Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

## Chapter 11 Safety

### Safety

---

#### **POLICY:**

It is the policy of this Center in accordance with federal law, that all activities be conducted in the safest manner possible to protect our patients, our employees, the public, and to preserve our facility.

Safety is always to take precedence over expediency or shortcuts, and every attempt must be made by all employees to remove, correct, and/or report conditions that could cause accidents.

Exercise caution at all times in carrying out your duties. As you go about your work, you may observe unsafe conditions in the Center. If you cannot correct them yourself, report what you have seen to your supervisor and see that a warning sign, if necessary is posted.

You must also be on the lookout for fire hazards, which must be reported. In addition, be sure that your supervisor has explained your specific responsibilities in case of a fire, fire drill, or any other emergency condition.

It is the intent of all employees of this Center to provide services which directly and indirectly provide care needed by the patient and their significant others for whom we are responsible while within the Center until discharged or transferred from the premises.

We, therefore, urge employees to work cooperatively to achieve a functioning safety and health program to guard against injury and illness to themselves and to protect our patients from injury or the augmentation of existing illness.

#### **OBJECTIVE:**

To provide the safest facility possible to the patients, employees, and the public.

#### **PROCEDURE:      General Safety**

##### **Central Supply**

1. Proper ventilation and adequate lighting must be maintained at all times.
2. Any accident or injury, no matter how slight, must be reported immediately and an incident report is to be filled out by the employee involved and signed and witnessed by the Director of Nursing or current nurse in charge.
3. Always use the proper step ladder for reaching high places. Do not use chairs, boxes, makeshifts on which to stand. Use hand rails.
4. All personnel are to be instructed in the proper methods of lifting and carrying. Improper lifting, reaching, climbing, or carrying are discouraged due to potential injuries.
5. Floors are to be kept clear and dry. Wipe up spills immediately.
6. Traffic areas must be kept clear of equipment and supplies.
7. Fire fighting equipment must be kept unobstructed.
8. Extreme caution must be exercised in the handling of all instruments. Pick up all instruments by their finger grips.
9. Report any unsafe condition that is observed.
10. Pick up or wipe any foreign matter found on the floor.

## Chapter 11 Safety

### Soiled Utility

1. All washer materials must be discarded according to established procedure.
2. Gloves must be used for all cleaning. When hand washing any items with a scrub brush, keep the item and the brush below the surface of the cleaning solution in the sink. This will prevent the spraying and spreading of organisms that are on the item into the air and onto yourself.
3. Do not wear jewelry.
4. Never lift anything that cannot be lifted comfortably and safely. Ask for help whenever necessary.
5. Do not pick up broken glass with your hands. Follow the procedure listed below:
  - A. Sweep up glass that has broken on the floor.
  - B. Use small forceps or tweezers to get glass out of the sink drain.
  - C. Wipe glass off counter top with damp cloth, towel, or cotton.
  - D. Broken glass – all glass can be discarded in the sharps container for needles, razors, and scalpels.
    - 1) Needles: Discard into sharps container in decontamination area.
    - 2) Scalpels: NEVER discard into waste basket. Sharps container also available in clean preparation area.
    - 3) Razors: Discard into sharps container in decontamination area.
  - E. Broken glass adapters in rubber tubing is a danger to the processing employee, the patients, and the equipment. We cannot be positive that all the glass splinters have been removed from the inside of the tubing. Tubing in this condition should be disposed of.
  - F. Handle all instrument trays carefully. Remove towels carefully, inspect thoroughly, watch for falling needles, knife blades, and broken glass.
6. Wear autoclave glove to open door of washer/sterilizer. Allow residual steam in chamber to escape.
7. Be extremely careful and alert to water on the floor – wipe up any water spots.

### Clean Utility

1. DANGER HOT Remember that sterilizers and cart wash are very hot. Sterilizer jacket temperature reaches 270-275 F.
2. When opening door of autoclave, employee should step back away from the door to avoid being burned by escaping steam. Always cover hands when removing carts that have been steam sterilized.
3. Never lift more than one full instrument tray at a time.
4. Watch for SHARP or SEMI-SHARP instruments (scissors, shears, chisels, towel clips) while sorting them. Always grasp instruments by the finger grip end.
5. Employees should never push against walls when stocking them.
6. Carts are not to be overloaded. If you cannot easily propel a cart over carpeting, it is overloaded. Load carts so that you can see over, thru, or around the cart. If a cart should begin to tip over, DO NOT try to hold it – let it go. Supplies can be replaced – your back cannot.
7. NEEDLES, SCALPELS, RAZORS – discard into containers in the soiled utility. NEVER discard into wastebasket. Container also available in clean utility area.
8. GLASS – All glass can be discarded into any plastic lined wastebasket. Broken glass must be discarded in the sharps container for needles, razors, and scalpels.

### Equipment Safety

1. All equipment used must be checked for electrical and mechanical safety prior to use.
2. Defective equipment must be removed from the area and repaired and recertified prior to use.
3. All equipment must be maintained in accordance with manufacture's recommendations and preventive maintenance schedules.
4. All electrical equipment that comes into patient contact will be inspected on a bi-annual basis.
5. Documentation of inspections and preventive maintenance must contain the date of inspections and/or service, the type of service performed, and the signature of person performing the inspection or service.

## Chapter 11 Safety

6. All personnel must be trained in the handling, care, and use of center equipment and supplies.
7. Manufacturer's safety and inspection booklet must be on file and available in the center.
8. All personnel must be warned of any potential hazards in the use or handling of equipment. This includes electrical, mechanical, chemical, gas, or any other known hazard.
9. All drawers should be kept clean. Do not mix sharp instruments or needles with other instruments. Keep each type of instrument in separate places.
10. Never use contents of an unlabeled bottle. Unlabeled containers shall be discarded.

### Electrical Equipment (Safety and Use)

1. DO NOT connect or disconnect any electrical operated equipment to an electrical outlet with wet or moist hands. Inspect all cords and plugs before inserting into electrical outlet.
2. All electrical equipment shall be equipped with an approved 3-prong ground plug.
3. All power cords shall be kept clear of the plumbing fixtures, water pipes, radiators, and other equipment in contact with the ground.
4. Plug adapters or cheater plugs shall never be used.
5. Any electrical wire with cut, broken, or frayed insulation shall be removed from service immediately. Tag equipment "Do Not Use – in Need of Repair"

### BODY MECHANICS

1. Keep body in a straight line.
2. Carry body close to the body. This prevents shoulder tension. There are seven basic steps to be followed in any type of lifting procedure:
  - A. Use your thigh muscles
  - B. Keep spine straight
  - C. Divide weight between two hands
  - D. Firm, natural footing
  - E. Get as close to the object as possible
  - F. Squat or bend knees, then straighten
  - G. Bring weight up against your body
3. Here are some suggestions which may prove helpful in developing good body mechanics. Some of these are repetitious of the seven listed above:
  - A. Keep chest up and forward
  - B. Maintain normal spine curves
  - C. Stand with feet separated, toes pointed ahead, one foot forward for balance.
  - D. In all activity, keep weight balances over base of support
  - E. Prepare muscles for action – stabilize position of pelvis by setting abdominal muscles.
  - F. Use large leg muscles and thigh muscles, rather than back muscles, when lifting.
  - G. Stand close to task, flex hips and knees for task requiring stooping or bending; have work at elbow height when possible.

## Chapter 11 Safety

### FILLING REPORTS OF ADVERSE EVENTS

- A. Reports are filed under Med Watch, the FDA Medical Products Reporting Program.
- B. Reports should be filed for serious adverse events and product problems, not only with medical devices but also with human drugs, biologics (except vaccines), special nutritional products, and other products regulated by the FDA. (See Med Watch Mandatory Reporting Form Code Manuals and federal regulations).  
\*Although all of the above products can be filed on the mandatory form, only medical devices are considered mandatory as of Fall, 1993.
- C. Med Watch is divided into two components, mandatory reporting and voluntary reporting. Each type of reporting has a separate form to be completed. As of December, 1993, Mandatory reporting is done on Form 3500A and Voluntary reporting is done on Form 3500 (the yellow form).
1. Mandatory Reporting – Form 3500A
- \* Refer to Med Watch Instructions Booklet and Code Book
    - \* Reportable deaths to BOTH the manufacturer and the FDA
    - \* Report serious illness or serious injury to the manufacturer if known (if manufacturer is unknown, then report to FDA).
    - \* Send a semiannual summary to the FDA for all reports submitted to manufacturers and/or the FDA (January 31 and July 31)
2. Voluntary Reporting – Form 3500
- \* Refer to Voluntary Reporting Packet
    - \* Report adverse events or product problems to manufacturer or to the FDA. If you report to the manufacturer, they are required by law to report to the FDA.
    - \* Examples of other problems to report: Defective devices, inaccurate labeling, packaging, or product mix up, and contamination problems.
- D. Reports may be sent by mail (see address on forms) or by fax (see number on forms)
- E. General information
1. A semi annual report does not need to be filed if no reports were reported.
2. If a patient brings their own medical device to a facility (i.e. a wheelchair), and the device causes or contributes to a patient injury or death, the facility is responsible for reporting the event.
3. The outcome required intervention to prevent permanent impairment/damage is not intended to be used for adverse events that disappear after a medication was discontinued, the dosage was altered, or if the only intervention was to treat the patient with a routine prescription drug. The outcomes used only when you suspect that the use of a medical product may have resulted in a condition that required medical or surgical intervention to preclude permanent impairment or damage to a patient. For example, burns from radiation equipment, breakage from an orthopedic screw, Acetaminophen hepatotoxicity
4. Report even if you are unsure that the medical product caused the adverse event. If there is uncertainty if an adverse event meets the definition of serious and you feel it is something the FDA should know, report it.

It is the policy of this center to protect the employees and patients from violent situations.

#### OBJECTIVE:

Surgical Arts Center is committed to preventing workplace violence and to maintaining a safe work environment. Surgical Arts Center has adopted the following guidelines to deal with intimidation, harassment or other threats of or actual violence that may occur onsite or offsite during work-related activities.

#### PROCEDURE:

All employees, customers, vendors and business associates should be treated with courtesy and respect at all times. Employees are expected to refrain from fighting, "horseplay" or other conduct that may be dangerous to others. Conduct that threatens, intimidates or coerces another employee, customer, vendor or business associate will not be tolerated. Surgical Arts Center resources may not be used to threaten, stalk or harass anyone at or outside the workplace. Surgical Arts Center treats threats coming from an abusive personal relationship as it does other forms of violence.

Indirect or direct threats of violence, incidents of actual violence and suspicious individuals or activities should be reported as soon as possible to a supervisor, human resources (HR) or member of the Surgical Arts Center

## Chapter 11 Safety

management team. When reporting a threat or incident of violence, the employee should be as specific and detailed as possible. Employees should not place themselves in peril, nor should they attempt to intercede during an incident. Employees should promptly inform the administrator of any protective or restraining order that they have obtained that lists the workplace as a protected area. Employees are encouraged to report safety concerns with regard to intimate partner violence. Surgical Arts Center will not retaliate against employees making good-faith reports. Surgical Arts Center is committed to supporting victims of intimate partner violence by providing referrals to community resources and providing time off for reasons related to intimate partner violence.

### Investigations and Enforcement

Surgical Arts Center will promptly and thoroughly investigate all reports of threats of violence or incidents of actual violence and of suspicious individuals or activities. The identity of the individual making a report will be protected as much as possible. The Surgical Arts Center will not retaliate against employees making good-faith reports of violence, threats or suspicious individuals or activities. To maintain workplace safety and the integrity of its investigation, The Surgical Arts may suspend employees suspected of workplace violence or threats of violence, either with or without pay, pending investigation.

Anyone found to be responsible for threats of or actual violence or other conduct that is in violation of these guidelines will be subject to prompt disciplinary action up to and including termination of employment.

The Surgical Arts Center encourages employees to bring their disputes to the attention of their supervisors or the HR department before the situation escalates. The Surgical Arts will not discipline employees for raising such concerns.

To provide a safe workplace for the employees

1. Be physically fit for your work through good health habits, proper diet, sufficient rest, and cleanliness.
2. Prevent the spread of infection or contagious disease – when you are ill, call in, but remain home.
3. Personal hygiene should be paramount; wash your hands often.
4. Wear proper clothing and shoes for your particular job.
5. Know your job and all its responsibilities. Familiarize yourself with the safe work practices to follow.

Communicate your ideas on better and safer methods to the Director of Nursing.

6. Report any unsafe conditions, including defective or broken equipment to the Director of Nursing immediately.
7. Never engage in horseplay or play practical jokes.
8. Heed all warning signs – they caution you about a hazard or a condition detrimental to your safety.
9. Walk – do not run. Be cautious in congested areas and at blind corners.
10. Use handrails on stairways.
11. Use caution with swinging doors. If provided with a window panel, check clearance before opening. If no window panel is provided, open slowly using handle or push plate.
12. Always use a suitable ladder – never climb on chairs boxes to reach overhead items.
13. Be sure any foreign matter found on the floor is picked up and put into the proper receptacle.
14. Use or possession of intoxicating beverages, hypnotic, or hallucinogenic drugs while on duty is prohibited.
15. Know your part in the Center disaster plans.
16. Know your fire emergency plan and all the duties and responsibilities associated with the fire program, including evacuation procedures.
17. Be knowledgeable about the program adopted to control infectious disease.
18. Become acquainted with and participate in the center's safety program.
19. Report to the Director of Nursing all unusual and unscheduled events affecting the safety or well-being of patients, visitors, and other employees.
20. Report to the Director of Nursing any injury to yourself or a fellow employee.
21. Take a special interest in the new or inexperienced person; call attention to dangerous practices and help him/her to learn safe methods.
22. Notify all persons who may be endangered by a particular job you are doing.
23. Know the location of all fire extinguishers and how to use them.
24. Look for slipping or tripping hazards. Water, rubber bands, paper clips, pencils, etc., don't belong on the floor. Pick it up or have it cleaned up immediately.
25. Traffic areas must be kept clear of equipment and supplies. Do not leave chairs, stools, foot-rests, etc., in aisles or walk areas.
26. When descending stairways, use the handrail and watch your step.
27. Any equipment found defective must be removed from use and repaired.
28. Fire fighting equipment must remain unobstructed.
29. Always use "wet floor" signs when mopping floors.

Chapter 11  
Safety

SPRING VALLEY HOSPITAL

# Risk Management/ Patient Safety Plan

Nevada Acute Care Division

Revised 1/2018

## I. Overview

**SPRING VALLEY HOSPITAL** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. **SPRING VALLEY HOSPITAL** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **SPRING VALLEY HOSPITAL** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **SPRING VALLEY HOSPITAL** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at **SPRING VALLEY HOSPITAL**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **SPRING VALLEY HOSPITAL** policies. **SPRING VALLEY HOSPITAL** employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.

- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**SPRING VALLEY HOSPITAL** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**SPRING VALLEY HOSPITAL** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

## III. ROLES AND RESPONSIBILITIES

### A. Risk Management/Patient Safety Officer

**SPRING VALLEY HOSPITAL** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The

designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

## **B. Infection Control Officer**

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**SPRING VALLEY HOSPITAL** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **SPRING VALLEY HOSPITAL** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

##### Membership:

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**SPRING VALLEY HOSPITAL** PSC is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility's claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the "Best Practice."
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.

- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:

(1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

(2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## **II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**SPRING VALLEY HOSPITAL** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## **C. TERM Program**

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the

Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. MIDAS**

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

#### **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the

facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

### **G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

#### **RCA Responsibilities**

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Spring Valley will increase incident reporting through Midas by 10%.
- Spring Valley will reduce falls by 5%.
- Spring Valley will reduce patient Complaints and Grievances by 5%.

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to

these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## **VI. Evaluation/Review:**

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## **VII. Confidentiality**

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## **VIII. Approval of Patient Safety Plan**

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan. The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## **Appendix A: Terms and Definitions**

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;

- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility ([NRS 439.805](#))**

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at

[http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

**Appendix B: Checklist Example: Injuries from Falls and Immobility**

| Process Change                                                                                                                                           | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| <b>Conduct fall and injury risk assessment upon admission</b>                                                                                            |          |          |            |                                |
| <b>Reassess risk daily and with changes in patient condition</b>                                                                                         |          |          |            |                                |
| <b>Implement patient-specific intervention to prevent falls and injury</b>                                                                               |          |          |            |                                |
| <b>Communicate risk across the team; use handoff forms, visual cues, huddles</b>                                                                         |          |          |            |                                |
| <b>Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs)</b> |          |          |            |                                |
| <b>Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds</b>               |          |          |            |                                |
| <b>Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives</b>                                                                        |          |          |            |                                |
| <b>Incorporate multidisciplinary input for falls</b>                                                                                                     |          |          |            |                                |
| <b>Prevention from PT, OT, MD, RN and PharmD</b>                                                                                                         |          |          |            |                                |
| <b>Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient</b>              |          |          |            |                                |
| <b>Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls</b>                                      |          |          |            |                                |

## 2017 Sentinel event reporting

3835 S. Jones Blvd. Las Vegas NV 89103 License #: 3421

### Safety committee:

The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the Federal, State, Local and OSHA guidelines. The “Safety Plan” includes identification, evaluation and prevention of workplace hazards relating to the elements and specific criteria. The safety management of the Facility is composed of several elements regarding the safety features necessary for the protection and security of its patients and healthcare workers.

These elements are composed of two parts; one “Life Safety Enterprise Safety Plan” which is wide in scope, organizational and effectiveness, and the “Environmental Safety Management” which oversees the working environment elements of the Facility. These areas overlap each other but also provide individual elements which manage the overall security and safety of the Facility. A report from the Safety Committee is provided quarterly to the Medical Executive Committee (MEC) and onto the Governing Board. The Safety Committee meets and discusses how to improve and/or maintain patient and employee well-being and safety, items discussed range from falls to how to properly lift boxes, and the execution of a disaster drills, etcetera. If any incidents have occurred they will be discussed in detail, and prevention and safety will be implemented.

# PATIENT SAFETY PLAN

1. Aseptic technique to be used during surgical intervention per facility policy
  - Multi-dose vial policy for the facility
  - Sterile technique for injections
  - Single dose vial policy for the facility
  
2. Infection Control per facility policy
  - Post surgical infection survey policy
  - Care of infectious patients
  
3. Pharmacist monthly reviews
  
4. Monthly safety inspections to assure a safe environment.

Please revise and expand this template to meet your facility's needs.

## QUALITY AND PATIENT SAFETY PLAN Template

DATE: 02/23/2018  
VERSION: XX

This plan was created and revised by the (Seven Hills Surgery Center) Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**

**Facility name:** Seven Hills Surgery Center

## Commitment to Patient Safety

---

(Seven Hills Surgery Center) is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, (Seven Hills Surgery Center) Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in (Seven Hills Surgery Center) are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, (Seven Hills Surgery Center) has developed this Patient Safety Plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

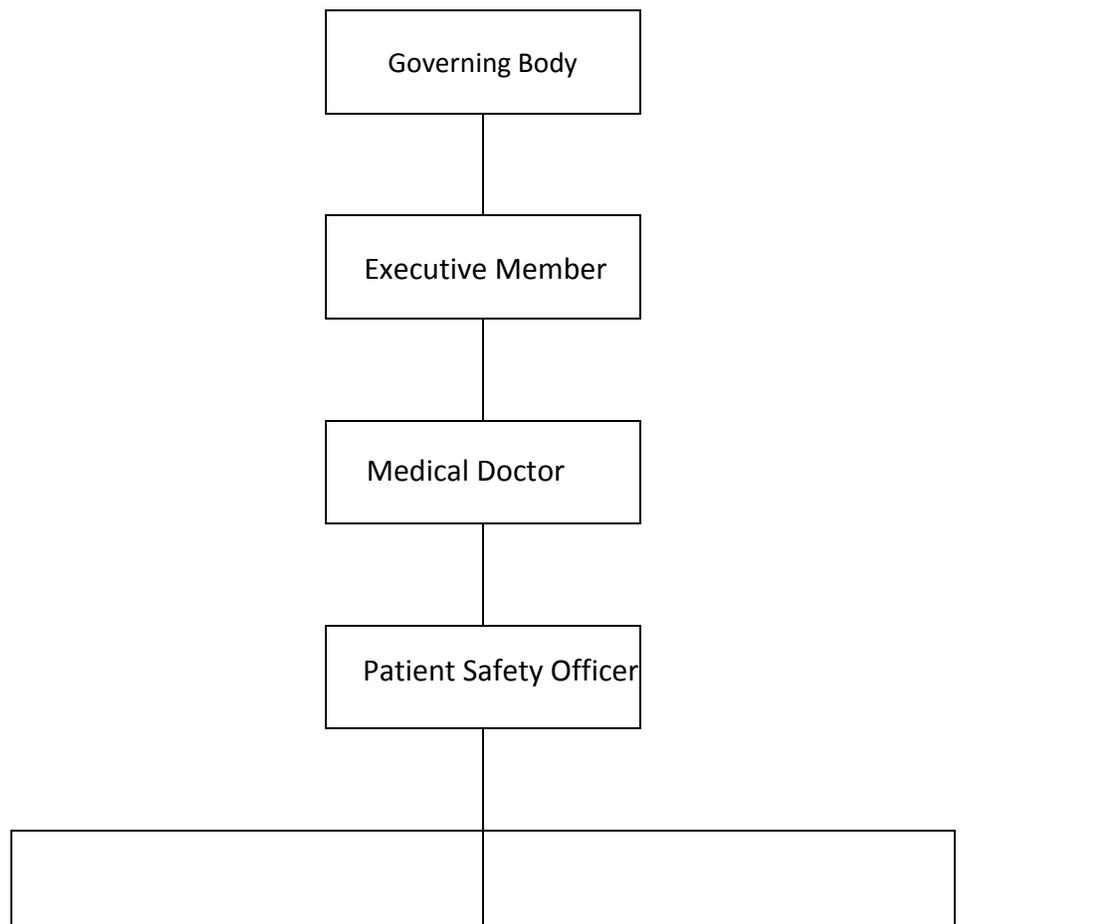

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

Pharmacist

Infection Control Officer

Administrator

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

**Patient Safety Committee Responsibilities** (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar (quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

(2) The number and severity of infections that occurred at the facility during the preceding calendar quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities (please revise as needed)

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities (please revise as needed)

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.

- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities (please revise as needed)

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

---

| Objective | Goals | Plan | Planned Completion Date | Responsible Party |
|-----------|-------|------|-------------------------|-------------------|
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |

## Components and Methods

---

Pursuant to [NRS 439.837](#) and [NAC 439.917](#), within 45 days after reporting a sentinel event pursuant to [NRS 439.835](#), the medical facility shall conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

(Seven Hills Surgery Center) will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement that we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

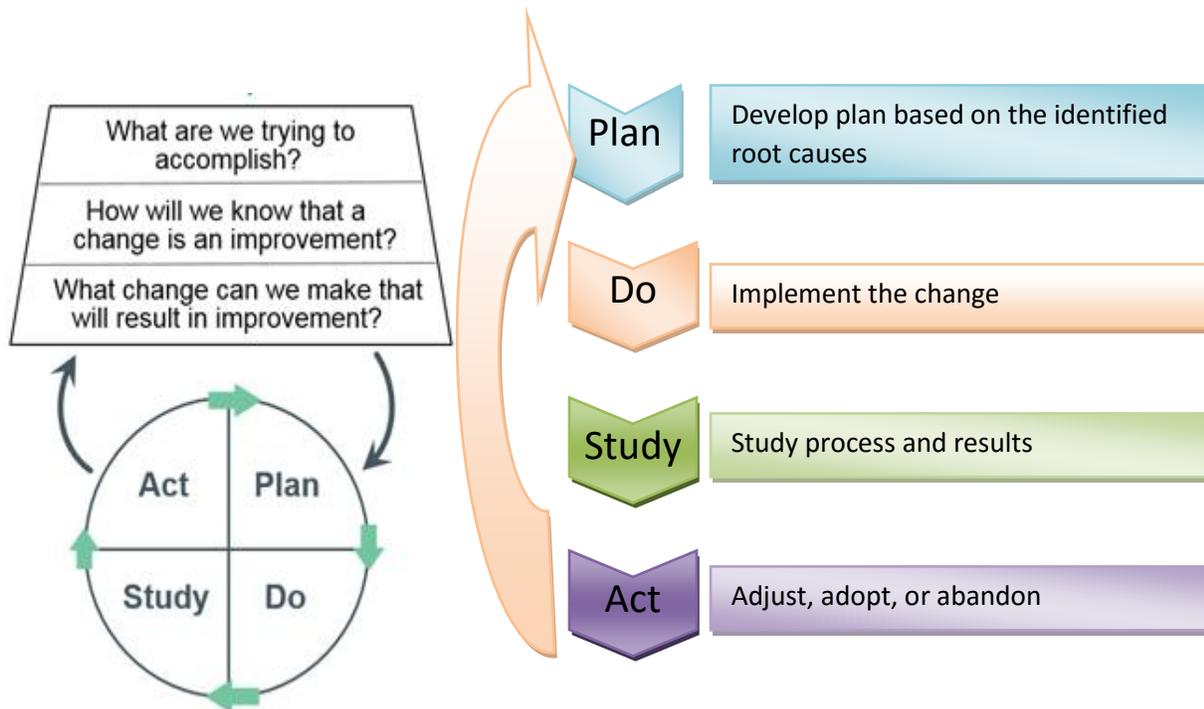

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases.

**5 Whys** technique will be used in (Seven Hills Surgery Center) to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--Collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--Make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. (Seven Hills Surgery Center) is using (internal processes) for tracking the sentinel events, healthcare infection data, and (Amkai) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission
- Pinnacle III Facilities

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a Infection Preventionist.

The patient safety checklists are listed in Appendix E. The following links provide some patient safety checklists for your reference-a checklist example is shown in Appendix E.

<http://www.hpoe.org/Reports-HPOE/Cklist PatientSafety.pdf>  
<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference- a policy example is shown in Appendix F).

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

### **Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CURRRENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRRENT_b.pdf).)

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                         | Q1 2015                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                              |                                                                                            |                                                                                                                                 |                                                                                      |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.                                                                                                               |                                                                                            |                                                                                                                                 | <b>Implement Trigger Tools.</b><br>Develop automated surveillance reports in Cerner. |
|                                                                                                                                                                     | b. Establish an automated surveillance process.                                                                                                              |                                                                                            | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                      |                                                                                      |
| <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                      | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.                                                         | Implemented e-MERS & PSO with UHC.                                                         | Create process for reviewing & closing reports in e-MERS.                                                                       |                                                                                      |
|                                                                                                                                                                     | b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.                                     |                                                                                            | Increase number of events reported by 10%.                                                                                      |                                                                                      |
|                                                                                                                                                                     | c. Establish a process for providing feedback regarding reported events.                                                                                     |                                                                                            | Create process for communicating outcome of reported events.                                                                    |                                                                                      |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.               |                                                                                            | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan. |                                                                                      |
|                                                                                                                                                                     | b. Establish a recognition program that rewards safe practices.                                                                                              |                                                                                            | Include patient safety presentation in monthly New Employee Orientation.                                                        |                                                                                      |
|                                                                                                                                                                     | c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.                                                                        |                                                                                            | Develop 'Great Catch' awards program.                                                                                           |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            |                                                                                                                                 | Re-evaluate culture of safety and develop action plan.                               |
| <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                                | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.                                                                          |                                                                                            | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee.                                                  |                                                                                      |
|                                                                                                                                                                     | b. Facilitate the development of action plans associated with measures not meeting benchmarks.                                                               | Complete 2014 Leapfrog Safety Survey.                                                      | Establish & implement a plan to improve performance of each leap.                                                               |                                                                                      |
|                                                                                                                                                                     | c. Assess and improve processes related to hand-off, transition and communication                                                                            | Develop method to track & report departmental progress and compliance of RCA action plans. |                                                                                                                                 |                                                                                      |
| <b>5. Charter Safety Programs</b> through teams, workgroups or projects.                                                                                            | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices. |                                                                                            | Establish Patient Safety Council.                                                                                               |                                                                                      |
|                                                                                                                                                                     | b. Reduce and eliminate variation in care.                                                                                                                   |                                                                                            | Establish workgroups focused on medication safety, reducing patient falls & hospital acquired pressure ulcers.                  |                                                                                      |
|                                                                                                                                                                     |                                                                                                                                                              |                                                                                            | Revise or develop policies, procedures and protocols.                                                                           |                                                                                      |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

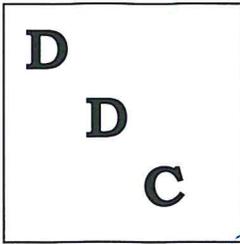

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

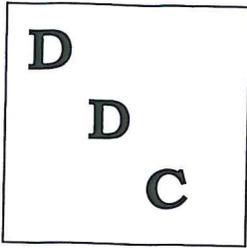

**P A T I E N T   S A F E T Y  
P O L I C Y & P R O C E D U R E**

**Policy:**

The policy set forth by the Digestive Disease Center (DDC) is to ensure patient safety, before, during, and after a patient's procedure.

**Procedure:**

- A. Each patient will have a history & physical examination documented in their chart within 7 days prior to their procedure.
- B. Each patient will complete the Medical History Questionnaire prior to his or her procedure.
- C. All patients will receive a copy of the Patient Rights and Responsibilities at the time of scheduling of procedure.
- D. All medical staff is CPR certified, and aware of the location and use of all emergency equipment. All DDC Physicians are ACLS certified.
- E. At least one ACLS certified Registered Nurse is staffed when patients are present in the facility, along with ACLS trained Anesthesiologist is present with sedated patients.
- F. Once a patient has been admitted to the facility, non-sedated patients are visualized frequently to ensure needs are met. Sedated patients are monitored closely checking vital signs with observation to assure patients are free from complications related to the procedure and /or medical problems
- G. Each patient will meet the required discharge criteria set forth by DDC, and ANOR anesthesia standard, prior to being discharged. The physician will have the final decision, to discharge the patient, which will be documented, signed and become part of the patient's record.
- H. A written physician discharge order will be issued to each patient post procedure, providing them with post procedure instructions, precautions, and contact information in case of an emergency. A copy of this document will become part of the patient's record.
- I. The facility staff will make a follow up appointment for the patient as ordered by the physician.
- J. Each patient will be contacted within 24 hours after having their procedure to ensure that they are not experiencing any complications related to the procedure.
- K. A patient safety committee will be formed to include one physician from each site, the nurse manager from each site, the pharmacy consultant, and the medical director. The committee will meet quarterly to discuss patient safety.

Digestive Disease Center

**P A T I E N T   S A F E T Y   C O M P L I A N C E  
P O L I C Y   &   P R O C E D U R E**

**Policy:**

The policy set forth by the Digestive Disease Center (DDC) is to ensure that staff, physicians, vendors, and contracted employees are compliant with patient safety including checklists, policies & procedures established by the DDC.

**Procedure:**

- A. All staff, physicians, vendors & contracted services are required to read and comply with the safety checklists, policies & procedures prior to working in the center.
- B. Policies & checklists will be provided to vendors & contracted services to provide to their employees.
- C. Staff educated upon hire & annually thereafter on the process for reporting violations to the Director of Nursing Services.
- D. Audits performed monthly utilizing the Infection Control Surveillance Tool to ensure compliancy & sanitation.
- E. The safety committee will meet monthly to discuss patient safety issues, review audits & monitor & document effectiveness of the patient identification policy.
- F. Safety Policies & Procedures, checklists will be reviewed at least annually & more often if needed.

**Safety Committee Report**

RN

**Discussion:**

Providers are required to complete OSHA/Infection Control training with Compliance Alliance.  
 CSC staff completed annual OSHA training with Compliance Alliance.  
 CSC staff completed annual malignant hyperthermia in service and mock drill.

Compliance Alliance completed an annual survey to evaluate compliance with OSHA and infection control standards. There were no deficiencies identified from the survey.

**Conclusion:**

Providers will complete annual OSHA training with Compliance Alliance.

