here, stabilized and proper management of pain.

Plan:

The patient and patients spouse will be monitored closely when spouse is in the room as they do not share a room. Continue to orient the patients by telling them that the patient cannot be removed from her bed, staff to monitor every 10-15 minutes when spouse is in the room. Because both have a diagnosis of dementia we have reminded all staff that we must be very aware of when the spouse enters the room. Side rails were requested by the family and after education and consent was signed, the rails were placed on the bed.

QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT PLAN

PURPOSE

The Governing Body, Administration, Medical Staff, and staff of Horizon Specialty Hospitals will demonstrate a consistent endeavor to deliver optimal care to all patients through the establishment of a hospital-wide continuous Quality Assessment and Performance Improvement (QAPI) plan. The organization's leaders will plan and implement a hospital-wide continuous Quality Assessment and Performance Improvement Plan in accordance with our mission, vision, and values as well as applicable laws and regulations. QAPI is incorporated into each aspect of our patient care delivery process. Quality is multidisciplinary and the processes for monitoring, analyzing, and improving quality involve various methodologies. Multiple tools and techniques are used to gather data, analyze information, evaluate solutions, and demonstrate improvement. Organizational functions and processes that most significantly impact patient care and outcomes will be evaluated in accordance with clinically valid criteria, indicators, and standards. Data can be obtained through a variety of sources (Appendix A). Performance measures may include efficacy, appropriateness, availability, timeliness, effectiveness, continuity, safety efficiency, respect, and caring. Continuously monitoring, analyzing, and improving performance of clinical and other processes are the focus of the QAPI Plan.

OBJECTIVES

The objective of the plan is to provide an optimal, uniform level of care through reduction and/or elimination of unnecessary and correctable risks, hazards, and expense within the hospital by:

- Establishing a planned and systematic approach to monitor, analyze, and improve performance to optimize patient outcomes
- Coordinating the integration of all quality improvement activities throughout the organization
- Implementing a system for evaluation of information collected through ongoing monitoring/evaluation and utilization of comparative data sources to identify trends, risks, or opportunities for improvement
- Objectively assessing the cause and scope of identified risks and variations
- Implementing appropriate processes for improvement and sustaining improved performance
- Documenting improved patient care and improved patient outcomes through quality improvement initiatives
- Assuring communication and reporting of quality improvement activities between hospital staff and administration, Medical staff, and the Governing Body

AUTHORITY AND ACCOUNTABILITY

The normal operation and administrative structure of the hospital and its Medical Staff are not altered by this plan.

A. Governing Body

The Governing Body of Horizon Specialty Hospital has the responsibility for the QAPI Plan. The Governing Body has delegated these functions to be carried out by the medical and hospital staff.

B. Medical Staff

The Medical Executive Committee (MEC) has the authority and responsibility to take necessary corrective action based on findings and recommendations of the quality improvement activities. This action could be in the form of, but is not limited to the following:

- a. New or revised policies and procedures
- b. Changes in privileges and assignments
- c. Educational and training programs
- d. Recommendations for equipment or facility changes
- e. Counseling of hospital or Medical staff
- f. Recommending a Performance Improvement Team

C. Quality Patient Safety Council (QPSC) Committee

The QPSC shall have the responsibility for coordinating and integrating the hospitals QAPI Plan and shall be accountable to the MEC of the Medical Staff, Administration, and the Governing Body. The council will monitor all quality improvement activities of the Medical Staff and hospital departments/programs.

D. Administration and Hospital Staff

The Executive Director (ED) has the responsibility for assuring that necessary action is taken in the administrative area based on findings of quality improvement activities.

The department and program directors shall be responsible for the implementation of quality improvement activities within their department/program. The quality department and program directors shall be accountable to the ED for taking necessary corrective action based on findings of the quality improvement activities as related to their area of responsibility.

CONFLICT OF INTEREST

In quality improvement activities which include Medical Staff ongoing Professional Practice Review (OPPE) and Focused Professional Practice Review (FPPPE), no physician shall have primary review responsibility for any case in which he/she is involved. This does not preclude the physician from participating in the case presentation process which facilitates education.

CONFIDENTIALITY

When monitoring, analyzing, and reporting quality improvement data, all reasonable steps shall be taken to ensure the confidentiality rights of patients, physicians, and staff that are affected by the data reviewed. All information related to quality improvement activities performed by the Medical Staff or hospital staff in accordance with this plan is confidential. Some information may be disseminated on a "need to know" basis as required by agencies, such as federal review agencies, regulatory bodies, the National Practitioners Data Bank, or others approved by the MEC, Hospital Administration, and/or the Governing Body. QPSC meeting minutes and reports generated are considered confidential. Official actions pertinent to individual clinical performance are personal and confidential.

QUALITY PATIENT SAFETY COUNCIL (QPSC) COMMITTEE

A. Membership/Organization

The membership of the QPSC Committee will be composed to all hospital departments, both internal and contracted. Meetings will be held on a monthly basis. More frequent meetings may be called at the discretion of the Committee Chairperson.

B. Responsibilities

The QPSC shall coordinate all quality improvement activities, having the responsibility for the following functions:

1. Setting priorities for hospital-wide quality improvement activities designed to provide quality outcomes and improved efficiency. Prioritizations of quality improvement activities is based on the following:

- a. Impact on patient care
- b. Urgency
- c. Information on unanticipated adverse occurrences affecting patients
- d. Potential for resistance to change, manageability and measurability
- e. Special attention will be given to those activities that are determined to involve high volume, high risk, and/or problem-prone aspects of care
- f. Quality improvement priorities will be established annually and specified in Appendix B of this plan

2. Chartering Performance Improvement Teams (PIT) as recommended and reviewing team activities. Proposed action from PIT's will be reviewed by the QPSC Committee for approval.

3. Ensuring that directors, staff, and teams have appropriate education, time, and resources for quality improvement activities.
4. Reviewing all performance improvement reports and data from hospital departments and committees as well as contracted services.
5. Assisting in the development of goals and selecting criteria to be used for ongoing monitoring and quality improvements activities.
6. Assisting in determining methods for review and assessment of identified concerns.
7. Requesting reports of performance improvement activities.
8. Recommending corrective action for identified concerns as appropriate.
9. Determining if further review should be done prospectively, concurrently, or retrospectively.
10. Monitoring corrective action through resolution.
11. Selecting and reviewing performance of comparative indicators and core measures.
12. Reviewing the results Sentinel Event or Near Miss investigations, including any analysis of the adequacy of staffing. Making recommendations based on event and investigation conducted.
13. Forwarding findings to the MEC and Governing Body as appropriate.
14. Performing an annual review of each clinical department's performance improvement indicators.
15. Performing an annual evaluation of the Hospital-wide QAPI Plan.

C. QPSC Committee Chairperson

The Chairperson is the vital link to ensure communication between the QPSC Committee, the ED, MEC, Governing Board, IP Committee, Environment of Care/Emergency Management and the medical and hospital staff. The chairperson is responsible for the administration of the QAPI and Safety Plan. His/her responsibilities include, but are not limited to:

1. Chairmanship of multidisciplinary QPSC Committee.
2. Presents final PSC activities and reports to the MEC and Governing Board.

- Performance improvement priorities identified by hospital administration
 - Invasive procedure monitoring
 - Adverse events related to the use of procedural sedation
 - Blood and blood component use, including reported and confirmed transfusion reactions.
- A. Ongoing monitoring and assessment of important aspects of care, processes, and functions, as well as review of occurrences identified through the medical record screening process and incident reporting. Monitoring will be carried out utilizing objective criteria and indicators that reflect current knowledge and clinical experience. Performance measurement data will be collected on the following as appropriate:

REVIEW PROCESS/SCOPE OF ACTIVITIES

Quality assessment and performance improvement shall be complete through:

1. Assuring that all quality improvement activities are documented with a focus on effective communication of conclusions, recommendations, actions, and follow-up evaluation.
2. Keeping the QPSC Committee informed of the results of all ongoing quality improvement activities and initiatives.
3. Assisting departments and services in developing a monitoring and assessment system to evaluate patient outcomes and important processes of the department or service in a continuous manner
4. Facilitation and training of Performance Improvement Teams as needed.
5. Informing ancillary and contracted services of quality improvement activities in process or completed that may be relevant to their respective areas.
6. Storing and retaining all departmental, committee, and team reports presented to the QPSC Committee.
7. Evaluation of the QAPI Plan annually.
8. Requesting follow-up information on concerns from hospital administration and Medical staff members.

D. Director of Patient/Customer Experience (DPCE)

3. Screening of sensitive information that should be referred to the appropriate authority other than the QPSC Committee because of the urgent or privileged nature of the information.
4. Reviewing medical staff and departmental quality improvement activities with the Senior Leadership Council, MEC, and Governing Board to determine patterns/trends, integration of information and compliance with CMS and The Joint Commission standards.
5. Providing input to the Credentials Committee as needed.
6. Participation in identification of multidisciplinary or departmental issues or concerns.

A. **Blood Usage Measurement**- Blood usage measurement shall be conducted on an ongoing basis. Blood usage data is reviewed and analyzed quarterly by the MEC. Clinically valid criteria and indicators will be used in the screening process and in the more intensive evaluation of any identified or suspected concerns in blood usage. Blood usage measurement will include the following:

MEDICAL STAFF AND/OR QUALITY IMPROVEMENT FUNCTIONS

Reports of the Medical Staff department quality improvement activities are reviewed by the MEC, Governing Board, the Executive Director (ED), and the Chief Nursing Officer (CNO). As part of the annual evaluation of the hospital's QAPI Plan, the effectiveness of the quality assessment and improvement activities by the Medical Staff department shall be evaluated.

- B. Periodic analysis of the data collected through ongoing monitoring and assessment including information collected by appointed Medical Staff committees, task forces, and PTT's to identify trends or opportunities for improvement.
- C. Taking action when concerns regarding patient care and clinical performance or opportunities for improvement have been identified.
- D. Evaluation of the effectiveness of action taken.
- E. Documentation of the results of monitoring and assessment activities, including conclusions, recommendations, actions taken, and follow-up and evaluation of the effectiveness of actions taken in the minutes of the departmental or committee meetings.

- The results of resuscitation
- Restraint utilization and safety
- Medication Management, including significant medication errors and adverse drug reactions
- Patient perception of the safety and quality of care, treatment, and services
- Staff perception of hospital safety culture (surveys to be completed no less than every two years)
- Fall reduction and Safety activities
- Effectiveness of response to a change or deterioration of a patient's condition
- Review of Rapid Response Team response
- Organ Procurement conversion rate
- Infection Prevention activities
- Mortality and Morbidity reviews including use of autopsy criteria
- Utilization Management
- Timeliness of reporting critical test results and compliance with all National Patient Safety Goals (NPSG)

- Monitoring the use of whole blood and blood components
 - Evaluation of all reported and confirmed transfusion reactions
 - Development/approval of policies and procedures relating to the distribution, handling, and administration of blood and blood components
 - Measuring, assessing, and improving the ordering, distribution, handling, dispensing, administration, and monitoring of the effects of blood and blood components
 - Review of the adequacy of transfusion services
- B. Credentials Committee-** The Credentials Committee shall meet monthly, but no less than quarterly. This committee shall ensure that each medical staff member is qualified for membership, and shall strive to maintain the optimal level of professional performance of the medical staff through the appointment/reappointment process, the specific delineation of privileges, the approval of physician assistant/nurse practitioner, and physician employees, and the periodic review of each staff member.
- C. Medical Executive Committee (MEC)-** The Medical Staff Executive Committee is delegated the primary authority over activities related to functions of quality assessment and performance improvement of the professional services provided by individuals with clinical privileges. The MEC shall meet quarterly to receive and act upon reports and recommendations from medical staff committees, clinical departments, assigned activity groups, and the QPSC Committee.
- D. Quality Patient Safety Council Committee (QPSC) -** The QPSC shall meet monthly. There shall be representation from the Medical Staff, hospital Administration and all hospital departments, services and programs as well as contracted services. The committee shall adopt, implement, and monitor a comprehensive hospital-wide Quality, Risk, and Safety Program. The committee is responsible for the oversight of the Patient Safety Program and to evaluate effectiveness and recommend changes in equipment, policies & procedures, and processes as appropriate for the safe, effective delivery of care. The committee shall oversee the Patient Complaint and Grievance process and all adverse occurrences.
- In addition, the QPSC shall review and evaluate The Joint Commission Sentinel Event Alerts and National Patient Safety Goals as they are published, make recommendations regarding further action and determine which areas within the hospital shall be involved with review/evaluation of each alert/goal and implementation of risk reduction strategies to ensure compliance.
- E. Infection Prevention Committee-** The Infection Prevention committee shall meet bi-monthly to review and evaluate the hospital-wide infection control activities. The committee shall have representation from the Medical Staff, Hospital Administration, the person directly responsible for management of infection surveillance, prevention

- Based on clinical experience, it is known or suspected that the drug causes adverse reactions or interacts with another drug(s) in a manner that represents significant health risk
- following reasons:
- monitoring of medications. Drugs may be selected for evaluation for one or more of the selection, ordering and transcribing, preparing and dispensing, administering, and meet quarterly and oversee the measurement, assessment, and improvement of the **G. Pharmacy, Nutrition, and Therapeutics Committee (PNT)**- The PNT Committee shall
- to patients, hospital staff, and visitors.
- characteristics and practices, and to eliminate or reduce, to the extent possible, hazards and utility systems of the hospital, which shall be designed to produce safe security, hazardous materials, emergency management, life safety, medical equipment, The committee shall adopt, implement, and monitor requirements related to safety, management, clinical leader, Human Resource Director, and Central Supply Manager. person directly responsible for all aspects of plant operations and emergency at least quarterly. Committee representation shall include Hospital Administration, the **F. Environment of Care/Emergency Management Committee**- The committee shall meet
- Control, OSHA, APIC and other agencies as indicated.
 - Current literature and/or new recommendations from the Centers for Disease
 - Procedures and practices of new services instituted and any problems identified
 - Prevalence and incidence studies
 - above the usual baseline infection rates
 - Unusual epidemics, clusters of infections, unusual pathogens, and occurrences of antimicrobial susceptibility/resistance trend studies
 - Annual program evaluation of risk assessments and outcomes using the results of antimicrobial susceptibility/resistance trend studies
 - hospital.
 - proposals for special infection control studies conducted throughout the employee infection surveillance and environmental sampling. This includes other
 - Special collection of surveillance data directed by the committee such as
 - Data trend analyses generated by surveillance activities
- The surveillance activities and system are selected by reviewing:
- targeted surveillance, problem-oriented surveillance, or a combination of these systems. the detection of nosocomial infection will be selected from total house surveillance, approve the type and scope of surveillance activities. The type of surveillance system for hospital from the community. The committee will evaluate, revise as indicated, and prevent, identify, and control infections acquired in the hospital or brought into the function will include the use of pre-established criteria and will be performed to and control program, and, as appropriate, other department and services. The review

The quality and appropriateness of patient care will be monitored and evaluated in all important aspects of care, key processes, and important functions of clinical departments and support services. This review may include the following dimensions of performance:

HOSPITAL AND/OR CONTRACTED SERVICES

Results of quality improvement activities are considered when evaluating each physician at the time of reappointment. As part of the annual evaluation of the hospital's QAPI Plan, the effectiveness of quality assessment and performance improvement activities by medical staff committees shall be evaluated.

Documentation of the results of monitoring and evaluation activities shall be included in the minutes of the committee meetings. The minutes will reflect all conclusions, recommendations, follow-up, and actions taken. All concerns and review activities are presented to the MEC and Governing Board.

H. **Utilization Management (UM) Committee**- The UM Committee shall meet quarterly to address over-utilization, under-utilization, and inefficient scheduling of resources for federal (QIO) and non-federal patients. This shall be accomplished through screening of admissions, evaluation of ancillary services as to inappropriate utilization, evaluation of "avoidable days", and evaluation of the results of discharge planning.

Department-specific information is forwarded to the appropriate medical staff department for review and follow-up.

- The drug is used in the treatment of patients who may be at high risk for adverse drug reactions because of age, disability, or unique, metabolic characteristics
- The drug has unusual toxicity or potential for causing serious complications from their pharmacologic effects if not prescribed correctly
- The drug has been designated, through the hospital's Antibiotic Stewardship Program or other continuous quality improvement activities for monitoring and evaluation
- The drug is one of the most frequently prescribed drugs; and/or The drug has greater cost than other drugs of comparable pharmacologic effect
- Monitor medication errors and adverse drug reaction and take appropriate follow-up actions
- Develop and approve policies and procedures related to the selection and procurement, storage, ordering and transcribing, preparing and dispensing, administering and monitoring of medications
- Develop and maintain a drug formulary or drug list

Performance Improvement Teams and/or Task Forces are comprised of individuals from cross-functional groups. Teams are chartered to improve systems and operational processes involved

QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT TEAMS & TASK FORCES

and/or contracted services shall be evaluated. the hospital's QAPI Plan, the effectiveness of the quality improvement activities by clinical the office of the Director of Patient/Customer Experience. As part of the annual evaluation of evaluation activities of the medical staff. All evaluation activities will be coordinated through Where possible, clinical and/or support services evaluation activities will be integrated with the effectiveness of actions taken shall be documented and submitted to the QPSC Committee. Results of the quality improvement activities including evaluation, actions taken, and the QPSC on a quarterly basis. Laboratory, Diagnostic Imaging, Dialysis, and Rehabilitation quality data will be reported to the issues/concerns impacting system processes and functions which affect patient care and safety; Each department/service is also responsible for identifying and participating in the analysis

- **Nursing Services- Chief Nursing Officer**
- **Respiratory Care Services- Director of Ancillary Services**
- **Dietary Services- Registered Dietician via PNT Committee**
- **Wound Care Services- Wound Care Services Registered Nurse**
- **ABG Laboratory Services- Director of Ancillary Services**
- **Pharmacy Services- Director of Pharmacy via the PNT Committee**
- **Patient & Family Services- Chief Nursing Officer**

Each department/service is responsible for establishing specific quality improvement indicators or projects which are reflective of the hospital-wide plan and prioritizes aspects of care to be studied. The indicator results will be presented to the QPSC at least quarterly by the responsible individual listed:

The same process as outlined for the medical staff and clinical departments (ongoing monitoring, periodic evaluation, the use of objective criteria, establishing thresholds, taking action for identified concerns, evaluation of the effectiveness of actions taken, and documentation of quality improvement activities) will be used.

POLICY: PATIENT SAFETY PLAN

In compliance with NRS 439.800-439.890, Humboldt General Hospital shall develop, in consultation with the providers of health care who provide treatment to patients at the medical facility, an internal patient safety plan to improve the health and safety of patients who are treated at this medical facility.

HGH shall develop a patient safety plan to include without limitation:

- a) The patient safety checklists and patient safety policies most recently adopted pursuant to NRS 439.877.
- b) An infection control program to prevent and control infections within the medical facility. To carry out the program, HGH shall adopt an infection control policy. The policy must consist of:
 - 1) The current guidelines appropriate for HGH’s scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, without limitation, the Association for Professionals in Infection control and Epidemiology, Inc., the Centers for Disease Control and Prevention of the United State Department of Health and Human Services, The World Health Organization and the society for Healthcare Epidemiology of America: and
 - 2) Facility-specific infection control developed under the supervision of a certified infection preventionist.

HGH shall designate the house supervisors as the person who is responsible for infection control when the infection control officer is absent to ensure that someone is responsible for infection control at all times.

The Patient Safety Plan shall be submitted to the governing board for approval in accordance with the requirements of NRS 439.865. After the HGH Patient Safety Plan is approved, all providers of health care who provide treatment to patients at HGH shall be notified of the plan and of the requirements of the plan. Compliance with the HGH Patient Safety Plan shall be required.

The Patient Safety Plan shall be reviewed and updated annually in accordance with the requirements for approval set forth in this section.

HGH shall designate an employee to serve as the patient safety officer. The person who is designated as the patient safety officer shall:

- a) Serve on the Patient Safety Committee

- b) Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to NRS 439.835.
- c) Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at HGH.
- d) Report to the patient safety committee regarding any action taken in accordance with paragraph (c).

HGH shall designate an employee to serve as the infection control officer. The infection control officer shall:

- a) Serve on the patient safety committee.
- b) Monitor the occurrences of infections at Humboldt General Hospital to determine the number and severity of infections
- c) Report to the patient safety committee concerning the number and severity of infections at HGH. Take such action as he or she determines is necessary to prevent and control infections alleged to have occurred at HGH.
- d) Carry out the provisions of the infection control program adopted pursuant to NRS 439.865 and ensure compliance with the program.

HGH will ensure that the infection control officer has successfully completed a nationally recognized basic training program in infection control, which may include, without limitation, the program offered by the Association for Professionals in Infection Control and Epidemiology, Inc., or a successor organization. The infection control officer shall complete at least 4 hours of continuing education each year on topics relating to current practices in infection control and prevention. HGH shall maintain records concerning the certification and training required by this section.

HGH shall establish a patient safety committee.

- a) The HGH Patient Safety Committee must be composed of:
 - 1) The patient safety officer of the medical facility.
 - 2) The infection control officer of the medical facility.
 - 3) At least three providers of health care who treat patients at HGH, including, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility.
 - 4) One member of the executive or governing body of the medical facility.
- b) A patient safety committee shall meet at least once each month.
- c) The patient safety committee shall:
 - 1) Receive reports from the patient safety officer pursuant to NRS 439.870.
 - 2) Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.
 - 3) Review and evaluate the quality of measures carried out by HGH to improve the safety of patients who receive treatment at the medical facility.
 - 4) Review and evaluate the quality of measures carried out by HGH to prevent and control infections at the medical facility.
 - 5) Make recommendation to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur at HGH.
 - 6) At least once each calendar quarter, report to the HGH executive or governing body of the medical facility regarding

- i. The number of sentinel events that occurred at HGH during the preceding calendar quarter;
 - ii. The number and severity of infections that occurred at the medical facility during the preceding calendar quarter; and
 - iii. Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- 7) Adopt patient safety checklists and patient safety policies as required, review the checklists and policies annually and revise the checklists and policies as the patients safety committee determines necessary.
- d) The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.265

The Patient Safety Committee, established pursuant to NRS 439.875 by a medical facility, shall adopt patient safety checklists and patient safety policies for use by:

- a) Providers of health care who provide treatment to patients at HGH;
- b) Other personnel of the medical facility who provide treatment or assistance to patients;
- c) Employees of the HGH who do not provide treatment to patients but whose duties affect the health or welfare of the patients at HGH, including, without limitation, a janitor or HGH; and
- d) Person with whom HGH enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients at HGH.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- a) Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care.
- b) Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary.
- c) A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - 1) Proper instructions concerning prescription medications;
 - 2) Instructions concerning aftercare; and
 - 3) Any other instruction concerning his or her care upon discharge.
- d) Any other checklists which may be appropriate to ensure the safety of patients at the medical facility

The patient safety policies must include, without limitation:

- a) A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of health care. The personal identifiers may include, without limitation, the name and date of birth of the patient.

- b) A policy regarding the nationally recognized standard of precautionary protocols to be observed by providers of health care at the medical facility including, without limitation, protocols relating to hand hygiene.
- c) A policy to ensure compliance with the patient safety checklists and patient safety policies, which may include, without limitation, active surveillance. Active surveillance may include, without limitation, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

The Patient Safety Committee shall:

- a) Monitor and document the effectiveness of the patient identification policy adopted.
- b) At least annually, review the patient safety checklists and patient safety policies adopted pursuant to this section as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
- c) On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted.

No person is subject to any criminal penalty or civil liability for libel, slander or any similar cause of action in tort if the person, without malice:

- a) Reports a sentinel event to a governmental entity with jurisdiction or another appropriate authority;
- b) Notifies a governmental entity with jurisdiction or another appropriate authority of a sentinel event;
- c) Transmits information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority;
- d) Compiles, prepares or disseminates information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority; or
- e) Performs any other act authorized pursuant to [NRS 439.800](#) to [439.890](#), inclusive.

If Humboldt General Hospital:

- (a) Commits a violation of any provision of [NRS 439.800](#) to [439.890](#), inclusive, or for any violation for which an administrative sanction pursuant to [NRS 449.163](#) would otherwise be applicable; and
- (b) Of its own volition, reports the violation to the Administrator, such a violation must not be used as the basis for imposing an administrative sanction pursuant to [NRS 449.163](#).

If HGH commits a violation of any provision of [NRS 439.800](#) to [439.890](#), inclusive, and does not, of its own volition, report the violation to the Administrator, the Division may, in accordance with the provisions of subsection 3, impose an administrative sanction:

- (a) For failure to report a sentinel event, in an amount not to exceed \$100 per day for each day after the date on which the sentinel event was required to be reported pursuant to [NRS 439.835](#);
- (b) For failure to adopt and implement a patient safety plan pursuant to [NRS 439.865](#), in an amount not to exceed \$1,000 for each month in which a patient safety plan was not in effect; and
- (c) For failure to establish a patient safety committee or failure of such a committee to meet pursuant to the requirements of [NRS 439.875](#), in an amount not to exceed \$2,000 for each violation of that section.

Patient Safety Plan, AQPI-02

PURPOSE:

To develop, implement, and evaluate a patient safety program for the Tahoe Forest Health System which includes Tahoe Forest Hospital (TFH) and Incline Village Community Hospital (IVCH), (hereinafter referred to as the "organization").

The Tahoe Forest Hospital District (TFHD) Board of Directors makes a commitment to provide for the safe and professional care of all patients, and also to provide for the safety of visitors, employees and health care practitioners. The commitment is made through the provision of this Patient Safety Plan that will identify, evaluate, and take appropriate action to prevent unintended patient care outcomes (adverse events), as well as protect the TFHD's financial resources, tangible assets, personnel and brand. Leadership structures and systems are established to ensure that there is organization-wide awareness of patient safety performance, direct accountability of leaders for that performance and adequate investment in performance improvement abilities, and that actions are taken to ensure safe care of every patient served.

This policy is integrated with a companion policy, Risk Management Plan AQPI-04.

The Tahoe Forest Hospital District endorses the National Quality Forum set of "34 Safe Practices for Better Healthcare." Further, the District ascribes to the tenets and practices of the Just Culture program in the investigation of near-misses, adverse events and unexpected/unintended outcomes.

A. SCOPE & APPLICABILITY

1. This is a Health System program empowered and authorized by the Board of Directors of Tahoe Forest Hospital District. Therefore, it applies to all services and sites of care provided by the organization.

B. RECITALS

1. The organization recognizes that a patient has the right to a safe environment, and strives to achieve an error-free healthcare experience. Therefore, the Health System commits to undertaking a proactive approach to the identification and mitigation of unexpected/unintended outcomes.
2. The organization also recognizes that despite best efforts, errors can occur. Therefore, it is the intent of the Health System to respond quickly, effectively and appropriately when an error does occur.
3. The organization also recognizes that the patient has the right to be informed of the results of treatments or procedures whenever those results differ significantly from anticipated results. Patients and patient representatives are informed of unexpected/unintended outcomes as described in 4.8.1

below.

C. AUTHORITY & RESPONSIBILITY

1. **Governing Body**

- a. The Governing Body, through the approval of this document, authorizes a planned and systematic approach to preventing adverse events and implementing a proactive patient safety plan. The Governing Body delegates the implementation and oversight of this program to the Chief Executive Officer (hereinafter referred to as the "Senior Leader") and request that the Medical Staff approve the creation of a Patient Safety Committee. The Medical Staff Quality Committee will serve as the Patient Safety Committee for TFHD and the IVCH Medical Staff Committee will serve as the Patient Safety Committee for IVCH.

2. **Senior Leader**

- a. The Senior Leader is responsible for assuring that this program is implemented and evaluated throughout the organization. As such, the Senior Leader will establish the structures and processes necessary to accomplish this objective. The Senior Leader delegates the day-to-day implementation and evaluation of this program to the Medical Staff Quality Committee and the Management Team.

3. **Medical Staff**

- a. The meetings, records, data gathered and reports generated by the Patient Safety Committee shall be protected by the peer review privilege set forth at California evidence Code Section 1157 relating to medical professional peer review and for the State of Nevada subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.265.
- b. The Patient Safety Committee shall take a coordinated and collaborative approach to improving patient safety. The Committee shall seek input from and distribute information to all departments and disciplines in establishing and assessing processes and systems that may impact patient safety in the organization. The Patient Safety Committee shall recognize and reinforce that the members of the Medical Staff are responsible for making medical treatment recommendations for their patients.

4. **Management Team**

- a. The Management Team, through the Director of Quality and Regulations, is responsible for the day-to-day implementation and evaluation of the processes and activities of this Patient Safety Plan.

5. **Patient Safety Officer (The Patient Safety Officer's standing committee assignments, chain-of-command and reports/reporting structure are attached as Attachment C)**

- a. The Director of Quality & Regulations or the Quality & Regulations staff designee shall be the Patient Safety Officer for the organization. The Patient Safety Officer shall be accountable directly to the Senior Leader, through the supervision of the Director of Quality and Regulations, and shall participate in the Patient Safety/Medical Staff Quality Committee.

6. **Patient Safety/Medical Staff Quality Committee**

1. The Patient Safety Committee shall:
 1. Receive reports from the Director of Quality and Regulations and/or the Patient Safety Officer

-
2. Evaluate actions of the Director of Quality and Regulations and/or Patient Safety Officer in connection with all reports of adverse events, near misses or unexpected/unintended outcomes alleged to have occurred
 3. Review and evaluate the quality of measures carried out by the organization to improve the safety of patients who receive treatment in the Health System
 4. Make recommendations to the executive committee or governing body of the Health System to reduce the number and severity of adverse events that occur
 5. Report quarterly, and as requested, to the executive committee and governing body
 6. The Patient Safety Committee members shall include, at least, the following individuals:
 1. Director of Quality and Regulations or the Patient Safety Officer designee, if not one and the same
 2. Members of the medical staff
 3. One member of the nursing staff (CNO or designee)
 4. Director of Pharmacy
 5. Medical Director of Quality
 6. Risk Manager, if not one and the same as the Patient Safety officer
 7. Chief Operating Officer

D. PROGRAM ELEMENTS, GOALS AND OBJECTIVES

1. Assess patient safety risk, identify threats, prevent occurrence or mitigate frequency and severity of harm when unexpected/unintended outcomes occur
2. Promote a safe environment in the Health Systems to alleviate injuries, damages or losses
3. Foster communication with patients, employees, medical staff and administration when patient safety issues are identified
4. Contribute to PI activities and plans to resolve patient safety issues
5. Participate and/or consult on all patient disclosure conferences regarding unexpected/unintended outcomes
6. Manage losses, claims or litigation when adverse events occur.
7. **Designing or Re-designing Processes**
 - a. When a new process is designed (or an existing process is modified) the organization will use the Patient Safety Officer to obtain information from both internal and external sources on evidence-based methods for reducing medical errors, and incorporate best practices into its design or re-design strategies.
8. **Identification of Potential Patient Safety Issues**
 - a. As part of its planning process, the organization regularly reviews the scope and breadth of its services. Attendant to this review is an identification of care processes that, through the occurrence of an error, would have a significant negative impact on the health and well being of the patient. Areas of focus include:
 - i. Processes identified through a review of the literature
 - ii. Processes identified through the organization's performance improvement program

- iii. Processes identified through Safety Risk Management Reports ([Event Reporting AQPI-06](#)) and sentinel events ([Sentinel/Adverse Event/Error or Unanticipated Outcome, AGOV-35](#))
- iv. Processes identified as the result of findings by regulatory and/or accrediting agencies
- v. The National Quality Forum: "Safe Practices for Better Healthcare – 02/2013 Update"
- vi. Adverse events or potential adverse events as described in HSC 1279.1. (Attachment A)
- vii. Health-care-associated infections (HAI) as defined in the federal CDC National Healthcare Safety Network. (Attachment B)
- viii. Adverse events associated with misconnecting intravenous lines, enteral feeding tubes, and epidural lines.
- ix. TFHD specific results from the AHRQ Patient Safety Culture Survey

9. Performance Related to Patient Safety

- a. Once potential issues have been identified, the organization will establish performance measures to address those processes that have been identified as "high risk" to patient safety. In addition, the following will be measured:
- b. The perceptions of risk to patients and suggestions for improving care.
 - i. The level of staff reluctance to report errors in care and staff perceptions of the organization's culture of safety as assessed through an industry-recognized external survey.
- c. Opportunities to reduce errors that reflect system issues are addressed through the organization's performance improvement program.
- d. Opportunities to reduce errors that reflect the performance of the individual care provider are addressed, as appropriate, through the Medical Staff peer review process or through the organization's human resource policy(s) using the practices and tenets of the Just Culture.

10. Proactive Risk Assessments

- a. Through implementation of this Patient Safety Plan, and integrated with the Risk Management Plan and other performance improvement processes, the Department of Quality and Regulations will systemically identify and mitigate patient safety risks and hazards with an integrated approach in order to continuously reduce preventable patient harm. Identified opportunities for improvement will then undergo redesign (as necessary) to mitigate any risks identified. A patient safety risk assessment by an external resource will be performed at least every 24 months and reported to the organization as described herein under "reporting structure." A focused patient safety risk assessment will be performed annually by the Patient Safety Officer and reported to the organization as described herein under "reporting structure."

11. Responding to Errors

- a. The organization is committed to responding to known errors in care or unexpected/unintended outcomes in a manner that supports the rights of the patient, the clinical and emotional needs of the patient, protects the patient and others from any further risk, and preserves information critical to understanding the proximal and – where appropriate – root cause(s) of the error. The organization's response will include care for the involved caregivers as noted below in 4.6.1. To that end, the organization has established a variety of policies and procedures to address these

issues,

- b. Errors that meet the organization's definition of a potential sentinel event will be subjected to an intensive assessment or root cause analysis using the tenets and practice of the Just Culture. Management of these types of errors is described in [Sentinel/Adverse Event/Error or Unanticipated Outcome, AGOV-35](#).

12. Supporting Staff Involved in Errors

- a. Following serious unintentional harm due to systems failures and/or errors that result from human performance failures, the involved caregivers shall receive timely and systematic care which may include: supportive medical/psychological care, treatment that is compassionate, just and respectful and involved staff shall have the opportunity to fully participate in the event investigation, risk identification and mitigation activities that will prevent future events. To that end, the organization has defined processes to provide care for the caregivers: ([Support for Employee Caregivers Involved in Sentinel or Adverse Events AHR-110](#))

13. Educating the Patient on Error Prevention

- a. The organization recognizes that the patient is an integral part of the healthcare team. Therefore, patients will be educated about their role and responsibility in preventing medical errors.

14. Informing the Patient of Errors in Care

- a. The organization recognizes that a patient has the right to be informed of results of care that differ significantly from that which was anticipated, known errors and unintended outcomes. Following serious unanticipated outcomes, including those that are clearly caused by systems failures, the patient, and family as appropriate, will receive timely, transparent and clear communication concerning what is known about the adverse event. Management of disclosure to patients/families is described in the Administrative policy, [Disclosure of Unanticipated Adverse Outcome to Patients/Families AGOV-15](#).

15. Reporting of Medical Errors

- a. The organization has established mechanisms to report the occurrence of medical errors both internally and externally.
- b. Errors will be reported internally to the appropriate administrative or medical staff entity.
- c. Errors will be reported to external agencies in accordance with applicable local, state, and federal law, as well as other regulatory and accreditation requirements. For reporting process, see the Administrative policy, [Sentinel/Adverse Event/Error or Unanticipated Outcome, AGOV-35](#).

16. Evaluating the Effectiveness of the Program

1. On an annual basis, the organization will evaluate the effectiveness of the patient safety program. A report on this evaluation will be provided to the Patient Safety/Medical Staff Quality Committee, Medical Staff, Senior Leader(s), and to the Governing Body.

Patient Safety Plan

Commitment to Patient Safety

Harmon Hospital is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

Mission, Vision, and Values

In support of our mission, vision, and values, Harmon Hospital's Patient Safety function as part of the Quality Assessment Quality Improvement program promotes:

- ✦ Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- ✦ Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- ✦ Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- ✦ Responsibility for every healthcare related decision and action.
- ✦ A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- ✦ Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- ✦ Education of staff and physicians to assure participation of healthcare providers.

Scope and Purpose

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- ✦ Patient safety
- ✦ Visitor safety
- ✦ Employee safety

All staff in Harmon Hospital are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Harmon Hospital has developed this Patient Safety Plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- ✦ All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- ✦ Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- ✦ Customer based including patients, families, and visitors.

Patient Safety Plan

- ✚ Promote systems thinking.
- ✚ Employ well-trained and competent staff maintaining high healthcare quality.

Roles and Responsibilities

According to NRS 439.875, a medical facility shall establish a Patient Safety Committee (PSC). This Committee should ensure that the Patient Safety Plan is promoted and executed successfully. The Patient Safety Function is incorporated into the Quality Assessment Performance Improvement Committee (QAPI)

The Patient Safety Function Organization

Patient Safety Plan

Roles and Responsibilities

In accordance with NRS 439.875, a patient safety committee must be comprised of:

- ✚ The infection control officer of the medical facility;
- ✚ The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- ✚ At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- ✚ One member of the executive or governing body of the medical facility.
- ✚ The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

Patient Safety Committee Responsibilities (based on NRS 439.875 and NRS 439.877)

- ✚ Monitor and document the effectiveness of the patient identification policy.
- ✚ **On or before July 1 of each year**, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to NRS 439.877(4)(b).
- ✚ Receive reports from the patient safety officer pursuant to NRS 439.870.
- ✚ Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- ✚ Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- ✚ Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- ✚ Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- ✚ At least once each calendar report to the executive or governing body of the facility regarding:
 - ✓ The number of sentinel events that occurred at the medical facility during the preceding calendar month

Patient Safety Plan

R (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- ✚ Adopt patient safety checklists and patient safety policies as required by NRS 439.877,
- ✚ review the checklists and policies annually and
- ✚ revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities

- ✚ Root Cause interviews,
- ✚ analysis,
- ✚ investigation, and
- ✚ corrective action plan implementations
- ✚ Participates in the RCA meetings and discussions.
- ✚ Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on NRS 439.870)

- ✚ Serve on the QAPI meeting for the patient function.
- ✚ Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to NRS 439.835.
- ✚ Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- ✚ Report to the patient safety function of the QAPI committee regarding any action taken in accordance with the responsibilities above.

Infection Control Officer Responsibilities (based on NRS 439.873)

- ✚ Serve on the QAPI Committee and report on infections and practices impacting patient safety.
- ✚ Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- ✚ Report to the QAPI committee concerning the number and severity of infections at the facility.
- ✚ Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- ✚ Carry out the provisions of the infection control program adopted pursuant to NRS 439.865 and ensure compliance with the program.

RCA team leader Responsibilities

Patient Safety Plan

- ✚ Organize and coordinate the RCA process.
- ✚ Assemble and encourage a supportive and proactive team.
- ✚ Assign investigative and implementation tasks to the team members.

Patient Safety Plan

- ✚ Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- ✚ Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- ✚ Monitor goals and progress towards completion of the Corrective Action Plans.
- ✚ Provide training, education and direction to create RCA processes that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- ✚ Provide vision and leadership to Patient Safety and Quality Improvement process, and
- ✚ Develop and foster a safe learning and improving culture.
- ✚ Provides oversight to the healthcare quality improvement processes and teams.
- ✚ Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Quality Assessment and Performance Improvement Committee (including the Patient Safety function) will meet monthly to accomplish the following:

- ✚ Report and discuss sentinel events which include:
 - ✓ Number of sentinel events from previous calendar month.
 - ✓ Number of severe infections that occurred in the facility.
 - ✓ Corrective Action Plan for the sentinel events and infections
 - ✓ Evaluate the corrective action plan.
- ✚ Patient safety policies and checklists
- ✚ At least annually evaluate Patient Safety policies and checklists
- ✚ Revise the patient safety policies and checklists as needed.
- ✚ Monitor and document the effectiveness of the patient safety policy.

A RCA Team and meeting will meet as needed to accomplish the following:

- ✚ Define the healthcare issues or potential risks.
- ✚ Conduct Root Cause Analysis
 - ✓ Reviewing and analyzing the data.
 - ✓ Reviewing the RCA process and quality improvement related activities and timelines.
 - ✓ Brainstorming issues or the potential risks by using the fishbone diagrams.
 - ✓ Identify the contributing factors and conduct the Root Cause

- ✚ A meeting agenda and minutes noting follow-up tasks will be kept.

Patient Safety Plan

| | | | | |
|--|--|--|--|--|
| | | | | |
|--|--|--|--|--|

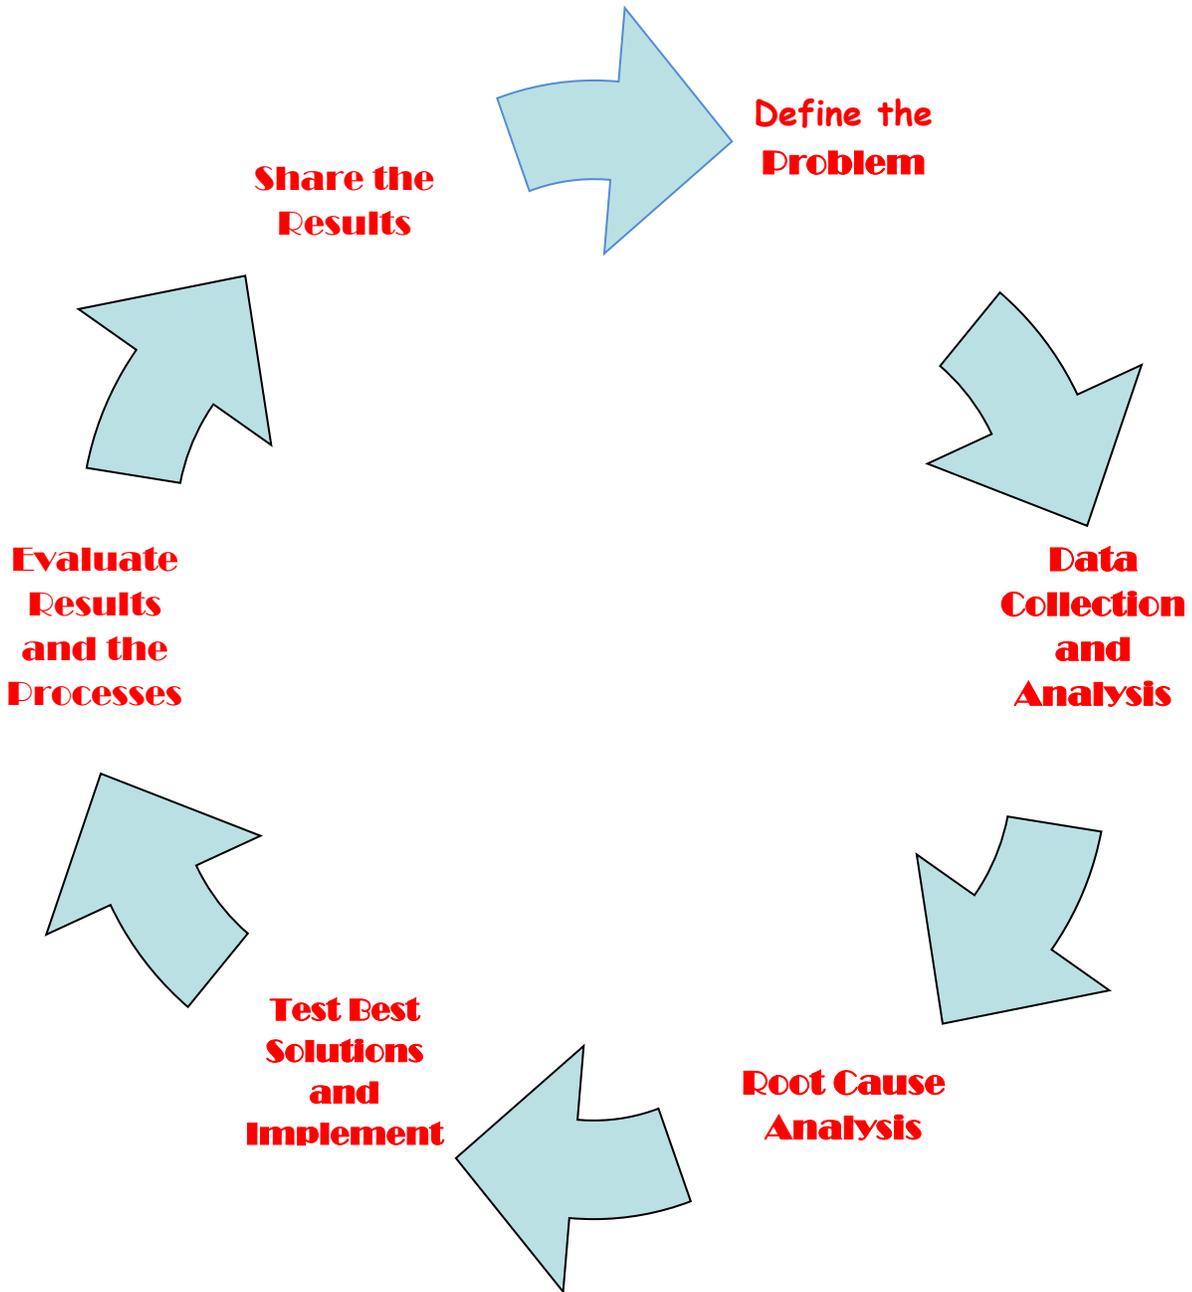

Components and Methods

- ✚ Pursuant to NRS 439.837 and NAC 439.917, within 45 days after reporting a sentinel event pursuant to NRS 439.835, the medical facility shall conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”
- ✚ Harmon Hospital will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study-Act (PDSA) is the model, which was developed by the Institute of Health Care Improvement that we will use to test the changes.

Root Cause Analysis

- ✚ A **Root Cause Analysis** is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.
- ✚ **Root cause analysis and action plan framework table**
 - ✓ Introduced by the Joint Commission.
 - ✓ It contains 24 analysis questions.
 - ✓ It guides the organization to the steps in a root cause analysis.
 - ✓ Not all the questions apply to all the events or cases.
 - ✓ This table can be used individually or with the fishbone diagram.
- ✚ **5 Whys**
 - ✓ Technique will be used by Harmon Hospital to explore the cause and effect relationship underlay a problem.
 - ✓ One can find the root causes by asking “why” no less than five times.
 - ✓ This technique can be used individually or as a part of the fishbone diagram.

RCA Improvement Process

Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems.

General categories used include:

- ✓ people,
- ✓ methods
- ✓ materials,
- ✓ measurements,
- ✓ education,
- ✓ procedures,
- ✓ process,
- ✓ location,
- ✓ environment, etc.

RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine;

- ✓ if the change is an improvement.
- ✓ Adjust, adopt, or abandon
- ✓ Study process and results
- ✓ Implement the change
- ✓ Develop plan based on the identified root causes

Patient Safety Plan

What are we trying to accomplish?

How will we know a change is an improvement?

What change can we make that will result in an improvement?

□

Plan--Do-- Study-- Act

Plan

Develop Plan based on identified root causes

Do

Implement the change

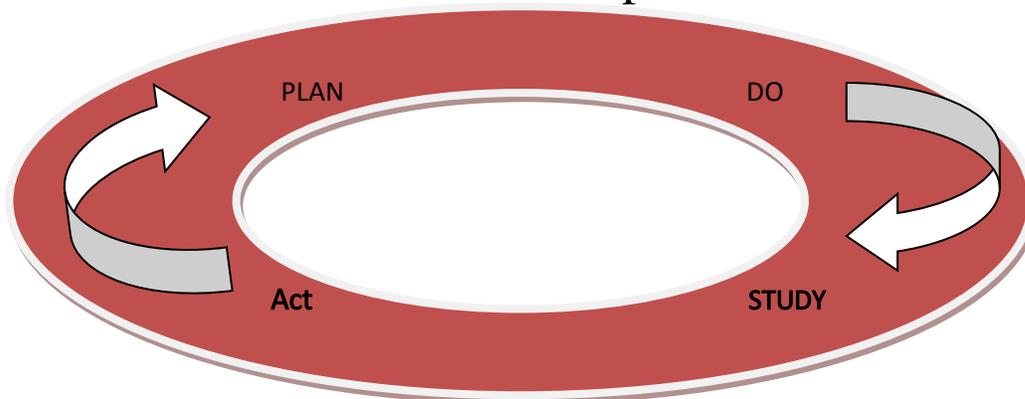

Study

Analyze process and results

Act

Adjust, adopt or abandon to repeat cycle as needed

Cycle continues until maximum improvement is achieved

The cycle is defined as follows:

- ✚ **Plan**--Collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
 - ✓ What is the objective of the test?
 - ✓ What are the steps for the test - who, what, when?
 - ✓ How will you measure the impact of the test?
 - ✓ What is your plan to collect the data needed?
 - ✓ What do you predict will happen?

Patient Safety Plan

- ✚ **Do-**
 - ✓ Make changes designed to correct or improve the situation.
 - ✓ Use the following questions for the guidance.
 - What were the results of the test?
 - Was the cycle carried out as designed or planned?
 - What did you observe that was unplanned or expected?

- ✚ **Study–**
 - ✓ Study the effect of the changes on the situation.
 - Data should be collected on the new process and compared to the baseline or expected results.
 - Results should be evaluated by using the following questions as guidance.
 - ✓ Did the results match your prediction?
 - ✓ What did you learn?
 - ✓ What do you need to do next?

- ✚ **Act–**
 - ✓ If the result is successful or desirable, standardize the changes
 - ✓ Then work on the next prioritized problem or the further improvements.
 - ✓ If the outcome is not yet successful, look for different ways to identify the causes or
 - ✓ Change the testing process.

Data Collection and Reporting

Data should drive any quality and patient safety effort. Harmon Hospital is using a Fundamental LTC corporate database for tracking the sentinel events and other incidents such as falls, hospital acquired pressure ulcers and medication variations for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- ✚ AHRQ: Agency for Healthcare Research & Quality
- ✚ CDC: Centers for Disease Control and Prevention
- ✚ CMS: Centers for Medicare & Medicaid Services
- ✚ NQF: National Quality Forum
- ✚ NHSN:

Patient Safety Plan

Ongoing Reporting and Review Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly | Quarterly | Annually |
|----------------------------------|--|---|
| 1) Sentinel event monthly report | 1) Sentinel event quarterly report | 1) Quality and Patient Safety Plan update |
| 2) Severity of infection report | 2) Severity of infection report | 2) Checklists |
| 3) RCA assessment | 3) Review and evaluate the measure of improvement of patient safety | 3) Policies reviewing and revising |
| 4) Infection reports | 4) Review and evaluate the measurement to prevent and control infections | |
| | | |

Patient Safety Checklists and Patient Safety Policies

By NRS 439.865, the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- ✚ Providers of healthcare who provide treatment to patients at the facility;
- ✚ Other personnel of the facility who provide treatment or assistance to patients;
- ✚ Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; a
- ✚ Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- ✚ Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- ✚ Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- ✚ A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - ✚ Proper instructions concerning prescription medications;
 - ✚ Instructions concerning aftercare;
 - ✚ Any other instructions concerning his or her care upon discharge; and
 - ✚ Any other checklists which may be appropriate to ensure the safety of patients at the facility.
- ✚ The patient safety policies must include, without limitation:
 - ✓ A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
 - ✓ A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

Patient Safety Plan

- ✓ A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on NRS 439.865, the patient safety plan must also include an infection control program that carries out the infection control policy.

The policy must consist of:

- ✚ The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- ✚ Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

Patient Safety Plan

Approval of Patient Safety Plan

According to NRS 439.865, a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to NRS 439.843, on or before March 1 of each year, a copy of the most current patient safety plan established to NRS 439.865 must be submitted to the Division of Public and Behavioral Health.

APPENDIX A

DEFINITIONS

Patient Safety Plan

Sentinel Event

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.
2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:
 - (a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or
 - (b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

** If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by 2002 Special Session, 13; A 2005, 599; 2013, 217)

Medical Harm

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

Facility-Associated Infection: (NRS 439.802)

- ✚ “Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:
 - ✓ Surgical site infections;
 - ✓ Ventilator-associated pneumonia;
 - ✓ Central line-related bloodstream infections;
 - ✓ Urinary tract infections; and
 - ✓ Other categories of infections as may be established by the State Board of Health by regulation pursuant to NRS 439.890.

(Added to NRS by 2005, 599; A 2009, 553)

Medical facility (NRS 439.805) Medical facility” means:

- ✚ A hospital, as that term is defined in NRS 449.012 and 449.0151;
- ✚ An obstetric center, as that term is defined in NRS 449.0151 and 449.0155;
- ✚ A surgical center for ambulatory patients, as that term is defined in NRS 449.0151 and 449.019; and
- ✚ An independent center for emergency medical care, as that term is defined in NRS 449.013 and 449.0151.

(Added to NRS by 2002 Special Session, 13)

Near miss:

Patient Safety Plan

- ✚ An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

Mandatory reporting:

- ✚ Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

Risk:

- ✚ Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

Patient Safety Plan

- ✚ **Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf.)

Patient Safety Plan

- ✚ **Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf.)

 **Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Appendix D

Leadership Policy

for Patient Safety

Patient Safety Program

PURPOSE

To establish guidelines and processes supporting a comprehensive, effective, organization-wide Patient Safety Program designed to improve patient safety by preventing medical/healthcare errors and reducing risks to patients.

POLICY

The Patient Safety Program is a coordinated and systematic approach to create an information infrastructure and build a better evidence base for patient safety critical to reducing medical/healthcare errors and improving patient safety. The program meets the requirements of Patient Safety Standard, and integrates with the Quality Assessment and Performance Improvement (QAPI) Plan and the Sentinel Event Policy, and is endorsed by the medical staff and Leadership.

Patient Safety Program:

Harmon Hospital is committed to making the safety of all patients, employees, physicians and visitors a leadership priority for organizational performance improvement. The Patient Safety Program is an integral part of the QAPI Plan that includes processes to:

- Establish and maintain a just culture of safety throughout the hospital;
- Promote safety by recognizing and reducing risks and hazardous conditions that result in medical/healthcare errors and patient injury;
- Support a strong internal non-punitive reporting mechanism;
- Facilitate the rapid redesign of unsafe care processes and systems in response to actual and potential adverse events;
- Support ongoing proactive efforts through implementation of known safe practices;
- Promote communication and coordination among individuals and departments to minimize risk to patients;
- Support sharing of knowledge to effect behavior change and organizational improvement to reduce risk and improve patient safety;
- Support notification of patients and when appropriate, their family, of unplanned outcomes;
- Establish a data collection system to monitor performance of new or revised processes including patient, family, and staff input, needs, perceptions of risk to patients, and suggestions for improvement.

Organizational Culture:

An organizational culture has been established by the leaders that support the effective reduction of medical/health care errors and other factors that contribute to unintended adverse patient outcomes. This culture is based on the principles of organization-wide cooperation and communication and encourages:

- The recognition and acknowledgement that preventing errors and improving safety for patients requires a systems approach in order to modify the conditions that contribute to errors;
- A focus on processes and systems;
- Minimization of individual blame or retribution for involvement in a medical/health care error;
- The internal reporting of what has been found and the actions taken to reduce risk; and
- Organizational learning about medical/health care to effect behavioral changes in order to improve patient safety.

The organizational culture is also reflective of Harmon Hospital's Philosophy, which supports the patient's right to be informed about the outcomes of their care, including unanticipated outcomes.

An effective Patient Safety Program cannot exist without optimal reporting of actual or potential medical/healthcare errors and occurrences. Therefore, it is the intent of Harmon Hospital to adopt a just, non-punitive approach in its management of errors and occurrences. All personnel will report suspected or actual medical/healthcare errors and may do so without fear of reprisal.

Scope of Activities:

The Patient Safety Program at Harmon Hospital is an organization-wide program that includes not only facility staff and medical staff, but is inclusive of patients, family and visitors. The Patient Safety program supports and encourages the active participation of each person in order to have an effective program.

When processes, functions or services are designed or redesigned, information internal and external to the organization regarding potential risks to patient safety will be considered and where appropriate, utilized to minimize the risk to patients affected by the new or redesigned process, function or service.

Undesirable patterns or trends in performance and sentinel events will be intensively analyzed to determine where best to focus changes for improvement. Intensive analysis will be initiated when:

- Levels of performance, patterns, or trends vary significantly and undesirably from those expected;
- Performance varies significantly and undesirably from that of other organizations;
- Performance varies significantly and undesirably from recognized standards; or
- When a sentinel event has occurred.

Minimally, data from the following areas will be analyzed and action plans developed reflective of the findings:

- Initial risk assessment
- On-going proactive risk assessments utilizing internal and external resources
- Aggregate event report reflective of all medical/healthcare errors, with and without adverse outcomes, including but not limited to:
 - Medication errors, to include delays in administration
 - Adverse drug reactions
 - Transfusion reactions
 - Patient falls
 - Sentinel events, actual and near misses
 - Hazardous conditions
 - Restraint issues
 - Medical record legibility issues

- Patient/family/staff opinions, needs, perceptions of risks to patients, and suggestions for improving patient safety
- Others as defined by Harmon Hospital

Leadership:

Hospital leadership has overall responsibility for the implementation of an integrated, organization-wide Patient Safety Program. These responsibilities include the following:

- Fostering an environment in which patients, their families and organization staff and leaders can identify and manage actual and potential risks to patient safety through personal example and the provision of resources to establish proactive mechanisms to reduce risk.
- Establishing a culture in which communication flows freely regardless of authority gradient;
- Ensuring that a defined, on-going, proactive program for identifying risks to patient safety and reducing medical/health care errors is fully implemented and includes responses to actual and potential events, as well as addresses two high risk processes for proactive intensive assessment based on internal data and information published in JCAHO Sentinel Event Alerts and other literature sources;
- Ensuring that patient safety issues are given a high priority and addressed when processes, functions or services are designed or redesigned;
- Providing for mechanisms to measure, analyze and manage variations in the performance of defined processes that affect patient safety;
- Allocating adequate resources, including personnel, time, information systems, data management support and staff training to support the performance improvement processes associated with reducing risk and improving patient safety; and
- Annually evaluating the patient safety plan for its effectiveness in reducing risk and improving patient safety.

Patient Safety Coordinator:

The Risk Manager has been designated the *Patient Safety Coordinator* and as such, has the administrative responsibility for the Program. Specific responsibilities include:

- Day to day responsibility for the ***Patient Safety Program***
- Along with the Safety Officer, collection, trending and analysis of data
- Quarterly reporting of trended data and actions taken to improve the quality and safety of patient care to the Patient Safety Committee and senior leadership
- Working with Patient Safety Committee to achieve the goals of the Patient Safety Program

Patient Safety Committee:

The Patient Safety Committee, in collaboration with the chair of the committee and the Patient Safety Coordinator, has oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following responsibilities are assigned:

- Serve as champions of the Patient Safety Program within the organization;
- Establish and evaluate data to identify patient safety performance indicators;
- Evaluate other sources of patient safety data utilizing internal and external resources including, but not limited to, risk assessments, sentinel event report/alert information, and event reporting information from a variety of available resources including the event reporting system;
- Selection of at least two high-risk patient safety processes (one related to medication errors and one related to mistake management) for proactive risk assessment and improvement annually; and
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts.

Physicians:

Physicians are responsible, as participants in the patient safety program, for reporting errors or near misses, and participating on teams to reduce identified patient safety risks. Whenever patient care outcomes differ significantly from the anticipated outcomes, the primary care provider and/or responsible licensed independent practitioner (or comparable designee), shall clearly explain these outcomes to the patient, and when appropriate, the family.

Patients/Families/Visitors:

Patients and families are responsible for:

- Providing, to the best of their knowledge, accurate and complete information about present complaints, past illnesses, hospitalizations, medications, and other matters relating to the patient's health;
- Reporting perceived risks in their care and unexpected changes in the patient's condition to the responsible practitioner;
- Asking questions when they do not understand what they have been told about the patient's care or what they are expected to do.

Patients and visitors will be provided with educational materials explaining these expectations and their role in reducing risk and improving patient safety at the time of admission. Some patients may also be included in the process to obtain their opinions, needs, perceptions of risks to patients and their suggestions for improving patient care.

Hospital Departments and Staff:

Hospital departments and staff have the following responsibilities:

- Active participation in the Patient Safety Program;
- Participation in all education activities and process implementation;
- As appropriate, the provision of accurate, timely and complete verbal and written communication among care givers, including test results relevant to the management of the patient's condition, and to all others involved in the utilization of data; and
- Participation in the information needs assessment, staff surveys and other processes that request information regarding the Patient Safety Program.
- Participate in the measurement activities for process and outcomes which will be utilized for data driven decisions and improve quality of care and services.

PROCEDURE

1. Proactive Risk Assessment Activities

- 1.1. The Risk Manager, in collaboration with the Patient Safety Committee, will conduct proactive risk assessments to identify hazards/risks that may affect patient safety. Risk assessment activities will include, but not be limited to the following:
 - 1.1.1. An initial patient safety risk assessment evaluating known high risk processes/procedures that have associated risks;
 - 1.1.2. On-going risk assessments based on internal and external data, including sentinel event alerts;

- 1.1.2.1. Focused risk assessments as determined by the Patient Safety Committee, senior leadership and/or Quality Council
 - 1.1.2.2. Selection of patient safety process improvements and risk reduction activities utilizing the priority setting criteria of Gerald Champion RMC.
 - 1.1.2.3. The information needs assessment conducted by Harmon Hospital will include identification of barriers to effective communication among caregivers.
 - 1.1.2.4. Patient satisfaction surveys will include a question determining how the patient/family thinks the facility can improve patient safety. Results from this question shall be analyzed and responded to in a manner that supports risk reduction.
 - 1.1.2.5. Staff surveys will be conducted to assess for staff opinions, needs, perceptions of risks to patients and suggestions for improving patient safety as well as the staff's willingness to report medical/health care errors.
- 1.2. Risk assessment activity results will be aggregated and analyzed. Appropriate action plans will be developed in response to the results with the goal of reducing the actual, potential or perceived risk to patient safety.

2. Event Reporting

- 2.1. When an unplanned event occurs, the patient care provider will do the following:
- 2.1.1. Perform the necessary healthcare interventions to support the patient's clinical condition
 - 2.1.2. Perform the necessary interventions to contain the risks to others
 - 2.1.3. Notify the patient's attending physician
 - 2.1.4. Preserve any information related to the event including physical evidence.
 - 2.1.5. Preservation of the information includes the documentation of facts regarding the event or complication of event on the Event Reporting form and in the medical record
 - 2.1.6. Notify immediate supervisor of the event
 - 2.1.7. Submit the Event Report form to the medical center's Risk Manager
- 2.2. Identification of potential unsafe condition that may affect patient safety:
- 2.2.1. Individuals identifying such a condition will immediately report such to their supervisor, and document on the Event Report form
 - 2.2.2. Take the necessary actions to ensure that any potential risks to patient care and safety are mitigated
 - 2.2.3. Submit the Event Report form to the medical center's Risk Manager

3. Event Monitoring/Risk Assessment Analysis, Action Planning and Intervention

- 3.1. Patient safety related event reporting data within the scope of the Patient Safety Program and all risk assessment results will be aggregated and presented to the Executive Safety Committee for analysis quarterly. Based on the analysis of this data, any actual or potential sentinel events and other internal and external data including JCAHO Sentinel Event Alerts and other current literature, proactive action plans will be developed to include the following:
 - 3.1.1. Assessment of the intended and actual implementation of processes to identify the steps in where there is, or may be, undesirable variation;
 - 3.1.2. Identification of the possible effects of the undesirable variations on patients and how serious the effect or outcome on the patient might be;
 - 3.1.3. For critical effects/outcomes, a root cause analysis will be conducted to determine why the variation leading to the effect may occur;
 - 3.1.4. Redesign of the process and/or underlying systems to minimize the risk of that variation or to protect patients from the effects of the variation;
 - 3.1.5. Test and implement the redesign process;
 - 3.1.6. Identification and implementation of measures of the effectiveness of the redesigned process;
 - 3.1.7. Implementation of a strategy for maintaining the effectiveness of the process over time.

4. Response to Reported Adverse/Sentinel Events

- 4.1. Harmon Hospital shall respond to all reported potential and actual adverse/sentinel events as described in the sentinel event policy.
- 4.2. Minimally, all significant adverse events will be analyzed utilizing a team of individuals to conduct a root cause analysis and/or a failure mode and effects analysis, implement an action plan to reduce further risk to patients and establish measures of effectiveness as described above in Section III A.
 - 4.2.1. The following events always elicit an intense analysis:
 - 4.2.1.1. Confirmed transfusion reactions;
 - 4.2.1.2. Significant adverse drug reactions;
 - 4.2.1.3. Significant medication errors and hazardous conditions;
 - 4.2.1.4. Major discrepancies, or patterns of discrepancies, between preoperative and postoperative (including pathologic) diagnoses, including those identified during the pathologic review of specimens removed during surgical or invasive procedures; and
 - 4.2.1.5. Significant adverse events associated with anesthesia use.
 - 4.2.2. A root cause analysis is performed when a sentinel event occurs.

- 4.3. Staff involved in an adverse/sentinel event shall be treated with respect and dignity.
 - 4.3.1. A non-punitive approach shall be taken in order to facilitate changes in systems and processes to prevent further risk to patient safety, as well as promote future reporting by other staff.
 - 4.3.2. Involved staff should be involved in the root cause analysis process.
 - 4.3.3. The department manager will provide on-going support to the staff member as needed.
 - 4.3.4. Whenever necessary, Employee Assistance Programs will be offered as support to the involved employee.
- 4.4. Harmon Hospital will notify patients and/or family members, when appropriate, of unplanned outcomes.
Staff will follow the policy and procedure on "Disclosure of Unanticipated Adverse Outcomes to Patients/Families."

5. Facility Education

5.1. Staff Education

- 5.1.1. General orientation, on-going in-service and other education and training programs will emphasize specific job-related aspects of patient safety.
- 5.1.2. Specific Patient Safety Program training at orientation and annually thereafter will include:
 - 5.1.2.1. An overview of the Patient Safety Program
 - 5.1.2.2. Staff's role and responsibilities in the Patient Safety Program
 - 5.1.2.3. Event reporting, including the events requiring reporting and the process for reporting events.
 - 5.1.2.4. Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care;
 - 5.1.2.5. Examples of specific job-related aspects of patient safety.
- 5.1.3. Staff participating at a higher level of the Patient Safety Program will receive appropriate training necessary to understand and complete their assigned responsibilities.

5.2. Physician Education

- 5.2.1. An overview of the Patient Safety Program will be provided to physicians at time of initial appointment and periodically thereafter that describes the program, emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism.
- 5.2.2. Specific physicians may receive additional training to support their involvement at a higher level in the Patient Safety Program.

6. Patient Safety Program Reporting and Review

- 6.1. Patient Safety related data and information reports will be provided at least quarterly to the Patient Safety Committee.
- 6.2. A summary report of data, other internal and external information, as well as all actions taken by the Patient Safety Committee and/or specific patient safety related teams will be submitted to the Quality Council, Quality and Utilization Management Committee the Medical Executive Committee and Governing Board.
- 6.3. Annually, the Patient Safety Program will be evaluated for effectiveness and the program updated to reflect the results of risk assessments of patients, families and staff. The review shall include a summary of the occurrence of medical/health care errors and actions taken to improve patient safety, both in response to actual occurrences and proactive efforts.

- 6.3.1. The review will be approved by Patient Safety Committee, Medical Staff Executive Committee
 - 6.3.2. Will be submitted to the governing body for review and approval.

Conditions of Participation- (CMS) Standards
The Joint Commission Standards
Sentinel Event Policy

Addendum A
Patient Safety Policy and Procedure
Definitions

Error: An unintended act, either of omission or commission, or an act that does not achieve its intended outcome.

Sentinel Event: An unexpected occurrence involving death or serious physical or psychological injury or the risk thereof. Serious injury specifically includes loss of limb or function. The phrase "or risk thereof" includes any process variation for which a recurrence would carry a significant chance of serious adverse outcome.

Near Miss: Used to describe any process variation which did not affect the outcome, but for which recurrence carries a significant chance of a serious adverse outcome. Such a near miss falls within the scope of the definition of a sentinel event, but outside the scope of those sentinel events that are subject to review by the Joint Commission under its Sentinel event Policy.

Hazardous Condition: Any set of circumstances (exclusive of the disease or condition for which the patient is being treated) which significantly increases the likelihood of a serious adverse event.

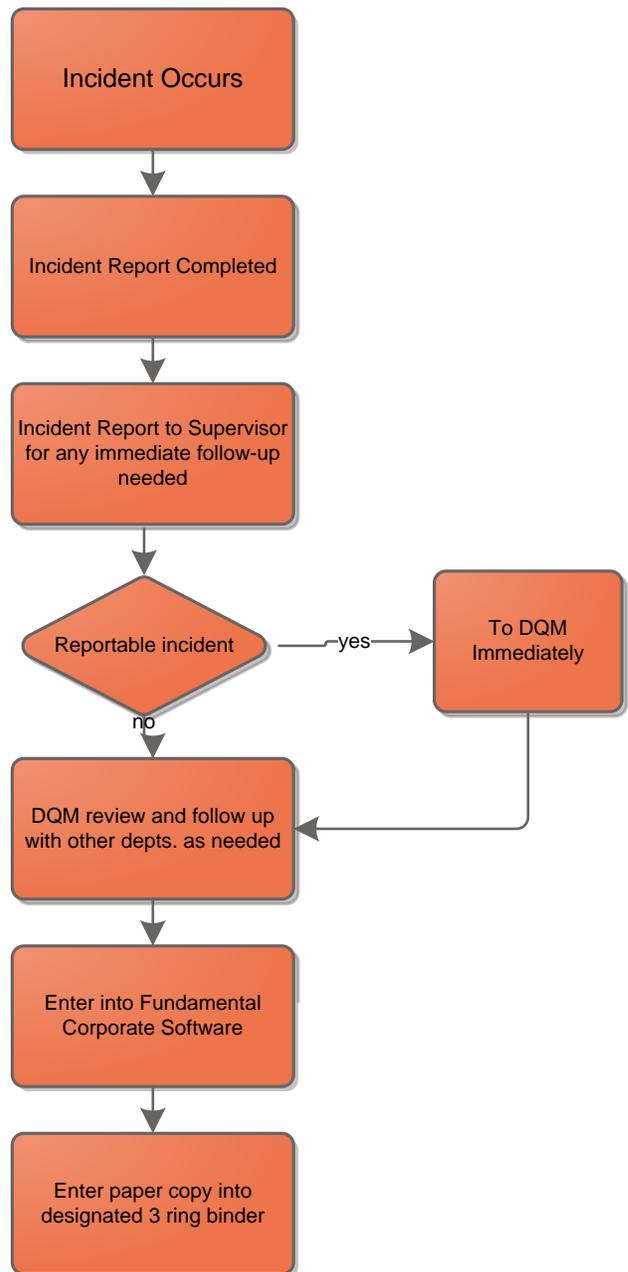

APPENDIX E

INCIDENT REPORTING

Incident Report Process (Non-Medication incident)

1. Incident is identified by Hospital staff
2. Incident report is completed
3. Incident Report is given to Nursing Supervisor for immediate review and follow up as needed.
4. Any additional assessment and investigation is completed and documented. Supporting documentation is attached to the Incident Report.
5. After incident information and follow up Completed the information and incident report is given to the Director of Quality Management (DQM).
6. DQM reviews for any immediate actions/notifications including interface with other departments involved.
7. DQM gives incident report to Patient Advocate for entering into Fundamental incident reporting software on Fundamental site.
8. Patient Advocate enters the Incident into the Incident Reporting Module.
9. Patient Advocate then has the paper copy of the incident with supporting documentation filled in 3 ring binders for maintaining incident reports.
10. Incidents are filed in binder by date. The binder is kept in the DQM office when filing is completed.
11. Reports are maintained on site for 3 years and then filed and sent to Iron Mountain for a total of 7 years.

Incident
Process
Flow Chart

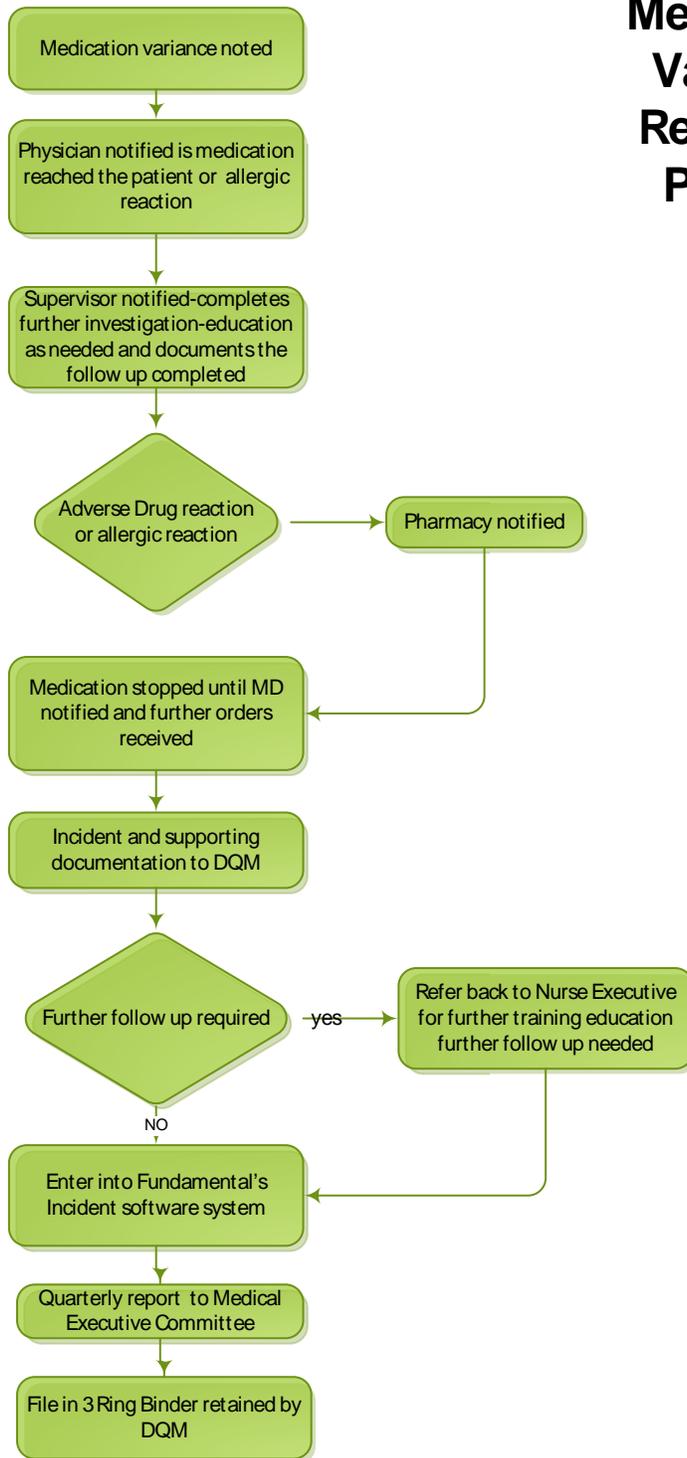

Incident Reporting Process

Medication Variances

1. Medication Variation is noted. (error, transcription error, medication not available, adverse drug reaction, etc.)
2. Individual noting the error completes the incident report.
3. Physician notified of medication error (only if wrong medication reached the patient, route, reached the patient or an obvious allergic reaction)
4. If the medication error reached the patient the physician notifies the patient, guardian or Power of Attorney of the error and any impact this had on the patient. This interaction must be documented in the patient's medical record.
5. Nursing Supervisor notified.
6. Nursing Supervisor investigates the medication variation issue and ensures all required follow up is completed.
7. Nursing Supervisor documents all and follow-up in a report to the nurse executive.
8. Staff education is completed at the time of the incident with the nurses involved. (Nursing Supervisor). Nurse Executive may do further education or further follow –up as appropriate at a later date.
9. Pharmacy is notified promptly for Adverse Drug Reactions and or allergic reactions.
10. Incident Report and all supporting investigative data are sent to the Director of Quality Management (DQM).
11. DQM will review medication variation, investigation and follow-up. Notifies the Nurse Executive if more follow-up or further investigation is needed.
12. DQM or designee enters the medication error into the Fundamental Corporate Software program.
13. Medication variations are reported to the Pharmacy and Therapeutics function at the Medical Executive Committee Quarterly.

Medication Variance Reporting Process

Compliance Checklist

Organization: _____ Department/Unit: _____

Date of Review: _____ Reviewer: _____

Environment of Care [CAH, HAP, NCC]

✓ N/A

- All equipment on one side of hall
- No equipment plugged in within hallways
- Nothing parked in hall longer than 30 minutes
- Top of linen cart covered; solid bottom on cart
- Nothing other than linen on linen carts

Clean Utility or Storage Room [AHC, CAH, HAP, NCC, OBS]

✓ N/A

- Oxygen tanks upright, in holder, full and empty tanks separated with signage
- Top of linen cart covered when not in use; solid bottom on cart
- Door to hall closed (not propped open)

Soiled/Dirty Utility Holding Room [AHC, BHC, CAH, HAP, NCC, OBS, OME]

✓ N/A

- Biohazard trash contained
- Nothing under sink

Housekeeping and Security [AHC, BHC, CAH, HAP, NCC, OBS]

✓ N/A

- Trash contained
- Drawers locked, as appropriate

Crash Cart [AHC, CAH, HAP, NCC, OBS]

✓ N/A

- Daily checklist completed
- No clutter on top
- Locked (including extra locks secured)
- No expired medications or supplies noted

Medication Carts/Storage Areas [AHC, BHC, CAH, HAP, NCC, OBS, OME]

✓ N/A

- No open single-use vials; all discarded after use
- Opened multidose vials dated
- MAR/eMAR closed when not in use
- Pill crushers/splitters cleaned
- All doors/drawers locked when unused

Medication Refrigerator/Freezer [AHC, BHC, CAH, HAP, NCC, OBS, OME]

✓ N/A

- Temperature checks completed; response to variances recorded

- Opened multidose vials dated
- Discharged patient medications managed
- No expired medications

Medications/Solutions [AHC, BHC, CAH, HAP, NCC, OBS, OME]

✓ N/A

- No unsecured medications, sharps, or syringes
- No expired medications or solutions
- No predrawn syringes

Point-of-Care Glucose Meters [AHC, BHC, CAH, HAP, NCC, OME]

✓ N/A

- Cleaned
- Controls and strips dated when opened
- QC performed, per manufacturer's guidelines

Patient Care [AHC, CAH, HAP, NCC, OBS]

✓ N/A

- All patients wearing correct ID band
- Fall-risk patients wearing bracelets; signage up
- Any nonambulatory patients (on gurneys or in wheelchairs) in hall covered with dignity
- Trays and snacks delivered
- Call lights functional and within patient reach
- Alarms answered
- Confirmed confidentiality of medical records
- Isolation precautions implemented if ordered
- Reviewed hand hygiene policy with staff and ensured sanitizer dispensers are full
- Reminded staff to perform time-out for any invasive procedures
- Reviewed medication administration with staff

Chart Review (New Admits) [CAH, HAP, NCC]

✓ N/A

- Home medication record completed
- Administration database completed
- TO/VO/critical value documentation completed

ICRA

Infection Control Risk Assessment

INFECTION CONTROL RISK ASSESSMENT (ICRA) FORM

Project Name: _____

Project Location: ..

Project Manager:

IDENTIFY THE TYPE --

Step 2: Identify the Area Risk Group

Identify the locations of all groups/spaces that are potentially impacted from the project. This should include all areas surrounding the project. If there is more than one risk group that will be affected, use the higher risk group.

- **Low Risk:** No patient care or occupancy. No laboratory research or materials present.
- **Medium Risk:** Most active laboratories, outpatient areas, patient occupancy and support service areas.
- **High Risk:** Clean Rooms, areas with high value equipment subject to damage from dust, High Risk Outpatient and all inpatient areas.

IDENTIFY THE RISK-

Step 3: Determine Class (I – IV) of Risk Mitigation Measures Required

Project Type

| Area Risk Group | Type A | Type B | Type C | Type D |
|-----------------|--------|--------|--------|--------|
| Low Risk | I | I | II | IV |
| Medium Risk | I | II | III | IV |
| High Risk | II | III/IV | III/IV | IV |

All work/construction projects that require Class II, III or IV risk mitigation measures will require approval of a dust control plan prior to the start of work.

Step 4: Risk Mitigation Measures

| Class | During Construction Project | Upon Completion of Project |
|-------|---|---|
| I | <ol style="list-style-type: none"> Execute work using methods to minimize raising dust from construction operations. Immediately replace a ceiling tile displaced for visual inspection. | <ul style="list-style-type: none"> Contractors will conduct cleaning with approved disinfectant. |
| II | <ol style="list-style-type: none"> Provide enclosure to control dust migration using portable tent (control cubes) or sheetrock, plywood, plastic (6 mil poly) to seal area from non-work area with a HEPA vacuum continuously running to create negative pressure (Monitoring airflow direction is not required). Provide active means as described below to prevent airborne dust from dispersing: <ul style="list-style-type: none"> Water mist work surfaces to control dust while cutting. Seal unused doors with tape if high risk site adjacent to construction site. Place sticky mat at entrance and exit of work area and change sticky mat when covered with dust. Provide dampen walk off mats at fixed location. If used must be kept damp. Contain construction debris (e.g. seal with plastic) prior to removal from site Use only designated route/elevator to transport materials or construction debris. | <ul style="list-style-type: none"> Vacuum with HEPA filtered vacuum prior to removing barrier. |

| | | |
|------------|--|--|
| <p>III</p> | <ol style="list-style-type: none"> 1. Disconnect or isolate HVAC system in area in consultation with Engineering & Maintenance where work is being done to prevent contamination of duct system or adjacent spaces. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic (6 mil poly), to seal area from non-work area, or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum for vacuuming prior to exit) before construction begins. 3. Place dust mat at entrance and exit of work area and replace or clean when no longer effective. 4. Maintain negative air pressure (>0.01" water) within work site utilizing HEPA equipped air filtration units or other methods to maintain negative pressure. 5. Re-circulating HEPA units may supplement dust control measures inside the work area. 6. Additional HEPA filtration unit should be installed near all entrances and exits to the work area. 7. The contractor will inspect all dust control equipment daily and log the results. 8. Keep work area broom clean and remove debris daily. 9. Contain construction debris (e.g. seal with plastic) prior to removal from site 10. Use only designated route/elevator to transport. | <ul style="list-style-type: none"> • Do not remove barriers from work area until completed project is inspected by Environmental Health and Safety. • Contractor to clean area with HEPA filtered vacuum or wet mop as appropriate to the satisfaction of the Project Manager. • Remove isolation of HVAC system in areas where work was being performed. |
|------------|--|--|

| | | |
|----|---|---|
| IV | <ol style="list-style-type: none"> 1. Disconnect or isolate HVAC system in area in consultation with Engineering & Maintenance where work is being done to prevent contamination of duct system or adjacent spaces. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic (6 mil poly), to seal area from non-work area, or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum for vacuuming prior to exit) before construction begins. 3. Place dust mat at entrance and exit of work area and replace or clean when no longer effective. 4. Maintain negative air pressure (>0.01" water) within work site utilizing HEPA equipped air filtration units or other methods to maintain negative pressure. 5. Re-circulating HEPA units may supplement dust control measures inside the work area. 6. Additional HEPA filtration unit should be installed near all entrances and exits to the work area if appropriate. 7. The contractor will inspect all dust control equipment daily and log the results. 8. Keep work area broom clean and remove debris daily. 9. Contain construction debris (e.g. seal with plastic) prior to removal from site 10. Seal holes, pipes, conduits, and punctures appropriately. 11. Construct anteroom and require all personnel to pass through this room. Wet mop or HEPA vacuum the anteroom daily. 12. During demolition, dust producing work, or work in the ceiling, disposable shoe covers and coveralls are to be worn and removed in the anteroom when leaving the work area. 13. Use only designated route to transport materials or construction debris. | <ul style="list-style-type: none"> • Do not remove barriers from work area until completed project is inspected by Plant operations • Contractor to clean area with HEPA filtered vacuum or wet mop as appropriate to the satisfaction of the Project Manager. • Remove isolation of HVAC system in areas where work was being performed. • Housekeeping Service will conduct cleaning with approved disinfectant before re-occupation of the area. |
|----|---|---|

Step 5: Life Safety Assessment

| Life Safety Assessment | Answer (Yes, No) | Alternative Measures If "YES" is answered for any questions in the life safety assessment, alternative life safety measures must be indicated |
|--|---------------------|---|
| 1. Will any existing required path of egress be obstructed or impacted by planned work or construction? | yes | The newly identified path of egress has been posted and staff educated. Fire drills will be completed weekly on each shift. Exit signs temporarily removed. |
| 2. Will any existing exit signs need to be covered; removed or relocated? | yes | This has been accomplished |
| 3. Will new exit signage be required due to rerouting of a path or egress? | yes | New signage has been placed. |
| 4. Will fire suppression system (wet/dry/pre-action sprinklers) be impaired during any part of planned work or construction? | no | |
| 5. Will any component of a fire alarm system be impaired during any part of planned work or construction? | yes | Smoke detectors disabled. See plan |
| 6. Will any existing fire/smoke rated separation be impacted by planned work or construction? | no | |
| 7. Will existing fire extinguishers be removed from the space during planned work or construction? | no | |

Step 6: Sign-Off:

Project Team/Hiring Department Supervisor must complete this form to document the results of the assessment of the planned work/construction project.

PROJECT NAME/DESCRIPTION:

Construction Project Type (A-D): _____

Risk Group Classification (Low-Medium-High): _____

Risk Mitigation Measures Class (I – IV): _____

Have any life safety issues been identified through the Life Safety Assessment? ____ Yes ____ No

The Project Team / Hiring Department Supervisor must submit a written plan detailing how dust/fume control and Interim Life Safety Measures (ILSM) if required, will be achieved to the CEO for any work:

1. That requires Class II, III, or IV risk mitigation measures, and/or
2. That requires interim life safety measures

Work cannot commence until the plan is approved by both CEO and the Project Manager.

Sign-Off:

Project Manager/Supervisor: _____ Date:

CEO: _____ Date:

Dust Control Plan and Interim Life Safety Measures

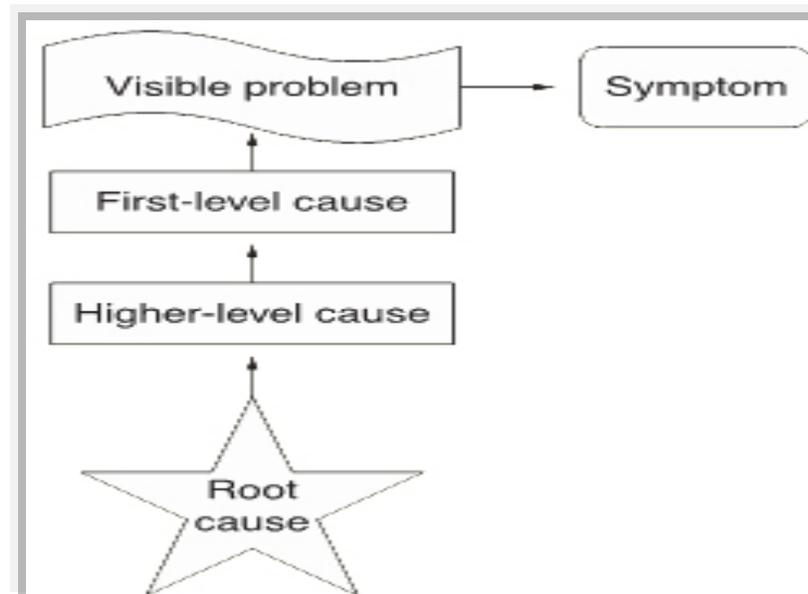

Dust Control:

Interim Life Safety

Appendix G

ROOT CAUSE ANALYSIS

The highest-level cause of a problem is called the root cause:

The root cause is “the evil at the bottom” that sets in motion the entire cause-and-effect chain causing the problem(s) and or adverse outcome.

Some root cause analysis approaches are geared more toward identifying true root causes than others; some are more general problem-solving techniques, while others simply offer support for the core activity of root cause

At the start of your fact finding team meeting list the sequence of events (flowchart) as they happened that lead to the problem, issues, or Sentinel Event.

If there is a defined procedure for the process that resulted in an adverse outcome list the sequence of steps in the approved procedure.

Compare the actual sequence of events to the steps outlined in the procedure. Identify any areas in the event sequence where approved procedure was not followed.

These areas may become the basis to develop a Cause and Effect Diagram to identify Root Cause.

Root causes analysis using the Cause and Effect methods.

What's the Problem?

Define the issue by its impact to overall goals. People often disagree over how to define the problem. You can get alignment when the problem is defined by the impact to the goals.

Why did it happen?

Break the problem down into a visual map. Using a Cause and Effect Diagram to provide a thorough explanation revealing all of the causes required to produce the problem.

What will be done?

Prevent or mitigate any negative impact to the goals by selecting the best solutions. Effective solutions should make a change to how people execute work process.

Better Communication, Better Analysis

The Sequence of Events identifies areas needing more investigation.

The Cause and Effect Diagram creates a visual dialogue, making it easier to communicate what's known and what needs a little more digging.

People can see how all of the pieces fit together to produce a particular incident.

The better an organization gets at explaining its problems, the better it becomes at finding smart solutions.

How to Use the Cause and Effect (Fishbone) Tool for Root Cause Analysis

Overview:

Root cause analysis is a structured team process that assists in identifying underlying factors or causes of an adverse event or near-miss. Understanding the contributing factors or causes of a system failure can help develop actions that sustain the correction.

A cause and effect diagram, often called a “fishbone” diagram, can help in brainstorming to identify possible causes of a problem and in sorting ideas into useful categories. A fishbone diagram is a visual way to look at cause and effect. It is a more structured approach than some other tools available for brainstorming causes of a problem (e.g., the Five Whys tool). The problem or effect is displayed at the head or mouth of the fish. Possible contributing causes are listed on the smaller “bones” under various cause categories. A fishbone diagram can be helpful in identifying possible causes for a problem that might not otherwise be considered by directing the team to look at the categories and think of alternative causes. Include team members who have personal knowledge of the processes and systems involved in the problem or event to be investigated.

Directions:

The team using the fishbone diagram tool should carry out the steps listed below.

- Agree on the problem statement (also referred to as the effect). This is written at the mouth of the “fish.” Be as clear and specific as you can about the problem. Beware of defining the problem in terms of a solution (e.g., we need more of something).
- Agree on the major categories of causes of the problem (written as branches from the main arrow). Major categories often include: equipment or supply factors, environmental factors, rules/policy/procedure factors, and people/staff factors.
- Brainstorm all the possible causes of the problem. Ask “Why does this happen?” As each idea is given, the facilitator writes the causal factor as a branch from the appropriate category (places it on the fishbone diagram). Causes can be written in several places if they relate to several categories.
- Again asks “Why does this happen?” about each cause. Write sub-causes branching off the cause branches.
- Continues to ask “Why?” and generate deeper levels of causes and continue organizing them under related causes or categories. This will help you to identify and then address root causes to prevent future problems.

Tips:

- Use the fishbone diagram tool to keep the team focused on the causes of the problem, rather than the symptoms.
- Consider drawing your fish on a flip chart or large dry erase board.
- Make sure to leave enough space between the major categories on the diagram so that you can add minor detailed causes later.
- When you are brainstorming causes, consider having team members write each cause on sticky notes, going around the group asking each person for one cause. Continue going through the rounds, getting more causes, until all ideas are exhausted.

- Encourage each person to participate in the brainstorming activity and to voice their own opinions.
- Note that the “five-whys” technique is often used in conjunction with the fishbone diagram – keep asking why until you get to the root cause.
- To help identify the root causes from all the ideas generated, consider a multi-voting technique such as having each team member identify the top three root causes. Ask each team member to place three tally marks or colored sticky dots on the fishbone next to what they believe are the root causes that could potentially be addressed.

Examples:

Here is an example of the start of a fishbone diagram that shows sample categories to consider, along with some sample causes.

Here is an example of a completed fishbone diagram, showing information entered for each of the four categories agreed upon by this team. Note, as each category is explored, teams may not always identify problems in each of the categories.

Facts gathered during preliminary investigation:

- Time of fall: change of shift from days to evenings
- Location of fall: resident’s bathroom
- Witnesses: resident and aide
- Background: the plan of care stipulated that the resident was to be transferred with two staff members, or with one staff member using a sit-to-stand lift.
- Information from interviews: the resident was anxious and needing to use the bathroom urgently. The aide was helping the resident transfer from her wheelchair to the toilet, without using a lift, and the resident fell, sustaining an injury. The aide stated she did not use the lift because the battery was being recharged, and there was no extra battery available. The aide stated she understood that the resident could be transferred with assist of one.

With this information, the team proceeded to use the fishbone diagram to better understand the causes of the event.

The value of using the fishbone diagram is to dig deeper, to go beyond the initial incident report, to better understand what in the organization’s systems and processes are causing the problem, so they can be addressed.

In this example, the root causes of the fall are:

- There is no process in place to ensure that every lift in the building always has a working battery. (One battery for the lift on this unit is no longer working, and the other battery was being recharged.)
- There is no process in place to ensure timely communication of new care information to the aides. (New transfer information had not yet been conveyed to the aide. The aide’s “care card” still indicated transfer with assist of one for this resident.)

The root causes of the event are the underlying process and system problems that allowed the contributing factors to culminate in a harmful event. As this example illustrates, there can be more than one root cause. Once you have identified root causes and contributing factors, you will then need to address each root cause and contributing factor as appropriate.

➤ **Root Causes are Identified**

➤ **Develop Action Plan for each Root Cause.**

➤ **Identify a Goal for each Root Cause.**

➤ **List the Steps needed to accomplish the Goal.**

➤ **What Resources are needed to complete the action steps?**

➤ **Who is Responsible for the Goal's steps?**

➤ **What is the anticipated Timeframe for completion?**

➤ **How will you Measure the effectiveness of the action steps?**

Planning is preparatory to action. Analytically at least, planning must be separated from implementation so that the major policy decisions can be taken and their implications understood prior to action

8 Steps to Develop a Plan for Action

1 Express your solution as a series of goals

Having agreed on a root cause to a particular problem within your organization, you first need to define that solution in terms of a goal. For example, each goal could be expressed as follows: "For us to, we would need to" Record each goal at the top of a whiteboard or sheet of paper

2 Generate a list of Actions for each goal

Use brainstorming to compile a list of actions to achieve a particular goal and record these below the goal. Arrange this list of suggested actions in sequential order. Include training and education, P&P changes, approvals.

3 Prepare a timeline

Beginning with a time point labeled "now" and ending with a point labeled "goal achieved", build a timeline on which you allocate dates by which you intend to complete each of the sequential actions listed under a particular goal. It is important that you get both sequence and timing right if you are to reach "goal achieved" effectively.

4 Allocate resources

Financial, physical and human resources must be allocated to each action step. If resources are limited, or fall short of requirements at any stage, it may be necessary to return to an earlier step and revise the action plan.

5 Identify possible problems

Consider all of the things that could go wrong in the process of achieving a particular goal. List these problems and identify causes and suitable actions to resolve them. If necessary, these actions might need to be added to appropriate slots in the timeline

6 Develop strategies for monitoring progress

List ways in which progress of the action plan can be monitored. These monitoring stages should also be included on the timeline.

7 Assign tasks

Take each point on the timeline in turn and ask : "Who will do what, by the date set, to bring about the specified action? Allocate these tasks to appropriate individuals or teams.

8 Implement the plan

Translate all your information to a clean copy, listing the actions required, the person responsible for a particular task, and when that task is to be completed. Having now finalized the plan for action in specific terms, this information can now be made available to all involved.

APPENDIX H

FISHBONE DIAGRAM

The Cause and Effect Diagram is used to explore all real, possible and potential causes of the single effect/outcome you are now experiencing.

Creating a cause and effect diagram is fun and educational. These diagrams are usually constructed as a team or group activity to get ideas from as many people as possible. As a result of everyone working on the diagram together, everyone tends to gain some new knowledge. Cause and effect diagrams encourage new ideas about causes of problems by helping the group think about different categories of causes. The cause and effect diagram also indicates how much we know about our process. If the diagram is full, we know a lot about our process. If it is sketchy, chances are we don't have a good understanding of our process. Cause and effect diagrams should be living documents. That is, we should actively seek causes of problems and add to the diagram as time goes on.

A cause and effect diagram is a tool that shows the relationship between an effect and possible sources of variation for this effect (causes). As shown in the figure the effect could be a problem that needs to be solved. The causes of the problem would then be listed on the cause and effect diagram. The effect could also be a goal. In this case, what needs to be done to reach the goal would be listed on the cause and effect diagram.

The causes are most commonly categorized as machines, methods, environment, materials, measurement, and people (the 4 M's, a P and an E). This is particularly true for manufacturing applications. You can pick your own categories. See above for 4 categories that may be used in healthcare. (People, Process, Materials, Equipment)

Cause and effect diagrams are also called fishbone diagrams (because of their appearance) and Ishikawa diagrams (because of their developer). Cause and effect diagrams can be used for any problem in any area

The cause and effect diagram is one of many root cause analysis tools. Root cause analysis should be thorough enough to "root" out the deep and hidden causes that are often missed with quick fixes to problems. It provides a method of taking all the jumbled-up ideas we have and arranging them so we can use a systematic approach to improvement.

How to Construct a Fishbone Diagram

1. Pinpoint the problem you want to fix or the goal you want to reach.
2. Write the problem or goal (effect) on the right hand side of a large sheet of paper taped to the wall and draw a horizontal line to the left.
3. Select the categories for the causes of the problem or for what needs to be done to reach the goal. These categories will be the main factors of the cause and effect diagram. Each main factor forms a branch off the horizontal line.
4. Brainstorm detailed causes for each main factor. These detailed causes are written on branches off those of the main factors. Use the brainstorming rules shown below to maximize the number of causes your group develops.
 - Go for quantity of ideas.
 - Everyone participates.
 - Encourage creativity.
 - Don't discuss/criticize/evaluate ideas.
 - Build off other ideas.
 - Pass if you don't have an idea to contribute.
5. Always try to branch further by continuously asking, "What causes variation in this branch?" In this way, you can add to the cause and effect diagram until it fully shows all the possible causes of variation.

A summary of the general rules for constructing a cause and effect diagram is given below.

1. Get everyone to participate.
2. Don't forget that this is a brainstorming session; brainstorming rules apply.
3. Give ideas one at a time to encourage creative ideas.
4. Have the person giving the idea tell which "bone" of the fish the idea goes on. For example, say "My idea is the truck tire pressure. That goes on the Materials bone."
5. Allow any idea to go on more than one bone. Allow other team members to use the same idea on multiple bones.

6. Never analyze or criticize suggestions while creating the fishbone. This includes nonverbal criticism such as shaking your head or drawing back from the group.
7. Piggyback one suggestion into another, let ideas suggest other ideas.
8. Use the major bones to help you come up with ideas. For example, think to yourself, "How could our methods or procedures cause this problem?"
9. Ask yourself for each idea that has already been given, "Why does that happen? How does that happen?" to develop branches or "smaller bones" off each major bone.
10. Be open and honest. Have the courage to give the idea that everyone is thinking about, but doesn't want to state.
11. Never use the suggestion that someone came up with in a fishbone session against the person outside the meeting. For example, never leave the meeting saying, "You'll never guess what Sam thought the problem was...He thinks that it's all Harvey's fault!"

I. INTRODUCTION

North Vista Hospital is committed to providing quality healthcare to all patients. The Patient Safety Plan serves as a framework to establish and maintain a safe patient care environment. It expands the organization-wide support for risk management, performance improvement, information management, education, human resources and patient's rights by implementing patient safety standards, measuring and monitoring their effectiveness, and creating a "culture of safety" as part of the overall quality program.

II. PURPOSE

Our goal is to establish a proactive approach to prevent patient injuries and other medical errors in an open and non-punitive environment. The Patient Safety Plan is to assure that a planned, systematic, coordinated approach exists to improve patient safety and reduce risk to patients through an environment that includes.

- Integration of all patient-safety activities both existing and newly created
- Identifies focus of accountability and support within the leadership of the organization
- Involves patients, their families, staff and leaders in the identification and management of actual and potential risks to patient safety as well as opinions, needs and perceptions of risks to patients and suggestions for improving patient safety
- Recognizes acknowledgment of risks to patient safety and medical / healthcare errors
- Initiates actions to reduce these risks
- Internally reports of what has been found and the actions taken
- Focuses on processes and systems rather than individual blame and retribution
- Ongoing proactive reduction in medical / healthcare errors
- Considers patient safety priorities in the design and redesign of all relevant organization processes, functions and services
- Communicates to patients and when appropriate to their families about the outcomes of care, including unanticipated outcomes
- Educates patients and families about their role in helping to facilitate the safe delivery of care
- Ongoing orientation, in-service and other education and training programs to emphasize specific job-related aspects of patient safety to maintain and improve staff competence.

The Patient Safety Plan involves all departments and disciplines at all levels of Hospital in establishing the processes and mechanisms that comprise the patient safety activities through the recognition and acknowledgment of risks, preventive actions to reduce risk, internal reporting and corrective actions taken and fostering a non-punitive environment when errors occurs.

Proactive identification and management of potential risks to patient safety have the obvious advantage of *preventing* adverse occurrences, rather than simply *reacting* when they occur. This approach also avoids the barriers to understanding created by hindsight bias and the fear of disclosure, embarrassment, blame, and punishment that can arise in the wake of an actual event.

III. SCOPE OF ACTIVITIES

- A. Hospital recognizes that patients, staff and visitors have the right to a safe environment. Therefore, the organization commits to undertaking a proactive approach to the identification and mitigation of medical errors through the integration into and participation of all components of the hospital into the hospital wide program. This includes Performance Improvement, Risk, Infection Control and EOC programs.
- B. The Patient Safety Plan promotes the use of internal and external knowledge and experience to identify, analyze, and prevent the occurrence of medical / healthcare errors and identify areas of opportunity to maintain and improve patient safety.
- C. Patient safety information will be analyzed from aggregated data reports and summarized in the Patient Safety Dashboard. These reports will be reported to appropriate hospital and Medical Staff committees and to the Governing Board. The aggregate data will be used to prioritize organization-wide patient safety efforts.
- D. The organization also recognizes that despite our best efforts, errors can and will occur. Therefore, it is the intent of the organization to respond quickly, effectively, and appropriately when an error does occur.
- E. The organization also recognizes that the patient has the right to be informed of the results of treatment or procedures whenever those results differ significantly from anticipated results.

IV. DEFINITIONS

| | |
|--------------------------------------|---|
| Error | An unintended act, either of omission or commission, or an act that does not achieve its intended outcome. A failure of a planned action to be completed as intended or the use of a wrong plan to achieve an aim. Errors can include problems in practice, products, procedures, and systems. |
| Patient Safety | The degree to which the risk of an intervention and risk in the care environment are reduced for a patient while under the treatment of a healthcare provider or facility. |
| Patient Safety Event | Any identified defect, error, medical accident, near miss, sentinel event, medication error, significant procedural variance, or other threat to safety that could result in patient injury. |
| Medical Accident (Error) | An unintended event in the system of care with actual or potentially negative consequences to the patient. Types of medical errors: <ul style="list-style-type: none"> ▪ Diagnostic errors (misdiagnoses leading to an incorrect choice of therapy or treatment, failure to use an indicated diagnostic test, misinterpretation of test results, failure to properly act on abnormal test results) ▪ Equipment failures (defibrillator without working batteries, or inadvertent dosing of medications in a short time frame due to IV pumps with valves that are easily dislodged) ▪ Infections (HAI, post-op wound infections) ▪ Blood transfusion-related injuries ▪ Deaths due to seclusion / restraint use |
| Medical Accident, “near miss” | Any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome. May include a clinical event. |
| Sentinel Event | An unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof. Serious injury specifically includes loss of limb or function. The phrase “or the risk thereof” includes any process variation for which a recurrence would be a significant chance of serious adverse outcome. |
| Root Cause Analysis | A process for identifying the basic or causal factor(s) that underlie variation in performance, including the occurrence or possible occurrence of a sentinel event. |
| Intensified Analysis | An examination of factors or elements that contribute to undesirable trends in performance to determine where best to focus changes for improvement. |

| | |
|----------------------------|---|
| Adverse Drug Event | A patient injury resulting from a medication, either because of a pharmacological reaction to a normal dose or because of a preventable adverse reaction to a drug resulting from an error. |
| Medication Error | Any preventable event that may cause or lead to inappropriate medication use or patient harm. |
| Hazardous condition | Any set of circumstances (exclusive of the disease or condition for which the patient is being treated) which significantly increased the likelihood of a serious adverse event. |

V. AUTHORITY/ROLES & RESPONSIBILITY

Governing Board

The Hospital Governing Board has the ultimate authority and responsibility for approving the patient safety program. The Governing Board has delegated the responsibility of implementing an organization-wide patient safety program and creating a “culture of safety” to the leaders and medical staff of the hospital.

Administrator / CNO

The Administrator/CNO is responsible for assuring that this program is implemented, supported, and evaluated throughout the organization. As such, the Administrator/CNO will establish the structures and processes necessary to accomplish this objective. The Administrator/CNO may delegate the day to day implementation and evaluation of this program to an appropriate staff leader who can operationalize this plan such as the Patient Safety Officer who may be supported by the Director/Manager, Performance Improvement.

Director/Manager, Performance Improvement, Patient Safety Officer and Infection Control Officer

The Patient Safety Officer is the Risk Manager at North Vista Hospital. The Patient Safety Officer is responsible for the day to day implementation and evaluation of the processes and activities noted in this program. The Patient Safety Officer will work collaboratively with the Director/Manager of Performance Improvement and the Infection Control Officer in establishing the Patient Safety framework and a culture of patient safety. The leadership including Senior Administration and the Chief of Staff will provide support as needed to assure the Patient Safety Plan is fully implemented and effective in positively impacting patient safety issues.

Patient Safety Officer Duties Include (As indicated in [NRS 839.870](#)):

1. Serve on the Patient Safety Committee (Chair of the Committee)
2. Supervise the reporting of all sentinel events alleged to have occurred at the medical facility, including, without limitation, performing duties required pursuant to [NRS 439.835](#).
3. Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the medical facility.
4. Report to the patient safety committee regarding any action taken in accordance with number 3.

Other Duties shall include:

1. Supports Patient Safety Committee by collecting and formulating relevant information to facilitate decision-making activities.
2. Selects at least one high-risk patient safety process for proactive risk assessment (FMEA) at least every 12-18 months. Coordinates the process throughout this period.
3. Presents Patient Safety reports to all departments.
4. Develops, and recommends new policies and procedures for patient safety based on analysis of data from events, and other relevant information.
5. Works in conjunction with the EOC Chair to prioritize risks, review and analyze data and performs risk analysis as needed to address the safety of the patient environment.
6. Maintains the confidentiality and legal privilege, as appropriate, of all data and information.
7. Facilitates patient safety orientation and in-service education programs.
8. Measures and evaluates effectiveness of the patient safety program using the established goals and prepares an annual report for the Governing Board, which includes events related to staffing complement.
9. Assists department directors and administrators in enforcing policies and procedures, standards of care.

Directors and Managers

1. The leaders of the organization maintain responsibility for proper collection and dissemination of information for continuing education pertaining to the Patient Safety Program to employees.
2. The leaders create an environment that encourages prompt error identification and reduction and minimizes blame or retribution against individuals involved in an error or the reporting of an error.
3. The leaders provide direction and resources to conduct proactive correction and reversal of conditions and procedures that increase the chance that a patient might be harmed.
4. The leaders will collaborate in decision making which effects the development of hospital-wide patient care programs; policies and procedures that describe how patient care needs are met.
5. The leaders will assist in the development and implementation of the Hospital Plan for the Provision of Care, Performance Improvement Plan, Risk Management Plan, Information Management Plan, decision-making structures and processes; and implementation of an effective and continuous program to measure, assess and improve performance and patient safety.

(Directors and Managers defined as those accountable for leadership, planning, organizing, developing, controlling, directing and evaluating care for designated departments – “Provision of Patient Care and Services”.)

Medical Staff

The Chief of Staff and Department Chairs of the organized medical staff through the Medical Executive Committee and in collaboration with the leaders of the organization promote and support the patient safety initiatives of Hospital. (Medical staff defined as those physicians who have been granted recognition as members of the medical staff pursuant to the terms of the Medical Staff Bylaws.)

Quality/Utilization Management Committee

Quality/Utilization Management Committee is assigned to oversee Patient Safety Committee at North Vista Hospital. Duties include:

1. Review Patient Safety Dashboard for trends, performance and improvement and make recommendations where necessary.
2. Review, provide input and recommend approval of Patient Safety Plans & evaluations where necessary.
3. Review all sentinel event / root cause analyses and intensified analyses if/as requested by Patient Safety Committee.
4. Review risk assessments and FMEA and make recommendations where necessary.

Patient Safety Committee

The hospital has an organization-wide, integrated patient safety program which operates under the Patient Safety Committee. It is the responsibility of the Patient Safety Committee to implement a hospital-wide patient safety program. The Patient Safety Committee is chaired by the Patient Safety Officer (Risk Manager) who is tasked to manage the day to day operations of the patient safety program.

The scope of the patient safety program includes the full range of safety issues, from potential or no-harm errors (sometimes referred to as near misses, close calls, or good catches) to hazardous conditions and sentinel events. All departments, programs, and services within the hospital participate in the patient safety program. As part of the patient safety program, the hospital creates procedures for responding to system or process failures.

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#)):

1. Monitor and document the effectiveness of the patient identification policy.
2. On or before July 1st of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
3. Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
4. Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
5. At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
6. Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

- a. The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter).
- b. The number and severity of infections that occurred at the facility during the preceding calendar month or quarter.
- c. Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

7. Provide regular reports to the Quality/Utilization Management Committee.
8. Implement and monitors the National Patient Safety Goals compliance within the facility.

VI. OBJECTIVES AND GOALS FOR THE PATIENT SAFETY PLAN

Goal 1 – Improve the following 3 Patient Safety Culture Domains:

- Nonpunitive Response to Errors-2018 Goal: 20% (scored 14% in 2017)
- Communication Openness-2018 Goal: 55% (scored 47% in 2017)
- Handoffs & Transitions-2018 Goal: 21% (scored 16% in 2017)

Goal 2 – Reduce the number of patient falls in 2018 from 2017 (119)

- Hospital Wide Performance Improvement Indicator (Risk Manager is lead) as listed in the Performance Improvement Plan

Goal 3 – Reduce number of hospital acquired conditions (HACs) in 2018 from 2017

- 7 CAUTIs, 19 C. Diff, 2 SSI's

VII. COMPONENTS AND METHODOLOGY

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

North Vista will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The FOCUS Plan-Do-Check-Act (PDCA) is the model which North Vista Hospital will use to test the changes.

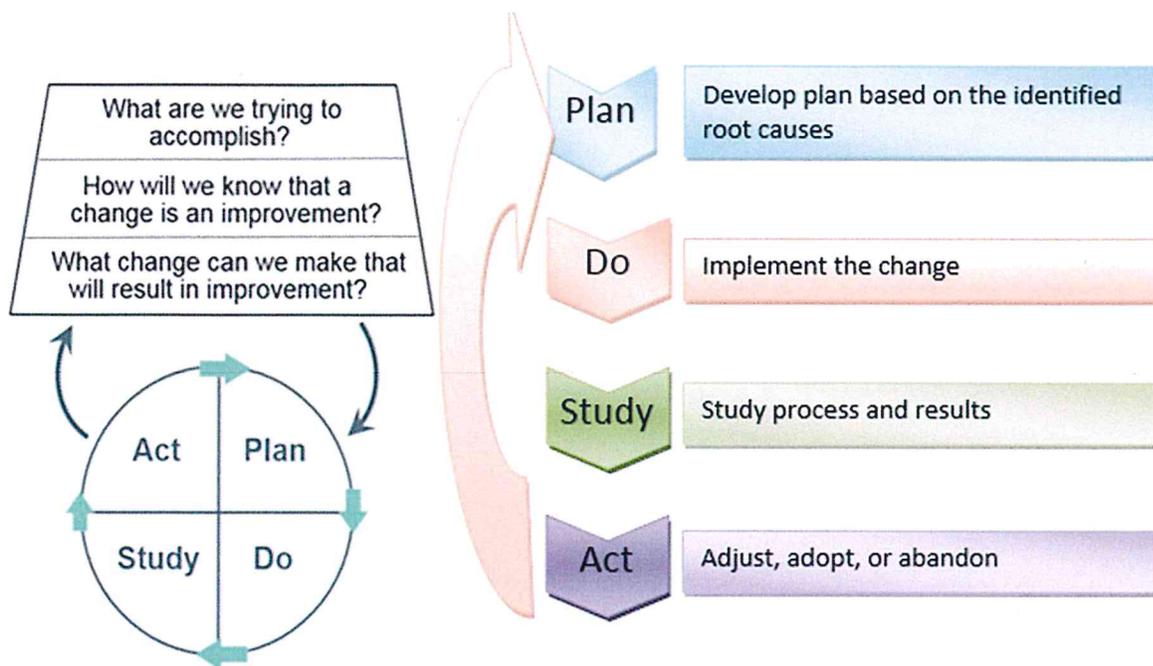

Root Cause Analysis

A Root Cause Analysis (RCA) is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis. The attached forms in Attachment I will be utilized to conduct RCAs.

Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

This methodology will be accomplished utilizing the RCA forms attached in Attachment I. This methodology is also utilized in the Performance Improvement Plan to select Performance Improvement Indicators for each department.

VIII. DATA COLLECTION AND RISK ASSESSMENT

In order to reduce the likelihood of patient incidents and negative outcomes, North Vista Hospital will track the frequency and type of patient safety issues and compile them in order to learn from and prevent future negative occurrences. Examples of how the hospital collects and analyzes data is listed below.

A. Data Sources

1. Internal

- Risk incident reports with database compilation
- Adverse Drug Events and Adverse Drug Reactions
- Data from patient complaints
- Risk Management and Safety findings
- Compliance findings
- PI and special study findings
- Infectious Disease information
- Operative/Invasive procedures
- Departmental indicators
- Employee surveys (includes perception of risk)

2. External

- Core Measures Indicators
- Accreditation/regulatory deficiencies
- Patient Satisfaction Surveys
- Other Evidence-Based external sources

B. Risk Assessment (Failure Mode and Effect Analysis)

An assessment that examines a process in detail including sequencing of events; assesses actual and potential risk, failure, points of vulnerability; and through a logical process, priorities areas for improvement based on the actual or potential patient care impact (criticality).

C. Data Analysis

Analysis of collected data will be undertaken to monitor and identify levels of performance, trends or patterns that vary significantly from expected outcomes and the need for possible change/improvement in systems or processes.

D. Process Improvement

When undesirable outcomes are identified, the hospital shall involve the personnel, resources, disciplines, and department/services most directly involved with the process to reduce future risk.

E. FOCUS PDCA (Plan, Do, Check, Act) methodology for Performance Improvement will be utilized for all performance improvement activities within the facility. This methodology will not be used when conducting RCAs

IX. PATIENT SAFETY CHECKLISTS & PATIENT SAFETY POLICIES

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
 - Proper instructions concerning prescription medications;
 - Instructions concerning aftercare;
 - Any other instructions concerning his or her care upon discharge; and
 - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a

system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

X. CULTURE OF SAFETY SURVEY

North Vista Hospital will utilize the Agency of Healthcare and Research Quality (AHRQ) research survey that is intended to measure the ten dimensions of culture pertaining to patient safety:

1. Supervisor/manager expectations & actions promoting patient safety
2. Organizational learning – continuous improvement
3. Teamwork within units
4. Communication openness
5. Feedback & communications about errors
6. Non-punitive response to error
7. Staffing effectiveness
8. Hospital management support for patient safety
9. Teamwork across hospital units
10. Hospital handoffs & transitions

The results of the survey will be used by the Patient Safety Committee to enhance the patient safety program at North Vista Hospital.

XI. CONFIDENTIALITY

The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in [NRS 49.265](#)

XII. PLAN EVALUATION

According to [NRS.439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan. The patient safety plan must be reviewed and updated annually in accordance with the requirements set forth in this section. According to NRS 439.843, on or before March 1st of each year, a copy of the most current patient safety plan (developed according to [NRS 439.865](#)) must be submitted to the Division of Public and behavioral Health.

- A. This plan encompasses many disciplines and activities in addition to those specifically referenced in the plan. The Patient Safety Plan is designed to assist in the integration of these activities, not replace them. Integration should enhance the accountability and impact of the patient safety related activities and collectively provide a comprehensive quality management system for North Vista Hospital.
- B. The Patient Safety Plan should be considered a "working" document and an interim product to facilitate the development of a "culture of safety". As such, the plan may be modified as the implementation of the patient safety standards takes place and sections of the plan are incorporated into existing plans, policies, procedures and protocols.
- C. The Patient Safety Plan will be reviewed on an annual basis. Goals shall be identified and prioritized based on internal occurrences and trends, RCA, FMEA, survey results, sentinel events, State and Federal regulations, and other applicable patient safety issues and initiatives.

| |

| |
|--|
| Brief Description (No names or other individual identifiers): |
| |

Definitions:

Error:

An unintended act, either of omission or commission, or an act that does not achieve its intended outcome.

Sentinel Event:

An unexpected occurrence involving death or serious physical or psychological injury or the risk thereof. Serious injury specifically includes loss of limb or function. The phrase "or risk thereof" includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome.

Near Miss:

Used to describe any process variation that did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome. Such a near miss falls within the scope of the definition of sentinel event, but outside the scope of those sentinel events that are subject to review by the Joint Commission under its sentinel event policy. Refer to the Sentinel Event Policy for JCAHO reviewable events.

Hazardous Condition:

Any set of circumstances (exclusive of the disease or condition for which the patient is being treated), which significantly increases the likelihood of a serious adverse outcome.

| UNDERSTAND THE CURRENT PROCESS |
|---|
| <p>What was intended to happen, normally occur? (steps as defined by the policy, procedure)</p> |
| <p>What went wrong? (Easily identifiable, proximal causes) (Were there any steps in the process that did not occur as intended?)</p> |

ROOT CAUSE ANALYSIS

(Checkoff the appropriate sections. This is the ANALYSIS section where you document the drill down of the event.
Remove items rows not applicable)

| Process | Analysis |
|--|----------|
| <input type="checkbox"/> Behavioral Assessment Process: Was patient's mood/ behavior approp assessed upon admission? Were potential mood/behavior problems identified approp/subsequently monitored? Were referrals made to physicians, Social Work, or Behavioral Health? Are current asmt. tools approp. measurement of mood/behavior? | |
| <input type="checkbox"/> Physical Assessment Process: Was patient approp. assessed upon admission or prior to their procedure? Was the patient approp. re-assessed throughout their stay? Were assessments done timely and according to policy? If conditions identified, did staff act approp. follow up, referrals, etc.? | |
| <input type="checkbox"/> Patient Identification Process: Was the patient approp. identified by an ID band or by other means? Are there deficits in the patient identification process that permitted the error to occur? Did the patient have approp. patient identifiers in place (i.e. ID bands, chart labels, etc.)? | |
| <input type="checkbox"/> Patient Observation Procedures: Was the patient approp. observed/monitored during their stay/procedure? Were conditions present that warranted increased observation/monitoring that were not identified by staff? | |
| <input type="checkbox"/> Care Planning Process: Was the patient's care planned approp.? Did the patient have a completed History and Physical? Was care deemed to be appropriate as planned? Was the outcome a complication despite appropriate care planning? | |
| <input type="checkbox"/> Continuum of Care: Was the outcome affected by a breakdown in the continuum of care? Was there a failure to provide adequate information/services from a prior caregiver or other discipline that contributed to the event? Were the appropriate referrals made according to the patient's assessment? Were the appropriate referrals completed? | |
| <input type="checkbox"/> Staffing Levels: Are staffing levels high enough to meet demand; limitations overtime? Agency/float staff in use? Are staff members approp. matched to assignments? How many continuous hours had the staff/physician involved been working? | |
| <input type="checkbox"/> Orientation and Training Of Staff: Is ongoing training available regarding the process involved in the event? Are employees oriented to the process involved in the incident? Are staff members aware of reference resources? If event involved a contingent or agency staff member, was orientation and training sufficient for the delivery of patient care? | |
| <input type="checkbox"/> Competency Assessment/Credentialing: Have staff completed orientation and training on the process involved? Is assessment of employee performance of this procedure part of the employee review process? When was last competency assessment completed? Need to repeat them? What the process involved a "core ability" of the staff member, if so, should competencies be considered? Include omissions in critical thinking and/or performance variance(s) from defined policy, procedure, protocol and guidelines in effect at time. | |

| | |
|--|-----------------|
| <input type="checkbox"/> Supervision of Staff: Are supervisors readily available to both experienced and new staff? Are performance standards made clear? Are staff members observed in the performance of their daily work? Would direct supervision have resulted in a better outcome in this process? | |
| <input type="checkbox"/> Communication with Patient/Family: Was communication with the patient hindered in any fashion (i.e. a comatose or demented patient)? Was the family or significant other present to assist with the assessment process? Is the patient a reliable historian? | |
| Process | Analysis |
| <input type="checkbox"/> Communication Among Staff Members: Are instructions clear and precise: evaluation of verbal, written, electronic communication or the lack thereof? Timing factor? Handoff? Are human interactions free of intimidation and embarrassment? Was key information communicated from one caregiver to another as appropriate? Were appropriate referrals made? | |
| <input type="checkbox"/> Availability of Information: To what degree was all the necessary information available when needed? Accurate? Complete? Unambiguous? Does historical information include all pertinent information needed to facilitate care of the patient? Was the sharing of necessary information hindered due to technological reasons? | |
| <input type="checkbox"/> Adequacy of Technological Support: Did automation actually contribute to this event? Is the right equipment used for the task at hand? Is the equipment up-to-date? Are resources available to answer the operator's questions about the equipment? Does equipment design play a role in causing problems? | |
| <input type="checkbox"/> Equipment Maintenance/Management: Is machinery/equipment working properly? Are service guidelines being followed? Is backup equipment on hand? Biomed checks done? | |
| <input type="checkbox"/> Physical Environment: Current environment meets code? Do noise levels make it difficult for staff to communicate? Was there an environmental risk involved in the event that was not previously identified? Was location a factor in causing the event? Was the facility on any special status at the time (e.g. fire drill, Code Blue, etc.)? Lighting issues? | |
| <input type="checkbox"/> Security Systems and Processes: Were medications/equipment/supplies needed for the delivery of care secured properly? Were medications/equipment/supplies needed for the delivery of care able to be obtained. Was the safety and security of the patient/staff adequate? Were there deficits or breaches in security that contributed to the event? | |
| <input type="checkbox"/> Control of Medications - Storage/Access: Are medications stored properly? For example, are dangerous drugs stored away from patient-care units? Is storage set up to eliminate confusion? Is access to medications limited to the appropriate personnel? | |
| <input type="checkbox"/> Labeling of Medications: Are labels clear and legible? Do similarities in packaging cause confusion? Are labels read at least three times – when picking the medication, preparing the dose, and prior to administration? | |

ADDITIONAL QUESTIONS

What uncontrollable external factors influenced this outcome? (Identify any factors the organization cannot change that contributed to a breakdown in the internal process, for example natural disasters).

Were there any other factors that directly influenced this outcome? (List any other factors not yet discussed).

What are the other areas in the organization where this could happen? (Ensure planned actions include addition areas as needed).

What barriers were in place but failed to stop the undesirable outcome? What barriers SHOULD have been place but were not to prevent the undesirable outcome?

What uncontrollable, outside factors directly affected the result?

What human factors were relevant to the outcome? (examples: fatigues, personal problems, in-attentional blindness/confirmation bias, substance abuse)

| Summary | YES | NO |
|--|-----|----|
| 1. Was the event caused by an inappropriate action? | | |
| 2. Do policies/procedures exist for the activities/tasks involved? | | |
| 3. Do the policies/procedures related to the tasks have sufficient detail? | | |
| 4. Do the policies/procedures have sufficient fail-safe mechanisms? | | |
| 5. Do the policies/procedures cover tasks in proper sequence? | | |
| 6. Did the time of day have an effect on the event? | | |
| 7. Did the event occur at shift change? | | |

What other pertinent issues were identified not already addressed in the minimum scope of investigation as listed above?

MONTEVISTA

| | |
|--------------------------------|-----------------------------------|
| Title: SAFETY PLAN | Policy Number: 800.102 |
| Function: EOC | Approved: 10/17 Revised: 01/18 |
| Manual: ENVIRONMENT OF CARE | Page(s): 13 |
| Developed By: SAFETY COMMITTEE | Attachment(s): N/A |

I. Objective and Scope

It will be the policy of Montevista Hospital (MH) to provide a work environment safe for the guest and employees and make every effort to prevent accidents.

II. Risk Assessment

It will be the practice of MH to perform safety risk assessments per policy 800.114.

III. Staff Development

MH will train staff to recognize and keep a safe environment. This will be accomplished through initial orientation safety topics, rounding that identifies safety issues, meetings, and policy familiarization.

IV. Emergency Response and Procedures

MH will have standards that guide safe action during related events such as the emergency preparedness manual.

V. Inspection, Testing, and Maintenance

Proper care of the MH facilities will occur on an ongoing basis through TELS PM and work order systems.

VI. Information Collection and Evaluation

MH records about safety practices and events will be used to improve safety.

VII. Performance Monitoring

MH tracks compliance with safety practices and policies.

VIII. Annual Evaluation

MH reviews its safety plan, policies and procedures.

POLICY:

Montevista Hospital will have an active safety plan to outline operation processes designed to manage staff activities which will reduce health care errors, the risk of human injury, and provide a safe physical environment for patients, personnel and visitors.

DEFINITIONS:

1. Error - an unintentional act either of omission or commission, or an act which does not achieve its intended outcome.
2. Sentinel Event - The sentinel event applies to events which meet the following criteria:
 - The event has resulted in an unanticipated death or major permanent loss of function¹, not related to the natural course of the patient's illness or underlying condition, (note: a distinction is made between an adverse outcome related to the natural course of the patient's illness or underlying condition [not a sentinel event] and a death or major permanent loss of function associated with the treatment, or lack of treatment, of that condition), or,
 - The event is one of the following (even if the outcome was not death or permanent loss of function):
 - Suicide of a patient in a setting where the patient receives around-the-clock care (e.g., hospital, residential treatment center, crisis stabilization center), or
 - Infant abduction or discharge to the wrong family, or
 - Rape, the determination of which is to be based on the hospital's definition consistent with applicable law and regulation. An allegation of rape shall be investigated and the root cause analysis initiated when the determination is made a rape has occurred, or
 - Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities, or

¹ A major permanent loss of function means sensory, motor, physiological, or intellectual impairment not present or admission requiring continued treatment or life-style change. When major permanent loss of function cannot be immediately determined, root cause analysis may not be initiated until either the patient is discharged with continued major loss of function, or two weeks have elapsed with persistent major loss of function, whichever occurs first.

Root Cause Analysis (RCA): An evaluation process structured to attempt to determine underlying causes of the sentinel event and whether there is a reasonable potential for process improvement to reduce the likelihood of such events in the future. The following are characteristics of a root cause analysis:

- Focus primarily on systems and processes, not individual performance;
- Progression from special causes in clinical processes to common causes in organizational processes;
- The use of "Why?" repeatedly as each reason is determined; and

- Identification of changes, if any, should be made in systems and processes, either through redesign or development of new systems or processes, which would reduce the risk of recurrence of that sentinel event.
3. Critical Event - Critical event applies to events which meet the following criteria: The event results in or has the potential to cause serious harm or death (even if the outcome was not serious harm or death):
- Suicide of any patient other than an inpatient or who has been discharged from the facility's inpatient, partial hospitalization, outpatient or other service program within 30 days prior to the suicide, or
 - Attempted suicide of any patient (does not result in a major loss of permanent function), or
 - Any actual or alleged inappropriate sexual contact between staff and current patients or individuals who are patients within two years from discharge, (to include inappropriate verbal or written communication and/or inappropriate physical contact), or
 - Sexual contact between patients involving any touching of genitalia, or
 - Patient elopement, or
 - Staff/patient or patient/patient aggression resulting in injury to the patient, or
 - Medication error resulting in injury to the patient, or
 - Significant adverse drug reaction, including incidents where the correct drug and dosage were administered, yet the patient suffered a major reaction which may have precipitated a medical emergency, or
 - Falls with significant injury, or
 - Any other Class I Incident.

Critical Event Analysis: An evaluative process structure to attempt to determine underlying causes of the critical event and whether there is a reasonable potential for process improvement to reduce the likelihood of such events in the future. The following are characteristics of a critical event analysis:

- Focus primarily on systems and processes, not individual performance;
 - Progression from special causes in clinical processes to common causes in organizational processes;
 - The use of "Why?" repeatedly as each reason is determined; and identification of changes, if any, should be made in systems and processes, either through redesign or development of new systems or processes, would reduce the risk of recurrence of that critical event.
4. Near Miss - use to describe any process variation which did not affect the outcome but for which a recurrence carries a significant chance of a serious adverse outcome. Such a near miss falls within the scope of the definition of a sentinel event but outside the scope of those sentinel events which are subject to review by the Joint Commission on Accreditation of Healthcare Organizations under its Sentinel Event Policy.
5. Hazardous Condition - any set of circumstances (exclusive of the disease or condition for which the patient is being treated) which significantly increases the likelihood of serious adverse outcome.

6. Medication Variance – any preventable event may cause or lead to inappropriate medication use or patient harm while the medication is in the control of the health care professional, or patient. Such events may be related to professional practice, pharmaceutical products, procedures, & systems, including prescribing; order communication; product labeling; packaging and nomenclature; dispensing; distribution; administration; education; monitoring; and use.
7. Adverse Drug Reactions (ADR): any undesired, unintended, excessive or exaggerated effect of a drug administered to a patient within the facility due to either the drug itself or patient idiosyncrasy (excluding gross overdose and therapeutic failure). These reactions may be expected or unexpected.

SAFETY PLAN PHILOSOPHY:

The focus of this plan is to identify and reduce risks to patient safety and employee safety. The hospital environment is one, which values the highest standards of quality and ethics integrity. Open communication and safety reporting is encouraged and a nonpunitive philosophy presides, focusing on systems and processes rather than individual blame. Individuals involved in a risk event (staff, visitor, patient, family) will be offered an opportunity to process/express feelings in a safe and therapeutic environment.

All departments/personnel are responsible to contribute to data collection, resolution of problems and continued monitoring using the PDCA PI model of safety issues. An interdisciplinary process (formal and informal) is encouraged to enhance positive outcomes. A competent work force is paramount in maintaining a safe practice; therefore every department will develop an employee competency program which is reviewed by Human Resources.

SCOPE:

The Safety Plan includes all buildings and facilities operated by Montevista Hospital and apply to all employees, physicians, and other independent practitioners, patients and visitors. It also applies to all activities conducted by staff members off site while conducting activities required by their position at the Hospital.

The scope of the Plan entails the following operational components: safety policies and procedures, safety education and training, hazard surveillance (including product recall), employee incident reports, security program, hazardous materials and waste Plan, emergency preparedness program, quality improvement program, risk Plan, life safety Plan, medical equipment Plan, utilities Plan and medical/health care errors/factors which contribute to unanticipated patient outcomes.

GOALS:

The Safety Plan functions to create a culture of safety by maintaining a safe environment for patients, personnel, and visitors through compliance with regulations, procedures, and standards set forth by OSHA, The Joint Commission, CMS, HIPAA, National Fire Code, the City of Las Vegas Fire Marshall's office and Standard Building Codes, Clark County, as well any Professional Discipline Regulatory Agencies.

Short-term objectives of the Safety Plan will be identified annually by the Safety Committee. These will be based on annual evaluation results of the Safety Plan and unresolved safety issues.

OBJECTIVES:

The objectives of the Plan are to:

- Establish and implement operational processes which guide, monitor and/or evaluate safety management practices.
- Identify the organizational components responsible for safety management functions at Montevista Hospital and delineate the relationship among these components including lines of authority, responsibility and accountability.
- Identify and resolve safety management issues which result in environmental hazards and unsafe practices with special attention to hazards related to the ages of the patients served.
- Evaluate results of actions taken by individual departments to meet safety recommendations.
- Provide at least monthly reports of safety management activities to Quality Council, Administration, and department heads, including the CEO.
- Provide effective process for supervising all grounds and equipment.
- Provide processes for conducting risk assessments that evaluate the buildings, grounds, equipment, occupants, and other physical systems on patient and public safety.
- Provide processes for reporting and investigating all incidents or abnormal occurrences which involve the building, patients, staff, and visitors.

RESPONSIBILITY AND AUTHORITY:

Chief Executive Officer: The Chief Executive Officer (CEO) has the responsibility, authority, and accountability for requiring, supporting the establishment and maintenance of an effective hospital-wide Safety Plan. The CEO has the responsibility to provide necessary staffing and equipment for the Safety Plan; and require hospital staff participation by all departments. The CEO has authorized the Safety Officer the responsibility for development, implementation, and monitoring of the Safety Plan. The CEO and Medical Director through the Medical Executive Committee authorize the Safety Officer to intervene whenever conditions exist that pose a threat of damage to equipment or building.

Quality Council: The Quality Council monitors the effectiveness of the Safety Plan and is authorized to designate resources and priority levels to the Safety Committee's recommendations. The Quality Council approves the annual Safety Plan.

Safety Committee: The Safety Committee is a standing committee designed to analyze identified safety management issues and to develop recommendations for resolving them. The Safety Committee is responsible for:

- The Safety Committee will meet every month with an agenda and minutes completed for each meeting.
- The Chairman of the Safety Committee will be appointed by the Chief Executive Officer.
- Review and revision of the Safety Plan policies and procedures for accuracy, completeness, and proper implementation.
- Monitoring system user training programs and directing changes as appropriate.
- Monitoring safety systems and processes as it relates to the overall quality of the patient care environment.
- Developing and monitoring Performance Standards for the Safety Plan.
- The Committee will receive on a regular basis summary reports from the following areas:
 - 1) Patient and visitor variances
 - 2) Personnel injuries and occupational illness incidents
 - 3) Personnel and visitor security incidents and property damage
 - 4) Medical equipment and utility management disruptions
 - 5) Hazard surveillance, product recall, fire safety, and all safety and security investigations
 - 6) Fire drill and emergency preparedness evaluation data
 - 7) Life Safety (to include all aspects of fire devices, i.e., sprinkling system, fire Extinguishing systems, etc.)
 - 8) Performance Improvement results of monitoring and evaluation activities related to Hazards and safety practices
 - 9) Risk Management issues related to hazards and safety practices
 - 10) Infection Control activities related to hazards and safety practices

The SAFETY Committee will make recommendations to analyze identified safety management issues and to develop and approve recommendation for solving them and to monitor the effectiveness of the changes to see if correction/improvement occurs.

The SAFETY Committee will receive results of the annual evaluation of the Safety Plan and revise as necessary and forward the plan to Quality Council.

Safety Officer: The Safety Officer has the responsibility to manage an ongoing hospital-wide process to collect and evaluate information about hazards and safety practices used to identify safety management issues to be addressed by the SAFETY Committee. The Safety Officer will:

- Report monthly to the SAFETY Committee on findings, recommendations, actions and monitoring conducted by the Safety Department. This includes but is not limited to hazard surveillance, product recall, fire safety, incident investigation.

- Participate in hazard surveillance, product recall and incident reporting on a regular basis.
- Participate in the development of departmental and organization-wide safety policies and procedures.
- Participate in Safety education orientation program for new employees and in continuing education for all employees.
- Be a member of the SAFETY Committee and Quality Council.
- Work with appropriate staff to implement SAFETY Committee recommendations and to monitor effectiveness of the changes.
- Prepare monthly reports of safety management issues and summaries of SAFETY Committee activities for communication and distribution to Quality Council and designated hospital personnel.
- The Safety Officer will work with the SAFETY Committee and Quality Council to develop and monitor Performance Standards for the Safety Plan.

Compliance Director: The Performance Improvement (PI) Director is responsible for the planning, implementation, monitoring and evaluation of Performance Improvement clinical activities including safety and risk events as well as proactive safety improvements and risk reduction strategies. The PI Director serves as a resource for regulatory compliance and risk management consultation. The PI Director works collaboratively with the Safety Officer to establish a Safety Plan and monitor the effectiveness of the plan. (Refer to PI and Risk Management sections)

Department Heads: Department Heads are responsible for establishing departmental safety programs. Safety precautions applicable to the department will be written form either collectively or inclusive in the various job functions. Each department head is responsible for employee safety awareness/education; monitoring or compliance to safety related policies and procedures; corrections of safety deficiencies and proper reporting of safety incidents/hazardous.

Employees: Hospital employees are responsible for adhering to safety policies and procedures, reporting environmental hazards and safety incidents/variances, and making recommendations for the improvement of the Safety Plan and the overall Environment of Care.

SAFETY RISK/ERROR REDUCTION:

1. Montevista Hospital recognizes a patient has the right to a safe environment therefore the organization is committed to undertaking a proactive program to identify processes which may adversely affect patient safety or be associated with medical errors.
2. Effective reduction of errors and other factors which contribute to unintended adverse patient outcomes in our organization requires an environment in which patients, their families, and organizational staff and leaders can identify and manage actual and potential risks to patient safety. Our environment must encourage:

- a. Recognition and acknowledgement of risks to patient safety.
 - b. Organizational focus on process and systems assessment and improvement related to patient risk and safety.
 - c. Initiation of actions to reduce these risks.
 - d. Internal reporting of what has been found and the actions taken.
 - e. Minimization of individual blame or retribution for involvement in a medical error.
3. Montevista Hospital has delegated oversight of our patient safety and error reduction program to Quality Council.
 4. Quality Council shall report to the Medical Executive Committee. Quality Council will on a regular basis aggregate and assess all organizational data related to adverse events; incident reports; risk management; environmental safety clinical outcome measurements; risk concerns and provide a report to the Medical Executive Committee.
 5. At least annually, Quality Council will select at least two (2) high-risk processes for proactive risk assessment and risk reduction. High-risk process selection shall be based on information published periodically by the Joint Commission or other nationally recognized sources of information on patient safety and medical errors. The processes selected for proactive risk assessment and risk reduction should include those processes known to be associated with sentinel events, significant patient risk or medical errors in other organizations.
 6. Quality Council shall oversee the development of a program to reduce medication related errors. The medication error reduction program shall incorporate the principles of medication error reduction which have been identified by the Joint Commission and by other nationally recognized sources of patient safety and error reduction strategies. Montevista Health recognizes medication errors as medication variances.
 7. Montevista Hospital understands inconsistency in the performance of existing organizational processes frequently leads to unanticipated and/or undesirable results. In order to minimize risk to patient safety due to undesirable process variations, Quality Council will require ongoing monitoring to ensure processes identified as variance prone or high risk regarding patient safety are being performed. Each year the performance of critical steps in at least two (2) processes shall be subject to ongoing measurement and analysis to determine the degree of variation from intended performance. If undesirable process variation is identified Quality Council shall refer their assessment findings to the appropriate committee or team for prioritization of a performance improvement project.
 8. Specific processes which should be considered for performance improvement prioritization. Identification of risk can occur through:
 - Self report
 - Performance Improvement reporting and trending
 - Proactive measurement of high risk, problem prone processes
 - Failure Mode Evaluation (including near misses)
 9. Safety risks will be categorized as Class I, II, III, IV
 - Class I Incidents: Patient event requires forwarding to Corporate Risk Management.

- Class II Incidents: Patient event requires internal tracking and trending.
 - Class III Incidents: Visitor general liability.
 - Class IV Incidents: Worker's Compensation, employee injury or concern.
10. Quality Council will assure knowledge-based information, including journal literature, clinical practice standards or guidelines, reference information and research data, is utilized in process design and process redesign. Quality Council shall assure knowledge based information is used and the development of at least one (1) clinical practice guideline (Best Practice) on an annual basis.

FUNCTIONS TO BE INCLUDED IN PATIENT SAFETY AND ERROR REDUCTION COMMITTEE DUTIES

Performance Improvement

1. Establish measurable objectives for improving patient safety and reducing medical errors. Measurable objectives shall be based on the elements of patient safety and error reduction which are described in this Plan.
2. Review of all sentinel/critical events including the development of a thorough and credible root cause analysis or critical event analysis, appropriate plan of correction, and follow up plan. See Sentinel Event and Critical Event Policies and Procedures #200.12 and #200.121.
3. Review and disseminate available information about sentinel events known to occur in other health care organizations which provide services similar to Montevista Hospital. This includes review of all The Joint Commission sentinel event alerts through Quality Council.
4. Assuring prioritization is given to those events and processes most closely associated with patient safety when developing the organizational measurement program and in selecting specific improvement activities.
5. Assuring the data which the organization considers for collection to monitor performance shall include the following:
 - a. Patient, family and staff opinions, needs, perceptions of risks to patients, and suggestions for improving patient safety.
 - b. Staff willingness to report medical/health care errors/variances.
 - c. Data about the needs, expectations, and satisfaction of individuals and organizations served. Montevista Hospital will ask these groups specifically how the organization can improve patient safety.
6. Aggregating organizational information related to patient safety and medical errors to identify trends or patterns in process or outcome, which may lead toward patient events.
7. Assuring when organizational process is designed or redesigned, information from other organizations related to potential risks to patient safety, including occurrence of sentinel/critical events, is reviewed and risk reduction strategies are implemented in the designed or redesigned process.

Information Management

1. Quality Council shall work with appropriate organizational staff in developing the hospital information management needs assessment. The needs assessment shall include information regarding barriers to effective communication among caregivers. Specific attention will be directed to the processes for assuring accessibility of accurate, timely and complete verbal and written communication among caregivers and all others involved in the utilization of data (including external sources).
2. Working collaboratively with staff to assure the medical record is audited on a regular basis to verify all information necessary to assure patient safety and reduce medical errors is contained in the medical record in a timely manner.
3. Development of program to assure knowledge-based information is available to clinicians to support clinical management and decision making in a timely manner, including internet access, journal subscriptions, corporate and community networking and collaborative efforts.

Environment of Care (EOC)

1. Aggregate and assess organizational data related to environmental issues associated with patient safety and risk. Each of the seven (7) EOC elements have an individual management plan. These plans are reviewed annually by the Safety Committee, Quality Council and Medical Executive Committee. Additionally, departments develop specific safety policies to promote safety practices and reduction of risk opportunities. Refer to the EOC Safety Manual.

Risk Management

1. Provide oversight of all organizational risk management activities.
2. Develop an organizational-wide approach to the reporting and evaluation of potential medical errors.
3. Develop procedures for immediate response to medical errors including care of the affected patient, containment of risk to others and preservation of information for subsequent analysis. Refer to Addendum B.
4. Develop systems for internal and external reporting of information relating to medical errors.
5. Aggregation and trending of all risk management information to identify those events or processes which are associated with patient safety and/or medical errors.
6. Develop procedures to be followed related to the notification of patients and when appropriate their families about unanticipated error outcomes or medical errors. Refer to Addendum A.

Human Resources

1. Ensure each staff member participates in ongoing in-service, education, and training to increase his or her knowledge of job-related aspects of patient safety.
2. Assure ongoing in-service and other education and training programs emphasize specific job-related aspects of patient safety. As appropriate, this training incorporates methods of team training to foster the interdisciplinary collaborative approach to the delivery of patient care and reinforces the need and ways to report medical care errors.
3. Define a mechanism for the support of staff who are involved in medical errors or sentinel/critical events.

Patient and Family Education

1. Work with staff in the development of programs to enhance involvement by the patient and patient's family as appropriate to his or her condition as a partner in the health care process.
2. Oversee the development of programs to educate the patient and families about their role in helping to facilitate the safe delivery of health care.
3. Oversee the development of programs to educate patients and families regarding their responsibility for asking questions when they do not understand what they have been told about the patient's care or what they are expected to do.
4. Work with staff to assure patient education programs are implemented related to safe and effective use of medications.

Safety Risk Continuum of Care

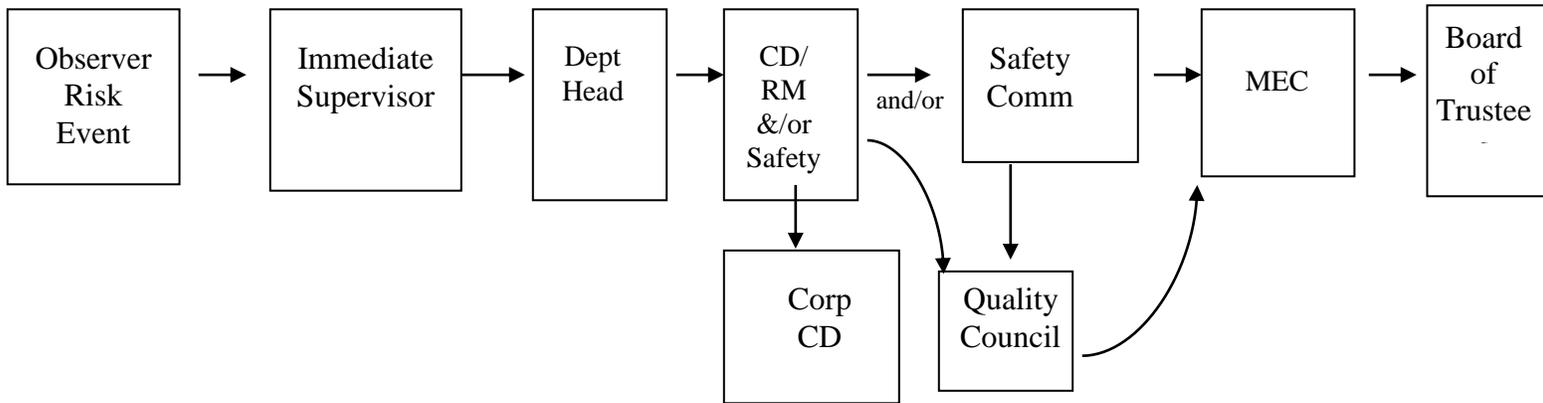

The patient and staff safety standards meet regulatory requirements throughout the continuum of care at Montevista Hospital. Department Heads review standards to ensure compliance for off-campus sites and when providing community services. Safety risk identification and follow through remains intact regardless of level of care or site location.

Safety Risk Event Documentation/Notification

It is the policy of Montevista Hospital that patients and, when appropriate, their families are informed about outcomes of care including unanticipated outcomes. It is the obligation of the responsible licensed independent practitioner or his or her designee to clearly explain the outcome of any treatment or procedure to the patient and, when appropriate, to the patient's family whenever those outcomes differ significantly from anticipated outcomes. Quality Council shall institute monitoring programs to assure information regarding unanticipated outcomes is shared with patients and, when appropriate, their families in a timely manner. Refer to Addendum A.

Risk events are to be accurately documented in the medical record. Patient and non-patient related events are to be documented using appropriate internal reporting tools. Routing of this documentation is diagramed below to ensure preservation of information to appropriate notification of key caregivers (i.e., attending physician, medical physician, therapist, etc.). To encourage accurate reporting the hospital supports the Supervisor's authority to impact changes to avoid similar risk events. This includes: time limited milieu modifications, import additional

staff or modify staffing pattern, notification of vendors or other department personnel to make necessary changes.

Performance Improvement Measurements Clinical Safety

1. Patient Satisfaction Survey: Created as a mechanism to review outcome study and recommend action to improve satisfaction scores.
2. Seclusion/Restraint Indicator: High volume of seclusion and restraints experienced. Corporate policy to reduce seclusion and restraints by 50%.
3. Staffing Effectiveness: Measurement of key indicators as they relate to patient and employee safety and staffing patterns.

Addendum A

The patients and family if applicable are to be informed of unanticipated outcomes by the attending physician/designee unless such information is deemed detrimental to the safety of the individual. Such a sanction requires a second opinion by a psychiatrist and administrative approval.

Patient/family notification is documented in the Progress Notes, signed by the attending physician and witness by an additional care giver attending the meeting. Should information be deemed detrimental, Risk Management is contacted and provides opportunity for the second opinion to be documented and reviewed by Administration. The approval or other direction is noted and followed accordingly.

Addendum B

Immediate response to medical errors:

- Follow communication algorithm for notification
- Provide care per policy and physician orders
- Supervisor to determine risk containment measure including
 - Staffing/personnel changes
 - Equipment replacement
 - Relocation of patients
 - Modification of processes/program
- Preservation of factual information
 - Event is to be documented immediately in Progress Notes and via Risk Management tools.
 - Equipment including videotapes, medical devices, instruments, photos are to be locked in Risk Management.
 - Event analysis is to occur within 24 hours of notification.
 - Events necessitating reporting to outside agencies (i.e., CPS, Adult Protective Services, Police, and insurance carriers) will be handled promptly and with full commitment to the governing regulations by the CEO or designee.

Policy:

It is the policy of MGGH to develop and implement, in consultation with the providers of health care, an internal Patient Safety Program to improve the health and safety of patients/residents who are treated at our facility.

Procedure:

1. The Patient Safety Plan at MGGH encompasses Acute care, Emergency room, surgical services, clinic and Home Maker Services and compliance with the Patient Safety Plan is mandatory.
2. Following approval of the safety plan by the Governing Body, the Medical Staff shall be notified as to the existence and requirements of the plan.
3. The Patient Safety Committee is comprised of a physician, a nurse from SNF, pharmacist, governing board member, risk manager, Infection Control Officer, Patient Safety Officer, and the Administrator

The Committee shall:

- Function under the authority of the Medical Staff
- Submit its patient safety plan to the Governing Board
- Meet monthly
- Investigate, report and formulate corrective actions related to alleged sentinel events
- Review Medical Equipment/devices safety and maintenance inspections
- Review and recommend actions related to medications events
- Review and investigate patient care related incident reports
- Additional tasks as assigned by the Medical Staff
- Annually review patient safety checklists and policies and consider any additional checklists and policies for appropriate adoption
- Revise check lists and policies to ensure they reflect the most current standards in patient safety protocols
- On or before July 1st of each year, submit a report to the Director of the Legislative Bureau for transmittal to the Legislative Committee on Health Care that includes information regarding the development, revision, and usage of the patient safety checklists and policies and a summary of the annual review conducted by the facility.

3. The Administrator shall appoint a Patient Safety Officer with the following responsibilities:

- Serve on the Patient Safety Committee
- Supervise the reporting of all sentinel events alleged to have occurred in the medical facility.
- Shall within 13 days of being notified of a Sentinel event or within 14 days of becoming aware without notification, report the date, time and brief description of the sentinel event to the health division, The Bureau of Licensure, Administrator and the Patient Safety Committee
- Take such actions as he/she determine necessary to ensure the safety of the patients as a result of an investigation of any sentinel event alleged to have occurred at the medical facility
- Report to the Patient Safety Committee regarding any actions taken
- The Patient Safety Officer may designate alternates to act in his/her absence. Kathy The Risk Manager will act as Patient Safety Officer in the absence of the Patient Safety Officer
- The Patient Safety Officer is responsible to review, investigate and act upon patient safety issues other than sentinel events at this facility, including medication errors, environmental issues and equipment and supply malfunction

4. Jan Kollodge RN DON has been appointed by the Administrator as Patient Safety Officer

POLICY: The Patient Safety Committee functions to enhance patient safety through data collection, reporting, investigation and evaluation of patient safety issues prior to an event and when an event occurs. All patient safety information will be confidential and reported through the Medical Staff Quality Assurance process.

PROCEDURE: The Patient Safety Committee shall:

- Receive reports from the Patient Safety Officer (PSO)
- Evaluate actions of the PSO in connection with all reports of sentinel events alleged to have occurred at MGGH
- Review and evaluate the quality of measures carried out to improve the safety of patients who receive treatment at MGGH
- Review and evaluate the quality of measures carried out by MGGH to prevent and control infections
- Make recommendations to the Governing Board of MGGH to reduce the number and severity of sentinel events and infections that occur at MGGH
- Monitor and document the effectiveness of the patient identification policy
- At least annually, review the patient safety checklists and patient safety policies appropriate for adoption for use by MGGH
- Revise a patient safety checklist and patient safety policy as necessary to ensure that the checklist or policy reflects the most current standards in patient safety protocols
- On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care with information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted in #3 above
- Forward Patient Safety Committee minutes/reports to the Medical Staff quarterly. Minutes will summarize MGGH patient safety activities.
- Report on a quarterly basis to the Governing Body of MGGH regarding:
 1. The number of sentinel events that occurred at MGGH during the preceding calendar quarter
 2. The number and severity of infections that occurred at MGGH during the preceding calendar quarter
 3. Any recommendations to reduce the number and severity of sentinel events and infections that occur at MGGH

PATIENT SAFETY DATA COLLECTION:

Patient safety data collection, review and reporting of the following patient safety events is a means of providing the safest patient care possible. Data collection will begin with the completion of a Quality Review Report.

- Sentinel events
- Adverse events
- Near Misses
- Medication errors and falls
- Equipment malfunctions
- Preventive corrective interventions

SUBJECT: MEETING AGENDA

APPROVED BY: _____ EFFECTIVE: 11/03 REVISED:

Patient Safety Committee Meeting Agenda

The Patient Safety Committee meets on the fourth Tuesday of each month.

Patient Safety officer: Name Here RN

Date:

Members Present:

Standard Agenda Items:

- 1. Sentinel Event**
- 2. Other Events**
- 3. Adverse Drug Events and medication errors**
- 4. Incident Reports**
- 5. Equipment/ Supply issues**
- 6. Root Cause Analyses Evaluation**

Old business:

New business:

Other:

SUBJECT: **EMPLOYEE TRAINING/EDUCATION**

REFERENCE 4003

DEPARTMENT: HOSPITAL WIDE

PAGE: 1 of 1

APPROVED BY: _____ EFFECTIVE: 11/03 REVISED: 6/21/16

POLICY:

It is the policy of MGGH that all employees and individuals contracted for patient care receive Patient Safety Training and are familiar with the job related aspects of patient safety and staff specific roles and responsibilities to actively support patient safety

PROCEDURE:

All staff will receive patient safety education and training during their new employee orientation and on an annual and as needed basis. Contracted individuals will be monitored for compliance with patients safety policies by the supervisor of the department the contracted individual is assigned to.

SUBJECT: INTERNAL EVENT REPORTING

DEPARTMENT: HOSPITAL WIDE

REFERENCE: 4004

PAGE: 1 of 1

APPROVED BY: _____ EFFECTIVE: 11/03 REVISED:

POLICY:

It is the policy of MGGH that prevention and reporting of harm to patients is the responsibility of all employees. Anyone with knowledge of an actual or patient safety event must report it.

PROCEDURE: Near Miss and Adverse Events

- Immediately notify your Department Director and complete a Quality Review Report.
- The supervisor will review and forward it to the Patient Safety Officer within 24 hours of receipt or the first work day following a week-end or holiday
- The Patient Safety Officer will review all reports and determine what specific actions are needed and forward them to Risk Management for review through the Quality Review Process
- All events will be reported to the Patient Safety Committee

SENTINEL EVENT REPORTING

Sentinel events signal the need for immediate investigation and response and any person employed by MGGH shall, within 24 hours after becoming aware that a sentinel event has occurred, notify the Patient Safety Officer of the sentinel event.