**Action items:**

Use monthly Environmental Rounds to monitor for patient/employee safety issues.  
 Provide monthly safety education to staff using the OSHA newsletters provided by Compliance Alliance.  
 Present narcan policy in December staff meeting agenda.  
 Include reporting of unusual discharge to Kellie Merrill in September staff meeting agenda.  
 Schedule providers for OSHA webinar with Compliance Alliance.

**Patient Satisfaction**

RN

**Discussion:** Patient satisfaction surveys are reviewed monthly. Patient satisfaction was selected as a topic for CSC quality improvement (see attached QI study). Overall, patients are satisfied. The most common complaint is caregivers are not given discharge instructions.

**Conclusions:**

Recovery nurses will provide instructions to the patient's caregiver at discharge.

**Action items:**

Review submitted patient satisfaction surveys monthly.  
 Tally patient satisfaction survey results using spreadsheet.  
 Nurses will be informed to provide discharge instructions to caregivers in monthly staff meeting.

# SUMMIT Surgery Center

## Quality Improvement Plan

### Purpose:

This organization provides ongoing monitoring of important aspects of the care provided. Health care professionals participate in the development and application of the criteria used to evaluate the care they provide. The Quality Improvement (QI) program addresses clinical, administrative and cost-of-care issues, as well as actual patient outcomes. Data related to established criteria are collected in an ongoing manner. Collected data are periodically evaluated to identify unacceptable or unexpected trends or occurrences that influence patient outcomes. Information will be gathered, logged and identified on a quarterly basis by the Quality Improvement Committee. This will include the laboratory consultant who will review all logs kept (i.e. blood glucose). The radiology safety officer will monitor the radiation safety issues for the facility including radiation badge levels. The pharmacy consultant will review all pertinent pharmacy data including narcotic review monthly. In addition, the contract service providers may provide appropriate in-service education for the staff of the facility as requested by the facility.

### QI Indicators to be monitored will include:

- 1) Patient Satisfaction, Employee Satisfaction, Physician Satisfaction
- 2) Patient Follow-up: a) post op phone calls b) post –op complications
- 3) Post Operative Occurrences
- 4) Medication Use , Pharmacist review, Adverse Reaction Log & Medication Error Log per occurrence reporting system
- 5) Cancellations on Day of Surgery
- 6) Medical Record Review
- 7) Safety
- 8) Infection Control
- 9) Credentials
- 10) Employee Files
- 11) Ancillary Services
- 12) Employee Blood Borne Pathogen Exposures
- 13.) Patient Complications – Transfers, Returns to Surgery,

### Quality Improvement Issues:

In addition to the on-going monitoring of QI indicators, staff and department managers will be encouraged to develop and assess “Quality Improvement Issues” to ensure department concerns are addressed and corrected. QI activities are consistent with the characteristics of the organization’s overall QI program. QI activities will follow the five steps of “closing the QI loop”.

Routine monitoring will also include:

- Emergency Cart / Defibrillator checks
- Refrigerator and Fluid warmer temperature checks.

The Quality Improvement Plan, the Peer Review Plan and Processes and the Risk Management Plan are all integrally inter-related in the overall quality processes of the ASC. When one process is affected, all subsequent processes and plans can be affected and may require follow-up and/or evaluation of the quality of care provided and the risks to the facility.

Quality Improvement Annual Review:

The Quality Improvement Plan will be evaluated and/or updated by the organization on at least an annual basis. The evaluation will be completed by designated personnel, including, but not limited to the Administrator, the QI Nurse, etc. Results of the QI Plan annual review will be reported to the Governing Body.

Benchmarking:

The surgery center has a process in place to review key indicators in comparison to other similar organizations and surgery centers. The Benchmarking data collected is analyzed and reviewed to determine areas of patient care that may need to be addressed to reduce the gaps from benchmarking norms. Both internal and external benchmarks are evaluated and utilized in QI activities.

Risk Management:

The QI Plan includes a risk management plan, with policies and processes to maintain an environment designed to protect the life and welfare of our patients, visitors and employees.

**Responsibility:**

The Board of Directors has the ultimate responsibility to continually evaluate and if necessary, improve the quality of care. The Administrator has the responsibility to implement the Quality Improvement Plan. The Board of Directors and Medical Executive Committee (MEC) will review and approve the plan. The Quality Improvement Coordinator will be responsible to oversee the ongoing operations of the Quality Improvement Plan. The Quality Improvement Committee will meet at least quarterly to review the data and make recommendations to the MEC and the Board.

**Committee Composition:**

The professional and administrative staff of the Surgery Center understands, supports, and participates in programs of quality management and improvement, through organized mechanisms responsible to the governing body. Contracted services provided to the facility will participate in the quality improvement plan of the facility on an ad hoc basis. This will include radiology laboratory, environmental and pharmacy services. The committee will be comprised of key staff, management and a physician appointed by the Board:

Medical Director: Name Here

Administrator: Name Here

QI Coordinator/D.O.N.: Name Here

OR Supervisor: Name Here

PACU Supervisor: Name Here

Ad HOC members:

Pharmacy Consultant: Name Here

Laboratory Consultant: Name Here

Environmental Consultant: Engineer from Saint Mary's

Housekeeping Services: Xtra Clean

Medical Executive Committee: MEC chair Dr Name Here

Radiology Consultant: Radiologist from Saint Mary's

The managers may delegate to their staff in their respective department (i.e. pre-op/PACU, OR and Business Office) the responsibility to gather information to further the quality of care at the facility.

### **Scope of Care:**

The facility provides services to all patients who require treatment and procedures on an ambulatory surgery basis.

### **Communication:**

The QI committee will meet at least quarterly to review, monitor and evaluate all information gathered. All activities will be documented on the quarterly report. The committee will summarize all activity and submit a report to the MEC for review. The MEC will give direction and recommendation for the approved activity and then report results to the Governing Board. Finding of quality improvement activities are incorporated into the organization's educational activities. Information is communicated through the organization via feedback from the Administrator, QI Coordinator and/or managers to the staff members at the staff meetings so they can have the opportunity to participate in the plan.

Assessment will be a continued process to recognize priorities. Appropriate records of QI activities will be maintained.

### **Quality Improvement Goals and Objectives of the Quality Management / Quality Improvement Program focus on the following patient care services and priorities:**

- Improving patient health outcomes through the identification and reduction of medical errors,
- Evaluating high risk, high volume, problem prone areas and the incidence, prevalence and severity in these areas
- Evaluating high risk, low volume, problem prone areas and the incidence, prevalence and the severity in these areas
- Trending and implementing strategies and processes that positively effect health outcomes for patients, staff and the medical staff,
- Evaluating, developing and implementing defined performance measures or indicators for patient safety and the quality of care provided including medical necessity and the appropriateness of care provided.

### **Performance Improvement Activities will consistently track all:**

- Adverse patient events,
- Examine the causes,
- Implement improvements approved by leadership, and
- Re-check to ensure that improvements are sustained over time

## **Elements and Composition of the Quality Improvement Plan:**

The Quality Improvement Plan is an integrated plan which addresses both administrative and clinical outcomes of the Surgery Center.

1. Identification of Problems and Concerns –
  - This is accomplished thru audits, complaints and occurrence reports, which are tracked and trended within the surgery center as well as after patient discharge.
2. Participation of physicians, allied health professionals, office staff personnel and administration –
  - A member from each department of the surgery center will participate in the Quality Improvement Committee. At least 2 physicians will be involved in evaluating all quality of care issues
3. Evaluation of frequency, severity, and the sources of suspected problems and concerns and evaluation of whether policies and procedures should be revised –
  - As all occurrences are tracked, trended and evaluated by both the QI committee and the governing body, recommendation regarding policy and procedure changes will be evaluated as well, and policy changes based on current standards of care.
4. Review of related processes and implementation of measures to address and resolve identified problems or concerns-
  - Recommendations and comparisons will be made by the QI committee to present to the Governing Body, addressing possible solution paths to implement in order to resolve identified problems or concerns within the facility.
5. Re-evaluation of problems or concerns to determine objectively whether the corrective measures achieved and sustained and the desired results –
  - All problems or concerns will be re-evaluated or re-studied to determine if corrective measures implemented or changed in policy and procedures have been effective or need to be changed in order to maintain desired change or results.
6. Reporting of findings to the governing body –
  - All findings of outcomes, problems or concerns will be reported to the Governing Body on a least quarterly basis. Additionally, all measures implemented or changed will have outcomes of such changes reported to the Governing Body in order to evaluate if changes or measures have been effective or ineffective and if further evaluation is needed in the long term or short term.

## Quality Improvement Indicators

### 1. SATISFACTION SURVEYS

- a. Patient
- b. Employee
- c. Physician

Tool:

#### Patient/Family Satisfaction Questionnaire (CTQ)

CTQ has been contracted to send each patient a patient satisfaction survey via e-mail or mail. The facility is immediately notified of any negative surveys or of patients who request to be contacted. When returned, these surveys are inputted into an analysis report and provided to the Q.I. team who will review them accordingly and assimilate them into the Patient Evaluation Summary.

#### Evaluation Summary of each population

CTQ sends the facility a form summarizing the information received from the satisfaction surveys and reports. It enables the center to monitor the percentage of surveys returned and define follow-up actions that may be necessary in response to patient complaints, employee and physician concerns.

Percentage Monitored:

100% - all patients

Frequency:

Employee satisfaction survey is done once a year

Physician satisfaction survey is done a minimum of annually

Patient satisfaction survey is done on each patient and results are sent each month

Threshold:

Meet or exceed national benchmark of like facilities

Follow-Up:

Results of the indicator will be presented at the staff meetings, QI meetings and Board meetings. Cases of noncompliance with this indicator will be discussed at these meeting and also presented to the Q.I. Committee so improvements can be made.

Quarterly reports to Administration and D.O.N..

### 2. OPPORTUNITIES ENCOUNTERED ON PATIENT FOLLOW-UP

Tool:

#### Post-Operative Nursing Follow-up Call Form

All patients will be called by an R.N. within two working days after surgery and this form will be completed. If the patient is unable to be reached, a letter will be sent by the third working day. Anytime a patient is referred to their physician for a post-operative complication this completed form will be given to the D.O.N.

Post-op follow up (unable to reach card) will be mailed to each patient that was able to be reached for their follow up call.

#### Post-operative Complication Log

Per occurrence reports, a summary is filled out with the information received from the patient follow-up phone calls. It enables the center to monitor the complications and define actions that may be necessary to improve on patient care &/or post-op instructions.

#### Percentage Monitored:

Post-Op Nursing Follow-up Call attempt to contact 100% of patients within 24 hours, except for Friday patients as the amended Medicare regulation states. Those with post-op complications will be investigated through follow-up with patient and physician.

#### Frequency:

Reported Monthly

#### Threshold:

100% of the comments will be addressed to the staff for opportunity to improve or provide surveillance for change.

#### Follow-Up:

Results of the indicator will be presented at the monthly staff meeting. Cases of non-compliance with this indicator will be discussed at these meeting and also presented to the Q.I. Committee so that improvements can be made.

### **3. POST OPERATIVE OCCURRENCES**

#### Tool:

##### A. Physician Review Form

This form will be completed by the assigned staff in procedures where there are complications prior to and/or during the surgery that may be related to anesthesia or surgical intervention patients who have an extended recovery period or are transferred to a hospital, are also reviewed.

##### B. Return to OR, Injury/Death to patient & Transfer Log

A log book will be maintained to monitor unanticipated returns, injury/deaths & transfers to a hospital. The person caring for the patient will enter the information on the occurrence report. The QI Committee will monitor and assimilate the information in the log book.

#### Percentage Monitored:

1. Physician Review Form – 100% of applicable cases.
2. Return, Injury/Death, & Transfer Log – 100%.

#### Frequency:

1. Physician Review Form – quarterly
2. Return, Injury/Death, & Transfer Log – quarterly

Threshold:

100% of post-op occurrences will be followed as appropriate.

Follow-up:

Results of the indicator will be presented at the quarterly MEC meeting. Cases of non-compliance with this indicator will be discussed at these meeting and also presented to the Q.I. Committee so improvements can be made. The Q.I. Committee will also be made aware of the number of unanticipated occurrences and respond accordingly.

#### **4. MEDICATION USE**

Tool:

- A. Pharmacy Review Documentation  
This form will be complete by the Pharmacist on a monthly visit. Monitoring of the form will be done by the Q.I. team.
- B. Narcotic Log  
A count will be done on all schedule II, III, IV, & V narcotics at the beginning and end of each day the center is open. Discrepancies will be resolved if possible. If the discrepancy can not be resolved, an incident report will be completed and submitted to the Q.I. team for further investigation.
- C. Occurrence Report  
All incidents involving medication administration will be submitted to the Q.I. team for review.
- D. Medication Error Log  
All medication incidents will be recorded according to type for monitoring, education and risk management purposes.
- E. Adverse Reaction Log  
All adverse reactions will be recorded with subsequent follow-up. Pharmacy consultant will be notified with copy of form sent to consultant.

Percentage Monitored:

100% of all incidents involving the administration of medication will be reviewed and all schedule II, III, IV, V narcotics will be accounted for appropriately.

Frequency:

- A. Pharmacy Review- monthly
- B. Narcotic Log- Twice daily
- C. Occurrence Report – as needed.
- D. Medication Error Log – as needed
- E. Adverse Reaction Log – as needed

Threshold:

100% of all schedule II, III, IV & V narcotics will be documented appropriately and all incidents involving the administration of medication will be reviewed and processed accordingly.

Follow-up:

The Q.I. Committee will assimilate all data and report to the Q.I. meetings. The Q.I. Committee will also address and in-service the staff accordingly and report to MEC and Board of Directors as needed.

## 5. **CANCELLATION ON THE DAY OF SURGERY**

Tool:

### A. Same Day Cancellation

This will be documented on an occurrence report and in HST by the staff member notified of the cancellation. Monitoring and assimilation of the documentation will be done by the Q.I. committee.

### B. Cancellation Log

This form is filled out to summarize the reasons for cancellations. It enables the center to monitor the cancellations and define actions that may be necessary to avoid some of the same day cancellations.

Percentage Monitored

100% of cancellations on the day of surgery.

Frequency:

Monthly

Threshold:

100% of cancellation on the day of surgery will be followed for opportunities to avoid cancellations.

Follow-up:

The Q.I. committee will forward results of cancellations monitoring to the Q.I. Committee who will follow up accordingly.

## 6. **MEDICAL RECORD REVIEW**

- ❖ The results of peer review are used as part of the basis for granting continuation of clinical privileges.

Tool:

### A. Daily Chart Review

This form will be completed on all patient charts. It will be utilized to verify the chart is put together in the correct order and that it is complete.

### B. QI Chart Audit

This form will be completed on 10% of all completed procedures, representing every specialty. It will enable us to monitor many aspects of the completeness of the Medical Record, in addition to confirming the medical necessity of the procedure done. Results will be made available to the Q.I. Committee.

C. Incomplete Health Record Report

This form will be completed on all medical records that are delinquent past 30 days despite center attempts at completion. The report will be forwarded to the MEC and the Governing Body for further action.

Percentage Monitored:

1. QI Chart Review – 100% - all patients
2. Chart Audit – 10% of all procedures.
3. Incomplete Health Record Report – 100% of all delinquent charts.

Frequency:

1. QI Chart Review – monthly
2. Chart Audit – monthly
3. Incomplete Health Record Report – monthly

Threshold:

100% of medical records reviewed will be completed as required by law and Surgery Center Medical Staff Bylaws.

Follow-up:

Any matter that renders a chart incomplete will be appropriately addressed by the Q.I. Committee and forwarded to the MEC and Board of Directors.

**7. SAFETY**

Tool:

- A. Record of Safety Rounds  
This form is completed by the Safety Committee to ensure accepted standards of safety are being utilized. Noncompliance will be addressed with personnel involved and according to the Center Safety Management Plan.
- B. Occurrence Report  
This form is completed by any staff member whenever a potential safety concern is noted. It is forwarded to the Safety Committee/QI Committee who ensures resolution of the concern.
- C. Emergency Drill Records & Summary  
These forms will be completed by the Safety Officer to evaluate compliance of center emergency preparedness and reports to QI Committee

Percentage Monitored:

100% of all safety concerns.

Frequency:

- A. Record of Safety Rounds - monthly
- B. Occurrence Report – on going
- C. Emergency Drill Records & Summary – quarterly

Threshold:

100% of all reported safety issues will be addressed and resolved

Follow-up:

The Safety/QI Committee reviews any deficiencies with the staff and implements changes as needed. If safety issues are due to staff noncompliance, those individuals involved will be counseled.

## **8. INFECTION CONTROL**

Tool:

- A. Infection Report Form  
This form will be completed on all cases of infection and will be referred to the Q.I. team for surgical case review.
- B. Infection Log  
In order to track post-op infections through the physician's office, a letter will be mailed/faxed to physicians along with a list of their patients who had procedures. If the physician fails to respond, a second letter will be sent. After two unsuccessful attempts, the physician will be contacted via phone. All cases of infection will be investigated and reported to the staff and the Q.I. Committee.
- C. Infection Summary  
This form will be used to summarize the number of post-op infections and percentage of reports returned.
- D. Sterilization Report  
This form will be used to summarize the sterilization performance and report any positive biologicals.

Percentage Monitored:

- A. Infection Report Form- 100% of all cases that develop a post-op infection.
- B. Infection Log- 100% of the physicians who have completed procedures.
- C. Infection Summary- 100% of infections
- D. Sterilization Report- 100% of all positive biologicals will be reported

Frequency:

Monthly

Threshold:

100% of all reported infections will be investigated.

Follow-up:

Results of the indicator will be presented at the monthly staff meetings and at the Q.I. meeting. All cases of post-op infections will be discussed to determine appropriate systems corrections and preventive measures that may be deemed necessary and reported to MEC Committee, Board of Directors.

## 9. CREDENTIALS

Tool:

Credentialing Checklist

This form will be completed by the Medical Staff Credentialer to assure proper credentials are maintained by all physicians at the Surgery Center.

Credentialing Report

This form will be used to summarize the credentialing status of physician files to the Medical Director, MEC and ultimately the Board of Directors.

Percentage Monitored:

100% of all physicians and Allied Health Professionals

Frequency:

On-going

Threshold:

100% of the Surgery Center credentialed physicians and Allied Health Professionals will have the required current documents.

Follow-up:

Specific credentialing difficulties will be referred to the Medical Director, Administration, and if necessary the Q.I. Committee and the Board of Directors.

## 10. EMPLOYEE FILES

- ❖ All health care professionals have the necessary and appropriate training and skills to deliver the services provided by this organization.
- ❖ Health care professionals practice their professions in an ethical and legal manner.
- ❖ All personnel assisting in the provision of health care services are appropriately trained, qualified, and supervised and are available in sufficient numbers for the care provided.

Tool:

A. Employee File Checklist

This form will be maintained by the Manager for all employees in each employee file.

B. Employee Competency Record

This form is completed by the department manager to ensure strong knowledge and competency by all staff personnel.

C. Performance Review

This form will be completed by the department manager on an annual basis in order to document the employee's job performance.

Percentage Monitored:

100% of all employees

Frequency:

- A. Employee File Check List – initial hiring
- B. Employee Competency Record – on going
- C. Performance Review – annual

Threshold:

100% of employee files will have current proof of compliance as required by Surgery Center and State/Federal Regulations.

Follow-up:

Specific employee file difficulties will be referred to the Administrator if necessary.

## 11. ANCILLARY SERVICES

Tool:

- A. Glucose Monitoring Form  
This form will be complete by the Laboratory consultant on a monthly basis. Monitoring of the form will be done by the Q.I. team.
- B. Pathology Review Checklist  
This form will be utilized to record findings of pathology reports received and assure reporting to physician.
- C. Tissue Review Report  
This form will be used to summarize tissue reporting.
- D. Annual Review of Lead Protection Devices  
This form will be complete by the Radiology technician annually. Monitoring of the form will be done by the Q.I. team.

Percentage Monitored:

100% of all laboratory test & Radiology safety procedures.

Frequency:

- A. Glucose Monitoring results- monthly
- B. Pathology Review Checklist - quarterly
- C. Tissue Review Report- quarterly
- D. Review of Lead Protection Devices - Annual

Threshold:

100% of all glucose tests will be correctly performed and reported appropriately & Radiology safety procedures followed.

Follow-up:

The Q.I. team will assimilate all data and report to the Q.I. meetings. The Q.I. team will also address and in-service the staff accordingly.

## **12. Blood Borne Pathogens Exposure**

Tool:

- A. Occurrence Reports
  - This form will be completed by the staff member involved with assistance from clinical Manager.
  - Employee will be sent for emergency treatment of exposure deemed significant. Concentra clinic will do follow up as needed on our employees.
  
- B. BBP exposure form
  - Employee Exposure
  - Patient consent

Percentage Monitored:

100% of all employee exposures

Frequency:

- A. Occurrence report ongoing
- B. BBP exposure report ongoing
- C. Annual report posted per OSHA guidelines

Threshold:

100% of employee exposures will be followed as appropriate

Follow-up:

The Q.I. team will assimilate all data and report to the Q.I. meetings. The Q.I. team will also address and in-service the staff accordingly.

## Quality Improvement Reporting Schedule

The following matrix outlines the quarterly Quality Improvement Reports to the Q.I. Committee, Medical Executive Committee and Board of Directors. The reports are due in the month or quarter indicated based on data collated from the immediately preceding months. The Quality Improvement Committee will report to the MEC through the Administrator. Recommendations from the MEC and Board of Directors will be reported back to the QIC and or MEC through the Administrator.

| <b>Quarter</b> | Report                                     | Responsibility for Data |
|----------------|--------------------------------------------|-------------------------|
| Every Month    | QI Meeting Summary                         | D.O.N./ Administrator   |
|                | Infection control statistics               |                         |
|                | Pharmacy audits                            |                         |
|                | Patient/Employee/Physician Satisfaction    |                         |
|                | Cancellation DOS                           |                         |
|                | Sterilization Reports                      |                         |
|                | Occurrence Reports/Patient Complications   |                         |
|                | Chart Review                               |                         |
|                | Pathology/Laboratory                       |                         |
|                | Extended Recovery Unit                     |                         |
|                | Medication Errors & Adverse Drug Reactions |                         |
|                | Physician Utilization Review               |                         |
|                | Quality Improvement Projects               |                         |
|                | Safety Reports                             |                         |
|                | Peer Review/Credentialing                  |                         |
| Annual         | Policies & Procedures                      | Administrator           |
|                | Infection Control Plan                     |                         |
|                | Local Contracts                            |                         |
|                | Quality Improvement/Risk Management Plan   |                         |
|                | Review Annual Marketing Plan               |                         |
|                | Annual Report to the Medical Staff         |                         |
|                | Annual Safety Program Summary              |                         |
|                | Employee Performance                       |                         |
|                | Review/Approval Annual Budget              |                         |

## I. **Introduction**

### ***Purpose, Scope and Responsibility***

- ✓ Purpose:
  - To define the essential components of the Patient Safety Program at Southern Hills Hospital, which is committed to ensuring a safe environment and reliable care processes.
  - To cultivate a culture of patient safety through the ongoing promotion of a safe practices and personal accountability.
- ✓ Scope: Patient safety is everyone's responsibility. The Southern Hills Hospital Patient Safety Program covers all activities and functions relating to patient safety at all sites and services within the organization.
- ✓ Responsibility: Leaders, employees, members of the medical staff, students and volunteers are to be familiar with and involved in the Patient Safety Program.

### ***Participation in Patient Safety Organization***

- ✓ Southern Hills Hospital is committed to an organizational environment aimed at improving patient safety and the quality of healthcare provided to the Hospital. To further this objective, the Hospital contracted with HCA Patient Safety Organization, LLC ("HCA PSO, LLC"), a federally certified Patient Safety Organization ("PSO"), to receive assistance in conducting a wide variety of patient safety activities intended to reduce medical errors in a legally protected environment. Generally speaking, patient safety work product ("PSWP") is not subject to subpoena or discovery in state or federal court, in administrative proceedings, or pursuant to the Freedom of Information Act ("FOIA"), and cannot be disclosed except as permitted under the Patient Safety and Quality Improvement Act ("PSQIA") and its associated regulations. *(See 42 CFR § 3.204, Privilege of patient safety work product; and 42 CFR § 3.206, Confidentiality of patient safety work product.)* The Hospital will be receiving and exchanging patient safety information with the PSO, including event or incident reports and investigations, analytic tools such as root cause analyses, patient safety communications, quality reviews, and other documents aimed at improving patient safety. Documents will be submitted in a standardized format to allow for comparison with like providers. As part of this effort, the Hospital will operate a Patient Safety Evaluation System ("PSES") designed to encourage internal reporting of adverse events, near misses, and unsafe conditions for purposes of reporting to HCA PSO, LLC. The PSES will be the vehicle for collecting, managing, and analyzing information for patient safety purposes. Designated Hospital personnel will collect patient safety information and report it to HCA PSO, LLC on an ongoing basis for analysis and feedback.

### ***Definition of Terms***

|                             |                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Accountability:</u>      | An obligation or willingness to accept responsibility for one's actions.                                                                                                                                                                                                                                                                                                           |
| <u>Adverse Event:</u>       | Event under the control of a provider which has caused harm and requires a new or modified physician order for management of the patient's health care. See Policy RM19: Sentinel Event for specific event list and RM13: Disclosure of Adverse Events.                                                                                                                            |
| <u>Hazardous condition:</u> | Any set of circumstances (exclusive of the disease or condition in which the patient is being treated), which significantly increases the likelihood of serious adverse outcome.                                                                                                                                                                                                   |
| <u>Healthcare FMEA:</u>     | Healthcare Failure Mode and Effects Analysis: A proactive model for addressing potential risks within the organization.                                                                                                                                                                                                                                                            |
| <u>Human Error:</u>         | An unintended act, or failure to act, that results in actual or potential patient injury, harm or adverse event in the process of care delivery.                                                                                                                                                                                                                                   |
| <u>Near miss:</u>           | Any process variation that did not affect the patient outcome, but for which a recurrence carries a significant chance of serious adverse outcome.                                                                                                                                                                                                                                 |
| <u>Non-punitive:</u>        | No punishment or disciplinary action imposed for specific error.                                                                                                                                                                                                                                                                                                                   |
| <u>Patient injury:</u>      | Major permanent loss of function, sensory, motor, or intellectual impairment not present at admission, requiring continued treatment or lifestyle change. When "major permanent loss of function" cannot be immediately determined, patient injury is not established until either the patient is discharged with continued major loss of function, or two weeks have elapsed with |

persistent major loss of function, whichever occurs first.

Patient safety event:

All adverse events or potential adverse events that are deemed preventable and Healthcare associated infections as defined by the CDC that are deemed to be preventable.

PSQIA

The Patient Safety and Quality Improvement Act (PSQIA) of 2005, Pub. L. 109-41, 42 U.S.C. 299b-21-b-26 (for which the final rule implementing the regulations became effective on January 19, 2009), was enacted in response to growing concern about patient safety in the United States and the Institute of Medicine's 1999 report, *To Err is Human: Building a Safer Health System*. The goal of the Act is to improve patient safety by encouraging voluntary and confidential reporting of events that adversely affect patients.

PSO

A Patient Safety Organization (PSO) means a private or public entity or component thereof that is listed as a PSO by the Secretary of Health and Human Services. A health insurance issuer or a component organization of a health insurance issuer may not be a PSO. The PSO enters into bona fide contracts, each of a reasonable period of time, each with a different provider for the purpose of receiving and reviewing patient safety work product.

PSES

A Patient Safety Evaluation System (PSES) means the collection, management, or analysis of information for reporting to or by a PSO.

PSWP

Patient Safety Work Product (PSWP) (1) Except as provided in (2) below, patient safety work product means any data, reports,

records, memoranda, analyses (such as root cause analyses), or written or oral statements (or copies of any of this material) (i) Which could improve patient safety, health care quality, or health care outcomes; and (A) Which are assembled or developed by a provider for reporting to a PSO and are reported to a PSO, which includes information that is documented as within a patient safety evaluation system for reporting to a PSO, and such documentation includes the date the information entered the patient safety evaluation system; or (B) Are developed by a PSO for the conduct of patient safety activities; or (ii) Which identify or constitute the deliberations or analysis of, or identify the fact of reporting pursuant to, a patient safety evaluation system. (2)(i) Patient safety work product does not include a patient's medical record, billing and discharge information, or any other original patient or provider information; nor does it include information that is collected, maintained, or developed separately, or exists separately, from a patient safety evaluation system. Such separate information or a copy thereof reported to a PSO shall not by reason of its reporting be considered patient safety work product. (ii) Patient safety work product assembled or developed by a provider for reporting to a PSO may be removed from a patient safety evaluation system and no longer considered patient safety work product if: (A) The information has not yet been reported to a PSO; and (B) The provider documents the act and date of removal of such information from the patient safety evaluation system. (iii) Nothing in this part shall be construed to limit information that is not patient safety work product from being: (A) Discovered or admitted in a criminal, civil or administrative proceeding; (B) Reported to a Federal, State, local or Tribal governmental agency for public health or health oversight purposes; or (C) Maintained as part of a provider's recordkeeping obligation under Federal, State, local or Tribal law.

Reliability: The extent of consistent performance over time.

Sentinel Event: A patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in death, permanent harm, and/or severe temporary harm (TJC, 2016). (A permanent loss of function related to the natural course of the patient's illness or underlying condition is not a Sentinel Event.) The State of Nevada defines a sentinel event as an event included in Appendix A of "Serious Reportable Events in Healthcare – 2011 Update: A Consensus Report," published by the National Quality Forum (Nevada Revised Statutes NRS §439.830 – effective October 1, 2013).

Sentinel Event Alert Gap Analysis: A model for prioritizing and addressing potential risks related to publish external sentinel or warning alerts.

Unusual Occurrence: Any event or condition not consistent with the normal or usual operation of the hospital or department and which has the potential for causing patient or visitor injury or property damage.

## **II. Policy**

The Board of Trustees delegates responsibility for oversight of the patient safety program to the Patient Safety Committee. The Patient Safety Committee monitors and evaluates the effectiveness of the Patient Safety Program and generates feedback and actions as appropriate. The Patient Safety Committee prepares an annual report to the Quality Care Committee, Medical Executive Committee (MEC), and the Board of Trustees (BOT). The report includes at a minimum, occurrence or trending of patient safety indicators and actions taken in response to actual occurrences as well as proactive assessments of high-risk activities. The Environment of Care Committee oversees non-clinical safety related processes and system issues that affect patients, employees, and visitors in the environment of care.

Risk Management maintains the hospital-wide occurrence reporting system for patients, employees, and visitor occurrences and a referral system for hospital staff and physicians to report potential claims. Risk Management in conjunction with Hospital Quality and Patient Safety Leaders investigate actual and potential safety risk within the organization. They also evaluate occurrences to identify those that may require immediate follow up actions or meet the Sentinel Event, the Safe Medical Device Act, or regulatory agency reporting criteria, including CMS, FDA, OSHA, State of Nevada DHHS, or Joint Commission. Notification is made to Administration, Risk Management, appropriate regulatory and accrediting agencies, equipment manufacturers and other appropriate individuals as necessary.

The Organization ensures timely coordination and dissemination of reporting and data management of patient safety information at the appropriate medical staff/organizational committees for review and discussion.

### **III. Culture of Safety**

Southern Hills Hospital is committed to creating a culture of safety by designing or redesigning systems and processes geared to prevent, detect, and minimize the hazards and likelihood of error. Southern Hills Hospital is focused on prevention, not blaming individuals. Patient safety events are viewed as an opportunity to learn. The Hospital believes in balancing the organization's accountability and the individual's accountability for assuring safe practices and a safe environment to care for patients.

### **IV. Structure, Roles and Responsibilities**

The philosophy guiding the promotion of a culture of patient safety is accountability. To achieve a culture of patient safety the following accountabilities are expected at Southern Hills Hospital:

| <b>Role</b>                                                          | <b>Accountability</b>                                    | <b>Specific Tasks</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**V. Mechanisms for Coordination**

**Southern Hills Hospital Patient Safety Committee**

The SHH Patient Safety Committee (PSC) or equivalent is a multidisciplinary team involving department representatives that meets not less than monthly. The Patient Safety committee or equivalent committee, is comprised of various health care professionals including but not limited to physicians, nurses, pharmacists and administrators, and is chartered to oversee the implementation of the Hospital's Patient Safety Program. The Patient Safety Officer coordinates the PSC. The CEO, Chief of Staff, and Chair of Quality Care Committee appoint medical leadership for the PSC.

Structures that support the Patient Safety Committee or equivalent works in conjunction with other safety committees, including but not limited to:

- Medication Safety

- Quality Council
- Environment of Care
- Falls Committee
- Infection Prevention Committee

The PSC reviews and develops implementation strategies for the NPSG's. Strategies include assessing and developing a culture of patient safety, encouraging a non-punitive reporting environment, developing a best practice infrastructure to foster the design of safety into our systems, and monitoring of systems risks and improvements. The PSC networks with other committees as appropriate per topic to gain consensus (e.g. Quality Care Committee, Infection Prevention, Pharmacy, other). Sentinel Event Alerts and other industry alerts are routed to the appropriate committee or teams to ensure evaluation of current care processes incorporate recommended changes.

The PSC reviews Sentinel Event Alerts, other industry alerts, compliance to The Joint Commission National Patient Safety Goals, State regulatory requirements, adverse events and potential adverse events that are deemed to be preventable, health care associated infections as defined by the CDC that are deemed to be preventable, and assures recommendations are integrated into processes. Additional resources such as national and local professional organizations/associations are monitored for changes in standards and potential risk events. Regular summary reports of progress are reported to the designated Quality Care Committee, Medical Executive Committee, and the Board of Trustees.

The PSC reviews and approves plans to address key organizational concerns, such as Falls, Restraint Reduction, Patient/Family Education, Patient Mobility, Blood and Blood Components, Medication Safety, Adverse Drug Reactions (ADR's), Pressure Ulcer Prevalence, Health Care Associated Infections and Environmental issues updates.

The PSC recommends and provides direction for training on key initiatives and educational strategies related to patient safety.

## **VI. Communicating with Patients about Safety**

It is Southern Hills Hospital's philosophy that accountability for patient safety is imbedded in a collaborative relationship involving our Board of Trustees, administrative leadership, our medical staff, employees, patients and family.

Patient safety awareness information is posted in public areas throughout the hospital. This information contains basic strategies for patients to assist in assuring their safety. The admission and discharge patient information also contains information on the patient role in safety. Patient Guides are provided to in-patients upon admission, and includes strategies prevent untoward events such as falls, medication errors, and infections while in the hospital. Annually, Patient Safety Awareness Week activities are planned to educate and inform staff, patients and the community.

Patients or their families may contact the hospital to report patient safety concerns as well as to the State of Nevada Department of Health and Human Services or to the Joint Commission. The hospital's website and other patient materials include information on how to report issues internally as well as to the Joint Commission.

Patients are randomly selected to participate in completing the Patient Experience Survey after discharge, which include questions related to the patient safety experience. These results are reported to the hospital.

## **VII. Education**

### **1. Staff Education**

- General orientation, on-going in-service and other education and training programs will emphasize specific job-related aspects of patient safety
- Specific Patient Safety Program training at orientation and annually thereafter will include:
  - An overview of the Patient Safety Program
  - Staff's role and responsibilities in the Patient Safety Program
  - Event reporting, including the events requiring reporting and the process for reporting events.
  - Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care;
  - Examples of specific job-related aspects of patient safety.

2. Physician Education - An overview of the Patient Safety Program is provided to physicians at time of initial appointment and periodically thereafter that describes the program, emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism and Culture of Safety processes.

3. Organizational Learning: Patient safety is everyone's responsibility. Everyone has a responsibility to report. By reporting concerns, it enables the organization to learn and improve processes, procedures, and systems.

## **VIII. Safety Improvement Activities**

### **Prioritization of Patient Safety Activities**

Prioritization elements are defined in the annual performance improvement plan and apply to patient safety initiatives. The PSC annual goals are listed at the end of this plan and meet the prioritization elements.

### **Routine safety-related data collection analysis**

- Unusual Occurrence reporting (see SPAE Guidance Policy)
- Medication Error Reporting
- Infection Surveillance
- Culture of Patient Safety Survey
- Environmental Safety Rounds and Assessment
- Patient Experience Survey
- Leadership Walk-around and Tracers
- National Patient Safety Goal Dashboard
- Annual Leapfrog (NQF Safe Practices) Survey
- Sentinel Event Alert Compliance
- Institute for Safe medication Practices( ISMP) and other industry Alerts
- Employee feedback survey

### **Identification, reporting, and management of patient safety events**

1. To effectively improve processes and systems, health care providers should not be fearful of punishment or retribution for reporting mistakes.
2. An accessible multifaceted non-punitive, just culture reporting system exists .
3. Errors and accidents are tracked in an attempt to establish trends and patterns, to learn from them and prevent reoccurrence.
4. Healthcare providers participate in reporting and developing improved processes to effectively evaluate errors and near misses.
5. Reporting errors and near misses are a critical component of the Southern Hills Hospital Patient Safety Program.

The Meditech on-line incident reporting system is a tool for the documentation, investigation, and correction of patient safety issues as described in the organizational policy: The Patient Safety Director coordinates this process.

Organization or Medical Staff committees refer patient safety issues to the Patient Safety Officer for review at the PSC and corrective action.

### **NRS 439.877 – Monitoring and Compliance**

Nevada statute NRS 439.877 requires medical facilities to adopt patient safety checklists and patient safety policies. These patient safety checklists are protocols used to improve the outcomes of patients at the hospital to include:

1. Patient Discharge Process-Healthy Living (Meditech)
2. Patient Identification Process (Policy)
3. Patient room/environment sanitation and cleaning (Sodexo 7-Step Cleaning Process)
4. Additional patient safety checklists which may be appropriate to ensure the safety of patients in the facility. These include, but are not limited to the following:

- a. Universal Protocol (Safe Procedural and Surgical Verification)
- b. Central Line Insertion Bundle (Meditech)

Monitoring and oversight for compliance with these policies and checklists will be the ongoing responsibility of the Patient Safety Committee.

### **NRS 439.865– Infection Control Program**

Nevada statute NRS 439.865 requires medical facilities have an infection control program to prevent and control infections within the medical facility, as well as an infection control policy. The Hospital's Infection Control Plan is attached as an addendum to the Patient Safety Plan and is reviewed annually. (See Appendix 2 – Infection Prevention and Control Plan)

### **Proactive Risk Identification and Reduction:**

1. Opportunities for improvement regarding patient safety issues and hazardous conditions are identified through trending of actual or potential occurrences involving patients or visitors and/or evidence-based literature (e.g. The Joint Commission Sentinel Event Alerts).
2. When an identified opportunity for improvement is identified, it is analyzed by the involved care providers according to level of severity, frequency of occurrence, potential for harm and liability.
3. At least every 18 months, one high-risk or error-prone process is selected for Failure Mode Effect Analysis (FMEA) process. The underlying systems are examined and modified or redesigned to minimize the risk of the identified failure mode.
4. Trending of adverse events, environmental safety issues, aggregate data collection, and review of intensive assessments are part of the identification and management of risks to safety and are used to prevent reoccurrences.
5. Serious unusual occurrences and sentinel events are reviewed with determination made for intensive assessment and root cause analysis according to the SPAE policy.
6. Near miss events are reviewed and root cause analysis conducted as deemed appropriate.
7. Regular communication about patient safety and risk management is conducted with designated Quality Care Committee, Medical Executive Committee, and the Board of Trustees.  
Disclosure of an adverse event to a patient is in accordance with the SPAE policy.

## **IX. Reporting Patient Safety Results:**

### **To the PSC:**

The Patient Safety Committee reviews and recommends actions on the following reports:

- Audits and performance improvement activities on Patient Safety
- National Patient Safety Goals and Safe Practices compliance (including accordance with NRS 439.877)
- Culture of Patient Safety Survey

- Leapfrog Survey

**To organization staff and medical staff:**

Organizational staff receives patient safety results and information on:

- Culture of Safety Survey
- Patient experience survey results on patient safety components.
- National Patient Safety Goals and Safe Practices compliance (including accordance with NRS 439.877)
- Leapfrog Survey

**To executive leadership and Board of Trustees:**

The Board of Trustees and Executive Leadership receives periodic reports on:

- Culture of Safety Survey
- Leapfrog Survey
- Results of intensive analyses related to patient safety issues

**X. Annual Review**

The Patient Safety Program is reviewed annually and revised as necessary. It is submitted annually for review and approval by the Medical Executive Committee and the Board of Trustees.

**XI. References/Authority**

- The Joint Commission 2017 NPSG's
- HCA Patient Safety Organization PSO Operating Policy and Procedure  
Federal Register- Department of Health and Human Services 42 CFR Part 3  
Patient Safety and Quality Improvement

## Appendix One

### Strategic Priorities for 2017 - Goals

- Maintain at least 2 facility Master TeamSTEPPs trainers
- 100% of clinical directors/managers complete TeamSTEPPs training
- 100% of senior leaders complete TeamSTEPPs training
- 90% of clinical staff working in patient care areas complete TeamSTEPPs training
- Achieve 95% compliance with oxytocin process measures each quarter Q416-Q317
- Create facility-wide expansion and implementation plan for use of SBAR tool on all clinical high-risk areas
- 95% of leadership and staff complete viewership of “Hindsight” educational videography by end of Q317
- 95% of new hires from January 1-September 30, 2017 complete viewership of “The Dream” and “Hindsight” educational videography by end of Q317
- Complete and submit a minimum of 3 Serious Event Analyses (SEAs) to the PSO
- Submit a case study for a completed SEA to the PSO
- Submit 95% of all patient event and close call reports designated as PSWP within 60 days
- Participate in the Division-wide Patient Safety Table project
- Attend Patient Safety Director Development Program
- Obtain/maintain CPPS/CPHRM Certification
- Attend HCA PSO Seminar
- Attend National Patient Safety Foundation Patient Safety Congress

## SCOPE

This Infection Prevention and Control Plan applies to Southern Hills Hospital and Medical Center

## POLICY

Southern Hills Hospital and Medical Center will develop and maintain a comprehensive and effective program of surveillance, prevention, and control of infection. The employees, medical staff, licensed independent practitioners, contract service workers, volunteers, students and visitors of Southern Hills Hospital and Medical Center will comply with the policies and procedures of this program, as well as all relevant federal laws and accrediting body standards.

The organization will employ a coordinated process to reduce the risks of endemic and epidemic nosocomial, or healthcare-associated, infections in patients and healthcare workers. Healthcare-associated infections (HAI) are defined by the Centers for Disease Control (CDC) as an infection that develops in a patient who is cared for in any setting where healthcare is delivered (e.g. acute care hospital, chronic care facility, ambulatory clinic, dialysis center, surgery center, home) and is related to receiving health care (i.e., was not incubating or present at the time healthcare was provided).

## PURPOSE

- A. The purpose of the infection control program plan is to identify infections and reduce the risk of disease transmission through the introduction of preventive measures. The aim of our program is to deliver safe, cost-effective care to our patients, staff, visitors, and others in the healthcare environment (with emphasis on populations at high risk of infection). The program is designed to prevent and reduce hospital associated infections and provide information and support to all staff regarding the principles and practices of Infection Prevention & Control in order to support the development of a safe environment for all who enter the facility.
- B. Our goals include recommendation and implementation of risk reduction practices by integrating principles of infection prevention and control into all direct and indirect standards of practice.
- C. The program at Southern Hills Hospital and Medical Center is designed to provide processes for the infection prevention and control program among all departments and individuals within the organization. It supports the mission to serve, heal, and educate with a concern for the whole patient as well as an understanding of the economic environment and a commitment to quality.

- D. It includes an evaluation of surveillance, prevention and control activities for 2016 as well as future surveillance plans and goals; it is evaluated annually and as the need arises.

### **INFECTION PREVENTION & CONTROL PROGRAM DESCRIPTION**

The Infection Prevention & Control Program is a multidisciplinary, systematic approach to quality patient care that emphasizes risk reduction of disease transmission in a health care environment by using sound epidemiological principles. It can further be defined as the establishment of a program or a plan of action to prevent disease transmission when possible, monitor its occurrence, and initiate measures to minimize the impact in those cases that cannot be prevented

Activities of the Infection Prevention & Control Program are appropriate to this hospital's geographic location, the volume of patients encountered; the patient populations served, the hospital's clinical focus, and number of employees (see risk analysis for more details).

The goals stated above are accomplished by setting controls or standards that have been proven effective in minimizing infections that cannot be prevented, preventing those that can be, and providing for early diagnosis and appropriate treatment of all infections. These controls include hospital policies and procedures and departmental protocols. Effectiveness is achieved by integrating principles of Infection Prevention & Control within each department.

In addition, as clinical practice guidelines and standards are reviewed/revised (such as CDC guidelines), measures are taken to identify practices followed in the name of Infection Prevention & Control and to evaluate them for implementation

### **PROGRAM OBJECTIVES**

- A. To prevent/minimize disease transmission within the facility.
- B. To recommend methods for early identification and appropriate therapy when infections are inevitable
- C. To recommend practices oriented towards preventing introduction of infection into the facility and/or containing the spread of infection if it is introduced.
- D. To mitigate the unintended consequences of antimicrobial use (resistance, morbidity & mortality, cost)
- E. To analyze practices which have the potential to affect rates of health care associated infections
- F. To implement practices which decrease the risk of transmission of microorganisms within the organization
- G. To support Employee Health, Quality/Management, Public Safety, and Nursing Management efforts, using epidemiological and scientific methodologies.
- H. To facilitate compliance with reporting requirements of the facility to Public Health agencies.

### **PROGRAM AUTHORITY AND RESPONSIBILITY**

- A. The Infection Prevention Coordinator through the Infection Prevention and Control Committee and will have the authority designated by the Medical Staff and Administration to institute any appropriate control measures or studies and to make decisions in an emergency regarding Infection Control. Such measures include but are not limited to the following:
  - Initiating culture and sensitivity testing.
  - Instituting appropriate isolation precautions.
  - Restricting visitors.
  - Closing units to admission.
  - Initiating potential outbreak investigations
- B. Statement of Accountability:

The Board of Trustees through the Hospital Administrative Team will be accountable for the assurance of a safe hospital environment, providing quality care and the necessary resources to prevent and control infections.

  - The Medical Staff through the Infection Prevention and Control Committee, comprised of indirect and direct patient care staff, and the Quality Council with input from the medical

committees, will be accountable for the guidance and direction of a comprehensive and effective infection control program.

- The Infection Prevention and Control Committee with the guidance of the chairman and the Infection Prevention Coordinator will be accountable for the review and analysis of health care-associated infections, the promotion of a preventative and corrective program designed to minimize infection hazards, and the supervision of infection control in all phases of the hospital's activities.
- The Infection Prevention Coordinator will be accountable for day-to-day infection control activities and for maintaining an effective infection control program in compliance with the county, state and federal laws and regulations.
- Each healthcare individual with the support, leadership and education provided by the Hospital Administrative Team will be accountable for the diligent adherence to appropriate practices that are designed to eliminate, control and reduce infections within the facility.

C. Members of the Infection Control Committee include:

- Representatives from: Medical Staff (to insure representation of the major services), Administration, Nursing, Surgical Services, Quality/Risk Management, Laboratory Services, Plant Operations, Nutritional Services, and Pharmacy
- The Chairperson of the Control Committee is the Infection Prevention and Control Coordinator

D. Duties and Responsibilities of the Infection Control Committee

- The Infection Control Program is designed and approved by the Infection Control Committee. This collaborative group will provide ongoing direction to the Infection Control Practitioner regarding all aspects of the Infection Control Program.

## **RESOURCES**

A. Allocation of Resources for the Infection Control Program.

- Hospital leaders will review on an ongoing basis (but no less frequently than annually) the effectiveness of the hospital's infection prevention and control activities and report their findings to the integrated patient safety program.
- Systems to access information will be provided to support infection prevention and control activities.
- Laboratory support will be provided to support infection prevention and control activities.
- Equipment and supplies will be provided to support infection prevention and control activities.
- Infection control personnel will have appropriate access to medical or other relevant records and to staff members who can provide information on the adequacy of the institution's compliance with regard to regulations, standards and guidelines.

## **RISK ANALYSIS**

A. The comprehensive risk analysis for our hospital will include an assessment of the geography, environment, services provided and population served; the available infection prevention and control data; and the care, treatment and services provided by this facility. The infection Prevention and Control program is ongoing and is reviewed and revised at least annually. Surveillance activities will be used to identify risks pertaining to patients, staff, volunteers, students, and licensed independent practitioners and as warranted, visitors.

1. Baseline (initial) risk assessment:

- A careful assessment of the risk for infections has been conducted for Southern Hills Hospital and Medical Center
- The risk assessment was conducted by: Infection Control Coordinator with input from the Infection Prevention and Control Committee
- The baseline risk assessment was based on: Southern Hills Hospital and Medical Center, located in the southwest valley of Las Vegas, Nevada.

- Licensed Beds, Setting, and Employees:  
Southern Hills Hospital and Medical Center Medical Center is an acute care hospital consisting of 180 licensed beds located in an (urban) setting with approximately 917 employees.
  - The annual population includes approximately:
    - ◊ Number of admissions – 9138
    - ◊ Number of inpatients surgeries- 3057
    - ◊ Number of outpatients surgeries- 5193
    - ◊ Number of surgeries per year- 8250
    - ◊ Number of C-sections – 212
    - ◊ Number of endo cases – Inpatient-744 Outpatient - 1526
    - ◊ Number of ED visits - 40053
    - ◊ Number of Births – 1337
  - The services provided at this hospital include: Medical Surgical Services; Laboratory Services; Rehab Services, Maternal and Child Services (including Level 2 NICU), Behavioral Health Services, Emergency Care, Outpatient Surgery, Diagnostic Imaging, Cardiac Catherization and Surgical Services
  - In 2012 we opened a 14 bed Geri-Psych Unit
  - In 2016 we added 46 Ortho beds
  - In 2016 we opened a free standing Provider Based Emergency Department with 12 beds
  - In 2017 we will be adding an attached 80 bed Psychiatric Facility
  - Risk factors are identified and interventions are implemented to decrease the incidence of infections. Specific risk factors shall include the monitoring of:
    - ◊ Invasive devices
    - ◊ Compliance with surgical antibiotic prophylaxis
    - ◊ New and emerging infectious diseases as well as antimicrobial resistant pathogens
    - ◊ Compliance with infection control policies and procedures
2. Surveillance and Other Data  
The hospital identifies risks for acquiring and transmitting infections based on the following: The analysis of surveillance activities and other infection control data.
3. Input from Staff  
The hospital reviews and identifies its risks at least annually and whenever significant changes occur with input from, at a minimum, infection control personnel, medical staff, nursing, and leadership.”
4. Ranking Risk  
The hospital prioritizes the identified risks for acquiring and transmitting infections. These prioritized risks are documented.
5. Periodic risk assessments:  
At a minimum, a reassessment of risk will be conducted annually.  
  
A reassessment will be conducted whenever risks are significantly changed.

## **PRIORITIES AND GOALS**

- A. The hospital establishes priorities and sets goals for preventing the development of health care-associated infections with in the hospital. In order to continue Southern Hills Hospital and Medical Center’s mission, the following infection control goals have been established:
- To identify and reduce the risks of acquiring and transmitting infections among patients, employees, physicians, other licensed independent practitioners, contract service workers, volunteers, students and visitors.

- To meet patient expectations of safe care and environment.
  - To meet employee expectations of a safe workplace environment.
  - To comply with all relevant federal law and accrediting body standards.
  - To reduce health care costs while delivering high quality care.
1. Strategies to meet the goals of Southern Hills Hospital and Medical Center's Infection Control and Prevention Program include the following:
- a. Hand-hygiene program
    - See Hospital Policy for Hand Hygiene. Initial training is given during General Orientation and periodically during the year as needed
    - This hospital has adopted the CDC Guidelines for Hand Hygiene in Healthcare Settings – 2002
    - Guideline For The Prevention And Control Of Norovirus Gastroenteritis Outbreaks In Healthcare Settings - 2011
  - b. Storage, cleaning, disinfection, sterilization and/or disposal of supplies and equipment
    - See Hospital Policy for Equipment, Patient, Cleaning; Cleaning Agents - Selection, Trophon Probe Cleaning.
    - The ICP participates on Product Evaluation Committee (SMAT) to ensure infection related products and equipment support safe and sound practices and principles and the ICP responds to notification of a recalled item(s) specific to infection related issues.
  - c. Appropriate reuse of single use equipment (when appropriate)
    - See Hospital Policy for Reprocessing of Single Use Devices
  - d. Personal protective equipment
    - See Hospital Policy for Bloodborne Pathogens Plan, BBP Departmental tasks and PPE. This plan and attachment addresses who is to use it, when they are to use it, and when they are trained
    - See Hospital Policy: Post Exposure to Blood/Body Fluid/OPIM
    - See Hospital Policies for Standard Precautions and Transmission-Based Precautions
    - This hospital has adopted the CDC Guidelines for [Guideline for Isolation Precautions in Hospitals](#) the Healthcare Infection Control Practices Advisory Committee. CDC and AM J Infect Control 2007;
  - e. Program to reduce the incidence of antimicrobial resistant infections
    - See Hospital Policy for MDROs
    - Detection of Vancomycin Resistant Staph
      - The Infection Prevention & Control Department and the appropriate Infectious Disease physician must be immediately contacted when a staph aureus/epidermidis isolate is recovered that is known or suspected to be intermediate or resistant to vancomycin.
      - Vancomycin resistant should be confirmed by the Microbiology Lab; this is done by repeating antimicrobial susceptibility testing using standard methods. It is advisable to re-streak the colony to ensure that the culture is pure.
      - The state health department and the CDC must be notified; the isolate will be sent through the state health department to the CDC (phone number 404-639-6413) for confirmation of vancomycin resistance.
    - Detection of Carbapenem-Resistant or Carbapenemase-Producing Enterobacteriaceae)
      - The Laboratory will promptly notify the nursing unit and the Infection Prevention & Control Dept. of all isolates that are non-susceptible to carbapenems or isolates that test positive for carbapenemase.

- Since CRE is not endemic, surveillance will continue. If CRE become endemic, or an outbreak occurs, then additional strategies will be considered as per the 2006 CDC MDRO guidelines.
  - Resources
    - Guidance for Control of Infections with Carbapenem-Resistant or Carbapenemase-Producing Enterobacteriaceae in Acute Care Facilities 2009.
    - Management of Multidrug-Resistant Organisms In Healthcare Settings, 2006
- g. Programs to prevent hospital acquired device-associated infections (namely central venous catheter-associated infections, urinary catheter associated infections and ventilator-associated infections).
- g. This facility has adopted the following CDC Prevention Guidelines:
  - Preventing Healthcare-Associated Pneumonia - 2003
  - Guidelines for the Prevention of Intravascular Catheter-Related Infections, 2011
  - Guideline for Prevention of Catheter-associated Urinary Tract Infections, 2009
- h. A program to prevent surgical site infections.
  - This hospital has adopted the CDC Guidelines for Prevention of Surgical Site Infections – 1999
- i. Additional guidelines
  - Guidance on Public Reporting of Healthcare-Associated Infections: Recommendations of the Healthcare Infection Control Practices Advisory Committee 2003
  - Guideline for Disinfection and Sterilization in Healthcare Facilities, 2008
  - Guidelines for Preventing Health-Care--Associated Pneumonia, 2003
  - Guidelines for Environmental Infection Control in Health-Care Facilities 2003
  - Guideline for Prevention of Surgical Site Infection, 1999
- Employee Health (EH) Program:  
The Employee Health program involves interventions for reducing the risk of infection transmission, including recommendations for immunizations and testing for immunity. In late 2014 we added a full time Employee Health Nurse
  - The program includes screening for health issues, childhood illness/immunization; tuberculosis screening; immunization for hepatitis B and influenza; evaluation of post-exposure assessment to blood/body fluid exposures and/or other communicable diseases.
  - When indicated, the program also includes monitoring of employee illnesses in order to identify potential relationships among employee illness, patient infectious processes and/or environmental health factors.
  - The infection control program will review and approve all policies and procedures developed in the employee health program that relate to the transmission of infections in the hospital. Infection Control/Employee Health Coordinator will develop, implement, and annually review and update the OSHA Bloodborne Pathogens Exposure Control Plan and Tuberculosis Control Plan.
  - The Hospital follows the following CDC guidelines
    - Influenza Vaccination of Healthcare Personnel (2006)
    - Immunization of Healthcare Workers (1997)
    - Infection Control in Healthcare Personnel (1998)
    - Tuberculosis (2005)
  - At the time of employment, all facility personnel will be evaluated by the employee health program for conditions relating to communicable diseases.

The evaluation includes the following:

- ◇ Medical history, including immunization status and assessment for conditions that may predispose personnel to acquiring or transmitting communicable diseases;
  - ◇ Tuberculosis testing (T-Spot);
  - ◇ Serologic screening for vaccine preventable diseases, if indicated;
  - ◇ Such medical examinations as are indicated by the above.
- Appropriate employees or other healthcare workers will have periodic medical evaluations to assess for new conditions related to infectious diseases that may have an impact on patient care, the employee, or other healthcare workers, which should include review of immunization and tuberculosis testing (T-Spot) status, if appropriate.
  - Southern Hills Hospital and Medical Center will maintain confidential medical records on all healthcare workers. Files are stored in locked file cabinets in the Employee Health Office
  - Employees will be offered appropriate immunizations for communicable diseases.
  - Immunizations will be based on regulatory requirements and Advisory Committee on Immunization Practices recommendations for healthcare workers.
  - The employee health program will develop policies and procedures for the evaluation of ill employees, including assessment of disease communicability, indications for work restrictions, and management of employees who have been exposed to infectious diseases, including postexposure prophylaxis and work restrictions.
    - This hospital has adopted the following Healthcare Worker Safety Guidelines
      - Management of Occupational Exposures to Hep B, Hep C, and HIV and Recommendations for Postexposure Prophylaxis 2001
      - Infection Control in Healthcare Personnel - 1998
2. Program Compliance
- To verify compliance with the program, Infection Control Coordinator shall conduct periodic infection control rounds with follow-up required by the department director.
  - The Department Director or designee will conduct direct observation of appearances and practices in their specific clinical areas.

2017 Goals Based on 2016 Risk Assessment

- Maintain central line related bloodstream infections NHSN SIR <1.000
- Continue to report department specific CLBSI to NHSN as required
- Decrease Ventilator Associated Pneumonia infections NHSN SIR <1.000
- Continue to monitor and maintain SSIs to NHSN SIR <1.000. Report COLO, HPRO, HYST, KRPO and LAM in NHSN.
- Maintain CAUTI's NHSN SIR <1.000. Continue reporting of ICU CAUTIS in NHSN.
- Continue HCA Corporate MRSA Campaign - SHHMC goal 95%.
- Monitor ESBLs
- Maintain MRSA HAIs less than 0.4 per 1000 patient days. NHSN reporting will continue in 2015
- Maintain VRE HAIs less than 0.1 cases per 1000 patient days
- Decrease C. Difficile HAIs NHSN SIR <1.000. Continue reporting to NHSN.
- Maintain HAI from Acinetobacter below 0.5 cases per 1000 patient days

## SURVEILLANCE PLAN

- A. When developing infection prevention and control activities, the hospital uses evidence-based national guidelines or, in the absence of such guidelines, expert consensus CDC/HICPAC Guidelines
- Isolation Precautions (2007)
  - Multi-Drug Resistant Organisms (2006)
  - Influenza Vaccination of Healthcare Personnel (2006)
  - Tuberculosis (2005)
  - Healthcare Associated Pneumonia (2004)
  - Environmental Infection Control (2003)
  - Smallpox Vaccination (2003)
  - Intravascular Device-Related Infections (2002)
  - Hand Hygiene (2002)
  - Infection Control in Healthcare Personnel (1998)
  - Surgical Site Infection (1998)
  - Immunization of Healthcare Workers (1997)
- B. Activities  
There is an active program for the prevention, control and investigation of infections and communicable diseases that includes a hospital-wide surveillance program. Surveillance data will be analyzed appropriately and used to monitor and improve infection control and healthcare outcomes.
- C. Surveillance and Monitoring:  
Surveillance is performed as an adjunct to the Quality and Risk Prevention Programs. It includes (but is not limited to):
1. Monitoring high volume/high risk; low volume/high-risk and surgical procedures.
  2. Evaluating new programs as well as renovation or construction in conjunction with the hospital's Facilities Management Department and the Environment of Care (EOC) team.
  3. Compiling and analyzing surveillance data, presenting findings and making recommendations to the Infection Prevention and Control Committee and other departments appropriate.
  4. Using baseline surveillance data to determine if an outbreak is occurring.
  5. Investigating trends of infections, clusters, and unusual infections.
  6. Conducting or facilitating infection control rounds or focus reviews.
- D. Surveillance Methodology
1. Sources for infection identification include:
    - Microbiology records
    - Reports from TheraDoc
    - Reports from MEDITECH including patient census/diagnosis
    - Routine Chart reviews
    - Post-discharge surveillance following surgical procedures
    - Staff reports of suspect/known infections or infection control issues
    - Device-associated infections (i.e., Line day usage for urinary catheters, central line catheters and ventilator day use).
    - Employee Health reports reflecting epidemiological significant employee infections
    - Public Health reporting of State mandated reportable infections
    - Regular review of surveillance data
  2. Infection Definitions:
    - Recommended practices for surveillance: Association for Professionals in Infection Control and Epidemiology (APIC), Inc. American Journal of Infection Control 2007
    - National Healthcare Safety Network (NHSN) definitions
  3. Data Collection Methods
    - The infection Control Coordinator collects the infection prevention and control data
  4. Rate calculations:

Infection rates are calculated using formulas accepted by the Association for Professionals in Infection Control and Epidemiology (APIC) and the Centers for Disease and Control and Prevention (CDC).