PROCEDURE:

- Immediately perform necessary health care interventions
- Notify the patient's Medical Provider and initiate all physician orders. If necessary contain the risk to others and preserve event related material that may require further investigation
- Document the facts in the medical record using concise, factual, objective and complete details
- Notify the appropriate department director and the Patient Safety Officer who will inform the Administrator and Risk Manager and in the case of an intentional unsafe act that results from gross negligence or possible criminal activity, report to the appropriate authorities.
- The Patient Safety Officer will notify the Bureau of Licensure and the Health Department on a form to be developed by them within the prescribed time restraints.
- All Sentinel events will be reported to and investigated by the Patient Safety Committee

POLICY:

It is the policy of MGGH to investigate all patient safety events that occur (actual event) or almost occurred (near miss) that caused or had the potential to cause harm to a patient.

PROCEDURE:

1. Upon notification of a patient safety event the Patient Safety Officer will review all pertinent data related to the event i.e. diagnostic testing, medication orders, medical records and interviews of the parties involved etc
2. Take any action deemed necessary at the time of the investigation
3. Form a plan to prevent recurrence of a similar event
4. In the event of a sentinel event, begin investigation immediately and take such actions necessary to ensure the safety of the patient.
5. Report the event and the results of the review, action taken, and the prevention plan to the Patient Safety Committee for their recommendations
6. The Patient Safety Officer will inform the appropriate supervisor of actions taken and the determinations of the Patient Safety Committee

SUBJECT: PATIENT SAFETY EVENT ANALYSYS

REFERENCE 4006

DEPARTMENT: HOSPITAL WIDE

PAGE: 1 of 1

APPROVED BY: _____ EFFECTIVE: 11/03 REVISED:

DEFINITIONS:

Aggregate Review Analyses: The process of examining data elements for common trends or patterns.

Root Cause Analyses: The process for identifying the basic or contributing factors associated with patient safety events. It identifies changes that could be made to the system to improve performance and to reduce the risk of adverse events or the recurrence of near misses with the ultimate goal of reducing or eliminating patient harm.

POLICY:

It is the policy of MGGH to track and trend data to identify familiar trends or circumstances so that system issues can be identified and improved and to conduct a Root Cause Analyses and action plan to prevent the recurrence of similar events

PROCEDURE:

1. The Patient Safety Committee shall collect data from each patient safety event to perform an Aggregate Review Analyses.
2. The Patient Safety Committee will conduct a root cause analyses and complete an action plan for all sentinel events focusing on system and process changes to improve performance and to reduce the risk of adverse events.
3. The Root Cause Action Plan will enumerate the risk reduction strategies, implementation, and evaluation of the effectiveness of actions taken.
4. The Root Cause Action Plan will be submitted to the Medical Staff for approval

POLICY:

A patient safety event is defined as any incident that occurred (actual event) or almost occurred (near miss) that caused or had the potential to cause harm to a patient and shall be reported to Patient Safety Officer via the Quality Review Report.

- Near Miss: An event or situation that could have resulted in harm to a patient but did not, either by chance or through intervention.
- Adverse Event: An occurrence associated with health care or services that may or may not result in harm to a patient. These include incidents such as medication errors and patient falls even if there is no harm or permanent damage to the patient.
- Sentinel Event: An event included in Appendix A ‘Serious Reportable Events in Health Care__2001 Update: A Consensus Report. Sentinel events signal the need for immediate investigation and proactive response from MGGH.
- Facility –acquired infection: A localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility including: 1. surgical site infections 2. ventilator-associated pneumonia 3. Central line-related bloodstream infections 4. Urinary tract infections

SUBJECT: SAFE MEDICAL DEVICES REPORTING TO THE FDA

REFERENCE 4009

DEPARTMENT: HOSPITAL WIDE

PAGE: 1 of 1

APPROVED BY: _____ EFFECTIVE: 11/03REVISED:

Safe Medical Devices Reporting to the FDA

POLICY:

It is the policy of MGGH to voluntarily report serious adverse events or product problems that are suspected to be associated with a drug or medical device to the FDA. All such events will be reported to the Patient Safety Officer and the Patient Safety Committee for review.

PROCEDURE:

The following reporting procedure will be followed

1. All adverse events or product problems will be reported to the Patient Safety Officer.
2. Department managers will be responsible for completion of the MED WATCH FDA reporting form (form 3500A)
3. The Patient Safety Officer will review and submit the completed form to
4. Forms are available in the Patient Safety Policy and Procedure manual

FDA
MedWatch HFD-410
5600 Fishers Lane
Rockville, MD 20857

POLICY:

Proper patient identification is required in order to prevent errors related to invasive procedures, medication administration, transfusion of blood products, and patient labeling of specimens. The use of patient identifiers improves the reliability of the patient identification process and decreases the chance of performing the wrong procedure on the wrong patient. It is the policy of MGGH to correctly identify patients prior to any procedures and before each interaction with a health care provider/

PROCEDURE:

The use of two patient identifiers is required to confirm a patient's identity.

1. Ask all patients for their NAME and DATE OF BIRTH prior to any treatments, procedures, or medication administration.
2. Label all specimen containers with the patient labels that are generated at admission.

MONITORING AND DOCUMENTATION:

1. Monitor medication errors related to wrong patient and report to Patient Safety Committee
2. Monitor incident reports related to wrong person procedures
3. Review the patient identification policies with the involved staff member
4. Perform a root cause analysis if indicated
5. Report as a sentinel event if indicated

POLICY:

Health Care Workers at MGGH are required to recognize and follow established nationally recognized standards of care.

PROCEDURE:

Nationally recognized standards of care are to be followed by all Health Care Workers relevant to their departments and to standards related to all departments involved in patient care. Established standards of care include, but are not limited to, the following:

1. Implementation of evidence based practice to prevent health care associated infections:
 - A. Hand hygiene based on CDC guidelines
 - B. CAUTI
 - C. Infections caused by multi-drug resistant organisms
 - D. Central line infections
 - E. Surgical site infections
 - F. Blood stream infections
2. Improve the accuracy of patient identification prior to any treatment, care, or services, using 2 patient identifiers
3. Report critical results of tests and diagnostics on a timely basis
4. Prevent pressure ulcers
5. Identify safety risks and prevent falls
6. Prevent wrong site, wrong patient, and wrong surgery
 - A. Mark the site
 - B. Time out before procedures
 - C. Surgical checklists
7. Improve the safety of medications
 - A. Label all IV medications accurately and completely
 - B. Use approved protocols for the initiation and maintenance of anticoagulation therapy
 - C. Maintain and communicate accurate patient medication records
 - E. 2 nurses to verify certain high risk medications before administration i.e. insulin, cardiac drips, heparin, etc.

SUBJECT: INFECTION CONTROL OFFICER

DEPARTMENT: HOSPITAL WIDE

REFERENCE # 4013

PAGE: 1 of 1

APPROVED BY: _____ EFFECTIVE: 10/1/11 REVISED:

POLICY:

MGGH has designated the DON as the Infections Control Officer for the facility which includes ER, OR, acute care, SNF, and the medical clinic. The Infection Control Officer also serves as the Patient Safety Officer at MGGH

RESPONSIBILITIES:

- Serves on the Patient Safety Committee
- Monitors the occurrences of infections to determine the number and severity of infections at the facility
- Reports to the patient safety committee concerning the number and severity of infections at the facility
- Shall take such action as he or she determines is necessary to prevent and control infections alleged to have occurred at MGGH
- Shall carry out the provisions of the infection control program adopted by NRS 439.865 and ensure compliance with the program
- Shall consult with the Health Division for education and technical assistance relating to infection control in medical facilities when indicated
- The Risk Manager will service as the Infection Control Officer in the absence of the Infection Control Officer. If neither one is available, the charge nurse is responsible.

POSITION REQUIREMENTS:

- Must be a Registered Nurse
- Must successfully complete a nationally recognized basic training program in infection control
- Must complete at least 4 hours of continuing education each year on topics relating to current practices in infection control and prevention
- MGGH shall maintain records concerning the required training

POLICY:

It is the policy of MGGH that when a patient at our facility has an infection, the provider of health care or the designee of the provider of health care shall, as soon as practicable, but not later than 5 days after the diagnosis is confirmed, inform the patient or legal guardian or other person authorized by the patient to receive such information that the patient has an infection. Notification of the patient may be delayed only if the patient does not have a legal guardian, has not authorized any other person to receive such information and:

1. Is not capable of understanding the information
2. Is not conscious or
3. In the judgment of the provider of health care, is likely to harm himself or herself if informed about the infection

If the provider of health care or the designee of the provider of health care delays providing information about an infection, such information must be provided as soon as practicable after:

1. The patient is capable of understanding the information
2. The patient regains consciousness
3. In the judgment of the provider of health care the patient is not likely to harm himself or herself if informed about the infection or
4. A legal guardian or other person authorized to receive such information is available

PROCEDURE:

1. At admission, all patients or their legal guardian sign a Release of Protected Health Information that lists who may be given information about their health condition
2. The provider of health care will consult this list when someone other than the patient must be given information about an infection
3. The provider of health care may authorize the Infection Control Officer, Risk Manager or other RN to inform the patient, legal guardian, or another person authorized by the patient of an infection
4. Notification will be verbal and will be documented in the medical record
5. If an infection is known or determined while the patient remains at MGGH, the patient or person authorized by the patient or the legal guardian will be notified whether the infection was acquired at the facility and of the apparent source of the infection

APPROVED BY: _____ EFFECTIVE: 07/12/10 REVISED:

POLICY:

Patient Safety policies and check lists have been developed by MGGH to ensure the safety of our patients. Staff compliance with these safety components will be ensured by monitoring, peer-to- peer communication, sanitation audits, education, and when possible video monitoring.

PROCEDURE:

Compliance will be measured using the following methods and reported at the monthly Patient Safety Committee Meeting. Violations will be reported to the appropriate supervisor.

1. Chart audits
2. Staff monitoring by Department Supervisors
3. Staff monitoring by the Patient Safety and Infection Control Officer
4. Environmental sanitation audits
5. Department specific education
6. Video monitoring when possible