- Infection rates will be compared to internal and external benchmarks.
- 5. The occurrence and follow-up of infections/communicable diseases among patients, staff and visitors will be documented by the Infection Control Coordinator and reported to the Infection prevention and Control Committee

E. Environmental Assessment/Surveillance:

1. Environmental Assessment/Surveillance is performed in conjunction with the Environment of Care (EOC) group and includes the following:
  - a. Verifying compliance with the IC program, the facility's ICP will conduct periodic infection control rounds with follow-up required by the surveyed department.
  - b. Ensuring clean equipment and supplies are stored separately from soiled ones.
  - c. Ensuring linens are kept covered during transport and storage.
  - d. Ensuring sterile supplies are stored in a manner as to prevent contamination or damage to the packaging.
  - e. Reviewing the sterilization parameters for all patient care items processed within the facility to assure standards are met.
  - f. Review the documentation of sterile processing in all areas including Sterile processing, Surgery and Gastroenterology Labs to ensure all sterilization done in the facility meets the same standards.
  - g. Evaluating the surgical department's review and report of the summary of all flash sterilization by instrument type to determine if adequate supplies are being maintained.
  - h. Assisting in the evaluation of sterilization failures, reporting findings to the Infection prevention and Control Committee, Medical Staff, Quality/Risk Management, Patient Safety Director, attending physician, and patient care manager of area involved.
  - i. Unused single-use device (SUD) will be reprocessed by an external company (Used single-use devices will not be reprocessed by the facility.)
  - j. Monitoring microbiology of treated water and dialysate according to State and Federal standards
  - k. Evaluating of patients or employees with infections or diseases from environmental organisms, e.g., Legionella, Aspergillus.
  - l. Routine sampling of the environment, air, surfaces, water, food, etc., is discouraged unless a related infection control issue is identified
  - m. Performing Pre Construction Infection Control Risk Assessments (PCRA) prior to renovation, construction, or planned interruption of the utility system within the patient care environment.
    - The PCRAs are to be approved by the appropriate committees, which may include, but are not limited to: EOC, Safety, and ICC.
    - Rounds of the construction/renovation site are conducted to evaluate compliance with PCRA requirements. The ICP will have the authority to stop any project that is in substantial non-compliance with the requirements.
    - Any time there is construction or renovation, the ICP will be consulted prior to final design.
  - n. Monitoring Atmospheric Guidelines
    - Evaluate the use of negative pressure environments in the care of patients with airborne diseases.
    - This hospital has adopted the following:
      - CDC Guidelines for Environmental Infection Control in Healthcare Facilities – 2003

6. Outbreak Plan

- a. Southern Hills Hospital & Medical Center will identify an outbreak as early as possible to protect patients, employees and visitors to the Hospital. Additional resources will be summoned to include the Infection Control Coordinator, the Infectious Prevention and Control Committee Physician representative Specialist, Laboratory and Microbiology experts, Hospital Administration and the Public Health Authorities. Normal surveillance may locate a disease that has been absent, or herald the onset of a new disease. One case may be sufficient for this identification.
  - b. The term outbreak describes the sudden rise in the incidence of a disease, especially a harmful one. An outbreak is characterized by a disease's bypassing of measures to control it. An outbreak may be defined as a localized increase in the expected incidence of a disease. .
7. All Components and Functions  
All hospital components and functions are integrated into infection prevention and control activities.
  8. Communication Method  
The hospital has a method for communicating responsibilities about preventing and controlling infection to licensed independent practitioners, staff, visitors, patients, and families
  9. External Reporting Methods  
The hospital identifies methods for reporting infection surveillance and control information to external organizations.
  10. Influx of Infectious patients  
The hospital has a separate plan which addresses the sudden influx of infectious patients

## **PLAN IMPLEMENTATION**

- A. Epidemiologic data is used to plan, implement, evaluate and improve infection control strategies. Surveillance is a critical component of the program. Prevention and control efforts will include activities such as:
  - Identifying, managing, reporting, and following-up on persons with reportable and/or transmissible diseases.
  - Measuring, monitoring, evaluating and reporting program effectiveness.
  - Expanding activities as needed in response to unusual events or to control outbreaks of disease.
  - Addressing outbreaks and epidemics, and unusual activities in a timely manner.
  - Ensuring that all departments alert the Infection Control Coordinator whenever an unusual pathogen is isolated or suspected.
  - Focusing on medical and surgical services that have a high volume of procedures and/or have a population that may be at high risk for infection.
  - Complying with mandates listed under the umbrella of infection control by licensing and accrediting agencies

## **EVALUATION AND IMPROVEMENT**

- A. Infection Classification and Analysis
  1. For the purposes of routine data collection, health care-associated infections are clinically active infections occurring in hospitalized patients in whom the infection was not present or incubating at the time of admission. When the incubation period is unknown, an infection is called health care-associated if it develops at any time after admission and meets established criteria
  2. Both infections with endogenous organisms carried by the patient and those with organisms originating in the animate or inanimate environment are included in the definition. When thus

defined, health care-associated infections include potentially preventable infections while admittedly including some infections that may be regarded as inevitable

3. In determining the presence or absence of a health care-associated infection for statistical measurements, strict criteria must be used for valid data analysis. Not all health care-associated infections are counted and presented for statistical analysis.
4. All positive cultures will be reviewed and classified as either:
  - Nosocomial Infection: All Nosocomial Infections (both device-associated and non-device-associated) are defined, in general as
    - ◇ An infection not present or incubating at the time of admission
    - ◇ An infection, with an unknown incubation period, that develops after admission
    - ◇ An infection present on admission that is directly related to or is the residual of a previous admission
    - ◇ An infection indicated as nosocomial in a patient chart, by a physician
  - Community-Acquired:
    - ◇ An infection present at the time of admission
    - Exception: An infection present on admission is nosocomial if it is directly related to or is the residual of a previous admission
  - Healthcare associated
  - Colonization: Organisms present but not causing an infection from a normally non sterile site.
  - Not Significant: Includes contamination (e.g., urine with a mixed culture, low colony counts in blood or sputum, etc.) and repeat cultures / cultures previously isolated.
- B. An assessment may be done for infections as determined by the facility as hospital acquired infection sentinel event process
  - In cooperation with the Quality/Risk Departments, the ICP will facilitate a root cause analysis of all nosocomial infections that result in serious injury or harm or the risk thereof.
  - Any suspected cases in which the hospital-acquired infection is the direct cause of death or major permanent loss of function will be referred to the Chairman of the Quality Committee for verification. If the Chairman deems this is a sentinel event, the case will be sent to the Quality Management Department for a root cause analysis to determine if the case meets the definition of "Hospital Acquired Infection Sentinel Event". The Infection Control Coordinator will participate in the analysis.
- C. Nevada Senate Bill 319/CMS Reporting
- D. **Nevada Revised Statute**
  - Nevada Revised Statutes 439.847 requires facilities to participate in the NHSN surveillance system, and facilities must provide the Health Division access to that information for the purpose of analyzing the data.
  - A hospital, which meets the criteria prescribed in subsection (1) of Section 4 of Senate Bill 319 of the 2009 legislative session shall collect and submit data related to methicillin-resistant staphylococcus aureus (MRSA). The hospital shall, at a minimum, report MRSA Metric 1 by each patient-care location in the medical facility where denominator data can be collected and on Metric 2 using a facility-wide measurement.
  - The Reporting Program CLABSI Requirements Hospitals must be enrolled in the National Healthcare Safety Network (NHSN) and use the CLABSI protocol to submit data elements needed to calculate the CLABSI measure.
    - Hospitals with a signed Notice of Participation indicating they participate in the Reporting Program do not need to sign a new Notice of Participation.
    - **All** hospitals participating in the Reporting Program are required to:
    - Submit quarterly data if a hospital has an ICU, in which there were central line days.

#### E. Program Evaluation

1. The Infection Prevention and Control Committee will annually evaluate (See Risk Assessment), revise as necessary, and approve a plan for surveillance, prevention, and control of infections. The following information will be used:
  - Data trend analyses generated by surveillance activities during the past year.
  - Effectiveness of prevention and control intervention strategies.
  - Services instituted during the past year as well as priorities or problems identified.
  - TB and Bloodborne pathogen exposure control programs.

**Policy Title: 2017 Patient Safety Plan**

---

**Audience: All Employees**

---

**References and Citations:**

---

**PURPOSE**

The purpose of the Patient Safety Plan is to provide a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services. The goal of the Patient Safety Plan is to provide a safe environment for patients and their families. The approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at the Hospital. The purpose includes creating an environment that encourages:

- Recognition and acknowledgment of risks to patient safety and medical/health errors;
- The initiation of actions to reduce these risks;
- The internal reporting of what has been found and the actions taken;
- A focus on processes and systems;
- Minimization of individual blame or retribution for involvement in a medical/healthcare error;
- Organizational learning about medical/healthcare errors;
- Support of the sharing of that knowledge to effect behavioral changes in itself and other health care organizations; and
- Disclosure of the outcomes of care, treatment and services.

The Patient Safety Plan developed by the interdisciplinary Patient Safety Committee and approved by the Quality Improvement Council, the Medical Executive Committee, and the Board of Trustees, outlines the components of the organization-wide Patient Safety Program.

**SCOPE OF ACTIVITIES**

The Patient Safety program is an organization-wide program that includes and integrates all activities within the organization and CHS PSO, LLC. which contributes to the maintenance and improvement of patient safety, healthcare quality and healthcare outcomes.

The scope of the Patient Safety Program involves an ongoing assessment, using internal and external knowledge and experience, to prevent occurrence of errors and to maintain and improve patient safety. Patient safety event information from aggregated data reports and individual event reports will be reviewed by the Patient Safety Committee to prioritize organizational patient safety activity efforts.

In addition to internal knowledge and experience, the services and information that the CHS PSO, LLC. offers will be reviewed and evaluated to include:

Original Effective Date: 9/30/2004

Revision Date: 4/9/2017

- 
- Best Practices and Took Kit Development;
  - Comparative Analysis of Adverse Event Reported in the Event Reporting System;
  - Unsafe Behavior Evaluations;
  - Raise safety awareness through the internal publication of anonymized Action Plans from root cause analysis;
  - Develop and publish Patient Safety Alerts; and
  - Monthly Comprehensive Risk Assessments.

**Patient Safety Event Work Product:**

Types of patient safety events, adverse outcomes, or medical/health care errors included in data analysis are:

- Event Reports- those events and outcomes reportable to the Director of Risk Management by an Event Report (Form RM 3301) during downtime or by entering the occurrence into the Event Reporting System include processes and outcomes of care that may result in no harm through serious injury or death. Examples include falls, medication variances, adverse drug reactions, intravenous therapy variances, procedure variances, procedure complications, patient complaints and AMA and elopement discharges. These may also include near miss events.
- Hemolytic transfusion reactions reported through the transfusion review channels.
- Hazardous Condition – any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Serious Safety Event & Sentinel Event: applies to events that have resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient's illness or underlying condition. In addition, there are other event types that are considered sentinel due to the severity of the event even though the outcome was not death or permanent loss of function unrelated to the natural course of the patient's illness or underlying condition.
- Serious Safety Event & Sentinel event criteria and the procedures involved are detailed in the sentinel event and root cause analysis policies and procedures including definitions of near misses, which require a root cause analysis.
- Never Events and Hospital Acquired Conditions including:

**Surgical events:**

- Surgery performed on the wrong body part;
- Surgery performed on the wrong patient;
- Wrong surgical procedure performed on a patient;
- Unintended retention of a foreign object in a patient after surgery or other procedure;
- Intraoperative or immediately postoperative death in an American Society of Anesthesiologists Class I patient; or
- Artificial insemination with the wrong sperm or donor egg

**Product or device events:**

- 
- Patient death or serious disability associated with the use of contaminated drugs, devices, or biologics provided by the health care facility;
  - Patient death or serious disability associated with the use or function of a device in patient care, in which the device is used for functions other than as intended; or
  - Patient death or serious disability associated with intravascular air embolism that occurs while being cared for in a health care facility e.g., luer connectors are implicated in or contribute to many of these errors because they enable functionality of dissimilar tubes to be connected.

Patient protection events:

- Infant discharged to the wrong person;
- Patient death or serious disability associated with patient elopement (disappearance); or
- Patient suicide or attempted suicide resulting in serious disability, while being cared for in a health care facility

Care management events:

- Patient death or serious disability associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration);
- Patient death or serious disability associated with a hemolytic reaction due to the administration of ABO/HLA-incompatible blood or blood products;
- Maternal death or serious disability associated with labor or delivery in a low-risk pregnancy while being cared for in a health care facility;
- Patient death or serious disability associated with hypoglycemia, the onset of which occurs while the patient is being cared for in a health care facility;
- Death or serious disability (kernicterus) associated with failure to identify and treat hyperbilirubinemia in neonates;
- Stage 3 or 4 pressure ulcers acquired after admission to a health care facility; or
- Patient death or serious disability due to spinal manipulative therapy

Environmental events:

- Patient death or serious disability associated with an electric shock or electrical cardio-version while being cared for in a health care facility;
- Any incident in which a line designated for oxygen or other gas to be delivered to a patient contains the wrong gas or is contaminated by toxic substances;
- Patient death or serious disability associated with a burn incurred from any source while being cared for in a health care facility;
- Patient death or serious disability associated with a fall while being cared for in a health care facility; or
- Patient death or serious disability associated with the use of restraints or bedrails while being cared for in a health care facility.

Criminal events:

Original Effective Date: 9/30/2004

Revision Date: 4/9/2017

- 
- Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed health care provider
  - Abduction of a patient of any age;
  - Sexual assault on a patient within or on the grounds of the health care facility;
  - Death or significant injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of the health care facility; or
  - Environment of care significant incidents involving employee, visitor, utility or property damage

Sources of external knowledge and experience include the Sentinel Event Alerts. Published by The Joint Commission, safety alerts published by the Food and Drug Administration, Patient Safety Alerts, adverse outcome and lessons learned from RCA's, information from insurance carriers and other private and public healthcare safety organizations.

The scope of the organization-wide Safety Program encompasses all people including the patient population, visitors, volunteers and staff (including medical staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility, as well as employee safety, physical plant and facilities, equipment and supply-related safety issues, among other safety issues. To promote efficiency, there is an Environment of Care Committee, chaired by the Environmental Safety Officer, that addresses employee events and safety, workers compensation, needle sticks and products, visitor Events, hazard surveillance, and the safety management plans. To promote integration, communication and analysis of inter-related issues, there is cross membership between the committees, and both committees report to the Quality Improvement Council for oversight and further integration of related issues. Physician peer review of medical errors is also conducted at the Quality Improvement Council level (or at their direction).

The Serious Safety Event Rate (SSER) calculation will then be reviewed on a monthly basis. The SSER should be considered Patient Safety Work Product and will be reported to the following council/committees, Patient Safety, Quality Improvement, Medical Executive and the Board of Directors. This rate will also be reported to the Patient Safety Committee and the CHS PSO.

The Patient Safety Committee is composed of a physician chairperson who is also a member of, and liaison to, the Quality Improvement Council. Other members include the Chief Quality Officer/QMRC, administrative representation such as the assistant CEO or COO, nursing leadership representative(s), including hospital, long term care, a pharmacist, and appropriate other medical and organization staff.

The meeting frequency should be at least quarterly. The Patient Safety Committee will appoint a Patient Safety Officer. The organizations' Director of Risk Management will serve as the Patient Safety Officer in most instances.

## **Procedures**

---

Committee responsibilities:

1. The interdisciplinary Patient Safety Committee is responsible for the oversight and management of the Patient Safety Program. This includes making recommendations to organization leaders regarding the adequacy of resources allocated to support patient safety activities. The committee will oversee data and analysis in order to prioritize patient safety activities, including, but not limited to patient safety work product, Medication Variances, Infection Surveillance, Safety Surveillance, Staff Perceptions of and suggestions for improving patient safety, Staff willingness to report errors (Employee Surveys), Patient/Family perceptions of, and suggestions for improving patient safety, and results of risk assessment surveys by department.
2. The Patient Safety Committee is responsible to review and approve the organization-wide and departmental patient safety-related policies, procedures and CHS PSO information. This should include the content of any proactive risk self-assessments prior to data collection, as well as patient/family education regarding their role in helping to facilitate the safe delivery of care.

All departments within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences, and potential occurrences to the Director of Risk Management, who will aggregate occurrence information and present a report to the Patient Safety Committee on a quarterly basis. This Patient Safety Work Product report will contain aggregated information related to the cause or nature of the occurrence, severity of occurrence, number/type of occurrences per department, occurrence impact on the patient, improvement actions taken, and patient outcome. The Patient Safety Committee will analyze the report information and determine further patient safety activities as appropriate. Any undesirable patterns or trends in patient safety and sentinel events should be intensively analyzed. Intense analysis involves studying a process to learn in greater detail about how it is performed or how it operates, how it can malfunction, and how errors occur.

3. Patient complaints and concerns or ideas about patient safety should be reported to and evaluated by the Patient Safety Committee. Patient safety information input regarding employee willingness to report and related information from patient and employee surveys should be reviewed and evaluated by the Patient Safety Committee. (Resolution of individual patient complaints is handled by the personnel so designated by the organization.)
4. The Patient Safety Committee reviews alerts or guidance from external sources, including TJC, Institute for Safe Medication Practices, the Food and Drug Administration and consider whether their recommendations should and could be implemented at the organization as a proactive measure to reduce patient safety risks.
5. Patient safety occurrences requiring a report to an external agency such the F.D.A., Board of Pharmacy, Center for Medicare Administration, a manufacturer or the state department of health, should also be reported to the Patient Safety Committee. This report should include an analysis of the occurrence as to underlying causes, any improvement actions recommended and/or taken and, when available, the results of those improvement actions.

- 
6. Through review of internal data reports and reports from external sources (including TJC sentinel event report information, and other sources such as available occurrence reporting information from state and federal sources and current literature), and through the Quality Improvement priority criteria grid, the Patient Safety Committee will select at least one high-risk safety process for proactive risk assessment annually using a Failure Mode Effects Analysis methodology.
  7. The Patient Safety Committee consists of the following personnel: Patty Holden, CEO; David Howell, Plant Operations; Kathy Jo Knight, Administrative Laboratory Director; Janeen Johansen, Inpatient Director; Dan Crossley, Pharmacy Director; Roger Silva, Radiology Director; Susan Stowell, Quality Director; Jan Call, ED Director; Steve Siegrist, HR Director; Mary Lyman, Director Risk Management; Julie Roberts, Surgical Services Director; Johnny Neve, Materials Management; Norma Zierle, HIM director and Nancy Seck, CNO.

The proactive risk assessment will include:

- ◆ Assessment of the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation (failure mode). For each identified failure mode, identify the possible effects of the undesirable variation on patients, and how serious the possible effect on the patient could be (criticality);
- For the most critical effects, conduct a root cause analysis to determine why the variation (failure mode) leading to that effect may occur;
- Redesign the process and/or underlying systems to minimize the risk of that failure mode or to protect patients from the effects of that failure mode;
- Test and implement the redesigned process;
- Identify and implement measures of the effectiveness of the redesigned process; and
- Implement a strategy for maintaining the effectiveness of the redesigned process over time.

Organization-wide activities:

1. Education regarding employee responsibilities for patient safety is included in initial and annual orientation programs, both by the Director of Risk Management and department manager. This includes reporting requirements and mechanisms. As appropriate, training which incorporates methods of team training to foster an interdisciplinary, collaborative approach to patient care delivery is provided. The Patient Safety Committee and other committees may recommend education as a patient safety improvement activity at any time throughout the year. Training on failure mode analysis, effects and criticality analysis should be done for those involved with this risk reduction tool.
2. Patient safety is included as a regular agenda item for at least the clinical and support service departments of the organization. The intent is to foster a culture of "patient safety as job number one", "Safety First". Patient safety is a high priority function in the design and redesign of processes, functions and systems that impact or involve patient care.

3. At any given time, the performance of critical steps in at least one high-risk process is the subject of ongoing measurement and periodic analysis to determine the degree of variation from intended performance.
4. Initiate and comply with TJC National Patient Safety Goals, and/or other regulatory or accrediting standards, by implementing the goals' elements of performance to improve Patient Safety.

Actions upon Error or Event:

Upon identification of a medical/health care error/event, the patient care provider should:

- As appropriate to the occurrence, perform healthcare interventions to contain the risk to the patient or others
- Contact the patient's attending physician and other physicians, as appropriate, to report the error or event, carrying out physician orders as necessary.
- Contact the patient's family, guardian, Power of Attorney or significant other to make aware of the error or event. Refer to the Disclosure of Treatment Outcomes policy.
- Preserve any information (Preservation Checklist) related to the error or event (including physical information). Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an Event Report, and in the medical record *as appropriate* to organizational policy and procedure.
- Report the medical/health care error to the staff member's immediate supervisor.
- Submit the Event Report to the Director of Risk Manager per the Patient Safety Evaluation System.

Individuals in any department identifying a potential patient safety issue should notify their supervisor and document the findings on an Event Report. This Patient Safety Work Product includes patient safety near misses. The Event Report should be submitted to the Director of Risk Manager per organizational policy.

Staff response to medical/health care occurrences is dependent upon the type of occurrence identified:

- Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue should notify their supervisor and document the findings on an Event Report form. The Event Report form will be submitted to the Director of Risk Manager per organizational policy
- Serious Safety Event & Sentinel Event - staff should perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure. A root cause analysis should be

---

performed for any sentinel event and near miss as defined in the sentinel event policy and procedure.

- Near Miss – staff should report the near miss event to their immediate supervisor, describe the facts of the near miss on an event report and submit the report to the Director of Risk Manager. A proactive risk assessment may be performed to prevent recurrence if it is determined that a recurrence poses a significant safety risk to future patients. This may be determined by the Director of Risk Manager and/or the Patient Safety Committee if there is any disagreement as to risk potential.

An effective Patient Safety Program cannot exist without optimal reporting of medical/health care errors and occurrences. Therefore, it is the intent of this organization to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relation to their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members.

#### Staff Support:

Staff members involved in a sentinel event occurrence will receive support from the Director of Risk Manager regarding the staff member's professional and emotional reconciliation of the sentinel event. The staff member's involvement in the root cause analysis and action plan processes is encouraged, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the hospital's social worker, psychologist or psychiatrist on staff and/or their department supervisor.

#### Disclosure:

Patients, and when appropriate, their families are informed regarding the unanticipated outcomes of care, or when the outcomes differ significantly from the anticipated outcomes. The Patient Safety Committee will monitor for compliance with this standard through the information management function of record reviews, and through reports from the Patient Safety Officer of evidence found upon individual record review for other risk management purposes. (See also policy regarding disclosure of unanticipated outcomes.)

#### Communication:

1. Medical/health care errors and occurrences, including sentinel events, will be reported to the CHS PSO, LLC and externally, per hospital policy through the channels established by this plan. External reporting will be performed in accordance with state, federal and regulatory body rules, laws and requirements (i.e., regarding medical devices in accordance with the Safe Medical Devices Act.).

- 
2. An annual report will be compiled by the Patient Safety Committee and forwarded to the Quality Improvement Council, the Medical Executive Committee and on to the governing board. This report shall include at least aggregate data regarding patient safety, an analysis thereof (conclusions), recommendations and actions taken to improve patient safety, both in response to actual occurrences and proactively. These reports shall be protected to the extent allowable under the disclosure laws applicable to peer review, the Quality Improvement Council, and risk management.
  3. The governing board, upon evaluation of received reports (at a minimum, annually), should assess the allocation of resources, the assignment of personnel and their time, the provision of information services and data management processes, and staff training in terms of adequacy of their allocation of human, information, physical and financial resources to support patient safety improvement priorities.

Patient and Family Education:

The organization urges patients and families to get involved in their care. Educational efforts to increase consumer awareness and involvement are supported by the Centers for Medicare and Medicaid Services and TJC as a critical process to improve patient safety. The organization encourages patients and families to:

- ◆ Speak up if they have questions or concerns, and if they don't understand, ask again. Encouraging patients that it is their right to know
- ◆ Pay attention to the care received. Making sure you are getting the right treatments and medications by the right health care professionals. Don't assume anything.
- ◆ Educate yourself about diagnosis, the medical tests you are undergoing and your treatment plan.
- ◆ Ask a trusted family member or friend to be your advocate.
- ◆ Know what medications you take and why you take them. Medication errors are the most common health care mistakes.
- ◆ And to participate in all decisions about your treatment. You are the center of the health care team.

**SUBJECT: PATIENT SAFETY PLAN**

**POLICY NUMBER: 7.2**

**Introduction:**

Safety at Elite Endoscopy encompasses:

- i. The environment of care; and
- ii. The process of care.

The environment of care is addressed in the Environmental Standards, and Safety and Infection Control Plan, while this document addresses the process of care.

**Purpose:**

As part of a continuous focus on the safe delivery of healthcare services, the Patient Safety Program was established as an interdisciplinary collaborative effort.

The purpose of the Patient Safety Program is to identify and effectively resolve events that result in, or have the potential to result in adverse patient care outcomes. The program is also designed to examine existing patient care processes and identify and effect improvements that reduce the risk of adverse outcomes. In achieving such, Elite Endoscopy has cultured an environment that encourages:

- i. The recognition and acknowledgement of medical/health care errors and their risks to patient safety;
- ii. The initiation of actions to reduce these risks;
- iii. The internal reporting of what has been found and the actions taken;
- iv. A focus on processes and systems;
- v. A non-punitive culture with minimization of individual blame or retribution for involvement in a medical/health care error; and
- vi. Organizational learning about medical/health care errors.

### Scope of Program Activities:

The scope of the Patient Safety Program is designed to support and reflect Elite Endoscopy's commitment to fostering a culture of safety, service and continuous improvement to assure the highest-quality patient care. The Patient Safety Program is broad in its scope and includes patients, visitors, and staff. The program addresses maintenance and improvement of safety issues in the facility.

### **Objectives:**

The objectives of the Patient Safety Program are as follows:

- i. Establish and convene an appropriate group to develop and monitor Patient Safety Program initiatives;
- ii. Develop an awareness of the Patient Safety Plan;
- iii. Develop knowledge and skills related to the analysis of patient safety events;
- iv. Prioritize and effect patient safety improvements;
- v. Determine if corrective actions and improvements are effective; and
- vi. Report to the Governing Body at least quarterly.

### **Responsibilities:**

All personnel will participate in the patient safety program. All personnel are responsible for reporting patient occurrences and potential occurrences.

Patient Safety will be under the direction of the Quality Assurance Patient Safety Committee and will assist with the identification, coordination and implementation of patient safety initiatives.

### **Non-Punitive Reporting Culture**

An effective Patient Safety Program cannot exist without optimal reporting of medical/health care errors and occurrences. Therefore, Elite Endoscopy strives for a non-punitive approach in its management of errors and occurrences. Personnel are required to report suspected and identified medical/health care errors, and should do so without the

fear of reprisal in relationship to their employment. Elite Endoscopy supports the concept that errors occur due to a breakdown in systems and processes, and focuses on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus is placed on remedial actions to assist, rather than punish, staff members. Any identified instances of incompetence, negligence, and malfeasance that are discovered and ascertained during the evaluation of errors and occurrences are forwarded to Medical Director.

### **Methodology:**

Identification of Medical/ Health Care Errors:

The identification of medical/health care errors includes, but is not limited, to the following mechanisms:

- Incident reporting (which includes adverse drug reactions and emergency patient transfer), and
- Sentinel Event Reporting

Options for reporting patient events are continuously being explored and will be included as they are approved.

Response to medical/health care errors

Upon identification of a medical/health care error, the staff immediately:

- i. Performs emergency healthcare interventions (if necessary) to treat the patient's clinical condition. As appropriate to the occurrence, necessary healthcare interventions are performed to contain the risk to others.
- ii. Contacts the patient's providing physician and/or other physicians, as appropriate, to report the error and carry out any physician orders as necessary.
- iii. Reports the medical/health care error to the Director of Nursing and preserves any information related to the error (including physical information). Preservation of information includes documenting facts regarding the error on an occurrence report and in the medical record as appropriate.

iv. Submits the report of occurrence to the Quality Assurance Committee for review under Risk Management.

v. Patients and, when appropriate, their families are informed about the outcomes of care, this includes unanticipated adverse outcomes- a result that differs significantly, and adversely, from what was anticipated from a treatment or procedure.

### Classification of Medical/Health Care Errors

Elite Endoscopy defines medical/health care error as an unintended event during the process of care. Nevada Digestive classifies unintended events during the process of care by "clinical significance" which correlates with injury severity and ranges from none to catastrophic. This classification process assists the organization in determining the types of analysis that may be applied to the event. For example, a Root Cause Analysis is always completed for those errors classified as Sentinel Events.

1. Events of No Clinical Significance –there is no evidence of injury to the patient.

2. Events of Minor Clinical Significance – these events result in only first aid care (no additional procedures, tests, medications, or increased length of stay or increased level of care).

3. Events of Moderate Clinical Significance - these events result in additional procedures, tests, or medications, or transfer to a hospital.

4. Events of Major Clinical Significance - these events result in, surgical intervention, and transfer to a hospital.

5. Events of Catastrophic Clinical Significance (Sentinel Event) - An event involving death or serious physical or psychological injury, or the risk thereof, including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function. Sentinel event criteria includes:

i. An event that has resulted in an unanticipated death or major, permanent loss of function, not related to the natural course of the patient's illness or underlying condition.

ii. An infant abduction or discharge to the incorrect family.

iii. The rape of a patient.

iv. A hemolytic transfusion reaction.

v. Surgery on the wrong patient or body part; and the suicide of a patient (where the patient received “around the clock” care.

The type of analysis will be determined after evaluation of the event by the Quality Assurance Committee.

Prioritization of Safety Improvement Activities:

In a continuing effort to prevent errors and improve patient safety, Elite Endoscopy's Patient Safety Program utilizes internal and external informational resources, to identify potential improvements in patient safety. Patient complaints, occurrence reporting, State and Federal recommendations, and current literature, including the National Quality Forum (NQF) compilation of Best Patient Safety Practices, will be collected and utilized in the program.

Patient Education and Patient Responsibilities:

Staff educates patients and their families about their respective roles in helping to facilitate the safe delivery of care. Patients are given information of their rights and responsibilities upon admission

Staff Education:

Staff receives education and training during their initial orientation process and on a continuing basis. The education includes, but is not limited to; the need and process of reporting medical/health care errors, and the identification and disclosure of potential risks of healthcare errors

Patient Safety Assessment:

The Patient Safety Program includes at a minimum, an annual assessment of patients, their families, and staff (including medical staff) opinions, needs and perceptions of risks to patients, and request suggestions for improving patient safety.

Governing Body

The Governing Body is responsible and accountable for the approval of the Patient Safety Plan and the oversight of the Patient Safety Program. The Governing Body supports the appropriation of the resources necessary to address identified patient safety issues. Elite

Endoscopy's progress with Patient Safety initiatives is evaluated and actions are planned based on the conclusions and recommendations forwarded to it by the Quality Assurance Committee.

Quality Assurance Committee/Patient Safety Committee

The Quality Assurance Committee/Patient Safety Committee is charged with developing and monitoring the Patient Safety Program. The Quality Assurance Committee is knowledgeable of ongoing safety activities, and promotes new initiatives when necessary. Under the Patient Safety Program, the Quality Assurance Committee/Patient Safety Committee is responsible for:

- Enhancing Elite Endoscopy's commitment to patient safety
- Facilitating and coordinating patient safety activities.

POLICIES AND PROCEDURES

SECTION: N-140

DATE: 07/03

REVIEWED: 12/2017

TITLE: SAFETY RULES AND REGULATIONS (GENERAL)

**POLICY:** IT IS THE POLICY OF ALTA ROSE SURGERY CENTER TO PROVIDE A SAFE, HEALTHFUL, AND SANITARY WORKING ENVIRONMENT FOR PATIENTS, STAFF, AND VISITORS. STANDARDS SHALL BE SET AND MAINTAINED ACCORDING TO LOCAL, STATE AND FEDERAL RULES, LAWS, AND REGULATIONS. IT IS ONE OF THE OBJECTIVES OF THE CENTER TO COMPLY WITH ALL RULES, MANDATES, LAWS, AND REGULATIONS PERTAINING TO THE SAFETY AND HEALTH OF ITS EMPLOYEES.

**PROCEDURE:** EACH DEPARTMENT MANAGER IS RESPONSIBLE FOR DEVELOPING SPECIFIC WRITTEN SAFETY RULES AND REGULATIONS. THESE RULES AND REGULATIONS MUST BE A PART OF THE INTRODUCTION AND ORIENTATION OF EACH NEW EMPLOYEE BROUGHT INTO THE DEPARTMENT. SAFETY SYSTEMS WILL BE DEVELOPED AND MAINTAINED THROUGH POLICIES AND PROCEDURES TO MINIMIZE HAZARDS TO PATIENTS, STAFF, AND VISITORS. GUIDELINES FOR ALL EMPLOYEES INCLUDE THE FOLLOWING:

- 1) KNOW THE SAFETY RULES AND REGULATIONS FOR BOTH DEPARTMENT AND THOSE APPLICABLE TO THE OPERATION OF THE CENTER.
- 2) KNOW THE LOCATION AND OPERATION OF THE CENTER'S TELEPHONES, FIRE EXTINGUISHERS, EXITS, AND YOUR INDIVIDUAL RESPONSIBILITIES IN CASE OF FIRE, BOMB THREAT, OR DISASTER.
- 3) REPORT IMMEDIATELY TO YOUR SUPERVISOR HAZARDS OR VIOLATIONS OF SAFETY STANDARDS, SUCH AS IN THE FOLLOWING EXAMPLES:
  - A) DEFECTIVE EQUIPMENT;
  - B) CARELESS USE OF EQUIPMENT;
  - C) OBSTRUCTION TO EXIT DOORS, CORRIDORS, ENTRY WAYS OR ENTRY DOORS TO PATIENT ROOMS, OFFICES, OR DEPARTMENTS;
  - D) SMOKING IN UNAUTHORIZED AREAS;
  - E) WET OR SLIPPERY FLOORS;
  - F) COMBUSTIBLE MATERIALS NEAR HEAT OR OPEN FLAMES.
- 4) OBSERVE SAFETY STANDARDS IN THE USE OF WHEELCHAIRS, STRETCHERS, BEDS, OR OTHER EQUIPMENT RELATED TO PATIENT CARE.
- 5) OBSERVE THE BASIC RULES FOR LIFTING PATIENTS. PROPER BODY MECHANICS SHOULD BE USED WHEN LIFTING OR MOVING PATIENTS. REQUEST ASSISTANCE AS NECESSARY.
- 6) USE CARE WHEN APPROACHING SWINGING DOORS, CONGESTED AREAS, OR TURNING CORNERS. "NEVER RUN".
- 7) REPORT UNAUTHORIZED INDIVIDUALS NEAR OR IN THE FACILITY
- 8) DO NOT OPERATE EQUIPMENT UNLESS YOU HAVE BEEN PROPERLY INSTRUCTED.
- 9) UNPROFESSIONAL CONDUCT WILL NOT BE ALLOWED
- 10) FOLLOW SAFETY PRECAUTIONS IN DISPOSING OF ALL TYPES OF NEEDLES OR OTHER SHARP ITEMS IN THE APPROPRIATE SHARPS PUNCTURE RESISTANT CONTAINERS.
- 11) INJURY RELATED ACCIDENTS ARE TO BE REPORTED IMMEDIATELY TO YOUR SUPERVISOR.
- 12) OPERATE TOOLS AND EQUIPMENT ONLY AFTER INSTRUCTIONS AND PROPER DEMONSTRATION OF PROFICIENCY.