PROTOCOL

SUBJECT: PATIENT SAFETY PROGRAM

NUMBER: DT-PI-02

Page 1 of 8

ORIGINAL DATE: 2/18/10

REVIEW/REVISE DATE: 7/18/13, 11/22/17

APPROVAL: _____ Agency Manager

APPROVAL _____ Local Governing Body

~~~~~

I. PURPOSE

To enhance patient care delivery and prevent adverse outcomes of care by employing a systematic, coordinated, and continuous approach to the improvement of patient safety.

II. PROTOCOL

The Patient Safety Program is supported by leadership’s promotion of a blame-free culture of safety that:

- 1. Facilitates reporting and follow-up on errors, adverse events, risks, and safety concerns.
- 2. Initiates, monitors, and takes action to reduce errors and risks of errors.
- 3. Reports findings and actions taken.

4. Educates employees to ensure their knowledge of and participation in the program.

### III. DEFINITIONS

1. Sentinel Event: An unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof. Serious injury specifically includes loss of limb or function. The phrase "or the risk thereof" includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. Such events are called "sentinel" because they signal the need for immediate investigation and response.
2. Near Miss: Any process variation which did not affect an outcome but for which a recurrence carries a significant chance of a serious adverse outcome.
3. Facility Acquired Infection: A localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:
  - a. Surgical site infections.
  - b. Ventilator-associated pneumonia.
  - c. Central line-related bloodstream infections.
  - d. Urinary tract infections.
4. Incident: An event that is not consistent with routine patient care or hospital procedure which either did not or could have resulted in injury, loss to a patient, employee, or visitor; or which may give rise to a claim against the hospital, an employee, or a member of the medical staff.
5. Error: An unintended act, either omission or commission, or an act that does not achieve its outcome such as medication errors and adverse drug events or reactions.

8. Dini-Townsend Hospital Protocol DT-PI-03 Sentinel Events.
9. Division of Public and Behavioral Health (DPBH) Discharge Interdisciplinary Continuity of Care Form MR 189 Nursing Discharge Instructions.

#### V. OBJECTIVES

1. To collect and analyze data to evaluate processes for opportunities to proactively reduce risk and correct potential system failures.
2. To respond appropriately to any error, adverse event, or sentinel event.
3. To incorporate recognition of patient safety as an integral job responsibility.
4. To encourage organizational learning about adverse or potential adverse events.
5. To improved hospital safety culture by encouraging reporting, measuring safety culture on a regular basis, and involving employees in addressing needed change.

## VI. SCOPE

- A. Areas of focus shall include sentinel events, near misses, errors, and other incidents related to:
  - 1. Facility-acquired infections.
  - 2. Medication errors.
  - 3. Adverse drug events.
  - 4. Drug recalls.
  - 5. Other product recalls.
  - 6. Patient falls.
  - 7. Other patient incidents.
  - 8. Blood and body fluid exposures.
  - 9. Communicable disease exposures.
  - 10. Influenza vaccination program.
- B. Data from external sources, including but not limited to:
  - 1. The Joint Commission.
  - 2. Centers for Medicare and Medicaid Services.
  - 3. Centers for Disease Control and Prevention.
  - 4. Institute for Safe Medication Practices.
  - 5. National Quality Forum.

## VII. PATIENT SAFETY COMMITTEE

- A. The Patient Safety Committee provides a multidisciplinary forum for the analysis of risk to patient safety and for the dissemination of information on identified risk for the purpose of improving patient care.
- B. Membership shall include:
  - 1. The Patient Safety Officer – Accreditation and QAPI Manager.
  - 2. The Agency Manager.

3. The Director of Nursing.
  4. The Director of Pharmacy Services.
  5. The Infection Control Officer.
  6. The Clinical Education Coordinator.
  7. The Environmental Safety Officer - Facilities Supervisor.
  8. The Medical Director or other member of the medical staff.
- C. The Patient Safety Committee has adopted patient safety checklists and policies, including, but not limited to:
1. Checklists related to specific types of treatment.
  2. Checklists ensuring that the patient's environment is sanitary.
  3. A discharge checklist which includes instructions concerning aftercare and medications.
  4. Any other checklist which may be appropriate to ensure patient safety.
  5. A protocol for appropriately identifying a patient with two personal identifiers.
  6. A hand hygiene protocol regarding standard precautions.
- D. The Patient Safety Committee shall meet monthly and shall:
1. Review reports and evaluate the actions of the Patient Safety Officer on sentinel events and other incidents.
  2. Review, discuss, and evaluate Root Cause Analyses and corrective actions associated with serious incidents.
  3. Review emerging research and best practice standards related to patient safety.
  4. Promote a hospital-wide coordinated effort to comply with The Joint Commission's National Patient Safety Goals.
  5. Review and disseminate information it receives to the appropriate committees or individuals, including, learned lessons from incident reports,

to increase awareness and promote continuous improvement and a just culture.

6. Make recommendations concerning identified risks and evaluate the implementation of corrective action plans.
7. Review the patient safety checklists and policies at least annually and revise as necessary.
8. Ensure compliance with the patient safety checklists and policies, which may include:
  - a. Hand hygiene monitoring.
  - b. Audits of sanitation materials.
  - c. Review of medical records.
  - d. Performance improvement indicator reports.
  - e. Communication to employees.

E. The Patient Safety Officer shall:

1. Serve on the Patient Safety Committee.
2. Manage the agency incident reporting system.
3. Report all sentinel events to the Nevada Sentinel Event Registry, and to The Joint Commission where applicable.
4. Conduct investigations, root cause analyses, and monitor corrective action plans for completion and effectiveness.
5. Take action in collaboration with the Patient Safety Committee and leadership to ensure the safety of patients.
6. Report quarterly, to the Local Governing Body, the number and severity of sentinel events, and any recommendations to reduce the number and severity of sentinel events.
7. On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on

Health Care. The report shall include a summary of any new checklist development, or, revision and use of the checklists and policies.

8. On or before March 1<sup>st</sup> of each year, submit a report to the Nevada Sentinel Event Registry, summarizing the previous calendar year's sentinel events and Patient Safety Committee activities.

## VII. SAFETY IMPROVEMENT ACTIVITIES

- A. Incident reporting trending and analysis.
- B. Medication error reporting and trending.
- C. Other potential errors/prescription interventions tracked by pharmacy.
- D. Infection surveillance and prevention.
- E. Monitoring hand hygiene.
- F. Tracking seclusion and restraint data.
- G. Appropriate implementation of input from patients, families, and employees.
- H. Environmental safety rounds.
- I. Environmental safety monitoring by Environment of Care Committee.
- J. Reactive analysis (root cause analysis) of incidents.
- K. Proactive risk assessment (failure mode effect analysis).
- L. Antibiotic Stewardship Program.
- M. Culture of Safety Employee Survey.

## VIII. EMPLOYEE EDUCATION AND TRAINING

- A. Employees are educated on safety issues, policies, and procedures during new employee orientation, including department specific orientation.
- B. Annual and bi-annual employee education includes safety education.
- C. Employees are updated on all new protocols or protocol revisions.

- D. Employees participate on teams for proactive or reactive analysis and are, thus encouraged to participate in the improvement of safety.
- E. Employees are provided feedback on the results of the Culture of Safety Survey.
- F. Employees participate with leaders in addressing Culture of Safety Survey data.

**I. Overview**

Northern Nevada Medical Center endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. Northern Nevada Medical Center operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that Northern Nevada Medical Center remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by Northern Nevada Medical Center to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at Northern Nevada Medical Center. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with Northern Nevada Medical Center policies. Northern Nevada Medical Center employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

**GENERAL STATEMENTS ON GOALS AND OBJECTIVES**

To support, maintain and enhance the quality of patient care delivered by:

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 2 of 20         |

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.
- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

Northern Nevada Medical Center mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.

|                                            |                                                                               |                            |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101          |
|                                            |                                                                               | Effective Date: 1/03       |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>3</b> of <b>20</b> |

- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

Northern Nevada Medical Center recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

### III. ROLES AND RESPONSIBILITIES

#### A. Risk Management/Patient Safety Officer

Northern Nevada Medical Center has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

#### B. Infection Control Officer

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 4 of 20         |

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility’s scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

**C. Patient Safety**

Northern Nevada Medical Center has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. Northern Nevada Medical Center has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 5 of 20         |

electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

**I. Facility Patient Safety Committee**

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

**Membership:**

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

Northern Nevada Medical Center PSC is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 6 of 20         |

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility’s claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the “Best Practice.”
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 7 of 20         |

- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
  
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

**II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

Northern Nevada Medical Center is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

**C. TERM Program**

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 8 of 20         |

function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

|                                            |                                                                               |                      |
|--------------------------------------------|-------------------------------------------------------------------------------|----------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101    |
|                                            |                                                                               | Effective Date: 1/03 |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page 9 of 20         |

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### D. MIDAS

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### E. ClearSight (STARS)

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

|                                            |                                                                               |                             |
|--------------------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101           |
|                                            |                                                                               | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>10</b> of <b>20</b> |

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility’s RM to the Governing Board of all claims activities.

**F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

**G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

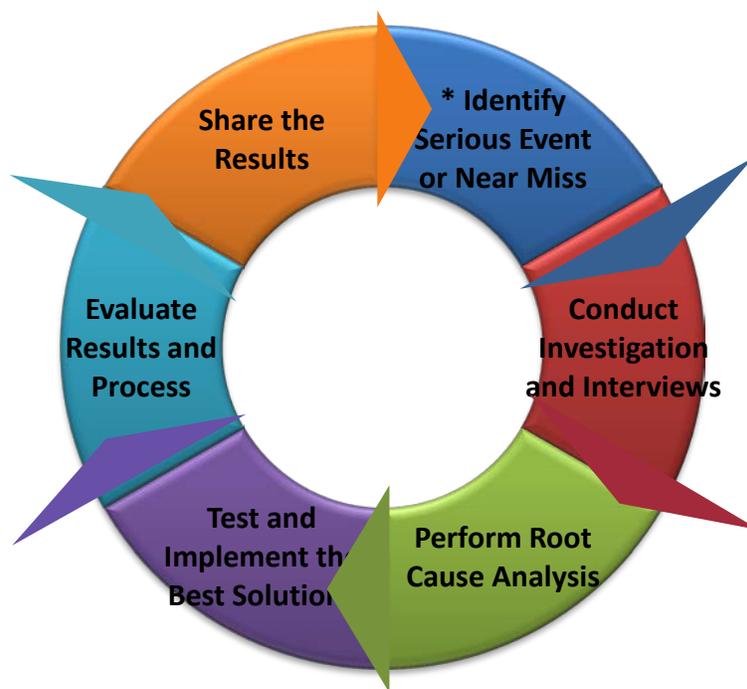

It is recommended that the Joint Commission’s root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the “5 Whys” technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking “why” no less than five times.

**RCA Responsibilities**

|                                            |                                                                         |                             |
|--------------------------------------------|-------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                         | Policy No. PI-101           |
|                                            |                                                                         | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05, 12/06, 2/09, 10/09, 2/11, 4/13, 2/14, 1/17, 02/18 | Page <b>11</b> of <b>20</b> |

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

|                                            |                                                                               |                             |
|--------------------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101           |
|                                            |                                                                               | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>12</b> of <b>20</b> |

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B**.)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

## I. Patient Safety Policies

|                                            |                                                                               |                             |
|--------------------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101           |
|                                            |                                                                               | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>13</b> of <b>20</b> |

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

**J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

**K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired

|                                            |                                                                               |                             |
|--------------------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101           |
|                                            |                                                                               | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>14</b> of <b>20</b> |

risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

#### IV. Risk Management Goals and Objectives 2018

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.
  - Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
  - events
- Retained surgical Items
  - Zero harm events - retained sponges
- Conduct risk management education to staff on identified key risk areas and topics

- Perform two "deep dive" claims and event analysis report on one high risk area- 4<sup>th</sup> floor and ED
- Reduce falls by 10% and/or meet goal set forth on dashboard.
- Reduce IV infiltrates by 5%.
- Reduce E-I risk incidents by 5%.
- Increase overall incident reporting by 10%.
- Increase medication bar code scanning to 90% compliance.
- Increase medication variance reporting by 10%.

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## VI. Evaluation/Review:

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program

consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## VII. Confidentiality

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## VIII. Approval of Patient Safety Plan

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility’s patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the

requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## ***Appendix A: Terms and Definitions***

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.” [http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

|--------------------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Title: Patient Safety/Risk Management Plan |                                                                               | Policy No. PI-101           |
|                                            |                                                                               | Effective Date: 1/03        |
| Reviewed: 12/07, 3/15, 2/16                | Revised: 10/04,10/05,<br>12/06, 2/09, 10/09, 2/11,<br>4/13, 2/14, 1/17, 02/18 | Page <b>18</b> of <b>20</b> |

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and

- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available

## PURPOSE:

1. The purpose of the Organizational Patient Safety Plan at Pershing General Hospital is to improve patient safety and reduce risk to patients through an environment that encourages:
  - a. Recognition and acknowledgment of risks to patient safety and medical/health care errors;
  - b. The initiation of actions to reduce these risks;
  - c. The internal reporting of what has been found and the actions taken;
  - d. A focus on processes and systems improvement;
  - e. Minimization of individual blame or retribution for involvement in a medical/health care error;
  - f. Organizational learning about medical/health care errors with implemented plans of corrections;
  - g. Support sharing knowledge to effect behavioral changes in itself and other healthcare organizations.
2. The Patient Safety Plan provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through the establishment of mechanisms that support effective responses to actual occurrence; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.
3. Patient care and the maintenance and improvement of patient safety, is a coordinated and collaborative effort. The approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at Pershing General Hospital. The Patient Safety Plan, developed by the interdisciplinary Safety Committee and approved by the medical staff, Governing Board and administration, in accordance with NRS 439.865, outlines the components of the organizational Patient Safety Program.

## **PATIENT SAFETY PROGRAM:**

### 1. Scope of Activities:

a. The scope of the Patient Safety Program includes an ongoing assessment, using internal and external knowledge and experience, to prevent error occurrence, maintain and improve patient safety. Patient safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed by the Risk Manager for presentation to the Safety/QA committee to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included the data analyses are:

1. No Harm Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome – that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
2. Mild-Moderate Adverse Outcome Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
3. Any Medication Error
4. Any Adverse Drug Reaction
5. Any Transfusion Reaction
6. Hazardous Condition – any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
7. Sentinel Event – is defined as an unexpected occurrence, involving facility acquired infection, death or serious physical or psychological injury or the risk thereof, including, without limitation, any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. The term includes loss of limb or function (NRS 439.830). It is called a sentinel event because it signals the need for immediate investigation and response.

The Mandatory reportable sentinel events include events that have resulted in an unanticipated death or major permanent loss of function.

b. The scope of the Patient Safety Program encompasses the patient population, visitors, volunteers and staff (including medical staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility. These will be an emphasis on important facility and patient care functions of:

1. Patient Rights including freedom from abuse/neglect;
2. Assessment of Patient;
3. Care of Patients to include special considerations;

4. Patient/Family and Lay Caregiver Education
5. Continuum of Care
6. Management of Information
7. Management of Human Resources
8. Management of the Environment of Care
9. Surveillance, Prevention and Control of Infection

2. Methodology:

- a. The Interdisciplinary Safety Committee is responsible for the oversight of the Patient Safety Program. The Safety Committee Chairperson will have administrative responsibility for the program, or the Safety Committee may assign this responsibility to another member of the committee (such as the Director of Risk/Quality Management).
- b. **All departments** within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences and potential occurrences to the Director of Risk/Quality Management, who will aggregate occurrence information and present a report to the Safety Committee on a monthly basis. The report will contain aggregated information related to type of occurrence, severity of occurrence, number/type of occurrences per department, occurrence impact on the patient, remedial actions taken, and patient outcome. The Safety Committee will analyze the report information and determine further patient safety activities as appropriate. Issues of great importance will also be reported to CEO/Administration as they occur.
- c. Through review of internal data reports and reports from external sources (including, but not limited to sentinel event report information, occurrence reporting information from state and federal sources and current literature), the Safety Committee will select at least one high-risk safety process for proactive risk assessment annually. The proactive risk assessment will include:
  1. Assessment of the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation. Identification of the possible effects of the undesirable variation on patients, and how serious the possible effect on the patient could be;
  2. For the most critical effects, a root cause analysis to determine why the undesirable variation leading to the effect may occur;
  3. Process and/or underlying systems will be redesigned to minimize the risk of threat undesirable variation or to protect patients from the effects of that undesirable variation;
  4. Redesigned process that are tested and implemented;
  5. Identify and implement measures of the effectiveness of the redesigned process;

6. A strategy for maintaining the effectiveness of the redesigned process over time and its implementation.
- d. Description of mechanisms to ensure that all components of the healthcare organization are integrated into and participate in the organization wide program.
  - e. Upon identification of a medical/health care error, the patient care provider will immediately:
    1. Perform necessary healthcare interventions to protect and support the patient's clinical condition.
    2. As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others – example: immediate removal of contaminated IV fluids from floor stock should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
  - f. Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.
  - g. Preserve any information related to the error (including physical information). Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
  - h. Report the medical/health care error to the staff member's immediate supervisor.
  - i. Submit the occurrence report to the Director of Risk/Quality Management per organizational policy.
  - j. Any individual in any department identifying a potential patient safety issue will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Director of Risk/Quality Management per organizational policy.
  - k. Staff response to medical/health care errors is dependent upon the type of error identifies;
    1. No Harm Errors – (including “no harm” medication errors) – staff will document appropriately in the medical record according to organizational policy, document the circumstance regarding the no harm error on an occurrence report form, submit the form to the Director of Risk/Quality management and notify their immediate supervisor.
    2. Mild-Moderate Adverse Outcome Errors (including medication errors) – Staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical

record and on an occurrence report – submitting the report to the Director of Risk/Quality Management per organizational policy.

- a. Mediation Errors – the staff member identifying a medication error (no harm and mild-moderate harm) will notify the Pharmacy Services Department of the event and the immediate department director.
3. Adverse Drug Reaction – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medial record and on an occurrence report – submitting the report to the Director of Risk/Quality Management per organizational policy. Staff will also notify the Pharmacy Services Department.
  4. Transfusion Reaction – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the Blood/Blood Component Transfusion Reaction Policy and Procedure. Blood will be saved for evaluation.
  5. Hazardous Condition/Patient Safety Issue – as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue, and then identify the hazardous condition or potential patient safety issue and will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Director of Risk/Quality Management per organizational policy.
  6. Sentinel Events – staff will perform any necessary clinical interventions to support and protect the patient and notify the patient/residents next of kin, guardian etc. and the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure.
  7. Near Miss – staff will report the near miss event to his/her immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to the Director of Risk/Quality Management.
- h. Established organizational policies (such as the Sentinel Event Policy) and/or the Safety Committee will determine the organizational response to medical/health care errors and occurrence. All sentinel events and near miss occurrence will have a root cause analysis conducted and report to CEO, CNO and Department Manager. The determination of the Safety Committee Members based on internal and external data analysis and prioritizing of patient safety criticality, will be determine.
    1. Further remedial action activities necessary for identified occurrences
    2. Proactive occurrence reduction activates
    3. Necessity and benefit of root cause analysis performance for identified occurrences or proactive reduction activities

- i. An effective Patient Safety Program cannot exist without optimal reporting of medical/health care errors and occurrences. Therefore, it is the intent of this institution to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the Safety Committee and the individual staff member's department supervisor determining the appropriate course of action to prevent error recurrence.
  - 1. Sentinel Events – staff members involved in a sentinel event occurrence will receive support from the Safety Committee regarding the staff member's professional and emotional reconciliation of the sentinel event. The Safety Committee encourages the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the Social Services Department, Human Resources Department and/or his or her department supervisor.
- j. Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. The Safety Committee will analyze error reporting data submitted through the Director of Risk/Quality Management for evidence of this information.
- k. Staff will educate patients and lay caregivers their role in helping to facilitate the safe delivery of care. The Safety Committee will request a report on a quarterly basis consisting of random record review verifying compliance with this educational process.
- l. The Patient Safety Program includes consideration, at least annually, of data, which includes information regarding barriers to effective communication among caregivers. The Safety Committee will also request on a quarterly basis, a report identifying the effectiveness of the organization to provide accurate, timely, and complete verbal and written communication among care givers and all other involved in the utilization of data.
- m. Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.
- n. Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally, per facility policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.
- o. Patient safety reports from the Safety Committee will be submitted to the organizational Quality Improvement Committee, which exists as the oversight committee for all Safety Committee. A monthly data report and recordings of meeting minutes will be forwarded to the Quality Improvement Committee, with all information submitted held under the auspices of the Quality Improvement Committee.

- p. A report will be forwarded to the Governing Board annually on the occurrence of medical/health care errors and actions taken to improve patient safety, both in response to actual occurrences and proactively.

The patient Safety Committee will be composed of (NRS439.875):

1. Patient Safety Officer
2. At least three providers of healthcare who treat patients at the medical facility including one member of the medical, nursing, and pharmaceutical staff.
3. One member of the executive or governing board of the medical facility

The patient Safety Committee will meet monthly.

# HealthSouth Rehabilitation Hospital of Las Vegas

|                          |                            |                                |
|--------------------------|----------------------------|--------------------------------|
| Policy#: 180             | Title: Patient Safety Plan | Category: Plans                |
| Policy Status: Published | Effective Date: 09/21/2017 | Last Reviewed Date: 09/21/2017 |

## PROCEDURE

### **PURPOSE:**

The purpose of the Patient Safety Program is to improve patient safety and reduce risk to patients, staff and visitors. Recognizing the effective medical/health care error reduction requires an integrated and coordinated approach; HealthSouth Rehabilitation Hospital of Las Vegas has developed an organization-wide safety program. The program supports the creation of an environment in which patients, their families, and organization staff leaders can identify and manage actual and potential risks to patient safety.

### **OBJECTIVE:**

It is the objective of HealthSouth Rehabilitation Hospital of Las Vegas to foster an environment to improve patient safety, establish mechanism to support effective responses to actual occurrences and to be proactive in the reduction of medical/health care errors. Patient safety will be a priority in new design and all relevant organization processes, functions and services.

## **SCOPE:**

The scope of the patient safety program will include compliance with standards identified by external regulatory agencies and accrediting bodies. Program activities will address occurrences ranging from "near misses" to sentinel events with serious adverse outcomes.

## **DEFINITIONS:**

Actual Event-an event occurred that reached the patient or individual (e.g., visitor fall, student injury, etc.).

Near Miss-an event occurred but it did not reach the patient because of chance alone or because of active recovery efforts by caregivers.

Unsafe Condition- circumstances that could cause adverse events (e.g., look-alike medications, confusing equipment, failure to use proper signage when floor is wet).

Sentinel Event- is defined as a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in any of the following:

- Severe temporary harm which is defined as critical, potentially life-threatening harm lasting for a limited time with no permanent residual effect, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition. (Hip fractures are always included)
- Permanent harm
- Death

For additional events also considered "sentinel" reference the HealthSouth Sentinel Event policy

## **PROCEDURES:**

A. The responsibility for management of the organization-wide patient safety program is assigned to the Director of Quality/Risk Management and Patient Safety Officer.

1. The Safety Committee and Quality Council will provide interdisciplinary input related to patient, visitor and staff safety.

2. Reports of safety related activities and issues would be presented to Department Managers, Senior Staff, Medical Staff via the Medical Executive Committee, and the Governing Board. This communication is confidential and for quality assurance purposes only.

B. Staff will report information relating the medical/health care events as outlined in Risk Management Electronic Event Reporting Policy.

1. Staff will be oriented to the Risk Management Policies on hire and through ongoing in-service and other education and training programs.

2. Staff will be oriented to their roles in preventing adverse occurrences as related to their specific job responsibilities and as a part of the organization-wide efforts to improve patient safety.

3. Staff will be oriented to the importance of reporting "near misses," as well as adverse occurrences.

4. Team training to foster an interdisciplinary, collaborative approach to patient care delivery and to reinforce the need and way(s) to report medical/health care errors will be provided as appropriate.

5. The Director of Quality/Risk Management, Department Managers, and Senior Staff are responsible for interacting with staff in a manner that ensures staff do not fear disclosure, embarrassment, blame or punishment for reporting potential or actual events related to patient safety.

6. The Director of Quality/Risk Management, Department Manager and/or Senior Staff member may request the assistance of external resources if a staff member(s) needs support in coping with a sentinel event.

C. Hospital leadership will identify barriers to effective communication among caregivers relative to patient care, redesign the process to

eliminate barriers and monitor for effectiveness. Specific attention will be directed to:

1. Process for ensuring accurate, timely, and complete verbal and written communication among care givers and all others involved in utilization of data, and
2. Test results relative to the management of the patient's condition.

D. All patients are entitled to information about all aspects of their health care, including information about clinically relevant unanticipated outcomes of care.

Patients and, when appropriate, their families are informed about the outcomes of care including unanticipated outcomes (i.e. sentinel events, State reportable events). Responsibility for disclosing unanticipated outcomes typically rests with the physician or designee who has overall responsibility for the patient's care. However, in some situations, other healthcare professionals may be deemed more appropriate to be responsible for disclosing the outcome. A hospital representative, preferably the Quality/Risk Director, Chief Nursing Officer or the Chief Executive Officer should be present for the initial conversation and any follow-up discussions that may occur with the patient and/or patient's representative.

E. The Director of Quality/Risk Management or designee will respond immediately to notification of significant medical/health events to a patient/visitor or staff member.

1. The Nursing Supervisor or Department Manager will contact the Risk Manager and/or Administrator/Administrator-On-Call to report events.
2. Action(s) will be taken to protect the patient/visitor/staff members as indicated per hospital plans and policies.
3. Factual information will be obtained and preserved for subsequent analysis. Such information is confidential for quality assurance purposes.

F. The facility will review historical risk management, Environment of Care (EOC), Program Improvement (PI) and Human Resources (HR) data for high volume, high risk problem trends in medical and care

processes, as well as unanticipated adverse occurrences affecting patients. These will be ranked as:

- A. Unsafe condition (Non-event)
- B1. Near Miss - No Harm/Didn't Reach Patient/Caught by Chance
- B2. Near Miss - No Harm/Didn't Reach Patient b/c of Active Recovery by Caregiver
- C. No Harm – Reached Patient No Monitoring Required
- D. No Harm – Reached Patient Monitoring Required
- E. Harm – Temporary, Intervention Needed
- F. Harm – Temporary, Hospitalization Needed
- G. Harm - Permanent
- H. Harm – Permanent, Intervention Required to Sustain Life
- I. Death

G. The facility will also perform intense analysis consistent with the Root Cause Analysis/Sentinel Event Policies, and reports as required by state, regulatory, and accreditation bodies. The Risk Management designee is responsible for ensuring compliance with reporting.

H. Emerging needs requiring reprioritizing performance improvement activities may be identified through data collection and assessment, unanticipated adverse occurrences affecting patients, changing regulatory requirements, significant patient and staff needs, changes in the environment of care, or changes in the community. Priority consideration in establishing performance improvement teams is given to:

1. Processes that affect a large percentage of patients.
2. Processes that place patients at risk, if not performed well, if performed when not indicated, or if not performed when indicated.

Processes that have been or are likely to be problem prone.

I. When designing/redesigning processes, Department Managers and staff will:

1. Incorporate information from within the organization and from other organizations about potential risks to patients, including the occurrence

of sentinel events in order to minimize risks to patients affected by the new or redesigned process, function or service.

2. Conduct literature searches to obtain evidence based medical and/or care practices to be included in process redesign.

3. Include analysis and or pilot testing to determine whether the proposed design/redesign is an improvement.

J. Hospital leadership will consider the importance of patient safety in:

1. Development of hospital-wide patient care programs, policies and procedures that describe how patients' care needs are assessed and met.

2. Development and implementation of the hospital's plan for the provision of patient care.

3. Decision-making structures and processes.

4. Implementation of an effective and continuous program to measure assesses and improves performance.

5. Development of an interdisciplinary culture that emphasizes cooperation and communication. The leadership role of coaching will be used to promote communication among services, individual staff members and less formal structures such as quality action teams, performance-improvement teams or members of standing committees.

6. Development of a process to involve the patient, as appropriate to his/her condition, as a partner in helping to facilitate the safe delivery of care.

a. Patients/family members are oriented on admission of the importance of reporting perceived risks and concerns about the patient's care per Patient and Customer Complaint and Grievance Policy.

b. Department Managers and Senior Staff will review Press Ganey Patient Satisfaction Survey questions related to patient safety and develop a corrective action plan to patient/family complaints or suggestions for improving safety as appropriate.

7. The Governing Board will appoint the Director of Quality and Risk Management (DQRM) as the Patient Safety Officer. The Patient Safety Officer/Director's role includes:

- Participating in hazard surveillance, event reporting, reviewing, and the development of patient safety policies and procedures.
- Analyzing and seeking resolution of patient safety issues and works with the appropriate staff to implement recommendations and to monitor patient safety improvement activities.
- Report on findings, recommendations, actions taken, and results of measurements through the hospital quality structure.

K. At least one (1) high-risk process is the subject of ongoing measurement and periodic analysis to determine the degree of variation from intended performance, a minimum of 1 proactive risk assessment every 18 months. The process selected will be based, in part, on the information identifying the most frequently occurring sentinel events and patient safety risk factors.

1. Assess the intended and actual implementation of this process to identify steps in the process where there is, or may be, undesirable variation (i.e. called potential "failure modes").
2. For each identified "failure mode, "identify the possible "effect(s)" and how serious the possible effect on the patient could be (i.e. "criticality "of the effect).
3. For the most critical effects, conduct a root cause analysis to determine the variation (failure mode) leading to that effect occur.
4. Redesign the process and/or underlying systems to minimize the risk of that failure mode to protect patients from the effect of that failure mode.
5. Test and implement the redesigned process.

6. Identify and implement measures of the effectiveness of the redesigned process.

7. Implement a strategy for maintaining the effectiveness of the redesigned process over time.

L. Hospital leadership will measure and assess the effectiveness of their contributions to improving patient safety. To accomplish these goals, leaders will.

1. Set measurable objectives for improving patient safety.

2. Actively request staff to periodically discuss their opinions, needs, perceptions of risks to patients and suggestions for improving patient safety. The actions taken as a result of this staff input will be reported to the MEC/GB at bi-annually.

3. Review data on staff willingness to report medical/health events.

4. Review data from Press Ganey Patient Satisfaction Survey related to patient safety.

5. Use pre-established, objective process criteria to assess their effectiveness in improving patient safety.

6. Draw conclusions based on their findings and develop and implement improvement in their activities.

7. Evaluate their performance in supporting sustained improvement.

M. The DQRM will report at a minimum quarterly to the Governing Board occurrences of medical/health events and actions to improve patient safety.

# Patient Safety Plan

2017

This plan was created and revised by the Renown Health's Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes. In addition the plan is intended to encourage recognition, reporting, and acknowledgment of risks to patients, visitors, and employees as well as reduce medical/healthcare errors and /or preventable events.

## Patient Safety Plan

### Contents

|                                                             |   |

## Commitment to Patient Safety

---

Renown Health is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Renown Health's Patient Safety program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Honest, open communication to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and values for each patient, family member, employee, and other healthcare providers.
- Responsibility for safety related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible patient outcomes.
- Incorporation of evidence-based safety practice guidelines to deliver high quality healthcare.
- Education of staff, physicians, patients and their families to promote patient safety and continuous quality improvement.

## Scope and Purpose

---

This Patient Safety Plan applies across the entire Renown Health organization.

All staff and physicians in Renown Health are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare performance improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve patients and their families.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

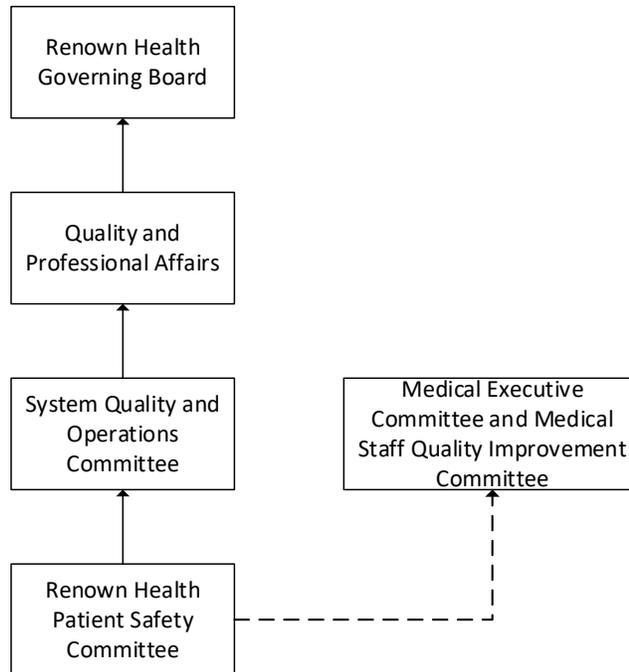

- Staff and physicians contributing their knowledge, vision, skill, and insight to improve the processes of patient safety
- Decisions made based on data and facts, with patient safety being considered
- Customer-focus including patients, families, and visitors
- System-based thinking
- Utilization of trained, expert staff and physicians.

## Roles and Responsibilities

---

The Renown Health Patient Safety Committee ensures that the Patient Safety Plan is promoted and executed successfully as indicated in NRS439.875.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), the Renown Health Patient Safety Committee is comprised of:
- The Renown Health Infection Control Officer;
- The Renown Health Patient Safety Officer;
- At least three providers of healthcare who treat patients, including at least one member of the medical, nursing and pharmaceutical staff of the medical organization; and
- One member of the executive or governing body of the medical organization;
- A representative from Executive Leadership.

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy through event review when applicable.

- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the organization to improve the safety of patients.
- Review and evaluate the quality of measures carried out by the organization to prevent and control infections.
- Make recommendations to the executive or governing body of the organization to reduce the number and severity of sentinel events and infections.
- At least once each calendar quarter, report to the executive or governing body of the organization regarding:
  - (1) The number of sentinel events that occurred;
  - (2) The number and severity of infections that occurred; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the Renown Health Patient Safety Committee.
- Supervise the reporting of all sentinel events alleged to have occurred, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred.
- Report to the patient safety committee directly or through his/her designee any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the Renown Health Patient Safety Committee.
- Monitor the occurrences of infections to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections either directly or through his/her designee.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Quality and Professional Affairs Committee of the Renown Health Board

- Provide vision and leadership to Patient Safety process, and develop and foster a safe learning and improving culture.
- Ensures the priorities of patient safety are aligned with the strategic priorities of the health system.

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events and hospital acquired infections including:

- Number of sentinel events from previous calendar month
- Number of hospital acquired infections that occurred in the organization
- Corrective action plans for the sentinel events and infections.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed
  - Monitor and document the effectiveness of patient safety policies.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

### Root Cause Analysis

Renown Health will use Root Cause Analysis (RCA) to determine the contributing factors and the underlying reasons for the deficiencies or failures. Transformational Health Care principles and methods are incorporated into Renown Health’s RCA process.

An RCA is a process for identifying the root causes of problems. It follows the principles of Just Culture by focusing on processes, instead of individuals.

#### Root Cause Analysis (RCA) Team Responsibilities

RCAs are conducted for all identified sentinel events and significant events/near misses involving complex process failure. Results of significant RCAs will be reported and monitored by the Renown Health Patient Safety Committee.

- Root Cause interviews, analysis, investigation, and corrective action plan implementations
- Participates in the RCA meetings and discussions
- Communicate honestly and openly about data and facts to the team members and their supervisors/leaders
- Incorporates the principles of Just Culture in the RCA process.

**Causal Chain (5 Whys)** technique will be used in Renown Health to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” repeatedly.

### Data Collection and Reporting

Data drives quality and patient safety efforts. Renown Health uses Midas and other databases for tracking sentinel events, healthcare infections, and other patient safety related data.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Patient Safety plan include the data from:

*Renown Health Patient Safety Plan*

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the organization;
- Other personnel who provide treatment or assistance to patients;
- Employees who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the organization; and
- Persons with whom the organization enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The Renown Health Patient Safety Committee reviews and approves annually patient safety checklists based on policy.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The Renown Health Infection Prevention Plan and Program is established and approved by the Renown Health Infection Control Committee. Regular reports and updates regarding the Infection Prevention Program are provided to the Patient Safety Committee.

## Approval of Patient Safety Plan

---

The Renown Health Patient Safety Plan is reviewed and updated annually and is approved by the Quality and Professional Affairs Committee of the Renown Health Board.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

# Saint Mary's Regional Medical Center:

## PATIENT SAFETY PLAN

DATE: 01/26/2018  
VERSION: 01

This plan was created and revised by Saint Mary's Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

All documents, materials and/or information prepared or created for the purpose of compliance with state law and/or peer review are confidential and deemed protected by the confidentiality provisions of any subsequent federal or state statute providing protection for related activities. Patient Safety files and their entire contents will be clearly marked —CONFIDENTIAL--and should not be copied or distributed without the advice of Legal Counsel.

## Commitment to Patient Safety

---

Saint Mary's Regional Medical Center is committed to providing quality healthcare to all patients. The Patient Safety Plan serves as a framework to establish and maintain a safe patient care environment. It expands the organization-wide support for risk management, performance improvement, information management, education, human resources and patient's rights by implementing patient safety standards, measuring and monitoring their effectiveness, and creating a "culture of safety" as part of the overall quality program.

### Mission, Vision, and Values

In support of our mission, vision, and values, Saint Mary's Patient Safety program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

### Scope and Purpose

---

The scope of this Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
  - Visitor safety
  - Employee safety
- A. Saint Mary's recognizes that patients, staff and visitors have the right to a safe environment. Therefore, the organization commits to undertaking a proactive approach to the identification and mitigation of medical errors through the integration into and participation of all components of the hospital into the hospital wide program. This includes Performance Improvement, Risk, Infection Control and EOC programs.
  - B. The Patient Safety Plan promotes the use of internal and external knowledge and experience to identify, analyze, and prevent the occurrence of medical / healthcare errors and identify areas of opportunity to maintain and improve patient safety.
  - C. Patient safety information will be analyzed from aggregated data reports. All types of events can be addressed including "no harm", "near misses", and "sentinel events".

These reports will be reported to appropriate hospital and Medical Staff committees and to the Governing Board at regular intervals. The aggregate data will be used to prioritize organization-wide patient safety efforts.

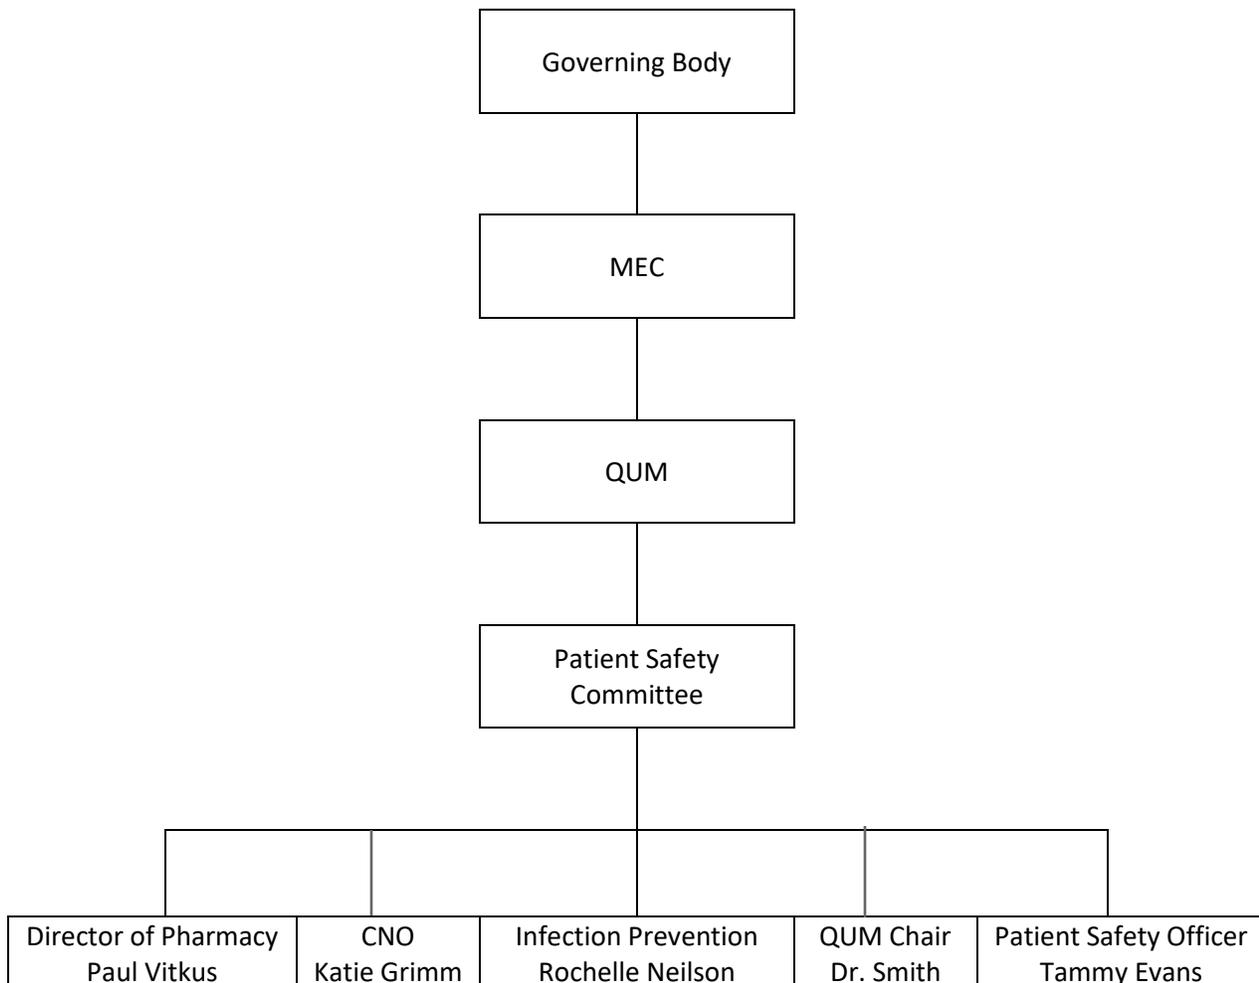

- D. The organization also recognizes that despite our best efforts, errors can and will occur. Therefore, it is the intent of the organization to respond quickly, effectively, and appropriately when an error does occur.
- E. The organization also recognizes that the patient has the right to be informed of the results of treatment or procedures whenever those results differ significantly from anticipated results.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below

**Patient Safety Committee Responsibilities** (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

**Patient Safety Officer Responsibilities** (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

- Selects at least one high-risk patient safety process for proactive risk assessment (FMEA) at least every 12-18 months. Coordinates the process throughout this period.
- Presents Patient Safety reports to all departments.
- Develops, and recommends new policies and procedures for patient safety based on analysis of data from events, and other relevant information.
- Works in conjunction with the EOC Chair to prioritize risks, review and analyze data and performs risk analysis as needed to address the safety of the patient environment.
- Maintains the confidentiality and legal privilege, as appropriate, of all data and information.
- Facilitates patient safety orientation and in-service education programs.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Patient Safety Plan

| Objective                                            | Goals                                                                                                                                                                                                | Plan                                                                                                                                                                                                                                                                                                                                                                                             | Planned Completion Date | Responsible Party |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-------------------|
| Improve Hospital Handoffs & Transitions              | Use TC tools to standardize handoffs within and across hospital departments. Goal: Improve Hospital Handoffs & Transitions by 10% or more by the next Safety Attitude Survey. Current AHRQ value 16% | Saint Mary's will implement a performance improvement team with a bottoms-up approach to problem solving led by bedside employees. We will collaborate with physicians, nurses, and non-clinical staff to address both clinical and non-clinical processes associated with handoff communication. We will have a bias toward action implementing small tests of change utilizing the PDSA model. | July 1, 2018            | Name Here         |
| Reduce Mislabeled Specimens                          | Use standardized data collection and process review to determine causation links                                                                                                                     | Saint Mary's will implement a mislabeled specimens committee to review data and report progress towards zero events to QUM                                                                                                                                                                                                                                                                       | July 1, 2018            | Name Here         |
| Improve response rate of AHRQ Safety Attitude Survey | Increase respondents by 30%                                                                                                                                                                          | Focus on patient care areas by removing non-clinical departments from denominator                                                                                                                                                                                                                                                                                                                | November 30, 2018       | Name Here         |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event."

Saint Mary's will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, which we will use to test the

changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

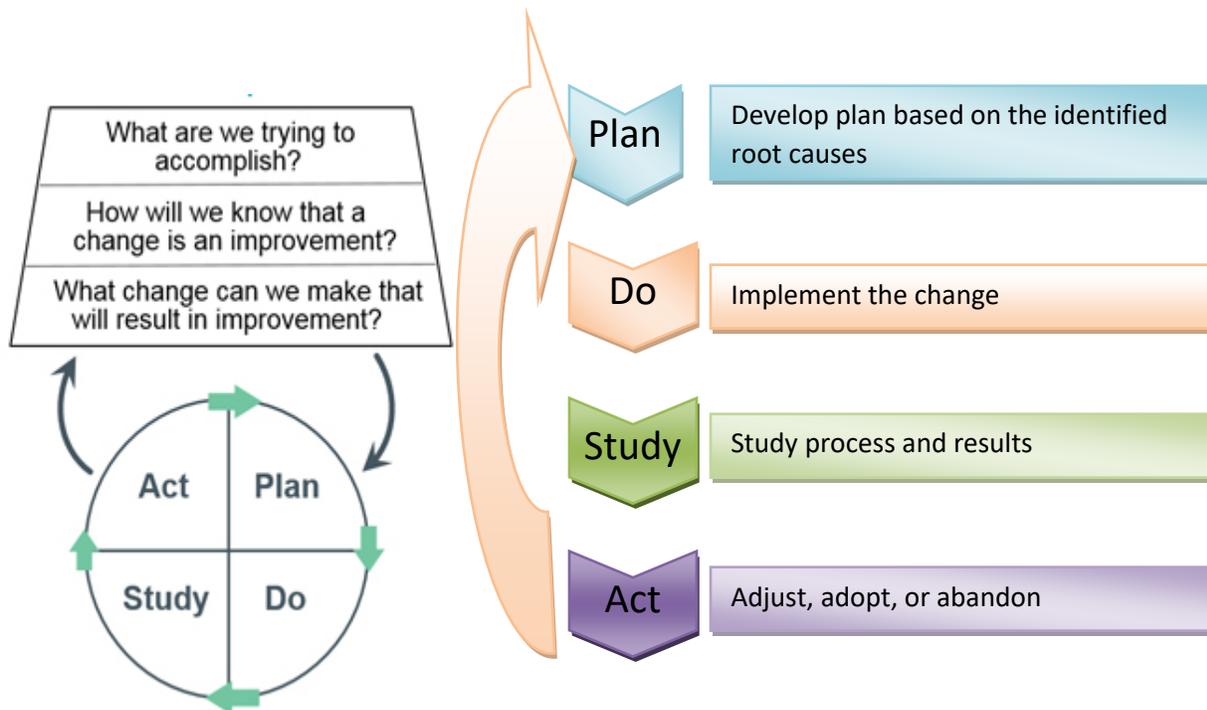

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Saint Mary's to explore the cause and effect relationship underlay a problem. One can find the root causes by asking "why" no less than five times.

## Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?

- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

In order to reduce the likelihood of patient incidents and negative outcomes, Saint Mary's shall track the frequency and type of medical errors and compile them in order to learn from and prevent future negative occurrences.

1. External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:
  - a. AHRQ: Agency for Healthcare Research & Quality
  - b. CDC: Centers for Disease Control and Prevention
  - c. CMS: Centers for Medicare & Medicaid Services
  - d. NQF: National Quality Forum
  - e. NHSN: National Healthcare Safety Network
  - f. TJC: The Joint Commission
2. Internal data sources:
  - a. Risk incident reports with database compilation
  - b. Adverse Drug Events and Adverse Drug Reactions
  - c. Data from patient complaints
  - d. Risk Management and Safety findings
  - e. Compliance findings
  - f. PI and special study findings
  - g. Infectious Disease information
  - h. Employee surveys
3. Risk Assessment (Failure Mode and Effect Analysis)

An assessment that examines a process in detail including sequencing of events; accesses actual and potential risk, failure, points of vulnerability; and through a logical process, priorities areas for improvement based on the actual or potential patient care impact (criticality).

4. Data Analysis

Analysis of collected data will be undertaken to monitor and identify levels of performance, trends or patterns that vary significantly from expected outcomes and the need for possible change/improvement in systems or processes.

5. Process Improvement

When undesirable outcomes are identified, the hospital shall involve the personnel, resources, disciplines, and department/services most directly involved with the process to reduce future risk.

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                    | Annually                                                                                       |
|------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

**Assessment of the Patient Safety Plan**

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

**Patient Safety Checklists and Patient Safety Policies**

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;

*Patient Safety Plan*

- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. Saint Mary's has a separate Infection Prevention Plan developed by our certified Infection Preventionist. This document is available upon request.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

### Approvals

|                                       |       |
|---------------------------------------|-------|
| _____                                 | _____ |

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);

- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

## Appendix B: Patient Safety Goals

---

**Goal 1** - Improve the accuracy of patient identification.

**NPSG.01.01.01**

Use at least two patient identifiers when providing care, treatment, and services.

**NPSG.01.03.01**

Eliminate transfusion errors related to patient misidentification.

**Goal 2** - Improve the effectiveness of communication among caregivers.

**NPSG.02.03.01**

Report critical results of tests and diagnostic procedures on a timely basis.

**Goal 3** - Improve the safety of using medications.

**NPSG.03.04.01**

Label all medications, medication containers, and other solutions on and off the sterile field in perioperative and other procedural settings.

Note: Medication containers include syringes, medicine cups, and basins.

**NPSG.03.05.01**

Reduce the likelihood of patient harm associated with the use of anticoagulant therapy.

Note: This requirement applies only to hospitals that provide anticoagulant therapy and/or long-term anticoagulation prophylaxis (for example, atrial fibrillation) where the clinical expectation is that the patient's laboratory values for coagulation will remain outside normal values. This requirement does not apply to routine situations in which short term prophylactic anticoagulation is used for venous thrombo-embolism prevention (for example, related to procedures or hospitalization) and the clinical expectation is that the patient's laboratory values for coagulation will remain within, or close to, normal values.

**NPSG.03.06.01**

Maintain and communicate accurate patient medication information.

**Goal 6** - Reduce the harm associated with clinical alarm systems.

**NPSG.06.01.01**

Improve the safety of clinical alarm systems.

**Goal 7** - Reduce the risk of health care-associated infections.

**NPSG.07.01.01**

Comply with either the current Centers for Disease Control and Prevention (CDC) hand hygiene guidelines or the current World Health Organization (WHO) hand hygiene guidelines.

**NPSG.07.03.01**

Implement evidence-based practices to prevent health care-associated infections due to multidrug-resistant organisms in acute care hospitals.

Note: This requirement applies to, but is not limited to, epidemiologically important organisms such as methicillin-resistant staphylococcus aureus (MRSA), clostridium difficile (CDI), vancomycin-resistant enterococci (VRE), and multidrug-resistant gram-negative bacteria.

**NPSG.07.04.01**

Implement evidence-based practices to prevent central line-associated bloodstream infections.

Note: This requirement covers short- and long-term central venous catheters and peripherally inserted central catheter (PICC) lines.

**NPSG.07.05.01**

Implement evidence-based practices for preventing surgical site infections.

**NPSG.07.06.01**

Implement evidence-based practices to prevent indwelling catheter-associated urinary tract infections (CAUTI).

Note: This NPSG is not applicable to pediatric populations. Research resulting in evidence-based practices was conducted with adults, and there is no consensus that these practices apply to children.

**Goal 15** -The hospital identifies safety risks inherent in its patient population.

**NPSG.15.01.01**

Identify patient at risk for suicide.

1. Conduct a risk assessment that identifies specific patient characteristics and environmental features that may increase or decrease the risk for suicide.
2. Address the patient's immediate safety needs and most appropriate setting for treatment.
3. When a patient at risk for suicide leaves the care of the hospital, provide suicide prevention information (such as a crisis hotline) to the patient and his or her family.

**Universal Protocol**

**UP.01.01.01**

Conduct a pre-procedure verification process.

**UP.01.02.01**

Mark the procedure site.

**UP.01.03.01**

A time-out is performed before the procedure.

**Appendix C: RCA**

---

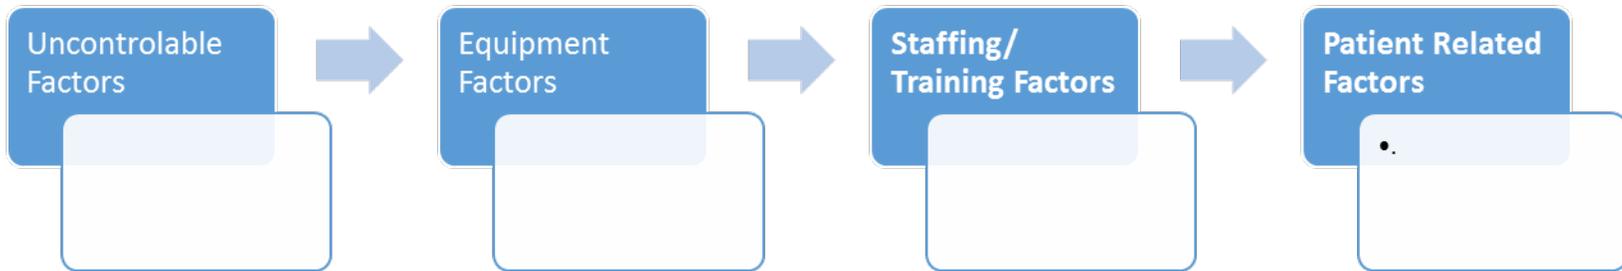

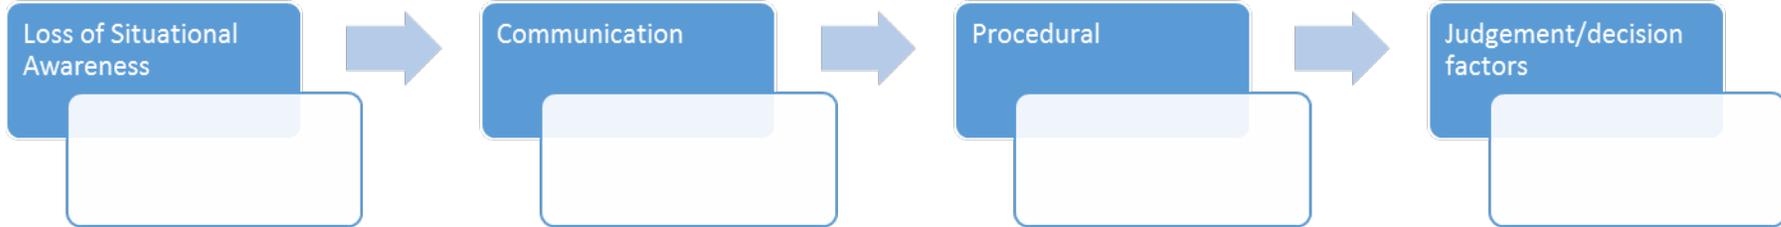

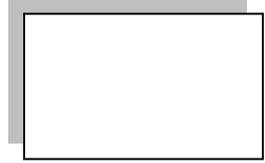

**Narrative:**

**Key Factors:**

**Timeline:**

| Date / Time | Description of Event as relates to RCA | Concerns Noted | Employee(s) involved |
|-------------|----------------------------------------|----------------|----------------------|
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |
|             |                                        |                |                      |

| <b>Universal Protocol</b>                                                                                                               |                             |                                                                                                                                                        |

**POLICY:** Universal Protocol (Procedure Verification, Correct Site Management and Time Out For Invasive Procedures)

All patients undergoing a surgery or invasive procedure are to be considered at risk for the potential of a wrong patient, procedure or wrong site surgery/invasive procedure. The process to prevent wrong patient, wrong procedure and wrong site surgery or invasive procedure includes all required elements of the *Universal Protocol*. To assure that the correct procedure (operative or invasive) is performed on the correct patient and body part or site. Certain patients are considered at higher risk for error such as those undergoing multiple procedures with one or more physicians, those undergoing emergency procedures, or those patients that have unusual characteristics such as a physical deformity or massive obesity.

**DEFINITIONS:**

Procedure Verification: Includes verification of patient, procedure and site and as applicable, any implants, diagnostic/radiology results, blood, devices and special equipment (as appropriate to the type of surgery or procedure) AND is applicable to all departments performing surgical or invasive procedures, inclusive of bedside procedures.

Invasive Procedure: Any procedure performed which involves a puncture or incision of the skin, or insertion of an instrument or foreign material into the body, including but not limited to percutaneous aspirations, biopsies, cardiac and vascular catheterization, central line placements, epidurals and endoscopies. This policy does not apply to certain routine minor procedures such as peripheral IV line placement, insertion of an NG tube or urinary catheter insertion.

Procedure Room: Any room where a surgical or invasive procedure may occur to include the patient's bedside.

Procedure Personnel: The RN or credentialed personnel who are participating in the invasive procedure

**PROCEDURE:****A. General Information**

- Procedures NOT within the Scope of the Universal Protocol and this policy:
  - Venipuncture
  - Peripheral intravenous line placement
  - Insertion of nasogastric tube
  - Urinary catheter placement
  - ECT (electroconvulsive therapy)
  - Closed reduction
  - Radiation oncology
  - Lithotripsy (this does have laterality, but the stone is visualized during the procedure)
  - Dialysis (except insertion of the dialysis catheter)
  
- All other invasive procedures are within the scope of the Universal Protocol and this policy.
  
- Department staff and physicians participating in a surgical or invasive procedure will actively participate in the Procedure Verification process (to include pre-procedure verification, site marking, and time out) as described in this policy, to assure the correct patient, procedure and site (as applicable) is assessed prior to any surgical or invasive procedure. Staff will document the verification steps in the medical record.
  
- Anytime there is a discrepancy in the Procedure Verification process, the person discovering the discrepancy will re-verify all the previously completed steps against the surgery schedule, the history and physical, the permit, the patient and notify the physician and department manager. The procedure will not begin until clear verification of the patient, procedure and/or site is completed.
  
- All actual and "near miss" wrong patient, wrong procedure or wrong site procedures will be reported promptly to the Department Manager or designee and Risk Manager.

**B. Pre-Procedure Verification**

- Verification of the correct person using two identifiers (patient's name & date of birth), correct site, and correct procedure will occur with the patient/family/legal representative involved, awake and aware, if possible and documented.
  
- Additionally, persons responsible for scheduling the procedure, completing preadmission testing/assessment and admitting the patient will verify the procedure and site with the physician, physician's office or physician order.
  
- Pre-procedure verification will occur at the following times:
  - At the time the procedure is scheduled (to include implant information if applicable).
  - At the time of preadmission testing & assessment
  - At the time of admission or entry into the facility for a procedure, whether elective or emergent
  - Before the patient leaves the pre-procedure area (i.e. Same Day Unit or Pre-op Holding) or enters the procedure room

- Anytime the responsibility for care of the patient is transferred to another member of the procedural care team, (including the anesthesia providers), the above information will be communicated during the hand-off
- Additionally, in the pre-procedure area, procedure verification will include the following for patients undergoing a surgical or invasive procedure and be documented. All applicable items will be available in the procedure room/area and matched to the patient:
  - Identification of the procedure scheduled and identified in physician documentation
  - Presence of current, updated and complete History and Physical
  - Consent accurate, complete and signed by patient/representative
  - Provider assessment (MD, Nursing, PA, APN) and pre-anesthesia /procedural sedation assessment completed and documented
  - Marking of the procedure site by the physician prior to the procedure (if applicable)
  - Verification of the correct patient position
  - Availability and documentation of correct and labeled implants, diagnostic/radiology results, blood, devices and special equipment, or special requirements
- Scheduled procedures that involve anatomical sites that have laterality, surface (flexor, extensor), levels or specific digits or lesions, the word(s) left or right or bilateral will be written out fully on the procedure/operating room schedule and on all relevant documentation including the procedural consent or permit.

### C. Site Marking

- Site marking is conducted for all procedures involving incision or percutaneous puncture or insertion.
- The marking takes in to consideration anatomical laterality, the surface (flexor, extensor), the level (spine) or specific digit or lesion to be treated.
- In cases where bilateral structures are removed (such as tonsils or ovaries) the site does not need to be marked.
- If one side is definite and the other is possible, only mark the definite site (example: right ovary, possible left ovary, only mark the right side).
- The only exceptions to site marking are:
  - Midline, single organ procedures
  - When both bilateral structures are to be removed.
  - Endoscopies without laterality
  - Procedures when there is no pre-determined site of insertion, such as cardiac catheterization, interventional radiology and amniocentesis.
  - When the use of direct imaging (fluoro x-ray, ultrasound imaging, CT fluoro or MRI imaging) is utilized by a physician present from the time the site is selected through the completion of the procedure. This applies to all cases where the performing physician uses imaging to select and/or navigate and/or complete the procedure.
- The site marking is completed for all procedures involving incision or percutaneous puncture or insertion by the physician or proceduralist performing the procedure prior to the time the patient is moved in to the procedure room/location. The patient/family/legal representative should be involved in the site marking process.

- The physician or proceduralist will identify the patient (using the two patient identifiers) and verify the procedure and site with the patient/family/legal representative.
- In collaboration with the patient or patient's family member, the site will be marked with the initials of the physician performing the procedure using an indelible marker prior to the patient being transferred to the procedure/operating room unless the anatomical site is exempted per policy.
- The site initialed will be made at or adjacent to the incision site, and must be visible after the patient is prepped and draped and positioned in the final position.
- If the procedure involves multiple sides/sites during the same operation, each side and site must be initialed.
- Do not mark any non-operative site(s).
- In limited circumstances, the licensed independent practitioner may delegate site marking to an individual who is permitted by the organization to participate in the procedure, is familiar with the patient, will be present when the procedure is performed, and is either qualified through a medical residency program or is a licensed individual who performs duties requiring collaboration or supervisory agreements with the licensed independent practitioner (i.e., PA, APN).
- For spinal surgery, a two-stage marking process will occur as follows:
  - The general level of the procedure (cervical, thoracic, lumbar, or sacral) will be initialed pre-procedure, along with an indication of the right vs. left if applicable.
  - Intra-operatively, the exact interspace will be precisely marked using the standard intraoperative x-ray.
- The site will not be marked with the letter "X" or the word "No."
- A new marking pen will be used for each patient
- If the patient refuses to be marked, procedural personnel will re-educate the patient regarding the importance of site marking and document. If the patient still declines to be marked, the procedural personnel will notify the physician, document what alternative means was utilized for marking. The patient's refusal to be marked must be resolved between the procedural physician and the patient prior to the invasive procedure.
- If the consent was signed and the patient was marked accordingly, and then it was discovered that the site was incorrect before the incision was made, the procedure can proceed at the discretion of the procedural physician. The procedural personnel as per hospital policy will document an occurrence report.

#### **D. Difficult to Mark Site:**

- Sites which are technically difficult or anatomically impossible to mark or minimal access procedures treating a lateralized internal organ, will apply the alternative process below:
- Examples: Arm in cast, ureters through a cystoscope, teeth, or premature infants.

- After verifying with the patient/family/legal representative that the patient identification and procedural information is correct, the procedural personnel will place a patient sticker and the procedural information on an orange band, indicating the 'side' with 'Left' or 'Right'.
- The orange band information will be verified and initialed by the physician, then placed on the patient's ankle. If the patient's anatomy or procedural draping prevents visualization of the band during the time out process then the band will be placed on the patient's wrist.
- The orange band will be removed in the PACU or post-procedure recovery location.
- Teeth. The physician will initial on the dental radiographs or dental diagram each tooth involved in the surgery/procedure. The dental radiograph or diagram will be used during the time-out before the procedure to identify the site during the "time-out".
- Premature Infants: The orange band will be applied as in no. 1 above.

#### **E. Time Out**

- The time out is the suspension of all other activities to permit all members of the surgical/ procedural team to focus on active confirmation of the required time out elements. The circulating nurse or technologist will initiate the time out, although any member of the team may do this. These elements include:
  - Correct Patient: Patient identification using the two patient identifiers (patient name & date of birth).
  - Correct Site: Verification/confirmation of procedure site and side as specified on the consent and visualization of site marking that it is correct and agrees with consent
  - Correct Procedure: Accurate procedure and consent form per physician's order.
  - Confirmation of antibiotic administration
  - Consensus with all team members that above information is correct
  - Documentation of the "time out/procedure verification" process
- The procedure will not be initiated until all members agree with all elements included in the time out.
- The time out will be initiated by the procedural personnel after the patient has been prepped and draped and immediately prior to the initiation of the procedure with all team members present in the room or at the bedside.
- Whenever there is more than one procedure performed by separate procedure teams, there will be a time-out completed and documented by the separate procedure teams. The time out will precede each individual procedure.
- If there is any discrepancy among the team members during the time-out, re-verification will occur with a review of the surgical/department procedure schedule, history and physical, procedure consent, radiology films, consultations and any other information available to validate the correct patient, procedure and site.

#### **F. Management Following Discovery of Wrong Patient/ Wrong Site/ Wrong Procedure**

- If, after induction of anesthesia, during the course of a surgical/invasive procedure, or after a surgical/ invasive procedure has been completed, it is determined that the procedure being performed or completed is the wrong patient, wrong procedure or at the wrong site, the surgeon/physician and anesthesiologist will:
  - Act in accord with the patient's best interests and to promote the patient's well-being.
  - Record the event accurately in the medical record.
  
- Procedural personnel will immediately inform the department manager who will immediately notify the Risk Manager per hospital policy.

### **G. Fire Risk Assessment**

- A fire risk assessment shall be done prior to the start of all surgical procedures (Perioperative Areas)
  - Performed before start of procedure
  - All members of the team participating
  - Communicated during the "Time Out"
  - Documented in patient record
  - Fire Risk Assessment Tool:
    - A. Is an alcohol-based prep agent or other flammable solution being used preoperatively?
    - B. Is the surgical procedure being performed above the xiphoid process or in the oropharynx?
    - C. Is open oxygen or nitrous oxide being administered?
    - D. Is an electrosurgical unit, laser, or fiber-optic light being used?
    - E. Are there other possible contributors (i.e. defibrillators, drills, saws, or burrs)?

### **H. Quality Improvement:**

Compliance with the Universal Protocol Policy will be monitored by conducting documentation/observation audits on a monthly basis.

#### **DOCUMENTATION:**

Surgical/Procedural Consent

Procedural/Surgical Nursing Record

Preprocedure Safety Checklist

#### **REFERENCE/EVIDENCE BASED PRACTICE:**

**Dignity Health – St. Rose Dominican  
Rose de Lima Campus  
PATIENT SAFETY/RISK MANAGEMENT PLAN**

DATE: 01/01/2018  
VERSION: 01

This plan was created and revised by the Dignity Health – St. Rose Dominican Patient Safety Officer with review and input from the Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**  
**St. Rose Dominican – Rose de Lima Campus**

## Commitment to Patient Safety

---

Dignity Health St. Rose Dominican Hospital – Rose de Lima Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Dignity Health – St. Rose Dominican, Rose de Lima Campus' Patient Safety/Risk Management program promotes:

- Honest, open collaboration and partnership of hospital leadership, medical staff, patients and their families, the community and other healthcare providers to deliver compassionate, high-quality, affordable healthcare.
- Promote justice and respect for those we serve.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility and accountability for every healthcare related decision and action.
- A focus on excellence, teamwork and innovation through continuous learning, improvement in system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The Patient Safety/Risk Management Program at St. Rose Dominican is an organization-wide/campus specific strategy that includes not only facility staff and medical staff, but is inclusive of patients, family and visitors. The Patient Safety/Risk Management Program at Rose de Lima Campus supports and encourages the active participation of each person in order to be an effective program. When processes, functions or services are designed or redesigned, information internal and external to the campus and/or organization regarding potential risks to patient safety will be considered and where appropriate, utilized to minimize the risk to patients affected by the new or redesigned process, function or services.

The purpose of this plan is to establish system-wide guidelines and processes supporting a comprehensive, effective, organization-wide Patient Safety/Risk Management Program Plan designed to promote and improve patient safety at Dignity Health – St. Rose Dominican, Rose de Lima Campus, by working to prevent medical/healthcare adverse events and reducing risk to patients and visitors.

Undesirable facility specific and system patterns or trends in performance and sentinel events will be intensively analyzed to determine where best to focus changes for improvement. Intensive analysis will be initiated when:

- Levels of performance, patterns or trends vary significantly and undesirably from those expected including significant near misses;
- Performance varies significantly and undesirable from that of other campuses/organizations;
- Performance varies significantly and undesirably from recognized standards; and/or
- A reportable event has occurred at that campus.

Minimally, data from the following areas will be gathered at each facility and presented at that facility for analysis with action plans developed reflective of the findings:

- Initial and on-going proactive risk assessments utilizing internal and external resources;
- Campus aggregate event reports reflective of all medical/healthcare events, with and without adverse outcomes, including but not limited to:
  - Hospital acquired infections
  - Medication events, to include delays in administration
  - Adverse drug events
  - Transfusion reactions
  - Patient falls
- Actual and near misses
- Hazardous conditions
- Restraint issues
- Medical record legibility issues
- Patient/family/staff opinions, needs, perceptions of risks to patients, and suggestions for improving patient safety;
- Identified data trends and analysis reports from sister facilities, Dignity Health Shared Learnings, etc.
- Others as defined by various campus committees, Leadership and/or Quality Council and Advisory Committee of the Board (QCAC).

## Roles and Responsibilities

---

Per [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

### The Patient Safety Committee Organization

#### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;

- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below.

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the Rose de Lima Campus and includes multidisciplinary team members which has oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following are responsibilities assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators.
- Evaluate other sources of patient safety data utilizing internal and external resources including but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow-up on patient safety related trends, analysis results, changes in processes, and policies.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.

- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.
- See Quality Department's Performance Improvement Plan

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

The Director of Quality Risk Services has been designated the Patient Safety Officer for the Rose de Lima Campus and as such, has the administrative responsibility for the program specific responsibilities including:

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Day to day responsibility for the Patient Safety/Risk Management Program at Rose de Lima Campus.
- Maintenance of related data collected, trended and analyzed at each campus.
- Routine reporting to leadership and QCAC on campus specific trended data and actions taken to improve the quality and safety of patient care.
- Working with QCAC to achieve the goals of the Patient Safety/Risk Management Program.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.

- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporates the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

- Identify RCA participants and coordinate a time, date and location of RCA meeting.
- Inform RCA participants of the sentinel event process.
- Explain confidential nature of RCA.
- Explain Just Culture and its application.
- Review event using medical record and any other pertinent materials in preparation for the RCA.
- Provide RCA members access to relevant best practice/research documents/statutes and other literature to include hospital Policy and Procedure documents for reference.
- Conduct RCA in a manner consistent with Just Culture, using principles of human factors, systems theory, etc.

#### Executive or Governing Body Staff Responsibilities

Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.

- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans.

### Leadership

The Dignity Health St. Rose Dominican Board and campus Senior Leadership has overall responsibility for the implementation of an integrated, organization-wide Patient Safety/Risk Management Program. These responsibilities are campus specific and include the following:

- Foster an environment in which patients, their families and organization staff and leaders can identify and manage actual and potential risks to patient safety through personal example and the provision of resources to establish proactive mechanisms to reduce risk.
- Establish a culture in which communication flows freely regardless of authority gradient.
- Ensure that a define, on-going, proactive program for identifying risks to patient safety and reducing medical/healthcare adverse events is fully implemented and includes responses to actual and potential events;
- Ensure that patient safety issues are given a high priority and addressed when processes, functions or services are designed or redesigned;
- Provide for mechanisms to measure, analyze and manage variation in the performance of defined processes that affect patient safety;
- Allocate adequate resources, including personnel, time, information systems data associated with reducing risk and improving patient safety, and
- Active participation in the California Hospital Patient Safety Organization (CHPSO).

### Physicians

Physicians are responsible, as participants in the Patient Safety/Risk Management Program for reporting events or near misses at each campus, and participating on focus teams to reduce identified patient safety risks. Whenever patient care outcomes differ significantly from the anticipated outcomes, the primary care provider and/or responsible licensed independent practitioner (LIP) or comparable designee shall clearly explain these outcomes to the patient, and when appropriate, the family. (See Disclosure Policy)

### Patients/Families/Visitors

Patients, families and patient representatives via written communication are encouraged to be active participants in their care and as such are responsible for:

- Providing, to the best of their knowledge, accurate and complete information about present complaints, past illnesses, hospitalizations, medications and other matters relating to the patient's health;
- Reporting their patient and outcome of treatment of that pain
- Reporting perceived risks in their care and unexpected changes in the patient's condition to the responsible practitioner, and
- Asking questions when they do not understand what they have been told about the patient's care, infection control, safety precautions and programs or what they are expected to do etc.

Patients and families/patient representatives/visitors will be provided with educational materials explaining these expectations and their role in reducing risk exposure and improving patient safety at the time of admission and throughout the patient stay utilizing various delivery methods including pamphlets, television

and verbal communication. Some patients may also be included in the development process to obtain their opinions, needs, perceptions of risks to patients and their suggestions for improving patient care.

### Hospital Departments and Staff

Rose de Lima staff are key to promoting, identifying, and implementing activities to reduce risk and improve patient safety. Some of the activities include:

- Active participation in the activities to improve patient safety and the quality of healthcare delivered;
- Adherence to Infection prevention measures, the Joint Commission National Patient Safety Goals and other patient safety initiatives;
- Participation in education activities and process implementations;
- As appropriate, the provision of accurate, timely and complete verbal and written communication among caregivers, including test results relevant to the management of the patient's condition, and to all others involved in the utilization of data; and
- Participation in information needs assessment, staff surveys, and other processes that request information regarding the Patient Safety/Risk Management Program.
- Reporting all events and process variances (harm or no harm) even if they do not reach the patient (near miss).

### The Patient Safety Committee

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the Rose de Lima Campus and includes multidisciplinary team members which have oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following responsibilities are assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators;
- Evaluate other sources of patient safety data utilizing internal and external resources including, but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow up on patient safety related trends, analysis results, changes in processes, policies and other areas to make as a result of identified needs.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).

- Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Patient Safety/Risk Management Plan

| Goal                          | Plan                                                                                                                                                               | Due Date               |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| Risk Assessments              | 1. Patient Safety/Risk Management to perform monthly risk assessments and report to PSC.<br>2. Infection Prevention to report to PSC findings of Risk Assessments. | Monthly PSC            |
| FMEA                          | PSC to ensure one FMEA is conducted by Risk Management in CY 2018.                                                                                                 | December 2018          |
| Checklists                    | PSC will receive all new and renewed checklists used that impact patient safety whether directly or indirectly.                                                    | Monthly and ongoing    |
| National Patient Safety Goals | PSC will support the posting of NPSGs throughout the hospital for staff reference.                                                                                 | Department leaders     |
| Root Cause Analysis           | RCAs will be conducted by Risk and Quality Management as soon as possible/practical after an event per Dignity Health policy                                       | Ongoing                |
| Manager orientation           | Quality Risk Services will review/update Manager orientation.                                                                                                      | March 31, 2018         |
| Grievance Management          | Grievances will be reviewed by the Grievance Committee to ensure compliance with CMS CoPs.                                                                         | Quarterly and ongoing. |

| Goal                          | Plan                                                                                                                                        | Due Date |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|----------|
| Staff and physician education | Patient Safety education will occur in various forms (e.g. Huddles, Department Meetings, Leadership Meetings, Posters) throughout the year. | Ongoing  |

## Components and Methods

---

### Proactive Risk Assessment Activities

The Patient Safety/Risk Management Department, in collaboration with the various facility committees including Infection Prevention, Quality Council and leadership will conduct proactive risk assessments to identify hazards/risks that may affect patient safety. Risk Assessment activities will include, but not be limited to the following:

- Patient Safety Risk Assessment evaluating known high risk processes/procedures that have associated risks,
- Review employee survey results to identify safety concerns,
- On-going risk assessments based on internal and external data, including sentinel event alerts,
- Focused risk assessments as determined by the Patient Safety Committee, Senior Leadership, external/internal events, etc.
- Selection of patient safety process improvements and risk reduction activities utilizing the priorities set criteria of Rose de Lima campus,
- Any information assessments conducted by St. Rose Dominican will include identification of barriers to effective communication among caregivers.
- Patient Satisfaction surveys will include a question determining how the patient/family thinks the individual facility can improve patient safety. Results from this question shall be analyzed and responded to in a manner that supports risk reduction.
- Infection Prevention Surveillance Program.
- Additional staff surveys may be conducted to assess for staff opinions, needs, perceptions of risks to patients and suggestions for improving patient safety, as well as the staff’s willingness to report medical/healthcare events.

### Event Reporting

Rose de Lima actively participates in the CHPSO and its Patient Safety Evaluation System for data collection, monitoring, collaboration and evaluation activities. As provided under the CHPSO (42 Code of Federal Regulations (CFR) Part 3 Section 3.20) the event report is considered a Patient Safety Work Product and as such is privileged and shall not be (1) subject to subpoena; (2) subject to discovery; (3) subject to disclosure and (4) admitted into evidence-provided such information is not subject to disclosure in certain criminal proceedings as described in regulation. (See Event Reporting and Management Policy).

- A. When an unplanned event/process variance occurs, the patient care provider will do the following:
  - a. Perform the necessary healthcare interventions to support the patient’s clinical condition.
  - b. Perform the necessary interventions to contain the risks to others.
  - c. Notify the patient’s attending physician.
  - d. Preserve any information related to the event including physical evidence. Preservation of the information includes the documentation of facts regarding the event or complication of event on the Event Report and in the patients’ medical record.

- e. Notify immediate supervisor of the event.
  - f. Submit electronically an Event Report form or handwritten Event Report form to Risk Management/Patient Safety Services.
- B. Identification of potential unsafe condition that may affect patient safety:
- a. Individual's identifying such a condition will immediately report such to their supervisor, and document in the Event Report.
  - b. Take the necessary actions to ensure that any potential risks to patient care and safety are mitigated.

#### **Event Monitoring/Risk Assessment Analysis, Action Planning and Intervention**

- A. Patient safety related event reporting data within the scope of the Patient Safety Program and risk assessment results will be aggregated and presented routinely to various committees including but not limited to Medical Executive Committee (MEC), Medication Safety, Quality Council and Environment of Care for analysis and action. Based on analysis of this data and any actual or potential reviews, sentinel events and other internal and external data including TJC Sentinel Event Alerts, Dignity Health Shared Learnings, CHPSO trends, current literature, proactive action plan will be developed to include the following:
- a. Assessment of the intended and actual implementation of processes to identify the steps in where there is, or may be, undesirable variation.
  - b. Identification of the possible effects of the undesirable variations on patients and how serious the effect or outcome on the patient might be;
  - c. For critical effects/outcomes, a root cause analysis will be conducted to determine why the variation leading to the effect may occur;
  - d. Redesign of the process and /or underlying systems to minimize the risk of that variation or to protect patients from the effects of the variation;
  - e. Test and implement the redesign process;
  - f. Identification and collaboration with Quality Management Systems on implementation of measures of the effectiveness of the redesigned process; and
  - g. Implementation of a strategy for maintaining the effectiveness of the process over time.
  - h. Events that do not require a Root Cause Analysis will have an incident review completed by Quality/Risk Services Department as soon as practicable of becoming aware of the event. The results will be forwarded to leadership for review.

#### **Response to Reported Adverse/Sentinel Events**

Reporting of events is an essential component of a Patient Safety/Risk Management program. Through its participation in the CHPSO; all related investigation of events will be securely conducted, collected and documented as Patient Safety Work Product (PSWP) to maintain confidentiality as defined in the Federal Regulation.

- A. Rose de Lima shall respond to all reported potential and actual adverse/sentinel events. (See Sentinel Event policy).
- B. Minimally, all adverse events will be analyzed utilizing a team of individuals including Risk Management/Patient Safety and Quality Departments, to conduct root cause analysis (RCA), incident review and/or a failure mode effects analysis (FMEA), implementation in action plan to reduce further risk to patients and establish measures of effectiveness.
- a. The following events always elicit an intense analysis:
    - i. Confirmed transfusion reactions

- ii. Significant adverse drug reactions
  - iii. Significant medication events and hazardous conditions
  - iv. Manor discrepancies, or patterns of discrepancies, between preoperative and postoperative (including pathologic) diagnoses, including those identified during the pathologic review of specimens removed during surgical or invasive procedures; and
  - v. Significant adverse events associated with anesthesia use.
  - vi. Hospital acquired infections
  - vii. All events meeting the definition of Sentinel Events in the State of Nevada.
  - b. A root cause analysis is performed when a sentinel or State reportable event occurs.
  - c. An incident review is performed when a near miss or other event with significant areas for improvement are identified.
- C. Staff involved in an adverse/sentinel event shall be treated with respect and dignity.
- a. A “JUST CULTURE” approach shall be taken in order to facilitate changes in systems and processes to prevent further risk to patient safety, as well as promote future reporting by other staff.
  - b. Involved staff should be involved in the RCA process.
  - c. The Department Manager will provide ongoing support to the staff member(s) as needed.
  - d. Whenever necessary, Crisis Intervention or Employee Assistance Programs (EAP) will be offered as support to the involved employee.

### **Education**

#### **A. Staff Education**

- a. General orientation and other education and training programs as needed will emphasize specific job related aspects of patient safety and risk reduction strategies.
- b. Specific Patient Safety/Risk Management Program training at orientation and annually thereafter will include:
  - i. An overview of the Patient Safety Program
  - ii. Overview of TJC National Patient Safety Goals
  - iii. Staff’s role and responsibilities in the Patient Safety/Risk Management Program
  - iv. Event reporting criteria and process
  - v. Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care
  - vi. Examples of specific job related aspects of patient safety.
- c. Staff participating at a higher level of the Patient Safety/Risk Management Program will receive appropriate training necessary to understand and complete their assigned responsibilities.

#### **B. Physician Education**

- a. An overview of the Patient Safety/Risk Management Program will be provided to physicians at time of initial appointment and annually thereafter that describes the program, emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism.
- b. Specific physicians may receive additional training to support their involvement at a higher level in the Patient Safety/Risk Management Program.

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Rose de Lima Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Rose de Lima Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Whys technique also can be used to drill down the problem and find the root causes.

**Model for Improvement**

Please refer to the Dignity Health – St. Rose Dominican Performance Improvement Plan.

**Data Collection and Reporting**

Data should drive any quality and patient safety effort. Rose de Lima is using IVOS\_for tracking the sentinel events, healthcare infection data, and Midas for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

## Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

### **Patient Safety Program Reporting and Review**

All patient safety work product (PSWP) submitted through the CHPSO will be collected in the Patient Safety Evaluation System (PSES) for collection, management and analysis of information pursuant to the Patient Safety and Quality Improvement Act of 2005 ( 42 U.S.C. 299 et seq.).

- A. Patient safety/Risk Management related data and information reports will be provided routinely to various committees as previously identified including but not limited to medical staff, Quality Council and QCAC.

- B. A summary report of data, other internal and external information, as well as all actions taken by various committees and/or specific patient safety related teams will be submitted to the QCAC and the MEC.
- C. Annually, the Patient Safety/Risk Management Plan will be evaluated for effectiveness and the program updated to reflect the results of risk assessments related to patients, families and staff. The review shall include a summary of the occurrence of medical/healthcare events and actions taken to improve patient safety, both in response to actual occurrences and proactive efforts.
  - a. The review will be approved by QCAC.
  - b. Will be submitted to the Community Board for final review and approval.

### **Reviewed/Approved:**

Patient Safety Committee, February 2018

Quality Care Advisory Committee of the Board, March 2018

Community Board, March 2018

# SOUTH LYON MEDICAL CENTER

## PATIENT SAFETY COMMITTEE

---

**SUBJECT: Patient Safety Plan**

**POLICY NO:**

**PAGE NO: 1 of 8**

**EFFECTIVE: 11/2002**

**REVISED:12/2016**

**CROSS: Medical Staff**

**APPROVED:**

---

**POLICY:** South Lyon Medical Center Patient Safety Plan

### **PROCEDURE:**

1. The Medical Staff, with the approval of the Governing Board shall develop and implement a Patient Safety Plan to encompass all facets of patient care at South Lyon Medical Center. This includes Acute Care, Long Term Care and Rural Health Clinics.
2. The Medical Staff will appoint and submit to the Governing Board for approval the implementation of a Patient Safety Committee which will comprise at a minimum: a physician, a nurse, pharmacist, governing board member and risk manager. This committee shall:
  - a. function under the authority of the Medical Staff
  - b. meet monthly
  - c. investigate, report and formulate corrective actions related to alleged sentinel events
  - d. review medical equipment/devices safety and maintenance inspections
  - e. review and recommend actions related to medication events
  - f. review and investigate patient care related incident reports
  - g. review, investigate and recommend corrective actions for near-miss events
  - h. additional tasks as assigned by the Medical Staff
3. The Administrator shall appoint a Patient Safety Officer whose responsibilities are outlined in the position description.
4. The Patient Safety Plan shall include but not limited to the following items:
  - I. General:
    - a. Patient Safety involves a variety of clinical and administrative activities that health care organizations undertake to identify, evaluate, and reduce the potential for harm to beneficiaries and to improve the quality of health care. Effective medical/health care error reduction requires an integral approach and a supportive environment, in which patients, their families, organization staff and leaders can identify, manage and learn from actual and potential risks.
    - b. A successful patient safety program facilitates non-punitive, interdisciplinary approach to decrease unanticipated adverse health care outcomes. The organizational focus is on continued learning about risks and mitigation strategies and reengineering systems/processes to reduce the chance of human error. South Lyon Medical Center (SLMC) fosters and

supports an organizational environment that recognizes and acknowledges potential risks to patient safety and the occurrence of medical/health care errors. The patient safety program encourages medical error reporting in order to identify system or process failures and to enhance improvement strategies.

## II. South Lyon Medical Center (SLMC) Patient Safety Program

- a. The goal of the SLMC Patient Safety Program is to reduce the chance that the adverse effects of human error will harm patients. By creating and promoting a culture in which staff willingly report actual and near-miss patient safety related events without fear of disciplinary action, SLMC is encouraging these events to be freely identified. Once events have been identified, systems and processes can be analyzed and improved in order to prevent future recurrence. Improved systems and processes result in a safer patient care environment.
- b. SLMC Patient Safety Program focuses on system and process design rather than on the individual involved in a given patient safety related mishap. This paradigm is very different from that which prevails in the health care community at large. In the patient safety conscious culture, when an error occurs the response is not to ask “who”, but rather “why”. This new paradigm can exist in light of other organizational expectations associated with risk management, claims management and review of potentially compensable events (PCE) for which the facility may incur financial liability.
- c. All patient safety related reports requires that an investigation be conducted to determine the cause(s) of the adverse event.
- d. A patient safety event that causes no patient harm requires no standard of care determination. However, any patient safety event that results in patient harm or potential patient harm, by definition, is a PCE. The patient safety officer will be notified of all PCE's and these will be managed according to the established policies and procedures outlined in the Patient Safety Committee. Given the results of the investigation of the event, a Standard of Care determination will be required. Competency related information that arises through patient safety investigations will not be released outside of the Patient Safety Program except as noted in paragraph e below. The Patient Safety Program will consider process/system issues, while the Standard of Care determination reviews the individual's performance.
- e. Although not a specific focus of the Patient Safety Program, concerns about a specific provider's/professional's competence may arise. Competence relates directly to an individual and, as such, requires an evaluation of the provider's/professional's performance, not an evaluation of the health care system. Competence will be addressed through the organization's competence assessment, credentialing and privileging process. No individual competence related information will be released outside of the Patient Safety Program, except as noted in paragraph f below. If the competence assessment processes are determined to require review and improvement, such recommendations by the Patient Safety Committee and Medical Staff may be appropriate.
- f. The vast majority of errors are unintentional. No disciplinary action will be initiated against the individual(s) involved in an unintentional error. However, certain events, such as noted below, do warrant administrative, disciplinary or legal action. Should any of the following be discovered in the course of a patient safety event investigation, the Administrator and Medical Staff will be immediately informed of the circumstance and action taken beyond the scope of the Patient Safety Program:
  - 1) Criminal activity (e.g. assault and battery, etc)
  - 2) Intentional unsafe acts due to gross negligence or reckless behavior

- 3) Alleged patient abuse of any kind
- 4) Impairment due to medical and psychological conditions including alcohol or other drug abuse.

### III. South Lyon Medical Center Patient Safety Function.

- a. Integration of all patient safety related issues and processes under the auspices of a single committee/ functional team. This reduces duplication of effort and enhances program efficiency.
- b. Patient Safety Committee.

- 1) Membership. Membership is outlined in NRS 439.875; 1) The infection control officer, 2) The patient safety officer, 3) At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility. And 4) One member of the executive or governing body of the medical facility.
- 2) Chairperson. The chairperson shall be a nurse or physician.
- 3) Committee minutes/reports. The committee minutes/reports will summarize the organizations patient safety activities to include, as a minimum:
  - a. Analysis of all clinical and non-clinical reported events, trends and lessons learned.
  - b. Actions necessary for organizational process/systems improvements as appropriate.
  - c. Proactive patient safety error reduction activities.
  - d. Progress related to risk assessments, prospective analysis and root cause analysis action plan implementation and effectiveness, according to established time lines.
  - e. Patient Safety Committee minutes/reports will be forwarded to the Medical Staff Committee. Quarterly reports will be forwarded to the Governing Board. Recommendations associated to patient safety will be forwarded to the Medical Staff for implementation as appropriate.

### c. Management of Patient Safety Information.

- a. The focus of patient safety data collection and reporting is to improve organizational systems and to provide the safest care possible. The information and data amassed through reporting, investigation and evaluation will be confidential and reported through the Medical Staff Quality Assurance process.
- b. Data trend analysis will include, but not be limited to, the following:
  - 1) Sentinel Events or actual or alleged.
  - 2) Medication errors and fall.
  - 3) Equipment malfunctions.
  - 4) Preventive/corrective interventions
- c. Ad hoc committees may be assigned by the Medical Staff regarding competency investigations related to a patient safety related event to insure that peer status is maintained throughout any investigation. All information obtained will remain confidential under the auspices of Medical Staff Quality Assurance.

### IV. Patient Safety Event Management.

- a. Event identification. A patient safety event is any incident that occurred (actual event) or almost occurred (near miss) that caused or had the potential to cause harm to a patient. Identification and reporting of near misses and adverse events, including those that result from practitioner/professional error, should be encouraged as an expectation of everyday practice. The three types of patient safety events include near miss, adverse events and sentinel events.
- b. Near Miss. A near miss is an event or situation that could have resulted in harm to a patient, but did not, either by chance or through timely intervention. The event was identified and resolved before reaching the patient. Because near misses generally occur more frequently than actual adverse events, proactive analyses of near misses provide a tangible opportunity to improve the system without having to experience an actual adverse event. Staff should be encouraged to report near miss events for the purpose of analysis and identification of methods improvement.
- c. Adverse Event. An adverse event is an occurrence associated with the provision of health care or services that may or may not result in harm to the patient. Adverse events may be due to acts of commission or omission. Incidents such as patient falls or improper administration of medications are also considered adverse events even if there is no harm or permanent effect to the patient.
- d. Sentinel Event. A sentinel event is an unexpected occurrence involving death, serious physical or psychological injury, or the risk thereof. **Recent Nevada Legislation has expanded the definition of a Sentinel Event to include Surgical Site Infections (SSI's), Catheter Associated Urinary Tract Infections (CAUTI's). A comprehensive listing of potential Sentinel Events is included in the Sentinel Event Reporting Guidance Compliance Manual dated 12/606/2011. Serious injury** specifically includes loss of limb or function. The phrase “or risk thereof” includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. Such events are called “sentinel” because they signal the need for immediate investigation and proactive response on the part of the organization.

## V. Event Documentation and Reporting.

1. Prevention of harm to patients is everyone’s responsibility and reporting all potential and/or actual patient safety events is a performance expectation of all organizational staff. Anyone with knowledge of a patient safety event not only may, but should, report it.
  - a. Immediate actions.
    - 1) Upon identification of a actual patient safety event, the staff member will immediately perform necessary health care interventions to protect and support the patient’s clinical condition. The patient’s attending physician and other physicians, as appropriate, will be contacted as soon as possible to report the incident and provide an update on the patient’s current clinical status.
    - 2) As appropriate to the event, the staff will initiate all physician directed orders and take other necessary health care interventions to contain the risk to others, and to preserve event-related materials that may require further investigation. Examples of physical information preservation include: removal and preservation of a blood unit for a

suspected transfusion reaction; preservation of IV tubing, fluid bag, and/or IV pump for a patient with a severe drug reaction from a IV medication. Preservation of information also includes documenting the facts regarding the event in the patient's medical record according to organizational policy and procedure.

- 3) If the patient safety event involves serious physical or psychological injury, unexpected death, or qualifies as a sentinel event, the appropriate department director will be notified immediately. If such events occur after hours, the administrative on-call staff will be notified immediately. Individuals notified will ensure proper notification of senior management is accomplished in a timely fashion.

b. Documentation and Internal Reporting.

- 1) Any individual in any department who identifies a potential (e.g. near-miss) or actual patient safety event will immediately notify their immediate supervisor and will initiate a Incident Report. This report will contain concise, factual, objective and complete details about the event.
- 2) Incident Reports or in the case of medication errors, a Adverse Drug Event Report will be forwarded to the department director within 24 hours of the discovery of the event or the first duty day following a weekend or holiday. The department director will review the report, add any additional relevant information, and forward it to the Patient Safety Officer, or designee, within 24 hours of receipt.
- 3) The Patient Safety Officer (PSO), or designee, will review all incident reports and ADE reports. In addition, the PSO will determine what specific actions are necessary to further evaluate the event. If the event is a sentinel event, the PSO will immediately notify the Administrator and Risk Manager and activate a Root Cause Analysis Team from the Patient Safety Committee and others as deemed appropriate to investigate the event.
- 4) If the patient safety event is an intentional unsafe act that results from gross negligence or possible criminal activity, the event shall be reported to the appropriate authorities for investigation.
- 5) Some events fall within the definition of both an adverse event and an intentional unsafe act. For example, infant abduction would be both a crime and a reportable Sentinel Event that require Root Cause Analysis. In cases that appear to be both a adverse event and an intentional unsafe act, primary authority and responsibility for dealing with the event belongs to the Administrator and Risk Manager. This is beyond the scope of the Patient Safety Program. The PSO will coordinate a review of the systems and processes implicated in the actual or potential unsafe act, to include conducting a root cause analysis, if applicable, but will defer to a separate investigation with respect to the culpability of any persons involved in the event.
- 6) External reporting requirements. All incidents meeting the definition of a Sentinel Event must be reported to the State Health Department

and Bureau of Licensure. Reports must be completed within the time frame as outlined in policy and procedure.

## VI. Patient Safety Event Analysis.

Event analysis assists in the discovery of the root causes and/or contributing factors associated with the patient safety event. Tracking and trending of data allows the Patient Safety Committee and Medical Staff to identify familiar trends or circumstances so that system or process issues can be identified and improved.

- a. Aggregate review analyses. Aggregate review consists of examining data elements for common trends or patterns within the group. The use of aggregated review serves two purposes. It allows for wider applicability of the analyses (i.e., trends or patterns that were not noticeable in an individual case analysis become more obvious as the number of cases increases). In addition, it more clearly defines specific data elements in a recurring problem and encourages prudent use of the time and expertise of the organization staff associated with evaluation and corrective action.
- b. Root Cause Analysis. A root cause analysis must be conducted and an action plan completed for all actual sentinel events. The Patient Safety Committee will formally designate a root cause analysis team to conduct a thorough and credible root cause analysis on all sentinel events. A Root Cause Analysis (RCA) is the process for identifying the basic and/or contributing casual factor(s) associated with patient safety events. The review is interdisciplinary and includes those who are closest to the process, but typically not those directly involved in the specific event. Those directly involved may be consulted for event-related information if appropriate. The RCA focuses on systems and processes, not individual performance. It identifies changes that could be made in the systems and processes to improve performance and to reduce the risk of adverse events, or the recurrence of near misses, with the ultimate goal of reducing and/or eliminating patient harm.
- c. Root Cause Analysis Action Plan. Once the RCA has been completed, a detailed action plan must be developed to enumerate the risk reduction strategies that the organization intends to implement to prevent the recurrence of similar events. The action plan should address responsibility for implementation, oversight, pilot testing (if appropriate), timeliness, and the specific metrics to be employed in evaluating the effectiveness of the actions taken.
- d. The RCA action plan will be submitted to the Medical Staff for approval.
- e. Follow-up review. All RCA action plans will be reviewed at a minimum of 6 months following implementation to address the effectiveness of the improvements implemented by the organization. These findings will be reported to the Medical Staff and Governing Board.

## VII. Patient Safety Event Communication.

Administration and all staff are reminded that all data compiled as part of the Patient Safety Program are QA information and protected from disclosure and must be marked as Quality Assurance Document.

- a. Staff involved in a patient safety event. Any staff member reporting and/or directly involved in a patient safety event that caused patient harm will receive support and assistance from their supervisor to facilitate the staff member's professional and emotional needs related to the patient safety event. Management efforts and activities will focus on improving the systems and processes that may have contributed to the event rather than disciplining those involved.
- b. Reporting a patient safety event. Staff members and supervisors who submit patient safety event reports will receive timely feedback on the actions being taken as a result of their report.
- c. Patient/family affected by a patient safety event. In cases involving an unanticipated outcome of care, a qualified health care provider will inform the patient and/or his/her family member(s) within seven (7) days of discovery of the event. This information is provided as a matter of policy and does not affect any rights or obligations in legal or administrative proceedings. Under no circumstances will QA-protected information be released or provided to the patient/family member.
- d. The Patient Safety Officer, or designee, is responsible to ensure that the provider and patient/family member communication takes place. The designated primary communicator will document in the patient's medical record what was communicated to the patient/family member, the patient/family member's response, and any other pertinent information. It shall be the responsibility of the affected patient's primary care physician or Chief of the Medical Staff or Vice Chief of the Medical Staff to make the initial and subsequent notification.
- e. In most cases, facts surrounding the patient safety event that affect the patient can and should be disclosed to the patient/family member by the provider.
- f. Any specific questions relative to disclosure of information associated with unanticipated adverse outcomes should be referred to the organization's legal representatives.

## VIII Patient safety Education and Training

- a. All staff shall receive patient safety education and training during their initial new employee orientation and on an annual and as-needed basis, regarding job-related aspects of patient safety and staff specific roles and responsibilities to actively support patient safety policy.
- b. Community education. Patients and potential patients/family members shall be educated concerning their role in helping to facilitate the safe delivery of care. Methods include but are not limited to; public forums, newspaper articles, addressing specific community groups and organizations.
- c. **Checklists have been developed and implemented in several different formats that range from facility policies, department checklists and medical record audits. These checklists and policies include but are not limited to; correct patient identification and verification, foley catheter criteria, informing patients of Healthcare Acquired Infections (HAI's) or Facility Acquired Infections (FAI's), hospital inpatient information sheets related to HAI's and hand hygiene and respiratory etiquette and patient information regarding discharge planning, medication reconciliation and request that providers indicate the use or reason for each prescription that is issued.**
  - a. **On or before July 1 of each year a report will be submitted to the Director of the Legislative Counsel Bureau which includes the**

**development, revision and usage of patient safety checklists and policies.**

**IX Confidentiality of Medical Quality Assurance Information.**

As with other medical QA documents, any information, records, reports, minutes, and other documents directly associated with patient safety activities are protected under 10 USC 1102. In discussing medical information with family members, staff shall also comply with other applicable restrictions on nonconsensual disclosures, including those under the Privacy Act, 5 USC 552a. As a general rule under the Privacy Act, information regarding a patient's condition shall not be provided to others without the patient's consent.

QUALITY AND PATIENT SAFETY PLAN 2018

---

**SNAMHS**

DATE: 02/15/2018  
VERSION: 01

This plan was created and revised by the SNAMHS Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program  
Rawson-Neal Hospital**

1650 Community College Dr.  
Las Vegas, NV 89146

## Commitment to Patient Safety

---

SNAMHS is committed to becoming a high reliable organization through a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes being “aware that safety is an emergent not a static property” (Patient Safety Primer High Reliability November 2017).

### Mission, Vision, and Values

In support of our mission, vision, and values, SNAMHS Patient Safety and Quality Improvement programs promote:

- Collaboration of healthcare through collecting and sharing data with leadership, medical staff, our governing board, and other healthcare providers to deliver integrated and comprehensive high-quality healthcare
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All SNAMHS staff are required to fully support and participate in this plan and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise programs to better serve the patients and their families. To this end, SNAMHS has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

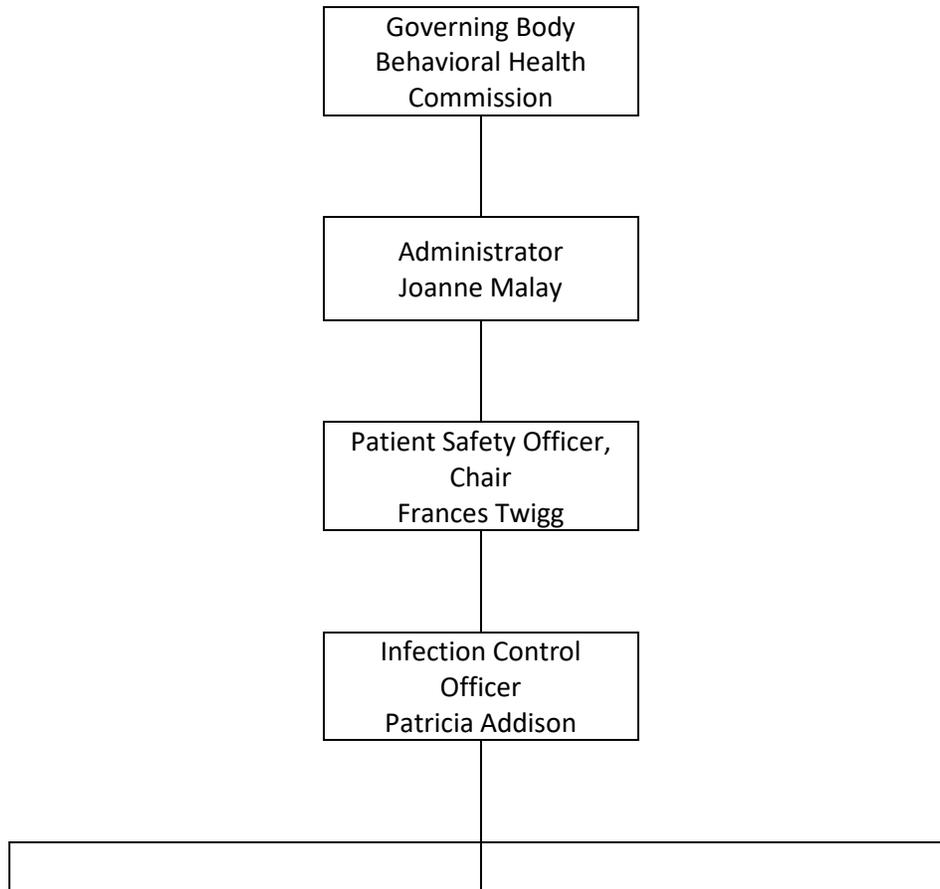

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

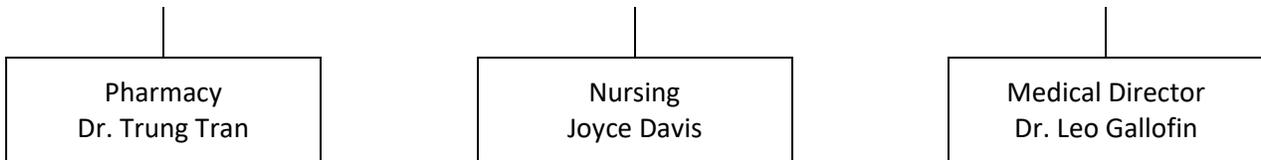

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
  - The infection control officer of the medical facility;
  - The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
  - At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
  - One member of the executive or governing body of the medical facility.
- Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:
  - The patient safety officer of the medical facility;
  - At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
  - The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below.

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer regarding all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

(2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Participate as a consultant to the RCA teams
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.
- Complete and submit the NSHN report to the state Registry and the CDC

### RCA Facilitator Responsibilities

- Organize and coordinate the RCA as well as facilitate the RCA process
- Identify team members and alert their supervisors, as well as the staffing department to provide coverage on their units or department
- Assemble and encourage a supportive and proactive team. Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.

### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                                                                                         | Goals                                         | Plan                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Planned Completion Date                 | Responsible Party                                                                                                        |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Rawson-Neal will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, which we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Rawson-Neal to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

## Fishbone Diagram

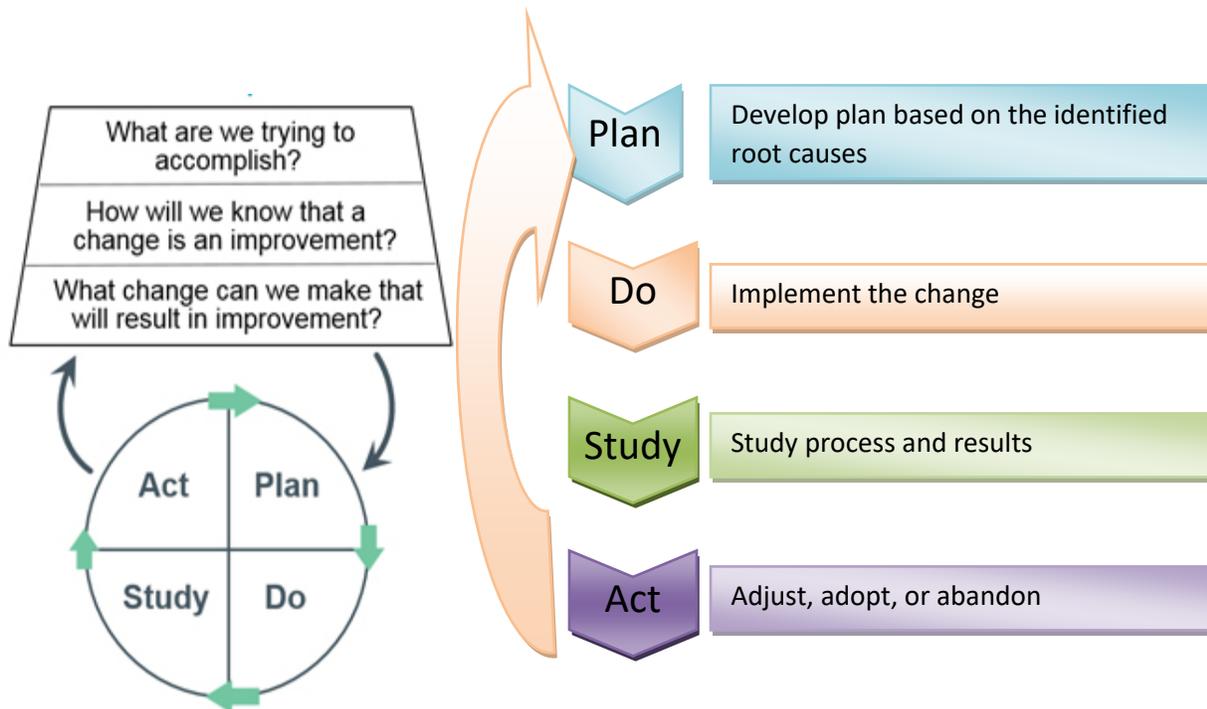

*Patient Safety and Quality Improvement Plan*

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

## Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
- How will you measure the impact of the test?
- What is your plan to collect the data needed?
- What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. SNAMHS is using Avatar for tracking the sentinel events, healthcare infection data and seclusion and restraint data.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                                                                  | Quarterly                                                                                                                                                                                                                                                                 | Annually                                                                                                                                                                                                              |

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

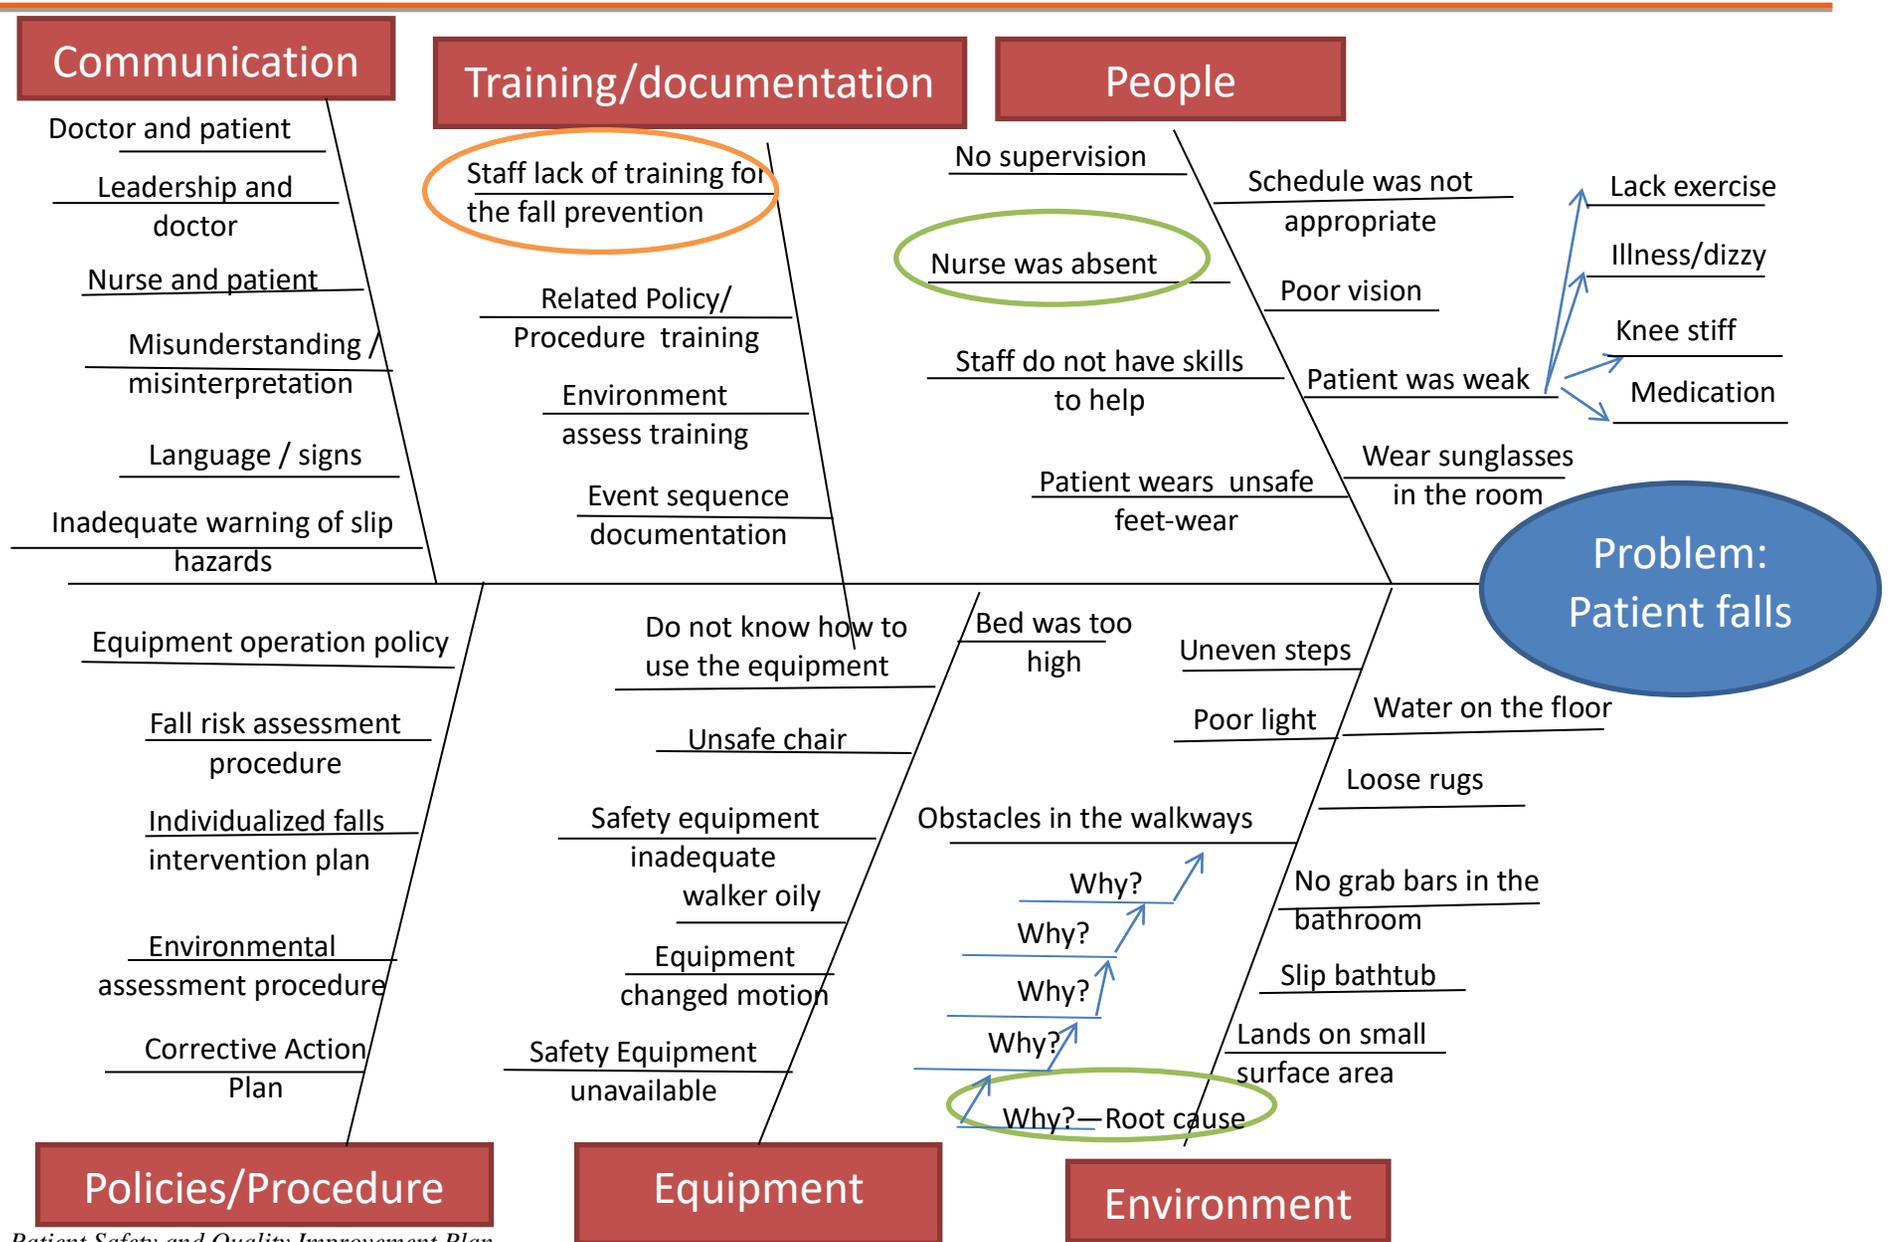

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                                                                                                                                              | Q1 2015                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                                                                                                                                                                              |                                                                                            |                                                                                                                                                                                                                                                      |                                                                               |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.<br>b. Establish an automated surveillance process.<br>c. | Other Medical Staff                                                             |  |        |  |
| Other team members                                                              |  |        |  |
| <b>Aim:</b> (Describe the overall SMART goal that your team wishes to achieve.) |  |        |  |
|                                                                                 |  |        |  |
| <b>Plan:</b>                                                                    |  |        |  |
| 1. List the tasks needed to set up this test of change.                         |  |        |  |
|                                                                                 |  |        |  |
| 2. Predict what will happen when the test is carried out.                       |  |        |  |
|                                                                                 |  |        |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

Did you meet your measurement goal? Explain.

**Summarize what was learned: success, failure, unintended consequences, etc.**

**Act:** (Describe what you concluded from this cycle.)

Based on what was learned, please indicate what action will be considered.

**Describe what modifications to the plan will be made for the next cycle based on what you learned.**

- Adapt: modify changes and repeat PDSA Cycle
- Adopt: expanding changes throughout organization
- Abandon: change approach and repeat PDSA cycle

| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes<br>(Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|-----------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                   |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                   |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                   |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                   |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                   |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                   |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                   |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                   |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                   |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                   |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                   |

es. MERCY Hospital. <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

|                                                                                              |                                                                         |                                          |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|------------------------------------------|
|             | HOSPITAL POLICY AND INFORMATION MANUAL                                  |                                          |
| <p><a href="#">PERSONAL PROTECTIVE EQUIPMENT POLICY</a><br/> <a href="#">Page 2 of 2</a></p> | Date Issued:<br>Date Last Revised:<br>Next Review Date:<br>Approved By: | 07/01 08/14<br>08/17<br>Policy Committee |

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

#### Implementation:

#### Risk Management

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

#### Process

##### Manager's Responsibilities

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee's Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

SUMMERLIN HOSPITAL MEDICAL CENTER

# Risk Management/ Patient Safety Plan

Nevada Acute Care Division

Revised 1/2018

## I. Overview

**SUMMERLIN HOSPITAL MEDICAL CENTER** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients. Patient safety is a cornerstone of quality care and is a leadership priority. **SUMMERLIN HOSPITAL MEDICAL CENTER** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **SUMMERLIN HOSPITAL MEDICAL CENTER** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **SUMMERLIN HOSPITAL MEDICAL CENTER** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at **SUMMERLIN HOSPITAL MEDICAL CENTER**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **SUMMERLIN HOSPITAL MEDICAL CENTER** policies. **SUMMERLIN HOSPITAL MEDICAL CENTER** employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.

- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**SUMMERLIN HOSPITAL MEDICAL CENTER's** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**SUMMERLIN HOSPITAL MEDICAL CENTER** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

## III. ROLES AND RESPONSIBILITIES

### A. Risk Management/Patient Safety Officer

**SUMMERLIN HOSPITAL MEDICAL CENTER** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective

facilities. The designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

## **B. Infection Control Officer**

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**SUMMERLIN HOSPITAL MEDICAL CENTER** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **SUMMERLIN HOSPITAL MEDICAL CENTER** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

##### **Membership:**

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**SUMMERLIN HOSPITAL MEDICAL CENTER**PSC is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility's claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the "Best Practice."
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.

- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## **II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**SUMMERLIN HOSPITAL MEDICAL CENTER** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## **C. TERM Program**

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the

Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. MIDAS**

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

#### **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the

facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

### **G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

#### **RCA Responsibilities**

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Increase medication reporting from an average of 45 per month to an average of 80 per month.
- Increase overall MIDAS reporting by 20% each month.
- Mandatory Education for Nursing Directors on documentation in the medical record

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## **VI. Evaluation/Review:**

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## **VII. Confidentiality**

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## **VIII. Approval of Patient Safety Plan**

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility’s patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## ***Appendix A: Terms and Definitions***

---

**Patient Safety**: The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods

toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and

- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI)**: Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

***Appendix B: Checklist Example: Injuries from Falls and Immobility***

---

| <b>Process Change</b>                                                                                                                                    | <b>In Place</b> | <b>Not Done</b> | <b>Will Adopt</b> | <b>Notes (Responsible &amp; By When?)</b> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------|-------------------|-------------------------------------------|
| <b>Conduct fall and injury risk assessment upon admission</b>                                                                                            |                 |                 |                   |                                           |
| <b>Reassess risk daily and with changes in patient condition</b>                                                                                         |                 |                 |                   |                                           |
| <b>Implement patient-specific intervention to prevent falls and injury</b>                                                                               |                 |                 |                   |                                           |
| <b>Communicate risk across the team; use handoff forms, visual cues, huddles</b>                                                                         |                 |                 |                   |                                           |
| <b>Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs)</b> |                 |                 |                   |                                           |
| <b>Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds</b>               |                 |                 |                   |                                           |
| <b>Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives</b>                                                                        |                 |                 |                   |                                           |
| <b>Incorporate multidisciplinary input for falls</b>                                                                                                     |                 |                 |                   |                                           |
| <b>Prevention from PT, OT, MD, RN and PharmD</b>                                                                                                         |                 |                 |                   |                                           |
| <b>Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient</b>              |                 |                 |                   |                                           |
| <b>Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls</b>                                      |                 |                 |                   |                                           |

Reference: Checklists to Improve Patient Safety. June 2013. Health Research & Educational Trust.

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

**Purpose**

To establish the role of hospital leadership, hospital staff and medical staff in an integrated patient safety program.

**Policy**

Hospital leaders ensure that an integrated patient safety program is implemented throughout the hospital and ensure the participation of hospital staff and medical staff in the Patient Safety Program.

**Procedure**

- A. A patient safety program is established throughout the hospital. A qualified individual or team is assigned to manage the hospital safety program.
- B. The scope of the patient safety program encompasses potential negative to actual negative and serious events (near misses to sentinel events).
- C. All components of the hospital participate in the patient safety program.
- D. Patient Safety Program Reports are presented at least annually to the Governing Board regarding system or process failures and actions taken to improve patient safety

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018  
**Patient Safety Program**

**Purpose**

Tahoe Pacific Hospital has developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital. It is the intent of the leadership of Tahoe Pacific to foster a safe and safety-conscious environment that promotes wellbeing, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

**Scope**

Overall Patient Safety Goals include the following:

1. Improve the accuracy of patient identification
2. Improve the effectiveness of communication among caregivers
3. Improve the safety of using high-alert medications
4. Eliminate wrong-site, wrong patient and wrong-procedure surgery
5. Improve the safety of using infusion pumps
6. Improve the effectiveness of clinical alarms systems
7. Ensure the prevention and control of infections

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

**Methodology**

The Patient Safety Program includes both pro-active and responsive components.

Proactive: The proactive patient safety component emphasizes a pro-active error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect Analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report Trending

Failure Mode Event Analysis (FMEA) will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership and staff. Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and the Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Responsive: The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues:

1. Root Cause Analysis
  2. Intensive Assessment and Analysis
  3. Occurrence Report Findings
  4. Patient complaint response
  5. Performance improvement measures
- Patient Safety Committee and Reporting

Patient safety is the responsibility of all employees and Medical Staff Members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is multidisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from each performance improvement team are sent to the Quality Council, and reported to the Medical Executive Committee and the Governing Board.

The Patient Safety Committee is also multidisciplinary with representation from the following areas at a minimum: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management and Infection Control.

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:
  - a. Risk and Safety Management
  - b. External Data Reports
  - c. Sentinel Event Alerts from the Joint Commission
  - d. Healthcare Reports
  - e. Regulatory Reports
  - f. Patient/Family members
2. Continually improve processes of care delivery based on data analysis.
3. Develop policies and procedures that result from process improvement activities.
4. Develop and approve Patient Safety Education for the medical and hospital staff
5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

The Tahoe Pacific Lifecare Hospital believes in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator/CEO

The activities of the Patient Safety Program will be reported up to the Quality Council, the Medical Executive Committee and the Governing Board as outlined in the Performance Improvement Plan. Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care.

## Patient Safety Program

### **Purpose**

Tahoe Pacific has developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program, and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital and to comply with the requirements of the state of Nevada. It is the intent of the leadership of the hospital to foster a safe and safety-conscious environment that promotes wellbeing, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

### **Scope**

Overall Patient Safety responsibilities include the following:

- 1. Improve the accuracy of patient identification.** The LifeCare policy, National Patient Safety Goals contains the policy and procedure detailing the use of 2 patient identifiers whenever performing procedures, administering medications or blood, taking blood samples or other specimens, or providing any other treatments or procedures.
- 2. Improve the effectiveness of communication among caregivers** as contained in Handoff Communication Guidelines, Located under Best Practices in LifeCare Policies and Procedures
- 3. Improve the safety of using high-alert medications** as contained in the LifeCare policy, Medication Safety: High Alert Medications
- 4. Ensure the identification,** reporting, prevention and control of infections, including the role of proper hand hygiene as contained in the LifeCare policies, The Infection Control Plan and its addendums; Hand Hygiene, and other policies covering Blood and Body Fluid Exposure, Environmental Disinfection, Single Use of Drugs and Devices and Use of Isolation Precautions as contained in the Quality Management policy section.
- 5. Reduce patient falls and injuries from falls** as contained in the LifeCare policy, Fall Prevention, through recommendations from the Falls Committee Performance Improvement Team and information about falls gathered from the Post Fall Assessment Form.
- 6. Improve the effectiveness of clinical alarms systems** as contained in the LifeCare policy, Safety – Alarms- Clinical Equipment.
- 7. Identifying, preventing and correcting errors in the labeling, storing, prescription or administration of medications** as contained in the LifeCare policies, Medication Storage, Dispensing – Labels, Dispensing Medications – General, and other policies contained in the Pharmacy section.

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

**8. Ensuring the safe administration of prescription drugs, controlled substances, pharmaceutical services and other medications** as contained in the LifeCare policy, Administration of Drugs, and other policies contained in the Pharmacy section.

**9. The identification, investigation and reporting of Sentinel Events** as contained in the LifeCare policy, Sentinel Events, and as prescribed by NRS 439.800 and following guidelines established by the Nevada State Health Department's Sentinel Event Registry. The Patient Safety Officer will also be responsible for the maintenance of Sentinel Event records.

**10. Oversight of the maintenance of a sanitary environment** by the facility through conduction of Environmental Rounds, Infection Control Rounds and day to day observations by supervisory and charge staff, as contained in the LifeCare policies, Safety Management Plan,; the Infection Control Plan, and other policies under Quality Management and Engineering.

**11. Adoption and implementation of patient safety checklists to improve the health outcomes of patients in the medical facility** and ensure the knowledge to provide care safely is applied consistently and correctly. These checklists may include best practices and competencies for treatments ordered by an independent licensed practitioner. Other examples may include the proper sequence for environmental cleaning and proper use of personal protective equipment. Also included are discharge checklists explaining discharge medications, aftercare instruction and other instruction needed for safe discharge.

Current examples in use include:

- a. Insertion of PICC lines.
- b. Maintenance of foley catheters
- c. Discharge checklist
- d. Respiratory Treatment competencies

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

The role of the Patient Safety Program also crosses over into the safety of the environment of the hospital including oversight of the 7 Environment of Care Plans:

1. Safety Management Plan
2. Security Management Plan
3. Life Safety Management Plan
4. Medical Equipment Plan
5. Emergency Preparedness Plan
6. Hazardous Materials and Waste Management Plan,
7. Utilities – Utilities Management Plan

Annual Reviews of each of the 7 plans are performed annually and reported to the Environment of Care Committee, the Medical Executive Committee and the Governing Board

### **Methodology**

The Patient Safety Program includes both proactive and responsive components.

Proactive: The proactive patient safety component emphasizes a proactive error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical Record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report trending

**Failure Mode Event Analysis (FMEA)** will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership, and staff. Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and The Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

**Responsive:** The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues.

1. Root Cause Analysis
2. Intensive Assessment and Analysis
3. Occurrence Report Findings
4. Patient Complaint Response
5. Performance Improvement Measures
6. Patient Satisfaction Survey Reports

### **Patient Safety Committee and Reporting**

Patient Safety is the responsibility of all employees and Medical Staff members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is multidisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from the performance improvement teams are sent to the Quality Council and reported to the Medical Executive Committee and the Governing Board.

In compliance with State of Nevada Regulations, the Patient Safety Committee is comprised of:

- (1) The patient safety officer of the medical facility.
- (2) At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility.
- (3) One member of the executive or governing body of the medical facility.

The Patient Safety Committee is also multidisciplinary with representation from the following areas: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management, and the Hospital's Infection Control Preventionist.

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:
  - a. Risk and Safety Management
  - b. External Data Reports
  - c. Sentinel Event Alerts from the Joint Commission

Patient Safety Plan  
Tahoe Pacific Hospitals Meadows  
2018

d. Healthcare Reports

e. Regulatory Reports

f. Patient/Family Members

2. Continually improve processes of care delivery based on data analysis.
3. Develop policies and procedures that result from process improvement activities.
4. Develop and approve Patient Safety Education for the medical and hospital staff.
5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

The Hospital believe in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator/CEO.

The activities of the Patient Safety Program and an annual review of the Patient Safety Plan, appropriate policies, forms, checklists and best practices will be reported to the Patient Safety Committee, the Medical Executive Committee, and the Governing Board as outlined in the Performance Improvement Plan and the LifeCare Reporting Calendar. Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care.

# Kindred Hospital Las Vegas Sahara Campus

## PATIENT SAFETY PLAN

DATE: 02/19/18

---

This plan was created and revised by the Kindred Hospital Las Vegas Sahara Campus Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**  
**Kindred Hospital Las Vegas Sahara Campus**  
5110 West Sahara Avenue  
Las Vegas, Nevada 89146

## Commitment to Patient Safety

---

Kindred Hospital Las Vegas Sahara Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Kindred Hospital Las Vegas Sahara Campus Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

### Scope and Purpose

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Kindred Hospital Las Vegas Sahara Campus are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Kindred Hospital Las Vegas Sahara Campus has developed this Patient Safety Plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The

core principles of this plan include:

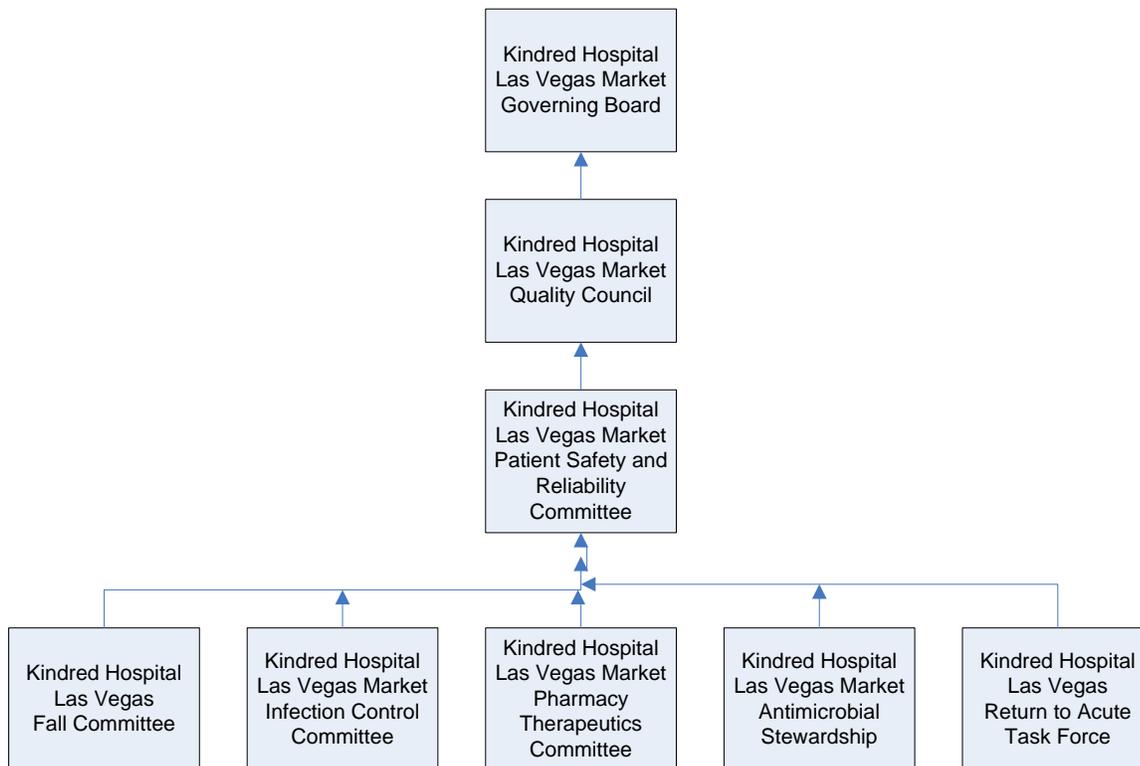

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;

- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

RCA Team Leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

RCA Facilitator Responsibilities

- Provide vision and leadership to the Root Cause Analysis process
- Work with the Director of Quality Management to assure process changes are implemented
- Guide the staff in the process of discovery and mitigation of future process failures

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans
- Provide fiduciary responsibilities

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective               | Goals                     | Plan                                                                                                                                                                                                                                                                                                     | Planned Completion Date | Responsible Party                              |
|-------------------------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|------------------------------------------------|
| <b>CLABSI Reduction</b> | Reduce CLABSI by 10%      | <ol style="list-style-type: none"> <li>1) Use Tegaderm Dressings</li> <li>2) CHG Bathing Program</li> <li>3) Staff education and competencies on hire and annually thereafter</li> <li>4) Develop nurse-driven protocol for discontinuation of lines</li> <li>5) RCA performed for each event</li> </ol> | 12/31/18                | ICP/CCO                                        |
| <b>CAUTI Prevention</b> | Reduce CAUTI by 10%       | <ol style="list-style-type: none"> <li>1) Staff education and competencies on hire and annually thereafter</li> <li>2) Evaluate use of external female urine systems</li> <li>3) RCA performed for each event</li> </ol>                                                                                 | 12/31/18                | ICP/CCO                                        |
| <b>NOWPU Prevention</b> | Reduce NOWPU by 10%       | <ol style="list-style-type: none"> <li>1) Use of Patient Safety Index to assure HAPU prevention</li> <li>2) Braden Scale, Repositioning, Assessment and Wound Education to Patient Family Score</li> <li>3) RCA done for each event</li> </ol>                                                           | 12/31/18                | Wound Care Coordinator/ Chief Clinical Officer |
| <b>Employee Health</b>  | Improve flu vaccine by 5% | <ol style="list-style-type: none"> <li>1) Vaccine Education</li> <li>2) Use of isolation masks by non-vaccinated personnel in clinical areas</li> </ol>                                                                                                                                                  | 12/31/18                | Employee Health Nurse/ Chief Clinical Officer  |

|                                         |                                                            |                                                                                                                                                                                                                                                                                                                    |                 |                                                      |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Kindred Hospital Las Vegas Sahara Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, which we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Kindred Hospital Las Vegas Sahara Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

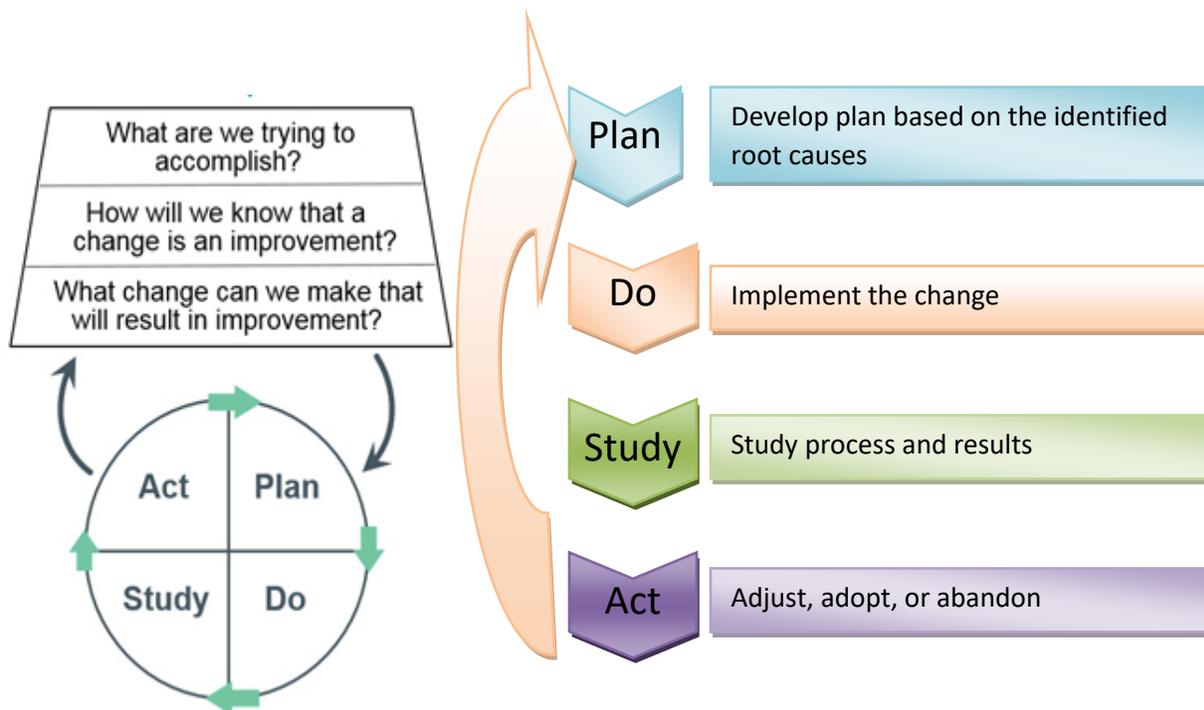

### Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.

- What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Kindred Hospital Las Vegas Sahara Campus is using the Kindred Event Reporting System for tracking the incident and sentinel events, NHSN for reporting healthcare infection data, WebIZ for reporting vaccinations, and Business Warehouse and Meditech for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

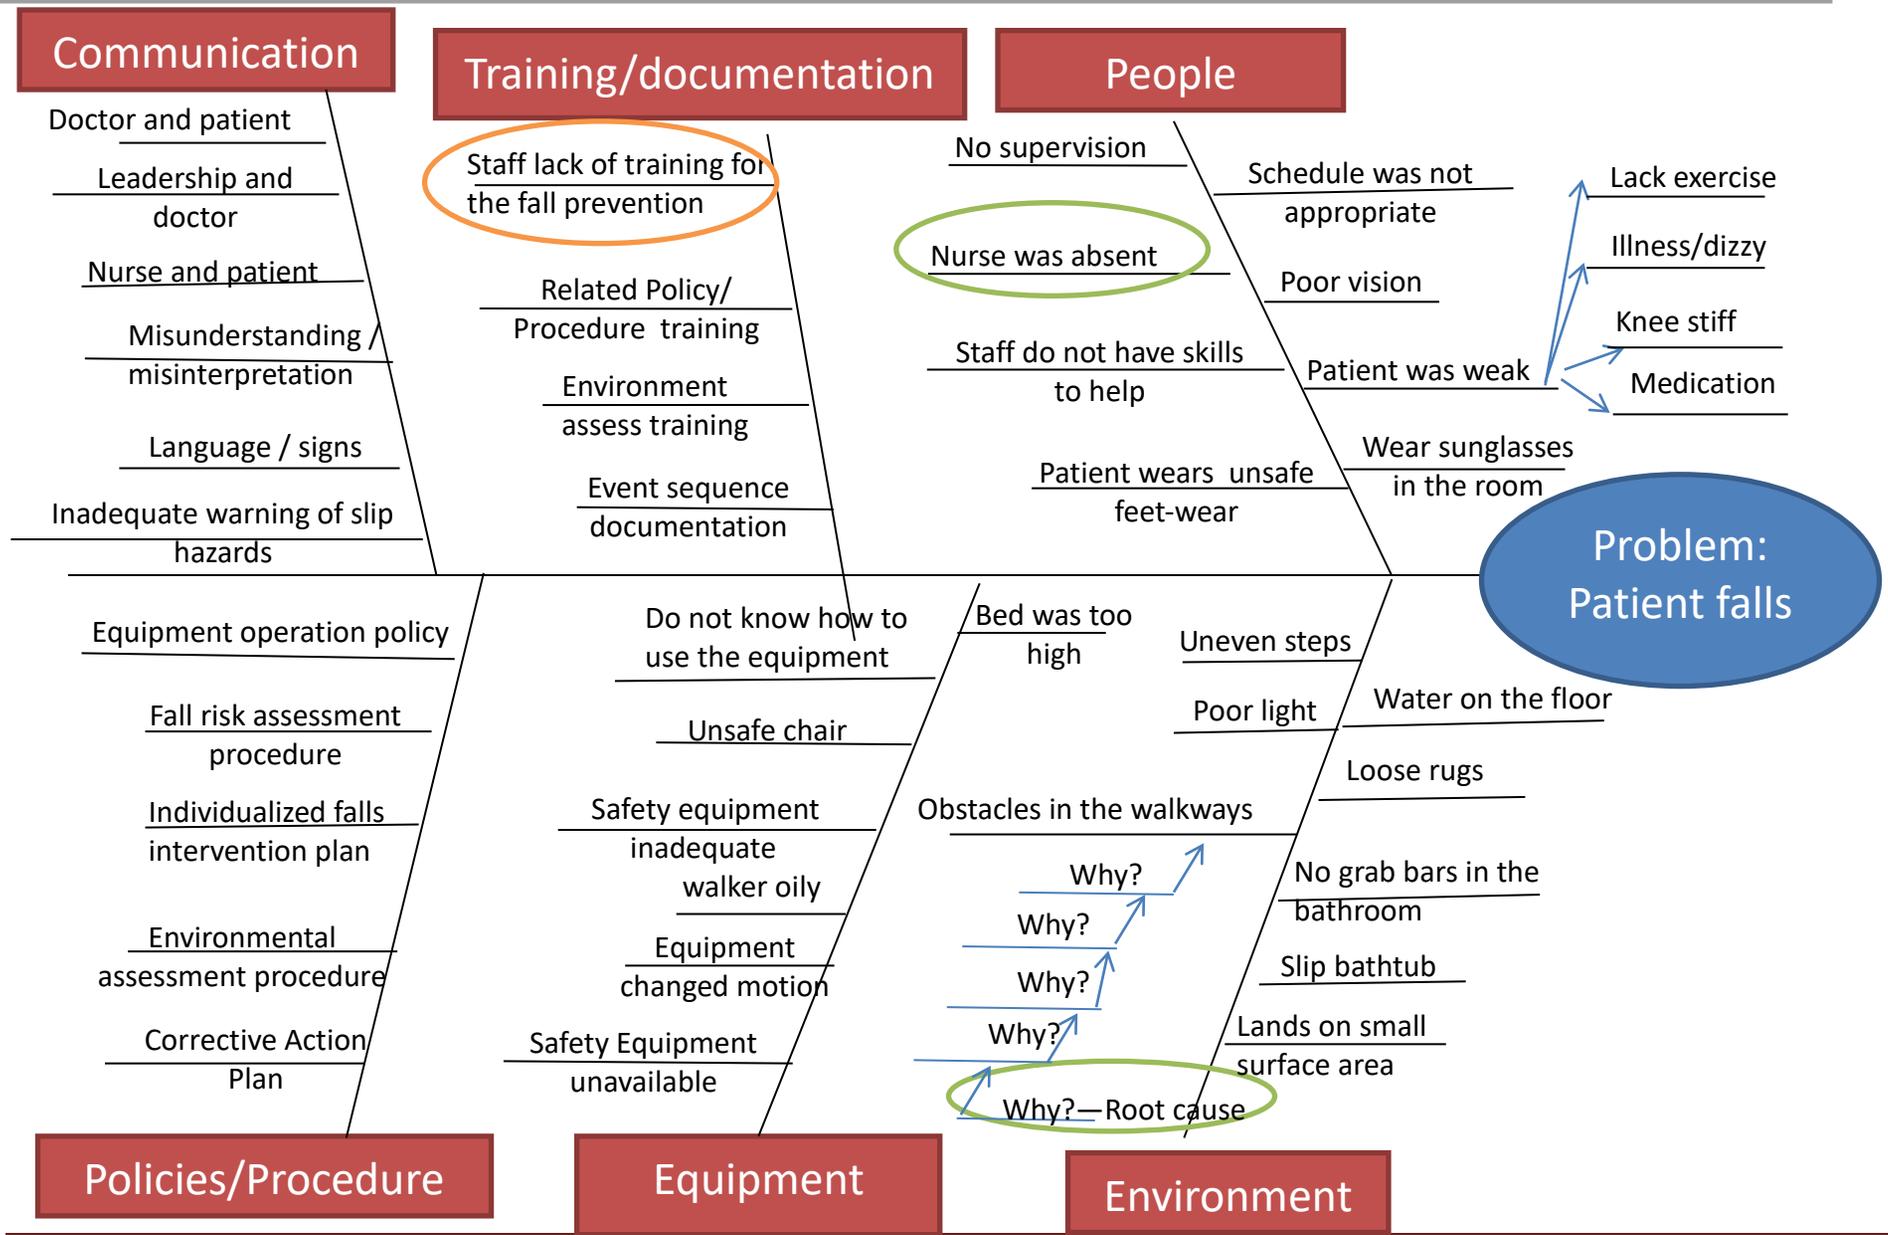

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                         | Q1 2015                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                              |                                                                                            |                                                                                                                                 |                                                                                      |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.                                                                                                               |                                                                                            |                                                                                                                                 | <b>Implement Trigger Tools.</b><br>Develop automated surveillance reports in Cerner. |
|                                                                                                                                                                     | b. Establish an automated surveillance process.                                                                                                              |                                                                                            | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                      |                                                                                      |
| <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                      | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.                                                         | Implemented e-MERS & PSO with UHC.                                                         | Create process for reviewing & closing reports in e-MERS.                                                                       |                                                                                      |
|                                                                                                                                                                     | b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.                                     |                                                                                            | Increase number of events reported by 10%.                                                                                      |                                                                                      |
|                                                                                                                                                                     | c. Establish a process for providing feedback regarding reported events.                                                                                     |                                                                                            | Create process for communicating outcome of reported events.                                                                    |                                                                                      |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.               |                                                                                            | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan. |                                                                                      |
|                                                                                                                                                                     | b. Establish a recognition program that rewards safe practices.                                                                                              |                                                                                            | Include patient safety presentation in monthly New Employee Orientation.                                                        |                                                                                      |
|                                                                                                                                                                     | c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.                                                                        |                                                                                            | Develop 'Great Catch' awards program.                                                                                           |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            |                                                                                                                                 | Re-evaluate culture of safety and develop action plan.                               |
| <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                                | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.                                                                          |                                                                                            | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee.                                                  |                                                                                      |
|                                                                                                                                                                     | b. Facilitate the development of action plans associated with measures not meeting benchmarks.                                                               | Complete 2014 Leapfrog Safety Survey.                                                      | Establish & implement a plan to improve performance of each leap.                                                               |                                                                                      |
|                                                                                                                                                                     | c. Assess and improve processes related to hand-off, transition and communication                                                                            | Develop method to track & report departmental progress and compliance of RCA action plans. |                                                                                                                                 |                                                                                      |
| <b>5. Charter Safety Programs</b> through teams, workgroups or projects.                                                                                            | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices. |                                                                                            | Establish Patient Safety Council.                                                                                               |                                                                                      |
|                                                                                                                                                                     | b. Reduce and eliminate variation in care.                                                                                                                   |                                                                                            | Establish workgroups focused on medication safety, reducing patient falls & hospital acquired pressure ulcers.                  |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            | Revise or develop policies, procedures and protocols.                                                                           |                                                                                      |

| <b>Aim:</b> (Describe the overall SMART goal that your team wishes to achieve.) |  |        |  |
|                                                                                 |  |        |  |
| <b>Plan:</b>                                                                    |  |        |  |
| 1. List the tasks needed to set up this test of change.                         |  |        |  |
|                                                                                 |  |        |  |
| 2. Predict what will happen when the test is carried out.                       |  |        |  |
|                                                                                 |  |        |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

|  |
|--|
|  |
|--|

**Study:** (Describe what you learned and did you meet your measurement goal?)

|                                              |                                                                                    |
|----------------------------------------------|------------------------------------------------------------------------------------|
| Did you meet your measurement goal? Explain. | <b>Summarize what was learned: success, failure, unintended consequences, etc.</b> |
|                                              |                                                                                    |

**Act:** (Describe what you concluded from this cycle.)

|                                                                            |                                                                                                           |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Based on what was learned, please indicate what action will be considered. | <b>Describe what modifications to the plan will be made for the next cycle based on what you learned.</b> |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle       |                                                                                                           |
| <input type="checkbox"/> Adopt: expanding changes throughout organization  |                                                                                                           |
| <input type="checkbox"/> Abandon: change approach and repeat PDSA cycle    |                                                                                                           |

| <b>Monthly / Quarterly Report</b>                                                       |                    |                      |  |
| <b>Items</b>                                                                            | <b>Description</b> |                      |  |
| 1. What is your goal?                                                                   |                    |                      |  |
| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

**Appendix E: Checklist Example: Injuries from Falls and Immobility**

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

|  | HOSPITAL POLICY AND INFORMATION MANUAL                                            |                                                   |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY<br/>Page 1 of 2</p>                       | <p>Date Issued:<br/>Date Last Revised:<br/>Next Review Date:<br/>Approved By:</p> | <p>07/01 08/14<br/>08/17<br/>Policy Committee</p> |

Key Words: personal protective equipment, PPE, safety equipment,

### Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

### Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

### Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

### Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

### Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

**UNIVERSITY MEDICAL CENTER  
PATIENT SAFETY PLAN 2018**

**I. PURPOSE**

---

University Medical Center of Southern Nevada (UMC) is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

This is achieved through:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Honest and open communication that fosters trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes and performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

**II. SCOPE OF ACTIVITIES**

---

The scope of this Patient Safety Plan is organizational-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in University Medical Center of Southern Nevada is able to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, UMC has developed this Patient Safety Plan.

The plan focuses on the process and systems rather than the individual, and recognizes both internal and external customers, as well as facilitates the need for analyzing and improving processes. The core principles of this plan include:

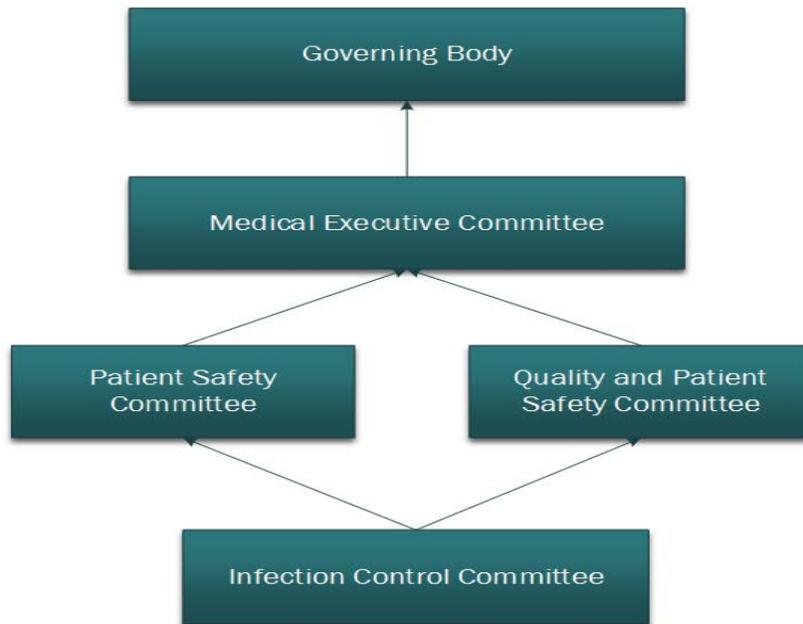

- All staff are encouraged to contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.
- One Failure Mode Effect Analysis (FMEA) completed each year

### III. ROLES AND RESPONSIBILITIES

---

In accordance with [NRS 439.875](#), UMC has established a Patient Safety Committee (PSC). The PSC is responsible to oversee UMC’s Patient Safety Program. As directed by the Board of Governors, the Patient Safety Committee will act as the hospital’s Grievance Committee.

#### Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

### Patient Safety Committee Responsibilities (NRS 439.875 and NRS 439.877):

- The Patient Safety Committee will meet at least monthly
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#)
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment, including the effectiveness of patient identification policy.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar quarter, report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the previous calendar quarter;
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.
- The Patient Safety Committee shall be responsible for generating, evaluating and reviewing proactive risk assessments for the use of such documents and records in its proceedings. All risk assessments and associated documentation and records shall be subject to the applicable privileges under NRS 49.265 and NRS 439.875 provided that it is generated or produced during the Patient Safety Committee's review process.

Patient Safety Officer Responsibilities ( NRS 439.870)

At UMC the Patient Safety Director is designated as the Patient Safety Officer. The Patient Safety Officer shall perform all duties and responsibilities required under Nevada law, including, without limitation:

- Serve on the Patient Safety Committee;
- Supervise the reporting of all sentinel events alleged to have occurred at UMC;
- Investigating the occurrence of Sentinel Events and implementing developed action plans;
- Report to the Patient Safety Committee

**IV. COMPONENTS AND METHODS**

---

Reporting of patient safety events:

All medical, nursing and support clinical staff are required to report any event, situation or circumstance that is significant or potentially significant to patient safety. These events will be reviewed and investigated as needed

This is accomplished by:

- Completing an event report in accordance with UMC policy
- Area manager/clinical supervisor review and completion of the manager's section of the event report
- Quality review by the Center for Quality and Patient Safety
- Review of significant/potentially significant events by the Patient Safety Officer
- Unit review of event types with action plan delivered at the Patient Safety Committee

Mandatory Reporting of Sentinel Events:

Pursuant to [NRS 439.835](#):

- A person who is employed by UMC shall, within 24 hours after becoming aware of a sentinel event, notify the Patient Safety Officer of the event.
- Within 13 days after receiving notification, the patient safety officer shall report the event to the Nevada Division of Public and Behavioral Health (DPBH).
- If the Patient Safety Officer personally discovers or becomes aware of a sentinel event, in the absence of notification by another employee, the patient safety officer shall report the event to DPBH within 14 days of discovery of the event must submit a report to The Health Division.

Disclosure of event to patient/family

Notification of patients who have been involved in a sentinel event will occur no later than 7 days after discovering or becoming aware of an event that occurred at the facility. Serious events should

be disclosed by the attending physician who has responsibility for overall care of the patient. If that is not possible, the Risk Manager or designee will disclose the event to the patient.

Pursuant to [NRS 439.837](#), UMC, upon reporting a sentinel event will conduct an investigation concerning the causes and/or contributing factors of the sentinel event and implement a plan to remedy the causes and/or contributing factors of the sentinel event.

### **Data Collection and Risk Assessment**

Data should drive any quality and patient safety effort. UMC utilizes both internal and external sources for data collection.

#### Internal sources include but are not exclusive:

- Patient Safety Reporting system
- Patient and Family complaints
- Risk Management findings
- Morbidity/Mortality reviews
- Infection Control information
- Compliance findings
- Operative/procedural data
- Staff verbal reporting

#### External sources include but are not exclusive:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### **V. Patient Safety Checklists and Patient Safety Policies:**

---

Patient Safety Checklists must follow protocols, are utilized to improve the health outcomes of patients at UMC and include, without limitation:

- Specific types of treatment, which include documentation that the treatment provided was properly ordered by the provider of healthcare.
- Ensuring that the patient's room and overall environment is sanitary.

- Discharge instructions that must include: proper instructions concerning prescription medications, aftercare instructions, and any individualized patient instructions.

Patient Safety Policies include, without limitation:

- Appropriate identification of patient prior to providing treatment requiring at least two personal patient identifiers
- Nationally recognized standard precaution protocols, including protocols relating to hand hygiene
- Compliance with the patient safety checklists and patient safety policies

Pursuant to [NRS 439.865](#), Policy # I-270, Patient Safety Checklists and Patient Safety Policies, is an extension of the Patient Safety Plan.

## **VI. Annual Patient Safety Plan and Evaluation:**

---

The Patient Safety Officer reviews and updates the Patient Safety Plan annually. The Patient Safety Committee reviews the Patient Safety Plan annually and submits it to the Governing Board.

The Patient Safety Officer prepares a written annual evaluation of the patient safety program. The annual report assesses patient safety events and actions taken to improve patient safety. The report will be submitted through the performance improvement structure and to the Governing Board.

At a minimum, the written report includes the following:

- All system and process failures
- The number and types of sentinel events
- Whether patients and family were notified of events
- All actions taken to improve safety
- All actions taken in response to analyses related to the adequacy of staffing

## **VII. Approval of Patient Safety Plan**

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and updated annually in accordance with the requirements for approval set forth in this section.

In compliance with [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) will be submitted to the Division of Public and Behavioral Health.

## Terms and Definitions

**Patient Safety**: The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/voll/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/voll/advances-emanuel-berwick_110.pdf)

### **Sentinel event** (NRS 439.830)

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Near miss**: An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting**: Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

VALLEY HOSPITAL MEDICAL CENTER

# Risk Management/ Patient Safety Plan

Nevada Acute Care Division

Revised 1/2018

## I. Overview

**Valley Hospital Medical Center** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. **Valley Hospital Medical Center** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **Valley Hospital Medical Center** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **Valley Hospital Medical Center** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at **Valley Hospital Medical Center**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **Valley Hospital Medical Center** policies. **Valley Hospital Medical Center** employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.

- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**Valley Hospital Medical Center** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**Valley Hospital Medical Center** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

## III. ROLES AND RESPONSIBILITIES

### A. Risk Management/Patient Safety Officer

**Valley Hospital Medical Center** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The

designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

## **B. Infection Control Officer**

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**Valley Hospital Medical Center** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **Valley Hospital Medical Center** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

##### **Membership:**

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**Valley Hospital Medical Center PSC** is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility's claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the "Best Practice."
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.

- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:

(1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

(2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## **II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**Valley Hospital Medical Center** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## **C. TERM Program**

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the

Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. MIDAS**

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

#### **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the

facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

### **G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

#### **RCA Responsibilities**

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Falls: Goal: Valley Hospital and Medical Center would like to reduce patient falls with injuries by 20%. The methodology for attainment is incorporating daily rounds by clinical supervisors to confirm all fall reduction strategies have been implemented on high risk for fall patients. Also, patients that require closer monitoring will be placed in camera rooms and/or, a sitter will be utilized as necessary.
- Increase Risk management education to all staff by attending daily huddles, monthly on-site staff meetings, Safety Fair, and conducting open house in the Risk Office. Key patient safety concerns, topics, Midas questions will be addressed. Valley Hospital Risk Management will increase this by 30%.

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### **C. Dashboards**

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## **VI. Evaluation/Review:**

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of "Near Miss" events
- There is a framework that advances a "Just Culture"
- Accountability is promoted when acts of "at risk" or "reckless behavior" occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year's probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## **VII. Confidentiality**

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## **VIII. Approval of Patient Safety Plan**

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## **Appendix A: Terms and Definitions**

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and

Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CURRRENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRRENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

| Summary of Review         | Total # developed | Total # revised | Total # Reviewed |
|---------------------------|-------------------|-----------------|------------------|
| Patient Safety Checklists |                   | 4               | 52               |
| Patient Safety Policies   |                   | 4               | 9                |

\*Checklists and Patient Safety Policies were reviewed for the stated time period. Need for revision is noted by the date the revision was made.

\*\*Usage outlines the units/departments the checklists are used in.

\*\*\*As part of the annual review any required revisions will be identified. If revisions are required this is noted in the revision box. Any additional patient safety checklists or policies identified will be noted in this (review) column. If the annual review reveals no changes are required this box will be marked with an "X". An "X" means that the checklists and policies were reviewed but no changes were required.

❖ Reports are due on or before July 1 of each year, address report to:

# Patient Safety Plan

2017

This plan was created and revised by the Renown Health's Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes. In addition the plan is intended to encourage recognition, reporting, and acknowledgment of risks to patients, visitors, and employees as well as reduce medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Renown Health is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Renown Health's Patient Safety program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Honest, open communication to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and values for each patient, family member, employee, and other healthcare providers.
- Responsibility for safety related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible patient outcomes.
- Incorporation of evidence-based safety practice guidelines to deliver high quality healthcare.
- Education of staff, physicians, patients and their families to promote patient safety and continuous quality improvement.

## Scope and Purpose

---

This Patient Safety Plan applies across the entire Renown Health organization.

All staff and physicians in Renown Health are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare performance improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve patients and their families.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

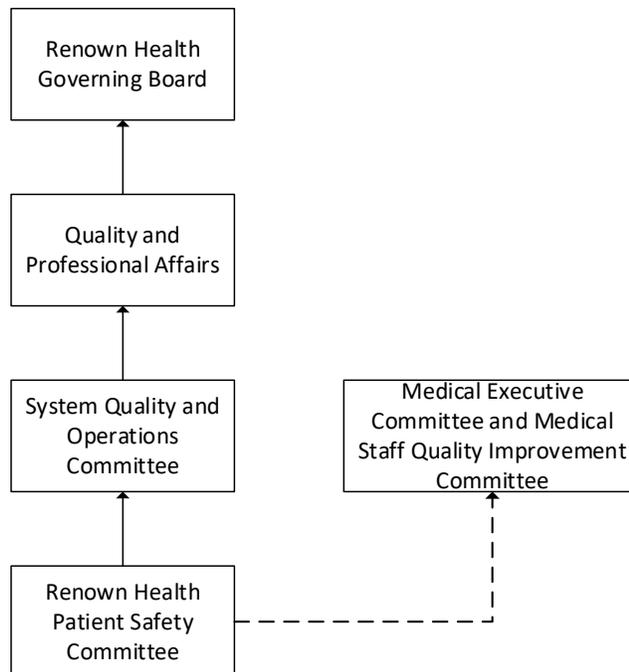

- Staff and physicians contributing their knowledge, vision, skill, and insight to improve the processes of patient safety
- Decisions made based on data and facts, with patient safety being considered
- Customer-focus including patients, families, and visitors
- System-based thinking
- Utilization of trained, expert staff and physicians.

## Roles and Responsibilities

---

The Renown Health Patient Safety Committee ensures that the Patient Safety Plan is promoted and executed successfully as indicated in NRS439.875.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), the Renown Health Patient Safety Committee is comprised of:
- The Renown Health Infection Control Officer;
- The Renown Health Patient Safety Officer;
- At least three providers of healthcare who treat patients, including at least one member of the medical, nursing and pharmaceutical staff of the medical organization; and
- One member of the executive or governing body of the medical organization;
- A representative from Executive Leadership.

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy through event review when applicable.

- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the organization to improve the safety of patients.
- Review and evaluate the quality of measures carried out by the organization to prevent and control infections.
- Make recommendations to the executive or governing body of the organization to reduce the number and severity of sentinel events and infections.
- At least once each calendar quarter, report to the executive or governing body of the organization regarding:
  - (1) The number of sentinel events that occurred;
  - (2) The number and severity of infections that occurred; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the Renown Health Patient Safety Committee.
- Supervise the reporting of all sentinel events alleged to have occurred, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred.
- Report to the patient safety committee directly or through his/her designee any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the Renown Health Patient Safety Committee.
- Monitor the occurrences of infections to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections either directly or through his/her designee.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Quality and Professional Affairs Committee of the Renown Health Board

- Provide vision and leadership to Patient Safety process, and develop and foster a safe learning and improving culture.
- Ensures the priorities of patient safety are aligned with the strategic priorities of the health system.

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events and hospital acquired infections including:

- Number of sentinel events from previous calendar month
- Number of hospital acquired infections that occurred in the organization
- Corrective action plans for the sentinel events and infections.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed
  - Monitor and document the effectiveness of patient safety policies.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

### Root Cause Analysis

Renown Health will use Root Cause Analysis (RCA) to determine the contributing factors and the underlying reasons for the deficiencies or failures. Transformational Health Care principles and methods are incorporated into Renown Health’s RCA process.

An RCA is a process for identifying the root causes of problems. It follows the principles of Just Culture by focusing on processes, instead of individuals.

#### Root Cause Analysis (RCA) Team Responsibilities

RCAs are conducted for all identified sentinel events and significant events/near misses involving complex process failure. Results of significant RCAs will be reported and monitored by the Renown Health Patient Safety Committee.

- Root Cause interviews, analysis, investigation, and corrective action plan implementations
- Participates in the RCA meetings and discussions
- Communicate honestly and openly about data and facts to the team members and their supervisors/leaders
- Incorporates the principles of Just Culture in the RCA process.

**Causal Chain (5 Whys)** technique will be used in Renown Health to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” repeatedly.

### Data Collection and Reporting

Data drives quality and patient safety efforts. Renown Health uses Midas and other databases for tracking sentinel events, healthcare infections, and other patient safety related data.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Patient Safety plan include the data from:

*Renown Health Patient Safety Plan*

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the organization;
- Other personnel who provide treatment or assistance to patients;
- Employees who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the organization; and
- Persons with whom the organization enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The Renown Health Patient Safety Committee reviews and approves annually patient safety checklists based on policy.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The Renown Health Infection Prevention Plan and Program is established and approved by the Renown Health Infection Control Committee. Regular reports and updates regarding the Infection Prevention Program are provided to the Patient Safety Committee.

## Approval of Patient Safety Plan

---

The Renown Health Patient Safety Plan is reviewed and updated annually and is approved by the Quality and Professional Affairs Committee of the Renown Health Board.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

**WILLIAM BEE RIRIE CRITICAL ACCESS HOSPITAL/RURAL HEALTH CLINIC**

**ADMINISTRATION POLICY & PROCEDURES**

**Department:** Facility Wide

**Program/Manual:** Administration

**Policy Subject:** Patient Safety Plan

**Section Number:** P

**Effective Date:** 01/1990

**Revision Date:** 09/26/2011; 2/17/2015; 3/14/2018

**Approved:** \_\_\_\_\_

**I. INTRODUCTION**

The Patient Safety Program supports and promotes the mission, vision and values of William Bee Ririe Hospital and Rural Health Clinic through organizational prioritization of patient, visitor and employee safety.

The patient safety program is implemented through the Enterprise Safety Committee and is supported by leadership's promotion of a safety culture that:

- Encourages recognition, reporting, and acknowledgment of risks to patient/visitor and employee safety and medical/healthcare errors
- Initiates/monitors actions to reduce risks/errors
- Internally report's findings and actions taken
- Promotes a blame-free culture facilitating the reporting and follow-up on safety concerns, errors and adverse events
- Educates staff and physicians to assure participation in the program

**II. PURPOSE**

The Patient Safety Program is designed to enhance patient care delivery and prevent adverse outcomes of care by utilizing a systematic, coordinated and continuous approach to the improvement of patient safety. This approach focuses on actual and potential occurrences; ongoing proactive risk management; and integration of patient safety priorities in the development and revision of processes, functions and services.

**III. MISSION, VISION AND VALUES**

In support of the mission, vision and values of this organization the Patient Safety Program promotes;

- Collaboration among staff members, physicians and other providers to deliver comprehensive, integrated and quality health care.

- A focus on comprehensive, integrated quality service
- Open and honest communication to foster trust relationships among staff members, physicians, other providers and patients.

#### IV. OBJECTIVES

The objectives of the Patient Safety Program are to:

- Encourage organizational learning about adverse or potential adverse events
- Incorporate recognition of patient safety as an integral job responsibility
- Provide patient safety education
- Involve patients in decisions about health care and promote open communication
- Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate proactive measures
- Report internally and findings and actions taken to reduce risk
- Support sharing of knowledge to effect change
- Supplying support systems to health care workers who are involved in sentinel events.
- Have a sufficient number and mix of individuals to support safe, quality care, treatment, and services.

#### V. RESPONSIBILITIES/DUTIES

It is William Bee Ririe Hospital and Rural Health Clinic's responsibility to designate an officer or employee of the facility to serve as the patient safety officer of the medical facility.

The duties of the designated patient safety officer are:

- To serve as the patient safety officer of WBRH and RHC
- Serve on the Enterprise Safety Committee
- Supervise the reporting of all sentinel events alleged to have occurred at the WBRH and RHC, including, without limitation, performing required pursuant to NRS 439.835
- Duties pursuant to 439.835 are
  - a) A person who is employed by WBRH and RHC shall, within 24 hours after becoming aware of a sentinel event that occurred at WBRH and RHC, notify the patient safety officer of the sentinel event.
  - b) The patient safety officer shall, within 13 days after receiving notification, report the date, the time and a brief description of the sentinel event to The Health Division and facility representative if that person is different from the patient safety officer.
  - c) If the patient safety officer of WBRH and RHC personally discovers or becomes aware, in the absence of notification by another employee, of a sentinel event

that occurred at WBRH and RHC, the patient safety officer shall, within 14 days after discovering or becoming aware of the sentinel event report the date, time and brief description event to those listed in b) above.

- Take such action as he or she determine to be necessary to insure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at WBRH and RHC
- Report to the Enterprise safety committee regarding any action taken in accordance to the above paragraph.
- Upon discovery notify the CEO immediately.

The Enterprise Safety Committee shall meet each month

The Patient Safety Plan and any changes thereafter shall be presented to the governing board of WBRH and RHC for approval.

The Patient Safety Plan must include, without limitation, the patient safety checklists and patient safety policies most recently adopted in regards to the patient safety plan.

After the WBRH and RHC's patient safety plan is approved, WBRH and RHC shall notify all providers of health care who provide treatment to patients at WBRH and RHC of the existence of the plan and of the requirements of the plan. WBRH and RHC shall require compliance with the patient safety plan.

The Enterprise safety Committee shall

- Receive reports from the Patient Safety Officer
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the facility
- Review and evaluate the quality of measures carried out by WBRH and RHC to improve the safety of patients who receive treatment at WBRH and RHC
- Make recommendations to the governing body of WBRH and RHC to reduce the number and severity of sentinel events that occur at WBRH and RHC.

The Enterprise Safety Committee provides a multidisciplinary forum for the collection and analysis of risk to patient safety and the dissemination of information on identified risk for the purpose of improving patient care. It shall review reports on occurrences including near misses to sentinel events. It shall identify those individuals or groups best situated to perform a root cause analysis and develop and implement an action plan for identified issues. It shall review, analyze and disseminate the information it receives, as appropriate, to the designated individuals and/or committees. It shall provide recommendations concerning identified risks, approve plans for corrective actions and evaluate the implantation of corrective actions taken.

Membership will include: CEO, CNO, CIO, Pharmacist, QIC, Infection Control, Materials Manager, Environmental Safety Officer, Patient Safety Officer, a Medical Staff Member, and 1 member of the governing body.

## VI. SCOPE

The types of occurrences to be addressed include, but are not limited to, sentinel events, near misses, and actual events related to:

- a) Patient safety
- b) Adverse drug events (medication errors and adverse drug reactions)
- c) Health acquired infections
- d) Patient Falls
- e) Other patient incidents/unexpected clinical/medical events
- f) Unsafe conditions
- g) Visitor safety
  - Visitor incidents
- h) Employee safety
  - Blood/body fluid exposures
  - Occupational diseases
  - Communicable disease exposures
  - Musculoskeletal injuries
  - Immunization programs
  - Other employee incidents
- i) Environmental safety
  - Product recalls
  - Drug recalls
  - Product/equipment malfunction
  - Construction –Infection Control Risk Assessment
  - Water Quality
  - Air Quality
  - Disaster Planning
  - Security incidents
  - Workplace violence

Data from external sources, including but not limited to:

- Centers for Disease Control and Prevention (CDC)
- Joint Commission
- Institute for Healthcare Improvement (IHI)
- Institute for Safe Medication Practices (ISMP)

- Occupational Safety and Health Administration (OSHA)
- Nevada State Health Division
- Published literature

## VII. DEFINITIONS

Adverse (Sentinel) Event is defined as an unexpected occurrence that involving facility-acquired infection, death or serious physical or psychological injury, or the risk thereof. Serious injury specifically includes loss of limb function. The phrase “or the risk thereof” includes any process variation for which recurrence would carry a significant chance of a serious adverse outcome.

Facility-acquired infection means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections
- Ventilator-associated pneumonia
- Central line-related bloodstream infections
- Urinary tract infections; and
- Other categories of infections as may be established by the Administrator.

Medical Error is defined as failure of a planned action to be completed as intended or the use of a wrong plan to achieve an aim. Medical errors may or may not cause harm.

Serious Error is an error resulting in patient injury including the potential to cause permanent injury or transient but potentially life-threatening harm

Minor Error is an error that does not cause harm or have the potential to do so

Near Miss is an error that could have caused harm but did not reach the patient because it was intercepted.

## VIII. STRUCTURE

The authority for the Patient Safety Plan rests with the CEO, CNO, Quality Improvement Coordinator, Patient Safety Officer, and Chief of Medical Staff and has delegate the authority to implement and maintain activities described in this plan to the Enterprise safety committee.

## IX. QUALITY REVIEW INFORMATION

To the extent possible, and in the manner consistent with the protection of confidentiality of quality assurance and patient safety data, pertinent information will be shared between the Quality Improvement Program and the Enterprise Safety Program.

In an attempt to protect quality review information from discovery, all quality review documents must be labeled as a Quality Review document. Documents should be in a formal format, handled by a limited number of individuals and secured in the Quality or Risk Managers Office accessible only to designated individuals. Nevada Revised Statute that protects quality documents is NRS49.265.

#### X. EDUCATION

Annual Staff and physician/provider education includes but is not limited to the following topics:

- Fire Drills
- Emergency and Disaster Drills
- Workplace violence
- Customer Service
- Creating, implementing, achieving, and maintaining a culture of Enterprise safety
- Risk management and error prevention
- Teamwork

#### XI. SAFETY IMPROVEMENT ACTIVITIES

Specify Measures Selected for an annual focus; (Examples are listed below)

- Patient satisfaction surveys
- Medical Record review; legible documentation, clear, complete, signed
- Complaints and resolution; to improve care and satisfaction (trends)
- Confidentiality; insure patient and employee information is secure
- Appointments/scheduling process; accessibility to physician
- Informed Consent Policy and Procedure
- Medication management and reconciliation i.e. allergy information current
- Telephone response time to callers
- Occurrence review

Give consideration to measures that facilitate safe practices; (Examples are listed below)

- Involve patients in their health care; consider literacy issues and cultural values, partner with patients in developing and planning their care plan.
- Use a team approach to safety; hold focused safety meetings

- Endorse open, effective communication; identify shared values and attitudes among all members. Interview and/or survey staff for attitudes, perceptions and communication barriers.
- Encourage error reporting to include near miss events. Institute a non-punitive reporting that is confidential and timely.
- Ensure employee and patient information or event reports shared with staff for educational purposes do not identify individuals.
- Facilitate communication skills learning (teamwork)
- Examine physical premises to identify and correct potential hazardous conditions.
- Orient physicians and new employees to risk management and patient safety concepts
- Conduct patient safety rounds
- Provide education and training on high risk processes.

## XII. METHODOLOGY

### A. Structure

- Proactive risk prevention strategies
- Identification of High Risk Areas
- General Incidences (Patient Injuries)
- Potential or actual adverse events (medication errors)

### B. Method – Establish a process for;

- Identification, Selection, Prioritization
- Data Collection and Analyses
- Development of Actions
- Implementation
- Reporting
- Follow-up

### C. Process Improvement – Establish teams/individual staff members to implement processes and to monitor for effectiveness.

Utilize applicable tools to facilitate improvement; for example

- PDCA: Plan, Do Check Act with focus on process improvement
- FMEA: Failure Mode Effect Analysis a systematic process for identifying potential process failures before they occur with the intent to eliminate or minimize risk.
- RCA: Root Cause Analysis is a retrospective approach to error analysis that identifies what and how the event occurred and why it happened. The focus is on the process and systems not individuals.

## XIII. PROGRAM EVALUATION

The Patient Safety Officer will submit monthly a report the Enterprise Safety Committee, Medical Staff and the Board of Directors.

1. Definition of the scope of occurrence including sentinel events, near misses and serious occurrences that occurred at WBRH and RHC during the preceding month including;
  - Employee injuries
  - Potential lawsuits
  - Resolutions
  - Recommendations to the decrease of the number and severity of Sentinel Events

Yearly the Patient Safety Officer will submit to the Enterprise Safety Committee, Medical Staff and the Governing Board the following;

- a. Detail of activities that demonstrate the enterprise safety program has a proactive component by identifying the high-risk process selected.
- b. Results of the high-risk or error-prone processes selected for ongoing measurement and analysis.
- c. A description of how the function of process design that incorporates patient safety has been carried out using specific examples of process design or redesign that include patient safety principles.
- d. The results of how input is solicited and participation from patients and families in improving patient safety is obtained.
- e. The results of the program that assesses and improves staff willingness to report errors.
- f. A description of the examples of ongoing education and training programs that are maintaining and improving staff competence and supporting an interdisciplinary approach to patient care.

Yearly the Enterprise Safety Committee shall;

1. Monitor and document the effectiveness of the patient identification policy.
2. Review the patient safety checklists and patient safety policies adopted and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at the medical facility.
3. Revise a patient safety checklist and patient safety policy adopted as necessary to ensure that the checklist or policy reflects the most current standards in patient safety protocols.
4. On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. This report must contain;
  - Information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted.

XIV. NO CRIMAL PENALTY OR CIVIL LIABILITY

No person is subject to any criminal penalty or civil liability for libel, slander or any similar cause of action in tort if the person, without malice;

- Reports sentinel event to a governmental entity with jurisdiction or another appropriate authority.
- Notifies a governmental entity with jurisdiction or another appropriate authority of a sentinel event.
- Transmits information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority
- Compiles, prepares or disseminates information regarding a sentinel event to a governmental entity with jurisdiction or another appropriate authority; or
- Performs any other act authorized pursuant to NRS 439.800 to 439.890.

NRS439.860 ANY REPORT, DOCUMENT AND ANY OTHER INFORAMTION COMPILED OR SIDDEMINATED PURSUANT TO THE PROVISIONS OF NRS 439.800 TO 439.890, INCLUSIVE AND SECTION I OF AB 280 IS NOT ADMISSIBLE IN EVIDENCE IN ANY ADMINISTRATIVE OR LEGAL PROCEEDING CONDUCTED IN THE STATE OF NEVADA.

# Willow Springs Center

---

A Residential Treatment Center for Children and Adolescents

## Risk Management/Patient Safety Plan

2018

## 1. Overview

- A. Willow Springs has established a Risk Management/Patient Safety Plan that is supported by Senior Leadership to prevent, reduce, modify and eliminate conditions and practices that may create or cause loss. The safety and wellbeing of patients, personnel and the public is of the highest priority.

### Mission and Vision

*At Willow Springs, we are compassionate, committed and caring people, dedicated to inspire hope, as well as the ability to achieve and celebrate success through the power of relationships developed with children, families, and the communities we support. Willow Springs promotes clinical excellence, an environment of collaboration and trust while maintaining fiscal responsibility and integrity for patients, customers and the communities we serve.*

## 2. Roles and Responsibilities

### A. Risk Management/Patient Safety Officer

1. Behavioral Health Facilities designate Risk Managers to be responsible for risk identification and risk reduction.
2. The designated Risk Manager/Director is also the Patient Safety Officer
3. The Patient Safety Officer responsibilities based on [NRS 439.870](#) includes:
  1. Serve on the patient safety committee.
  2. Supervise the reporting of all sentinel events alleged to have occurred at the medical facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
  3. Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the medical facility.
  4. Report to the patient safety committee regarding any action taken in accordance with paragraph iii.

### B. Infection Control Officer

1. The Infection Control Officers responsibilities based on [NRS 439.873](#) includes:
  1. Shall serve on the patient safety committee.
  2. Shall monitor the occurrences of infections at the medical facility to determine the number and severity of infections.
  3. Shall report to the patient safety committee concerning the number and severity of infections at the medical facility.

4. Shall take such action as he or she determines is necessary to prevent and control infections alleged to have occurred at the medical facility.
  5. Shall carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.
2. Based on [NRS 439.865](#), the patient safety plan must also include an Infection Control Plan/Program that carries out the infection control policy. The policy must consist of:
    1. The patient safety checklists and patient safety policies most recently adopted pursuant to [NRS 439.877](#).
    2. An infection control program to prevent and control infections within the medical facility. To carry out the program, the medical facility shall adopt an infection control policy. The policy must consist of:
      1. The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, without limitation, the Association for Professionals in Infection Control and Epidemiology, Inc., the Centers for Disease Control and Prevention of the United States Department of Health and Human Services, the World Health Organization and the Society for Healthcare Epidemiology of America; and
      2. Facility-specific infection control developed under the supervision of a certified infection preventionist.
- C. Patient Safety Council (PSC)
1. The Patient Safety Council meets monthly and ensures
  2. According to [NRS 439.875](#), a medical facility shall establish a patient safety committee.
    1. A patient safety committee established pursuant to subsection 1 must be composed of:
      1. The infection control officer of the medical facility.
      2. The patient safety officer of the medical facility, if he or she is not designated as the infection control officer of the medical facility.
      3. At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility.

4. One member of the executive or governing body of the medical facility.
2. A patient safety committee shall meet at least once each month.
  1. A patient safety committee shall meet at least once each month.
  2. The Administrator shall adopt regulations prescribing the composition and frequency of meetings of patient safety committees at medical facilities having fewer than 25 employees and contractors.
3. A patient safety committee shall:
  1. Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
  2. Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.
  3. Review and evaluate the quality of measures carried out by the medical facility to improve the safety of patients who receive treatment at the medical facility.
  4. Review and evaluate the quality of measures carried out by the medical facility to prevent and control infections at the medical facility.
  5. Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur at the medical facility.
  6. At least once each calendar quarter, report to the executive or governing body of the medical facility regarding:
    - a. The number of sentinel events that occurred at the medical facility during the preceding calendar quarter;
    - b. The number and severity of infections that occurred at the medical facility during the preceding calendar quarter; and
    - c. Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
  7. Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.
  8. The proceedings and records of a patient safety committee are subject to the same privilege and protection from

discovery as the proceedings and records described in [NRS 49.265](#).

4. Additional Patient Safety Committee Responsibilities, based on [NRS 439.877](#) includes Patient safety checklists and patient safety policies: Adoption by patient safety committee; required provisions; duties of patient safety committee.
  1. The patient safety committee established pursuant to [NRS 439.875](#) by a medical facility shall adopt patient safety checklists and patient safety policies for use by:
    - a. Providers of health care who provide treatment to patients at the medical facility;
    - b. Other personnel of the medical facility who provide treatment or assistance to patients;
    - c. Employees of the medical facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
    - d. Persons with whom the medical facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients at the facility.
  2. The patient safety checklists adopted pursuant to subsection 1 must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:
    - a. Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care.
    - b. Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary.
    - c. A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
      - i. Proper instructions concerning prescription medications;
      - ii. Instructions concerning aftercare; and
      - iii. Any other instructions concerning his or her care upon discharge.
    - d. Any other checklists which may be appropriate to ensure the safety of patients at the medical facility.

3. The patient safety policies adopted pursuant to subsection 1 must include, without limitation:
  - a. A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of health care. The personal identifiers may include, without limitation, the name and date of birth of the patient.