- 13) USE PROTECTIVE CLOTHING/EQUIPMENT WHERE INDICATED, I.E., GOWNS, MASKS, GLOVES, EYE SHIELDS, ETC.
- 14) CLEAN SPILLS IMMEDIATELY.
- 15) DISPOSE OF SHARP OBJECTS, CONTAMINATED TRASH, OR HAZARDOUS MATERIALS IN THE PROPER CONTAINERS.
- 16) FOLLOW PROTOCOL FOR HANDWASHING.
- 17) NEVER OPERATE OR USE ELECTRICAL EQUIPMENT THAT IS NOT PROPERLY GROUNDED, HAS FRAYED CORDS, OR IS MALFUNCTIONING IN ANY WAY.
- 18) MALFUNCTIONING OR BROKEN EQUIPMENT SHOULD BE IMMEDIATELY REMOVED FROM USE, APPROPRIATELY LABELED, REPORTED TO THE SUPERVISOR, AND SUBMITTED FOR REPAIR.

**PURPOSE:**

The purpose of the organizational Patient Safety Program at Carson Valley Medical Center is to improve patient safety and reduce risk to patients through an environment that encourages:

- A Patient Centered approach to care
- Integration of safety priorities into all relevant organization processes, functions and services
- Recognition and acknowledgment of risks to patient safety and medical/health care errors
- The initiation of actions to reduce these risks
- The internal reporting of what has been found and the actions taken
- A focus on processes and systems, and the reduction of process and system failures.
- Minimization of individual blame or retribution for involvement in a medical/health care error
- Organizational learning about medical/health care errors
- Support of the sharing of that knowledge to effect behavioral changes in itself and other healthcare organizations

The Patient Safety Program provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.

As we work toward Patient Centered Care, and therefore the maintenance and improvement of patient safety, it is a coordinated and collaborative effort. The approach to optimal patient safety involves all departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at Carson Valley Medical Center. The Patient Safety Program

is developed by an interdisciplinary Patient Safety Committee and approved by the Governing Body and administration, outlines the components of the organizational Patient Safety Program.

**PATIENT SAFETY PROGRAM:**

Scope of Activities:

The scope of the Patient Safety Program includes an ongoing assessment, using internal and external knowledge and experience, to prevent error occurrence, maintain and improve patient safety. Patient safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed by the Patient Safety Committee to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included in data analysis are:

- No Harm Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome - that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
- Mild-Moderate Adverse Outcome Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error resulting in an adverse event
- Any Adverse Drug Reaction
- Any Transfusion Reaction
- Hazardous Condition - any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.

Sentinel Event –NRS 439.830

“An unexpected occurrence involving facility acquired infection, death or serious physical or psychological injury or the risk thereof, including without limitation, any process variation from which a recurrence would carry a significant chance of a serious adverse outcome. The term includes loss of limb or function.”

- ◆ The event has resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient’s illness or underlying condition.
- ◆ The event is one (1) of the following (even if the outcome was not death or major permanent loss of function):

**Reporting Requirements NRS 439.835 Appendix A:**

1. Surgical or Invasive Procedure Events

- A. Surgery or other invasive procedure performed on the wrong site
- B. Surgery or other invasive procedure performed on the wrong patient

- C. Wrong surgical or other invasive procedure performed on a patient
  - D. Unintended retention of a foreign object in a patient after surgery or other invasive procedure
  - E. Intraoperative or immediately postoperative/post procedure death in an ASA Class 1 patient
2. Product or Device Events
- A. Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting
  - B. Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended
  - C. Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting
3. Patient Protection Events
- A. Discharge or release of a patient/resident of any age, who is unable to make decisions, to other than an authorized person
  - B. Patient death or serious injury associated with patient elopement (disappearance)
  - C. Patient suicide, attempted suicide, or self-harm that results in serious injury, while being cared for in a healthcare setting
4. Care Management Events
- A. Patient death or serious injury associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration)
  - B. Patient death or serious injury associated with unsafe administration of blood products
  - C. Maternal death or serious injury associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare setting
  - D. Death or serious injury of a neonate associated with labor or delivery in a low-risk pregnancy
  - E. Patient death or serious injury associated with a fall while being cared for in a healthcare setting
  - F. Any Stage 3, Stage 4, or unstageable pressure ulcers acquired after admission/presentation to a healthcare setting
  - G. Artificial insemination with the wrong donor sperm or wrong egg
  - H. Patient death or serious injury resulting from the irretrievable loss of an irreplaceable biological specimen
  - I. Patient death or serious injury resulting from failure to follow up or communicate laboratory, pathology, or radiology test results
5. Environmental Events
- A. Patient or staff death or serious injury associated with an electric shock in the course of a patient care process in a healthcare setting
  - B. Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances
  - C. Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care process in a healthcare setting
  - D. Patient death or serious injury associated with the use of physical restraints or bedrails while being cared for in a healthcare setting

6. Radiologic Events

- A. Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area

7. Potential Criminal Events

- A. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider
  - B. Abduction of a patient/resident of any age
  - C. Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting
  - D. Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting
- Near Miss - any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.

The scope of the Patient Safety Program encompasses the patient population, visitors, volunteers and staff (including medical staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility. There will be an emphasis on important hospital and patient care functions of:

- Ethics, Rights and Responsibilities
- Provision of Care, Treatment and Services
- Medication Management
- Surveillance, Prevention and Control of Infection
- Improving Organization Performance
- Leadership
- Management of the Environment of Care
- Management of Human Resources
- Management of Information

Methodology:

The Patient Safety Committee is responsible for the oversight of the Patient Safety Program. The Director of Operations will have administrative responsibility for the program.

**NRS 439.875 A Patient Safety Committee** established pursuant to subsection 1 must be composed of:

- (1) The Infection Control Officer of the medical facility.

- (2) The patient safety officer of the medical facility.
- (3) At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility.
- (4) One member of the executive or governing body of the medical facility.

The Patient Safety Committee shall meet at least once each month.

The Patient Safety Committee shall:

- (a) Receive reports from the patient safety officer pursuant to **NRS 439.870**.
- (b) Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at the medical facility.
- (c) Review and evaluate the quality of measures carried out by the medical facility to improve the safety of patients who receive treatment at the medical facility.
- (d) Review and evaluate the quality of measures carried out by the medical facility to prevent and control infections at the medical facility.
- (e) Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- (f) At least once each calendar quarter, report to the executive or governing body of the medical facility regarding:
  - 1) The number of sentinel events that occurred at the medical facility during the preceding calendar quarter; and
  - 2) The number and severity of infections that occurred at the medical facility during the preceding calendar quarter
  - 3) Any recommendations to reduce the number and severity of sentinel events that occur at the medical facility.
- (g) Adopt patient safety checklists and patient safety policies as required by NRS 439.877, review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

**The Patient Safety Officer** duties include:

- (a) Serve on and facilitate the patient safety committee.
- (b) Supervise the reporting of all sentinel events alleged to have occurred at the medical facility, including, without limitation, performing the duties required pursuant to **NRS 439.835**.
- (c) Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the medical facility.

(d) Report to the patient safety committee regarding any action taken in accordance with paragraph (c).

(e) Serve on the Occurrence Report Committee.

**All departments** within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences and potential occurrences to the Patient Safety Officer and complete an occurrence report. The Patient Safety Officer in conjunction with Risk will aggregate occurrence information and present a report to the Occurrence Report Committee on at least a monthly basis. The report will contain aggregated information related to type of occurrence, severity of occurrence, number/type of occurrences per department, occurrence impact on the patient, remedial actions taken, and patient outcome. The Patient Safety Officer will report this information to the Patient Safety Committee, which will analyze the report information and determine further patient safety activities as appropriate.

- Through review of internal data reports and reports from external sources (including, but not limited to Core Measure performance data, occurrence reporting information from state and federal sources and current literature), and through the Risk Performance Improvement report, the Patient Safety Committee will review Patient Safety occurrences. The Quality Manager, Patient Safety Officer, or Department Leader will:
  - Redesign the process and/or underlying systems to minimize the risk of that undesirable variation or to protect patients from the effects of that undesirable variation
  - Test and implement the redesigned process
  - Identify and implement measures of the effectiveness of the redesigned process
  - Implement a strategy for maintaining the effectiveness of the redesigned process over time
  - Document the process improvement on the CQI form and send to the QA department

The following include description of mechanisms to ensure that all components of the healthcare organization are integrated into and participate in the organization wide program.

Upon identification of a process or system failure and/or medical/health care error, the patient care provider will immediately:

Perform necessary healthcare interventions to protect and support the patient's clinical condition.

- As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others - example: immediate removal of contaminated IV fluids from floor stock should it be discovered a contaminated lot of fluid solutions was delivered and stocked.

- Contact the patient's family/caregivers to report the incident. Contact the attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary. Document that this has been done in the medical record.
- Preserve any information related to the error (including physical information). Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
- Report the process/system failure or medical/health care error to the staff member's immediate supervisor.
- Submit the occurrence report to the Risk Management Department per organizational policy.

Any individual in any department identifying a process/system failure and/or potential patient safety issue will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Risk Management Department per organizational policy.

Staff response to process/system failures and/or medical/health care errors is dependent upon the type of error identified:

- No Harm Failures or Errors - (including "no harm" medication errors) - staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an occurrence report form, submit the form to the Risk Management Department and notify their immediate supervisor.
- Mild-Moderate Adverse Outcome Failures or Errors (including medication errors) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report - submitting the report to the Risk Management Department per organizational policy.
- Medication Errors - the staff member identifying a medication error (no harm and mild-moderate harm) will complete an occurrence report.
- Adverse Drug Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report,

submitting the report to the Risk Management Department per organizational policy. Staff will also notify the Pharmacy Department.

- Transfusion Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the Suspected Transfusion Reaction Nursing Worksheet Policy and Procedure BB-35.
- Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Risk Management Department and Patient Safety Officer per organizational policy.
- Sentinel Event - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. The staff will also notify the patient's family/caregiver to notify them of the incident and will document all notifications and interventions in the medical record. Staff will then follow the organizational Sentinel Event Policy and Procedure. The Patient Safety Officer will organize a Root Cause Analysis (RCA) as soon as possible after the event.
- Near Miss - staff will report the near miss event to his/her immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to the Risk Management Department.

Established organizational policy (such as the Sentinel Event Policy) and/or the Patient Safety Committee and the Environment of Care Committee will determine the organizational response to process/system failures and/or medical/health care errors and occurrences. All sentinel events and other occurrences as deemed appropriate will have a root cause analysis conducted. The determination of the Patient Safety Committee and the Quality Committee members, based on internal and external data analysis and prioritizing of patient safety criticality, will determine:

- Further remedial action activities necessary for identified occurrences
- Proactive occurrence reduction activities
- Necessity and benefit of root cause analysis performance for identified occurrences or proactive reduction activities
- An effective Patient Safety Program cannot exist without optimal reporting of process/system failures and medical/health care errors and occurrences. Therefore, it is the intent of this institution to adopt a non-punitive approach in its management of failures, errors and occurrences. ***See reporting of occurrences and sentinel events policy #2.025***
- All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment. This organization supports the concept that errors occur due to a

breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members using the Just Culture method, with the Patient Safety Committee and the Environment of Care Committee and the individual staff member's department supervisor determining the appropriate course of action to prevent error recurrence.

- Sentinel Events – Quality Assurance and Risk Management encourages the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the Human Resources Department and/or his or her department supervisor (Refer to the Critical Incident Stress policy).
- The Patient Safety Program includes implementation of the recommendations set forth by the Joint Commission, or identified alternative recommendations defined by this institution, to achieve compliance with the Joint Commission established National Patient Safety Goals. The selected recommendations will be monitored on a routine basis to evaluate the organization's effectiveness in the implementation of the recommendations in achieving compliance with the identified National Patient Safety Goals.
- Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. ***See Managing the Disclosure of Unanticipated Outcomes policy # 2.049.***
- Observation will be used ensure compliance with patient safety checklists and will offer opportunities for corrective feedback. This approach is a learning opportunity not intended for disciplinary purposes. ***See Active Surveillance of Patient Safety Checklist Use policy # 2.030.***
- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.
- Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally, per hospital policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.

Patient safety reports from the Patient Safety Committee will be submitted to the organizational Environment of Care Committee.

- A quarterly patient safety report will be forwarded to the Governing Body on the occurrence of medical/health care errors and actions taken to improve patient safety, both in response to actual occurrences and proactively.

**AB 280: CVMC has adopted the use of the following Patient Safety Checklists;**

A. Patient Safety checklists included in the medical record;

1. Non-OR Invasive Procedure checklist,
2. Central Line Procedural checklist,
3. Inter-facility Transfer checklist,
4. Neurological checklist,
5. Sitter Observation checklist,
6. Initial ventilator setting checklist,
7. Medication Reconciliation form,
8. Discharge Instruction Sheet,
9. Surgical checklist

B. Patient safety checklists **Not** included in the medical record include;

1. Hand off tool,
2. Hand Hygiene Observation,
3. Multidisciplinary rounding checklist
4. Quality Assurance device tracking
5. Environment of Care/Infection Control Checklist
6. Infection Control Weekly Construction Site Observation checklist
7. CDC Environmental Checklist for Monitoring Terminal Cleaning
8. Ventilator bundle checklist,
10. Surgical site verification checklist

***Please refer to the Infection Control Program policy # 101.12 for more information***

Subject: **VIII - Patient Safety Plan**

## I. PURPOSE:

The purpose of the Patient Safety Plan is to outline the process for implementing a patient safety program at Western Nevada Surgical Center (WNSC) that supports the proactive reduction of medical / health care errors as well as an effective response to actual occurrences.

## II. POLICY:

It is the policy of Western Nevada Surgical Center to promote the reduction of risks to patients through an integrated and coordinated organization-wide approach. The Governing Body is committed to providing the resources, delegating responsibility, and acting on reports to provide a systematic program designed to effectively reduce errors and other factors that lead to unanticipated adverse patient outcomes.

Administration shall provide an environment in which patients, their families, facility staff, managers and physicians are encouraged to identify, report and manage both actual and potential risks to patient safety. The program shall be non-punitive in nature, focusing on processes, procedures and systems rather than individuals.

## III. SCOPE:

The objectives include:

- A. To recognize risks to patient safety and sources of medical/health care errors and to initiate actions to proactively reduce these risks;
- B. To encourage learning about errors and share this knowledge to improve patient safety ;
- C. To encourage internal reporting of errors and issues;
- D. To focus on the improvement of processes and systems associated with medical/health care errors; and
- E. To minimize individual blame or retribution for involvement in a medical / health care error.
- F. To review and implement the Patient Safety goals
  - Improve the accuracy of patient identification
  - Improve the effectiveness of communication among caregivers
  - Improve the safety of using high-alert medications
  - Eliminate wrong-site, wrong-patient and wrong-procedure surgery
  - Improve the effectiveness of clinical alarm systems

## IV. AUTHORITY & RESPONSIBILITY:

- A. Governing Body – The Governing Body of WNSC has the ultimate responsibility for patient safety. To fulfill the commitment to patient safety, the board delegates

## Subject: VIII - Patient Safety Plan

the responsibility for identifying, analyzing and managing patient safety activities to administration, management, supervisors, medical staff and employees. The Governing Body recognizes that proactive management of patient safety is a continuous, ongoing process; therefore they will provide the necessary resources to carry out this philosophy. Through the development of strategic initiatives, the Governing Body provides direction for the organization's improvement activities. Reports from the Utilization Review/Quality Improvement Committee provide the Board with a means of evaluating the organization's effectiveness in reducing risks to patient safety.

- B. Administration and Managers – Administration and managers are responsible for supporting the Patient Safety Plan and the risk reduction efforts of the organization. These efforts are given a high priority, especially when processes are designed or redesigned. To support these activities the organization will provide:
- Adequate resources;
  - Staff to participate in risk reduction activities;
  - Adequate time for staff to participate;
  - Adequate information systems and data management systems; and
  - Staff education regarding risk reduction strategies.
- C. Medical Staff -The Medical Staff is involved in patient safety activities by participation in the Utilization/Quality Improvement Committee..

## V. MEDICAL/HEALTH CARE ERROR AND NEAR MISS REPORTING

- A. Definitions:
- Error – an unintended act, either of omission or commission, or an act that does not achieve its intended outcome.
  - Near Miss - used to describe any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- B. In response to a medical/health care error, appropriate steps will be taken in the care of the patient to minimize negative outcomes. Any appropriate steps that would decrease the possibility of the error occurring again, or that would protect others from the risk, will be implemented immediately.
- C. The physician or his/her designee will clearly explain the outcome of any treatments or procedures to the patient and/or family members as soon after the incident as is possible and appropriate whenever those outcomes differ significantly from the anticipated outcomes.
- D. When a medical/health care error occurs that has caused harm to a patient, staff members will immediately notify the Administrator. The Administrator is then responsible for notifying the appropriate organizational leaders .

Subject: **VIII - Patient Safety Plan**

- E. When a medical/health care error or near miss occurs, a staff member involved in the occurrence will complete an Incident Report and Follow-Up.
- F. The Nurse of the department where the error or near miss occurred will begin the preliminary analysis. All information obtained during the analysis will be reported to the Administrator.
- G. Care will be taken at the time that an error or near miss occurs to preserve any information or evidence that may be helpful in the analysis of the error.
- H. Depending on the nature and severity of the medical/health care error, the appropriate external authorities (such as the Food and Drug Administration (FDA), National Institute Occupational Safety Administration (NIOSA), United States Pharmacopeia (USP), Nevada Department of Health) will be notified of the error. The Administrator will discuss the details of each case with appropriate staff to determine what authorities need to be notified.
- I. Data related to medical/health care errors will be aggregated , analyzed across the organization to identify patterns and trends and appropriate action implemented.

VI. NEW AND REVISED PROCESSES

Patient safety is given high priority at Western Nevada Surgical Center. Patient safety considerations must be an integral part of the development of new policies, procedures, systems and services. When existing policies, procedures, systems and services are revised and re-evaluated, patient safety considerations will be addressed.

## **INTRODUCTION**

Carson Tahoe Regional Healthcare/ Regional Medical Center is a part of Carson Tahoe Health System, a Nevada not-for-profit hospital. We are committed to patient safety, quality patient care and quality patient outcomes consistent with our Mission and Core Values.

## **MISSION**

To enhance the health and well being of the communities we serve.

## **CORE VALUES**

Putting patients first

Treating everyone with dignity and respect.

## **PURPOSE**

The Patient Safety Plan provides a planned, systematic, coordinated approach for continually improving the health and safety of patients who are treated at the medical facility, by reducing patient harm and maintaining a safety culture.

## **PLAN**

- Establish Patient Safety Committee:
  - Mandatory Membership to include:
    - Patient Safety Officer
    - Infection Control Officer
    - At least 3 providers of health care who treat patient at the medical facility, including one medical, nursing and pharmaceutical staff
    - One member of the executive or governing body
    - Additional non required members include: Quality Director, Chief Medical Officer, In-House Council, Environmental Safety Officer, Nursing Director.
    - Ad-Hoc invitees as appropriate
  - Committee required to meet at least once per month
- Inclusion of
  - Infection Control Program to prevent and control infections within the medical facility (this is a document separate from the Patient Safety Plan that meets the requirements for NRS 439.865)
  - Patient Safety checklists and patient safety policies as required by NRS. 439.877
    - 2018 Checklist Inventory *Attachment A*
    - Annual review and revision of checklists and policies
- Annual Report to Legislative Committee on Health Care
- Integration of all patient safety activities both ongoing and developing
- Ongoing orientation, education and training to emphasize specific job related aspects of patient safety to maintain and improve staff awareness

- Encourage internal reporting of medical / healthcare incidents and events, effectively respond to actual occurrences, manage occurrences and events with a non-punitive approach, and focus on processes and systems to minimize individual blame and retribution
- Periodic survey of the staff regarding willingness to report, actions taken and outcomes of occurrences and events
- Internal reporting of findings, actions taken and resolution; organizational learning and communication of occurrence and event information
- Consideration of patient safety priorities when designing and redesigning of relevant processes, functions and services

Involvement and education of patients, their families about their role in facilitating safe delivery of care, identifying potential risks and suggesting improvement to patient safety

## **SCOPE OF ACTIVITIES**

The Patient Safety Committee integrates all components of safety into the organization-wide safety program in collaboration with Quality, Environmental Safety, Infection Control, Patient Care areas, Risk Management, Compliance and Ethics.

### **Patient Safety Committee activities include:**

- Sentinel Events pursuant to NRS Chapter 439
  - Review alleged events reported to State of Nevada, RCA investigations and resulting action plans.
  - Recommendations, as appropriate, to the executive or governing body for reducing the number and severity of sentinel events and infections that occur
  - Provide emotional support for staff involved in incidents or events, through Human Resources, leadership, department supervisors and other resources as appropriate
  - Report at least quarterly to the executive or governing body
    - The number of sentinel events occurring in the previous quarter
    - The number/severity of infections occurring in the previous quarter
- Quality Measures: Review and evaluate
  - To improve the patient safety and outcomes
  - To reduce and/or prevent infections
- Monitor patient/ environment safety issues identified throughout the organization
- Promote internal and external knowledge and experience to prevent patient harm, adverse events and occurrences, to maintain and improve patient safety
- Dashboard Trending Report: Review aggregated or trended data including but not limited to: No harm events, Mild or moderate adverse outcomes, Near miss, Medication events, Falls, Adverse drug reactions, Transfusion reactions, Hazardous conditions, Present on admission / Hospital acquired conditions, Online incident reports, adding Restraint indicators for 2018
- Utilize a proactive approach to recognize and acknowledge medical/healthcare events and risks to patient safety, initiate actions and recommendations to reduce or prevent these events and risks
- Prioritize and recommend Patient Safety activities, as appropriate.
  - Utilizing trended data from Environmental safety, Security, Employee

health, Emergency management, Lab or radiation safety, Utilities management, Bio Med, Fire drills or inspections.

### **PATIENT SAFETY OFFICER**

The Patient Safety Officer is designated by the medical facility and has administrative responsibilities as prescribed by NRS chapter 439 (specifically outlined in NRS 439.815 through NRS.439.875) and by other regulatory agencies and accrediting bodies. Duties and responsibilities include but are not limited to:

- Serving on the Patient Safety Committee
- Supervising sentinel event reporting to the State
- Conducting mandatory investigations; developing and implementing action plans
- Ensuring notification as appropriate within the medical facility

### **STRUCTURE**

The Quality Reporting Structure Model *Attachment B* visually diagrams the reporting structure.

### Carson Tahoe Regional Health Quality Reporting Structure

Revised 9/2016

**Draft Policy**

|                      |                            |                         |
|----------------------|----------------------------|-------------------------|
| Policy#: 180         | Title: Patient Safety Plan | Category: Plans         |
| Policy Status: Draft | Effective Date: N/A        | Last Reviewed Date: N/A |

**PROCEDURE INSTRUCTIONS****PURPOSE:**

The purpose of the Patient Safety Program is to improve patient safety and reduce risk to patients, staff and visitors. Recognizing the effective medical/health care error reduction requires an integrated and coordinated approach; we have developed an organization-wide safety program. The program supports the creation of an environment in which patients, their families, and organization staff leaders can identify and manage actual and potential risks to patient safety.

**OBJECTIVE:**

It is our objective to foster an environment to improve patient safety, establish mechanism to support effective responses to actual occurrences and to be proactive in the reduction of medical/health care errors. Patient safety will be a priority in new design and all relevant organization processes, functions and services.

**SCOPE:**

The scope of the patient safety program will include compliance with standards identified by external regulatory agencies and accrediting bodies. Program activities will address occurrences ranging from "near misses" to sentinel events with serious adverse outcomes.

**DEFINITIONS:**

Actual Event-an event occurred that reached the patient or individual (e.g., visitor fall, student injury, etc.).

Near Miss-an event occurred but it did not reach the patient because of chance alone or because of active recovery efforts by caregivers.

Unsafe Condition- circumstances that could cause adverse events (e.g., look-alike medications, confusing equipment, failure to use proper signage when floor is wet).

Sentinel Event- is defined as a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in any of the following:

- Severe temporary harm which is defined as critical, potentially life-threatening harm lasting for a limited time with no permanent residual effect, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition. (Hip fractures are always included)
- Permanent harm
- Death

For additional events also considered "sentinel" reference the HealthSouth Sentinel Event policy

**PROCEDURES:**

A. The responsibility for management of the organization-wide patient safety program is assigned to the Director of Quality/Risk Management.

1. The Safety Committee and Quality Council will provide interdisciplinary input related to patient, visitor and staff safety.
2. Reports of safety related activities and issues would be presented to Department Managers, Senior Staff, Medical Staff via the Medical Executive Committee, and the Governing Board. This communication is confidential and for quality assurance purposes only.

B. Staff will report information relating the medical/health care events as outlined in Risk Management Electronic Event Reporting Policy.

1. Staff will be oriented to the Risk Management Policies on hire and through ongoing in-service and other education and training programs.
2. Staff will be oriented to their roles in preventing adverse occurrences as related to their specific job responsibilities and as a part of the organization-wide efforts to improve patient safety.
3. Staff will be oriented to the importance of reporting "near misses," as well as adverse occurrences.
4. Team training to foster an interdisciplinary, collaborative approach to patient care delivery and to reinforce the need and way(s) to report medical/health care errors will be provided as appropriate.
5. The Director of Quality/Risk Management, Department Managers, and Senior Staff are responsible for interacting with staff in a manner that ensures staff do not fear disclosure, embarrassment, blame or punishment for reporting potential or actual events related to patient safety.
6. The Director of Quality/Risk Management, Department Manager and/or Senior Staff member may request the assistance of internal behavioral management staff or external resources if a staff member(s) needs support in coping with a sentinel event.

C. Hospital leadership will identify barriers to effective communication among caregivers relative to patient care, redesign the process to eliminate barriers and monitor for effectiveness. Specific attention will be directed to:

1. Process for ensuring accurate, timely, and complete verbal and written communication among care givers and all others involved in utilization of data, and
2. Test results relative to the management of the patient's condition.

D. All patients are entitled to information about all aspects of their health care, including information about clinically relevant unanticipated outcomes of care.

Patients and, when appropriate, their families are informed about the outcomes of care including unanticipated outcomes (i.e. sentinel events, State reportable events). Responsibility for disclosing unanticipated outcomes typically rests with the physician or designee who has overall responsibility for the patient's care. However, in some situations, other healthcare professionals may be deemed more appropriate to be responsible for disclosing the outcome. A hospital representative, preferably the Quality/Risk Director, Chief Nursing Officer or the Chief Executive Officer should be present for the initial conversation and any follow-up discussions that may occur with the patient and/or patient's representative.

E. The Director of Quality/Risk Management or designee will respond immediately to notification of significant medical/health events to a patient/visitor or staff member.

1. The Nursing Supervisor or Department Manager will contact the Risk Manager and/or Administrator/Administrator-On-Call to report events.
2. Action(s) will be taken to protect the patient/visitor/staff members as indicated per hospital plans and policies.

3. Factual information will be obtained and preserved for subsequent analysis. Such information is confidential for quality assurance purposes.

F. The facility will review historical risk management, Environment of Care (EOC), Program Improvement (PI) and Human Resources (HR) data for high volume, high risk problem trends in medical and care processes, as well as unanticipated adverse occurrences affecting patients. These will be ranked as:

- A. Unsafe condition (Non-event)
- B1. Near Miss - No Harm/Didn't Reach Patient/Caught by Chance
- B2. Near Miss - No Harm/Didn't Reach Patient b/c of Active Recovery by Caregiver
- C. No Harm - Reached Patient No Monitoring Required
- D. No Harm - Reached Patient Monitoring Required
- E. Harm - Temporary, Intervention Needed
- F. Harm - Temporary, Hospitalization Needed
- G. Harm - Permanent
- H. Harm - Permanent, Intervention Required to Sustain Life
- I. Death

G. The facility will also perform intense analysis consistent with the Root Cause Analysis/Sentinel Event Policies, and reports as required by state, regulatory, and accreditation bodies. The Risk Management designee is responsible for ensuring compliance with reporting.

H. Emerging needs requiring reprioritizing performance improvement activities may be identified through data collection and assessment, unanticipated adverse occurrences affecting patients, changing regulatory requirements, significant patient and staff needs, changes in the environment of care, or changes in the community. Priority consideration in establishing performance improvement teams is given to:

1. Processes that affect a large percentage of patients.
2. Processes that place patients at risk, if not performed well, if performed when not indicated, or if not performed when indicated.

Processes that have been or are likely to be problem prone.

I. When designing/redesigning processes, Department Managers and staff will:

1. Incorporate information from within the organization and from other organizations about potential risks to patients, including the occurrence of sentinel events in order to minimize risks to patients affected by the new or redesigned process, function or service.
2. Conduct literature searches to obtain evidence based medical and/or care practices to be included in process redesign.
3. Include analysis and or pilot testing to determine whether the proposed design/redesign is an improvement.

J. Hospital leadership will consider the importance of patient safety in:

1. Development of hospital-wide patient care programs, policies and procedures that describe how patients' care needs are assessed and met.
2. Development and implementation of the hospital's plan for the provision of patient care.
3. Decision-making structures and processes.
4. Implementation of an effective and continuous program to measure assesses and improves performance.
5. Development of an interdisciplinary culture that emphasizes cooperation and communication. The leadership role of coaching will be used to promote communication among services, individual staff members and less formal structures such as quality action teams, performance-improvement teams or members of standing committees.
6. Development of a process to involve the patient, as appropriate to his/her condition, as a partner in helping to facilitate the safe delivery of care.
  - a. Patients/family members are oriented on admission of the importance of reporting perceived risks and concerns about the patient's care per Patient and Customer Complaint and Grievance Policy.

b. Department Managers and Senior Staff will review Press Ganey Patient Satisfaction Survey questions related to patient safety and develop a corrective action plan to patient/family complaints or suggestions for improving safety as appropriate.

7. The Governing Board will appoint the Director of Quality and Risk Management (DQR) as the Patient Safety Officer. The Patient Safety Officer/Director's role includes:

- Participating in hazard surveillance, event reporting, reviewing, and the development of patient safety policies and procedures.
- Analyzing and seeking resolution of patient safety issues and works with the appropriate staff to implement recommendations and to monitor patient safety improvement activities.
- Report on findings, recommendations, actions taken, and results of measurements through the hospital quality structure.

K. At least one (1) high-risk process is the subject of ongoing measurement and periodic analysis to determine the degree of variation from intended performance, a minimum of 1 proactive risk assessment every 18 months. The process selected will be based, in part, on the information identifying the most frequently occurring sentinel events and patient safety risk factors.