  - b. A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of health care at the medical facility including, without limitation, protocols relating to hand hygiene.
  - c. A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, without limitation, active surveillance. Active surveillance may include, without limitation, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.
4. The patient safety committee shall:
  - a. Monitor and document the effectiveness of the patient identification policy adopted pursuant to paragraph (a) of subsection 3.
  - b. At least annually, review the patient safety checklists and patient safety policies adopted pursuant to this section and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at the medical facility.
  - c. Revise a patient safety checklist and patient safety policy adopted pursuant to this section as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
  - d. On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to paragraph (b).

#### D. Patient Safety Advisories/Alerts.

1. Advisories/Alerts are issued to facilities for the purpose of sharing pertinent information regarding a system or event that led to failure. Assessing these systems, can to lead to positive outcome so facilities can reduce the risk and avoid the same or similar outcome.
2. Each facility should review the advisory and assure that processes are safe and appropriate.

E. TERM Program.

1. WSC utilizes a risk management program identified as TERM, The Technical Elements Related to the Management of Patient Safety. The TERM document identifies expectations for our facility similar to a standard of care.
2. Elements of TERM include:
  1. Administration of the RM and Patient Safety Program.
  2. Risk Identification.
  3. Patient Safety Orientation and Education.
  4. Risk Prevention Techniques.
  5. Contract Services.
  6. Risk Profiling.
  7. Patient Safety Council.
  8. Environment of Care.
  9. Claims and Litigation.
  10. Measuring the Effectiveness of the Patient Safety Program.

F. MIDAS.

1. The entering of the facility's Healthcare Peer Review Reports (HPRs) for patients and non-patients into MIDAS+ as Risk Management Event Entries is the responsibility of the facility Risk Manager. They are entered on a regular basis and the Risk Manager utilizes the system to collect data through the various Risk Management Reports, which are written based on data from the event reports (HPRs) and MIDAS+.

G. ENTERPRISE.

1. Enterprise is an electronic platform used to enter and track probable claims reports. A PCR is the facility's method of communicating the event and related findings/facts to Corporate Insurance staff.

H. RCA – Root Cause Analysis.

1. The Root Cause Analysis and Action Plan tool has 24 analysis questions. The framework is intended to provide a template for answering the analysis questions and aid organizing the steps in a root cause analysis. All possibilities and questions should be fully considered in seeking "root cause(s)" and opportunities for risk reduction. Not all questions will apply in every case and there may be findings that emerge during the course of the analysis. For each finding we continue to ask "Why?" and drill down further to uncover why parts of the process occurred or didn't occur when they should have. Significant findings that are not identified as root causes themselves have "roots".
2. According to [NRS 439.837](#), states that a Mandatory investigation of sentinel event by medical facility:

1. A medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.

I. Risk Management Goals and Objectives 2018:

1. Demonstrate compliance with the Centers for Disease Control and Prevention (CDC) and compliance with National Patient Safety Goal NPSG.07.01.10, demonstrating our compliance with hand hygiene guidelines.”
2. Educate new staff and facility adheres to the National Patient Safety Goals to improve patient safety.
3. Senior leadership conducts audit observation rounds which leads to maintaining patient safety and preventing harm to the patient.
4. Patient safety orientation and education for all new hires creates risk reducing practices.
5. Good Catch Program recognizes an event that could have been harmful to a patient, but was prevented. This creates and maintains an environment of non-punitive reporting

J. Approval of Patient Safety Plan.

1. According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the medical facility for approval in accordance with the requirements of this section.
  1. After a medical facility’s patient safety plan is approved, the medical facility shall notify all providers of health care who provide treatment to patients at the medical facility of the existence of the plan and of the requirements of the plan. A medical facility shall require compliance with its patient safety plan.
  2. The patient safety plan must be reviewed and updated annually in accordance with the requirements for approval set forth in this section.

## QUALITY AND PATIENT SAFETY PLAN

---

DATE: 02/15/2017  
VERSION: 01

This plan was created and revised by the Wildcreek Surgical Center Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**  
**Wildcreek Surgical Center**

## Commitment to Patient Safety

---

Wildcreek Surgical Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Wildcreek Surgical Center's Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Wildcreek Surgical Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Wildcreek Surgical Center has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and

external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

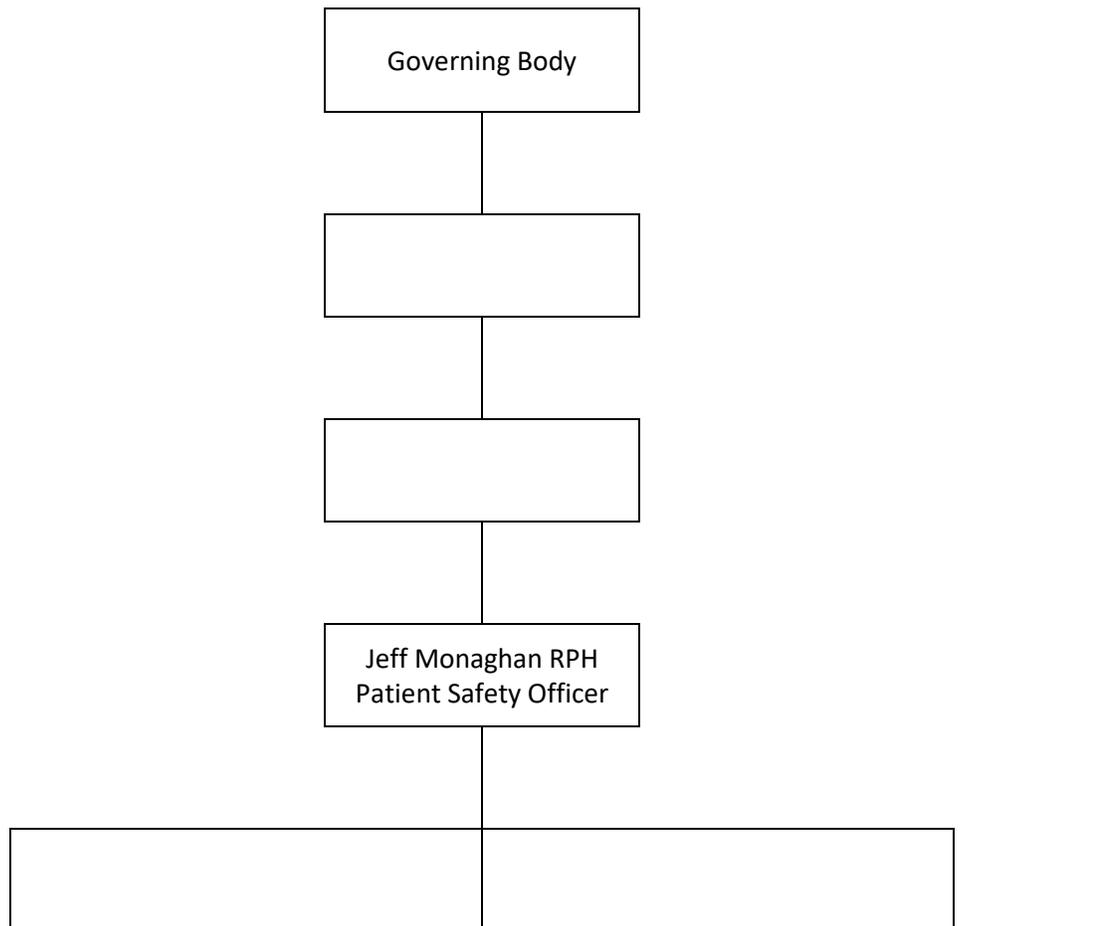

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

Paul Hiss MD

Douglas Devries OD

Kathryn Brewer RN

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

#### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities (please revise as needed)

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

RCA team leader Responsibilities (please revise as needed)

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

(Please provide the responsibilities here)

#### Executive or Governing Body Staff Responsibilities (please revise as needed)

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

(Please provide additional responsibilities here if needed)

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## **Objectives and Goals of the Quality and Patient Safety Plan**

---

| Objective | Goals | Plan | Planned Completion Date | Responsible Party |
|-----------|-------|------|-------------------------|-------------------|
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Wildcreek Surgical Center will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Wildcreek Surgical Center to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

## Fishbone Diagram

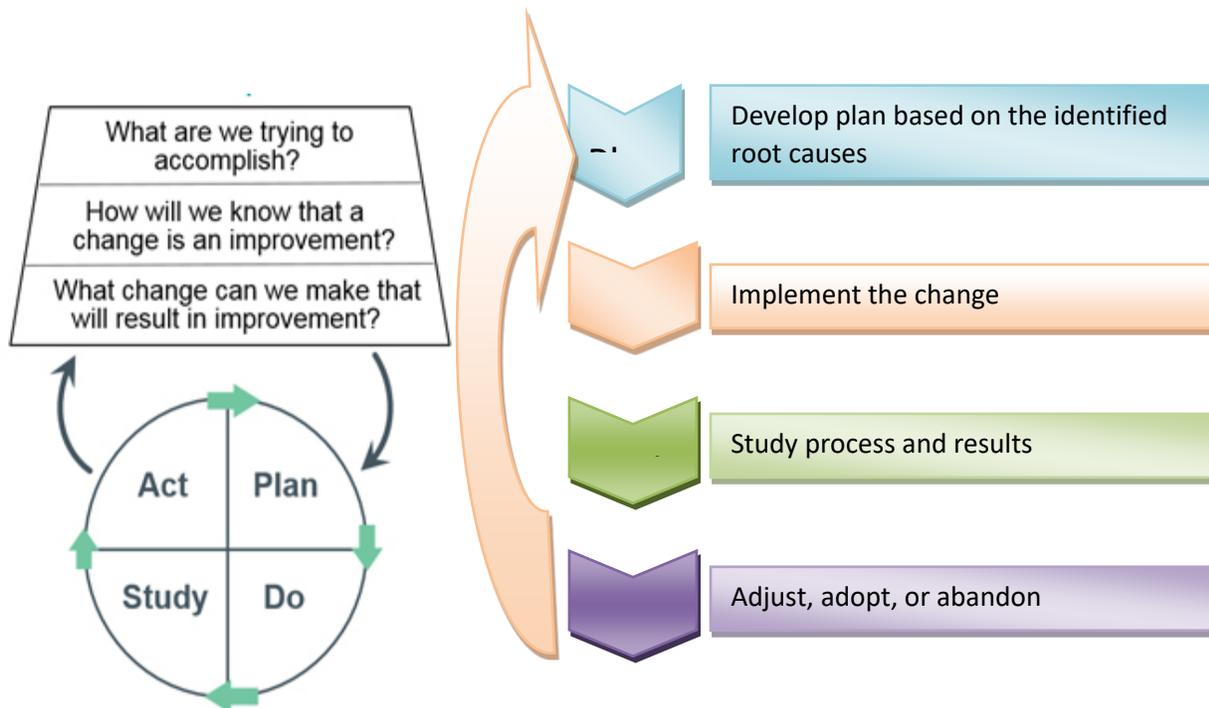

*Patient Safety and Quality Improvement Plan*

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. Wildcreek Surgical Center is using, [NHSN: National Healthcare Safety Network](#), for tracking the sentinel events, healthcare infection data, and internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.
2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:
  - (a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or
  - (b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.
3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.  
(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

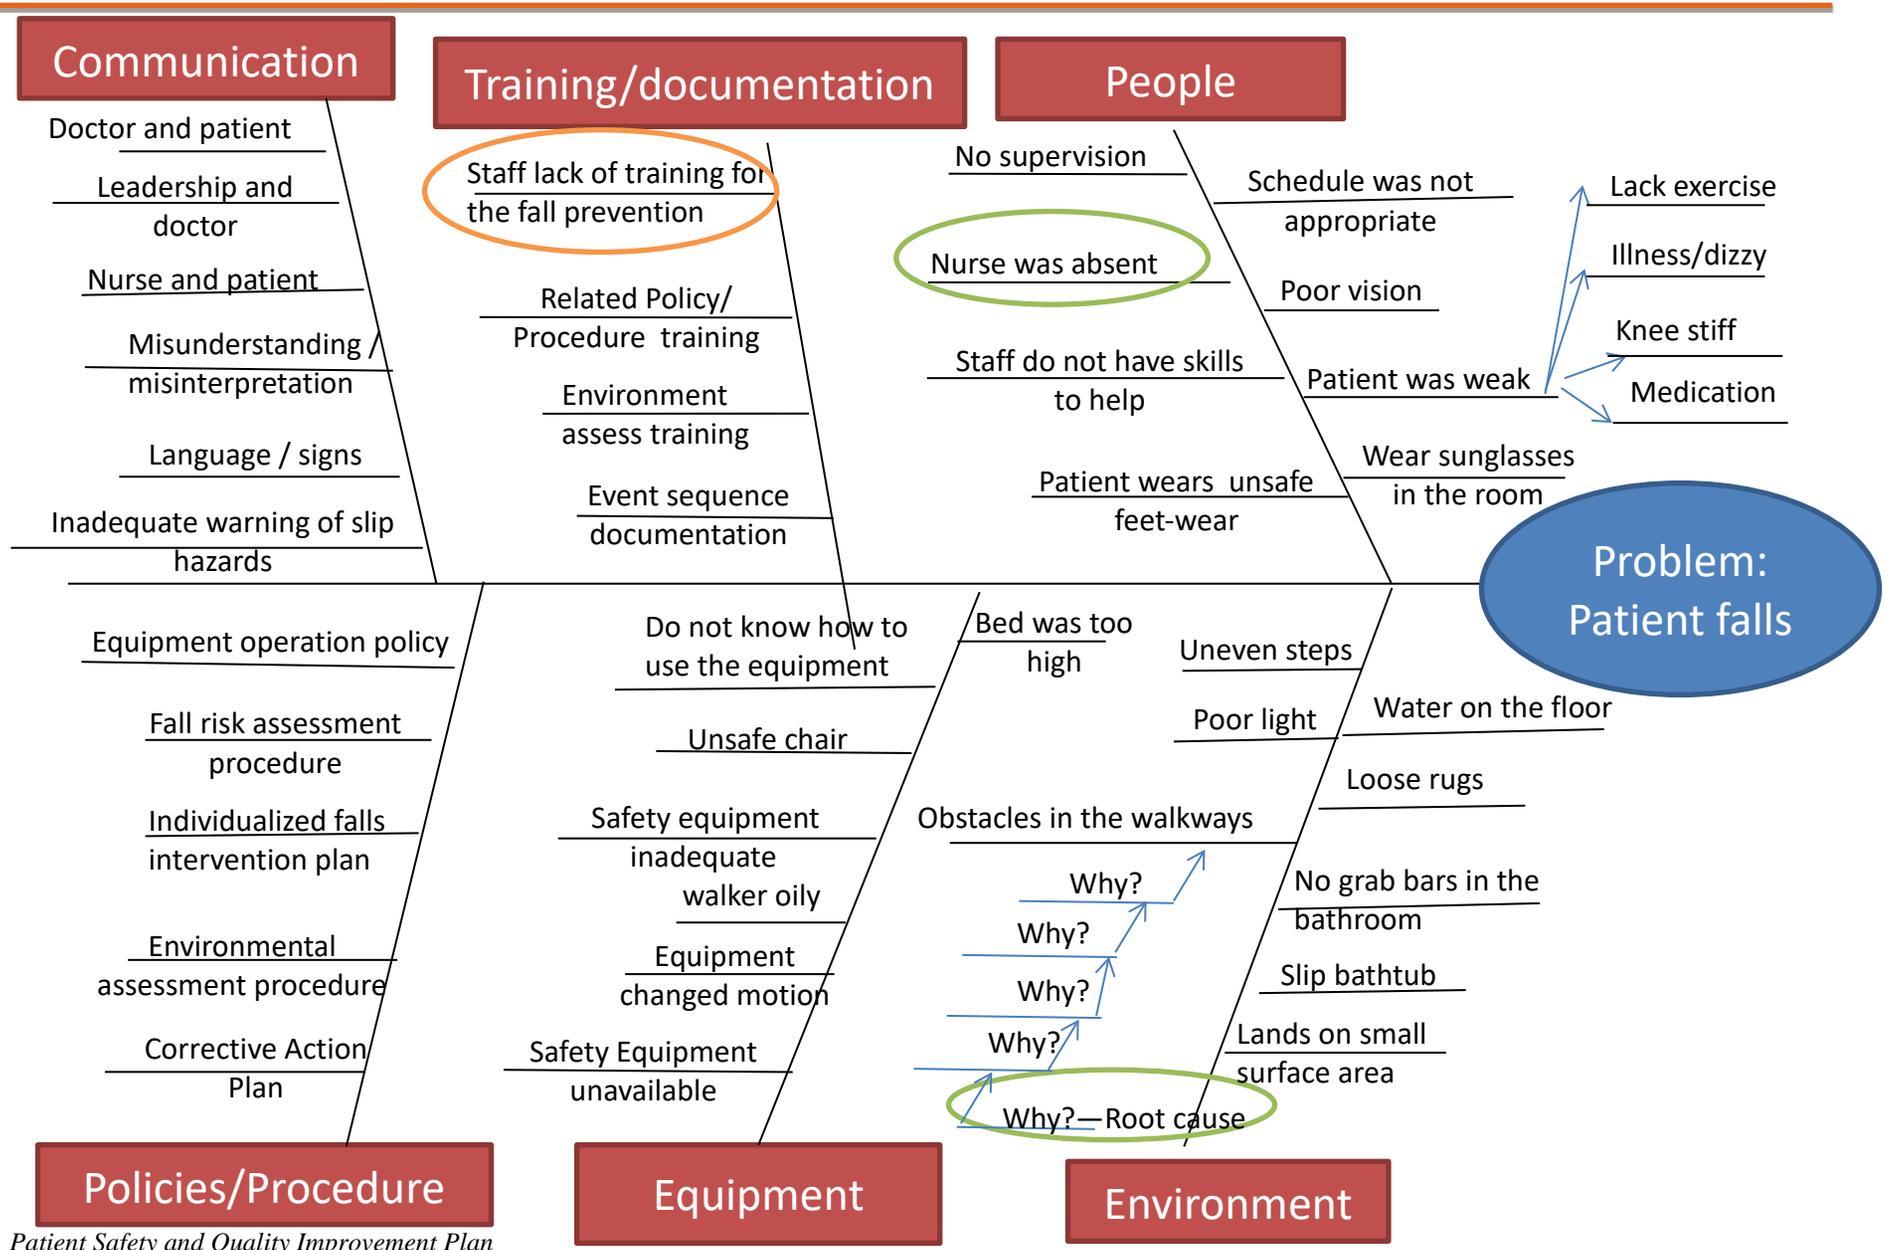

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                               | Q4 2014                                                                                                                         | Q1 2015                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                              |                                       |                                                                                                                                 |                                                                                      |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.                                                                                                               |                                       |                                                                                                                                 | <b>Implement Trigger Tools.</b><br>Develop automated surveillance reports in Cerner. |
|                                                                                                                                                                     | b. Establish an automated surveillance process.                                                                                                              |                                       | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                      |                                                                                      |
| <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                      | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.                                                         | Implemented e-MERS & PSO with UHC.    | Create process for reviewing & closing reports in e-MERS.                                                                       |                                                                                      |
|                                                                                                                                                                     | b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.                                     |                                       | Increase number of events reported by 10%.                                                                                      |                                                                                      |
|                                                                                                                                                                     | c. Establish a process for providing feedback regarding reported events.                                                                                     |                                       | Create process for communicating outcome of reported events.                                                                    |                                                                                      |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.               |                                       | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan. |                                                                                      |
|                                                                                                                                                                     | b. Establish a recognition program that rewards safe practices.                                                                                              |                                       | Include patient safety presentation in monthly New Employee Orientation.                                                        |                                                                                      |
|                                                                                                                                                                     | c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.                                                                        |                                       | Develop 'Great Catch' awards program.                                                                                           |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                       |                                                                                                                                 | Re-evaluate culture of safety and develop action plan.                               |
| <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                                | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.                                                                          |                                       | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee.                                                  |                                                                                      |
|                                                                                                                                                                     | b. Facilitate the development of action plans associated with measures not meeting benchmarks.                                                               | Complete 2014 Leapfrog Safety Survey. | Establish & implement a plan to improve performance of each leap.                                                               |                                                                                      |
|                                                                                                                                                                     | c. Assess and improve processes related to hand-off, transition and communication                                                                            |                                       | Develop method to track & report departmental progress and compliance of RCA action plans.                                      |                                                                                      |
| <b>5. Charter Safety Programs</b> through teams, workgroups or projects.                                                                                            | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices. |                                       | Establish Patient Safety Council.                                                                                               |                                                                                      |
|                                                                                                                                                                     | b. Reduce and eliminate variation in care.                                                                                                                   |                                       | Establish workgroups focused on medication safety, reducing patient falls & hospital acquired pressure ulcers.                  |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                       | Revise or develop policies, procedures and protocols.                                                                           |                                                                                      |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                     | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|----------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                             |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                          |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                                |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                          |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks (vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds                |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                         |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                      |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                          |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient               |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                       |          |          |            |                                |

## Appendix F: Policy Example

[Reference: Hospital Policies. MERCY Hospital. <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>]

|                                                                                   |                                                                                   |                                                   |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------------------------------|
|  | HOSPITAL POLICY AND INFORMATION MANUAL                                            |                                                   |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY<br/>Page 1 of 2</p>                       | <p>Date Issued:<br/>Date Last Revised:<br/>Next Review Date:<br/>Approved By:</p> | <p>07/01 08/14<br/>08/17<br/>Policy Committee</p> |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

|                                                                                   |                                                                         |                                          |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------|------------------------------------------|
|  | HOSPITAL POLICY AND INFORMATION MANUAL                                  |                                          |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY<br/>Page 2 of 2</p>                       | Date Issued:<br>Date Last Revised:<br>Next Review Date:<br>Approved By: | 07/01 08/14<br>08/17<br>Policy Committee |

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

# **Patient Safety Plan**

**2018**

**Barton Health**

**██████████**, MSN, RN, PHN, CPPS  
Director Patient Safety & Clinical Education

## ***Executive Summary***

The purpose of the Patient Safety Plan is to set the foundation for patient safety at Barton Health in accordance with state and regulatory requirements. The breadth of Patient Safety is vast and includes event reporting, review, follow up on errors and harm that impact or have the potential to impact patients, hazard mitigation through evidence-based tools, and reporting to internal committees and external agencies. The Patient Safety Plan addresses the processes to correct opportunities for improvement and prevent identified hazards from recurrence. 2017 high priorities are reviewed which included: tubing connections, reducing falls, enhancement of teamwork through TeamSTEPPS, clinical alarms, and sepsis. 2018 high priorities include reducing falls across the organization, tubing connections, teamwork enhancement through TeamSTEPPS in the outpatient clinics, assessing communication in relation to patient hand-offs/hand overs, and clinical alarms. The Patient Safety Plan grants authority for Patient Safety oversight across the organization to the Chief Medical Officer and the Director of Patient Safety and Clinical Education. This plan is revised and updated annually or more often as needed.

***Section A***

***2018 Patient Safety Plan***

***Purpose***

Barton Health is committed to continuously improving patient safety and reducing health care errors. This Patient Safety Plan ensures that Barton Health implements and maintains a patient safety program in accordance with The Joint Commission standards, guidelines from the California Department of Public Health (CDPH), Nevada Revised Statutes (NRS), Patient Safety and Quality Improvement Act of 2005, and other regulatory agencies.

***Introduction***

The Patient Safety Plan supports and promotes the mission, vision, values, and strategic plan of Barton Health. This Plan implements continuous integration and coordination of patient safety activities for all medical staff, clinical departments, support service departments and service lines including trauma at Barton Health. A culture of safety inherently implies the continued attention, refinement and progression of the patient safety plan and program.

Barton Health's patient safety goal is to foster an environment and culture where patients, families, staff and leaders within the organization identify and manage actual and potential risks to patient safety thereby resulting in zero harm. All patients and staff are strongly encouraged and supported with multiple avenues/programs to speak up when safety concerns are identified. As an organization, Barton Health has the obligation to listen and respond to these concerns.

The Patient Safety Plan is designed to reduce patient safety errors and improve patient care delivery processes by utilizing a systematic, coordinated and continuous approach to the improvement of patient safety. This approach centers on the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reductions in health related errors including near miss and good catch events; and integration of patient safety priorities in the design and redesign of all relevant organizational processes, functions, and services. Patient safety is emphasized in areas such as patient's rights, patient and family education, continuity of care, risk reduction, and managing performance improvement.

Each employee performs a critical role in patient safety and thus, Barton Health's journey to becoming a high reliability organization. All Barton Health team members are focused on providing consistently exceptional care through an environment that supports teamwork, collaboration and respect for other people, regardless of their position in the organization. Leaders demonstrate their commitment to quality and safety while setting expectations for those who work in the organization. Leadership evaluates the culture of safety on a regular basis.

The Chief Medical Officer and Director of Patient Safety & Clinical Education, provide oversight to the integrated patient safety program. These individuals ensure alignment of patient safety activities, compliance with regulations, and provide opportunities for all Barton Health team members to be educated and involved in patient safety initiatives.

The Director of Patient Safety & Clinical Education and Patient Safety Department have the authority to intervene in any clinical or non-clinical activity which poses an actual or potential negative outcome to a patient's well-being. The Patient Safety Department provides leadership in the creation, initiation and evaluation of corrective action measures for event resolution.

The Governing Body, Board Quality Committee, and Patient Safety Committee, described below, are committed to patient safety. These bodies shall assure an environment that encourages error identification, remediation, non-punitive reporting, and prevention through education, system redesign, or process improvement for any potential or actual adverse event.

In accordance with The Joint Commission's Accreditation Participation Requirements, APR.09.02.01, this plan implies Barton Health shall:

- Educate its staff, medical staff, and other individuals who provide care, treatment, and services that concerns about the safety or quality of care provided in the organization may be reported to The Joint Commission.
- Inform its staff and medical staff that Barton Health will take no disciplinary or punitive action because an employee, physician, or other individual who provides care, treatment, and services reports safety or quality of care concerns to The Joint Commission.
- Take no disciplinary or punitive action against employees, physicians, or other individuals who provide care, treatment, and services when they report safety or quality of care concerns to The Joint Commission.

Any employee or medical staff member may contact The Joint Commission if they have a safety or quality of care concern that is not being addressed by Barton Health. All employees or medical staff members are strongly encouraged to bring any safety or quality of care concerns to the Chief Medical Officer, Director of Patient Safety & Clinical Education, Patient Safety Officer, or Director of Quality without fear of punitive or disciplinary action.

In addition, patients are provided information in the patient handbook regarding their right to contact and report a complaint to The Joint Commission.

### ***Scope of the Patient Safety Plan***

The Joint Commission, CDPH, NRS, Centers for Medicare and Medicaid Services (CMS) and other regulatory agencies provide the defining framework for patient safety events. The Patient Safety Department is informed of safety event information and hazardous conditions from team members, volunteers, and medical staff practitioners across the organization through completion of event reports and verbal or written communication. This information includes actual or potential (near miss/good catch) occurrences involving inpatients, outpatients, volunteers, employees, physicians, allied healthcare providers, vendors, and visitors.

### ***Risk Assessment***

Proactive assessment of high risk activities and hazardous conditions are identified through event reporting, failure mode and effect analysis (FMEA), data collection, audits (tracers), and utilization. In addition, risk reduction strategies are built into the continual process improvement system. Such strategies are obtained from available information regarding sentinel events known to occur in healthcare organizations that provide similar care and services as well as knowledge based information including content from state patient safety organizations as well as other state, national, and international professional organizations.

### ***Event Prioritization***

Opportunities for improving patient safety issues are prioritized according to level of severity, frequency of the occurrence, potential for harm to the patient, employee or visitor involvement, and potential for liability. Ongoing review of information is performed to direct administrative and medical staffs' attention to areas of clinical care representing significant sources of actual or potential risk.

Types of medical / health care errors include, but are not limited to:

- **Adverse Event:** Per The Joint Commission, an adverse event is a patient safety event that resulted in harm to a patient. It is also defined as an unexpected occurrence meeting any of the Adverse Event criteria as designated by CDPH.
- **Error:** An unintended omission or commission of an act, or an act that does not achieve its intended outcome.
- **Good Catch/Close Call/Near Miss:** Any patient safety event that did not reach the patient.
- **No-Harm Event-** A patient safety event that reached the patient but did not cause harm.
- **Hazardous Condition:** Any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which increases the probability of an adverse event.
- **Sentinel Event:** A patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in death, permanent harm, or severe temporary harm (Refer to *Sentinel Event* section below) and is reported to The Joint Commission. For Lake Tahoe Surgery Center, located in Nevada, a sentinel event is defined in NRS 439.830 by the National Quality Forum. (Refer to Appendix A)
- **Healthcare Associated Infection (HAI):** A localized or systemic condition resulting from an adverse reaction to the presence of an infectious agent(s) or its toxin(s) as defined by the Centers for Disease Control and Prevention's National Healthcare Safety Network (NHSN) in addition to monthly submission of all surgical site infections associated with different procedures performed at Barton Health. Potential HAIs are reviewed by the HAI Review Committee. Confirmed HAIs are reported to the Patient Safety Committee. HAIs are also reported to Interdisciplinary Collaborative Care Team and Board Quality Committees.

Any patient safety event, incident, or condition that could have resulted or did result in harm to a patient shall be subject for review and further analysis.

### ***Event Reporting***

Identification and reporting of adverse events, including those that result from practitioner error are critical to Barton Health's efforts to continuously improve patient safety and reduce harm. To support and encourage this culture of safety, reporting of patient safety events or near misses is highly encouraged. Reporting of events is the responsibility of all employees, volunteers, practitioners, patients, visitors and guests. Events can be reported through many modalities including electronic, verbal, and written communication. Electronic event reporting is available on all Barton Health System computer terminals. An event is reported via the electronic event reporting system by the individual(s) involved with and most knowledgeable about the event. (Refer to Barton Health Organizational Event Reporting Policy.)

Events are reviewed on a daily basis. High severity events are reviewed promptly to ensure immediate action is

taken as warranted.

### ***Regulatory Agency Reporting***

Barton Health informs accrediting and licensing bodies when errors and events fall within that agency's reporting requirements. Team members involved in sentinel or adverse events have access to support and are included whenever possible in the root cause analysis process to ensure the potential for recurrence is minimized.

Intensive assessment may be initiated when undesirable patterns or trends are identified or serious, adverse, or sentinel events occur. This includes those events identified as unusual occurrences within the California Code of Regulations section 76551. Sentinel Events reportable to The Joint Commission and Adverse Events reportable to CDPH are delineated below. (Refer to Appendix A for Nevada Sentinel Event reporting.)

#### *Sentinel Event*

Patient safety events are determined to fall into the category of a Sentinel Event as defined by The Joint Commission when any of the following occur:

A sentinel event is a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in any of the following:

- Death
- Permanent harm
- Severe temporary harm\*

Or

The event is one of the following (even if the outcome was not death, or major permanent loss of function unrelated to the natural course of the patient's illness or underlying condition):

- Suicide of any patient receiving care, treatment and services in a staffed around the clock care setting or within 72 hours of discharge including from the hospital's emergency department (ED)
- Unanticipated death of a full-term infant
- Discharge of an infant to the wrong family
- Abduction of any patient receiving care, treatment, and services
- Any elopement (that is, unauthorized departure) of a patient from a staffed around-the-clock care setting (including ED), leading to death, permanent harm, or severe temporary harm to the patient
- Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities (ABO, Rh, other blood groups)
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any patient receiving care, treatment, and services while on site at the organization
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor or vendor while on site at the organization
- Invasive procedure, including surgery, on the wrong patient, at the wrong site, or that is the wrong (unintended) procedure

- Unintended retention of a foreign object in a patient after an invasive procedure, including surgery after the completion of final skin closure
- Severe neonatal hyperbilirubinemia (bilirubin greater than 30 milligrams/deciliter)
- Prolonged fluoroscopy with cumulative dose greater than 1500 rads to a single field or any delivery of radiotherapy to the wrong body region or greater than 25% above the planned radiotherapy dose
- Fire, flame, or unanticipated smoke, heat, or flashes occurring during an episode of patient care
- Any intrapartum (related to the birth process) maternal death
- Severe maternal morbidity (not primarily related to the natural course of the patient's illness or underlying condition) when it reaches a patient and results in permanent harm or severe temporary harm from the intrapartum through postpartum period (24 hours) requiring the transfusion of 4 or more units of packed red blood cells and/or admission to the ICU

\*Severe temporary harm is critical, potentially life threatening harm lasting for a limited time with no permanent residual, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition.

It is Barton Health's policy to voluntarily report Sentinel Events to The Joint Commission within their required reporting timeframe (Refer to Barton Health Sentinel Event Policy).

#### *Adverse Event*

Barton Health shall report an adverse event as defined within Health and Safety Code §1279.1 (below) to CDPH no later than five calendar days after the event has been detected or, if the event is an ongoing urgent or emergent threat to the welfare, health, or safety of patients, personnel, or visitors, no later than 24 hours after the adverse event has been detected. Events are investigated, mitigation actions initiated, and cooperation with CDPH occurs throughout the process. (Refer to Barton Health Adverse Event policy)

"Adverse event" includes *any* of the following:

1. Surgery performed on a wrong body part that is inconsistent with the documented informed consent for that patient. A reportable event does not include a situation requiring prompt action that occurs in the course of surgery or a situation that is so urgent as to preclude obtaining informed consent.
2. Surgery performed on the wrong patient.
3. The wrong surgical procedure performed on a patient that is inconsistent with the documented informed consent for that patient. A reportable event does not include a situation requiring prompt action that occurs in the course of surgery, or a situation that is so urgent as to preclude the obtaining of informed consent.
4. Retention of a foreign object in a patient after surgery or other procedure, excluding objects intentionally implanted as part of a planned intervention and objects present prior to surgery that are intentionally retained.
5. Death during or up to 24 hours after induction of anesthesia after surgery of a normal, healthy patient who has no organic, physiologic, biochemical, or psychiatric disturbance and for whom the pathologic processes for which the operation is to be performed are localized and do not entail a systemic disturbance.
6. Patient death or serious disability associated with the use of a contaminated drug, device, or biologic provided by the health facility when the contamination is the result of generally

detectable contaminants in the drug, device, or biologic, regardless of the source of the contamination or the product.

7. Patient death or serious disability associated with the use or function of a device in patient care in which the device is used or functions other than as intended. For purposes of this subparagraph, "device" includes, but is not limited to, a catheter, drain, or other specialized tube, infusion pump, or ventilator.
8. Patient death or serious disability associated with intravascular air embolism that occurs while being cared for in a facility, excluding deaths associated with neurosurgical procedures known to present a high risk of intravascular air embolism.
9. An infant discharged to the wrong person.
10. Patient death or serious disability associated with patient disappearance for more than four hours, excluding events involving adults who have competency or decision-making capacity.
11. A patient suicide or attempted suicide resulting in serious disability due to patient actions after admission, excluding deaths resulting from self-inflicted injuries that were the reason for admission to the health facility.
12. A patient death or serious disability associated with a medication error, including, but not limited to, an error involving the wrong drug, the wrong dose, the wrong patient, the wrong time, the wrong rate, the wrong preparation, or the wrong route of administration, excluding reasonable differences in clinical judgment on drug selection and dose.
13. A patient death or serious disability associated with a hemolytic reaction due to the administration of ABO-incompatible blood or blood products.
14. Maternal death or serious disability associated with labor or delivery in a low-risk pregnancy, including events that occur within 42 days post-delivery and excluding deaths from pulmonary or amniotic fluid embolism, acute fatty liver of pregnancy, or cardiomyopathy.
15. Patient death or serious disability directly related to hypoglycemia, the onset of which occurs while the patient is being cared for in a health facility.
16. Death or serious disability, including kernicterus, associated with failure to identify and treat hyperbilirubinemia in neonates during the first 28 days of life. "Hyperbilirubinemia" means bilirubin levels greater than 30 milligrams per deciliter.
17. A Stage 3 or 4 ulcer, acquired after admission, excluding progression from Stage 2 to Stage 3 if Stage 2 was recognized upon admission.
18. A patient death or serious disability due to spinal manipulative therapy performed at the health facility.
19. A patient death or serious disability associated with an electric shock while being cared for in a health facility, excluding events involving planned treatments, such as electric countershock.
20. Any incident in which a line designated for oxygen or other gas to be delivered to a patient contains the wrong gas or is contaminated by a toxic substance.
21. A patient death or serious disability associated with a burn incurred from any source while being cared for in a health facility.
22. A patient death associated with a fall while being cared for in a health facility.
23. A patient death or serious disability associated with the use of restraints or bedrails while being cared for in a health facility.
24. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed health care provider.
25. The abduction of a patient of any age.
26. The sexual assault on a patient within or on the grounds of the facility.
27. The death or significant injury of a patient or staff member resulting from a physical assault that occurs within or on the grounds of a facility.

28. An adverse event or series of adverse events that cause the death or serious disability of a patient, personnel, or visitor.

*Provider-Preventable Conditions*

Federal law requires Provider-Preventable Conditions (PPCs) that occur during treatment of Medi-Cal and Medicaid patients be reported. These include both healthcare-acquired conditions (HCAC) and other provider-preventable conditions (OPPC). California HCACs and OPPCs are reported to the Department of Health Care Services after discovery and confirmation that the patient is a Medi-Cal beneficiary. Nevada HCACs are reported through the Nevada sentinel event registry.

HCACs are defined as:

- Air embolism
- Blood incompatibility
- Catheter-associated urinary tract infection (UTI)
- Falls and trauma that result in fractures, dislocations, intracranial injuries, crushing injuries, burns and electric shock
- Foreign object retained after surgery
- Iatrogenic pneumothorax with venous catheterization
- Manifestations of poor glycemic control
  - Diabetic ketoacidosis
  - Nonketotic hyperosmolar coma
  - Hypoglycemic coma
  - Secondary diabetes with ketoacidosis
  - Secondary diabetes with hyperosmolarity
- Stage III and IV pressure ulcers
- Surgical site infection following:
  - Mediastinitis following coronary artery bypass graft (CABG)
  - Bariatric surgery, including laparoscopic gastric bypass, gastroenterostomy and laparoscopic gastric restrictive surgery
  - Orthopedic procedures for spine, neck, shoulder, and elbow
  - Cardiac implantable electronic device (CIED) procedures
- Vascular catheter-associated infection
- For non-pediatric/obstetric population, deep vein thrombosis (DVT)/ pulmonary embolism (PE) resulting from:
  - Total knee replacement
  - Hip replacement

OPPCs are defined as:

- Wrong surgical or other invasive procedure performed on a patient
- Surgical or other invasive procedure performed on the wrong body part
- Surgical or other invasive procedure performed on the wrong patient

### ***Patient Safety Organization Reporting***

Barton Healthcare System is a member of the California Hospital Patient Safety Organization (CHPSO), which serves as its Patient Safety Organization. Patient Safety Work Product is submitted to CHPSO in accordance with the Patient Safety and Quality Improvement Act of 2005. (Refer to Patient Safety Evaluation System Policy for further details.)

### ***Investigation: Root Cause Analysis and Process Improvements***

In any event when an adverse/sentinel event or hazardous condition has occurred, the issue is revisited and the status mitigated through a risk reduction strategy using the Root Cause Analysis (RCA) process. Lesser events are managed through either an RCA or Process Improvement (PI). Reportable Adverse or Sentinel Events shall be subject to an immediate in-depth RCA.

RCAs shall be convened by the Director of Patient Safety & Clinical Education or designee and includes team members either directly or indirectly involved in the event. Members from uninvolved departments may be invited to provide additional information. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting the RCA. The Root Cause Analysis and Action Plan Framework Table, introduced by the Joint Commission, contains 24 analysis questions that guide the organization through the steps in a root cause analysis. Not all the questions apply to all the events or cases. The 5 Whys technique is utilized to explore the cause and effect relationship underlay a problem. Root causes can be identified by asking “why” no less than five times. During the RCA, events are deconstructed in an effort to identify the key causes that may have contributed to the event. The deconstruction process leads to action items designed to eliminate or control system hazards or vulnerabilities directly related to causal and contributory factors. The Veterans Affairs National Center for Patient Safety Action Hierarchy is used to assure strong corrective action items are identified.

Process Improvement teams are formed when an issue affecting more than one service line is identified and a near miss may or may not be involved. There may be no adverse patient outcome in connection with the event, however, the potential for a patient event should the issue recur is likely. PIs may also result from discussions during RCAs where a system improvement process is identified as a result of a patient event. Team members convene and identify key factors involved in the process through deconstruction that may have contributed to the situation and create action items to mitigate the identified issues.

RCA and PI workgroups construct action items and assign them to appropriate individuals for completion. Staff involvement is considered essential, since they are the team members on the front line with the most knowledge of the actual day-to-day workings of the processes. Individuals assigned action items are required to complete the tasks within a designated amount of time depending upon the breadth of the item. Action items may be forwarded to other appropriate bodies for further in-depth evaluation, review, response, revision, or development of policies or procedures when applicable. Action item progress and completion is reported to the Patient Safety Department.

As a learning organization utilizing Just Culture, Barton Health focuses on systems and processes, not individuals, during RCA or PI event review.

### ***Disclosure***

Full disclosure of serious medical errors, reportable events and any unanticipated outcomes are communicated to patients/families by the practitioner with the assistance of the- Risk Management Analyst, Director of Patient Safety & Clinical Education, Patient Safety Officer, or designee as appropriate. (Refer to Barton Health Disclosure of Unanticipated Outcome Policy.)

### ***Patient Safety Committee***

The Patient Safety Committee is a multidisciplinary team focused on review and discussion of patient events resulting in a near-miss or an untoward outcome as well as process improvements for the purposes of improving patient safety and the quality of care delivered to Barton Health's patients.

The Patient Safety Committee is a standing committee of the Medical Staff and is comprised of the Chief Medical Officer, Chief of Staff, Physician Director of the Emergency Department, Hospitalist Director, Trauma Medical Director, Administrative Director of Acute Care Services, Director of Patient Safety & Clinical Education, Patient Safety Officer, Director of Pharmacy, , Risk Management Analyst, Chief Nursing Officer, and Director of Quality. Ad Hoc members are invited as appropriate.

The Patient Safety Committee shall review and discuss Code Blues, hospital deaths, Rapid Response Team activations (including near codes), HAIs, serious patient events, and reportable adverse and sentinel patient events. Adverse/sentinel patient events include unanticipated events that affect patient care or patient safety and encompass all service lines of care.

The Committee promotes the application of evidence-based methods in the resolution of patient safety events and reviews RCA and PI workgroup recommendations which ultimately minimize the recurrence of comparable patient events or near misses. Recommendations can be revised, added or deleted through this committee.

The Lake Tahoe Surgery Center Patient Safety Committee is a subcommittee of and reports to the Patient Safety Committee. Refer to Appendix A.

Department Directors or designees are active participants who complete assigned action items within an appropriate timeframe designated by the work group, Director of Patient Safety & Clinical Education, Patient Safety Officer, Chief Medical Officer, or Patient Safety Committee. Directors are responsible for implementing action items and reporting back to the Patient Safety Committee and/or the Patient Safety Department with status updates and upon completion of assigned action items. Directors are responsible to ensure continued compliance exists with their direct reports and implemented process changes are sustained.

Events and PIs shall be closed through the Patient Safety Committee when all assigned action items have been completed, any associated audits exhibit compliance, and all remaining concerns are addressed.

The Director of Patient Safety & Clinical Education or designee shall report patient safety events and process improvements from the Patient Safety Committee to the Board Quality Committee. The Chief Medical Officer

or designee shall report acute events and process improvements from the Patient Safety Committee to the Medical Executive Committee and Governing Board.

### ***Patient Safety Risk Reduction***

Several approaches are utilized at Barton Health to reduce the risk of a patient safety event. The Joint Commission's National Patient Safety Goals, National Healthcare Safety Network (NHSN), Institute for Healthcare Improvement (IHI), Agency for Healthcare Research and Quality (AHRQ), National Patient Safety Foundation, and California Hospital Patient Safety Organization (CHPSO) are some examples of utilized resources to prevent and reduce the likelihood of serious patient safety events. Sentinel Event Alerts released through The Joint Commission are also analyzed for compliance.

### ***National Patient Safety Goals***

Compliance with The Joint Commission's National Patient Safety Goals are monitored and evaluated on a continual basis through observational audits. Data analyses of these audits shall be reported to and reviewed by Board Quality Committee on a biannual basis. Measure of success for compliance on each standard's requirement is expected to be 90% (ninety percent) or above. Elements falling near or below 90% (ninety percent) are addressed by the appropriate Department Director. The Director shall formulate an action plan with the goal of improving the affected element score within their department.

Patient Safety observational audits (tracers) are conducted on a routine basis. Immediate training is provided to staff when non-compliance with policy elements is observed. (Refer to Patient Safety Observational Tracer Policy.)

### ***Sentinel Event Alerts***

Sentinel Event Alerts, published through The Joint Commission, are communicated through the Patient Safety Committee. Compliance status and opportunities for improvement are addressed through workgroups consisting of affected Department Directors, Executive Team Members and others as appropriate to formulate risk reduction strategies and follow up through an action plan. Action items within the action plan are assigned to individuals who are required to complete the tasks within a designated amount of time depending upon the breadth of the item. Action items may be forwarded to other appropriate bodies for further in-depth evaluation, review, response, revision, or development of policies or procedures when applicable. Action item progress and completion is reported to the Patient Safety Department.

### ***Scientific Model Integration***

The patient safety program has been developed with scientific knowledge in a foundational aspect including concepts from:

- Shewhart cycle or Model for Improvement (Plan, Do, Study, Act –PDSA)
- Failure Mode and Effects Analysis (FMEA)
- Re-engineering (Human factor re-engineering such as signage for High Alert Medications, Pop up alert in Pyxis medication dispensing system, Tall man lettering for look-alike sound alike drugs in medication usage process, etc.)
- Rapid Cycle Improvement (IHI Collaborative approach termed the 'Breakthrough Series', to bring about rapid cycle improvements. Fundamental to the collaborative approach is the acceptance of a model and

establishment of infrastructure through which collaborating organizations can identify and prioritize aims for improvement and gain access to the methods, tools, materials etc.)

- RCA<sup>2</sup>: Improving Root Cause Analyses and Actions to Prevent Harm
- Process Improvement such as Lean and Six Sigma concepts
- Evidence-based practice and clinical practice guidelines

### ***Educational Enhancement Activities***

The Patient Safety Plan provides the opportunity to reduce patient safety events and hazardous conditions through education, proper and effective orientation, and annual training. Barton Health's clinical orientation program emphasizes medical error reduction and specific job-related aspects of patient safety. Ongoing patient safety training for Barton Health team members including practitioners is offered through various teaching strategies including, but not limited to, bulletin boards, online learning formats, skills labs, and didactic experiences. Program content may include education specific to patient safety related events or advancements in patient safety practice. As appropriate, this training incorporates methods of team training such as TeamSTEPPS by AHRQ to foster an interdisciplinary, collaborative approach to the delivery of patient care and reinforces the need and mechanisms to report patient safety concerns.

### ***Patient Safety Evaluation***

Annually, patient safety activities shall be reviewed and presented to the Patient Safety and Board Quality Committees.

### ***Patient Safety Plan Approval, Revision and Review***

The Patient Safety Committee shall review and approve this plan at least once a year, but more often as necessary, to evaluate and update the plan, and to incorporate advancements in patient safety practices. The Board Quality Committee shall review and approve this plan at least annually.

### ***Authority***

The authority to implement the Patient Safety Plan rests with Barton Health's Governing Body, Board Quality Committee, Medical Executive Committee, and Patient Safety Committee.

### ***Approval***

This plan was approved by the following committees:

Patient Safety Committee on 12/19/2017

Board Quality on 1/4/2018

***Section B:***

***2017 Patient Safety Priority Evaluation***

In 2017, Barton Health prioritized tubing connections, reducing falls, enhancement of teamwork through TeamSTEPPS, clinical alarms, and sepsis.

Tubing misconnections have been addressed by converting enteral products to meet new standards, continually monitoring for ISO tubing product changes, and awaiting final ISO approval and manufacturer modifications in accordance with California AB 1867, Joint Commission Sentinel Event Alert 53, and California Health and Safety Code 1279.7.

The Fall Prevention Workgroup continued in 2017 with the goal of reducing falls across the organization. Post fall huddle forms were revised and/or developed for patient care areas with emphasis on risk factors relevant to each specific department. Fall risk assessment tools were reviewed. The associated Fall Prevention FMEA will remain active in 2018 with the goal of identifying and mitigating factors that can contribute to patient falls.

TeamSTEPPS tools were introduced to many departments in 2017. Both the Sleep Studies Lab and Pharmacy teams were trained on the CUS tool which focuses on communicating critical information in a specific format. The Medical-Surgical, Orthopedic, Intensive Care Unit, Laboratory/Pathology and Medical Imaging departments were trained on the brief, huddle, and debrief tools and use these tools at the beginning, middle, and end of shifts respectively. System wide Daily Safety Briefs (DSBs) were implemented in the fourth quarter of 2017. The purpose of DSBs are to increase safety awareness and enhance communication among interdepartmental teams in addition to supporting Barton Health's journey to becoming a high reliability organization. The program has been highly successful in a short period of time.

Clinical alarms as related to NPSG.06.01.01 resulted in ongoing review with heightened attention focused on bedside capnography monitor alarms with the intent of reducing nuisance/false alarms. In an effort to mitigate nuisance alarms, work with the capnography vendor resulted in the addition of centralized monitors allowing for enhanced monitoring of patients at risk for respiratory compromise. Data analytics on clinical alarms will continue to be reviewed and assessed in 2018 for further system optimization.

Work on sepsis resulted in increased compliance with core measure requirements. This included the finalization of a sepsis order set and education to hospital based Registered Nurses. The Patient Safety Department will continue to assist with sepsis related concerns in 2018.

***Section C:***

***2018 Patient Safety Priorities***

The Patient Safety Plan identifies and defines goals and specific objectives to be accomplished each year. In 2018, Barton Health's high priorities for Patient Safety include reducing falls across the organization, tubing connections, teamwork enhancement through TeamSTEPPS in the outpatient clinic settings, assessing communication in hand-offs/hand overs, and clinical alarms.

Barton Health initiated a Fall Prevention FMEA in late 2016 that will conclude in early 2018. However, the workgroup will continue to focus on risk reduction opportunities related to patient falls. Strategies will be designed and implemented that are specific to addressing identified organizational and department needs with the overall goal of reducing patient falls across the organization.

Measures to prevent adverse events associated with misconnecting intravenous, enteral feeding, and epidural lines will remain a priority in 2018. A complete conversion to the new ISO standard enteral feeding lines occurred in 2015. Manufacturers currently distribute tubing types that can be mistakenly interconnected. However, until connectors are reengineered, approved by the ISO and the FDA, and distributed throughout the healthcare industry, there remains the possibility of human error. Barton Health proactively addresses prevention of adverse events associated with misconnecting IV, enteral and epidural lines through product purchasing and assessment of availability of connectors throughout the organization as well as staff education and awareness. It is anticipated neuraxial connectors with redesigned incompatible connectors will become publicly available in 2018 at which time Barton Health will assess and convert to this new design to ensure compliance with California state law.

TeamSTEPPS teamwork enhancement program implementation will continue across the organization with a focus on bringing the specific tools of briefs, huddles, and debriefs to outpatient clinics in 2018. TeamSTEPPS embraces leadership, communication, situation monitoring and mutual support to enhance team performance and optimize patient outcomes. TeamSTEPPS Master Trainers will continue to integrate tools into departments based upon readiness and need.

In 2018, an FMEA will commence within the organization in association with The Joint Commission's Sentinel Event Alert 58. The overall goal will be to assess and enhance patient hand-off/handover communication among team members.

Barton Health will continue to prioritize NPSG.06.01.01 focusing on clinical alarm system safety in 2018. While alarms in the clinical setting that are non-actionable can result in alarm fatigue for team members, bedside capnography monitoring alarms remain an area for further optimization. Therefore, specific focus will continue to be placed on bedside capnography monitoring data analytics related to nuisance/false alarms.

***Appendix A:***

***2018 Lake Tahoe Surgery Center  
Patient Safety Plan***

This plan was created and revised by the Lake Tahoe Surgery Center Patient Safety Committee, a subcommittee of Barton Health's Patient Safety Committee. Implementation of this plan is intended to optimize healthcare patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events. This Patient Safety Plan ensures that Barton Health implements and maintains a patient safety program in accordance with The Joint Commission standards, Nevada Revised Statutes (NRS), Patient Safety and Quality Improvement Act of 2005, and other regulatory agencies.

***Commitment to Patient Safety***

Lake Tahoe Surgery Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

***Mission, Vision, and Values***

In support of the mission, vision, values, and strategic plan of Barton Health, Lake Tahoe Surgery Center's Patient Safety program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.
- An environment and culture where patients, families, staff and leaders within the organization identify and manage actual and potential risks to patient safety thereby resulting in zero harm.
- An ongoing proactive reduction in health-related errors including near miss and good catch events.
- Integration of patient safety priorities in the design and redesign of all relevant organizational processes, functions, and services.

***Scope and Purpose***

The scope of this Patient Safety Plan is specific to Lake Tahoe Surgery Center, a department of Barton Health, which includes but is not limited to:

- Patient safety
- Visitor safety
- Employee safety

All Lake Tahoe Surgery Center staff are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process. Each employee performs a critical role in patient safety and thus, Barton Health's journey to becoming a high reliability organization. All Barton Health-Lake Tahoe Surgery Center team members are focused on providing consistently exceptional care through an environment that supports teamwork, collaboration and respect for other people, regardless of their position in the organization. Leaders demonstrate their commitment to patient safety while setting expectations for those who work in the organization. Leadership evaluates the culture of safety on a regular basis.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Lake Tahoe Surgery Center has developed this Patient Safety plan.

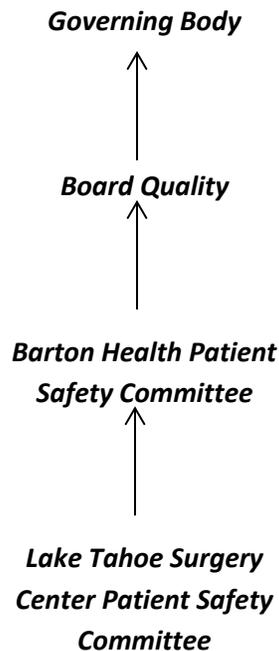

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff.

### ***Roles and Responsibilities***

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee reporting hierarchy:

### ***Roles and Responsibilities***

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
  - The patient safety officer of the medical facility. At Barton Health, the Director of Patient Safety & Clinical Education has oversight of the Patient Safety Officer and serves in this role;
  - The infection preventionist of the medical facility;
  - At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
  - One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below.

#### Lake Tahoe Surgery Center Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).

- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least quarterly, due to the number of employees in the facility, report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Lake Tahoe Surgery Center Patient Safety Committee will meet quarterly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.
- A meeting agenda and minutes noting follow-up tasks will be kept.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### RCA Team Leader/Facilitator Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation

process.

- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create a RCA process that incorporates Patient Safety Improvement elements.

#### Director of Patient Safety & Clinical Education Responsibilities (based on [NRS 439.870](#))

- Provide oversight to the integrated Barton Health patient safety program.
- Serve on the Lake Tahoe Surgery Center patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the Lake Tahoe Surgery Center Patient Safety Committee, Patient Safety Committee, Board Quality and Governing Board actions taken related to the sentinel event.
- Ensure alignment of patient safety activities, compliance with regulations, and provide opportunities for all Barton Health team members to be educated and involved in patient safety initiatives.
- Oversee, monitor and evaluate safety activities, manage the program that measures and analyzes safety levels, and help identify problem areas for correction
- The Director of Patient Safety & Clinical Education has the authority to intervene in any clinical or non-clinical activity which poses an actual or potential negative outcome to a patient's well-being. The Director of Patient Safety & Clinical Education involves leadership in the creation, initiation and evaluation of corrective action measures for event resolution.
- Report to the Patient Safety Committee regarding any action taken in accordance with the responsibilities above.

#### Infection Preventionist Responsibilities (based on [NRS 439.873](#))

- Serve on the Lake Tahoe Surgery Center patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number of infections at the facility.
- Take such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Chief Medical Officer Responsibilities

- Provide vision and leadership to the Lake Tahoe Surgery Center Patient Safety Committee and develop and foster a safe learning and improving culture.
- Provides oversight to the integrated patient safety program
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans.

- Ensure alignment of patient safety activities, compliance with regulations, and provide opportunities for all Barton Health team members to be educated and involved in patient safety initiatives.

***Objectives and Goals of the Patient Safety Plan***

| <b>Objective</b>                                                                                                                                                                                                             | <b>Goals</b>                                                                                         | <b>Plan</b>                      | <b>Planned Completion Date</b> | <b>Responsible Party</b>                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|----------------------------------|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To control known and potential safety hazards to patients, visitors, and staff.                                                                                                                                              | Strive for zero harm.                                                                                | Patient Safety Plan as presented | Ongoing                        | The Director of Patient Safety & Clinical Education and Patient Safety Committee presiding over Barton Health are responsible for managing and coordinating the organization-wide safety program in collaboration with other departments, services and disciplines including Lake Tahoe Surgery Center. |
| To establish a safety program that incorporates all activities within Lake Tahoe Surgery Center which contribute to the maintenance and improvement of staff and patient safety and reduction of medical/health care errors. | Provide education to all staff on the elements of the Lake Tahoe Surgery Center Patient Safety Plan. | Education provided upon hire     | Ongoing                        | The Director of Patient Safety & Clinical Education and Patient Safety Committee presiding over Barton Health are responsible for managing and coordinating the organization-wide safety program in collaboration with other departments, services and disciplines including Lake Tahoe Surgery Center. |

|                                                                                                                                                                                                                                                                                                        |                                                                                                                          |                                                                                                                 |         |                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To create a culture in which patients, visitors and employees can identify and manage actual and potential risks to patient and staff safety.                                                                                                                                                          | In-service all personnel on the use and completion of event reports.                                                     | Education provided upon hire                                                                                    | Ongoing | The Director of Patient Safety & Clinical Education and Patient Safety Committee presiding over Barton Health are responsible for managing and coordinating the organization-wide safety program in collaboration with other departments, services and disciplines including Lake Tahoe Surgery Center. |
| To develop a culture that encourages recognition and acknowledgement of risks to safety including medical health care errors, facility-acquired infections, initiation of actions to reduce risks, internal minimization of individual blame or retribution, and organizational learning about errors. | Reduce the risk of safety related incidents by proactively evaluating systems in place and making any necessary changes. | Evaluate near-miss events through RCAs and PIs presented at Patient Safety Committee and encourage Just Culture | Ongoing | The Director of Patient Safety & Clinical Education and Patient Safety Committee presiding over Barton Health are responsible for managing and coordinating the organization-wide safety program in collaboration with other departments, services and disciplines including Lake Tahoe Surgery Center. |
| To develop an environment that supports sharing of knowledge to affect behavioral changes in itself and other healthcare organizations to improve patient safety.                                                                                                                                      | Reduce the risk of safety related incidents by proactively evaluating systems in place and making any necessary changes. | Evaluate near miss events through RCAs and PIs presented at Patient Safety Committee and encourage Just Culture | Ongoing | The Director of Patient Safety & Clinical Education and Patient Safety Committee presiding over Barton Health are responsible for managing and coordinating the organization-wide safety program in collaboration with other departments, services and disciplines including Lake Tahoe Surgery Center. |

### ***Components and Methods***

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.

### **Patient Safety Risk Reduction**

Several approaches are utilized at Barton Health to reduce the risk of a patient safety event. The Joint Commission's National Patient Safety Goals, National Healthcare Safety Network (NHSN) Institute for Healthcare Improvement (IHI), Agency for Healthcare Research and Quality (AHRQ), Hospital Quality Institute, and California Hospital Patient Safety Organization (CHPSO) are some examples of utilized resources to prevent and reduce the likelihood of serious patient safety events. Sentinel Event Alerts released through The Joint Commission are also analyzed for compliance.

### ***National Patient Safety Goals***

Compliance with The Joint Commission's National Patient Safety Goals are monitored and evaluated on a continual basis through observational audits. Data analyses of these audits shall be reported to and reviewed by the Board Quality Committee on a biannual basis. Measure of success for compliance on each standard's requirement is expected to be 90% (ninety percent) and above. Elements falling near or below 90% (ninety percent) are addressed by the Department Director. The Director shall formulate an action plan with the goal of improving the affected element score within their department.

Patient Safety observational audits (tracers) are conducted on a routine basis. Immediate training is provided to staff when non-compliance with policy elements is observed. (Refer to Patient Safety Observational Tracer Policy.)

### ***Sentinel Event Alerts***

Sentinel Event Alerts, published through The Joint Commission, are communicated through the Patient Safety Committee. Compliance status and opportunities for improvement are addressed through workgroups consisting of affected Department Directors, Executive Team Members and others as appropriate to formulate risk reduction strategies and follow up through an action plan. Action items within the action plan are assigned

to individuals who are required to complete the tasks within a designated amount of time depending upon the breadth of the item. Action items may be forwarded to other appropriate bodies for further in-depth evaluation, review, response, revision, or development of policies or procedures when applicable. Action item progress and completion is reported to the Patient Safety Department.

### *Scientific Model Integration*

The patient safety program has been developed with scientific knowledge in a foundational aspect including concepts from:

- Shewhart cycle or Model for Improvement (Plan, Do, Study, Act –PDSA)
- Failure Mode and Effects Analysis (FMEA)
- Re-engineering (Human factor re-engineering such as signage for High Alert Medications, Pop up alert in Pyxis medication dispensing system, Tall man lettering for look-alike sound alike drugs in medication usage process, etc.)
- Rapid Cycle Improvement (Institute of Health Care Improvement (IHI)) Collaborative approach termed the ‘Breakthrough Series’, to bring about rapid cycle improvements. Fundamental to the collaborative approach is the acceptance of a model and establishment of infrastructure through which collaborating organizations can identify and prioritize aims for improvement and gain access to the methods, tools, materials etc.)
- RCA<sup>2</sup>: Improving Root Cause Analyses and Actions to Prevent Harm
- Process Improvement (PI) such as Lean and Six Sigma concepts
- Evidence-based practice and clinical practice guidelines

### **Educational Enhancement Activities**

The Patient Safety Plan provides the opportunity to reduce patient safety events and hazardous conditions through education, proper and effective orientation, and annual training. Barton Health’s clinical orientation program emphasizes medical error reduction and specific job-related aspects of patient safety. Ongoing patient safety training for Barton Health team members including practitioners is offered through various teaching strategies including, but not limited to, bulletin boards, online learning formats, skills labs, and didactic experiences. Program content may include education specific to patient safety related events or advancements in patient safety practice. As appropriate, this training incorporates methods of team training such as TeamSTEPPS by AHRQ to foster an interdisciplinary, collaborative approach to the delivery of patient care and reinforces the need and mechanisms to report patient safety concerns.

### **Investigation: Root Cause Analysis and Process Improvements**

In any event when an adverse/sentinel event or hazardous condition has occurred, the issue is revisited and the status mitigated through a risk reduction strategy using the Root Cause Analysis (RCA) process. Lesser events are managed through either an RCA or Process Improvement (PI). Reportable Adverse or Sentinel Events shall be subject to an immediate in-depth RCA.

RCAs shall be convened by the Director of Patient Safety & Clinical Education or designee and includes team members either directly or indirectly involved in the event. Members from uninvolved departments may be invited to provide additional information. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting the RCA. The Root Cause Analysis and Action Plan Framework Table, introduced by the Joint Commission, contains 24 analysis questions that guide the organization through

the steps in a root cause analysis. Not all the questions apply to all the events or cases. The 5 Whys technique will be used to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. During the RCA, events are deconstructed in an effort to identify the key causes that may have contributed to the event. The deconstruction process leads to action items designed to eliminate or control system hazards or vulnerabilities directly related to causal and contributory factors. The Veterans Affairs National Center for Patient Safety Action Hierarchy is used to assure strong corrective action items are identified.

An RCA meeting will meet as needed to accomplish the following:

Define the healthcare issues or potential risks.

- Conduct Root Cause Analysis
  - Review and analyze the data.
  - Review the RCA process and improvement related activities and timelines.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Discuss corrective action process and activities.
  - Discuss and present possible changes in procedure to improve areas indicated.
  - Identify strengths and areas that need improvement.
  - Develop strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

Process Improvement teams are formed when an issue affecting more than one service line is identified and a near miss may or may not be involved. There may be no adverse patient outcome in connection with the event, however, the potential for a patient event should the issue recur is likely. PIs may also result from discussions during RCAs where a system improvement process is identified as a result of a patient event. Team members convene and identify key factors involved in the process through deconstruction that may have contributed to the situation and create action items to mitigate the identified issues.

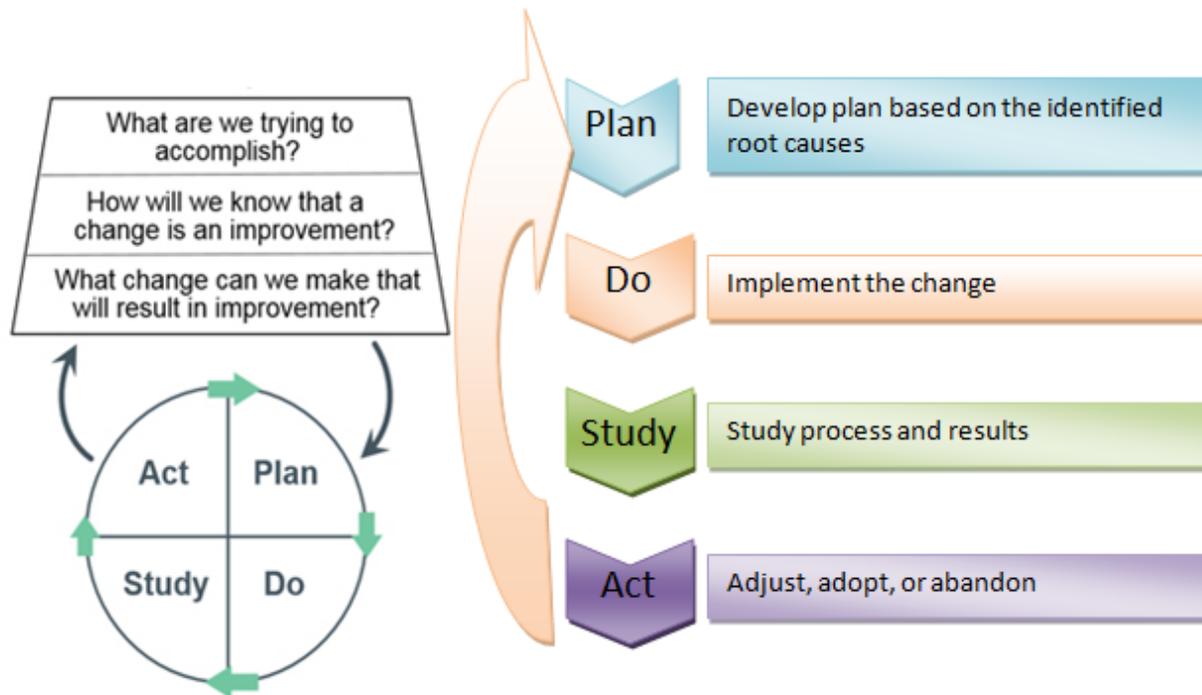

RCA and PI workgroups construct action items and assign them to appropriate individuals for completion. Staff involvement is considered essential, since they are the team members on the front line with the most knowledge of the actual day-to-day workings of the processes. Individuals assigned action items are required to complete the tasks within a designated amount of time depending upon the breadth of the item. Action items may be forwarded to other appropriate bodies for further in-depth evaluation, review, response, revision, or development of policies or procedures when applicable. Action item progress and completion is reported to the Patient Safety Department.

As a learning organization utilizing Just Culture, Barton Health focuses on systems and processes, not individuals, during RCA or PI event review.

Lake Tahoe Surgery Center will use the RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study-Act (PDSA) is the model, which was developed by the Institute of Health Care Improvement that will be utilized to test the changes.

### ***Model for Improvement***

The Model for Improvement is a collaborative and ongoing effort model to improve product, services and processes. It provides multi-disciplinary team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?

- What did you learn?
  - What do you need to do next?
- *Act*--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

**Data Collection and Reporting**

Data should drive patient safety efforts. Lake Tahoe Surgery Center utilizes an electronic event reporting system for tracking events, sentinel events, healthcare infection data, and information for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for the Patient Safety plan include data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                            | Quarterly                                                                                                                                                                                                                | Annually                                                                                     |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment as needed | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Patient Safety Plan update<br>2) Review and revise Patient Safety checklists and policies |

**Assessment of the Patient Safety Plan**

The Patient Safety Committee shall review and assess/approve this plan at least once a year, but more often as necessary, to evaluate and update the plan, and to incorporate advancements in patient safety practices.

***Patient Safety Checklists and Patient Safety Policies***

In accordance with [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure the patient's room and environment is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include the name and date of birth of the patient. Refer to Barton Health's Patient Identification policy.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene. Refer to Barton Health's Hand Hygiene policy.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials. Refer to Patient Safety Tracers policy.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in LTSC Attachment A.

The patient safety policies are listed in LTSC Attachment B.

***Approval of Patient Safety Plan***

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. At Barton Health, this is accomplished by the plan being approved through the Lake Tahoe Surgery Center Patient Safety Committee, the Barton Health Patient Safety Committee, Board Quality and the Governing Board. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan. The patient safety plan must be reviewed and updated annually in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

**Authority**

The authority to implement the Patient Safety Plan rests with Barton Health's Governing Body, Board Quality Committee, Medical Executive Committee, and Patient Safety Committee.

***2018 Lake Tahoe Surgery Center Patient Safety Priorities***

During 2018, Lake Tahoe Surgery Center will strive to achieve two different priorities to ensure safe patient care. During 2017, the surgical site infection rate was zero. Physician and staff education was provided during the year. In 2018, LTSC would like to maintain a surgical site infection rate of less than 0.5%.

Lake Tahoe Surgery Center had zero never events during 2017. In an effort to reduce the potential for harm, Lake Tahoe Surgery Center will strive to maintain zero harm during 2018. Physician and staff education is ongoing. The patient safety committee reviews all event reports and action items will be assigned to the appropriate staff. Education will occur immediately following an event, near miss or good catch.

### ***LTSC Attachment A: Terms and Definitions***

**Patient Safety**: The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

#### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

#### **Facility-Associated Infection**: ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#). (Added to NRS by [2005, 599](#); A [2009, 553](#))

#### **Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);

- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place for greater than 2 calendar days on the date of event, with day of device placement being Day 1, and an indwelling urinary catheter was in place on the date of event or the day before. If an indwelling catheter was in place for greater than 2 calendar days and then removed, the date of event for the UTI must be that day of discontinuation or the next day for the UTI to be catheter-associated (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN): Patient Safety Component Manual; 2017. Available at [https://www.cdc.gov/nhsn/pdfs/pscmanual/pcsmanual\\_current.pdf](https://www.cdc.gov/nhsn/pdfs/pscmanual/pcsmanual_current.pdf))

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

\*Checklists and Patient Safety Policies were reviewed for the stated time period. Need for revision is noted by the date the revision was made.

\*\*Usage outlines the unit/departments the checklists are used in.

\*\*\*As part of the annual review any required revisions will be identified. If revisions are required this is noted in the revision box. Any additional patient safety checklists or policies identified will be noted in this (review) column. If the annual review reveals no changes are required this box will be marked with an "X". An "X" means that the checklists and policies were reviewed but no changes were required.

Reports are due on or before July 1 of each year

The mission of Desert Willow Treatment Center is to provide quality, individualized mental health services in a safe and culturally sensitive environment collaborating with caregivers, community and other providers to ensure that children and families of Nevada may achieve their full human potential.

# Desert Willow Treatment Center

## QUALITY AND PATIENT SAFETY PLAN

DATE: 2018  
VERSION: 2

This plan was created and revised by the Desert Willow Treatment Center\_Patient Safety (Care of Patient) committee/team with coordination with applicable Continuing Quality Improvement Teams. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Desert Willow Treatment Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission Statement

The mission of Desert Willow Treatment Center is to provide quality, individualized mental health services in a safe and culturally sensitive environment collaborating with caregivers, community and other providers to ensure that children and families of Nevada may achieve their full human potential.

In support of our mission Desert Willow Treatment Center Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Desert Willow Treatment Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Desert Willow Treatment Center has developed this Patient Safety plan.

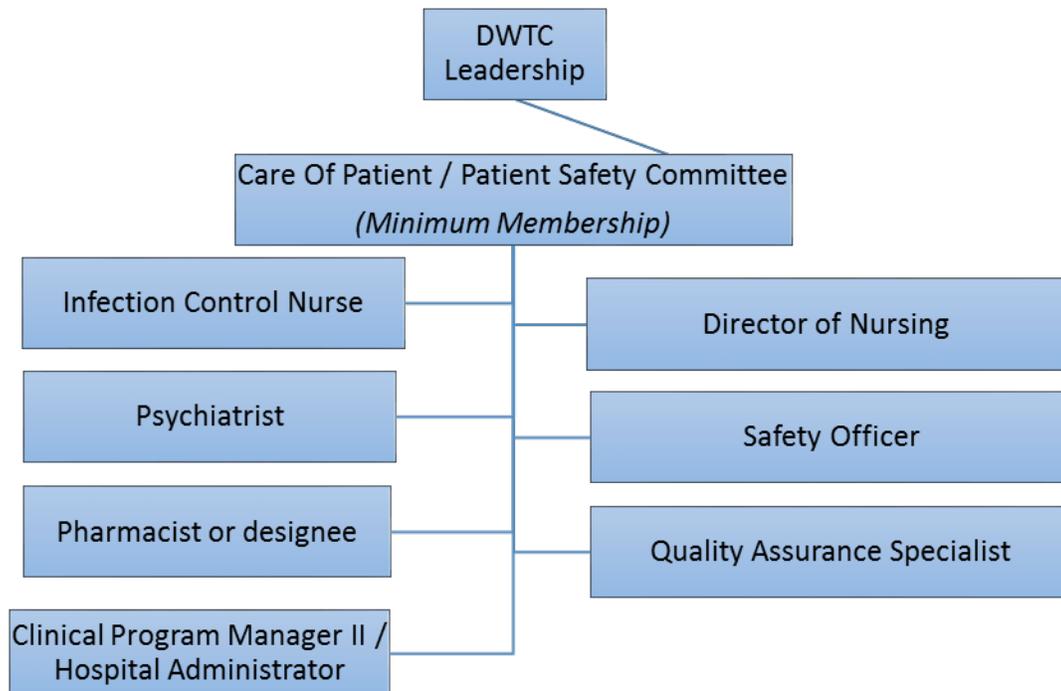

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully. Desert Willow Treatment Center’s Care of Patient Committee serves as the Patient Safety Committee.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to Leadership to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

### Root Cause Analysis (RCA) Team

A Root Cause Analysis Team will be established following a Sentinel Event or any other event determined by Leadership as requiring a Root Cause Analysis.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.

- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### RCA Team Membership:

- DCFS Administrator will identify a Root Cause Analysis team leader who is not a current employee of Desert Willow Treatment Center
  - RCA team leader Responsibilities:
    - Organize and coordinate the RCA process.
    - Assemble and encourage a supportive and proactive team.
    - Assign investigative and implementation tasks to the team members.
    - Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
  - Desert Willow Treatment Center Quality Assurance Specialist
  - Desert Willow Treatment Center Safety Officer or designee
  - Representation from the following disciplines within Desert Willow Treatment Center
    - Psychiatric Nurse
    - Mental Health Technician
    - Clinical Staff
    - Depending on the event other disciplines may be required
  - DCFS Administrator, Deputy Administrator or Clinical Program Manager II may request additional representation from other agencies, disciplines or programs

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Serve as chairperson of the Environment of Care Committee

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.

- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.
- Communicate the progress of any infection control investigations, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process for infection control that incorporates the Patient Safety and Quality Improvement elements.

#### Executive or Governing Body Staff Responsibilities (Clinical Program Manager II / Hospital Administrator)

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

#### The Patient Safety Committee/ Care of Patient Team will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Monitor and document the effectiveness of the patient safety policy.
  - Revise the patient safety policies and checklists as needed.
- A meeting agenda and minutes noting follow-up tasks will be kept.

#### A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

## Objectives and Goals of the Quality and Patient Safety Plan

---

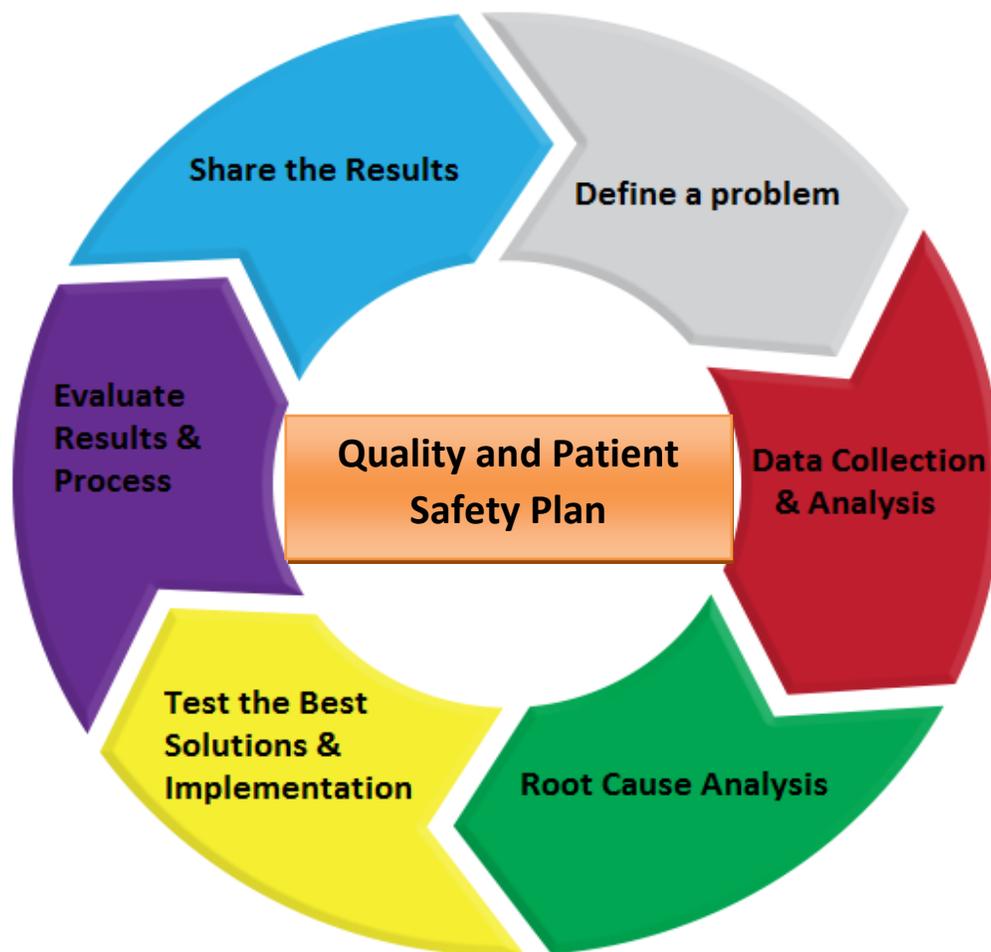

- National Patient Safety Goals guide the service delivery process.
  - Identify Patients Correctly. Use at least two identifiers when providing care, treatment or services. Label specimen containers in the presence of the patient.
  - Use Medications Safely. Maintain and communicate accurate medication information through medication reconciliation. Provide the patient and guardian with written information on the medication (dose, frequency, route, purpose) the patient should be taking and the importance of giving a list to his/her primary care physician.
  - Reduce the risk of health care-associated infections
    - Identify risks for acquiring and spreading infections
    - Comply with the CDC hand hygiene guidelines. Monitor hand hygiene practices. Set goals and improve compliance with hand hygiene guidelines.
    - Increase staff influenza vaccination rates
    - Annually evaluate the effectiveness of the infection control and surveillance plan
  - Identify Patients at risk for suicide. Conduct a risk assessment that identifies specific characteristics of the patient served and environmental features that may increase or decrease the risk for suicide. Assess the immediate safety needs and most appropriate setting for treatment for each patient. Identify patient safety risks. Identify protective factors that decrease risk of suicide. When an individual at risk for suicide leaves the care of the hospital, provide suicide prevention information (such as a crisis hotline) to the patient and family.
- Sentinel Events
  - Identify and Resolve Safety Risks for Patients including Environmental Factors
  - Root cause analysis will be done if sentinel event occurs
- Medication Management to include but not limited to:
  - Monitoring processes for high alert and look-alike/sound-alike medications
  - Reviewing the storage of medication, including expiration and temperatures
  - Reviewing appropriateness of drug order
  - Monitoring medication effects, adverse medication reactions and medication errors
  - Monitoring management of unused/expired medication
  - Monitoring Food/Drug/Drug interaction
  - Reviewing after hours dispensing and administration of medications
  - Providing medication education and handouts
  - Reconciling medication information
- Nutrition Services
  - Provide balanced meals in compliance with the National School Lunch Program
  - Provide all patients with a working knowledge of the basic principles of nutrition and appropriate exercise while addressing potential dietary issues or medical concerns.
- PBIS
  - Continue to implement, evaluate effectiveness and consistency of PBIS program. Update the program as necessary.

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Desert Willow Treatment Center will use a RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement that we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully

conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Desert Willow Treatment Center to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram. 5 Why’s technique also can be used to drill down the problem and find the root causes.

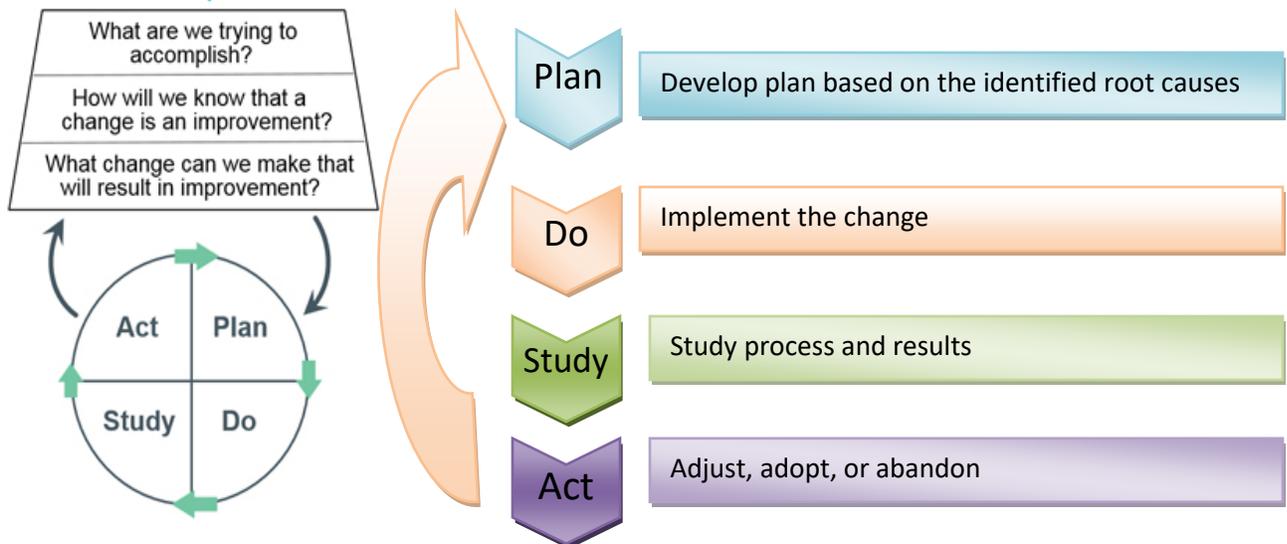

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram (Appendix C) may be used for analyzing the problems. You may use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics.

**Model for Improvement**

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. Desert Willow Treatment Center is using DCFS Incident/ Accident Reports for tracking sentinel events, healthcare infection data, and Microsoft Excel and Access for internal data collection.

Data is submitted to the following external reporting entities:

- BHCQC: Bureau of Health Care Quality and Compliance
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- DPBH: Department of Public and Behavioral Health
- Southern Nevada Health District
- State of Nevada Child Death Review Team
- TJC: The Joint Commission
- LCB: Legislative Council Bureau

## Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                          | Quarterly                                                                | Annually                                          |
|----------------------------------|--------------------------------------------------------------------------|---------------------------------------------------|
| 1) Sentinel event monthly report | 1) Severity of infection report                                          | 1) Quality and Patient Safety Plan update         |
| 2) Severity of infection report  | 2) Review and evaluate the measure of improvement of patient safety      | 2) Checklists and Policies reviewing and revising |
| 3) RCA assessment                | 3) Review and evaluate the measurement to prevent and control infections |                                                   |

## Assessment of the Quality and Patient Safety Plan

Quarterly Incident Accident Report including Trigger Identification reported to the Performance Improvement Team and to Leadership

Quarterly Consumer Complaint Report reported to Ethics Rights and Responsibilities Team and to Leadership

Infection Control information reported to Patient Safety Committee/Care of Patient Team and to Leadership

Root Cause Analysis for any Sentinel Event reviewed by all appropriate committees and to Leadership

Corrective Action Plans reviewed by all appropriate committees and Leadership

## Patient Safety Checklists and Patient Safety Policies

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;

- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

The patient safety checklists are listed in Appendix D.

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);  
(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

## Appendix B: National Patient Safety Goals

## National Patient Safety Goals 2018

⇒ **Identify Patient Correctly:**

⇒ **NPSG.01.01.01**– Use at least two identifiers (photo and date of birth), to identify each patient when providing care, treatment or services. Label specimen containers in the presence of the patient.

⇒ **Use Medicines Safely: Maintain and communicate accurate medication information for the patient by using proper medication reconciliation to identify and resolve discrepancies**

◆ **NPSG.03.06.01**– Record and pass along accurate information about patient's medicines. Find out what medicines the patient is taking. Compare those medicines to new medicines ordered for the patient to avoid duplications, omissions, interactions and the need to continue current medications. Provide written medication information. Make sure the patient/family knows what medicines to take, dose, frequency, route and purpose prior to being discharged and the importance of giving a list to his/her primary care physician.

⇒ **Prevent Infection: Reduce the risk of health care associated infections**

◆ **NPSG.07.01.01**- Use the hand cleaning guidelines from the CDC to prevent infections. Set goals and improve compliance.

⇒ **Identify Patient Safety Risks: NPSG.15.01.01**– Identify which patients are at risk for suicide and provide suicide prevention information (such as a crisis hotline) to the patient and his or her family. Conduct risk assessments of patients and the environment. Protect patients who are at-risk and keep them safe.

**Policy:** The facilities shall provide guidelines and implement proactive practices, which provide a safe environment of care in relation to property, equipment, patients, personnel and the public.

**Purpose:** The reduction of physical hazards and the implementation of safe practices enhance environmental safety.

**Procedure Guidelines:**

**Responsibility:**

1. Employees are responsible for:
  - A. Intervention when, safety conditions pose a threat to life or health, or threaten damage to equipment or buildings.
  - B. The continuing maintenance of the facility property, eliminating hazards upon discovery.
  - C. Reporting equipment or maintenance problems and incidents of property damage to the Safety Officer or Administrator/ Clinical Director upon discovery.
  - D. Reporting injuries and illness to the Administrator/Clinical Director.
  - E. Obtaining the information necessary to perform tasks in a manner that prevents injury to themselves, patients and others.
2. The Administrator/Clinical Director and designated Safety Officer, as agents of the Quality Assurance Committee are responsible for:
  - A. Environment of Care development, implementation and monitoring.

- B. Report of Safety Surveillance and activities to the Quality Assurance Committee.
- C. Annual review of the Environment of Care policies and guidelines for objectives, scope, performance and effectiveness.

**Maintenance and Supervision:**

1. Comply with the NFPA 101®, Life Safety Code® (LSC) for maintaining and supervising the facility grounds, buildings and equipment.
2. Maintain equipment and utilities following a preventative maintenance schedule.
3. Maintain sufficient light in the parking and entrance areas to reduce the potential for falls and security concerns.
4. Maintain signs and emergency systems to meet the needs of the visual and hearing impaired.
5. Maintain smoke free environment.
6. Provide facility cleaning, maintenance, and inspection, following a schedule for daily, weekly, monthly, semi-annual and annual activities.
7. Construction and Renovation (Interim Life Safety Plan):
  - A. Meet the existing ambulatory health care occupancy health code requirements for construction or renovation.
  - B. Train staff in alternative safety processes including the use of new specialized equipment and space.
  - C. Train staff to compensate for changes in Life Safety Plan.
  - D. Provide increased facility safety monitoring with construction and renovation included reference to the NFPA 101®, Life Safety Code® (LSC).
  - E. Inspect and monitor components of Life Safety Plan weekly or more frequently if indicated.

**Risk Assessment:**

1. Provide risk assessment and hazard surveillance to evaluate the impact of the center building, grounds, equipment, occupants, and internal physical systems on patient, employee and public safety.
  - A. Assign a Safety Officer to maintain risk and hazard surveillance.
  - B. Record Hazard surveillance.
  - C. Report environmental hazard and safety surveillance to the Quality Assurance Committee. Provide follow-up to staff concerning safety issue recommendations.
2. Report and document patient, personnel or visitor injury, and occupational illness. Document

incidents on a Variance Report, Occurrence Report, or Incident Report.

- A. Investigate and evaluate each report for opportunities to improve performance.
- B. Include injuries and occupational illness in the report to the Quality Assurance Committee.

**Product Safety Recalls:**

1. Address a product safety recall upon notification.
  - A. Inventory and remove recalled product from possible use.
  - B. Notify affected medical staff and evaluate a substitute product.
  - C. Inventory patients who may have received a recalled medical device from implant logs or records.
  - D. Consult with the Medical Director and/or Quality Assurance Committee to evaluate the situation and determine an appropriate method for patient notification if an implanted medical device has been recalled. The medical director, as an agent of the Quality Assurance Committee reports the incident to the Medical Executive Committee.

**Safety Education:**

1. Provide Safety Education and Training at orientation and at least annually thereafter. Address general safety processes; area specific safety and job related hazards.
2. Provide Safety Guidelines in the General Orientation including:
  - A. Review of Safety Policies and Guidelines.
  - B. Body Mechanics.
  - C. Hazardous Materials Communication.
  - D. SDS/ Hazardous Waste.
  - E. Safety Risk / Responsibilities.
  - F. Equipment Safety/Operations Manuals.
  - G. Emergency Preparedness.
  - H. Utility Systems and Electrical Safety.
  - I. Infection Control/Exposure OSHA.
  - J. Reporting of Sentinel Events.

- K. Variance, accidents/injuries, Security and Safety concerns.
  - L. Fire and Life Safety.
  - M. Safety Concerns.
  - N. Security.
  - O. OSHA.
3. Include specific safety standards related to safe practices and the safe use, inspection, cleaning and maintenance of specialized equipment in the Department /Job Specific orientation.
  4. Provide updates when new equipment is introduced.
  5. Review General Safety Guidelines annually.

## **PATIENT SAFETY PLAN**

- I. The Patient Safety Committee of Quail Surgical and Pain Management Center has developed this Patient Safety Plan designed to ensure the health and safety of all patients treated at the Center. The Center Administrator and the Management Committee have designated the Operating Room Charge Nurse to serve as Patient Safety Officer. Activities involved in the Patient Safety Plan will be overseen and reported to the Patient Care Committee, the Clinical Review Committee and, ultimately, the Management Committee. The plan encompasses all aspects of patient care, including but not limited to:
  1. Building Security
    - a. Video surveillance to monitor access and the parking lot/grounds
    - b. Door security with coded building entry
    - c. Medical gases and vacuum pump lock-secured
  2. Medication Safety
    - a. Storage
    - b. Administration
    - c. Identification
    - d. Monitoring compliance
  3. Patient Transport
    - a. Gurneys, chairs, cribs, ambulating
    - b. Number of personnel
  4. Patient Positioning
    - a. Number of staff
    - b. Positioning devices
    - c. Recommended practices
  5. Infection Prevention
    - a. See Infection Control Plan
  6. Medical Equipment Safety
    - a. Preventative maintenance
    - b. Proper inservicing
    - c. Safety checks
    - d. Electrical equipment
    - e. Electrosurgical and Laser safety

- f. Radiology safety
  - g. Biomedical checks for new equipment and at scheduled intervals
- 7. Procedure Consents
  - a. Accuracy monitored
- 8. Emergency Management (Code, Fire, Transfer & Disaster Plans)
  - a. Medical emergency equipment, supplies, and medications available
  - b. Clinical alarm systems maintained
  - c. Staff competency maintained (education & drills)
  - d. Emergency power source maintained
  - e. Fire drills
  - f. See disaster plans
- 9. Patient Education
  - a. Pre-admissions instructions, testing, education
  - b. Post-operative discharge instructions
- 10. Protection of Patient Health Information
  - a. Privacy
  - b. IT information protection
  - c. "Red Flag" policy and staff training
- 11. Physical Plant Environment
  - a. Environmental controls monitored and maintained
  - b. Facility Safety Officer observations and reports
  - c. Consistent maintenance of the facility (floors, walls, etc)
- 12. Healthcare Personnel Competency
  - a. Orientation and training
  - b. Continuing education programs
  - c. Peer review, supervisory review, performance evaluations, competency reviews, credentialing criteria
- 13. Anesthesia Care
  - a. Equipment safety
  - b. Anesthesia gases
  - c. Competency/Peer review
- 14. Surgical Counts
  - a. Policy and procedure reviews
- 15. Sharps Handling
  - a. Safe sharps containers in patient care areas for disposal
  - b. Exposure Control Program

- II. **The Patient Safety Officer:**
  - a. Chairs the Patient Safety Committee
  - b. Maintains documents and minutes of the Patient Safety Committee
  - c. Supervises the reporting of Sentinel Events to the State and maintains documentation
  - d. Assists in the investigation and analysis of any alleged sentinel event
  - e. Coordinates and conducts a risk assessment for the identification of potential patient safety hazards at least annually
  - f. Works with the Patient Safety Committee to determine resolutions to safety hazards identified in the risk assessment
  - g. Reports all actions of the Patient Safety Officer to the Patient Safety Committee
  
- III. **The Patient Safety Committee** is established to review, evaluate and recommend measures and actions designed to improve the safety of all patients receiving care at the Surgery Center. Committee members will also evaluate the actions and reports of the Patient Safety Officer regarding sentinel events and near-misses.
  - a. Multidisciplinary membership to include:
    - 1. Patient Safety Officer
    - 2. Administrator
    - 3. Director of Nursing
    - 4. Medical Director
    - 5. PACU Charge Nurse
    - 6. RN Pharmaceutical coordinator/Contracted Pharmacist
    - 7. Facility Safety Officer
    - 8. Ad Hoc members as appropriate (Materials Manager, Sterile Processing Technician, Surgical Technologist, Radiology Technologist, Orderly)Members serve indefinitely.
  - b. The committee generally meets monthly or in response to events or occurrences.
  - c. The committee reports activities and makes recommendations to the Patient Care Committee, the Clinical Review Committee and the Management Committee

- IV. The patient safety plan and policies and procedures regarding patient safety are reviewed and approved annually by the Management Committee. These policies are based on state and local regulations and AORN's Recommended Practices. Policies are reviewed by staff upon hire and on a continual basis throughout the year.
- V. Patient safety is routinely included in Quality Improvement activities.
- VI. Surgery Center staff will initially review the Patient Safety Plan following approval of this plan by the Management Committee. All staff members will subsequently conduct an annual review of the plan. Signature sheets to indicate staff review will be maintained in the Inservice binder.
- VII. Medical staff and Allied Health personnel will be notified of the plan through written postings throughout the Center. Copies of the plan will be readily available for review.
- VIII. Compliance with the Patient Safety Plan will be monitored by Patient Safety Committee Members and reported to the Center Administration.

The Patient Safety Plan was reviewed and recommended for approval by the Clinical Review Committee on 3/8/2011. It was approved by the Management Committee on 3/29/2011.

# Patient Safety Plan

2017

This plan was created and revised by the Renown Health's Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes. In addition the plan is intended to encourage recognition, reporting, and acknowledgment of risks to patients, visitors, and employees as well as reduce medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Renown Health is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Renown Health's Patient Safety program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Honest, open communication to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and values for each patient, family member, employee, and other healthcare providers.
- Responsibility for safety related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible patient outcomes.
- Incorporation of evidence-based safety practice guidelines to deliver high quality healthcare.
- Education of staff, physicians, patients and their families to promote patient safety and continuous quality improvement.

## Scope and Purpose

---

This Patient Safety Plan applies across the entire Renown Health organization.

All staff and physicians in Renown Health are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare performance improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve patients and their families.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

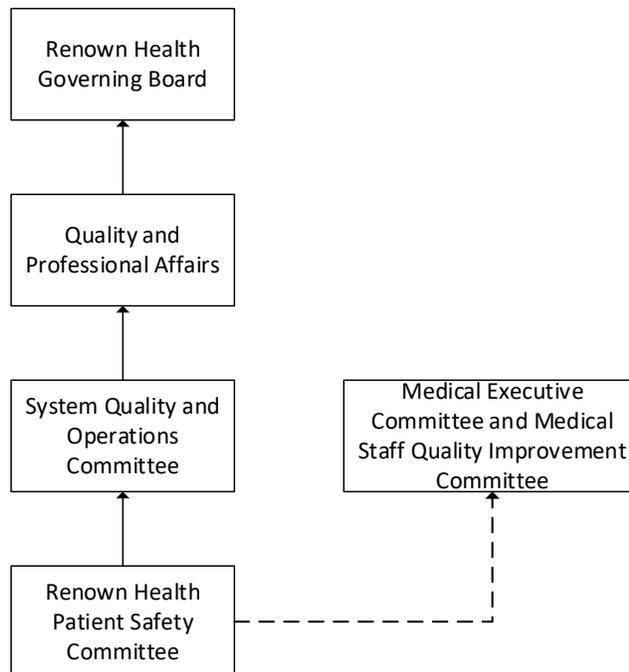

- Staff and physicians contributing their knowledge, vision, skill, and insight to improve the processes of patient safety
- Decisions made based on data and facts, with patient safety being considered
- Customer-focus including patients, families, and visitors
- System-based thinking
- Utilization of trained, expert staff and physicians.

## Roles and Responsibilities

---

The Renown Health Patient Safety Committee ensures that the Patient Safety Plan is promoted and executed successfully as indicated in NRS439.875.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), the Renown Health Patient Safety Committee is comprised of:
- The Renown Health Infection Control Officer;
- The Renown Health Patient Safety Officer;
- At least three providers of healthcare who treat patients, including at least one member of the medical, nursing and pharmaceutical staff of the medical organization; and
- One member of the executive or governing body of the medical organization;
- A representative from Executive Leadership.

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy through event review when applicable.

- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the organization to improve the safety of patients.
- Review and evaluate the quality of measures carried out by the organization to prevent and control infections.
- Make recommendations to the executive or governing body of the organization to reduce the number and severity of sentinel events and infections.
- At least once each calendar quarter, report to the executive or governing body of the organization regarding:
  - (1) The number of sentinel events that occurred;
  - (2) The number and severity of infections that occurred; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the Renown Health Patient Safety Committee.
- Supervise the reporting of all sentinel events alleged to have occurred, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred.
- Report to the patient safety committee directly or through his/her designee any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the Renown Health Patient Safety Committee.
- Monitor the occurrences of infections to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections either directly or through his/her designee.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Quality and Professional Affairs Committee of the Renown Health Board

- Provide vision and leadership to Patient Safety process, and develop and foster a safe learning and improving culture.
- Ensures the priorities of patient safety are aligned with the strategic priorities of the health system.

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events and hospital acquired infections including:

- Number of sentinel events from previous calendar month
- Number of hospital acquired infections that occurred in the organization
- Corrective action plans for the sentinel events and infections.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed
  - Monitor and document the effectiveness of patient safety policies.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

### Root Cause Analysis

Renown Health will use Root Cause Analysis (RCA) to determine the contributing factors and the underlying reasons for the deficiencies or failures. Transformational Health Care principles and methods are incorporated into Renown Health’s RCA process.

An RCA is a process for identifying the root causes of problems. It follows the principles of Just Culture by focusing on processes, instead of individuals.

#### Root Cause Analysis (RCA) Team Responsibilities

RCAs are conducted for all identified sentinel events and significant events/near misses involving complex process failure. Results of significant RCAs will be reported and monitored by the Renown Health Patient Safety Committee.

- Root Cause interviews, analysis, investigation, and corrective action plan implementations
- Participates in the RCA meetings and discussions
- Communicate honestly and openly about data and facts to the team members and their supervisors/leaders
- Incorporates the principles of Just Culture in the RCA process.

**Causal Chain (5 Whys)** technique will be used in Renown Health to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” repeatedly.

### Data Collection and Reporting

Data drives quality and patient safety efforts. Renown Health uses Midas and other databases for tracking sentinel events, healthcare infections, and other patient safety related data.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Patient Safety plan include the data from:

*Renown Health Patient Safety Plan*

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the organization;
- Other personnel who provide treatment or assistance to patients;
- Employees who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the organization; and
- Persons with whom the organization enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The Renown Health Patient Safety Committee reviews and approves annually patient safety checklists based on policy.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The Renown Health Infection Prevention Plan and Program is established and approved by the Renown Health Infection Control Committee. Regular reports and updates regarding the Infection Prevention Program are provided to the Patient Safety Committee.

## Approval of Patient Safety Plan

---

The Renown Health Patient Safety Plan is reviewed and updated annually and is approved by the Quality and Professional Affairs Committee of the Renown Health Board.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## **INTRODUCTION**

Carson Tahoe Regional Healthcare/ Regional Medical Center is a part of Carson Tahoe Health System, a Nevada not-for-profit hospital. We are committed to patient safety, quality patient care and quality patient outcomes consistent with our Mission and Core Values.

## **MISSION**

To enhance the health and well being of the communities we serve.

## **CORE VALUES**

Putting patients first

Treating everyone with dignity and respect.

## **PURPOSE**

The Patient Safety Plan provides a planned, systematic, coordinated approach for continually improving the health and safety of patients who are treated at the medical facility, by reducing patient harm and maintaining a safety culture.

## **PLAN**

- Establish Patient Safety Committee:
  - Mandatory Membership to include:
    - Patient Safety Officer
    - Infection Control Officer
    - At least 3 providers of health care who treat patient at the medical facility, including one medical, nursing and pharmaceutical staff
    - One member of the executive or governing body
    - Additional non required members include: Quality Director, Chief Medical Officer, In-House Council, Environmental Safety Officer, Nursing Director.
    - Ad-Hoc invitees as appropriate
  - Committee required to meet at least once per month
- Inclusion of
  - Infection Control Program to prevent and control infections within the medical facility (this is a document separate from the Patient Safety Plan that meets the requirements for NRS 439.865)
  - Patient Safety checklists and patient safety policies as required by NRS. 439.877
    - 2018 Checklist Inventory *Attachment A*
    - Annual review and revision of checklists and policies
- Annual Report to Legislative Committee on Health Care
- Integration of all patient safety activities both ongoing and developing
- Ongoing orientation, education and training to emphasize specific job related aspects of patient safety to maintain and improve staff awareness

- Encourage internal reporting of medical / healthcare incidents and events, effectively respond to actual occurrences, manage occurrences and events with a non-punitive approach, and focus on processes and systems to minimize individual blame and retribution
- Periodic survey of the staff regarding willingness to report, actions taken and outcomes of occurrences and events
- Internal reporting of findings, actions taken and resolution; organizational learning and communication of occurrence and event information
- Consideration of patient safety priorities when designing and redesigning of relevant processes, functions and services

Involvement and education of patients, their families about their role in facilitating safe delivery of care, identifying potential risks and suggesting improvement to patient safety

### **SCOPE OF ACTIVITIES**

The Patient Safety Committee integrates all components of safety into the organization-wide safety program in collaboration with Quality, Environmental Safety, Infection Control, Patient Care areas, Risk Management, Compliance and Ethics.

#### **Patient Safety Committee activities include:**

- Sentinel Events pursuant to NRS Chapter 439
  - Review alleged events reported to State of Nevada, RCA investigations and resulting action plans.
  - Recommendations, as appropriate, to the executive or governing body for reducing the number and severity of sentinel events and infections that occur
  - Provide emotional support for staff involved in incidents or events, through Human Resources, leadership, department supervisors and other resources as appropriate
  - Report at least quarterly to the executive or governing body
    - The number of sentinel events occurring in the previous quarter
    - The number/severity of infections occurring in the previous quarter
- Quality Measures: Review and evaluate
  - To improve the patient safety and outcomes
  - To reduce and/or prevent infections
- Monitor patient/ environment safety issues identified throughout the organization
- Promote internal and external knowledge and experience to prevent patient harm, adverse events and occurrences, to maintain and improve patient safety
- Dashboard Trending Report: Review aggregated or trended data including but not limited to: No harm events, Mild or moderate adverse outcomes, Near miss, Medication events, Falls, Adverse drug reactions, Transfusion reactions, Hazardous conditions, Present on admission / Hospital acquired conditions, Online incident reports, adding Restraint indicators for 2018
- Utilize a proactive approach to recognize and acknowledge medical/healthcare events and risks to patient safety, initiate actions and recommendations to reduce or prevent these events and risks
- Prioritize and recommend Patient Safety activities, as appropriate.
  - Utilizing trended data from Environmental safety, Security, Employee

health, Emergency management, Lab or radiation safety, Utilities management, Bio Med, Fire drills or inspections.

### **PATIENT SAFETY OFFICER**

The Patient Safety Officer is designated by the medical facility and has administrative responsibilities as prescribed by NRS chapter 439 (specifically outlined in NRS 439.815 through NRS.439.875) and by other regulatory agencies and accrediting bodies. Duties and responsibilities include but are not limited to:

- Serving on the Patient Safety Committee
- Supervising sentinel event reporting to the State
- Conducting mandatory investigations; developing and implementing action plans
- Ensuring notification as appropriate within the medical facility

### **STRUCTURE**

The Quality Reporting Structure Model *Attachment B* visually diagrams the reporting structure.

## Patient Safety Plan, A.1.26 - LAS VEGAS ONLY

### POLICY:

This is an internal safety plan designed to assist in the improvement of the health and safety of patients treated at AMG Specialty Hospital Las Vegas. The goal of the plan is to reduce and eliminate any potentially unsafe practices thereby promoting an environment of safety for our patients.

To notify patients; who are involved when a sentinel event occurs or of any infections present on admission and/or if they have acquired infections at AMG Specialty Hospital Las Vegas; pursuant to Nevada statutes. The plan is submitted to and approved by the governing board of AMG Specialty Hospital Las Vegas as required in NRS 439.865.

AMG Specialty Hospital Las Vegas's health care providers were notified of the initial plan and are able to freely access the plan for any completed updates to facilitate compliance with NRS 439.800-890. (Notification 10/09, 7/11, 2/11, 2-12, 2-13, 10-13, 2-14)

AMG Specialty Hospital Las Vegas (AMG) will maintain a Patient Safety Plan that complies with the statutes and rules pursuant with NRS 439.800-890 and NAC 439.900 to .920 inclusive of 2010 Regulations.

Established a Patient Safety Committee, pursuant to NRS439.875, that:

- Meets monthly
- Is Chaired by the Patient Safety Officer
- Includes the Infection Control Officer
- Contains at least three health care providers
- Includes one member from Pharmacy
- Includes one member from medical staff
- Includes one member from nursing
- Includes one member of the executive or governing body.

AMG Specialty Hospital Las Vegas has designated a Patient Safety Officer (PSO) who:

- Serves on the Patient Safety Committee, (PSC)

- Reports to the PSC Monthly, Quarterly and Yearly. Supervises the reporting of all sentinel events with active participation of the PSC. (NRS439.835)
- Takes action he/she determines necessary to ensure the safety of patients as a result of any investigation involving a safety risk or sentinel event that has occurred at AMG Specialty Hospital Las Vegas.
- Reports any actions taken to the Patient Safety Committee, the state reporting agencies and communicates with the patient as per NRS439.855 (2).0.

AMG Specialty Hospital Las Vegas has designated the CCO who functions in the role of Infection Control Preventionist and as the Infection Control Officer (ICO) +who:

- Serves on the PSC
- Monitors the occurrences of infections to determine the number and severity of infections.
- Reports to the PSC concerning the number and severity all infections at AMG.
- Takes such action as he/she determines is necessary to prevent and control infections alleged to have occurred at AMG.
- The Infection Control Officer or staff she designates notifies patients who have been admitted with POA, Present on Admission Infection(s), or who develop an infection at the facility (HAI), will be notified within 5 days of the Infection Control Officer's positive identification of the infection(s) as required by the statute.
- Reports Monthly, Quarterly and Yearly to the PSC.
- Shall carry out the provisions of the infection control program adopted pursuant to NRS 439.865 and ensure compliance with the program.
- AMG Specialty Hospital Las Vegas has less than 175 beds and therefore, will comply with 439 SEC 3. 4; AMG Specialty Hospital Las Vegas complies with this regulation and will:
- Maintain the records of completion of the required training in the employee file.
- Maintain periodic reviews by a certified infection preventionist consultant
- AMG designates a qualified backup person, who has received the required training, to carry out the duties of the Infection Control Officer, when he/she is absent per statute.

Patient Safety Committee:

- Will receive reports from the Patient Safety Officer and Infection Control Officer pursuant to NRS 439.870
- Will review and evaluate compliance with notification of patients who have been admitted with Present on Admission infection (POA) or developed an infection at the facility HAI, as required by the statute.
- Will post in publicly accessible areas and provide, to patients, information on reporting facility-acquired infections, including the contact information to the Health Division.
- The information provided to each patient includes all statutory requirements pursuant to 439.870 paragraph (a) of subsection.
- Has established pursuant to NRS 439.875 patient safety checklists and patient safety policies for use by: (The patient safety checklists adopted, pursuant to NRS 439.875 AB 280 subsection 1, follow protocols to improve the health outcomes of patients at AMG Specialty Hospital Las Vegas).
  - a. Providers of health care who provide treatment and/or care;
  - b. Other personnel who provide treatment or assistance to patients;
  - c. Employees of the medical facility who do not provide treatment but whose duties affect the health or welfare of the patients including janitors.
  - d. Persons with whom the medical facility enters into a contract to provide treatment or services which may affect the health or welfare of patients at the facility.
- Has a policy for appropriately identifying patients before providing care. Located in Section K care of patients in the AMG Policy and Procedure Manual.

- Shall monitor and document the effectiveness of the patient identification policy and the use of patient safety checklists adopted pursuant to NRS 439.875.
  - a. Will submit a report to the Director of the Legislative Counsel Bureau on or before July 1 of each year, pursuant to NRS 439.875.
- Shall evaluate the reports of sentinel events alleged to have occurred, submitted by Patient Safety Officer.
- Review and evaluate the quality measures carried out to improve the safety of patients who receive treatment at AMG Specialty Hospital Las Vegas.
- Make recommendations to the executive or governing body regarding any sentinel events for the previous calendar quarter and the plans to reduce the number and severity of events at AMG Specialty Hospital Las Vegas.
- All records are considered confidential and protected from discovery, as described in NRS 439.265 and in NAC 439 regulation R044-10 Sec. 6, 5. and NRS 239.0115.

#### PATIENT SAFETY GOALS:

Selected recommendations will be monitored on a routine basis to evaluate AMG Specialty Hospital Las Vegas's effectiveness in implementation and compliance with National Patient Safety Goals.

Goals are as follow:

- Improve the accuracy of patient identification
- Increase the effectiveness of communication among caregivers
- Improve the safety of giving medications
- Reduce the risks of health care infections
- Improve the response to alarms in the care environment.
- Improve the care of patients who require indwelling catheters and tubes.
- Use bundles to improve care patterns
- Accurately and completely reconcile medications across the care continuum
- Reduce the risk of patient harm resulting from falls
- Encourage patients active involvement in their care as a patient safety strategy
- AMG Specialty Hospital Las Vegas will identify risks inherent to its patient population
- Improve recognition and response to changes in condition

## **DISCLOSURE OF UNANTICIPATED OUTCOMES:**

AMG Specialty Hospital Las Vegas will follow the policy "Effective Patient Communication" in relating to the patient and when appropriate the patient's family about outcomes of care that the patient (or family) must be knowledgeable about in order to participate in current and future decisions affecting the patient's care and unanticipated outcomes of care.

Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job related aspects of patient safety including the methodology to report medical/healthcare errors and on the provision of an interdisciplinary approach to patient care for the optimal delivery of health care.

Unanticipated outcomes, including sentinel events, will be reported internally and externally as per AMG Specialty Hospital Las Vegas's policies. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and regulations. NAC 439.900-.920 and NRS 439.800 to .890, 2013

The Patient Safety Committee will report to AMG Specialty Hospital Las Vegas's Committee of The Whole (COW) meeting regarding any Performance Improvement (PI) or plans implemented subsequent to patient safety issues or sentinel events.

Upon identification of an unexpected occurrence the patient care provider will immediately:

- Perform the necessary healthcare interventions to protect and support the patient's clinical condition.
- Perform necessary healthcare interventions to reduce the potential risk to other patients.
- Contact the patient's physician to report the unexpected occurrence.
- Report the unexpected occurrence to their immediate supervisor and complete an event report.
- The Supervisor will immediately call their director and report the occurrence.
- Submit the event report to the CCO or designee.
- Forwards to Risk Management.
- If a PI team is initiated to assess the unexpected occurrence the care provider will make them self available to the team.

## **PATIENT SAFETY PLAN:**

The scope of the Patient Safety Plan encompasses the patient population, visitors and staff (including medical staff).

The Plan addresses the maintenance and improvement in patient safety in every department throughout AMG. Areas the plan covers are:

- No harm errors: those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome but do not result in a physical or psychological negative outcome, or the potential for a negative outcome for the patient.
- Medication errors
- Infection Control Program:
  1. The Infection Control Program is contained in the AMG Policy and Procedure Manual Sec. R Surveillance, Prevention and Control of Infection and follows the Centers for Disease Control, CDC, National Health Safety Network, NHSN, (nationally recognized infection control guidelines).
  2. Was developed under the direction of a certified infection preventionist (CIP), and as a less than 175 bed facility does not require a CIP, but the ICO has passed an infection preventionist course and keeps yearly training up to date with at least 4 CEU's of infection prevention related continuing education. NAC 279, SB 339
  3. Includes a "backup" person as required per statute and addressed under the CCO section of this document; keeps yearly training up to date with at least 4 CEU's of infection prevention related continuing education.
- Adverse drug reactions
- Restraints
- Falls
- Hazardous conditions; any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Sentinel events "Sentinel Event means an event included in Appendix A of "Serious Reportable Events in Healthcare-2011 Update: A Consensus Report", published by the National Quality Forum or, if revised, the most current version of the list of serious reportable events, published by the National Quality Forum.

If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist. (NRS 439.830)

- The Sentinel Events Policy can be found in the Leadership Manual
- For reporting sentinel events refer to the Sentinel Events Policy.

The Patient Safety Plan will place an emphasis on important AMG Specialty Hospital Las Vegas and patient care functions:

- Patient rights
- Assessment of patients
- Care of patients
- Patient/Family education
- Continuum of care
- Infection Control – Surveillance, control and prevention of infection
- Leadership
- Organization Performance Improvement
- Information management
- Human Resources management
- National Patient Safety Goals
- Life Safety
- Record of Care, Treatment and Services.

## **METHODOLOGY:**

The Patient Safety Committee:

- Is responsible for the oversight of the Patient Safety Plan.
- Meets monthly and receives a report in regards to the patient safety issues that occurred during the past calendar month.
- Includes by statute the Patient Safety Officer, the Infection Control Officer, at least three healthcare members; one member of the medical staff, pharmaceutical and nursing staff and a member of the executive or governing body attend each meeting.
- Is a sub-committee of the General Safety Committee
- Will review internal and external data, PI activities, sentinel events, infection control.
- Will direct updates of the policies and procedures necessary secondary to sentinel event occurrence, and review those policies at the first meeting post update.
- Will facilitate training as needed post sentinel event.
- Will review the status of the reporting progress to the Health Division, the root cause analysis team appointments and the performance of the Patient Safety Officer in completing the necessary tasks.
- Will review and evaluate the quality measures carried out to improve the safety of patients receiving treatment at AMG.
- Will review and evaluate the quality measures carried out to prevent and control infections at AMG.
- Will review and evaluate the number of patients notified of any infections acquired at AMG per statute.
- Members of the sub-committee may or may not attend the full safety meeting.

The Patient Safety Officer and Infection Control Officer:

- Will be responsible for the administration of the plan.
- Will submit a monthly report to the PSC

- Will prepare, quarterly, a report for the PSC that covers any patient safety related issues that have occurred in the preceding 3 months.
- Will submit an annual report to the committee covering the past year.

## **NEW PROCESS DESIGN:**

When the Patient Safety Committee

- Designs a new process, function, or service, it will utilize a standard document format for planning, implementing and evaluating the design and will consult with the administration team to facilitate the process and ensure all aspects and expectations are clear.
- Will take in to account the Mission Statement and Values of AMG Specialty Hospital Las Vegas, the needs of patients, staff and others when determining whether the program is clinically sound and current.
- The process foundation will be evidence based.
- Will consult a variety of information sources and incorporate available information from within the organization and other organizations about potential risks to patient safety, including the occurrence of sentinel events, in order to minimize risks to patients affected by the new/redesigned process, function or service.
- Will recommend the scale of the pilot program and monitor progress to determine whether the proposed design/redesign is an improvement.

## **REPORTING SAFETY AND QUALITY CONCERNS:**

- An effective Patient Safety Plan cannot exist without optimal reporting of unexpected occurrences.
- All reporting will be received in a non-punitive manner in its management of errors and occurrences.
- All staff should feel free to report unexpected occurrences without fear of reprisals.
- Errors occur due to a breakdown of systems and processes and require event reports and full notification of the medical and administrative staff.
- AMG Specialty Hospital Las Vegas will use reporting to place the focus on improving systems and processes. The focus will be placed on remedial actions to assist rather than punish staff members. Any employee who has concerns about the safety and/or quality of care provided at AMG Specialty Hospital Las Vegas is encouraged to report their concerns to:
  - Their Supervisor
  - CCO, Department Directors
  - The Patient Safety Officer
  - Safety Officer
  - Infection Control Officer
  - CEO

Any individual in any department who identifies a potential safety issue will immediately notify his/her supervisor.

- The supervisor or director of the department will prepare a report for the Patient Safety Officer and potentially initiate a PI review to assess relevance of initiating a PI team.
- No harm errors require completion of an event report, all normal notifications, and a review by the PSC
- Mild to moderate adverse outcomes require immediate clinical interventions, notification of the patient's physician, response to related physician orders, completion of an event report and all notifications. The

staff then documents the facts in the medical record and an event report is submitted to Action Cue and the Patient Safety Officer reviews for submittal to the PSC.

- Adverse Drug Reactions: require staff to perform any clinical interventions to support and protect the patient, notification of the physician responsible for the patient, implementation of any subsequent orders, notification of the Pharmacy and all other required notifications as per policy, documentation of the facts in the medical record and on an event report. (Medication errors that are No Harm, moderate adverse outcomes or adverse reactions must be reported to the CCO and Pharmacy). The director of Quality will review the event report and if a sentinel event is suspected the Patient Safety Officer will be notified for further communication with the Patient Safety Committee.
- Hazardous Condition/Patient Safety issue: as appropriate, and if possible, staff will contain any hazardous condition or patient safety issue. Staff identifying a hazardous condition or a potential patient safety issue will immediately fill out an event report and complete all notifications as per policy.
- Event reports that relate to patient safety will be reported by the supervisor to the Patient Safety Officer. PI will be done as appropriate. The PSC will review.
- Sentinel Event: staff will perform any necessary clinical assessments and interventions to support and protect the patient, notify the physician responsible for the patient, carrying out any orders subsequent to the event and then follow the Sentinel Events Policy and Procedure. The Patient Safety Officer will notify The Patient Safety Committee (PSC) who will review and respond to the potential sentinel event at the nearest meeting date possible. Any reporting to the SE registry is per statutes and AMG Specialty Hospital Las Vegas sentinel events policy.
- AMG Specialty Hospital Las Vegas Policies such as the Sentinel Event Policy will determine the organizational response to unexpected occurrences. All sentinel events will have a root cause analysis conducted as pursuant to NAC 439. The determination of the Patient Safety Committee members, based on internal and external data analysis and prioritizing of patient safety will determine if further remedial action necessary for identified occurrences, proactive occurrence reduction activities, or if a FEMA (Failure Mode Effects Analysis) will be performed. External notifications will be carried out as outlined per NAC 439.900 to .920, and NRS 439.800 to .890.

## **EXCEPTIONS TO NON PUNITIVE REPORTING:**

- All responses to unexpected occurrences will be investigated and any disciplinary action will be subsequent to that investigation;
- In the event that staff competency is the root cause for a pattern of errors; AMG Specialty Hospital Las Vegas management will make every reasonable effort to ensure staff can reliably deliver safe care. If it becomes clear that a staff member cannot practice in a reliably safe manner, in spite of education and counseling, this situation will be treated as a staff competency issue through disciplinary procedures.
- When staff knowingly performs intentional acts with intent to harm or deceive a patient possible disciplinary action may ensue.

## **SENTINEL EVENTS:**

The policy regarding sentinel events can be found in the leadership manual and includes but is not limited to the following:

- Reporting process, procedure for reporting and the time line for compliance.
- Professional or emotional support for staff involved in a sentinel event.
- Root Cause Analysis and/or action plan processes
- Staff Members role in the process resolution
- Availability of training or personal consultation for any staff involved.

- Feedback from patients, family and staff.
- Staff opinions, needs and perceptions of risks to patients, and requests/ suggestions for improving patient safety.
- Disclosure to the patient/patient family is outlined in the Effective Patient Communication Policy and the Sentinel Event Policy and Procedure and completed as per the statutory requirements (within 7 days). This disclosure is an important patient right.
- Staff will educate patients and families about their role in facilitating safe delivery of care.
- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job related aspects of patient safety including the need and method to report unexpected occurrences and the provision of an interdisciplinary approach to patient care to facilitate the optimal delivery of health care.
- Unexpected occurrences, including sentinel events, will be reported internally and externally, per AMG Specialty Hospital Las Vegas Policy, NAC 439.900 to .920, Reg. and NRS 439.800 to .890. External reporting will be in accordance with all state, federal and regulatory body rules, laws and requirements.
- Patient Safety Reports will be submitted by the Patient Safety Officer to the Patient Safety Committee for review and further for medical, executive and governing body review.
- A quarterly Patient Safety Report from the Patient Safety Officer/Infection Control Officer/Committee will be presented to the Committee of the Whole (COW) including unexpected occurrences, Sentinel events and the actions taken to improve patient safety, reduce patient risks, and in response to actual occurrences and re activity.
- The Patient Safety Committee will on a yearly basis evaluate the effectiveness of the Patient Safety Plan; review the Patient Safety Checklists, review policies related to patient safety and update as needed and changes will be present to the MEC for approval as with all Policies and Procedures.
- Quarterly the Patient Safety Committee will report, to the governing body, on the number of sentinel events; as well as the number and severity of infections that occurred at AMG during the preceding calendar quarter.
- On or before July 1 each year, the PSC will submit a report to the Legislative Counsel Bureau that includes information regarding the past years development, revision and usage of the patient safety checklists, patient safety policies and a summary of the annual review. (Pursuant to NRS 439.875.)

## ROOT CAUSE ANALYSIS AND ACTION PLAN FRAMEWORK TEMPLATE

The Joint Commission Root Cause Analysis and Action Plan tool has 24 analysis questions. The following framework is intended to provide a template for answering the analysis questions and aid organizing the steps in a root cause analysis. All possibilities and questions should be fully considered in seeking “root cause(s)” and opportunities for risk reduction. Not all questions will apply in every case and there may be findings that emerge during the course of the analysis. Be sure however to enter a response in the “Root Cause Analysis Findings” field for each question #. For each finding continue to ask “Why?” and drill down further to uncover why parts of the process occurred or didn’t occur when they should have. Significant findings that are not identified as root causes themselves have “roots”.

As an aid to avoid “loose ends,” the two columns on the right are provided to be checked off for later reference:

- “Root cause” should be answered “Yes” or “No” for each finding. A root cause is typically a finding related to a process or system that has a potential for redesign to reduce risk. If a particular finding is relevant to the event is not a root cause, be sure that it is addressed later in the analysis with a “Why?” question such as “Why did it contribute to the likelihood of the event?” or “Why did it contribute to the severity of the event?” Each finding that is identified as a root cause should be considered for an action and addressed in the action plan.
- “Plan of action” should be answered “Yes” for any finding that can reasonably be considered for a risk reduction strategy. Each item checked in this column should be addressed later in the action plan.

When did the event occur?

|       |                  |       |

| # | Analysis Question                                                   | Prompts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Root Cause Analysis Findings | Root cause | Plan of Action |
|---|---------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|------------|----------------|
| 1 | What was the intended process flow?                                 | <p>List the relevant process steps as defined by the policy, procedure, protocol, or guidelines in effect at the time of the event. You may need to include multiple processes.</p> <p><i>Note:</i> The process steps <i>as they occurred in the event</i> will be entered in the next question. Examples of defined process steps may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Site verification protocol</li> <li>• Instrument, sponge, sharps count procedures</li> <li>• Patient identification protocol</li> <li>• Assessment (pain, suicide risk, physical, and psychological) procedures</li> <li>• Fall risk/fall prevention guidelines</li> </ul> |                              |            |                |
| 2 | Were there any steps in the process that did not occur as intended? | <p>Explain in detail any deviation from the intended processes listed in Analysis Item #1 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                              |            |                |
| 3 | What human factors were relevant to the outcome?                    | <p>Discuss staff-related human performance factors that contributed to the event. Examples may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Boredom</li> <li>• Failure to follow established policies/procedures</li> <li>• Fatigue</li> <li>• Inability to focus on task</li> <li>• Inattentional blindness/ confirmation bias</li> <li>• Personal problems</li> <li>• Lack of complex critical thinking skills</li> <li>• Rushing to complete task</li> <li>• Substance abuse</li> <li>• Trust</li> </ul>                                                                                                                                                    |                              |            |                |
| 4 | How did the equipment performance affect the outcome?               | <p>Consider all medical equipment and devices used in the course of patient care, including AED devices, crash carts, suction, oxygen,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                              |            |                |

| # | Analysis Question                                                       | Prompts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Root Cause Analysis Findings | Root cause | Plan of Action |
|---|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|------------|----------------|
| 5 | What controllable environmental factors directly affected this outcome? | <p>instruments, monitors, infusion equipment, etc. In your discussion, provide information on the following, as applicable:</p> <ul style="list-style-type: none"> <li>• Descriptions of biomedical checks</li> <li>• Availability and condition of equipment</li> <li>• Descriptions of equipment with multiple or removable pieces</li> <li>• Location of equipment and its accessibility to staff and patients</li> <li>• Staff knowledge of or education on equipment, including applicable competencies</li> <li>• Correct calibration, setting, operation of alarms, displays, and controls</li> </ul> |                              |            |                |
| 6 | What uncontrollable external factors influenced this outcome?           | <p>What environmental factors within the organization's control affected the outcome? Examples may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Overhead paging that cannot be heard</li> <li>• Safety or security risks</li> <li>• Risks involving activities of visitors</li> <li>• Lighting or space issues</li> </ul> <p>The response to this question may be addressed more globally in Question #17. This response should be specific to this event.</p>                                                                                                              |                              |            |                |
| 7 | Were there any other factors that directly influenced this outcome?     | <p>Identify any factors the organization cannot change that contributed to a breakdown in the internal process, for example natural disasters.</p> <p>List any other factors not yet discussed.</p>                                                                                                                                                                                                                                                                                                                                                                                                          |                              |            |                |
| 8 | What are the other areas in the organization where this could happen?   | <p>List all other areas in which the potential exists for similar circumstances. For example:</p> <ul style="list-style-type: none"> <li>• Inpatient surgery/outpatient surgery</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                   |                              |            |                |

| #  | Analysis Question                                                                                             | Prompts                                                                                                                                                                                                                                                                                                       | Root Cause Analysis Findings                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Root cause | Plan of Action |
|----|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------|
| 9  | Was the staff properly qualified and currently competent for their responsibilities at the time of the event? | <ul style="list-style-type: none"> <li>Inpatient psychiatric care/outpatient psychiatric care</li> <li>Identification of other areas within the organization that have the potential to impact patient safety in a similar manner. This information will help drive the scope of your action plan.</li> </ul> | <p>Include information on the following for all staff and providers involved in the event.</p> <p>Comment on the processes in place to ensure staff is competent and qualified. Examples may include but are not limited to:</p> <ul style="list-style-type: none"> <li>Orientation/training</li> <li>Competency assessment (What competencies do the staff have and how do you evaluate them?)</li> <li>Provider and/or staff scope of practice concerns</li> <li>Whether the provider was credentialed and privileged for the care and services he or she rendered</li> <li>The credentialing and privileging policy and procedures</li> <li>Provider and/or staff performance issues</li> </ul> |            |                |
| 10 | How did actual staffing compare with ideal levels?                                                            |                                                                                                                                                                                                                                                                                                               | <p>Include ideal staffing ratios and actual staffing ratios along with unit census at the time of the event. Note any unusual circumstance that occurred at this time. What process is used to determine the care area's staffing ratio, experience level and skill mix?</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |            |                |
| 11 | What is the plan for dealing with staffing contingencies?                                                     |                                                                                                                                                                                                                                                                                                               | <p>Include information on what the organization does during a staffing crisis, such as call-ins, bad weather or increased patient acuity. Describe the organization's use of alternative staffing. Examples may include, but are not limited to:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                               |            |                |

## Healthcare Failure Modes and Effects Analysis (HFMEA)

**JCAHO Standard LD.5.2 requires facilities to select at least one high-risk process for proactive risk assessment each year. This selection is to be based, in part, on information published periodically by the JCAHO that identifies the most frequently occurring types of sentinel events. The National Center for Patient Safety will also identify patient safety events and high risk processes that may be selected for this annual risk assessment.**

HFMEA streamlines the hazard analysis steps found in the traditional Failure Modes and Effects Analysis (FMEA) process by combining the detectability and criticality steps of the traditional FMEA into an algorithm presented as a Decision Tree. It also replaces calculation of the risk priority number (RPN) with a hazard score that is read directly from the Hazard Matrix Table.

### Healthcare FMEA Steps

#### **STEP 1: Define the HFMEA Topic**

Define the topic of the Healthcare FMEA along with a clear definition of the process to be studied. See Figure 1.

#### **STEP 2: Assemble the Team**

The team is to be multidisciplinary including Subject Matter Expert(s) and an advisor. See Figure 1.

#### **STEP 3: Graphically Describe the Process**

- A. Develop and verify the flow diagram (this is a process vs. chronological diagram).
- B. Consecutively number each process step identified in the process flow diagram.
- C. If the process is complex identify the area of the process to focus on (take manageable bites).
- D. Identify all sub processes under each block of this flow diagram. Consecutively letter these sub-steps (i.e. 1a, 1b...3e, etc.).
- E. Create a flow diagram composed of the sub processes. Consecutively letter these sub-steps

*(Hint: It is very important that all process and sub-process steps be identified before proceeding.)*

**STEP 4: Conduct a Hazard Analysis**

- A. List all possible/potential failure modes under the sub-processes identified in HFMEA Step 3. Consecutively number these failure modes (i.e. 1a (1), 1a(2)...3e(4), etc.). Transfer the failure modes to the HFMEA Worksheet, Line 2. See Figure 2.

*(Hint: This is the step in the process where the expertise and experience of the team really pays off. Use various methods including brainstorming and cause and effect diagramming to identify potential failure modes.)*

- B. Determine the Severity and Probability of the potential failure mode and record these on Lines 4 and 5 of HFMEA Worksheet. Look up the Hazard Score on the Hazard Score Matrix and record this number on Line 6 of the HFMEA Worksheet. See Figures 3, 4, and 5.
- C. Go to the HFMEA Decision Tree. Use the Decision Tree to determine if the failure mode warrants further action. Record the action to "Proceed" or to "Stop" on the HFMEA Worksheet, Line 7. If the action is to "Stop" proceed to the next sub-process identified in Step 4B. (Note: if the score is 8 or higher, document the rationale for any "Stop" decisions.). See Figure 6.
- D. List all of the failure mode causes for each failure mode where the decision is to "Proceed" and record them on the HFMEA Worksheet, Line 3.

*(Hint: Each failure mode may have multiple failure mode causes. Failure modes include anything that could go wrong that would prevent the sub-process step from being carried out. For example: if logging onto a laptop computer is the process step, possible failure modes are not being able to log in and delayed login. Possible failure mode causes would include the computer not being available, no power, no log in ID for the operator, etc.)*

**STEP 5 Actions and Outcome Measures**

- A. Determine if you want to "eliminate," "control," or "accept" the failure mode cause. Record this decision on Line 8 of the HFMEA Worksheet.
- B. Identify a Description of Action for each failure mode that will be eliminated or controlled.

**(Hint: Place the control measure in the process at earliest feasible point. Multiple control measures can be placed in the process to control a single hazard. A control measure can be used more than one time in the process. Solicit input from the process owners if they are not represented on the team. Try to simulate any recommended process change to test them before facility-wide implementation.)**

- C. Identify outcome measures that will be used to analyze and test the redesigned process.
- D. Identify a single, responsible individual by title to complete the recommended action.
- E. Indicate whether top management has concurred with the recommended action.

### **Definitions:**

Effective Control Measure – A barrier that eliminates or substantially reduces the likelihood of a hazardous event occurring.

Healthcare Failure Mode & Effect Analysis (HFMEA) - (1) A prospective assessment that identifies and improves steps in a process thereby reasonably ensuring a safe and clinically desirable outcome. (2) A systematic approach to identify and prevent product and process problems before they occur.

Hazard Analysis - The process of collecting and evaluating information on hazards associated with the selected process. The purpose of the hazard analysis is to develop a list of hazards that are of such significance that they are reasonably likely to cause injury or illness if not effectively controlled.

Failure Mode - Different ways that a process or sub-process can fail to provide the anticipated result.

Probability – See the Probability Rating Scale, Figure 3.

Severity – See the Severity Rating Scale, Figure 4.

**Figure 1. Healthcare FMEA Process Steps 1 and 2**

**Step 1.** Select the process you want to examine. Define the scope (Be specific and include a clear definition of the process or product to be studied).

*This FMEA is focused on*

**Figure 4. Probability Rating**

|                                                                                                               |
|---------------------------------------------------------------------------------------------------------------|
| <b>Frequent</b> - Likely to occur immediately or within a short period (may happen several times in one year) |
| <b>Occasional</b> - Probably will occur (may happen several times in 1 to 2 years)                            |
| <b>Uncommon</b> - Possible to occur (may happen sometime in 2 to 5 years)                                     |
| <b>Remote</b> - Unlikely to occur (may happen sometime in 5 to 30 years)                                      |

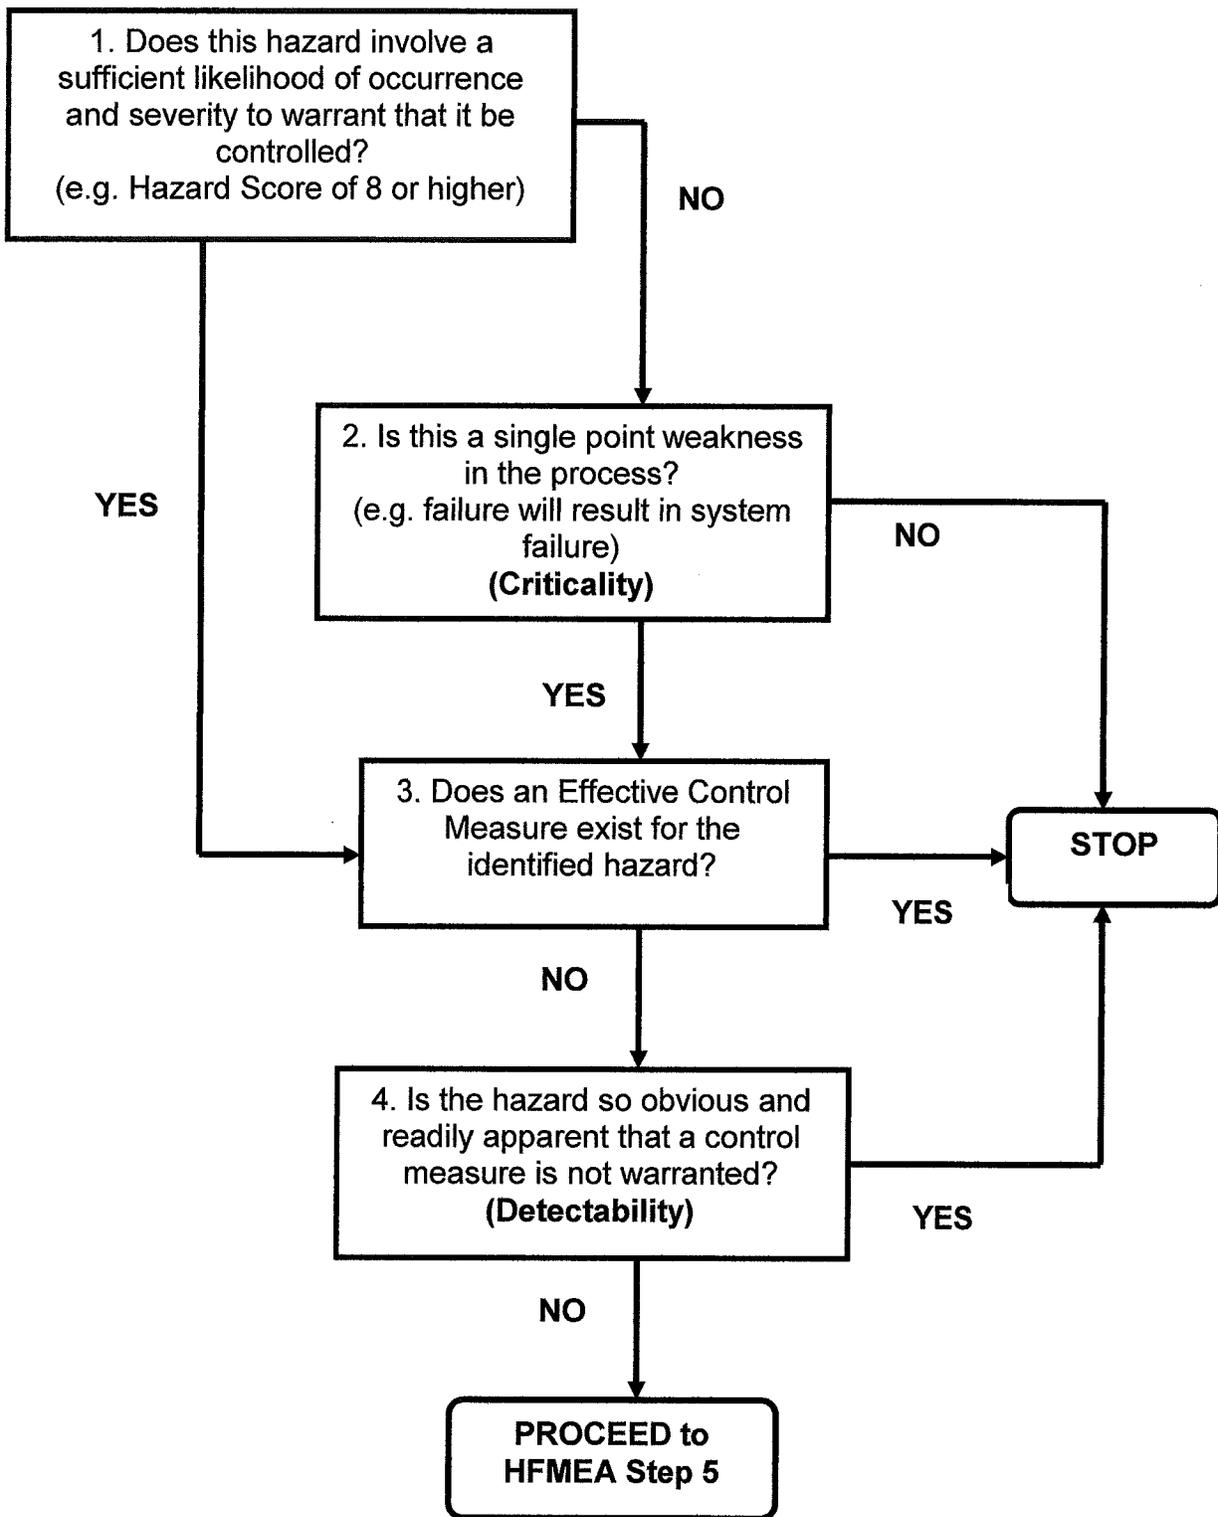

**Figure 5. Hazard Scoring Matrix**

|                   | Severity of Effect |       |          |       |
|-------------------|--------------------|-------|----------|-------|
|                   | Catastrophic       | Major | Moderate | Minor |
| Probability       |                    |       |          |       |
| <b>Frequent</b>   | 16                 | 12    | 8        | 4     |
| <b>Occasional</b> | 12                 | 9     | 6        | 3     |
| <b>Uncommon</b>   | 8                  | 6     | 4        | 2     |
| <b>Remote</b>     | 4                  | 3     | 2        | 1     |

**How to Use This Matrix:**

- (1) Determine the Severity and Probability of the Hazard based upon the definitions included with this matrix.
- (2) Look up the Hazard Score on the Matrix.

**PATIENT SAFETY/RISK MANAGEMENT PLAN**

DATE: 01/01/2018

VERSION: 01

This plan was created and revised by the Dignity Health – St. Rose Dominican Patient Safety Officer with review and input from the Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Dignity Health St. Rose Dominican Hospital – Siena Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Dignity Health – St. Rose Dominican, Siena Campus' Patient Safety/Risk Management program promotes:

- Honest, open collaboration and partnership of hospital leadership, medical staff, patients and their families, the community and other healthcare providers to deliver compassionate, high-quality, affordable healthcare.
- Promote justice and respect for those we serve.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility and accountability for every healthcare related decision and action.
- A focus on excellence, teamwork and innovation through continuous learning, improvement in system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The Patient Safety/Risk Management Program at St. Rose Dominican is an organization-wide/campus specific strategy that includes not only facility staff and medical staff, but is inclusive of patients, family and visitors. The Patient Safety/Risk Management Program at Siena Campus supports and encourages the active participation of each person in order to be an effective program. When processes, functions or services are designed or redesigned, information internal and external to the campus and/or organization regarding potential risks to patient safety will be considered and where appropriate, utilized to minimize the risk to patients affected by the new or redesigned process, function or services.

The purpose of this plan is to establish system-wide guidelines and processes supporting a comprehensive, effective, organization-wide Patient Safety/Risk Management Program Plan designed to promote and improve patient safety at Dignity Health – St. Rose Dominican, Siena Campus, by working to prevent medical/healthcare adverse events and reducing risk to patients and visitors.

Undesirable facility specific and system patterns or trends in performance and sentinel events will be intensively analyzed to determine where best to focus changes for improvement. Intensive analysis will be initiated when:

- Levels of performance, patterns or trends vary significantly and undesirably from those expected including significant near misses;
- Performance varies significantly and undesirable from that of other campuses/organizations;
- Performance varies significantly and undesirably from recognized standards; and/or
- A reportable event has occurred at that campus.

Minimally, data from the following areas will be gathered at each facility and presented at that facility for analysis with action plans developed reflective of the findings:

- Initial and on-going proactive risk assessments utilizing internal and external resources;
- Campus aggregate event reports reflective of all medical/healthcare events, with and without adverse outcomes, including but not limited to:
  - Hospital acquired infections
  - Medication events, to include delays in administration
  - Adverse drug events
  - Transfusion reactions
  - Patient falls
- Actual and near misses
- Hazardous conditions
- Restraint issues
- Medical record legibility issues
- Patient/family/staff opinions, needs, perceptions of risks to patients, and suggestions for improving patient safety;
- Identified data trends and analysis reports from sister facilities, Dignity Health Shared Learnings, etc.
- Others as defined by various campus committees, Leadership and/or Quality Council and Advisory Committee of the Board (QCAC).

## Roles and Responsibilities

---

Per [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

### The Patient Safety Committee Organization

#### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;

- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below.

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the Siena Campus and includes multidisciplinary team members which has oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following are responsibilities assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators.
- Evaluate other sources of patient safety data utilizing internal and external resources including but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow-up on patient safety related trends, analysis results, changes in processes, and policies.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

- (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
- (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.
- See Quality Department's Performance Improvement Plan

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

The Director of Quality Risk Services has been designated the Patient Safety Officer for the Siena Campus and as such, has the administrative responsibility for the program specific responsibilities including:

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Day to day responsibility for the Patient Safety/Risk Management Program at Siena Campus.
- Maintenance of related data collected, trended and analyzed at each campus.
- Routine reporting to leadership and QCAC on campus specific trended data and actions taken to improve the quality and safety of patient care.
- Working with QCAC to achieve the goals of the Patient Safety/Risk Management Program.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.

- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporates the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

- Identify RCA participants and coordinate a time, date and location of RCA meeting.
- Inform RCA participants of the sentinel event process.
- Explain confidential nature of RCA.
- Explain Just Culture and its application.
- Review event using medical record and any other pertinent materials in preparation for the RCA.
- Provide RCA members access to relevant best practice/research documents/statutes and other literature to include hospital Policy and Procedure documents for reference.
- Conduct RCA in a manner consistent with Just Culture, using principles of human factors, systems theory, etc.

#### Executive or Governing Body Staff Responsibilities

Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.

- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans.

#### Leadership

The Dignity Health St. Rose Dominican Board and campus Senior Leadership has overall responsibility for the implementation of an integrated, organization-wide Patient Safety/Risk Management Program. These responsibilities are campus specific and include the following:

- Foster an environment in which patients, their families and organization staff and leaders can identify and manage actual and potential risks to patient safety through personal example and the provision of resources to establish proactive mechanisms to reduce risk.

- Establish a culture in which communication flows freely regardless of authority gradient.
- Ensure that a define, on-going, proactive program for identifying risks to patient safety and reducing medical/healthcare adverse events is fully implemented and includes responses to actual and potential events;
- Ensure that patient safety issues are given a high priority and addressed when processes, functions or services are designed or redesigned;
- Provide for mechanisms to measure, analyze and manage variation in the performance of defined processes that affect patient safety;
- Allocate adequate resources, including personnel, time, information systems data associated with reducing risk and improving patient safety, and
- Active participation in the California Hospital Patient Safety Organization (CHPSO).

### Physicians

Physicians are responsible, as participants in the Patient Safety/Risk Management Program for reporting events or near misses at each campus, and participating on focus teams to reduce identified patient safety risks. Whenever patient care outcomes differ significantly from the anticipated outcomes, the primary care provider and/or responsible licensed independent practitioner (LIP) or comparable designee shall clearly explain these outcomes to the patient, and when appropriate, the family. (See Disclosure Policy)

### Patients/Families/Visitors

Patients, families and patient representatives via written communication are encouraged to be active participants in their care and as such are responsible for:

- Providing, to the best of their knowledge, accurate and complete information about present complaints, past illnesses, hospitalizations, medications and other matters relating to the patient's health;
- Reporting their patient and outcome of treatment of that pain
- Reporting perceived risks in their care and unexpected changes in the patient's condition to the responsible practitioner, and
- Asking questions when they do not understand what they have been told about the patient's care, infection control, safety precautions and programs or what they are expected to do etc.

Patients and families/patient representatives/visitors will be provided with educational materials explaining these expectations and their role in reducing risk exposure and improving patient safety at the time of admission and throughout the patient stay utilizing various delivery methods including pamphlets, television and verbal communication. Some patients may also be included in the development process to obtain their opinions, needs, perceptions of risks to patients and their suggestions for improving patient care.

### Hospital Departments and Staff

Siena staff are key to promoting, identifying, and implementing activities to reduce risk and improve patient safety. Some of the activities include:

- Active participation in the activities to improve patient safety and the quality of healthcare delivered;

- Adherence to Infection prevention measures, the Joint Commission National Patient Safety Goals and other patient safety initiatives;
- Participation in education activities and process implementations;
- As appropriate, the provision of accurate, timely and complete verbal and written communication among caregivers, including test results relevant to the management of the patient's condition, and to all others involved in the utilization of data; and
- Participation in information needs assessment, staff surveys, and other processes that request information regarding the Patient Safety/Risk Management Program.
- Reporting all events and process variances (harm or no harm) even if they do not reach the patient (near miss).

### The Patient Safety Committee

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the Siena Campus and includes multidisciplinary team members which have oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following responsibilities are assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators;
- Evaluate other sources of patient safety data utilizing internal and external resources including, but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow up on patient safety related trends, analysis results, changes in processes, policies and other areas to make as a result of identified needs.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Patient Safety/Risk Management Plan

| Goal                          | Plan                                                                                                                                                               | Due Date               |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| Risk Assessments              | 1. Patient Safety/Risk Management to perform monthly risk assessments and report to PSC.<br>2. Infection Prevention to report to PSC findings of Risk Assessments. | Monthly PSC            |
| FMEA                          | PSC to ensure one FMEA is conducted by Risk Management in CY 2018.                                                                                                 | December 2018          |
| Checklists                    | PSC will receive all new and renewed checklists used that impact patient safety whether directly or indirectly.                                                    | Monthly and ongoing    |
| National Patient Safety Goals | PSC will support the posting of NPSGs throughout the hospital for staff reference.                                                                                 | Department leaders     |
| Root Cause Analysis           | RCAs will be conducted by Risk and Quality Management as soon as possible/practical after an event per Dignity Health policy                                       | Ongoing                |
| Manager orientation           | Quality Risk Services will review/update Manager orientation.                                                                                                      | March 31, 2018         |
| Grievance Management          | Grievances will be reviewed by the Grievance Committee to ensure compliance with CMS CoPs.                                                                         | Quarterly and ongoing. |
| Staff and physician education | Patient Safety education will occur in various forms (e.g. Huddles, Department Meetings, Leadership Meetings, Posters) throughout the year.                        | Ongoing                |

## Components and Methods

---

### **Proactive Risk Assessment Activities**

The Patient Safety/Risk Management Department, in collaboration with the various facility committees including Infection Prevention, Quality Council and leadership will conduct proactive risk assessments to identify hazards/risks that may affect patient safety. Risk Assessment activities will include, but not be limited to the following:

- Patient Safety Risk Assessment evaluating known high risk processes/procedures that have associated risks,
- Review employee survey results to identify safety concerns,
- On-going risk assessments based on internal and external data, including sentinel event alerts,
- Focused risk assessments as determined by the Patient Safety Committee, Senior Leadership, external/internal events, etc.
- Selection of patient safety process improvements and risk reduction activities utilizing the priorities set criteria of Siena campus,
- Any information assessments conducted by St. Rose Dominican will include identification of barriers to effective communication among caregivers.
- Patient Satisfaction surveys will include a question determining how the patient/family thinks the individual facility can improve patient safety. Results from this question shall be analyzed and responded to in a manner that supports risk reduction.
- Infection Prevention Surveillance Program.
- Additional staff surveys may be conducted to assess for staff opinions, needs, perceptions of risks to patients and suggestions for improving patient safety, as well as the staff's willingness to report medical/healthcare events.

### **Event Reporting**

Siena actively participates in the CHPSO and its Patient Safety Evaluation System for data collection, monitoring, collaboration and evaluation activities. As provided under the CHPSO (42 Code of Federal Regulations (CFR) Part 3 Section 3.20) the event report is considered a Patient Safety Work Product and as such is privileged and shall not be (1) subject to subpoena; (2) subject to discovery; (3) subject to disclosure and (4) admitted into evidence-provided such information is not subject to disclosure in certain criminal proceedings as described in regulation. (See Event Reporting and Management Policy).

- A. When an unplanned event/process variance occurs, the patient care provider will do the following:
  - a. Perform the necessary healthcare interventions to support the patient's clinical condition.
  - b. Perform the necessary interventions to contain the risks to others.
  - c. Notify the patient's attending physician.
  - d. Preserve any information related to the event including physical evidence. Preservation of the information includes the documentation of facts regarding the event or complication of event on the Event Report and in the patients' medical record.
  - e. Notify immediate supervisor of the event.
  - f. Submit electronically an Event Report form or handwritten Event Report form to Risk Management/Patient Safety Services.
- B. Identification of potential unsafe condition that may affect patient safety:

- a. Individual's identifying such a condition will immediately report such to their supervisor, and document in the Event Report.
- b. Take the necessary actions to ensure that any potential risks to patient care and safety are mitigated.

### **Event Monitoring/Risk Assessment Analysis, Action Planning and Intervention**

- A. Patient safety related event reporting data within the scope of the Patient Safety Program and risk assessment results will be aggregated and presented routinely to various committees including but not limited to Medical Executive Committee (MEC), Medication Safety, Quality Council and Environment of Care for analysis and action. Based on analysis of this data and any actual or potential reviews, sentinel events and other internal and external data including TJC Sentinel Event Alerts, Dignity Health Shared Learnings, CHPSO trends, current literature, proactive action plan will be developed to include the following:
  - a. Assessment of the intended and actual implementation of processes to identify the steps in where there is, or may be, undesirable variation.
  - b. Identification of the possible effects of the undesirable variations on patients and how serious the effect or outcome on the patient might be;
  - c. For critical effects/outcomes, a root cause analysis will be conducted to determine why the variation leading to the effect may occur;
  - d. Redesign of the process and /or underlying systems to minimize the risk of that variation or to protect patients from the effects of the variation;
  - e. Test and implement the redesign process;
  - f. Identification and collaboration with Quality Management Systems on implementation of measures of the effectiveness of the redesigned process; and
  - g. Implementation of a strategy for maintaining the effectiveness of the process over time.
  - h. Events that do not require a Root Cause Analysis will have an incident review completed by Quality/Risk Services Department as soon as practicable of becoming aware of the event. The results will be forwarded to leadership for review.

### **Response to Reported Adverse/Sentinel Events**

Reporting of events is an essential component of a Patient Safety/Risk Management program. Through its participation in the CHPSO; all related investigation of events will be securely conducted, collected and documented as Patient Safety Work Product (PSWP) to maintain confidentiality as defined in the Federal Regulation.

- A. Siena shall respond to all reported potential and actual adverse/sentinel events. (See Sentinel Event policy).
- B. Minimally, all adverse events will be analyzed utilizing a team of individuals including Risk Management/Patient Safety and Quality Departments, to conduct root cause analysis (RCA), incident review and/or a failure mode effects analysis (FMEA), implementation in action plan to reduce further risk to patients and establish measures of effectiveness.
  - a. The following events always elicit an intense analysis:
    - i. Confirmed transfusion reactions
    - ii. Significant adverse drug reactions
    - iii. Significant medication events and hazardous conditions

- iv. Manor discrepancies, or patterns of discrepancies, between preoperative and postoperative (including pathologic) diagnoses, including those identified during the pathologic review of specimens removed during surgical or invasive procedures; and
    - v. Significant adverse events associated with anesthesia use.
    - vi. Hospital acquired infections
    - vii. All events meeting the definition of Sentinel Events in the State of Nevada.
  - b. A root cause analysis is performed when a sentinel or State reportable event occurs.
  - c. An incident review is performed when a near miss or other event with significant areas for improvement are identified.
- C. Staff involved in an adverse/sentinel event shall be treated with respect and dignity.
  - a. A “JUST CULTURE” approach shall be taken in order to facilitate changes in systems and processes to prevent further risk to patient safety, as well as promote future reporting by other staff.
  - b. Involved staff should be involved in the RCA process.
  - c. The Department Manager will provide ongoing support to the staff member(s) as needed.
  - d. Whenever necessary, Crisis Intervention or Employee Assistance Programs (EAP) will be offered as support to the involved employee.

### **Education**

- A. Staff Education
  - a. General orientation and other education and training programs as needed will emphasize specific job related aspects of patient safety and risk reduction strategies.
  - b. Specific Patient Safety/Risk Management Program training at orientation and annually thereafter will include:
    - i. An overview of the Patient Safety Program
    - ii. Overview of TJC National Patient Safety Goals
    - iii. Staff’s role and responsibilities in the Patient Safety/Risk Management Program
    - iv. Event reporting criteria and process
    - v. Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care
    - vi. Examples of specific job related aspects of patient safety.
  - c. Staff participating at a higher level of the Patient Safety/Risk Management Program will receive appropriate training necessary to understand and complete their assigned responsibilities.
- B. Physician Education
  - a. An overview of the Patient Safety/Risk Management Program will be provided to physicians at time of initial appointment and annually thereafter that describes the program, emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism.
  - b. Specific physicians may receive additional training to support their involvement at a higher level in the Patient Safety/Risk Management Program.

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Siena Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Siena Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking "why" no less than five times. This technique can be used individually or as a part of the fishbone diagram.

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Whys technique also can be used to drill down the problem and find the root causes.

**Model for Improvement**

Please refer to the Dignity Health – St. Rose Dominican Performance Improvement Plan.

**Data Collection and Reporting**

Data should drive any quality and patient safety effort. Siena is using IVOS\_for tracking the sentinel events, healthcare infection data, and Midas for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

## Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

### **Patient Safety Program Reporting and Review**

All patient safety work product (PSWP) submitted through the CHPSO will be collected in the Patient Safety Evaluation System (PSES) for collection, management and analysis of information pursuant to the Patient Safety and Quality Improvement Act of 2005 ( 42 U.S.C. 299 et seq.).

- A. Patient safety/Risk Management related data and information reports will be provided routinely to various committees as previously identified including but not limited to medical staff, Quality Council and QCAC.

- B. A summary report of data, other internal and external information, as well as all actions taken by various committees and/or specific patient safety related teams will be submitted to the QCAC and the MEC.
- C. Annually, the Patient Safety/Risk Management Plan will be evaluated for effectiveness and the program updated to reflect the results of risk assessments related to patients, families and staff. The review shall include a summary of the occurrence of medical/healthcare events and actions taken to improve patient safety, both in response to actual occurrences and proactive efforts.
  - a. The review will be approved by QCAC.
  - b. Will be submitted to the Community Board for final review and approval.

### **Reviewed/Approved:**

Patient Safety Committee, February 2018

Quality Care Advisory Committee of the Board, March 2018

Community Board, March 2018

## **TENAYA SURGICAL CENTER, LLC**

### **PATIENT SAFETY PLAN**

**Plan:** To understand and prepare the patient for outpatient surgery and/or procedure in order to improve outcomes.

- Patients are adequately prepared pre-operatively
- Patients and caregivers are well educated for pre- and post-operatively for self-management after surgery
  - To include Medication Reconciliation
- Providers are fully informed of their patient's physical status as it pertains to their surgery/procedure
- The surgery/procedure is appropriately marked and performed (correct-site), clinically accurate, and pertinent to the diagnosis
- Tenaya Surgical Center, LLC (TSC) will follow the Nevada State statutes as it pertains to controlled substance prescribing
  - Patient teaching will encompass instructions on the safe use and disposal of controlled substances

#### **Review:**

##### **Safe Environment of Care**

TSC's policies will follow the guidelines set forth in the Association of periOperative Registered Nurses (AORN).

The facility itself will maintain an atmosphere of safety with no hazards in the hallways, no wet floor surfaces or other examples that may prove hazardous to the patient and/or staff.

Risk factors include, but are not limited to:

1. Patient age greater than 85 years
2. Peripheral vascular disease
3. Operating room (OR) time greater than one hour
4. Malignancy
5. Positive HIV status
6. Heart disease
7. General anesthesia
8. Obstructive sleep apnea
9. Hyperactive reactive airway disease
10. BMI >30, especially over 35
11. Any chronic disease affecting internal organs

##### **Risk Assessment:**

The pre-operative assessment process starts when the surgeon or the interventionist schedules the case. In general, the goal of the pre-op assessment is to identify and manage any risks associated with surgery

and anesthesia as early in the process as possible. However, the assessment process continues up to the point of surgery.

Anesthesia Society of America (ASA) Physical Status Classification System Guidelines used by anesthesia providers to evaluate a patient's risk for anesthesia and surgery, excerpted as follows:

ASA 1: A normal healthy patient

ASA 2: A patient with mild systemic disease

ASA 3: A patient with severe systemic disease

ASA 4: A patient with severe systemic disease that is a constant threat to life

ASA 5: A moribund patient who is not expected to survive without the operation

ASA 6: A patient that has been declared brain-dead, whose organs will be removed for donor purposes

Patients classified as ASA 5 or 6 will not have procedures done at TSC. It is left up to the discretion of the operating surgeon or interventionist and the anesthesiologist whether or not to perform a procedure on a patient with an ASA classification of 4.

#### Pre-operative Screening:

The initial screening process is the first step in identifying any concerns or disease processes that could potentially cause intra- or post-operative problems. AORN has issued a guidance statement for a nursing pre-operative evaluation in the ambulatory surgery setting. The initial step is careful pre-operative screening, which is initiated by the pre-operative telephone interview. It is the policy that all patients, except for cosmetic surgery patients, are called the day prior to their procedure by a registered nurse (RN). The screening includes the following:

- A baseline physical assessment
- Allergies and sensitivities
- Cultural, emotional, and socioeconomic assessment
- Pain assessment
- Medication history; to include prescription medications, over-the-counter medications, herbal medications and supplements, opioid and other controlled substances, cannabinoids, and illicit substances. Included is the frequency, dosage and time last dose taken
- Anesthetic history, including adverse reactions to any form of anesthesia
- Results of radiological examinations and other pre-operative testing
- Discharge planning
- Referrals
- Identification of physical alterations that require additional equipment or supplies

- Pre-operative teaching, including which medications are to be taken or withheld before surgery and NPO requirements
- Development of a care plan
- Documentation and communication of all information

#### Pre-operative Nursing Assessment:

After the pre-operative screening is completed, the pre-operative nursing assessment is an opportunity to verify information and obtain missed or forgotten information that may affect patient outcomes. The AORN guidance statement recommends that an RN conduct a pre-operative nursing assessment on the day of surgery. TSC follows these recommendations. Information obtained during the pre-admission screening is verified. During the assessment, the following data is obtained:

- Verification of the patient's identity using two identifiers
- Review of the pre-admission screening/assessment
- Baseline physical assessment
- Assessment of NPO status
- Hypo/hyperthermia assessment and management
- Pain scale assessment
- Identification of the presence of an advanced directive
- Identification of the planned procedure by the patient, significant other, or guardian and verified with the consent and surgical schedule
- Verification of the site, side, or level, as applicable
- Informed consent signed and witnessed. Patient verbalizes understanding of the procedure listed. If no understanding, the surgeon or interventionist notified so he/she can answer any questions the patient may have.
- Signs of abuse or neglect in vulnerable populations, to include pediatrics, geriatrics, and others at risk
- Assessment for prosthetic devices and implantable electronic devices
- Evaluation of the availability of safe transportation home and aftercare
- Obtaining contact information of the patient's significant other
- Assessment of the patient's understanding of pre-operative teaching and discharge planning
- Assessment of DVT risk and prophylaxis
- Fall assessment and prevention
- Assessment of communicable disease risk and procedure to follow if positive

### Pre-operative Anesthesia Assessment:

The pre-operative anesthesia assessment is the part of the overall assessment process that identifies issues related to peri-operative anesthesia management of the patient. The anesthesiologist shall see the patient prior to the procedure to inform the patient of the plan of anesthesia and to answer any questions the patient may have in regards to anesthesia.

### Post-anesthesia Care:

Patients should have a complete systems assessment during the first few minutes of PACU care. This assessment should include, but is not limited to:

- Vital signs
- Respiratory adequacy
- Post-operative cardiac status
- Peripheral circulation
- Post-operative neurological status
- Level of consciousness, including alertness, lucidity and orientation
- IV patency
- Allergies and sensitivities
- Pain management
- Motor abilities
- Return of sensory and motor control in areas affected by local or regional anesthetics
- Skin integrity
- Temperature regulation
- Positioning
- Surgical wound site
- Nausea and vomiting
- Fluid and electrolyte balance

The post-anesthesia nurse should provide ongoing assessments and re-evaluations concurrently with nursing interventions.

### Post-operative Patient Outcomes

Nursing interventions are initiated to achieve a desired conclusion and/or to reduce the probability of patient outcomes that may be associated with a patient's post-operative experience.

### Discharge Criteria

The patient's post-procedure status should be assessed before he or she is discharged from the PACU. The Aldrete score at discharge must be at least an eight. If possible, the patient will be discharged in the company of a responsible adult. Occasionally, a patient may not have someone to pick them up and will request to go home via public transportation. If undergoing Monitored Anesthesia Care, (MAC), then it is up to the

interventionist and anesthesiologist to allow this to happen. I allowed, the patient will spend a longer period of time in the PACU, anywhere from one to four hours, depending on the circumstances and the alertness of the patient. In this instance, the Aldrete score should be nine or over. Any patient undergoing general anesthesia is told to have a responsible adult with them for the first twenty-four hours after anesthesia. If this is not possible, surgery may be cancelled and rescheduled for a more opportune time. If the patient wishes to leave against medical advice, then the policy for this shall be followed.

Discharge criteria includes an evaluation of the patient for nausea, pain, surgical site condition and bleeding.

#### Patient Transfer

Whenever a patient is transferred from one level of care to another level of care, the peri-operative RN is to communicate all pertinent information to the next caregiver. This is to include, but is not limited to:

- Vital signs and airway patency
- Level of consciousness
- Allergies
- Condition of operative site/dressing
- Location and patency of tubes and/or drains if applicable
- Medications given and response
- Intake and output
- Tests ordered with results, if available
- Pain level
- Nausea and vomiting psychosocial status, and
- Discharge orders

The policies and procedures on emergency transfer will be followed and the patient to be transferred to a hospital who has a transfer agreement with TSC, i.e. Mountain View Hospital, Summerlin Hospital or Spring Valley Hospital.

#### Discharge Instructions and Discharge

The written post-operative care instructions shall be provided to each patient and shall be reviewed with them and their caregiver prior to discharge. Either the patient or the caregiver shall verbalize understanding of these instructions prior to release. The discharge information includes what to expect after the surgery or procedure, what not to expect after surgery or the procedure and information on how to contact their doctor, both during and after office hours. If the patient has been provided with a prescription for medication, the medication should be reviewed with the patient, including how to use the medication, the side effects, signs and symptoms to report and when to contact the health care provider for additional assistance.

The discharge instructions will be tailored to the patient and the type of procedure.

When discharging the patient, the nurse shall take the patient to his/her car by wheelchair and assure he/she is properly positioned in the vehicle. If the patient has had MAC anesthesia, then he/she may walk out with the assistance of medical care personnel to ensure he/she ambulates safely to the vehicle.

**SUBJECT: RISK MANAGEMENT AND PATIENT SAFETY POLICY STATEMENT**

To assure the continuing ability to provide quality health care, the Center has established a risk management and patient safety program to minimize the adverse events. The risk management and patient safety program includes several activities geared toward the protection of the patient and the Center's assets and reputation.

An effective risk management and patient safety program is the responsibility of all employees and medical staff members of the Center. Periodically, the Governing Board will affirm support of and review the results of the risk management and patient safety program.

It is the intent of the Center to reduce, eliminate, and prevent conditions and practices that may cause loss. The safety and well-being of the patients, personnel, and public shall have the highest priority.

1. Risk management and patient safety activities include:
  - a. The investigation and analysis of the frequency and causes of general categories and specific types of adverse and unanticipated events causing actual or potential injury to patients, employees, physicians, and visitors.
  - b. The development of appropriate measures to minimize the risk of injuries and adverse events to patients, employees, physicians, and visitors through cooperative efforts of all personnel. These measures will include risk management, patient safety, and risk prevention education and training of all non-physician personnel as follows:
    - i. Education and training of all non-physician personnel as part of their initial orientation; and
    - ii. At least one (1) hour of such education and training annually for all non-physician personnel of the facility.
  - c. The analysis of patient grievances that relate to patient care and the quality of medical services.
  - d. The development and implementation of a reporting system based upon the affirmative duty of all health care providers and all agents and employees of the health care facility to report injuries and adverse outcomes and unanticipated events.

**SUBJECT: MANAGEMENT RESPONSIBILITIES**

1. Management will appoint a patient safety officer to be responsible for risk management and patient safety activities.
2. State specific reporting requirements must be followed to comply with regulations for the reporting of certain adverse patient outcomes. The patient safety officer will be familiar with the State regulations regarding what must be reported regarding adverse patient outcomes or facility damage such as fire, flooding, or wind damage.
3. If the Surgery Center is accredited, the accrediting body may also require reporting at the time of the adverse outcome. During an accreditation survey, a surveyor will likely review whether the Center management conducted a systematic review of the unanticipated event, including an analysis of how it occurred with an action plan to prevent similar unanticipated events in the future.
4. To promote patient safety, Center management will review unanticipated events to determine if a process change is required to reduce the potential of further unanticipated events. Unanticipated events that involve patient injuries, "near misses", and unexpected outcomes will be reviewed by the patient safety officer.
5. There will be an ongoing evaluation of procedures, protocols, and systems to accurately identify patients, planned procedures, and the correct site of the planned procedure so as to minimize the performance of a surgical procedure on the wrong patient, a wrong surgical procedure, a wrong-site surgical procedure, or a surgical procedure otherwise unrelated to the patient's diagnosis or medical condition.
6. When risk management and patient safety services are provided by an outside consultant, the professional services agreement will be approved by the Governing Board which approves all outside service agreements. This approval must be documented in minutes of the Governing Board meeting or by the signature of the Governing Board Chair on the agreement or appointment letter.
7. Employees will receive education on the Risk Management/Patient Safety program and participate in activities.
  - a. The policies and procedures will be reviewed.
  - b. The purpose and completion of the Unanticipated Event Report form will be discussed.
  - c. Each employee will complete the risk management quiz and the answers will be reviewed and discussed so that everyone understands the duties and responsibilities. This quiz will be filed in the employees' educational records to document their participation in patient safety and risk management education.

- d. All new employees will receive training within the first 30 days of work.
  - e. Patient safety and risk management may be discussed at staff and committee meetings throughout the year.
  - f. Annually the employees will receive risk management/patient safety education. The key points covered in the educational program and attendance will be recorded in the employees' educational records to document their annual risk management/patient safety education.
8. The patient safety officer must contact management immediately if any of the following occur:
- a. Adverse Incidents
    - i. any unexpected occurrence involving a serious physical or psychological injury or illness, including loss of limb or function, not related to the natural course of the patient's illness or underlying condition;
    - ii. any process variation for which a recurrence carries a significant chance of a serious adverse outcome;
    - iii. events such as breaches in medical care; administrative procedures or other breaches resulting in a negative impact on a patient, even where death or loss of limb or function does not occur
  - b. Unanticipated Events, including
    - i. notification by a patient or attorney of the intent to sue;
    - ii. unanticipated and unplanned transfer to a higher level of care as a result of action or inaction that occurred at the surgery center.
  - c. Any of the following sentinel events:
    - i. death of a patient;
    - ii. brain or spinal damage to a patient;
    - iii. performance of a procedure on the wrong patient;
    - iv. performance of a wrong-site procedure;
    - v. performance of a wrong procedure;
    - vi. procedure unrelated to the patient's diagnosis or medical needs;
    - vii. procedure to remove foreign objects remaining from a previous or just completed procedure;
    - viii. repair of injuries or damage from a planned procedure where the damage is not a recognized specific risk as disclosed to the patient and documented through the informed consent process.

9. The patient safety officer, with assistance as needed from staff and the Medical Director, will review reports to identify the basic or causal factors that underlie the variation in performance. If the report involves an adverse event or a “near miss” of an adverse event, an analysis will be completed within 10 days of the time the patient safety officer is notified of the event. An action plan will be established and implemented to reduce the risk of similar incidents occurring. The action plan must address responsibility for implementation, oversight, testing when appropriate, time lines, and measurement of the effectiveness of the actions. The 10 day period for completion of the analysis may be extended if reports, such as laboratory results, autopsy findings, consultative findings or hospital discharge summaries are pending. However, as much information as possible should be gathered. If the analysis cannot be completed within 45 days, the patient safety officer must submit justification to the Medical Director and Administrative Director.
10. The patient safety risk management policies and procedures will be available for all employees for reference.
11. Blank Unanticipated Event Report forms will be available and the employees will be advised where they can locate the supply of forms.
12. When an unanticipated event occurs, an Unanticipated Event Report form will be completed by the employee who will present the form to the patient safety officer.
13. The patient safety officer will learn the circumstances and make all efforts to determine what happened, who was involved, what injury or potential problem occurred, the cause of the injury or potential problem, and the status of any injured persons.
14. A patient may request a different health care provider. If this should occur, the supervisor and the Medical Director will confer and review with the patient the opportunities to select another provider.
15. Periodically, the patient safety officer or designee will review the medical records for appropriateness and completion of the medical records. This review will include forms used, how they are completed, and signatures, as well as the clinical record policies. Particular attention will be paid to the consent process documentation and the documentation of the “time out” to verify correct patient, correct site, correct surgery.

**SUBJECT: PATIENT SAFETY PROGRAM**

**POLICY:**

The patient safety program integrates risk management, performance improvement, and a review of processes, functions, and services to improve safety by reducing the risk of system or process failures.

By establishing a system and providing training to encourage the reporting of unanticipated events, the organization can review sentinel events as well as a process variation which does not affect the outcome or result in an adverse event, but for which a recurrence carries significant chance of a serious adverse outcome or result in an adverse event, often referred to as a “near miss”.

Data analysis of unanticipated events will be used to identify and implement changes that will improve the quality of care, treatment, and services and reduce the risk of sentinel events occurring.

A patient safety officer will be appointed and patient safety committee will promote the health and safety of patients, review and evaluate the quality of patient safety measures used in the Center to assist with implementation of the patient safety plan. This patient safety committee can be the same members as the quality improvement/performance improvement committee and employee safety committee, reviewing all areas of performance, safe work environment, and safe patient care processes.

**SUBJECT: RISK MANAGEMENT AND PATIENT SAFETY PROCESS**

The corporate liability theory is held on the belief that the Center and its Governing Board owe a duty to the patients served. The duty is established by virtue of the Center's "custody" of the patient.

The delegation by the Governing Board to the Medical Staff for peer review and credentialing activities does not absolve the Governing Board from liability. The corporate issue is that of oversight.

A redefinition of the Center's legal duty to patients has given rise to Center corporate liability for malpractice. This liability is not derived from medical negligence by physicians, but rests on a separate, independent duty to protect patients from harm.

The principal control mechanism available to the Center is an effective internal risk management and patient safety program. To implement this program effectively, it is important that the goals of risk management and patient safety are understood.

By definition, risk management and patient safety is a pro-active process instituted in an effort to protect and preserve the financial assets and reputation of the health care provider and the Center.

1. There are four basic components of risk management and patient safety.
  - a. Identification
  - b. Analysis
  - c. Treatment
  - d. Evaluation
2. Risk or exposure identification requires a systematic means of detecting potential problems and a reliable method to predict events in the future.
3. General analysis objectives are to determine where to direct attention and resources. Specific objectives for analysis are
  - a. the probable frequency of the loss
  - b. the probable cause of the loss
  - c. the possible severity of the loss
  - d. the effect that any potential loss would have on the patient and the organization.

4. Treatment includes two techniques.
  - a. Control
  - b. Risk Financing involves methods used to pay for losses
5. Evaluation includes a constant review and evaluation of the entire system to ensure its effectiveness and its compliance with all applicable statutes and external requirements.

**Patient Safety Program  
Addendum to the Performance Improvement Plan**

**Purpose**

LifeCare Hospitals- Complex Care Hospital at Tenaya has developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital. It is the intent of the leadership of Complex Care Hospital at Tenaya to foster a safe and safety-conscious environment that promotes well being, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

**Scope**

Overall Patient Safety Goals include the following:

1. Improve the accuracy of patient identification
2. Improve the effectiveness of communication among caregivers
3. Improve the safety of using high-alert medications
4. Eliminate wrong-site, wrong patient and wrong-procedure surgery
5. Improve the safety of using infusion pumps
6. Improve the effectiveness of clinical alarms systems
7. Ensure the prevention and control of infections

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

**Methodology**

The Patient Safety Program includes both pro-active and responsive components. 051-37-026.2 Patient Safety Program Page 3 of 9

Proactive: The proactive patient safety component emphasizes a pro-active error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect Analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report Trending

Failure Mode Event Analysis (FMEA) will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership and staff. Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and the Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Responsive: The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues:

1. Root Cause Analysis
2. Intensive Assessment and Analysis
3. Occurrence Report Findings
4. Patient complaint response
5. Performance improvement measures

### **Patient Safety Committee and Reporting**

Patient safety is the responsibility of all employees and Medical Staff Members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is transdisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from the performance improvement team's are sent to the Quality Council, and reported to the Medical Executive Committee and the Governing Board.

The Patient Safety Committee is also transdisciplinary with representation from the following areas at a minimum: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management and Infection Control. 051-37-026.2 Patient Safety Program Page 4 of 9

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:

- a. Risk and Safety Management
- b. External Data Reports
- c. Sentinel Event Alerts from the Joint Commission
- d. Healthcare Reports
- e. Regulatory Reports
- f. Patient/Family members

2. Continually improve processes of care delivery based on data analysis.

3. Develop policies and procedures that result from process improvement activities.

4. Develop and approve Patient Safety Education for the medical and hospital staff

5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

LifeCare Hospitals believe in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator.

The activities of the Patient Safety Program will be reported up to the Quality Council, the Medical Executive Committee and the Governing Board as outlined in the Performance Improvement Plan. Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care. 051-37-026.2 Patient Safety Program Page 5 of 9

# **Tahoe Pacific and Complex Care Hospital of Tenaya Patient Safety Program**

## **Purpose**

Tahoe Pacific Hospital and Complex Care Hospital of Tenaya have developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program, and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital and to comply with the requirements of the state of Nevada. It is the intent of the leadership of the hospitals to foster a safe and safety-conscious environment that promotes well being, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

## **Scope**

Overall Patient Safety responsibilities include the following:

1. Improve the accuracy of patient identification. Through the use of 2 patient identifiers whenever performing procedures, administering medications or blood, taking blood samples or other specimens, or providing any other treatments or procedures.
2. Improve the effectiveness of communication among caregivers as contained in Handoff Communication Guidelines, Located under Best Practices in LifeCare Policies and Procedures
3. Improve the safety of using high-alert medications as contained in the LifeCare policy, Medication Safety: High Alert Medications
4. Ensure the identification, reporting, prevention and control of infections, including the role of proper hand hygiene as contained in the LifeCare policies, The Infection Control Plan and its addendums; Hand Hygiene, and other policies covering Blood and Body Fluid Exposure, Environmental Disinfection, Single Use of Drugs and Devices and Use of Isolation Precautions as contained in the Quality Management policy section.
5. Reduce patient falls and injuries from falls as contained in the LifeCare policy, Fall Prevention, through recommendations from the Falls Committee Performance Improvement Team and information about falls gathered from the Post Fall Assessment Form.
6. Improve the effectiveness of clinical alarms systems as contained in the LifeCare policy, Safety – Alarms- Clinical Equipment.
7. Identifying, preventing and correcting errors in the labeling, storing, prescription or administration of medications as contained in the LifeCare policies, Medication Storage, Dispensing – Labels, Dispensing Medications – General, and other policies contained in the Pharmacy section.
8. Ensuring the safe administration of prescription drugs, controlled substances, pharmaceutical services and other medications as contained in the LifeCare policy, Administration of Drugs, and other policies contained in the Pharmacy section.
9. The identification, investigation and reporting of Sentinel Events as contained in the LifeCare policy, Sentinel Events, and as prescribed by NRS 439.800 and following guidelines established by the Nevada State Health Department’s Sentinel Event

Registry. The Patient Safety Officer will also be responsible for the maintenance of Sentinel Event records.

10. Oversight of the maintenance of a sanitary environment by the facility through conduction of Environmental Rounds, Infection Control Rounds and day to day observations by supervisory and charge staff, as contained in the LifeCare policies, Safety Management Plan,; the Infection Control Plan, and other policies under Quality Management and Engineering.

11. Adoption and implementation of patient safety checklists to improve the health outcomes of patients in the medical facility and ensure the knowledge to provide care safely is applied consistently and correctly. These checklists may include best practices and competencies for treatments ordered by an independent licensed practitioner. Other examples may include the proper sequence for environmental cleaning and proper use of personal protective equipment. Also included are discharge checklists explaining discharge medications, aftercare instruction and other instruction needed at discharge. Current examples in use include:

- a. Insertion of PICC lines.
- b. Maintenance of foley catheters
- c. Discharge checklist
- d. Respiratory Treatment competencies

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

The role of the Patient Safety Program also crosses over into the safety of the environment of the hospital including oversight of the 7 Environment of Care Plans:

1. Safety Management Plan
2. Security Management Plan
3. Life Safety Management Plan
4. Medical Equipment Plan
5. Emergency Preparedness Plan
6. Hazardous Materials and Waste Management Plan,
7. Utilities – Utilities Management Plan

Annual Reviews of each of the 7 plans are performed annually and reported to the Environment of Care Committee, the Medical Executive Committee and the Governing Board 051-37-026.2 Patient Safety Program Page 7 of 9

## **Methodology**

The Patient Safety Program includes both proactive and responsive components.

Proactive: The proactive patient safety component emphasizes a proactive error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical Record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report trending

Failure Mode Event Analysis (FMEA) will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership, and staff.

Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and The Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Responsive: The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues.

1. Root Cause Analysis
2. Intensive Assessment and Analysis
3. Occurrence Report Findings
4. Patient Complaint Response
5. Performance Improvement Measures
6. Patient Satisfaction Survey Reports

## **Patient Safety Committee and Reporting**

Patient Safety is the responsibility of all employees and Medical Staff members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is transdisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from the performance improvement teams are sent to the Quality Council and reported to the Medical Executive Committee and the Governing Board. 051-37-026.2 Patient Safety Program Page 8 of 9

In compliance with State of Nevada Regulations, the Patient Safety Committee will be comprised of:

- (1) The patient safety officer of the medical facility.
- (2) At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility.
- (3) One member of the executive or governing body of the medical facility.