1. Assess the intended and actual implementation of this process to identify steps in the process where there is, or may be, undesirable variation (i.e. called potential "failure modes").
2. For each identified "failure mode," identify the possible "effect(s)" and how serious the possible effect on the patient could be (i.e. "criticality" of the effect).
3. For the most critical effects, conduct a root cause analysis to determine the variation (failure mode) leading to that effect occur.
4. Redesign the process and/or underlying systems to minimize the risk of that failure mode to protect patients from the effect of that failure mode.
5. Test and implement the redesigned process.
6. Identify and implement measures of the effectiveness of the redesigned process.
7. Implement a strategy for maintaining the effectiveness of the redesigned process over time.

L. Hospital leadership will measure and assess the effectiveness of their contributions to improving patient safety. To accomplish these goals, leaders will.

1. Set measurable objectives for improving patient safety.
2. Actively request staff to periodically discuss their opinions, needs, perceptions of risks to patients and suggestions for improving patient safety. The actions taken as a result of this staff input will be reported to the MEC/GB bi- annually.
3. Review data on staff willingness to report medical/health events.
4. Review data from Patient Satisfaction Survey related to patient safety.
5. Use pre-established, objective process criteria to assess their effectiveness in improving patient safety.
6. Draw conclusions based on their findings and develop and implement improvement in their activities.
7. Evaluate their performance in supporting sustained improvement.

M. The DQR will report at a minimum quarterly to the Governing Board occurrences of medical/health events and actions to improve patient safety.

## PROCEDURE

### PROCEDURE INSTRUCTIONS

#### PURPOSE:

The purpose of the Patient Safety Program is to improve patient safety and reduce risk to patients, staff and visitors. Recognizing the effective medical/health care error reduction requires an integrated and coordinated approach; we have developed an organization-wide safety program. The program supports the creation of an environment in which patients, their families, and organization staff leaders can identify and manage actual and potential risks to patient safety.

**OBJECTIVE:**

It is our objective to foster an environment to improve patient safety, establish mechanism to support effective responses to actual occurrences and to be proactive in the reduction of medical/health care errors. Patient safety will be a priority in new design and all relevant organization processes, functions and services.

**SCOPE:**

The scope of the patient safety program will include compliance with standards identified by external regulatory agencies and accrediting bodies. Program activities will address occurrences ranging from "near misses" to sentinel events with serious adverse outcomes.

**DEFINITIONS:**

Actual Event-an event occurred that reached the patient or individual (e.g., visitor fall, student injury, etc.).

Near Miss-an event occurred but it did not reach the patient because of chance alone or because of active recovery efforts by caregivers.

Unsafe Condition- circumstances that could cause adverse events (e.g., look-alike medications, confusing equipment, failure to use proper signage when floor is wet).

Sentinel Event- is defined as a patient safety event (not primarily related to the natural course of the patient's illness or underlying condition) that reaches a patient and results in any of the following:

- Severe temporary harm which is defined as critical, potentially life-threatening harm lasting for a limited time with no permanent residual effect, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition. (Hip fractures are always included)
- Permanent harm
- Death

For additional events also considered "sentinel" reference the HealthSouth Sentinel Event policy

**PROCEDURES:**

A. The responsibility for management of the organization-wide patient safety program is assigned to the Director of Quality/Risk Management.

1. The Safety Committee and Quality Council will provide interdisciplinary input related to patient, visitor and staff safety.
2. Reports of safety related activities and issues would be presented to Department Managers, Senior Staff, Medical Staff via the Medical Executive Committee, and the Governing Board. This communication is confidential and for quality assurance purposes only.

B. Staff will report information relating the medical/health care events as outlined in Risk Management Electronic Event Reporting Policy.

1. Staff will be oriented to the Risk Management Policies on hire and through ongoing in-service and other education and training programs.
2. Staff will be oriented to their roles in preventing adverse occurrences as related to their specific job responsibilities and as a part of the organization-wide efforts to improve patient safety.
3. Staff will be oriented to the importance of reporting "near misses," as well as adverse occurrences.
4. Team training to foster an interdisciplinary, collaborative approach to patient care delivery and to reinforce the need and way(s) to report medical/health care errors will be provided as appropriate.

5. The Director of Quality/Risk Management, Department Managers, and Senior Staff are responsible for interacting with staff in a manner that ensures staff do not fear disclosure, embarrassment, blame or punishment for reporting potential or actual events related to patient safety.

6. The Director of Quality/Risk Management, Department Manager and/or Senior Staff member may request the assistance of internal behavioral management staff or external resources if a staff member(s) needs support in coping with a sentinel event.

C. Hospital leadership will identify barriers to effective communication among caregivers relative to patient care, redesign the process to eliminate barriers and monitor for effectiveness. Specific attention will be directed to:

1. Process for ensuring accurate, timely, and complete verbal and written communication among care givers and all others involved in utilization of data, and
2. Test results relative to the management of the patient's condition.

D. All patients are entitled to information about all aspects of their health care, including information about clinically relevant unanticipated outcomes of care.

Patients and, when appropriate, their families are informed about the outcomes of care including unanticipated outcomes (i.e. sentinel events, State reportable events). Responsibility for disclosing unanticipated outcomes typically rests with the physician or designee who has overall responsibility for the patient's care. However, in some situations, other healthcare professionals may be deemed more appropriate to be responsible for disclosing the outcome. A hospital representative, preferably the Quality/Risk Director, Chief Nursing Officer or the Chief Executive Officer should be present for the initial conversation and any follow-up discussions that may occur with the patient and/or patient's representative.

E. The Director of Quality/Risk Management or designee will respond immediately to notification of significant medical/health events to a patient/visitor or staff member.

1. The Nursing Supervisor or Department Manager will contact the Risk Manager and/or Administrator/Administrator-On-Call to report events.
2. Action(s) will be taken to protect the patient/visitor/staff members as indicated per hospital plans and policies.
3. Factual information will be obtained and preserved for subsequent analysis. Such information is confidential for quality assurance purposes.

F. The facility will review historical risk management, Environment of Care (EOC), Program Improvement (PI) and Human Resources (HR) data for high volume, high risk problem trends in medical and care processes, as well as unanticipated adverse occurrences affecting patients. These will be ranked as:

- A. Unsafe condition (Non-event)
- B1. Near Miss - No Harm/Didn't Reach Patient/Caught by Chance
- B2. Near Miss - No Harm/Didn't Reach Patient b/c of Active Recovery by Caregiver
- C. No Harm - Reached Patient No Monitoring Required
- D. No Harm - Reached Patient Monitoring Required
- E. Harm - Temporary, Intervention Needed
- F. Harm - Temporary, Hospitalization Needed
- G. Harm - Permanent
- H. Harm - Permanent, Intervention Required to Sustain Life
- I. Death

G. The facility will also perform intense analysis consistent with the Root Cause Analysis/Sentinel Event Policies, and reports as required by state, regulatory, and accreditation bodies. The Risk Management designee is responsible for ensuring compliance with reporting.

H. Emerging needs requiring reprioritizing performance improvement activities may be identified through data collection and assessment, unanticipated adverse occurrences affecting patients, changing regulatory requirements, significant patient and staff needs, changes in the environment of care, or changes in the community. Priority consideration in establishing performance improvement teams is given to:

1. Processes that affect a large percentage of patients.

2. Processes that place patients at risk, if not performed well, if performed when not indicated, or if not performed when indicated.

Processes that have been or are likely to be problem prone.

I. When designing/redesigning processes, Department Managers and staff will:

1. Incorporate information from within the organization and from other organizations about potential risks to patients, including the occurrence of sentinel events in order to minimize risks to patients affected by the new or redesigned process, function or service.
2. Conduct literature searches to obtain evidence based medical and/or care practices to be included in process redesign.
3. Include analysis and or pilot testing to determine whether the proposed design/redesign is an improvement.

J. Hospital leadership will consider the importance of patient safety in:

1. Development of hospital-wide patient care programs, policies and procedures that describe how patients' care needs are assessed and met.
2. Development and implementation of the hospital's plan for the provision of patient care.
3. Decision-making structures and processes.
4. Implementation of an effective and continuous program to measure assesses and improves performance.
5. Development of an interdisciplinary culture that emphasizes cooperation and communication. The leadership role of coaching will be used to promote communication among services, individual staff members and less formal structures such as quality action teams, performance-improvement teams or members of standing committees.
6. Development of a process to involve the patient, as appropriate to his/her condition, as a partner in helping to facilitate the safe delivery of care.
  - a. Patients/family members are oriented on admission of the importance of reporting perceived risks and concerns about the patient's care per Patient and Customer Complaint and Grievance Policy.
  - b. Department Managers and Senior Staff will review Press Ganey Patient Satisfaction Survey questions related to patient safety and develop a corrective action plan to patient/family complaints or suggestions for improving safety as appropriate.

7. The Governing Board will appoint the Director of Quality and Risk Management (DQR) as the Patient Safety Officer. The Patient Safety Officer/Director's role includes:

- Participating in hazard surveillance, event reporting, reviewing, and the development of patient safety policies and procedures.
- Analyzing and seeking resolution of patient safety issues and works with the appropriate staff to implement recommendations and to monitor patient safety improvement activities.
- Report on findings, recommendations, actions taken, and results of measurements through the hospital quality structure.

K. At least one (1) high-risk process is the subject of ongoing measurement and periodic analysis to determine the degree of variation from intended performance, a minimum of 1 proactive risk assessment every 18 months. The process selected will be based, in part, on the information identifying the most frequently occurring sentinel events and patient safety risk factors.

1. Assess the intended and actual implementation of this process to identify steps in the process where there is, or may be, undesirable variation (i.e. called potential "failure modes").
2. For each identified "failure mode," identify the possible "effect(s)" and how serious the possible effect on the patient could be (i.e. "criticality" of the effect).

3. For the most critical effects, conduct a root cause analysis to determine the variation (failure mode) leading to that effect occur.
4. Redesign the process and/or underlying systems to minimize the risk of that failure mode to protect patients from the effect of that failure mode.
5. Test and implement the redesigned process.
6. Identify and implement measures of the effectiveness of the redesigned process.
7. Implement a strategy for maintaining the effectiveness of the redesigned process over time.

L. Hospital leadership will measure and assess the effectiveness of their contributions to improving patient safety. To accomplish these goals, leaders will.

1. Set measurable objectives for improving patient safety.
2. Actively request staff to periodically discuss their opinions, needs, perceptions of risks to patients and suggestions for improving patient safety. The actions taken as a result of this staff input will be reported to the MEC/GB bi- annually.
3. Review data on staff willingness to report medical/health events.
4. Review data from Patient Satisfaction Survey related to patient safety.
5. Use pre-established, objective process criteria to assess their effectiveness in improving patient safety.
6. Draw conclusions based on their findings and develop and implement improvement in their activities.
7. Evaluate their performance in supporting sustained improvement.

M. The DQR will report at a minimum quarterly to the Governing Board occurrences of medical/health events and actions to improve patient safety.

N. The DQR will report any sentinel event within the allotted timeframe to the Nevada Division of Public and Behavioral Health via "RedCap" along with reporting to corporate risk management.

**Dignity Health – St. Rose Dominican  
San Martin Campus  
PATIENT SAFETY/RISK MANAGEMENT PLAN**

DATE: 01/01/2018  
VERSION: 01

This plan was created and revised by the Dignity Health – St. Rose Dominican Patient Safety Officer with review and input from the Patient Safety Committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**

## Commitment to Patient Safety

---

Dignity Health St. Rose Dominican Hospital – San Martin Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe 2018 for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Dignity Health – St. Rose Dominican, San Martin Campus' Patient Safety/Risk Management program promotes:

- Honest, open collaboration and partnership of hospital leadership, medical staff, patients and their families, the community and other healthcare providers to deliver compassionate, high-quality, affordable healthcare.
- Promote justice and respect for those we serve.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility and accountability for every healthcare related decision and action.
- A focus on excellence, teamwork and innovation through continuous learning, improvement in system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The Patient Safety/Risk Management Program at St. Rose Dominican is an organization-wide/campus specific strategy that includes not only facility staff and medical staff, but is inclusive of patients, family and visitors. The Patient Safety/Risk Management Program at San Martin Campus supports and encourages the active participation of each person in order to be an effective program. When processes, functions or services are designed or redesigned, information internal and external to the campus and/or organization regarding potential risks to patient safety will be considered and where appropriate, utilized to minimize the risk to patients affected by the new or redesigned process, function or services.

The purpose of this plan is to establish system-wide guidelines and processes supporting a comprehensive, effective, organization-wide Patient Safety/Risk Management Program Plan designed to promote and improve patient safety at Dignity Health – St. Rose Dominican, San Martin Campus, by working to prevent medical/healthcare adverse events and reducing risk to patients and visitors.

Undesirable facility specific and system patterns or trends in performance and sentinel events will be intensively analyzed to determine where best to focus changes for improvement. Intensive analysis will be initiated when:

- Levels of performance, patterns or trends vary significantly and undesirably from those expected including significant near misses;
- Performance varies significantly and undesirable from that of other campuses/organizations;
- Performance varies significantly and undesirably from recognized standards; and/or
- A reportable event has occurred at that campus.

Minimally, data from the following areas will be gathered at each facility and presented at that facility for analysis with action plans developed reflective of the findings:

- Initial and on-going proactive risk assessments utilizing internal and external resources;
- Campus aggregate event reports reflective of all medical/healthcare events, with and without adverse outcomes, including but not limited to:
  - Hospital acquired infections
  - Medication events, to include delays in administration
  - Adverse drug events
  - Transfusion reactions
  - Patient falls
- Actual and near misses
- Hazardous conditions
- Restraint issues
- Medical record legibility issues
- Patient/family/staff opinions, needs, perceptions of risks to patients, and suggestions for improving patient safety;
- Identified data trends and analysis reports from sister facilities, Dignity Health Shared Learnings, etc.
- Others as defined by various campus committees, Leadership and/or Quality Council and Advisory Committee of the Board (QCAC).

## Roles and Responsibilities

---

Per [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

### The Patient Safety Committee Organization

#### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;

- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below.

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the San Martin Campus and includes multidisciplinary team members which has oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following are responsibilities assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators.
- Evaluate other sources of patient safety data utilizing internal and external resources including but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow-up on patient safety related trends, analysis results, changes in processes, and policies.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.

- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.
- See Quality Department's Performance Improvement Plan

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

The Director of Quality Risk Services has been designated the Patient Safety Officer for the San Martin Campus and as such, has the administrative responsibility for the program specific responsibilities including:

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Day to day responsibility for the Patient Safety/Risk Management Program at San Martin Campus.
- Maintenance of related data collected, trended and analyzed at each campus.
- Routine reporting to leadership and QCAC on campus specific trended data and actions taken to improve the quality and safety of patient care.
- Working with QCAC to achieve the goals of the Patient Safety/Risk Management Program.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.

- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporates the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

- Identify RCA participants and coordinate a time, date and location of RCA meeting.
- Inform RCA participants of the sentinel event process.
- Explain confidential nature of RCA.
- Explain Just Culture and its application.
- Review event using medical record and any other pertinent materials in preparation for the RCA.
- Provide RCA members access to relevant best practice/research documents/statutes and other literature to include hospital Policy and Procedure documents for reference.
- Conduct RCA in a manner consistent with Just Culture, using principles of human factors, systems theory, etc.

#### Executive or Governing Body Staff Responsibilities

Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.

- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans.

### Leadership

The Dignity Health St. Rose Dominican Board and campus Senior Leadership has overall responsibility for the implementation of an integrated, organization-wide Patient Safety/Risk Management Program. These responsibilities are campus specific and include the following:

- Foster an environment in which patients, their families and organization staff and leaders can identify and manage actual and potential risks to patient safety through personal example and the provision of resources to establish proactive mechanisms to reduce risk.
- Establish a culture in which communication flows freely regardless of authority gradient.
- Ensure that a define, on-going, proactive program for identifying risks to patient safety and reducing medical/healthcare adverse events is fully implemented and includes responses to actual and potential events;
- Ensure that patient safety issues are given a high priority and addressed when processes, functions or services are designed or redesigned;
- Provide for mechanisms to measure, analyze and manage variation in the performance of defined processes that affect patient safety;
- Allocate adequate resources, including personnel, time, information systems data associated with reducing risk and improving patient safety, and
- Active participation in the California Hospital Patient Safety Organization (CHPSO).

### Physicians

Physicians are responsible, as participants in the Patient Safety/Risk Management Program for reporting events or near misses at each campus, and participating on focus teams to reduce identified patient safety risks. Whenever patient care outcomes differ significantly from the anticipated outcomes, the primary care provider and/or responsible licensed independent practitioner (LIP) or comparable designee shall clearly explain these outcomes to the patient, and when appropriate, the family. (See Disclosure Policy)

### Patients/Families/Visitors

Patients, families and patient representatives via written communication are encouraged to be active participants in their care and as such are responsible for:

- Providing, to the best of their knowledge, accurate and complete information about present complaints, past illnesses, hospitalizations, medications and other matters relating to the patient's health;
- Reporting their patient and outcome of treatment of that pain
- Reporting perceived risks in their care and unexpected changes in the patient's condition to the responsible practitioner, and
- Asking questions when they do not understand what they have been told about the patient's care, infection control, safety precautions and programs or what they are expected to do etc.

Patients and families/patient representatives/visitors will be provided with educational materials explaining these expectations and their role in reducing risk exposure and improving patient safety at the time of admission and throughout the patient stay utilizing various delivery methods including pamphlets, television

and verbal communication. Some patients may also be included in the development process to obtain their opinions, needs, perceptions of risks to patients and their suggestions for improving patient care.

### Hospital Departments and Staff

San Martin staff are key to promoting, identifying, and implementing activities to reduce risk and improve patient safety. Some of the activities include:

- Active participation in the activities to improve patient safety and the quality of healthcare delivered;
- Adherence to Infection prevention measures, the Joint Commission National Patient Safety Goals and other patient safety initiatives;
- Participation in education activities and process implementations;
- As appropriate, the provision of accurate, timely and complete verbal and written communication among caregivers, including test results relevant to the management of the patient's condition, and to all others involved in the utilization of data; and
- Participation in information needs assessment, staff surveys, and other processes that request information regarding the Patient Safety/Risk Management Program.
- Reporting all events and process variances (harm or no harm) even if they do not reach the patient (near miss).

### The Patient Safety Committee

The Patient Safety Committee convenes monthly in accordance with NRS 439.875. In collaboration with the Patient Safety Officer, the committee represents the San Martin Campus and includes multidisciplinary team members which have oversight responsibility to ensure that the responsibilities and functions outlined in this program are carried forward throughout the organization. The following responsibilities are assigned:

- Serve as champions of the Patient Safety/Risk Management Program within the facility/organization.
- Establish and evaluate data to identify patient safety performance indicators;
- Evaluate other sources of patient safety data utilizing internal and external resources including, but not limited to adopted patient safety checklists, risk assessments, sentinel event report/alert information and event reporting information from a variety of available resources including the event reporting system, APIC, CHPSO, etc.;
- Selection of a high-risk patient safety process for proactive risk assessment and improvement annually;
- Collaborates with each facility's Quality Council to identify, address and conduct follow up on patient safety related trends, analysis results, changes in processes, policies and other areas to make as a result of identified needs.
- Annual review of the Patient Safety Program to ensure its appropriateness of focus and effectiveness of efforts for each campus.
- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).

- Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Patient Safety/Risk Management Plan

| Goal                          | Plan                                                                                                                                                               | Due Date               |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| Risk Assessments              | 1. Patient Safety/Risk Management to perform monthly risk assessments and report to PSC.<br>2. Infection Prevention to report to PSC findings of Risk Assessments. | Monthly PSC            |
| FMEA                          | PSC to ensure one FMEA is conducted by Risk Management in CY 2018.                                                                                                 | December 2018          |
| Checklists                    | PSC will receive all new and renewed checklists used that impact patient safety whether directly or indirectly.                                                    | Monthly and ongoing    |
| National Patient Safety Goals | PSC will support the posting of NPSGs throughout the hospital for staff reference.                                                                                 | Department leaders     |
| Root Cause Analysis           | RCAs will be conducted by Risk and Quality Management as soon as possible/practical after an event per Dignity Health policy                                       | Ongoing                |
| Manager orientation           | Quality Risk Services will review/update Manager orientation.                                                                                                      | March 31, 2018         |
| Grievance Management          | Grievances will be reviewed by the Grievance Committee to ensure compliance with CMS CoPs.                                                                         | Quarterly and ongoing. |

| Goal                          | Plan                                                                                                                                        | Due Date |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|----------|
| Staff and physician education | Patient Safety education will occur in various forms (e.g. Huddles, Department Meetings, Leadership Meetings, Posters) throughout the year. | Ongoing  |

## Components and Methods

### Proactive Risk Assessment Activities

The Patient Safety/Risk Management Department, in collaboration with the various facility committees including Infection Prevention, Quality Council and leadership will conduct proactive risk assessments to identify hazards/risks that may affect patient safety. Risk Assessment activities will include, but not be limited to the following:

- Patient Safety Risk Assessment evaluating known high risk processes/procedures that have associated risks,
- Review employee survey results to identify safety concerns,
- On-going risk assessments based on internal and external data, including sentinel event alerts,
- Focused risk assessments as determined by the Patient Safety Committee, Senior Leadership, external/internal events, etc.
- Selection of patient safety process improvements and risk reduction activities utilizing the priorities set criteria of San Martin campus,
- Any information assessments conducted by St. Rose Dominican will include identification of barriers to effective communication among caregivers.
- Patient Satisfaction surveys will include a question determining how the patient/family thinks the individual facility can improve patient safety. Results from this question shall be analyzed and responded to in a manner that supports risk reduction.
- Infection Prevention Surveillance Program.
- Additional staff surveys may be conducted to assess for staff opinions, needs, perceptions of risks to patients and suggestions for improving patient safety, as well as the staff’s willingness to report medical/healthcare events.

### Event Reporting

San Martin actively participates in the CHPSO and its Patient Safety Evaluation System for data collection, monitoring, collaboration and evaluation activities. As provided under the CHPSO (42 Code of Federal Regulations (CFR) Part 3 Section 3.20) the event report is considered a Patient Safety Work Product and as such is privileged and shall not be (1) subject to subpoena; (2) subject to discovery; (3) subject to disclosure and (4) admitted into evidence-provided such information is not subject to disclosure in certain criminal proceedings as described in regulation. (See Event Reporting and Management Policy).

- A. When an unplanned event/process variance occurs, the patient care provider will do the following:
  - a. Perform the necessary healthcare interventions to support the patient’s clinical condition.
  - b. Perform the necessary interventions to contain the risks to others.
  - c. Notify the patient’s attending physician.
  - d. Preserve any information related to the event including physical evidence. Preservation of the information includes the documentation of facts regarding the event or complication of event on the Event Report and in the patients’ medical record.

- e. Notify immediate supervisor of the event.
  - f. Submit electronically an Event Report form or handwritten Event Report form to Risk Management/Patient Safety Services.
- B. Identification of potential unsafe condition that may affect patient safety:
- a. Individual's identifying such a condition will immediately report such to their supervisor, and document in the Event Report.
  - b. Take the necessary actions to ensure that any potential risks to patient care and safety are mitigated.

#### **Event Monitoring/Risk Assessment Analysis, Action Planning and Intervention**

- A. Patient safety related event reporting data within the scope of the Patient Safety Program and risk assessment results will be aggregated and presented routinely to various committees including but not limited to Medical Executive Committee (MEC), Medication Safety, Quality Council and Environment of Care for analysis and action. Based on analysis of this data and any actual or potential reviews, sentinel events and other internal and external data including TJC Sentinel Event Alerts, Dignity Health Shared Learnings, CHPSO trends, current literature, proactive action plan will be developed to include the following:
- a. Assessment of the intended and actual implementation of processes to identify the steps in where there is, or may be, undesirable variation.
  - b. Identification of the possible effects of the undesirable variations on patients and how serious the effect or outcome on the patient might be;
  - c. For critical effects/outcomes, a root cause analysis will be conducted to determine why the variation leading to the effect may occur;
  - d. Redesign of the process and /or underlying systems to minimize the risk of that variation or to protect patients from the effects of the variation;
  - e. Test and implement the redesign process;
  - f. Identification and collaboration with Quality Management Systems on implementation of measures of the effectiveness of the redesigned process; and
  - g. Implementation of a strategy for maintaining the effectiveness of the process over time.
  - h. Events that do not require a Root Cause Analysis will have an incident review completed by Quality/Risk Services Department as soon as practicable of becoming aware of the event. The results will be forwarded to leadership for review.

#### **Response to Reported Adverse/Sentinel Events**

Reporting of events is an essential component of a Patient Safety/Risk Management program. Through its participation in the CHPSO; all related investigation of events will be securely conducted, collected and documented as Patient Safety Work Product (PSWP) to maintain confidentiality as defined in the Federal Regulation.

- A. San Martin shall respond to all reported potential and actual adverse/sentinel events. (See Sentinel Event policy).
- B. Minimally, all adverse events will be analyzed utilizing a team of individuals including Risk Management/Patient Safety and Quality Departments, to conduct root cause analysis (RCA), incident review and/or a failure mode effects analysis (FMEA), implementation in action plan to reduce further risk to patients and establish measures of effectiveness.
- a. The following events always elicit an intense analysis:
    - i. Confirmed transfusion reactions

- ii. Significant adverse drug reactions
  - iii. Significant medication events and hazardous conditions
  - iv. Manor discrepancies, or patterns of discrepancies, between preoperative and postoperative (including pathologic) diagnoses, including those identified during the pathologic review of specimens removed during surgical or invasive procedures; and
  - v. Significant adverse events associated with anesthesia use.
  - vi. Hospital acquired infections
  - vii. All events meeting the definition of Sentinel Events in the State of Nevada.
  - b. A root cause analysis is performed when a sentinel or State reportable event occurs.
  - c. An incident review is performed when a near miss or other event with significant areas for improvement are identified.
- C. Staff involved in an adverse/sentinel event shall be treated with respect and dignity.
- a. A “JUST CULTURE” approach shall be taken in order to facilitate changes in systems and processes to prevent further risk to patient safety, as well as promote future reporting by other staff.
  - b. Involved staff should be involved in the RCA process.
  - c. The Department Manager will provide ongoing support to the staff member(s) as needed.
  - d. Whenever necessary, Crisis Intervention or Employee Assistance Programs (EAP) will be offered as support to the involved employee.

### **Education**

#### **A. Staff Education**

- a. General orientation and other education and training programs as needed will emphasize specific job related aspects of patient safety and risk reduction strategies.
- b. Specific Patient Safety/Risk Management Program training at orientation and annually thereafter will include:
  - i. An overview of the Patient Safety Program
  - ii. Overview of TJC National Patient Safety Goals
  - iii. Staff’s role and responsibilities in the Patient Safety/Risk Management Program
  - iv. Event reporting criteria and process
  - v. Methods to support and foster an interdisciplinary and collaborative approach to the delivery of patient care
  - vi. Examples of specific job related aspects of patient safety.
- c. Staff participating at a higher level of the Patient Safety/Risk Management Program will receive appropriate training necessary to understand and complete their assigned responsibilities.

#### **B. Physician Education**

- a. An overview of the Patient Safety/Risk Management Program will be provided to physicians at time of initial appointment and annually thereafter that describes the program, emphasizes their role and responsibilities in the program and informs them of the event reporting mechanism.
- b. Specific physicians may receive additional training to support their involvement at a higher level in the Patient Safety/Risk Management Program.

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

San Martin Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in San Martin Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Whys technique also can be used to drill down the problem and find the root causes.

**Model for Improvement**

Please refer to the Dignity Health – St. Rose Dominican Performance Improvement Plan.

**Data Collection and Reporting**

Data should drive any quality and patient safety effort. San Martin is using IVOS for tracking the sentinel events, healthcare infection data, and Midas for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

## Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

### **Patient Safety Program Reporting and Review**

All patient safety work product (PSWP) submitted through the CHPSO will be collected in the Patient Safety Evaluation System (PSES) for collection, management and analysis of information pursuant to the Patient Safety and Quality Improvement Act of 2005 ( 42 U.S.C. 299 et seq.).

- A. Patient safety/Risk Management related data and information reports will be provided routinely to various committees as previously identified including but not limited to medical staff, Quality Council and QCAC.

- B. A summary report of data, other internal and external information, as well as all actions taken by various committees and/or specific patient safety related teams will be submitted to the QCAC and the MEC.
- C. Annually, the Patient Safety/Risk Management Plan will be evaluated for effectiveness and the program updated to reflect the results of risk assessments related to patients, families and staff. The review shall include a summary of the occurrence of medical/healthcare events and actions taken to improve patient safety, both in response to actual occurrences and proactive efforts.
  - a. The review will be approved by QCAC.
  - b. Will be submitted to the Community Board for final review and approval.

### **Reviewed/Approved:**

Patient Safety Committee, February 2018

Quality Care Advisory Committee of the Board, March 2018

Community Board, March 2018

**Spring Mountain Sahara**  
**ORGANIZATIONAL PLAN FOR PATIENT SAFETY**

**PURPOSE**

Spring Mountain Sahara is committed to the well being and safety of patients. We acknowledge the process of health care delivery is complex and requires effective coordination within an organization to minimize the risks of adverse occurrences. We believe leaders must demonstrate the importance of patient safety through a comprehensive and non-punitive program for the prevention, detection and response to health care errors. We believe staff well trained in safety principles reduces the likelihood of errors. We believe an active partnership with the patients we serve will result in desired patient outcomes.

**GOALS**

The goals of the Organizational Plan for Patient Safety are:

1. Establish and maintain effective operational systems to prevent errors
2. Assure the safe delivery of care and services at Spring Mountain Sahara
3. Promote culture of patient safety priority
4. Foster non-punitive approach to error detection and response

**OBJECTIVES**

1. Establish priorities for Patient Safety
2. Coordinate functions, processes and systems related to patient and organizational safety within all services and departments
3. Design and redesign functions, processes and systems when an opportunity to improve patient safety exists
4. Incorporate best safety practices into organizational systems and processes
5. Provide interdisciplinary collaboration of safety in the environment of care
6. Standardize and integrate organization wide policies and procedures related to safety
7. Consider results of Performance Improvement activities in guiding safety
8. Respond to sentinel event and significant events requiring root cause analysis
9. Coordinate education and training for staff, patients and visitors related to safety
10. Utilize the Joint Commission National Patient Safety Goals as tools to improve safety and reduce errors
11. Incorporate Joint Commission Sentinel Event Alerts (applicable to Behavioral Health) into ongoing Patient Safety Process
12. Incorporate UHS Behavioral Health Division Risk Alerts into ongoing Patient Safety Process

**STRUCTURE**

Effective coordination and management of patient and organizational safety contributes to desired patient outcomes. The Patient Safety Council oversees the implementation of the Organization Plan for Patient Safety. The Patient Safety Council is chaired by the CEO and meets monthly, more often when necessary, to assure effective operation of functions, processes and systems related to patient and organizational safety. Patient

Safety Council members provide expert or first hand knowledge in safety aspects of clinical and administrative service delivery. Input from every department and services within the organization contributes to the well being and safety of patients. Patient Safety Council membership includes standing members who attend all Council meetings and “as needed” Council members who attend when necessary to effectively coordinate and integrate patient safety within the organization.

**Patient Safety Council Standing Members:**

1. CEO/Managing Director
2. Director of Performance Improvement
3. Medical Director
4. Director of Nursing
5. Risk Manager

**SCOPE OF SERVICES**

The Organizational Plan for Patient Safety involves all-important functions and processes that have the potential to affect the safety of services provided for inpatient and partial hospital programs.

1. Governance

The Governing Body assumes ultimate responsibility for the safety of patients. The Governing Body approves the mission, vision and values of the organization affirming the importance of patient safety. The Governing Body delegates oversight of the Organizational Plan for Patient Safety to leaders. The Governing Body allocates sufficient financial and human resources to meet the safety needs of patients. The Governing Body assures the organization complies with applicable local, state, federal laws and regulatory requirements for patient safety. The Governing Body establishes the organizational structure for patient care responsibility. The Governing Body stays informed about adverse occurrences, Performance Improvement activities and pro-active risk reduction strategies.

2. Leadership

Leaders implement the Organizational Plan for Patient Safety. Leaders foster a culture that promotes patient safety through a non-punitive approach to the detection and response to health care errors. Leaders approve important policies related to patient and organization safety. Leaders provide direction in carrying out the mission, vision and value of patient safety within the organization. Leaders assess the changing needs of the organization in order to maintain the highest level of patient safety. Leaders assure interdisciplinary coordination of patient and organizational safety. Leaders approve contracts for external services with reliable and credible vendors. Leaders identify sentinel events and significant events requiring root cause analysis and assure the timely and proper response to adverse events. Leaders are accountable for the safety of patients and the safe operation of the facility.

3. Management

- Managers are responsible for the safe delivery of care and services within a specific branch of administrative or clinical operation. Managers are responsible for attaining and maintaining safety expertise within their scope of service delivery. Managers define safety aspects within their services or department and monitor the outcomes of performance for effects. Managers provide job specific safety training and assure department operations are integrated and coordinated within the organization.
4. **Patient Rights, Responsibilities and Ethics**

Patients have the right to expect safe care and services. Patients have the right to be informed of benefits and risks associated with proposed care. Patients have the right to be informed about outcomes of care including undesired and unexpected occurrences. Patients have the right to be informed about alternatives and possible results of refused care. Patients have the responsibility to participate in treatment as much as possible, to follow instructions, rules and regulations. Patients have the responsibility to provide accurate and reliable information, to report changes and to ask questions especially when care plans are not understood. Patients have the responsibility to respect the needs of others. Patients can expect that the facility has their well being and safety in mind. Patients can expect information that is honest and accurate. Patients can expect restrictions that are limited to only those necessary for safety. Patients can expect staff conduct that is ethical and safe.
  5. **Assessment of Patients**

Assessment of patient safety needs is a dynamic process occurring through all points of service delivery. Assessment of patient safety includes physiological as well as psychosocial needs. The Admissions Department assesses whether the organization can meet the safety needs of patients desiring services. Professional assessment and reassessment of needs continues during the course of treatment in order to provide the proper database to make care decisions. Specialists assess the unique safety needs of adolescents as well as individuals who are victims of abuse or those requiring detoxification. Assessment of needs continues with the determination of safety requirements necessary for discharge or another level of care.
  6. **Care of the Patient**

Safety is always a priority in the care of the patient. Therapeutic programs are designed with safety in mind and the milieu is managed to promote the safety of patients, visitors and staff. All care provided is under the guidance of a physician in collaboration with an interdisciplinary treatment team. Individualized care plans and interventions are based on current scientific knowledge and professional practices guidelines. The safety and well being of the patient is always considered in the care planning process and patients and their families are encouraged to participate as much as possible. Treatment expectations and outcomes of care are discussed with the patient and family as desired. When outcomes differ significantly from expectations or when adverse occurrences or

errors occur, the patient and family, as desired are informed including the consequences and how the course of care will be affected.

Direct observation is a primary method to determine the effects of care provided. Close observation or special precautions may be employed when necessary to assure safety of the patient. Assistance is provided when necessary to restore or to maintain the well being of patients; activities of daily living. Safe methods to respond to psychiatric and medical emergencies are implemented when necessary. Pharmaceutical services carefully control the ordering, delivery, storage and dispensing of medications to prevent errors. Dietary services provide the safe nutritional needs of the patients. Diagnostic tests and evaluations required by the patient's condition that are not available within the organization are provided by credible external sources. Safety provisions are in place to transport patients to and from facilities when necessary.

7. Management of Human Resources

A sufficient amount of qualified staff are provided to assure the safety of patients. Job descriptions define performance expectations related to patient and organization safety. General, department and job specific orientation focuses on safety matters including definitions of errors, how they are reported, managed and prevented. Initial, annual and ongoing competency determination confirms the knowledge and skills necessary to perform important safety aspects of job functions. Additional on the job training in equipment and skill application maintain the abilities of staff to provide safe quality care. Orientation, training and education in safety is revised when necessary based on emerging needs of patients, visitors and staff. When work performance affects or has the potential to affect patient safety or when sentinel events or significant events occur, Human Resources provides additional training, education and employee assistance.

8. Management of Information

Patient information is coordinated amongst providers and users prior to service entry, during the course of care and after discharge. Electronic information and written medical records are available at points of service. The care of the patient and response to treatment is permanently maintained in clinical records. Authorization is required prior to the release or discussion of confidential patient information. Professional information sources are provided through internet and current literature subscriptions.

9. Medical Staff

Medical Staff Bylaws and Rules and Regulations define performance expectations for licensed independent practitioners. The appointment and reappointment process assures practitioners are qualified and competent to provide privileges. Peer Review activities evaluate the safety and effectiveness of care provided. The physician's health program provides services to medical staff to assure they maintain the ability to provide safe care to patients.

10. **Performance Improvement**  
Performance Improvement monitors measure, assess, and improve important aspects of organization safety including high risk and problem prone services. Internal and external comparison sources provide a means to evaluate performance. When trends or patterns indicate a quality concern intense analysis is conducted to determine cause. New processes and redesigned processes are evaluated for effectiveness. Sentinel Event Alerts warrant an examination of processes to determine if the potential to reduce risk of adverse occurrences exists. Improvement strategies and best practice standards are communicated within the organization.

The Risk Management Program identifies potential and actual risks to the organization and welfare of patients. Complaints are investigated and incidents analyzed. Processes to eliminate hazards and losses are implemented and evaluated for effectiveness. Contract provider performance is evaluated for quality and safety and claims litigation is managed.

11. **Patient Education**  
Education is provided to patients and families that promotes safety and enhances recovery. Individual education plans may include disease, pain and medication management, health teaching, coping strategies, proper nutrition, self-care, use of equipment and community resources. Comprehension of education learned is validated to avoid mistakes. Specialists provide academic education to children and adolescents as necessary.
12. **Perception of Care**  
Patients, visitors and staff are encouraged to submit comments about the care provided as well as suggestions to improve safety and services through the Patient Satisfaction Survey. Responses are reviewed and considered by leaders. Staff are commended when their ideas results in improved safety or service. Patients anonymously complete satisfaction surveys upon discharge and rate their perception of the safety of care received. In addition, patients are encouraged to submit suggestions on the satisfaction survey about ideas to improve safety conditions. Findings are analyzed and considered in process and system design.
13. **Continuum of Care**  
Care needs determine the level of services provided. Safety needs may trigger a change in the level of care. Processes assure prompt transition to a different level of care when necessary. Continued care and education needs identified during the course of treatment are coordinated and planned with the patient, family and alternate service provider in preparation for discharge to assure a smooth and safety transition.
14. **Environment of Care**  
The physical plan and patient unit designs consider the unique safety needs of the behavioral healthcare population including services to children, adolescents,

adults and older adults. Furnishings and fixtures are selected that are age appropriate and provide the safest environment of care. Internal and external space and traffic flow is planned to minimize the risks of injury to patients, visitors and staff. Safety measures are incorporated in rooms designated for the purpose of seclusion. Access to sharp and dangerous objects are controlled. The environment of care is frequently inspected for safety conditions and repairs made promptly to avoid injury. Building and construction planning complies with Life Safety Codes and considers the safety and comfort needs of patients. Utility systems that regulate the safe provision of water and air are inspected and maintained according to industry standards. Fire response measures are tested and analyzed for effectiveness. Emergency measures are in place to assure the well being and safety of patients when necessary. Hazardous wastes are contained and access to dangerous chemicals and combustible gas controlled. Emergency materials are available where needed to safely respond to emergencies, accidents and exposures. Back up communications methods are available to assure continuity of care during emergencies.

Medical equipment is inspected and tested according to manufacturer recommendations. Waived testing procedures include quality control measures to assure safety and reliability.

15. Infection Control

A comprehensive program to identify and reduce the risk of acquiring and transmitting infections among patients, visitors and staff is in place. Nosocomial infections are investigated and reduction strategies employed. Employee health and wellness measures help to prevent the spread of infection within the organization. Trends and patterns in infections are communicated to and from health officials to aid in control.

16. Nursing

Professional and paraprofessional nursing staff follow standards of patient care and standards of nursing practice to assure the safe and appropriate delivery of nursing care are on inpatient units twenty four hours per day, seven days per week. Psychiatric nurses provide direction and supervision in delivering safe care.

**PATIENT SAFETY PRIORITIES**

The Patient Safety Council establishes priorities for the organization in patient safety matters. Priorities may change at any time in response to actual or potential sentinel events, unusual or urgent events, unanticipated adverse occurrences, changing regulatory requirements, significant patient or staff need, changes in the environment of care or community needs, in response to performance improvement activities or at the request of the Governing Body.

## **PHILOSOPHY OF ERROR DETECTION AND RESPONSE**

The delivery of safe health care is a complex matter dependent upon processes and functions that perform well, careful actions and judgments of staff, and patient participation in care planning and treatment. We continually assess our operations to assure error prevention strategies are effective. When actual or potential undesirable conditions or events occur, we respond immediately to assure the safety and well being of patients, visitors and staff.

When adverse events occur we strive to minimize individual blame. We view error identification as an opportunity to improve processes and systems that will result in better care. When sentinel events and significant events occur, or conditions are discovered that may contribute to such events, leaders and staff most knowledgeable about the process or system contributing to the event or condition, participate in conducting a root cause analysis to determine the underlying cause.

## **COORDINATION AND INTEGRATION OF PATIENT SAFETY**

The risk of errors and adverse occurrences can be reduced when care and service is coordinated and integrated within an organization. The Patient Safety Council plans, organizes and coordinates practices that support or affect the safety of patient care delivery. The Patient Safety Council assures new services, changes in regulations, professional practices or accreditation requirements related to safety are coordinated and integrated in the organization. The Patient Safety Council reviews organizational policies and procedures for each point of service delivery or support to assure they are coordinated and patients, visitors and staff's safety are maintained. Practices, policies and procedures are revised as often as necessary to maintain the highest level of patient safety.

## **DESIGN AND REDESIGN OF FUNCTIONS, PROCESSES AND SYSTEMS**

The Patient Safety Council designs and redesigns functions, processes and systems in response to Performance Improvement Activities, Sentinel Event Alerts, Root Cause Analysis Recommendations, proactive risk assessments, new program or services or when an opportunity to improve patient safety exists.

The Patient Safety Council intensely analyzes actual or proposed processes, systems and functions to determine potential failure modes and to identify error prevention strategies to protect patients from harm. Processes, systems and functions are designed or redesigned that incorporate sound principles of safety engineering and management and fail safe design.

## **SAFETY EDUCATION AND TRAINING**

The Patient Safety Council coordinates staff, patient and visitor education and training programs in matters related to safety. Orientation and ongoing training programs for staff include general, department and job specific safety training including error detection and response, error prevention strategies and education to promote a safe environment for patients, visitors and staff.

## **BEST SAFETY PRACTICES**

The Patient Safety Council serves as the organizational source for best practice safety standards. The Patient Safety Council incorporates both successful safety practices and lessons learned internally and from other organizations in promoting and maintaining the facility's highest level of patient safety.

|                                                                               |                                                                                                                  |                                              |

**Policy:** The facility shall provide guidelines and implement proactive practices, which provide a safe environment of care in relation to property, equipment, patients, personnel and the public. The facility and each OR must be designed and maintained so that all types of surgery can be performed in a manner that protects the lives and assures the physical safety of all individuals. ORs include not only traditional ORs, but also procedure rooms, including those where surgical procedures that do not require a sterile environment are performed.

**Purpose:** The reduction of physical hazards and the implementation of safe practices enhance environmental safety.

**Procedure Guidelines:**

**Responsibility:**

1. Facility leadership takes action to minimize identified safety risks in the physical environment. Employees are responsible for:
  - A. Intervention when, safety conditions pose a threat to life or health, or threaten damage to equipment or buildings.
  - B. The continuing maintenance of the facility property, eliminating hazards upon discovery.
  - C. Reporting equipment or maintenance problems and incidents of property damage to the Administrator/ Clinical Director upon discovery.
  - D. Reporting injuries and illness to the Administrator/Clinical Director.
  - E. Obtaining the information necessary to perform tasks in a manner that prevents injury to themselves, patients and others.

2. The Administrator/Clinical Director, and Safety Officer, as agents of the Quality Assurance Committee are responsible for:
  - A. Environment of Care development, implementation and monitoring.
  - B. Report of Safety Surveillance and activities to the Quality Assurance Committee/PI committee.
  - C. Every 12 months the organization evaluates the Environment of Care Plan for objectives, scope, performance and effectiveness.

**Maintenance And Supervision:**

1. Comply with the NFPA 101®, Life Safety Code® (LSC) for maintaining and supervising the facility grounds, buildings and equipment.
2. Maintain equipment and utilities following a preventative maintenance schedule.
3. Maintain sufficient light in the parking and entrance areas to reduce the potential for falls and security concerns.
4. Maintain signs and emergency systems to meet the needs of the visual and hearing impaired.
5. Maintain smoke free environment.
6. Provide facility cleaning, maintenance, and inspection, following a schedule for daily, weekly, monthly, semi-annual and annual activities.
7. Construction and Renovation (Interim Life Safety Plan):
  - A. Meet the existing ambulatory health care occupancy health code requirements for construction or renovation.
  - B. Train staff in alternative safety processes including the use of new specialized equipment and space.
  - C. Train staff to compensate for changes in Life Safety Plan.
  - D. Provide increased facility safety monitoring with construction and renovation included reference to the NFPA 101®, Life Safety Code® (LSC).
  - E. Inspect and monitor components of Life Safety Plan weekly or more frequently if indicated.

**Risk Assessment:**

1. Provide risk assessment and hazard surveillance to evaluate the impact of the center building, grounds, equipment, occupants, and internal physical systems on patient, employee and public safety.
  - A. Assign a Safety Officer to maintain risk and hazard surveillance.

- B. Record Hazard surveillance.
  - C. Report environmental hazard and safety surveillance to the Quality Assurance Committee. Provide follow-up to staff concerning safety issue recommendations.
2. Report and document patient, personnel or visitor injury, and occupational illness. Document incidents on a Variance Report, Occurrence Report, or Incident Report.
- A. Investigate and evaluate each report for opportunities to improve performance.
  - B. Include injuries and occupational illness in the report to the Quality Assurance Committee.

**Product Safety Recalls:**

1. Address a product safety recall upon notification.
- A. Inventory and remove recalled product from possible use.
  - B. Notify affected medical staff and evaluate a substitute product.
  - C. Inventory patients who may have received a recalled medical device from implant logs or records.
  - D. Consult with the Medical Director and/or Quality Assurance Committee to evaluate the situation and determine an appropriate method for patient notification if an implanted medical device has been recalled. The medical director, as an agent of the QA/PI committee reports the incident to the Medical Executive Committee.

**Safety Education:**

1. Provide Safety Education and Training at orientation and at least annually thereafter. Address general safety processes; area specific safety and job related hazards.
2. Provide Safety Guidelines in the General Orientation including:
- A. Review of Safety Policies and Guidelines.
  - B. Body Mechanics.
  - C. Hazardous Materials Communication.
  - D. SDS/ Hazardous Waste.
  - E. Safety Risk / Responsibilities.
  - F. Equipment Safety/Operations Manuals.
  - G. Emergency Preparedness.
  - H. Utility Systems and Electrical Safety.

- I. Infection Control/Exposure OSHA.
  - J. Reporting of Sentinel Events.
  - K. Variance, accidents/injuries, Security and Safety concerns.
  - L. Fire and Life Safety.
  - M. Safety Concerns.
  - N. Security.
  - O. OSHA.
3. Include specific safety standards related to safe practices and the safe use, inspection, cleaning and maintenance of specialized equipment in the Department /Job Specific orientation.
  4. Provide updates when new equipment is introduced.
  5. Review General Safety Guidelines annually.

## QUALITY AND PATIENT SAFETY PLAN

This plan was created and reviewed by ESCNN Patient Safety committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and/or preventable events.

## Commitment to Patient Safety

---

ESCNN is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, ESCNN Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in ESCNN are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, ESCNN has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and

external customers, as well as facilitates the need of analyzing and improving processes.

The core principles of this plan include:

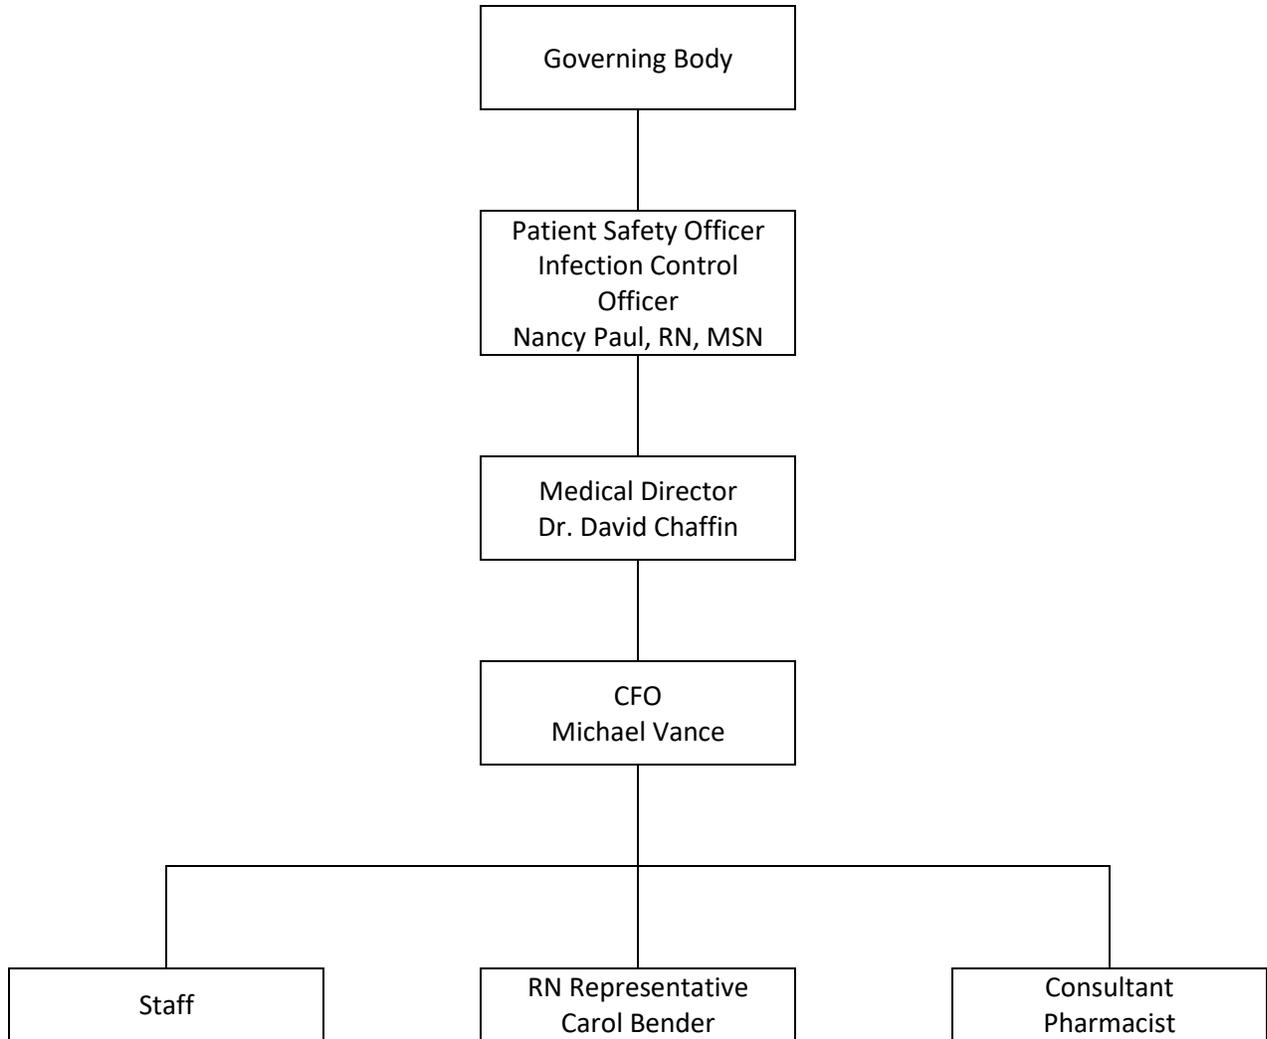

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

### The Patient Safety Committee Organization

## Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below:

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) :

- Conduct RCA as needed utilizing members of the Patient Safety Committee.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.
- Make policy changes as needed based on RCA results.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

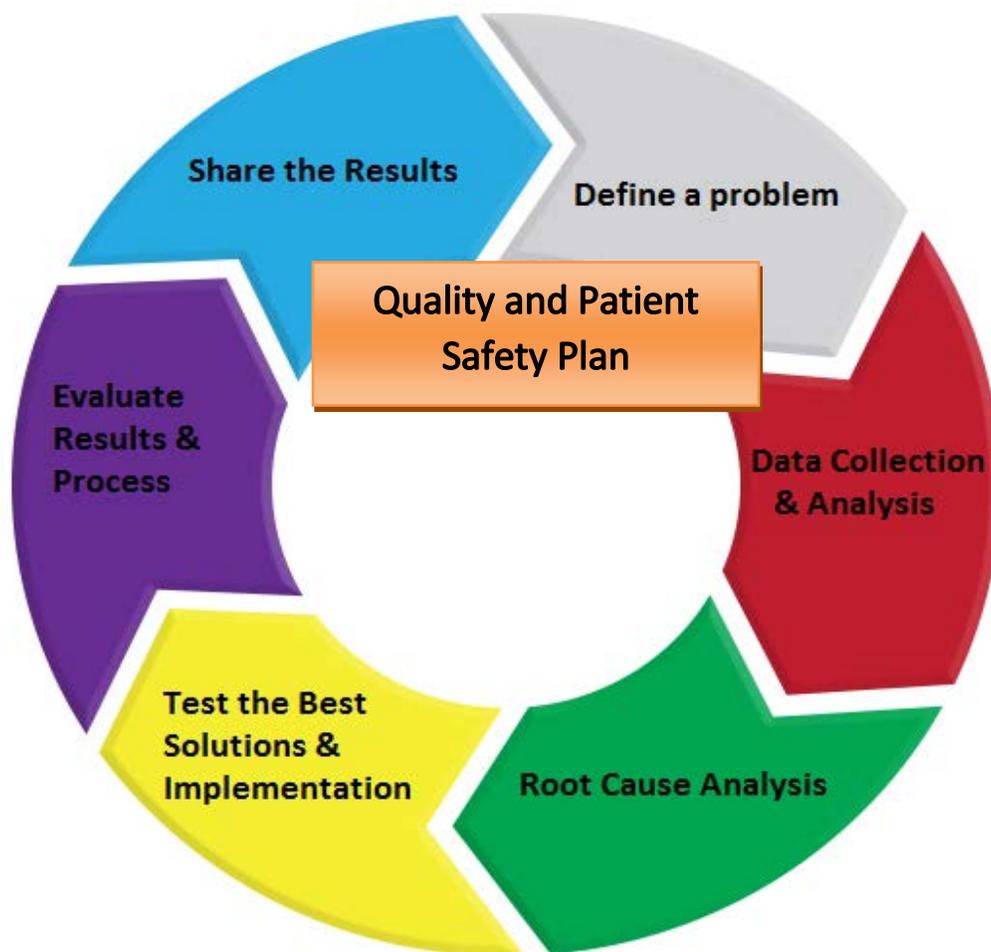

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

ESCNN will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

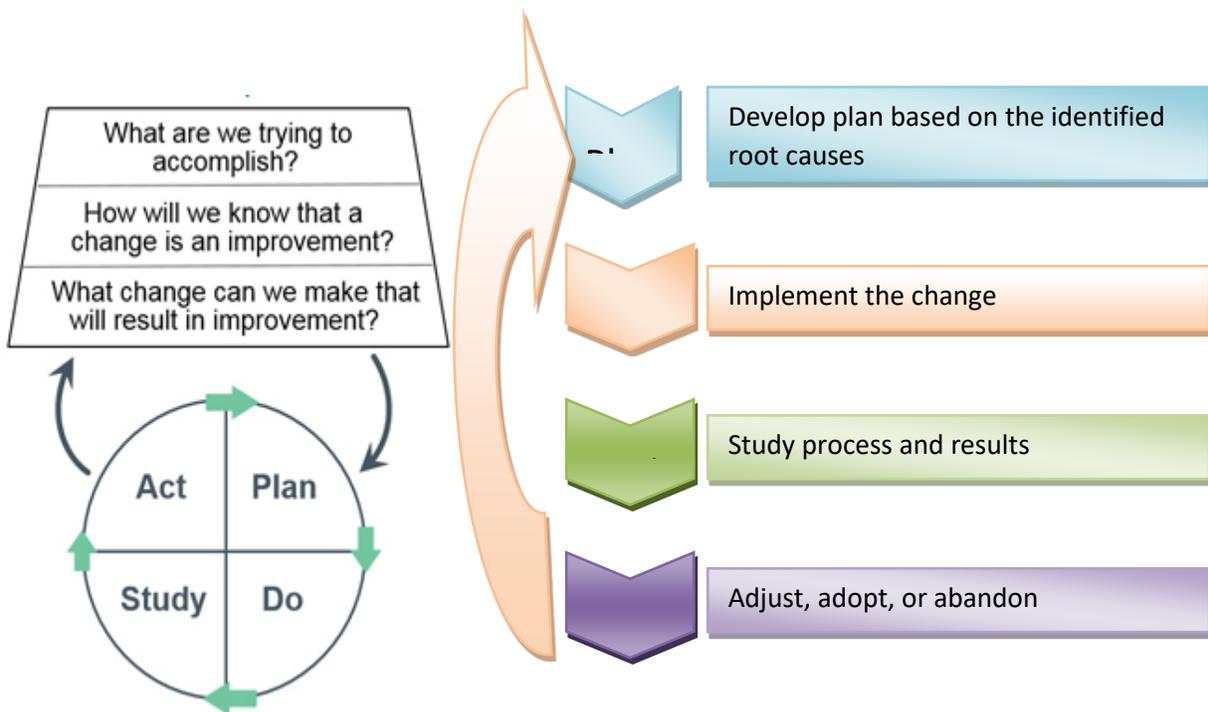

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

## Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?

- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. ESCNN is tracking sentinel events and healthcare infection data.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA).

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

**NEVADA ENDOSCOPY MANAGEMENT INC  
GASTROENTEROLOGY CONSULTANTS LTD  
RENO ENDOSCOPY CENTER LLC  
SOUTH MEADOWS ENDOSCOPY CENTER LLC  
CARSON ENDOSCOPY CENTER LLC**

**POLICY AND PROCEDURE MANUAL**

**Policy:** Patient Safety Plan  
**Owner:** Center  
**Date last updated:** Revised 4/2016

**Purpose:** Gastroenterology Consultants, Ltd (GIC) and affiliated Endoscopy Centers are committed to ensuring the ongoing safety of our patients. To ensure the ongoing safety and care of our patients we follow specific guidelines and policies which, at a minimum, include:

**I Infection Control (IC):** Refer also to the Infection Control (IC) Policy

**Guidelines followed include:**

- a. American Society for Gastrointestinal Endoscopy (ASGE) Multisociety Guideline on Reprocessing Flexible Gastrointestinal Endoscopes 2011
- b. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standards of Infection Prevention in Reprocessing Flexible Gastrointestinal Endoscopes 2015
- c. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standard of Infection Prevention in the Gastroenterology Setting 2015
- d. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Guideline for Use of High Level Disinfectants and Sterilants for Reprocessing Flexible Gastrointestinal Endoscopes 2013
- e. American Society for Gastrointestinal Endoscopy (ASGE) Infection Control during GI Endoscopy 2008
- f. Center for Disease Control (CDC) Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings 2007
- g. CDC Guide to Infection Prevention for Outpatient Settings 2014
- h. Association for Professionals in Infection Control and Epidemiology (APIC) Guide to the Elimination of Clostridium difficile in Healthcare Settings 2013
- i. CDC Safe Injection Practices

**The IC Policy includes at a minimum processes or guidelines for:**

- a. Patient selection and placement within the facility
- b. Infection Control Monitoring and Surveillance, Reporting
- c. Standard and Transmission Precautions, Hand Hygiene, Personal Protective Equipment, Respiratory Hygiene / Cough Etiquette and General Infection Control Practices in Healthcare Facilities as developed by the CDC and APIC
- d. Environmental and Terminal Cleaning
- e. Infection Control Officer

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

*The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.117 - 49.123 and NRS 49.265.*

- f. Equipment Processing: Cleaning, Disinfection, High Level Disinfection and Sterilization

**II □ Patient Selection and Screening:** Refer also to the Criteria for Scheduling Patients at ASC Policy.

1. To ensure patients are appropriate for the planned procedure in the planned setting patients undergo:
  - a. Pre-procedure scheduling evaluation with referral for office visit or consultation as appropriate
  - b. Pre-procedure assessment which includes at a minimum:
    - i. Review of past medical & surgical history
    - ii. Medication reconciliation, review
    - iii. Allergy and reaction, review of
    - iv. Physical assessment; assessment for communicable diseases
    - v. Vital signs

**III □ Patient Identification:** Refer to Patient Identification Policy. Patient identity is verified with at minimum two (2) identifiers at check-in and at multiple points throughout care.

**IV □ Safe Surgery Checklist:** Refer to Safe Surgery Checklist Policy. Patient and procedure are verified immediately prior to procedures.

**V □ Discharge Teaching:** Patients are provided with written discharge instructions which are reviewed with patient and driver, as applicable, prior to discharge. Medications are reconciled prior to discharge if any new medications are ordered. Information specific to diagnosis, as best as known, is given to the patient. Patients are educated about signs and symptoms to report and given a twenty-four (24) hour telephone number to call in event of questions or concerns.

**VI □ Post Procedure Callbacks:** Patients are contacted one (1) to two (2) business days post-procedure for follow up of any concerns and questions regarding discharge instructions.

**VII □ Pathology follow up:** Patients are notified of pathology results and given information and follow up orders as applicable within two (2) weeks.

**VIII □ Pharmaceutical Services:** Refer to Pharmaceutical Services Policy. Safe injection practices are strictly followed. Pharmaceutical services are overseen by a contracting pharmacist on a monthly basis.

**I □ Quality Assurance and Benchmarking:** Refer to the Quality Management Plan. More than one hundred (100) quality assurance checkpoints are monitored on per patient, per case, per day, per week or per month basis as applicable. Benchmarking of multiple facility and nursing care factors are completed on an ongoing basis. In addition, multiple procedure-related factors are tracked and trended in aggregate and specific to individual

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

SECTION: SAFETY – SAFETY PROGRAM

EFFECTIVE DATE: 10-12-07

REVISED: 2-28-12; 10-21-16

---

---

**TITLE:** Safety Program**SCOPE:** All ROSC Staff**PURPOSE:**

To adopt, implement and monitor a comprehensive environmental control program relative to safety and sanitation that involves staff, equipment operation and maintenance in order to provide a functionally and environmentally safe atmosphere for patients, personnel and visitors.

**POLICY:**

A Safety Committee will be established to implement the safety and environmental control program of the facility.

1. The safety committee will include: Administrator, Safety Officer, MD, Infection Control Officer, Pharmacy Consultant, and Clinical Manager.
2. Management will appoint a Safety Officer.
3. The Safety Committee will meet monthly as part of the Medical Advisory Committee.
4. Meeting minutes will be taken and maintained.
5. Committee findings and recommendations are reported and submitted in writing to the Quality Management Improvement and the Governing Board.
6. The Safety Officer will prepare the agenda and preside at the meetings. The Safety Officer is responsible for carrying out directives of the Committee and submitting reports to other committees.
7. The Committee members' responsibilities include reporting unsafe conditions, reporting all accidents or near accidents, investigating all serious accidents, contributing ideas and suggestions for improvement, making inspections, participating in In-service education and orientation, familiarizing themselves with standards for safety and sanitation, and assisting in policy and procedure development.