The Patient Safety Committee is also transdisciplinary with representation from the following areas: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management, and the Hospital's Infection Control Preventionist.

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:

- a. Risk and Safety Management
- b. External Data Reports
- c. Sentinel Event Alerts from The Joint Commission
- d. Healthcare Reports
- e. Regulatory Reports
- f. Patient/Family Members

2. Continually improve processes of care delivery based on data analysis.

3. Develop policies and procedures that result from process improvement activities.

4. Develop and approve Patient Safety Education for the medical and hospital staff.

5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

The Hospitals believe in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator.

The activities of the Patient Safety Program and an annual review of the Patient Safety Plan, it's appropriate policies, forms, checklists and best practices will be reported to the Patient Safety Committee, the Medical Executive Committee, and the Governing Board as outlined in the Performance Improvement Plan and the LifeCare Reporting Calendar. 051-37-026.2 Patient Safety Program Page 9 of 9

Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care.

## **Patient Safety Plan 2018**

### **PURPOSE:**

The purpose of the Patient Safety Program is to improve patient safety and reduce risk to patients, staff and visitors. Recognizing the effective medical/health care error reduction requires an integrated and coordinated approach; we have developed an organization-wide safety program. The program supports the creation of an environment in which patients, their families, and organization staff leaders can identify and manage actual and potential risks to patient safety.

### **OBJECTIVE:**

It is our objective to foster an environment to improve patient safety, establish mechanism to support effective responses to actual occurrences and to be proactive in the reduction of medical/health care errors. Patient safety will be a priority in new design and all relevant organization processes, functions and services.

### **SCOPE:**

The scope of the patient safety program will include compliance with standards identified by external regulatory agencies and accrediting bodies. Program activities will address occurrences ranging from "near misses" to sentinel events with serious adverse outcomes.

### **DEFINITIONS:**

Actual Event-an event occurred that reached the patient or individual (e.g., visitor fall, student injury, etc.).

Near Miss-an event occurred but it did not reach the patient because of chance alone or because of active recovery efforts by caregivers.

Unsafe Condition- circumstances that could cause adverse events (e.g., look-alike medications, confusing equipment, failure to use proper signage when floor is wet).

Sentinel Event- is defined as a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in any of the following:

- Severe temporary harm which is defined as critical, potentially life-threatening harm lasting for a limited time with no permanent residual effect, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition. (Hip fractures are always included)
- Permanent harm
- Death

For additional events also considered "sentinel" reference the HealthSouth Sentinel Event policy

### **PROCEDURES:**

A. The responsibility for management of the organization-wide patient safety program is assigned to the Director of Quality/Risk Management.

1. The Safety Committee and Quality Council will provide interdisciplinary input related to patient, visitor and staff safety.
2. Reports of safety related activities and issues would be presented to Department Managers, Senior Staff, Medical Staff via the Medical Executive Committee, and the Governing Board. This communication is confidential and for quality assurance purposes only.

B. Staff will report information relating the medical/health care events as outlined in Risk Management Electronic Event Reporting Policy.

1. Staff will be oriented to the Risk Management Policies on hire and through ongoing in-service and other education and training programs.
2. Staff will be oriented to their roles in preventing adverse occurrences as related to their specific job responsibilities and as a part of the organization-wide efforts to improve patient safety.
3. Staff will be oriented to the importance of reporting "near misses," as well as adverse occurrences.
4. Team training to foster an interdisciplinary, collaborative approach to patient care delivery and to reinforce the need and way(s) to report medical/health care errors will be provided as appropriate.
5. The Director of Quality/Risk Management, Department Managers, and Senior Staff are responsible for interacting with staff in a manner that ensures staff do not fear disclosure, embarrassment, blame or punishment for reporting potential or actual events related to patient safety.
6. The Director of Quality/Risk Management, Department Manager and/or Senior Staff member may request the assistance of internal behavioral management staff or external resources if a staff member(s) needs support in coping with a sentinel event.

C. Hospital leadership will identify barriers to effective communication among caregivers relative to patient care, redesign the process to eliminate barriers and monitor for effectiveness. Specific attention will be directed to:

1. Process for ensuring accurate, timely, and complete verbal and written communication among care givers and all others involved in utilization of data, and
2. Test results relative to the management of the patient's condition.

D. All patients are entitled to information about all aspects of their health care, including information about clinically relevant unanticipated outcomes of care.

Patients and, when appropriate, their families are informed about the outcomes of care including unanticipated outcomes (i.e. sentinel events, State reportable events). Responsibility for disclosing unanticipated outcomes typically rests with the physician or designee who has overall responsibility for the patient's care. However, in some situations, other healthcare professionals may be deemed more appropriate to be responsible for disclosing the outcome. A hospital representative, preferably the

Quality/Risk Director, Chief Nursing Officer or the Chief Executive Officer should be present for the initial conversation and any follow-up discussions that may occur with the patient and/or patient's representative.

E. The Director of Quality/Risk Management or designee will respond immediately to notification of significant medical/health events to a patient/visitor or staff member.

1. The Nursing Supervisor or Department Manager will contact the Risk Manager and/or Administrator/Administrator-On-Call to report events.
2. Action(s) will be taken to protect the patient/visitor/staff members as indicated per hospital plans and policies.
3. Factual information will be obtained and preserved for subsequent analysis. Such information is confidential for quality assurance purposes.

F. The facility will review historical risk management, Environment of Care (EOC), Program Improvement (PI) and Human Resources (HR) data for high volume, high risk problem trends in medical and care processes, as well as unanticipated adverse occurrences affecting patients. These will be ranked as:

- A. Unsafe condition (Non-event)
- B1. Near Miss - No Harm/Didn't Reach Patient/Caught by Chance
- B2. Near Miss - No Harm/Didn't Reach Patient b/c of Active Recovery by Caregiver
- C. No Harm – Reached Patient No Monitoring Required
- D. No Harm – Reached Patient Monitoring Required
- E. Harm – Temporary, Intervention Needed
- F. Harm – Temporary, Hospitalization Needed
- G. Harm - Permanent
- H. Harm – Permanent, Intervention Required to Sustain Life
- I. Death

G. The facility will also perform intense analysis consistent with the Root Cause Analysis/Sentinel Event Policies, and reports as required by state, regulatory, and accreditation bodies. The Risk Management designee is responsible for ensuring compliance with reporting.

H. Emerging needs requiring reprioritizing performance improvement activities may be identified through data collection and assessment, unanticipated adverse occurrences affecting patients, changing regulatory requirements, significant patient and staff needs, changes in the environment of care, or changes in the community. Priority consideration in establishing performance improvement teams is given to:

1. Processes that affect a large percentage of patients.

2. Processes that place patients at risk, if not performed well, if performed when not indicated, or if not performed when indicated.

Processes that have been or are likely to be problem prone.

I. When designing/redesigning processes, Department Managers and staff will:

1. Incorporate information from within the organization and from other organizations about potential risks to patients, including the occurrence of sentinel events in order to minimize risks to patients affected by the new or redesigned process, function or service.
2. Conduct literature searches to obtain evidence based medical and/or care practices to be included in process redesign.
3. Include analysis and or pilot testing to determine whether the proposed design/redesign is an improvement.

J. Hospital leadership will consider the importance of patient safety in:

1. Development of hospital-wide patient care programs, policies and procedures that describe how patients' care needs are assessed and met.
2. Development and implementation of the hospital's plan for the provision of patient care.
3. Decision-making structures and processes.
4. Implementation of an effective and continuous program to measure assesses and improves performance.
5. Development of an interdisciplinary culture that emphasizes cooperation and communication. The leadership role of coaching will be used to promote communication among services, individual staff members and less formal structures such as quality action teams, performance-improvement teams or members of standing committees.
6. Development of a process to involve the patient, as appropriate to his/her condition, as a partner in helping to facilitate the safe delivery of care.
  - a. Patients/family members are oriented on admission of the importance of reporting perceived risks and concerns about the patient's care per Patient and Customer Complaint and Grievance Policy.
  - b. Department Managers and Senior Staff will review Press Ganey Patient Satisfaction Survey questions related to patient safety and develop a corrective action plan to patient/family complaints or suggestions for improving safety as appropriate.

7. The Governing Board will appoint the Director of Quality and Risk Management (DQR) as the Patient Safety Officer. The Patient Safety Officer/Director's role includes:

- Participating in hazard surveillance, event reporting, reviewing, and the development of patient safety policies and procedures.

- Analyzing and seeking resolution of patient safety issues and works with the appropriate staff to implement recommendations and to monitor patient safety improvement activities.
- Report on findings, recommendations, actions taken, and results of measurements through the hospital quality structure.

K. At least one (1) high-risk process is the subject of ongoing measurement and periodic analysis to determine the degree of variation from intended performance, a minimum of 1 proactive risk assessment every 18 months. The process selected will be based, in part, on the information identifying the most frequently occurring sentinel events and patient safety risk factors.

1. Assess the intended and actual implementation of this process to identify steps in the process where there is, or may be, undesirable variation (i.e. called potential "failure modes").
2. For each identified "failure mode," identify the possible "effect(s)" and how serious the possible effect on the patient could be (i.e. "criticality" of the effect).
3. For the most critical effects, conduct a root cause analysis to determine the variation (failure mode) leading to that effect occur.
4. Redesign the process and/or underlying systems to minimize the risk of that failure mode to protect patients from the effect of that failure mode.
5. Test and implement the redesigned process.
6. Identify and implement measures of the effectiveness of the redesigned process.
7. Implement a strategy for maintaining the effectiveness of the redesigned process over time.

L. Hospital leadership will measure and assess the effectiveness of their contributions to improving patient safety. To accomplish these goals, leaders will.

1. Set measurable objectives for improving patient safety.
2. Actively request staff to periodically discuss their opinions, needs, perceptions of risks to patients and suggestions for improving patient safety. The actions taken as a result of this staff input will be reported to the MEC/GB bi- annually.
3. Review data on staff willingness to report medical/health events.
4. Review data from Patient Satisfaction Survey related to patient safety.
5. Use pre-established, objective process criteria to assess their effectiveness in improving patient safety.
6. Draw conclusions based on their findings and develop and implement improvement in their activities.
7. Evaluate their performance in supporting sustained improvement.

M. The DQR will report at a minimum quarterly to the Governing Board occurrences of medical/health events and actions to improve patient safety.

## **SAFETY MANAGEMENT PLAN 2018**

**PURPOSE:** The Safety Management Plan of Las Vegas Recovery Center (LVRC) serves to provide a framework to promote a safe environment for clients, visitors, and staff. It identifies the established policies, programs, and processes used by LVRC to establish, support, train, and maintain an effective quality safety management program that is promoted and executed successfully.

**SCOPE:** This Safety Management Plan covers the activities of LVRC, and affiliated remote sites including:

- 3321 N Buffalo, Suites 100 and 150: Business Offices and Intensive Outpatient Program

Any differences in activities at the various sites are so noted in the plan.

**RESPONSIBILITY:** Oversight of the safety management program is accomplished through the Safety Committee. The Office of Primary Responsibility (OPR) is Corporate Compliance, however, executive oversight is maintained through the governing body by the review of the Safety Committee minutes, annual evaluation of this management plan, and through leadership to quality care and improvement processes throughout the organization. Supervisors are responsible for ensuring all subordinates are properly trained and informed of all safety related issues as they pertain to the specific duty section/location, job, and task.

### **OBJECTIVES:**

1. Provide both a global and cross-functional approach to safety, by ensuring representation from appropriate departments on the Safety Committee.
2. Conduct ongoing surveillance to reduce risks to the lowest level possible to provide clients, visitors and staff with the safest possible environment.
3. Educate staff members, providers, and other personnel their roles in the Safety Management Plan.
4. Ensure staff members, providers, and other personnel follow protocols to secure safety and improve health outcomes of the client and their environment by incorporating the safety checklists and following all safety policies.

## **ELEMENTS OF PERFORMANCE:**

### **Written Management Plan**

LVRC has developed and implemented this Safety Management Plan in compliance with Joint Commission requirements to describe the processes involved with this function and to effectively manage the safety of all who use our facilities. The Sentinel event requirements however are specific to Nevada Revised Statutes (NRS) Chapter 49.

LVRC will follow Sentinel events protocol pursuant to the NRS Chapter 49 regulations as follows: (a) A person who is employed by a medical facility shall, within 24 hours after becoming aware of a sentinel event that occurred at the medical facility, notify the patient safety officer of the facility of the sentinel event; and (b) The patient safety officer shall, within 13 days after receiving notification pursuant to paragraph (a), report the date, the time and a brief description of the sentinel event to: (1) The Health Division; and (2) The representative designated pursuant to NRS 439.855, if that person is different from the patient safety officer. 2. If the patient safety officer of a medical facility personally discovers or becomes aware, in the absence of notification by another employee, of a sentinel event that occurred at the medical facility, the patient safety officer shall, within 14 days after discovering or becoming aware of the sentinel event, report the date, time and brief description of the sentinel event to: (a) The Health Division; and (b) The representative designated pursuant to NRS 439.855, if that person is different from the patient safety officer. 3. The State Board of Health shall prescribe the manner in which reports of sentinel events must be made pursuant to this section. A medical facility shall, upon reporting a sentinel event pursuant to NRS 439.835, conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event. A root cause analysis, cause and effect diagram, and PlanDoStudyAct (PDSA) are all models of improvements performed on Sentinel events as an ongoing effort to provide quality services and processes.

### **Plan Coordination**

The Safety Management Plan is coordinated by the Safety Officer, who is appointed by the CEO. The Safety Officer's responsibilities include, but are not limited to:

- Serve on the Safety Committee, serving as the point of contact on safety, inspections, investigations, and reporting of all events, including Sentinel events.
- Ensuring the integration of monitoring and client safety functions and taking such actions as necessary to ensure the safety of clients, staff and visitors as result of an investigation of any event not within the normal standards of quality and safety, including Sentinel events alleged to have occurred at the facility.
- Serve as the Infection Control Officer, ensuring compliance with the Infection Control program including monitoring and reporting occurrences of infection.
- Maintaining appropriate safety reference material and assistance in safety policy and procedure development as requested.
- Coordination of the information flow to and from the Safety Committee.
- Coordination of the reports to the Safety Committee concerning problems, failures, and user errors in all areas of the Environment of Care.
- Regular participation in hazard surveillance by conducting documented facility safety surveys yearly to identify and correct environmental hazards and unsafe conditions.
- Providing summary information on a quarterly basis to the governing body or their designee.
- Monitor and document the effectiveness of the National Patient Safety Goals: NPSG.01.01.01 – Use at least two ways to identify individuals served, NPSG.03.06.01 – Record and pass along correct information about an individuals medicines, NPSG.07.01.01 – Use the hand cleaning guidelines from the World Health Organization, NPSG.15.01.01 Find out which individuals served are most likely to try to commit suicide.
- The Safety plan includes the most updated safety checklists and safety policies for use by all staff that provides services to the clients, including contracted practitioners, consultants, and other personnel. Checklist are related to specific types of treatment and processes, including discharge, aftercare, medication reconciliation, dietary standards, laundry, nursing, maintenance, housekeeping, etc.

### **Intervention Authority**

The appointed Safety Officer or designee is authorized to intervene whenever conditions pose an immediate threat to life or health or pose a threat of damage to equipment or buildings. If this authority is exercised, it will be immediately reported to the CEO.

## **Risk Assessment**

LVRC conducts a periodic risk assessment to evaluate the impact of new or existing conditions of the facilities, grounds, equipment, operations, and occupants on client, staff and public safety. The goal of performing risk assessment is to reduce the likelihood of incidents or other negative experiences that have the potential to result in injury, and accident, or other loss to clients, visitors, staff, or assets. Potential safety issues are reported and discussed in the Safety Committee meetings, along with all pertinent data and alternatives.

## **Procedures and Controls**

Projects are planned and programmed so that they can compete for funding within the planning, programming, and budgeting process. A decision on management of the issue at hand is reached based on the Safety Committee's evaluation of the situation and the pertinent data. Documentation of this risk assessment process may be found in the Safety Committee minutes.

Results of the risk assessment process are used to create or revise safety policies, procedures, and practices, as well as develop safety orientation and education programs and safety performance monitors.

## **Safety Policies and Procedures**

The Safety Committee develops safety policies and procedures to be implemented upon review and approval of the governing body. Safety policies and procedures include safety checklists and are reviewed and updated as often as necessary, but at least annually. New safety policies and procedures are coordinated with the Safety Officer prior to implementation. The safety committee is comprised of the infection control officer (also the safety officer), the Director of Nursing, the Medical Director, the Manager of Nursing Services, and the Administrator of the facility (member of the governing body). The policy includes: (a) Monitor and document the effectiveness of the patient identification policy adopted (b) At least annually, review the patient safety checklists and patient safety policies and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at the facility. (c) Revise a patient safety checklist and patient safety policy to ensure that the checklist or policy reflects the most current standards in patient safety protocols. (d) On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to item (b).

The most current safety plan and Sentinel Events Report is submitted to the Division of Public and Behavioral Health on or before March 1 of each year.

### **Product Safety Recalls**

Product and equipment safety recalled by a vendor or otherwise cited for safety hazards are removed from or placed out of services and properly disposed of. Appropriate substitutes are obtained in a timely manner. All reports related to product and equipment safety recalls must be processed within 24 hours of receipt. End users must report actions taken with respect to the recall notice and product disposition to the appropriate department manager. Records must be maintained in the respective vendor file concerning actions taken and final disposition. Recalls will be reported to the Safety Committee.

### **Grounds and Equipment**

The COO of the parent company of LVRC is responsible for management of LVRC and the grounds maintenance programs, including the grounds, parking lots, grass and shrubbery care, irrigation systems and pest control. Regular schedules are established for grass cutting, landscaping maintenance, adequate storm drain and pavement cleaning, and pest control.

### **Hazard Surveillance**

The Safety Officer conducts and documents facility safety surveys of all areas twice a year to identify and correct environmental hazards and unsafe conditions. A schedule has been developed to ensure that all areas are surveyed in a timely manner.

### **Smoking**

LVRC maintains a policy of no smoking within any client care buildings. All staff members are responsible for monitoring for compliance with this policy.

Supervisory notification will be made of any staff members found to be in violation of the no smoking policy. Clients or visitors violating the policy will be directed to appropriate outdoor smoking areas.

### **Pre-Construction Risk Assessment**

LVRC uses a system of pre-construction risk assessment throughout all projects involving construction, renovation, or demolition. Infection control risk assessment will also be used as applicable for certain maintenance projects.

Key individuals involved in this team process (as applicable based on the scope of the project) include:

- Administration
- Infection Control
- Nursing Staff
- Medical Staff
- Architect
- Engineer
- Contractor

For each project, a risk assessment matrix is completed to ensure evaluation of its impact on client care, based on the type of project and the impacted client population. Particular attention is focused on the effect that the proposed activities will have on:

- Air quality
- Infection control
- Utilities
- Noise
- Vibration
- Emergency procedures

Controls are implemented as appropriate to the outcome of the assessment.

The Safety Officer is also responsible for the integration of the Environment of Care function with the organization-wide client safety program. Safety issues and the results of ensuing measurements are communicated to the appropriate components of the client safety program. The Safety Officer or designated representative is notified by maintenance or construction/project manager prior to beginning any work that may impact client safety.

### **Reporting Process**

The Corporate Compliance Office manages the incident reporting program. The governing body reviews major incidents, administrator, director of nursing, and the director/manager of the department involved in any incident also reviews the report. Other reviewers (depending on nature of incident) may include Infection Control, the Safety Officer, the Safety Committee and Corporate Compliance. Reports from these departments are submitted, as appropriate, to the Safety Committee. Department managers do the initial investigation and the Corporate Compliance Office provides further follow-up and investigation as necessary. All incidents are tracked for adverse trends and findings reported to both the governing body and the Safety Committee.

**EMPLOYEE HEALTH AND SAFETY:** An incident report is completed for any staff occurrence involving medical or legal risk. Supervisors must suggest corrective action. Any incident involving exposure to blood borne pathogens will also be included in the incident reports.

### **Performance Monitoring**

LVRC conducts appropriate monitoring of performance of this Safety Management Plan regarding actual or potential risk. Current performance monitors include:

- Staff members interviewed can appropriately identify their role in reporting safety issues.
- The number of incident reports will show a downward trend.
- The time to resolve issues, measured from their first appearance in the Safety Committee minutes to their resolution (in months), will exhibit a downward trend.

Results of this ongoing monitoring will be reported and reviewed at the Safety Committee meeting at least quarterly. This or other trend data will be considered by the committee annually for possible recommendation to leadership for a performance improvement activity in the Environment of Care.

### **Annual Evaluation**

There will be an annual evaluation of this Safety Management Plan in terms of its objectives, scope, performance, and effectiveness, defined as follows:

**Objectives:** An assessment of whether or not the objectives identified in this management plan have been appropriately addressed in the preceding year. Any adjustments made to the objectives for the following year should also be included.

**Scope:** An assessment of whether or not the scope, as identified in this management plan, remains the same for the coming year, or needs to be adjusted according to changes in the organization.

**Performance:** A quantitative analysis of the performance monitoring data as identified in this management plan.

**Effectiveness:** A qualitative assessment of what was done well, and what needed improvement in the fulfillment of the Safety Management Plan during the preceding year. Any changes, not previously mentioned, that are needed for the coming year should also be addressed.

The annual evaluation will be compiled by the Safety Officer. The evaluation will be reviewed by the Safety Committee at its next meeting following the completion of the evaluation, and it will then be forwarded to the governing body.

### **Multidisciplinary Improvement Team**

The Safety Committee is composed of representatives from medical, clinical, administrative, and support services, and chaired by the Corporate Compliance Manager. The Safety Committee meets quarterly.

Responsibilities of the Safety Committee include, but are not limited to:

- Evaluation of safety issues
- Recommendations for corrective measures
- Implementation and monitoring of recommendations
- Oversight of accident and injury investigations
- Hazard identification and elimination
- Oversight of safety education
- Review of performance monitoring

### **Orientation and Education**

All staff members participate in an orientation and education program that includes:

- General safety procedures
- Area-specific safety
- Specific job-related hazards
- Reporting procedures for incidents involving property damage, occupational illness, and injury to clients, staff, or visitors
- Actions to eliminate or minimize safety risks

The Safety Officer provides a broad overview of all safety related matters and general safety processes during newcomer's orientation. The orientation briefing and related material is provided and maintained by the Safety Officer or designee. During the newcomer's orientation, the employees are informed that their supervisor is the vital link in the safety training process at the department level. Refresher training is ongoing to include annual Safety and Incident Report training and safety related e-mails and fliers distributed by the Safety Officer throughout the year. Ongoing training by the Safety Officer ensures continuing education on safety issues.

Human Resources, and Safety Officer are responsible for orientation and education concerning area specific safety and job-related hazards.

**Spring Mountain Treatment Center**  
**ORGANIZATIONAL PLAN FOR PATIENT SAFETY**

**PURPOSE**

Spring Mountain Treatment Center is committed to the well being and safety of patients. We acknowledge the process of health care delivery is complex and requires effective coordination within an organization to minimize the risks of adverse occurrences. We believe leaders must demonstrate the importance of patient safety through a comprehensive and non-punitive program for the prevention, detection and response to health care errors. We believe staff well trained in safety principles reduces the likelihood of errors. We believe an active partnership with the patients we serve will result in desired patient outcomes.

**GOALS**

The goals of the Organizational Plan for Patient Safety are:

1. Establish and maintain effective operational systems to prevent errors
2. Assure the safe delivery of care and services at Spring Mountain Treatment Center
3. Promote culture of patient safety priority
4. Foster non-punitive approach to error detection and response

**OBJECTIVES**

1. Establish priorities for Patient Safety
2. Coordinate functions, processes and systems related to patient and organizational safety within all services and departments
3. Design and redesign functions, processes and systems when an opportunity to improve patient safety exists
4. Incorporate best safety practices into organizational systems and processes
5. Provide interdisciplinary collaboration of safety in the environment of care
6. Standardize and integrate organization wide policies and procedures related to safety
7. Consider results of Performance Improvement activities in guiding safety
8. Respond to sentinel event and significant events requiring root cause analysis
9. Coordinate education and training for staff, patients and visitors related to safety
10. Utilize the Joint Commission National Patient Safety Goals as tools to improve safety and reduce errors
11. Incorporate Joint Commission Sentinel Event Alerts (applicable to Behavioral Health) into ongoing Patient Safety Process
12. Incorporate UHS Behavioral Health Division Risk Alerts into ongoing Patient Safety Process

**STRUCTURE**

Effective coordination and management of patient and organizational safety contributes to desired patient outcomes. The Patient Safety Council oversees the implementation of the Organization Plan for Patient Safety. The Patient Safety Council is chaired by the CEO and meets monthly, more often when necessary, to assure effective operation of

functions, processes and systems related to patient and organizational safety. Patient Safety Council members provide expert or first hand knowledge in safety aspects of clinical and administrative service delivery. Input from every department and services within the organization contributes to the well being and safety of patients. Patient Safety Council membership includes standing members who attend all Council meetings and “as needed” Council members who attend when necessary to effectively coordinate and integrate patient safety within the organization.

**Patient Safety Council Standing Members:**

1. CEO/Managing Director
2. Director of Performance Improvement
3. Medical Director
4. Director of Nursing
5. Risk Manager

**SCOPE OF SERVICES**

The Organizational Plan for Patient Safety involves all-important functions and processes that have the potential to affect the safety of services provided for inpatient and partial hospital programs.

1. Governance

The Governing Body assumes ultimate responsibility for the safety of patients. The Governing Body approves the mission, vision and values of the organization affirming the importance of patient safety. The Governing Body delegates oversight of the Organizational Plan for Patient Safety to leaders. The Governing Body allocates sufficient financial and human resources to meet the safety needs of patients. The Governing Body assures the organization complies with applicable local, state, federal laws and regulatory requirements for patient safety. The Governing Body establishes the organizational structure for patient care responsibility. The Governing Body stays informed about adverse occurrences, Performance Improvement activities and pro-active risk reduction strategies.

2. Leadership

Leaders implement the Organizational Plan for Patient Safety. Leaders foster a culture that promotes patient safety through a non-punitive approach to the detection and response to health care errors. Leaders approve important policies related to patient and organization safety. Leaders provide direction in carrying out the mission, vision and value of patient safety within the organization. Leaders assess the changing needs of the organization in order to maintain the highest level of patient safety. Leaders assure interdisciplinary coordination of patient and organizational safety. Leaders approve contracts for external services with reliable and credible vendors. Leaders identify sentinel events and significant events requiring root cause analysis and assure the timely and proper response to adverse events. Leaders are accountable for the safety of patients and the safe operation of the facility.

3. **Management**

Managers are responsible for the safe delivery of care and services within a specific branch of administrative or clinical operation. Managers are responsible for attaining and maintaining safety expertise within their scope of service delivery. Managers define safety aspects within their services or department and monitor the outcomes of performance for effects. Managers provide job specific safety training and assure department operations are integrated and coordinated within the organization.
4. **Patient Rights, Responsibilities and Ethics**

Patients have the right to expect safe care and services. Patients have the right to be informed of benefits and risks associated with proposed care. Patients have the right to be informed about outcomes of care including undesired and unexpected occurrences. Patients have the right to be informed about alternatives and possible results of refused care. Patients have the responsibility to participate in treatment as much as possible, to follow instructions, rules and regulations. Patients have the responsibility to provide accurate and reliable information, to report changes and to ask questions especially when care plans are not understood. Patients have the responsibility to respect the needs of others. Patients can expect that the facility has their well being and safety in mind. Patients can expect information that is honest and accurate. Patients can expect restrictions that are limited to only those necessary for safety. Patients can expect staff conduct that is ethical and safe.
5. **Assessment of Patients**

Assessment of patient safety needs is a dynamic process occurring through all points of service delivery. Assessment of patient safety includes physiological as well as psychosocial needs. The Admissions Department assesses whether the organization can meet the safety needs of patients desiring services. Professional assessment and reassessment of needs continues during the course of treatment in order to provide the proper database to make care decisions. Specialists assess the unique safety needs of adolescents as well as individuals who are victims of abuse or those requiring detoxification. Assessment of needs continues with the determination of safety requirements necessary for discharge or another level of care.
6. **Care of the Patient**

Safety is always a priority in the care of the patient. Therapeutic programs are designed with safety in mind and the milieu is managed to promote the safety of patients, visitors and staff. All care provided is under the guidance of a physician in collaboration with an interdisciplinary treatment team. Individualized care plans and interventions are based on current scientific knowledge and professional practices guidelines. The safety and well being of the patient is always considered in the care planning process and patients and their families are encouraged to participate as much as possible. Treatment expectations and outcomes of care are discussed with the patient and family as desired. When outcomes differ significantly from expectations or when adverse occurrences or

errors occur, the patient and family, as desired are informed including the consequences and how the course of care will be affected.

Direct observation is a primary method to determine the effects of care provided. Close observation or special precautions may be employed when necessary to assure safety of the patient. Assistance is provided when necessary to restore or to maintain the well being of patients; activities of daily living. Safe methods to respond to psychiatric and medical emergencies are implemented when necessary. Pharmaceutical services carefully control the ordering, delivery, storage and dispensing of medications to prevent errors. Dietary services provide the safe nutritional needs of the patients. Diagnostic tests and evaluations required by the patient's condition that are not available within the organization are provided by credible external sources. Safety provisions are in place to transport patients to and from facilities when necessary.

7. Management of Human Resources

A sufficient amount of qualified staff are provided to assure the safety of patients. Job descriptions define performance expectations related to patient and organization safety. General, department and job specific orientation focuses on safety matters including definitions of errors, how they are reported, managed and prevented. Initial, annual and ongoing competency determination confirms the knowledge and skills necessary to perform important safety aspects of job functions. Additional on the job training in equipment and skill application maintain the abilities of staff to provide safe quality care. Orientation, training and education in safety is revised when necessary based on emerging needs of patients, visitors and staff. When work performance affects or has the potential to affect patient safety or when sentinel events or significant events occur, Human Resources provides additional training, education and employee assistance.

8. Management of Information

Patient information is coordinated amongst providers and users prior to service entry, during the course of care and after discharge. Electronic information and written medical records are available at points of service. The care of the patient and response to treatment is permanently maintained in clinical records. Authorization is required prior to the release or discussion of confidential patient information. Professional information sources are provided through internet and current literature subscriptions.

9. Medical Staff

Medical Staff Bylaws and Rules and Regulations define performance expectations for licensed independent practitioners. The appointment and reappointment process assures practitioners are qualified and competent to provide privileges. Peer Review activities evaluate the safety and effectiveness of care provided. The physician's health program provides services to medical staff to assure they maintain the ability to provide safe care to patients.

10. **Performance Improvement**  
Performance Improvement monitors measure, assess, and improve important aspects of organization safety including high risk and problem prone services. Internal and external comparison sources provide a means to evaluate performance. When trends or patterns indicate a quality concern intense analysis is conducted to determine cause. New processes and redesigned processes are evaluated for effectiveness. Sentinel Event Alerts warrant an examination of processes to determine if the potential to reduce risk of adverse occurrences exists. Improvement strategies and best practice standards are communicated within the organization.

The Risk Management Program identifies potential and actual risks to the organization and welfare of patients. Complaints are investigated and incidents analyzed. Processes to eliminate hazards and losses are implemented and evaluated for effectiveness. Contract provider performance is evaluated for quality and safety and claims litigation is managed.

11. **Patient Education**  
Education is provided to patients and families that promotes safety and enhances recovery. Individual education plans may include disease, pain and medication management, health teaching, coping strategies, proper nutrition, self-care, use of equipment and community resources. Comprehension of education learned is validated to avoid mistakes. Specialists provide academic education to children and adolescents as necessary.
12. **Perception of Care**  
Patients, visitors and staff are encouraged to submit comments about the care provided as well as suggestions to improve safety and services through the Patient Satisfaction Survey. Responses are reviewed and considered by leaders. Staff are commended when their ideas results in improved safety or service. Patients anonymously complete satisfaction surveys upon discharge and rate their perception of the safety of care received. In addition, patients are encouraged to submit suggestions on the satisfaction survey about ideas to improve safety conditions. Findings are analyzed and considered in process and system design.
13. **Continuum of Care**  
Care needs determine the level of services provided. Safety needs may trigger a change in the level of care. Processes assure prompt transition to a different level of care when necessary. Continued care and education needs identified during the course of treatment are coordinated and planned with the patient, family and alternate service provider in preparation for discharge to assure a smooth and safety transition.
14. **Environment of Care**  
The physical plan and patient unit designs consider the unique safety needs of the behavioral healthcare population including services to children, adolescents,

adults and older adults. Furnishings and fixtures are selected that are age appropriate and provide the safest environment of care. Internal and external space and traffic flow is planned to minimize the risks of injury to patients, visitors and staff. Safety measures are incorporated in rooms designated for the purpose of seclusion. Access to sharp and dangerous objects are controlled. The environment of care is frequently inspected for safety conditions and repairs made promptly to avoid injury. Building and construction planning complies with Life Safety Codes and considers the safety and comfort needs of patients. Utility systems that regulate the safe provision of water and air are inspected and maintained according to industry standards. Fire response measures are tested and analyzed for effectiveness. Emergency measures are in place to assure the well being and safety of patients when necessary. Hazardous wastes are contained and access to dangerous chemicals and combustible gas controlled. Emergency materials are available where needed to safely respond to emergencies, accidents and exposures. Back up communications methods are available to assure continuity of care during emergencies.

Medical equipment is inspected and tested according to manufacturer recommendations. Waived testing procedures include quality control measures to assure safety and reliability.

15. Infection Control

A comprehensive program to identify and reduce the risk of acquiring and transmitting infections among patients, visitors and staff is in place. Nosocomial infections are investigated and reduction strategies employed. Employee health and wellness measures help to prevent the spread of infection within the organization. Trends and patterns in infections are communicated to and from health officials to aid in control.

16. Nursing

Professional and paraprofessional nursing staff follow standards of patient care and standards of nursing practice to assure the safe and appropriate delivery of nursing care are on inpatient units twenty four hours per day, seven days per week. Psychiatric nurses provide direction and supervision in delivering safe care.

**PATIENT SAFETY PRIORITIES**

The Patient Safety Council establishes priorities for the organization in patient safety matters. Priorities may change at any time in response to actual or potential sentinel events, unusual or urgent events, unanticipated adverse occurrences, changing regulatory requirements, significant patient or staff need, changes in the environment of care or community needs, in response to performance improvement activities or at the request of the Governing Body.

## **PHILOSOPHY OF ERROR DETECTION AND RESPONSE**

The delivery of safe health care is a complex matter dependent upon processes and functions that perform well, careful actions and judgments of staff, and patient participation in care planning and treatment. We continually assess our operations to assure error prevention strategies are effective. When actual or potential undesirable conditions or events occur, we respond immediately to assure the safety and well being of patients, visitors and staff.

When adverse events occur we strive to minimize individual blame. We view error identification as an opportunity to improve processes and systems that will result in better care. When sentinel events and significant events occur, or conditions are discovered that may contribute to such events, leaders and staff most knowledgeable about the process or system contributing to the event or condition, participate in conducting a root cause analysis to determine the underlying cause.

## **COORDINATION AND INTEGRATION OF PATIENT SAFETY**

The risk of errors and adverse occurrences can be reduced when care and service is coordinated and integrated within an organization. The Patient Safety Council plans, organizes and coordinates practices that support or affect the safety of patient care delivery. The Patient Safety Council assures new services, changes in regulations, professional practices or accreditation requirements related to safety are coordinated and integrated in the organization. The Patient Safety Council reviews organizational policies and procedures for each point of service delivery or support to assure they are coordinated and patients, visitors and staff's safety are maintained. Practices, policies and procedures are revised as often as necessary to maintain the highest level of patient safety.

## **DESIGN AND REDESIGN OF FUNCTIONS, PROCESSES AND SYSTEMS**

The Patient Safety Council designs and redesigns functions, processes and systems in response to Performance Improvement Activities, Sentinel Event Alerts, Root Cause Analysis Recommendations, proactive risk assessments, new program or services or when an opportunity to improve patient safety exists.

The Patient Safety Council intensely analyzes actual or proposed processes, systems and functions to determine potential failure modes and to identify error prevention strategies to protect patients from harm. Processes, systems and functions are designed or redesigned that incorporate sound principles of safety engineering and management and fail safe design.

## **SAFETY EDUCATION AND TRAINING**

The Patient Safety Council coordinates staff, patient and visitor education and training programs in matters related to safety. Orientation and ongoing training programs for staff include general, department and job specific safety training including error detection and response, error prevention strategies and education to promote a safe environment for patients, visitors and staff.

## **BEST SAFETY PRACTICES**

The Patient Safety Council serves as the organizational source for best practice safety standards. The Patient Safety Council incorporates both successful safety practices and lessons learned internally and from other organizations in promoting and maintaining the facility's highest level of patient safety.

# INSTITUTE OF ORTHOPAEDIC SURGERY

## LIFE SAFETY MANAGEMENT PLAN

### I. Scope of Plan

The Institute of Orthopaedic Surgery administration and governing body are strongly committed to providing a safe and secure environment for patients, visitors, staff and property. The Life Safety Management Plan is the basis for managing the environment of care, including infection control, security, hazardous materials and wastes, emergency preparedness, and utility systems in a fire-safe environment and in accordance with applicable codes and regulations. This plan is reviewed annually.

### II. Objectives

IOS strives to protect patients, visitors, staff, and property from infection and environmental hazards by meeting the following objectives:

- ✦ Prevent and control infections within the facility through the implementation of effective and nationally recognized infection control policies.
- ✦ Ensure proper operation of fire detection, alarm, and suppression systems through a program of regular inspection, testing, and maintenance.
- ✦ Provide portable fire extinguishers according to established criteria for type, placement, inspection, maintenance, and use.
- ✦ Ensure acquisitions such as curtains, furniture, waste baskets, and other equipment meet established fire safety criteria.
- ✦ Collect information on staff knowledge and skill during drills.
- ✦ Evaluate staff and equipment response during fire and facility emergencies.
- ✦ Ensure facility code compliance to identify and correct deficiencies.
- ✦ Provide fire safety orientation for new employees and quarterly thereafter.
- ✦ Provide for specific roles and responsibilities of personnel at the fire, at areas away from the fire and during evacuation.
- ✦ Establish a risk-assessment program that proactively evaluates the building, grounds, equipment, occupants, and internal physical systems and their potential impact on patient and public safety.
- ✦ Establish an emergency preparedness program designed to manage the consequences of natural disasters or other emergencies that may disrupt the facility's ability to provide care.

### **III. Standards of Performance**

- ✦ All staff complete training in infection control, including aseptic technique and standard precautions, annually.
- ✦ Fire drills and education are conducted every quarter
- ✦ Staff will know locations of fire extinguishers and alarms
- ✦ Evacuation routes are posted in the facility
- ✦ Orientation and continuing education of the staff
- ✦ Management of hazardous materials and waste
- ✦ Bomb Threat drill and education twice a year
- ✦ Internal / External disaster at least twice a year

### **IV. Information Gathering and Reporting**

The IOS Safety / Quality Improvement Committee is represented by administration, and clinical and business office staff. The committee will meet at least monthly.

Information regarding worker knowledge about life safety and the fire protection system is gathered during fire drills and safety rounds.

Performance improvement and trends are submitted to the Medical Executive Committee and Governing Body.

### **V. Organizational Roles and Responsibilities**

The administrator and department supervisors have direct authority and responsibility for both the safe actions of employees and the safe performance of equipment within their department. Administration and the department supervisors shall:

- ✦ Ensure adherence to infection control policies and procedures not limited to, but including, the proper use of required personal protective equipment, aseptic technique, high level disinfection and sterilization.
- ✦ Take appropriate disciplinary action when safety rules are violated.
- ✦ Take prompt corrective action whenever unsafe working conditions are observed and report them to administration.
- ✦ Thoroughly investigate and report all accidents and take appropriate action(s) to prevent re-occurrence. All accidents shall be investigated, including those which do not result in injury or illness.
- ✦ Inform employees of the safety committee activities.
- ✦ Critique staff response during scheduled fire drills and emergency preparedness drills.
- ✦ Assess security and risk and make appropriate adjustments.

Each employee is responsible to practice safety on the job for themselves, patients, visitors, and other employees. Therefore each employee shall:

- ✦ Adhere to infection control policies and procedures not limited to, but including, the proper use of required personal protective equipment, aseptic technique, high level disinfection and sterilization.
- ✦ Report unsafe conditions to the department supervisor whenever a safety hazard or unsafe condition is identified.
- ✦ Promptly report all injuries and lost days due to work injuries or illness to the department supervisor.
- ✦ Use only equipment in safe operating condition. Tag and report defective equipment promptly.
- ✦ Respond to emergency situations in accordance with facility policies and procedures.

## **VI. INDICATORS AND THRESHOLDS**

### Continuing Safety Education and Training

- ✦ All new personnel are oriented to the Safety Management Program. Threshold 100%.
- ✦ All personnel participate in continuing safety education and training at least annually. Threshold 100%.

### Hazardous Materials and Waste

- ✦ Proper storage of hazardous material. Threshold 100%
- ✦ Proper waste disposal equipment available. Threshold 100%
- ✦ Proper handling of hazardous material. Threshold 100%
- ✦ Fire drills conducted quarterly. Threshold 100%

### Emergency Preparedness

- ✦ Drills are conducted semi-annually. Threshold 100%

### Fire Safety

- ✦ Fire drills are conducted quarterly. Threshold 100%
- ✦ Portable fire extinguishers checked annually. Threshold 100%

### Equipment Management

- ✦ Scheduled preventive maintenance is performed on patient equipment. Threshold: 100%.

- ✦ A summary of equipment problems / failures is immediately reported to the safety committee. Threshold 100%.

#### Security

- ✦ All theft and vandalism is immediately reviewed.

#### Performance Improvement

- ✦ A summary of actions taken by the performance improvement committee is reported quarterly. Threshold 100%

### **VII. DATA COLLECTION**

Quality Indicator data, including patient care and other relevant data regarding furnished services, shall be incorporated. The data are used to monitor the effectiveness and safety of services and quality of care rendered. The data results will help identify opportunities to change and improve patient care. Data sources include:

- ✦ Incident Trending Report
- ✦ Infection Trending Report
- ✦ Patient / family / vendor complaints
- ✦ Patient Satisfaction Surveys
- ✦ Quality Assurance Committee findings

### **VIII. EVALUATION OF PLAN ACTIVITIES**

IOS sets priorities for Quality Improvement activities that

- ✦ Focus on high risk, high volume and problem prone areas
- ✦ Consider incidence, prevalence and severity of problems in those areas
- ✦ Affect health outcomes, patient safety and quality of care

QI activities shall track adverse patient events, examine their causes, and ensure implemented improvements are sustained over time.

IOS shall implement preventive strategies throughout the facility, targeting adverse patient events and ensuring all staff members are familiar with the strategies.

**IX. CORRECTIVE ACTION**

The safety committee and other committees shall implement a corrective action and follow up for each indicator, as warranted.

**X. ASSESS ACTIONS AND DOCUMENT IMPROVEMENT**

The Safety / Quality Improvement Committee will oversee the effectiveness of corrective action and the progress toward problem solving resolution. The findings, conclusions, recommendations and follow-up will be reported to the medical executive committee and the governing board.

# **QUALITY IMPROVEMENT, RISK MANAGEMENT, AND PATIENT SAFETY PLAN**

## **Specialty Surgery Center 2017**

The mission of Specialty Surgery Center is focused on delivering the highest quality, cost effective healthcare that effectively responds to the needs and safety of our patients by minimizing the possibility for injury or harm to our patients. We are committed to the care, dignity and improvement of human life to the patient populations we serve.

In keeping with the mission of the Specialty Surgery Center, community, HCA initiatives, and regulatory standards for ambulatory surgical care, this plan allows for a planned, systematic, organization-wide approach to the quality improvement process, and assessing opportunities to reduce risk. This is accomplished through an effective risk and quality program, as well as a medication and radiation safety plan that are all targeted toward improving patient safety. The activities will be carried out in a collaborative and interdisciplinary manner. When identified, individual competency issues and process changes will be coordinated with management team and human resources. The overall strategies of the program include

- Improving patient safety and reducing risk to patients which includes, but not limited to medication and radiation safety, safe quality care and reducing risk of injury to patients and staff;
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety;
- Assuring that quality improvement initiatives continue to focus on high priority areas of clinical care, monitoring of process and outcome indicators; redesigning processes and systems and providing education to foster improvement;
- Positioning the Specialty Surgery Center to achieve earning expectations and maintain effective cost-containment strategies while providing high quality of patient care, and
- Meeting the expectations of the HCA internal initiatives, as well as the external regulatory and accrediting bodies through the identification of opportunities to improve patient care, demonstration of appropriate action taken, and follow up on the effectiveness of action taken.

Strategies will be incorporated in each of the following areas to identify opportunities and set goals to achieve and sustain the desired results:

- Performance Improvement Processes
- Quality studies
- Risk Management Strategies
- Patient Safety Initiatives
- Infection Control Strategies
- Medication Safety Strategies
- Radiation Safety Initiatives

### **HCA Patient Safety Organization (PSO), LLC**

HCA established a Patient Safety Organization, LLC in spring of 2014 in accordance with provisions of the Patient Safety and Quality Improvement Act (Public Law 109-41). The PSO is a component of its parent entity, HCA. The mission of the PSO is to conduct activities to improve patient safety and the quality of healthcare delivery. The vision is to assist participating providers in the elimination of preventable patient harm. The activities of the organization include:

- Improve patient safety and the quality of health care delivery
- Collect and analyze Patient Safety Work Product (PSWP)
- Develop and disseminate information regarding patient safety
- Utilize PSWP to encourage a culture of safety and provide assistance to effectively minimize patient risk
- Maintain procedures to preserve confidentiality and provide appropriate security of PSWP
- Utilize qualified medical personnel
- Operate a patient safety evaluation system (PSES) and provide feedback to participants of the PSO
- Utilizing the Serious Event Analysis (SEA) process to identify the root causes of adverse events

In early 2017 Specialty Surgery Center will begin to participate as a member of the HCA Patient Safety Organization (PSO), LLC. The Administrator will serve as the designated PSO Contact and oversees all activities of the PSO for the center. The Risk/Quality Manager shall serve as the Contact Designee, and the Administrator shall serve as the alternative. The Center will provide patient safety work products (PSWP) documents as requested by the PSO. The center will receive information from the PSES to evaluate opportunities for improving patient safety and quality care. All information submitted will remain confidential within the PSO.

### **Quality Improvement Plan**

The Center maintains an ongoing quality improvement program that has a broad scope to address administrative, clinical, and cost effective performance. The program also addresses patient outcomes, patient care processes, as well as medication, radiation and patient safety. Elements of the program include, but are not limited to a:

- Written plan that addresses the scope of health care services provided by the Center and how the quality improvement plan for these services is assessed
- Interdisciplinary QI committee for the development, implementation, review and oversight of the program. The committee has administrative, clinical and physician participation
- Set of goals and objectives that are reviewed and updated at least annually
- Quality improvement activities such as audits and studies to identify problems with processes or patient care, evaluate them, and develop action plans when indicated. The studies will be done utilizing the ten (10) step process that is current practice in quality performance improvement
- Measurement of data against internal and external benchmarking sources
- Annual reviews of the effectiveness of the program
- Periodic reports to Governing Body that encompasses a summary of the quality improvement activities, findings and process changes if indicated

### **Risk Management and Patient Safety**

#### **Definitions of Potential Risk Issues:**

**Event:** A discrete, auditable and clearly defined occurrence (NQF)

**Occurrence:** The action, fact, or instance of something that happens synonymous with an event; An event, situation, or process that contributes to, or has the potential to contribute to, a patient or visitor injury, or degrade our ability to provide optimal patient care. Reportable occurrences can generally be divided into the following types based on severity: Sentinel events, patient and visitor injuries, [adverse events], near misses (close calls, good catches), and safety concerns.(NPSF)

**Incident:** Synonymous with occurrence or event. An occurrence or event that interrupts normal procedure and can precipitate an untoward or unplanned outcome, or an unusual event that occurs at the facility, such as an

injury to a patient. Involved damage that is limited to parts of a unit, whether the failure disrupts the system or not. (NPSF). A patient safety event that reached the patient, whether or not the patient was harmed (NQF).

**Adverse Event:** Any deviation from usual medical care that causes an injury to the patient or poses a risk of harm. Events include errors, preventable adverse events, and hazards. An incident in which a patient is harmed (WHO). An injury or the risk thereof caused by medical management rather than the underlying disease. An untoward, undesirable, and usually unanticipated occurrence. An act of commission or omission arising during clinical care which causes physical or psychological injury to a patient regardless of severity, (NQF & NPSF). Any injury caused by medical care. An adverse event does not imply "error," "negligence," or poor quality care. It simply indicates that an undesirable clinical outcome resulted from some aspect of diagnosis or therapy, not an underlying disease process (AHRQ). Adverse events may be preventable or non-preventable (WHO).

**Serious Preventable Adverse Events (SPAEE) / Sentinel event:** A sentinel event is a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches the patient and results in any of the following (HCA policy definition):

- Death
- Permanent harm
- Severe temporary harm

In the ambulatory surgical setting, an event is also considered sentinel if it is one of the following:

- Discharge of an infant to the wrong family
- Abduction of any patient receiving care, treatment, and services
- Any elopement (that is, unauthorized departure) of a patient, leading to death, permanent harm, or severe temporary harm to the patient
- Hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities (ABO, Rh, other blood groups)
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any patient receiving care, treatment, and services while on site at the hospital
- Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor, or vendor while on site at the hospital
- Invasive procedure, including surgery, on the wrong patient, at the wrong site, or that is the wrong (unintended) procedure
- Unintended retention of a foreign object in a patient after an invasive procedure, including surgery
- Prolonged fluoroscopy with cumulative dose >1,500 rads to a single field
- Fire, flame, or unanticipated smoke, heat, or flashes occurring during an episode of patient care

**Close Call / Near Misses / Good Catches:** Events or situations that could have resulted in an adverse event (accident, injury, or illness), but did not, whether by chance or through timely intervention. Such events have also been referred to as "near miss" incidents. An example of a close call would be a surgery or other procedure almost performed on the wrong patient due to lapses in verification of patient identification, but caught prior to the procedure (Source: VA Patient Safety Program).

**Reportable Event:** Any event that is mandated to report by regulatory agencies or corporate within defined time frame. (HCA, CMS, FDA, SMDA, and/or local /state agencies).

**Serious Event Analysis (SEA):** A method of problem solving that tries to identify the root causes of faults or problems. The SEA process evaluates the underlying "why's" for the variance and solve problems by attempting to identify and correct the root causes of events, as opposed to simply addressing their symptoms. By focusing on the correction on root causes, problem recurrence can be prevented. An analysis is done *after* an event has occurred. All staff members involved, as well as, the Risk Manager, physicians involved shall participate in the SEA analysis. The SEA process is typically used as a reactive method of identifying event(s) causes, revealing problems and identifying opportunities to reduce the risk of future occurrences. The SEA action plan is reported at the quality meetings, MEC and GB meetings. In 2017 the ASD will be move toward an online program for analysis of serious events called Serious Event Analysis (SEA).

## **Risk Management**

The Center maintains an ongoing risk management program that is designed to protect the life, safety and welfare of the patients and employees. Risk management addresses strategies from the organizational, operational, human resource and liability areas of the organization. Goals of the program include:

- Improving patient safety and reducing risk to patients
- Reducing medical/healthcare system errors and hazardous conditions by creating an environment in which patients, their families, surgery center staff, and medical staff are able to identify and manage actual or potential risks to patient safety
- Reviewing and tracking of all variance reports and litigations for trends
- Reviewing and tracking of all adverse outcomes, near misses (close calls) or sentinel events to identify gaps or opportunities for improvement
- Maintaining a strong credentialing and privileging process and current bylaws that meet community standards
- Keeping abreast of current standards for risk management and adapting practice and policies that are compliant with standards

It is evident through the goals, activities and processes that the quality improvement and risk management programs intertwine and cross all spectrums of the organization. Quality care, as well as patient and employee safety is at the center focus of both programs. The operational linkage between Risk management, Safety, Quality and Infection Control is accomplished through the following mechanisms:

- Issues or trends identified through chart reviews, peer reviews, safety, radiation and infection control rounds are discussed and referred to the appropriate department for evaluation and/or corrective action
- Data from variances, identified trends, adverse events or any events that impact the quality or safety of patient care will be reviewed and referred to appropriate risk and leadership personnel for investigation, analysis and corrective action
- The Risk Manager will review current issues and risk reduction strategies with appropriate personnel and develop a plan of action. This action plan will be reported to MEC/GB.
- The Quality Committee will serve as the oversight committee for Patient Safety and Risk management. Medication Safety and Radiation Safety fall within a subsection of the Quality Committee and will be addressed as indicated.

These plans engage active involvement of all members of the healthcare team, as well as patients, families and physicians, addressing an environment which:

- Encourages recognition and acknowledgment of opportunities to improve quality performance and to reduce risks to patient safety
- Initiates actions to improve processes or reduce these risks
- Encourages internal reporting of what has been found and the actions taken
- Focuses on processes and system
- Minimizes individual blame or retribution for involvement in a medical/health care error; and
- Challenges leaders of the organization to be responsible for fostering a “non punitive” culture of continuous improvement, reducing risk, and creating a safe environment for patients, employees and physicians.

## **Medication Safety**

The Regional HCA Pharmacist oversees the medication practices and processes at the center. Their duties include, but not limited to:

- Conducting medication rounds and audits providing feedback on areas of opportunities
- Collaborating with the center on choice of pharmaceutical vendors and formularies
- Collaborating with the center on policy review and development
- Participating in review of any medication error or diversion
- Assuring controlled substance ordering and monitoring is in accordance to state and federal regulations

All relevant activities are reported through QI/MEC/GB committees

## **Radiation Safety**

This facility utilizes radiation emitting equipment and therefore, by direction of the Governing Body/Board. Radiation Safety will be a subgroup of representatives will be included under the QI/Safety/Risk committee to report radiation safety activities. Key activities are established by the Radiation Right policies identified as CSG.MI.001 Governance and CSG.MI.003 Fluoroscopy:

- Designate an individual that is approved by MEC/GB to oversee the program
- Oversee ongoing measurement, periodic review, and improvement of key radiation safety practices and provide a quarterly report to the QI/Risk/Safety committee
- Periodic maintenance of equipment
- Maintaining exposure time logs
- Communicate relevant radiation safety activities, as necessary, to the staff.
- Serve as a resource for radiation safety as it relates to staff and patient safety/regulatory issues and for the regulatory component of accrediting agencies.
- Educate staff on radiation safety practices

## **Infection Control**

The center conducts an annual infection control risk assessment to identify areas of opportunities to reduce the risk of infections. (See Infection Control Plan) All infection control activities are reported though QI/MEC/GB.

## **Peer Review**

Ambulatory Surgery Centers are required by AAAHC, CMS, and other regulatory agencies to conduct quality improvement and peer review on Medical Staff and Dependent Healthcare Practitioners (DHP). Peer review activities include ongoing random review, specialty specific review and review of events / complications. Whenever possible, peer review is done by a physician of like specialty.

Whenever possible to avoid conflict of interest, peer review cases will be referred to physicians who are not affiliated with the practitioner being reviewed, and no physician will review a patient's care in which she/he has been professionally involved. Provisions are made to have cases evaluated by an outside expert when necessary.

## **Confidentiality**

All quality improvement and peer review activities and data are considered confidential. Any requests for outside sources for any QI, Risk management, Peer Review or credentialing information or reports will be forwarded to the appropriate HCA administrative/corporate staff when indicated.

# **ORGANIZATION STRUCTURE AND PROCEDURE**

## **Role of Leadership**

Leaders play a key role in facilitating improvement and ensuring a safe environment. Specialty Surgery Center leadership includes the Governing Body, Medical Executive Committee; the facility based Medical Director, Administrator, Risk/Quality/Safety/Infection Control designees and Clinical Managers. Leaders foster quality improvement through planning, educating, setting priorities, providing support such as time and resources, and empowering staff as appropriate.

## **Governing Board/Medical Executive Committee**

The Board has the ultimate authority and accountability for the quality and risk programs to ensure that the quality of patient care is provided in an efficient, timely and cost-effective manner. The Governing Body provides support for the improvement strategies and delegates to the Medical Executive Committee and leaderships at each facility, the authority to perform assessment and improvement activities through committees and teams. Quarterly, the Governing Body shall receive a report on the activities of the quality and risk management programs. These functions include, but not limited to:

|                                 |                 |
|---------------------------------|-----------------|
| Infection Control Coordinator:  | Name Here RN    |
| Patient Safety Committee Chair: | Name Here RN    |
| Radiation Safety Officer        | Name Here, M.D. |

**Key activities:**

- Establish and oversee ongoing measurement, periodic review, and improvement of key processes
- Assist in identifying opportunities for improvement and participate in QI studies. In addition conduct re-audits to assure the changes have remained effective
- Participate in Ambulatory Surgery Division quality, risk and patient safety initiatives including Best Practices
- Communicate relevant activities, as necessary, to the staff
- Support a system that builds and reinforces a non-punitive culture for reporting and reducing errors
- Serve as a resource for patient safety/regulatory issues and for the regulatory component of accrediting agencies
- Provide periodic reports on quality improvement activities to Medical Executive Committee and Governing Board
- Educate staff on quality, risk and patient safety activities

**Quality Studies**

Quality studies will reflect the scope of services, priorities and findings from performance monitoring or other sources. Studies will address clinical, administrative, and/or cost of care issues and will be documented in the (10) step format which includes:

- State the purpose of the process improvement opportunity/purpose of the study
- Identify the goal of the study
- Description of data to be collected and established criteria
- Evidence of Data Collected
- Data analysis
- Comparison of actual data to goal
- Development of corrective action and execution timeline
- Re-measurement and monitoring to determine if actions have been achieved and improvements are sustained
- Development of additional corrective actions if needed
- Communication of results to appropriate personnel, MEC and Governing Board

**Staff Education**

The staff receives an orientation on quality improvement, risk management, infection control and patient/employee safety initiatives to be completed within 30 days of employment as part of new employee orientation. At least annually, a review of the process and accomplishments will be conducted through an appropriate mechanism. Clinical leaders will receive periodic training on any updates to initiatives, new statistical reporting or other information as indicated.

**Ongoing Measurement**

Ongoing measurement is overseen by the Quality/Risk Manager in collaboration with the Facility Administrator and Medical Director. These are outlined on the addendum to this plan.

**Design of New Processes**

When Specialty Surgery Center is considering a new process (for example, providing a new patient service, constructing a new facility, or redesigning an existing service), a multidisciplinary team will be convened to ensure that the process considers:

- The organization’s mission, vision and strategic plans

- Patient and community needs
- Information about performance and outcomes of the process (including information from reference data bases)
- Current evidence based practice and research
- Current regulatory standards

### **Periodic Assessment and Improvement**

Based on ongoing review of measurement data, this plan provides for assessment of data against historical trends and available benchmarks whenever possible. All measures are reviewed quarterly by the Quality Committee, Medical Executive Committee and Governing Board.

Assessment is automatically triggered for any of the following:

- By any sentinel event
- By important undesirable single events, which include at a minimum:
  - Credentialing or bylaw violation
  - “Close call / Near miss” event
  - Significant injury or death
  - Any significant untoward event during moderate sedation or anesthesia
  - Any serious adverse drug or medication error event
  - Any significant hazardous condition
  - Any significant infection control breach or trend
- By important undesirable patterns or trends, which include at a minimum:
  - Staffing effectiveness or clinical issues
  - Any quality measure that varies substantially from an expected range
  - When the organization’s performance significantly varies below that of other ambulatory surgery settings or recognized standards

Select quality data is submitted to corporate and trended with internal benchmarks across the company. This information is shared at the facility, division and corporate level. This information is used to develop corporate wide quality and risk initiatives and for external benchmarking in the ambulatory surgery arena.

In addition to ongoing measurement, the Center may at any time proactively assess its culture of patient safety as well as specific processes of care that have been within the healthcare industry as having the potential to harm patients. Also the Center may periodically assess processes using tools provided from a variety of outside sources to identify potential risks to patients and opportunities for improvement.

## **ONGOING QUALITY AND RISK MANAGEMENT PERFORMANCE MEASUREMENTS**

### **Customer Satisfaction Surveys**

- Patient surveys done after discharge (written survey, call, email)
- Post op phone calls
- Employee Surveys as designated by corporate
- Physician surveys as designated by corporate
- Patient complaints (response and corrective action)
- Physician complaints (response and corrective action)

### **Patient Flow**

- On time start of surgical cases
- Consistent delays in surgeries
- Turn around time
- Cases pulled correctly

- Equipment issues
- Cancelled cases (pre and intra-op )

### **Anesthesia Care**

- Conscious sedation monitoring standards are standardized and consistent
- Anesthesia Care: complication rates for general/regional, assessment and plan of care developed prior to the start of anesthesia, physiological monitoring
- Annual malignant hyperthermia drill

### **Pre-op Care**

- Completion of One Medical Passport prior to day of procedure
- Appropriate follow through on obtaining pre-op diagnostic studies per anesthesia guidelines and follow up on abnormal reports
- Pre op instructions
- DVT assessment –including use of SCD when indicated
- Falls Assessment
- Sleep Apnea assessment and Incentive Spirometer started on designated patient population (if applicable)

### **Intra-op Care and Processes**

- Time Out/correct site process
- Retained foreign bodies
- Wrong sites
- Near misses / close calls
- Blood usages
- Complications

### **Complications**

- Unexpected complications
- Post op DVT/PE
- Transfers to acute care (Direct Hospital Admits/ ER Transfers)
- Hospitalization or ED visit within 72 hours of discharge (Indirect Hospital Admits / ER visits)
- Variances of expected performance through clinical record review
- Mortality within 7 days of procedure or related to procedure.
- Falls
- Burns
- Loss of Vision

### **Resuscitation / Emergency Response**

- Code blue drill(s) - Adult and Pediatric if there is a pediatric population
- Malignant Hyperthermia drill
- Emergent Blood drill
- Crash carts, Malignant Hyperthermia carts checked according to policy

### **Diagnostics Results**

- Pre-op diagnostic studies clinically reviewed and documented.
- Pre- and post operative diagnosis agreement

### **Medication Usage**

- Utilize “One Source” truth for allergy documentation
- Medication Reconciliation process

- Use of Medication Administration Record (MAR) for consistency in medication documentation
- Medication errors
- Adverse drug reactions
- Appropriate labeling of high alert and look alike/sound alike medications
- Independent double checks with administration of designated high risk medications
- Controlled substance audits
- External pharmacy audits
- Surveillance of security of medications and needles
- Verbal and telephone orders are read back and verified
- Appropriate medication ordering, preparation and administration of medications.
- Utilizing approved compounding pharmacies and continual monitoring for FDA alerts.

### **Infection Control**

- Annual infection control risk assessment (ICRA)
- Proactive influenza vaccination program
- Compliance with hand washing standards- direct observation.
- Monitor compliance with cleaning protocols
- No use of razors except for urology cases
- Appropriate timing of pre-op prophylactic antibiotic administration
- Post-op infections (rate, type of organism, environmental causes) within 30 days of surgery
- Implant monitoring for 90 days
- OSHA training during orientation and annually
- Employee, physician, allied health and patient exposures
- Appropriate sterilization processes for instrumentation (quarterly audits – HCA BoosterPak )
- Appropriate endoscopy re-processing if applicable (quarterly audits – HCA BoosterPak)
- Monitoring IUSS rates
- 24/7 Monitoring of temperature and humidity of designated rooms

### **Provision of Care/ Medical Record Review**

- Appropriate credentialing of medical staff
- Physician H&P on chart prior to start of surgery
- H&P reviewed on day of surgery and updated if indicated to include patient acceptable candidate for ASC setting
- Required elements of assessment documented
- Pain assessment on admission, during Phase I and prior to discharge
- Fall assessment during admission process and discharge
- Operative reports: timeliness, content, intra-operative progress note completion
- Appropriate monitoring during IV conscious sedation by non-anesthesia personnel (if applicable)
- Timely medical record completion
- Medication Reconciliation completed

### **Equipment**

- Routine preventive maintenance
- Compliance with process of notification and removal of malfunctioning equipment.
- Initial and annual competencies

### **Safety**

- Surveillance rounds and corrective follow up on deficiencies
- Process for notifying and following through on recalls
- Periodic checks for life safety and environmental equipment

- Fire drills
- Emergency preparedness drills
- Infant/child abduction drill
- Sharps prevention program
- Incapacitated healthcare provider drill
- Active Shooter drill

### **Radiation Safety**

- Staff and physician training in radiation safety
- Physician and staff training in use of C-arms
- Compliance with radiation safety measures- direct observation
- Appropriate use of radiology equipment and shielding
- Dosimeter badge reports

### **Patient Safety**

- Use of two patient identifiers- direct observation
- One source truth for allergies noted and communicated
- Time out verification for procedures
- Surgical Site marking
- Appropriate use of abbreviations
- Latex allergy precautions
- Falls prevention guidelines
- DVT assessment
- Close calls
- Hand off communication

## **EVALUATION OF THE 2016 QUALITY PROGRAM**

### **1. Evaluation of 2016 Quality/Risk/Patient Safety Plan**

- 100% Grievances entered into Risk Management workbook **and addressed** within time frame dictated by policy in 2016. (# grievances within time frame / #total grievances entered)
- 99% staff that received annual Risk Management In-service in 2016. (# staff with in-service/ total number staff at time of in-service)
- 100 % compliance with 2016 Risk Reduction Program (#components completed/#components required)
- 100 % of the HCA High Level Disinfection & Central Sterile Processing Boosterpak deliverables met
- 1 ( # ) Sentinel Events in 2016 and SEA completed.
- Comments: SEA was completed and reviewed by DQRM. Plan was accepted and process improvements were noted and implemented.

### **2. Goals – met / not met (if not met – Explain)**

#### **Division Goals**

- To continue to reduce the number of sharp occurrences. (In 2014 the Division reported 20 occurrences and in 2015 the Division reported 17 sharp occurrences.)
- To continue to reduce the number of falls. (In 2014 there were 25 falls reported within the Division and in 2015 with the implementation of the falls toolkit, the falls reported rate decreased to 14 reported falls in 2015.)

- To complete the 2016 Risk Reduction Program Initiatives. **Completed.**
- To meet the 2016 ASD Clinical Objectives. – **Completed/Met**

### **Center specific Goals**

- To reduce the number of falls within the facility – **Met.**
- To reduce sharp incidents within the facility – staff will review systems by 3<sup>rd</sup> quarter 2016 – **partial.**
- To continue to monitor for compliance with past agenda it4ems to ensure full compliance. – **Met.**

## **2017 QUALITY / RISK GOALS**

### **2017 Clinical Agenda**

- Medication Safety – all patients are weighed upon admission and documented in kg
- Medical Director Engagement – Conference attendance; Conduct Stanford Emergency Drills
- Infection Control – Certification for Sterile Processing and Endoscope processing
- Tissue Management – Perform tissue handling gap analysis; complete action items; staff education
- Unintended Retained Surgical Item Prevention – Review policies; update OR record for policy compliance; Use of standardized white boards for all surgical procedures.

### **2017 Division Goals**

- To continue to reduce the number of sharp occurrences by implementing the sharps safety toolkit. In 2016 the Division reported an increase in sharp occurrences, in 2015 the Division reported 15 sharp occurrences.
- To decrease the Direct Hospital Admission rate per thousand by identifying commonalities/trends and increasing the use of One Medical Passport at the centers
- To sustain 100% compliance with IV Prophylactic Antibiotic Administration during 2017
- To complete the 2017 Clinical Safety Improvement (CSIP) Plan (Risk Reduction Program Initiatives).
- To meet the 2017 ASD Clinical Objectives

### **2017 Center Goals**

- Perform monthly intraocular audits; in OR and in place
- Embelish usefulness with One Source documents; complete binder with most utilized procedures/instruments for immediate reference.
- Perform monthly facility rounding tool.
- Increase utilization of One Medical Passport by 20% by the end of the 2<sup>nd</sup> quarter of 2017.
- ICRA review annually.

# Kindred Hospital Las Vegas Flamingo Campus

## PATIENT SAFETY PLAN

DATE: 02/19/18

---

This plan was created and revised by the Kindred Hospital Las Vegas Flamingo Campus Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**  
**Kindred Hospital Las Vegas Flamingo Campus**  
2250 East Flamingo Road  
Las Vegas, Nevada 89119

## Commitment to Patient Safety

---

Kindred Hospital Las Vegas Flamingo Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Kindred Hospital Las Vegas Flamingo Campus Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

### Scope and Purpose

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Kindred Hospital Las Vegas Flamingo Campus are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Kindred Hospital Las Vegas Flamingo Campus has developed this Patient Safety Plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The

core principles of this plan include:

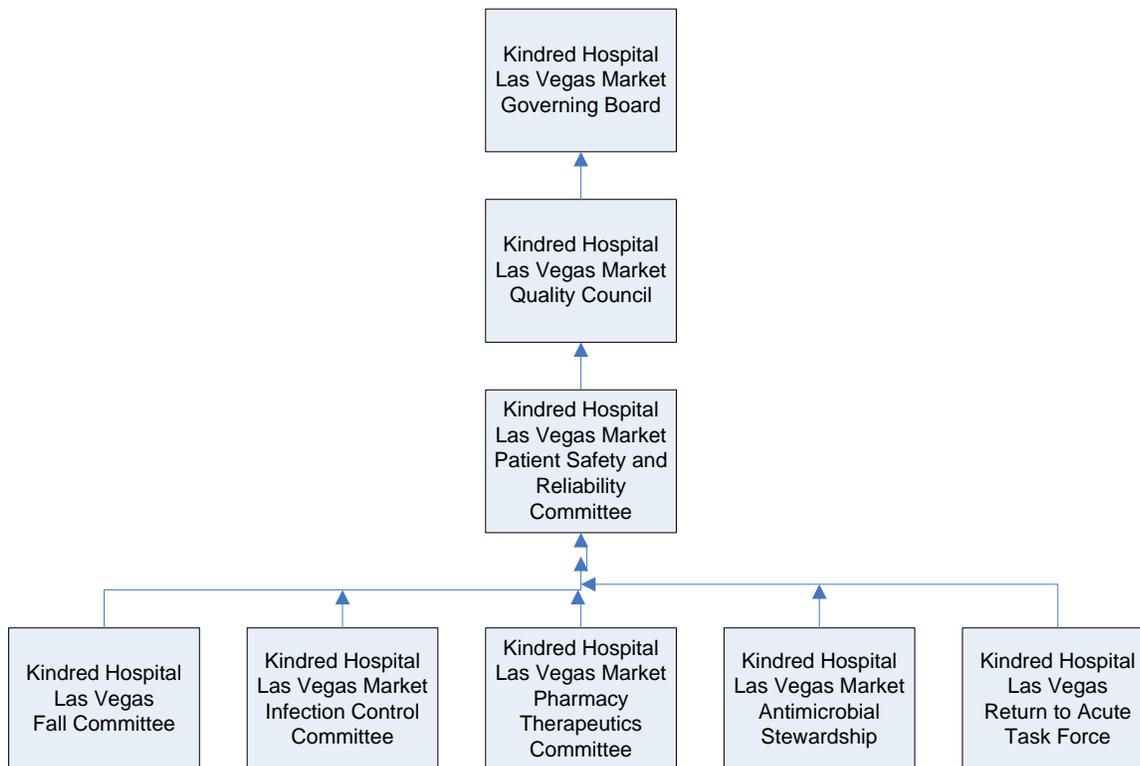

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;

- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

RCA Team Leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

RCA Facilitator Responsibilities

- Provide vision and leadership to the Root Cause Analysis process
- Work with the Director of Quality Management to assure process changes are implemented
- Guide the staff in the process of discovery and mitigation of future process failures

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans
- Provide fiduciary responsibilities

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

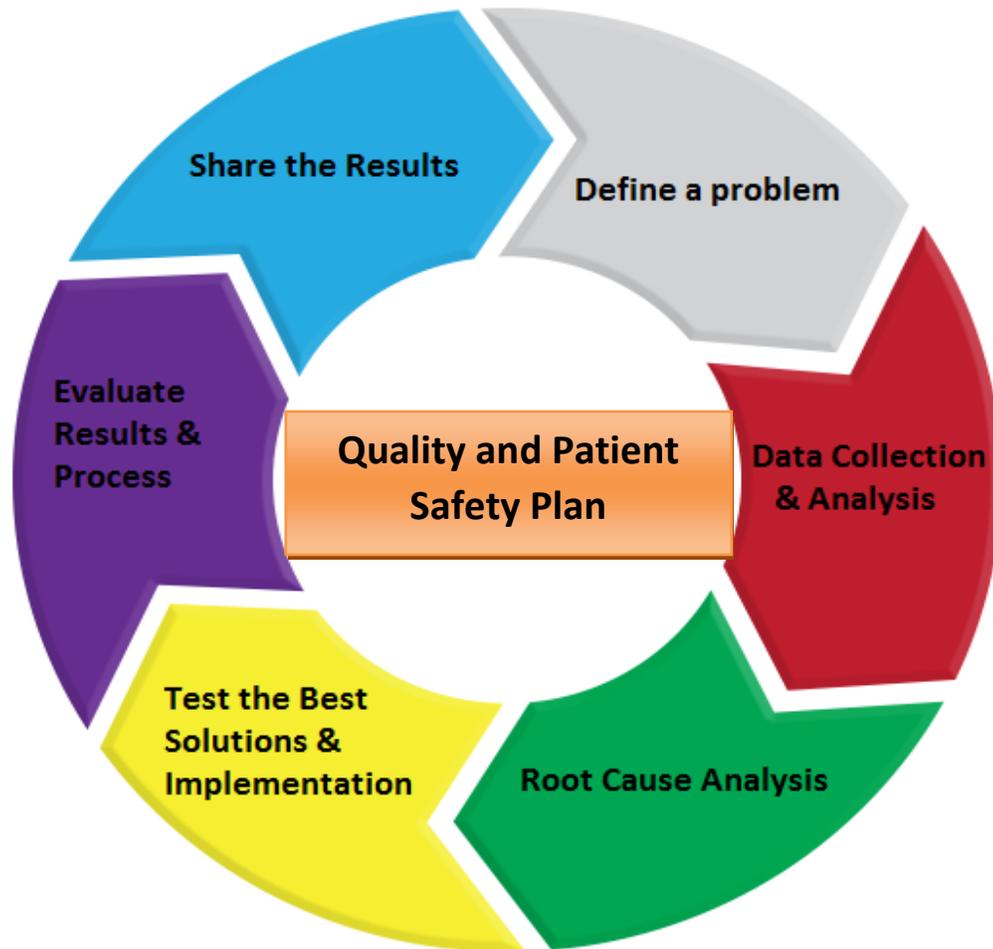

| Objective                | Goals                | Plan                                                                                                                                                                                                                                                                                                     | Planned Completion Date | Responsible Party                                 |
|--------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|---------------------------------------------------|
| <b>CLABSI Prevention</b> | Reduce CLABSI by 10% | <ol style="list-style-type: none"> <li>1) Use Tegaderm Dressings</li> <li>2) CHG Bathing Program</li> <li>3) Staff education and competencies on hire and annually thereafter</li> <li>4) Develop nurse-driven protocol for discontinuation of lines</li> <li>5) RCA performed for each event</li> </ol> | 12/31/18                | ICP/CCO                                           |
| <b>CAUTI Prevention</b>  | Reduce CAUTI by 10%  | <ol style="list-style-type: none"> <li>1) Staff education and competencies on hire and annually thereafter</li> <li>2) Evaluate use of external female urine systems</li> <li>3) RCA performed for each event</li> </ol>                                                                                 | 12/31/18                | ICP/CCO                                           |
| <b>NOWPU Prevention</b>  | Reduce NOWPU by 10%  | <ol style="list-style-type: none"> <li>1) Use of Patient Safety Index to assure HAPU prevention</li> <li>2) Braden Scale, Repositioning, Assessment and Wound Education to Patient Family Score</li> </ol>                                                                                               | 12/31/18                | Wound Care Coordinator/<br>Chief Clinical Officer |

|                                  |                                                          |                                                                                                                                                                                                                                                                                                                   |          |                                                |
|----------------------------------|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------------------------------|
|                                  |                                                          | 3) RCA done for each event                                                                                                                                                                                                                                                                                        |          |                                                |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Kindred Hospital Las Vegas Flamingo Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, which we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Kindred Hospital Las Vegas Flamingo Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

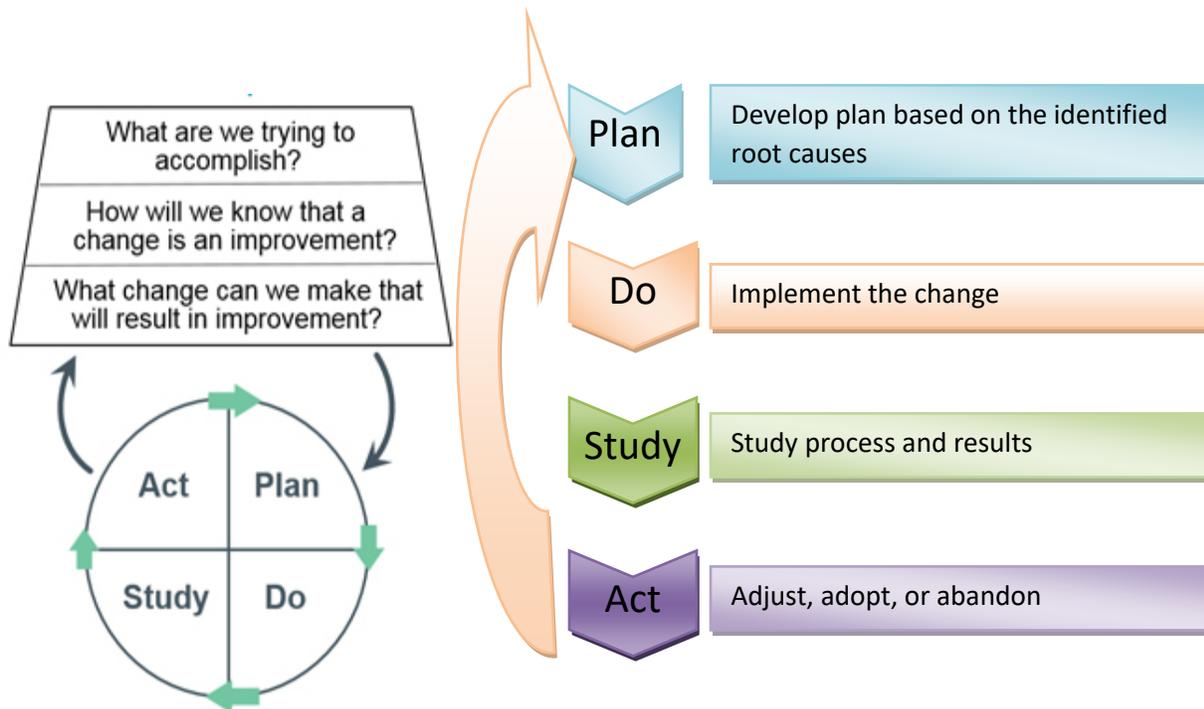

### Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
- How will you measure the impact of the test?
- What is your plan to collect the data needed?
- What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Kindred Hospital Las Vegas Sahara Campus is using the Kindred Event Reporting System for tracking the incident and sentinel events, NHSN for reporting healthcare infection data, WebIZ for reporting vaccinations, and Business Warehouse and Meditech for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

|         |           |          |
|---------|-----------|----------|
| Monthly | Quarterly | Annually |
|---------|-----------|----------|

## Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

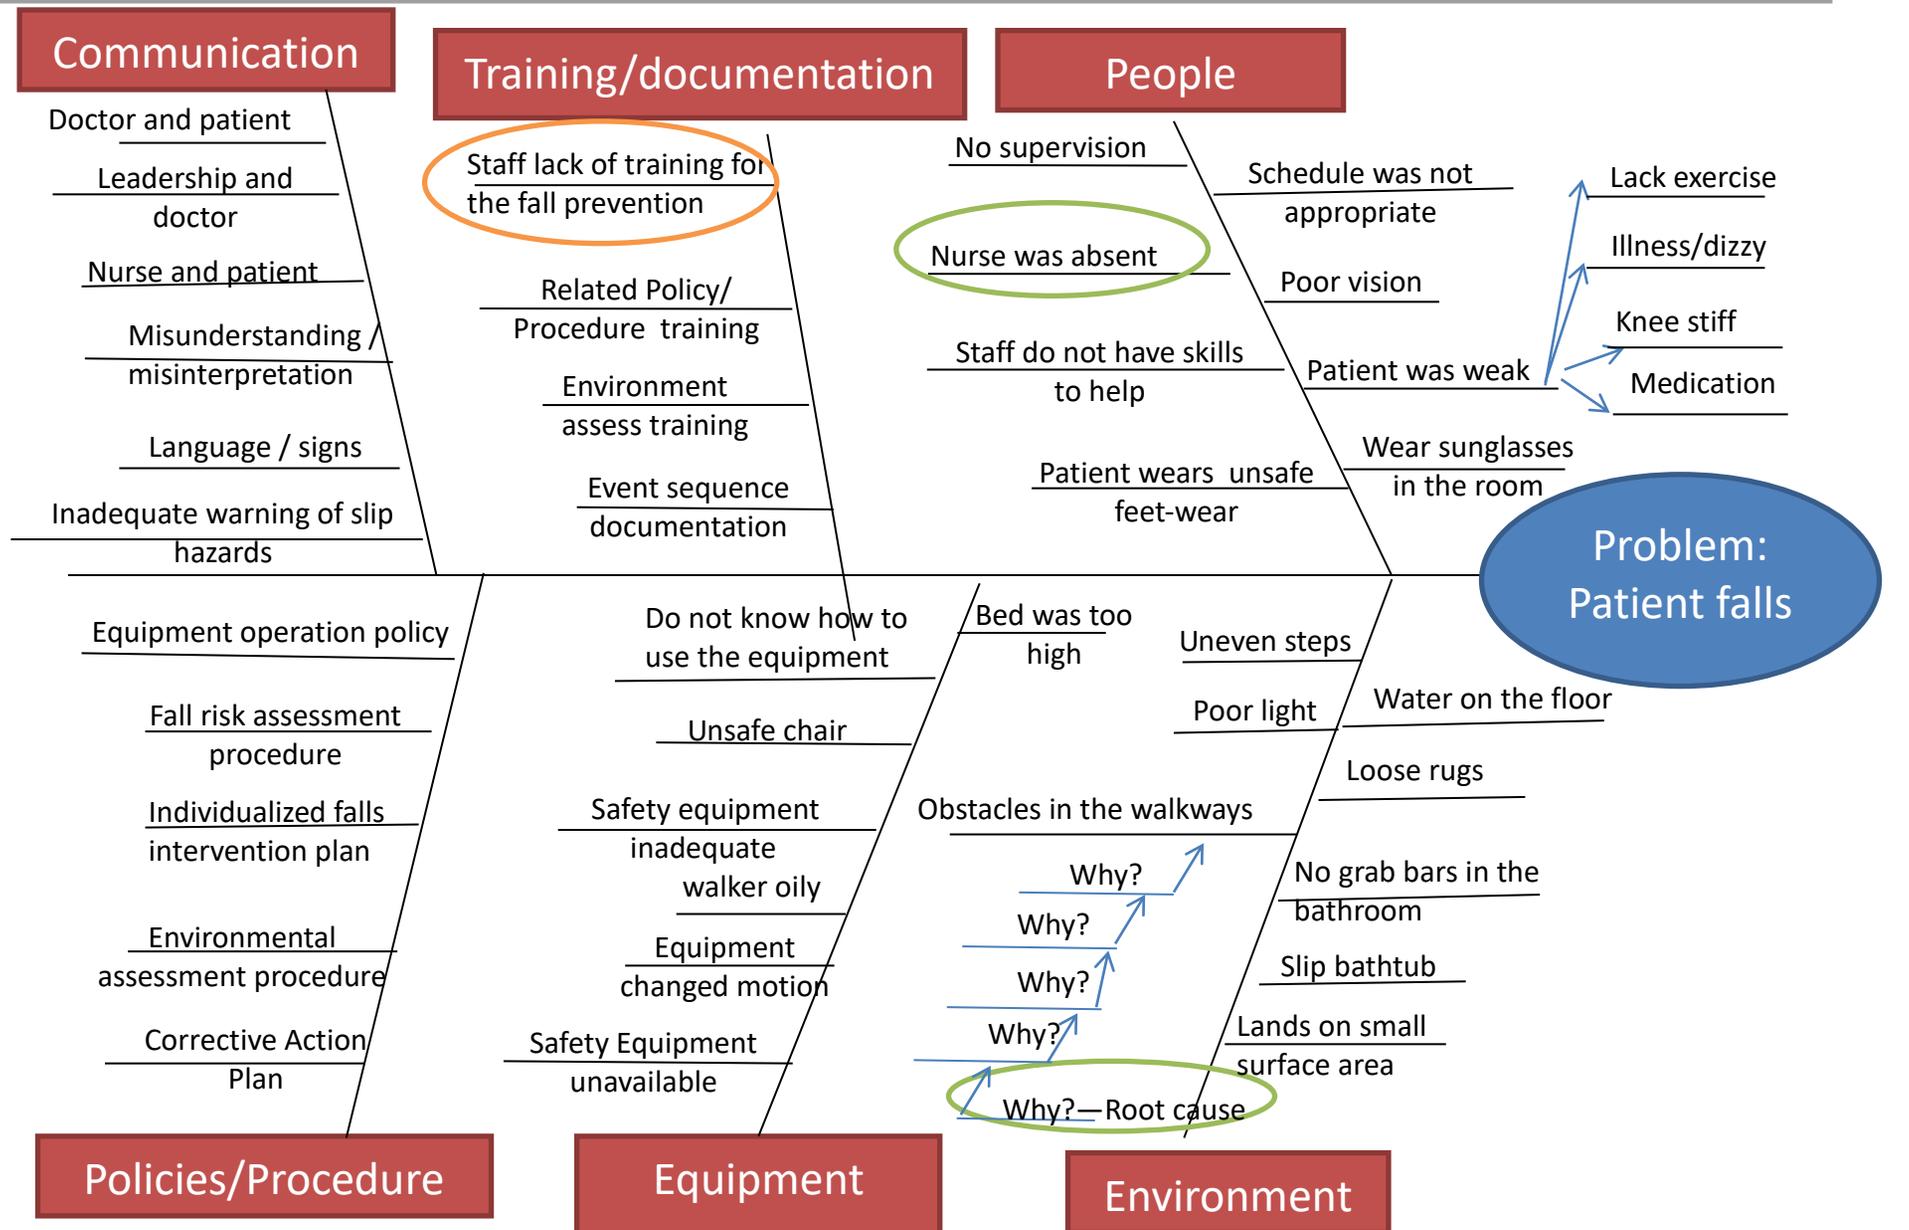

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                         | Q1 2015                                                                              |

| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                              |                                                                                            |                                                                                                                                 |                                                                                      |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.                                                                                                               |                                                                                            |                                                                                                                                 | <b>Implement Trigger Tools.</b><br>Develop automated surveillance reports in Cerner. |
|                                                                                                                                                                     | b. Establish an automated surveillance process.                                                                                                              |                                                                                            | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                      |                                                                                      |
| <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                      | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.                                                         | Implemented e-MERS & PSO with UHC.                                                         | Create process for reviewing & closing reports in e-MERS.                                                                       |                                                                                      |
|                                                                                                                                                                     | b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.                                     |                                                                                            | Increase number of events reported by 10%.                                                                                      |                                                                                      |
|                                                                                                                                                                     | c. Establish a process for providing feedback regarding reported events.                                                                                     |                                                                                            | Create process for communicating outcome of reported events.                                                                    |                                                                                      |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.               |                                                                                            | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan. |                                                                                      |
|                                                                                                                                                                     | b. Establish a recognition program that rewards safe practices.                                                                                              |                                                                                            | Include patient safety presentation in monthly New Employee Orientation.                                                        |                                                                                      |
|                                                                                                                                                                     | c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.                                                                        |                                                                                            | Develop 'Great Catch' awards program.                                                                                           |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            |                                                                                                                                 | Re-evaluate culture of safety and develop action plan.                               |
| <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                                | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.                                                                          |                                                                                            | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee.                                                  |                                                                                      |
|                                                                                                                                                                     | b. Facilitate the development of action plans associated with measures not meeting benchmarks.                                                               | Complete 2014 Leapfrog Safety Survey.                                                      | Establish & implement a plan to improve performance of each leap.                                                               |                                                                                      |
|                                                                                                                                                                     | c. Assess and improve processes related to hand-off, transition and communication                                                                            | Develop method to track & report departmental progress and compliance of RCA action plans. |                                                                                                                                 |                                                                                      |
| <b>5. Charter Safety Programs</b> through teams, workgroups or projects.                                                                                            | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices. |                                                                                            | Establish Patient Safety Council.                                                                                               |                                                                                      |
|                                                                                                                                                                     | b. Reduce and eliminate variation in care.                                                                                                                   |                                                                                            | Establish workgroups focused on medication safety, reducing patient falls & hospital acquired pressure ulcers.                  |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            | Revise or develop policies, procedures and protocols.                                                                           |                                                                                      |

| 1. List the tasks needed to set up this test of change.                         |  |               |  |
|                                                                                 |  |               |  |
| 2. Predict what will happen when the test is carried out.                       |  |               |  |
|                                                                                 |  |               |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

|                                              |                                                                                    |
|----------------------------------------------|------------------------------------------------------------------------------------|
| Did you meet your measurement goal? Explain. | <b>Summarize what was learned: success, failure, unintended consequences, etc.</b> |
|                                              |                                                                                    |

**Act:** (Describe what you concluded from this cycle.)

|                                                                            |                                                                                                           |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Based on what was learned, please indicate what action will be considered. | <b>Describe what modifications to the plan will be made for the next cycle based on what you learned.</b> |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle       |                                                                                                           |
| <input type="checkbox"/> Adopt: expanding changes throughout organization  |                                                                                                           |
| <input type="checkbox"/> Abandon: change approach and repeat PDSA cycle    |                                                                                                           |

| <b>Items</b>                                                                            | <b>Description</b> |                      |  |
| 1. What is your goal?                                                                   |                    |                      |  |
| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

## Appendix F: Policy Example

[Reference: Hospital Policies. MERCY Hospital. <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>]

|                                                                                   |                                                                                   |                                                   |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------------------------------|
|  | HOSPITAL POLICY AND INFORMATION MANUAL                                            |                                                   |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY<br/>Page 1 of 2</p>                       | <p>Date Issued:<br/>Date Last Revised:<br/>Next Review Date:<br/>Approved By:</p> | <p>07/01 08/14<br/>08/17<br/>Policy Committee</p> |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.