### RESPONSIBILITIES OF SAFETY COMMITTEE:

1. To implement and review policies and procedures concerning functional safety and environmental control.
2. To function as a liaison with the Infection Control Officer.
3. To participate in the In-service Education and Orientation program.
4. To conduct Hazard surveillance.
5. To be knowledgeable regarding community safety agencies, especially those concerned with fire and other disasters.
6. To evaluate the effectiveness of the Safety Program and revise and update the program annually and as necessary.

SECTION: SAFETY – ANESTHETIC WASTE GASES

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Anesthetic Waste Gases

**SCOPE:** ROSC Management

**PURPOSE:**

To provide a safe environment for staff at the Reno Orthopaedic Surgery Center

**POLICY:**

There is a scavenger system attached to all anesthesia machines used at the center. Monitoring of waste gases is done quarterly by an outside service to assure that escaping gases are within a safe range.

**PROCEDURE:**

1. There will be a scavenger system connected to a separate vacuum from each anesthesia machine. The anesthesia practitioner makes sure that the hose is attached and inspected for leaks on a daily basis.
2. Quarterly inspections with written reports are obtained by an outside company qualified to test anesthesia waste gases. Management coordinates the inspection.
3. If any leaks are found on inspection, or the safe range is exceeded, the problem is immediately remedied before further use of the machine.

APPROVED BY: BOARD OF DIRECTORS

---

---

SECTION: SAFETY – CHECKLIST

EFFECTIVE DATE: 9-20-11

REVISED: 2-28-12; 2-20-15

---

---

**TITLE:** Checklist

**SCOPE:** ROSC Staff  
Physicians  
Contracted Vendors

**PURPOSE:**

Provide for protocols to improve the health outcomes of patients.

**POLICY:**

ROSC Safety Committee adopts the following criteria as a safety checklist for patient surgery.

According the WHO Guidelines for Safe Surgery 2009 the Reno Orthopaedic Surgery Center meets the following highly recommended objectives listed below.

Objective 1: The team will operate on the correct patient at the correct site  
Universal Protocol

- Verification: Correct patient, site and procedure identified on the
  - Pre-op, Anesthesia and Intra op document.
- Marking: Preoperatively the patient participates along with the surgeon that marks the site.
- Time Out: Intra-operatively by the team and documented on the intraoperative record.

Objective 2: The team will use methods known to prevent harm from administration of anesthetics, while protecting the patient from pain

- Pulse oximetry & capnography are supplied and performed by an anesthesiologist or directed by a physician.
- Circulation is monitored and documented in surgery and post op by anesthesia and nursing.
- Temperature is monitored and recorded pre-op, intra-op and post op.
- Consciousness is monitored and recorded pre-op, intra-op and post op.

Objective 3: The team will recognize and effectively prepare for life-threatening loss of airway or respiratory function

- Airway is assessed and documented by anesthesia on the anesthesia record.

SECTION: SAFETY – CHECKLIST

EFFECTIVE DATE: 9-20-11

REVISED: 2-28-12; 2-20-15

- A difficult intubation cart is equipped and ready for use by anesthesia.
- Only credentialed anesthesiologist provide anesthesia at ROSC.

Objective 4: The team will recognize and effectively prepare for risk of high blood loss

- Large volume blood loss is not anticipated in a majority of the cases performed at ROSC
- The anesthesiologists communicate with the surgeon and evaluate each case appropriately.
- The Medical Director evaluates all questionable cases prior to surgery.
- IV's are established prior to each surgical case.
- Blood loss is recorded on the anesthesia record.
- Blood is not administered at ROSC.

Objective 5: The team will avoid inducing an allergic or adverse drug reaction for which the patient is known to be at significant risk

- Credentialed anesthesiologists administer pharmacologic agents.
- Nursing administers medication under a physician order.
- Both physician and clinical staff are responsible for identifying the patient and the medication administered.
- A Patient Medication Reconciliation Record (signed by the patient), is obtained prior to surgery.
- Allergies and sensitivities are recorded on the front of the chart.
- Allergies and sensitivities are checked and recorded on the pre-op, intraop, PACU and anesthesia records.
- Aseptic medication technique is performed upon hire and annually.
- Medication drawn up and labeled is administered by the same person drawing and labeling the medication.
- National patient safety goals for the medication are followed by ROSC.

Objective 6: The team will consistently use methods known to minimize the risk for surgical site infection

- Prophylactic antibiotics are administered to all surgical cases prior to surgery by the anesthesiologist.
- Sterilization process involves the use of indicators used on every tray and peel pack. A Biological is run each load.
- A surgical scrub for OR is done for 2-5 minutes.
- Sterile surgical attire is provided for each surgical case.

Objective 7: The team will prevent inadvertent retention of instruments and sponges in surgical wounds

- Sponge and sharps counts are performed before and after each procedure and documented on the intra-op record.

## RENO ORTHOPAEDIC SURGERY CENTER, LLC

---

---

### **POLICY MANUAL**

APPROVED BY: BOARD OF DIRECTORS

---

---

SECTION: SAFETY – CHECKLIST

EFFECTIVE DATE: 9-20-11

REVISED: 2-28-12; 2-20-15

---

---

Objective 8: The team will secure and accurately identify all surgical specimens

- All specimens have a patient label attached to the container.
- Pathology Specimen Request is complete and accompanies the patient specimen.

Objective 9: The team will effectively communicate and exchange critical information for the safe conduct of the operation.

- The team prepares for instruments, implants, intra-operative imaging, and pathology in advance of each case.
- Anesthesia issues are addressed by each anesthesiologist and surgeon prior to each case. When patient safety is in question, the case is cancelled.

Objective 10: Hospitals and public health systems will establish routine surveillance of surgical capacity, volume and results.

- ROSC Facility will report the following Outcomes to the Nevada State Bureau of Health & Welfare Annually
  - Number of operating rooms –
  - Number of procedure rooms –
  - Number of surgical procedures performed
  - Number of board certified Orthopaedic surgeons –
  - Number of Anesthesiologist
  - Day of surgery mortality rate
  - Post operative in hospital mortality rate
  - Surgical Site Infection Rate
  - Surgical Complications

2) All treatment provided is ordered by the physician.

3) Any prescription given to the patient is filled at the patients' pharmacy of choice. Medication is taken as directed by the surgeon and pharmacist and documented on the discharge instruction sheet.

4) All after care and all other discharge instruction are given as ordered by the physician and documented on the discharge instruction sheet.

5) An environmental, staff and patient safety checklist is completed monthly the safety officer. (attached)

6) Orientation checklist – (attached).

SECTION: SAFETY – COMPRESSED GAS HANDLING

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Compressed Gas Handling

**SCOPE:** ROSC Staff

**PURPOSE:**

To provide guidelines for safe handling of compressed gas.

**POLICY:**

IDENTIFICATION:

1. All gases are properly labeled with contents and whether they are flammable.
2. Never rely on the color of the tank for identification of the contents.

STORAGE & HANDLING:

1. Tanks of compressed gases are stored upright and chained to a support system to minimize falling over.
2. A safety cap is used during transport of H-cylinders.
3. Always use proper DISS or pin index safety system for the gas being used.
4. The gas storage area is kept cool and out of direct rays of the sun and away from heat pipes. It is well ventilated to prevent "pocketing " of fumes, and is fireproof with some means for cooling in the event of fire.
5. Regulators, fittings or gauges will never be lubricated or come in contact with oil or grease.
6. Never use leaking or defective tubing or equipment that is in need of repair.
7. When opening cylinder valve, always open with the face pointed away from any person.
8. Care should be taken to handle tanks safely. Seek assistance if tank is too heavy to handle alone. Never handle tank with greasy hands.

SECTION: SAFETY – ELECTRICAL SAFETY

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Electrical Safety

**SCOPE:** All ROSC Staff

**PURPOSE:**

To provide guidelines for general electrical safety

**POLICY:**

1. All staff will observe for signs of electrical hazards. Equipment with frayed cords, exposed wire, or broken plugs will be taken out of use immediately. A sign that states "DO NOT USE" will be placed on equipment, and Management notified. Management will have the equipment repaired by the biomedical engineer.
2. Extension cords will be used only on an emergency basis.
3. All electrical devices being used in the operating room must have three-pin plugs and connect into three-hole receptacles.
4. Cheater plugs will never be used.
5. Keep fluids away from all electrical equipment.
6. Remove power plugs by grasping the plug; never pull on the cord.

SECTION: SAFETY – ELECTRICAL SAFETY CHECKS

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Electrical Safety Checks

**SCOPE:** Biomedical Engineering Contractor  
Management

**PURPOSE:**

To assure that patients and employees are protected from electrical shock.

**POLICY:**

All electrical appliances or equipment destined for patient care is to have an electrical safety check performed before use in the facility with annual safety checks performed thereafter.

**PROCEDURE:**

1. Management or designee contacts the Biomedical Engineer to perform electrical safety inspections before new electrical equipment is used.
2. The Biomedical Engineering Contractor inspects the equipment and places a label stating when the inspection took place and that the item is safe for use.
3. The Biomedical Engineering Contractor has a contract with ROSC to inspect new equipment and to perform annual inspections on all electrical equipment.
4. During routine inspections, if equipment is found to be defective or hazardous, Management is informed and a decision is made as to whether the item will be replaced or repaired.

SECTION: SAFETY – GENERAL SAFETY IN THE WORKPLACE

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** General Safety In The Workplace

**SCOPE:** All ROSC Staff

**PURPOSE:**

To identify general safety rules for all employees of ROSC.

**POLICY:**

All employees of the Center will be familiar with the following safety rules of the workplace. Employees will be responsible to observe and correct any hazards in the workplace.

1. Keep traffic areas clear of obstructions.
2. Pick up any foreign matter on floors and put in proper receptacles.
3. Wipe up spills immediately.
4. Use caution when opening doors. If no viewing window is present, open door slowly.
5. Be physically and mentally prepared for work.
6. Prevent spread of infectious disease by staying out of the workplace when ill.
7. Never engage in horseplay or practical jokes.
8. Walk, never run in the facility.
9. Heed all warning signs that caution a hazardous condition. (i.e., wet floor signs.)
10. Know location of fire alarm pulls, extinguishers, and exits.
11. Be familiar with Emergency Codes.

SECTION: SAFETY – INSTALLATION OF ALCOHOL BASED HAND RUBS

EFFECTIVE DATE: 8-30-10

REVISED:

---

---

**TITLE:** Installation of Alcohol Based Hand Rubs**SCOPE:** Management**PURPOSE:**

To maintain a safe environment

**POLICY:**

ROSC will follow CFC 416.44 (b) Standard: Safety from Fire.

(5) Notwithstanding any provisions of the 2000 edition of the Life Safety Code to the contrary, an ASC may place alcohol-based hand rub dispensers in its facility if—

(i) Use of alcohol-based hand rub dispensers does not conflict with any State or local codes that prohibit or otherwise restrict the placement of alcohol-based hand rub dispensers in health care facilities;

(ii) The dispensers are installed in a manner that minimizes leaks and spills that could lead to falls;

iii) The dispensers are installed in a manner that adequately protects against access by vulnerable populations; and

(iv) The dispensers are installed in accordance with the following provisions:

(A) Where dispensers are installed in a corridor, the corridor shall have a minimum width of 6 ft (1.8m);

(B) The maximum individual dispenser fluid capacity shall be: (1) 0.3 gallons (1.2 liters) for dispensers in rooms, corridors, and areas open to corridors. (2) 0.5 gallons (2.0 liters) for dispensers in suites of rooms;

(C) The dispensers shall have a minimum horizontal spacing of 4 ft (1.2m) from each other;

(D) Not more than an aggregate 10 gallons (37.8 liters) of ABHR solution shall be in use in a single smoke compartment outside of a storage cabinet;

---

(E) Storage of quantities greater than 5 gallons (18.9 liters) in a single smoke compartment shall meet the requirements of NFPA 30, Flammable and Combustible Liquids Code;

(F) The dispensers shall not be installed over or directly adjacent to an ignition source; and

(G) In locations with carpeted floor coverings, dispensers installed directly over carpeted surfaces shall be permitted only in sprinklered smoke compartments.

**TITLE:** Latex Allergy

**SCOPE:** All ROSC Staff

**PURPOSE:**

To provide for a latex safe environment for patients with known latex allergies. To help prevent or minimize the risk of an allergic anaphylactic reaction secondary to exposure and sensitization to latex.

**POLICY:**

When possible, schedule procedure as first case of the day, otherwise plan for a latex safe environment.

**PROCEDURE:**

- 1) Notify all health care providers of potential or known latex-allergic patient before scheduled procedure.
- 2) Exchange latex-free products for all latex-containing items.
- 3) Notify surgeon and anesthesia care provider if no alternative latex free product is available.
- 4) Remove latex items from OR unless no non latex alternative exists.
  - a. Remove boxes of latex gloves and replace with non-latex gloves (e.g., sterile, nonsterile).
  - b. Double check all supplies and equipment for latex and remove any latex-containing items.
- 5) Educate patient about latex-safe plan.

SECTION: SAFETY – MEDICAL DEVICE PROBLEM &amp; RECALL

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Medical Device Problem & Recall**SCOPE:** All ROSC Staff**PURPOSE:**

To establish a uniform policy to ensure that product problem and recall information is documented, disseminated and reported according to Federal guidelines.

**POLICY:**

The following steps will be performed by Management for all reported product alerts and product problems:

1. When a product alert is received, Management determines if the product is stocked in the surgery center.
2. If the product is in ROSC, appropriate action takes place according to instruction of the recall. This may include revision of usage instructions, removal of the product, or modification of the product.
3. Staff and physicians are notified by Management as to the proper action to follow.
4. If the product has been used on a patient, the manufacturer and the patient are notified.
5. If a product is used on a patient and malfunctions during use, the manufacturer must be notified and if any injury or potential injury has occurred, an incident report is filled out.
6. If a medical device has in all probability caused death, serious injury or illness of a patient, the FDA and the Nevada Department of Public Health and Environment must be notified. Management or Administrator files the appropriate reports.
7. The report to the FDA must be made within ten days after the facility becomes aware of the problem. The report includes the facility name and address, the device's name, serial number and model number; the manufacturer's name and address and a brief description of the event reported to the manufacturer.

8. The “Occurrence Report – Equipment Malfunction or Misuse” form must be completed and submitted to the Nevada Department of Public Health and Environment (within one (1) business day of the occurrence. (See copy of form following this policy.)
  
9. A copy of the recall or problem and a copy of the reports to the FDA and applicable State reports is kept on file in the facility.

**TITLE:** Patient Safety Plan

**SCOPE:** All ROSC Staff

**PURPOSE:**

To provide ongoing safety and care for patients.

**POLICY:**

1. Guidelines followed:
  - a. CDC Guideline for Hand Hygiene
  - b. ANSI/AAMI Comprehensive guide to steam sterilization and sterility assurance in health care facilities. Supported by CDC Guideline for Sterilization and Disinfection in Health Care Facilities.
  - c. CDC Environmental Infection Control in Healthcare Facilities
  - d. AORN Peri-Operative Standards and Recommended Practices
  - e. APIC Text of Infection Control and Epidemiology Guideline for Isolation Precautions
2. Additional Infection Control Policies – See Infection Control in Policy Manual for details
  - a. Aseptic Technique
  - b. Communicable Disease Reporting
  - c. Environmental Controls
  - d. Facility Sanitation
  - e. Housekeeping Logs
  - f. Infection and Complication Tracking
  - g. Laundry Guidelines
  - h. Operating Room Sanitation
  - i. Pest Control
  - j. Sterilizer Monitoring
  - k. Traffic Patterns
  - l. Wound Classification
  - m. Universal Precautions
3. Patient Selection and Screening
  - a. Patients are pre-screened by the Surgeons and Medical Director for appropriateness for surgery.

---

- b. Patients with known infections and communicable disease are not a candidate for surgery at the facility.
  - c. In the event that an infection or communicable disease is discovered at the facility the patient is isolated and appropriate discharge is determined by the physician. Reports are made to the appropriate agencies.
4. Patient Identification
- a. Identity is verified with two identifiers upon admission and prior to any procedure or treatment.
5. Timeout: Timeout is performed prior to procedure or surgery.
6. Discharge Teaching
- a. Written discharge instructions are reviewed with the patient and significant other prior to discharge.
  - b. Patient medication is reconciled prior to discharge and a copy of their Medication Reconciliation Sheet is given to the patient.
  - c. Patients are educated to report general as well as specific signs and symptoms related to the procedure.
  - d. Patients are given a telephone number where they can reach a surgeon 24 hours a day.
7. Post Procedure Call
- a. Two attempts to call the patient post procedure is made one business day following the procedure.
8. Pathology results
- a. Pathology results are sent directly to the surgeon's office.
  - b. A designated ROSC nurse follows up on all pathology results and verifies that the surgeon received and reviewed the results
9. Pharmacy
- a. ROSC has a consulting Pharmacist who reviews, updates and educates staff on policy and procedure related to Medications. (See Medication section of Policy and Procedure)
  - b. The consulting Pharmacist performs a monthly audit of the Controlled Substances, DEA 222 forms, anesthesia narcotic reconciliation, patient charts.
  - c. The Pharmacist produces a monthly report, recommendations and corrective actions are made to Management, Medical Director and the Medical Advisory Committee as deemed necessary.
10. Quality Management and Improvement

---

**POLICY MANUAL**

*APPROVED BY: BOARD OF DIRECTORS*

---

---

*SECTION: SAFETY – RADIATION SAFETY*

*EFFECTIVE DATE: 10-12-07*

*REVISED: 8-30-10; 10-21-16*

---

---

**TITLE:** Radiation Safety

**SCOPE:** Physicians  
Clinical Staff  
Radiology Technicians

**PURPOSE:**

To provide guidelines that will limit exposure to radiation to personnel and patients in ROSC.

**POLICY:**

1. All personnel in the operating room will wear a lead shield while x-rays are being taken. Personnel wearing lead aprons should always face the x-ray unit.
2. Leaded shields will be used, when possible, to protect the patient's reproductive organs and thyroid during x-rays. The circulating nurse will document the type of protection used on the patient.
3. All reasonable means of reconciling an incorrect count should be implemented before using an x-ray to locate an unaccounted item.
4. Lead aprons will be laid flat or hung by the shoulders when not in use, to minimize cracking of shield.
5. The C-arm equipment will be inspected and calibrated annually by a state physicist, to ensure the equipment is working properly and meets safety regulations. Aprons and shields will be x-rayed bi-annually for any breaks in integrity. Any damaged aprons and shields will be disposed of.
6. All staff members working in the presence of fluoroscopy will wear dosimetry badges. Dosimetry Badges will be maintained and monitored.
7. All staff who are assigned a dosimetry badge will be requested to report all other badge reports on an ongoing basis in order to help keep track of cumulative exposure.

---

---

*SECTION: SAFETY – RADIATION SAFETY*

*EFFECTIVE DATE: 10-12-07*

*REVISED: 8-30-10; 10-21-16*

---

---

8. The staff member assigned to operate the fluoroscopy equipment must carefully observe all radiation safety precautions and remind other medical personnel if radiation safety rules/practices are violated. Violations of radiation safety rules/practices must be documented and reported to Management.
9. Personnel are limited to receiving no more than the maximum permissible radiation dose limit per State or Federal guidelines.
10. Reproductive organ shielding shall be provided to all patients unless this area is essential to the clinical image.
11. All fertile female patients will be evaluated for the potential of pregnancy.
12. Thyroid shields will be worn by staff if they are in proximity to the patient.
13. The facility has an established BioMed agreement for the maintenance of all radiation equipment.
14. Any questions regarding radiological safety must be directed to Management who will contact the contracted X-ray technician or the state physicist.
15. Signs will be posted on OR or procedure room door when x-ray is in use.
16. A yearly radiation safety competency will be completed by all staff.

*SECTION: SAFETY – REFRIGERATOR MONITORING*

*EFFECTIVE DATE: 10-12-07*

*REVISED:*

---

---

**TITLE:** Refrigerator Monitoring

**SCOPE:** ROSC Staff

**PURPOSE:**

To insure medications and food that require refrigeration are kept at proper temperature.

**POLICY:**

The temperature in the refrigerator used for storage of patient food or medication must be kept between 36 degrees and 46 degrees Fahrenheit.

**PROCEDURE:**

1. Medications and food is stored in separate refrigerators.
2. Refrigerators containing patient food or medications have a thermometer.
3. Staff checks the refrigerator temperature daily.
4. The temperature is recorded daily on the flow sheet. Flow sheet is filed with Management and kept for two years.
5. If there is a variance from the recommended temperature, the nurse notifies maintenance to have the refrigerator checked.

SECTION: SAFETY – REPORTING OF DEFECTIVE EQUIPMENT/INSTRUMENTS

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Reporting of Defective Equipment/Instruments

**SCOPE:** All ROSC Staff

**PURPOSE:**

To define the protocol to be used when an instrument or piece of equipment is not working properly. To assure that equipment and instruments that are defective are removed from the system until they are repaired.

**POLICY:**

Any item that is found to be defective is tagged and sent to Management.

**PROCEDURE:**

1. When an instrument or any piece of equipment in the Operating Room or Recovery Room is found to be defective, the employee discovering the problem tags the item and removes it from service. Management is notified so action can be taken to have the device repaired or replaced.
2. The employee labels the item and describes the exact problem that was observed, to improve rapid repairs.
3. Management further investigates and has the item sent for repair as needed. Management communicates with the staff that the item has been sent out of the department for repair and if a loaner can be expected.
4. Upon return of the item, the device is checked by a staff member who is familiar with the performance or, if necessary, it is evaluated by the Biomedical Engineering Contractor prior to being returned to service.

**TITLE:** Safe Use of Sterilizer

**SCOPE:** OR Staff/Sterile Processing

**PURPOSE:**

To assure safe use of sterilizers and prevent injuries from occurring when sterilizers are used.

**POLICY:**

Any staff member who will be using autoclaves will be educated and trained in the safe and proper operation of the sterilizer.

**PROCEDURE:**

1. Employees participate in an inservice on the use of the sterilizer. They demonstrate that they can safely operate the autoclaves, and are familiar with the manual operation of the autoclaves.
2. The chamber door is opened slowly and never opened until the pressure gauge reads zero. Never look directly at the autoclave when opening the door. Excess steam may have accumulated and be released when the door is opened.
3. When removing items from the autoclave, mitts, towels or forceps are used. Never reach in the autoclave with bare hands or arms.

**POLICY MANUAL**

APPROVED BY: BOARD OF DIRECTORS

---

---

SECTION: SAFETY – SAFETY PRECAUTIONS WHEN USING OXYGEN

EFFECTIVE DATE: 10-12-07

REVISED:

---

---

**TITLE:** Safety Precautions When Using Oxygen

**SCOPE:** All ROSC Staff

**PURPOSE:**

To assure safe handling of oxygen in the facility.

**DISCUSSION:**

Oxygen is a non-flammable, non-explosive gas, however it readily supports combustion. Any material that will burn in air will ignite more readily in an oxygen-enriched atmosphere. The higher concentration of oxygen, the greater is the intensity of burning. When oxygen is administered, the following precautions must be taken to prevent explosions and fire.

**POLICY:**

1. The facility is a "no smoking" facility. "No Smoking" signs are posted and visitors are reminded of this policy.
2. Any defect in the oxygen administration system such as a leak or a malfunctioning flow meter must be reported to Management who contacts the appropriate service for repair or replacement of the part.
3. Oxygen equipment must have an oxygen pressure interlock system and fail safe mechanism.
4. All electrical cords and equipment must be grounded.
5. Materials such as oil, grease, alcohol and other highly flammable substances must be kept away from oxygen and oxygen equipment.
6. Be sure there is no oil on hands when handling any oxygen administration equipment.

**TITLE:** Safety When Moving Patients or Objects

**SCOPE:** All ROSC Staff

**PURPOSE:**

To provide guidelines for moving patients and objects to avoid injury to staff.

**POLICY:**

**PROCEDURE:**

1. Lifting:
  - a. Look over the object to be lifted, making sure it is not too heavy or clumsy to handle alone.
  - b. Stand close to the object with feet apart for balance. Make sure footing is secure.
  - c. Bend knees. Keep back as straight as possible.
  - d. Get a good grip and keep the weight close to your body.
  - e. Lift gradually. Straighten knees and stand. Use leg muscles. Avoid quick, jerky motions.
  - f. When the weight is too heavy or the object is too bulky to lift safely, get help.
  
2. Pushing and pulling objects:
  - a. Get a good grip on the object; hands inside handles.
  - b. Keep back as straight as possible.
  - c. Brace your feet for maximum leg power.
  - d. Bend your knees to get the best use of your body weight.
  
3. Carrying:
  - a. Keep the load close to your body.
  - b. Make sure your vision is clear and the load does not obstruct your view.
  - c. Do not change grip while carrying the load.
  - d. Always face the spot on which the load will rest.
  
4. Transferring:

SECTION: SAFETY – USE OF SIDE RAILS

EFFECTIVE DATE: 10-12-07

REVISED: 8-30-10

---

---

**TITLE:** Use of Side Rails

**SCOPE:** All Staff

**PURPOSE:**

To assure the safety of patients who have had sedation or anesthetic drugs.

**POLICY:**

**PROCEDURE:**

1. The side rails of stretchers are put in an upright position if the patient has been given a preoperative sedative.
2. All patients transported on a stretcher must have the side rails in an upright position.
3. When the procedure is complete and the anesthetized patient is moved to the stretcher, the side rails are put in an upright position and remain up until the patient is transferred to a recliner or discharged.

SECTION: SAFETY – SENTINEL EVENTS

EFFECTIVE DATE: 10-12-07

REVISED: 8-30-10; 2-27-15

---

---

**TITLE:** Sentinel Event**SCOPE:** All ROSC Staff**PURPOSE:**

To identify and report to appropriate health regulatory agencies events resulting in unexpected outcomes. A thorough investigation for root cause analysis, implementation of improvement to reduce risk, and monitoring of the effectiveness of process improvement will occur following any reportable event.

**DEFINITION:**

Per NRS 439.830 defines a sentinel event as: an unexpected occurrence involving facility-acquired infection, death or serious physical or psychological injury or the risk thereof, including, without limitation, any process variation for which a recurrence would carry a significant chance of a serious adverse outcome. The term includes loss of limb or function.

**POLICY:**

Any event identified below is reported to the Department of health and Human Services Nevada Division of Public and Behavioral Health. All occurrences are reported by the next business day.

A written report using the format provided by the State, is completed and returned within 5 days of the occurrence. Prevention is encouraged through safe practices by the healthcare team.

**REPORTABLE OCCURRENCES:**

As of October 1, 2013 reportable events to the state Sentinel Registry include:

**Surgical or Invasive Procedure Events**

- A.** Surgery or other invasive procedure performed on the wrong site
- B.** Surgery or other invasive procedure performed on the wrong patient
- C.** Wrong surgical or other invasive procedure performed on a patient
- D.** Unintended retention of a foreign object in a patient after surgery or other invasive procedure
- E.** Intraoperative or immediately postoperative/post procedure death in an American Society of Anesthesiologists Class 1 patient.

Product or Device Events

- A.** Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting
- B.** Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended.
- C.** Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting.

Patient Protection Events

- A.** Discharge or release of a patient/resident of any age, who is unable to make decisions, to other than an authorized person
- B.** Patient death or serious injury associated with patient elopement (disappearance)
- C.** Patient suicide, attempted suicide, or self-harm that results in serious injury, while being cared for in a health care setting.

Care Management Events

- A.** Patient death or serious injury associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration)
- B.** Patient death or serious injury associated with unsafe administration of blood products
- C.** Maternal death or serious injury associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare setting
- D.** Death or serious injury of a neonate associated with labor or delivery in a low-risk pregnancy
- E.** Patient death or serious injury associated with a fall while being cared for in a healthcare setting
- F.** Any Stage 3, Stage 4, and un-stage-able pressure ulcers acquired after admission/presentation to a healthcare setting
- G.** Artificial insemination with the wrong donor sperm or wrong egg
- H.** Patient death or serious injury resulting from the irretrievable loss of an irreplaceable biological specimen
- I.** Patient death or serious injury resulting from failure to follow up or communicate laboratory, pathology, or radiology test results.

#### Environmental Events

- A.** Patient or staff death or serious injury associated with an electric shock in the course of a patient care process in a healthcare setting
- B.** Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances
- C.** Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care process in a healthcare setting
- D.** Patient death or serious injury associated with the use of physical restraints or bedrails while being cared for in a healthcare setting.

#### Radiologic Events

Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area.

#### Potential Criminal Events

- A.** Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider
- B.** Abduction of a patient/resident of any age
- C.** Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting
- D.** Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting.

# QUALITY AND PATIENT SAFETY PLAN

Lake's Crossing Center

500 Galletti Way  
Sparks, NV 89431  
775-688-1900

Name Here

### **Commitment to patient safety**

Lake's Crossing Center provides statewide residential and outpatient services to individuals who have been evaluated as requiring mental health services in order to proceed with their adjudication. Such services require a fully coordinated effort with responsibilities for treatment, evaluation and consultation. Lake's Crossing Center must meet a wide range of needs for a diverse population and we are committed to a comprehensive approach for continuous improvement of patient safety.

### **Mission, Vision and Values**

The purpose of this policy is to establish a plan for patient safety designed to promote patient safety throughout all departments in Lake's Crossing Center. Thus, the plan will focus on system-wide integrated performance improvement activities aimed at assuring an integrated approach to patient safety. In support of our commitment to patient safety, Lake's Crossing Patient Safety and Quality Improvement program includes oversight regarding:

- Providing the necessary services to clients in the least restrictive manner appropriate to the client, utilizing collaboration of leadership, medical staff and other staff providers to deliver integrated and high quality care within the program.
- Consultation and collaboration with other Division agencies on the treatment and management of clients.
- Providing treatment oriented toward development of socially appropriate and community -oriented skills stabilizing potentially dangerous behavior.
- Ensuring appropriate placement and follow-up of clients adjudicated not guilty by reason of insanity or un-restorable to competency.
- Continuing education of staff and medical personnel to assure quality of care and monitoring of standards.

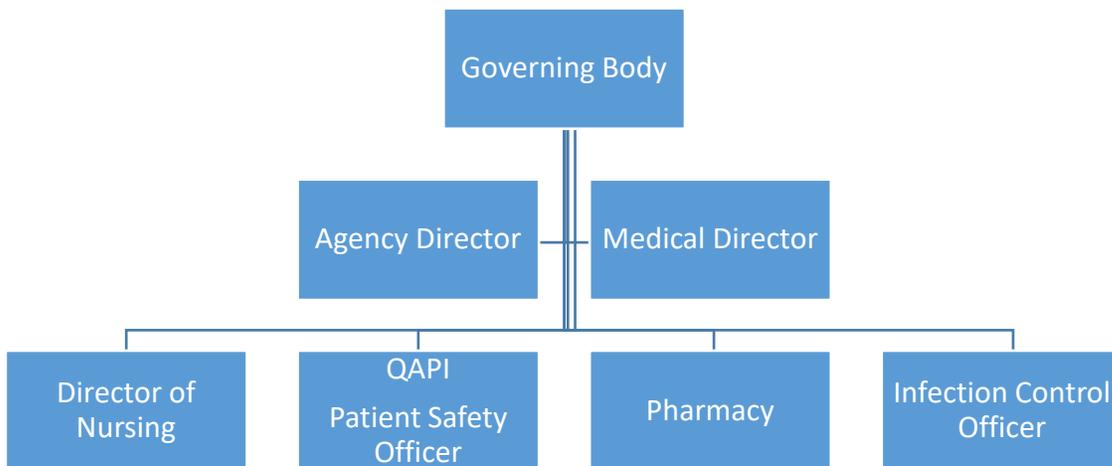

### **Scope and Purpose**

The scope of the Patient Safety Plan is agency wide and includes all aspects of patient safety, visitor safety, vendor safety and employee safety. All staff in Lake's Crossing are required to fully support and participate in this plan and devote their expertise to the patient safety and quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the clients and facilitate our accountability to the courts. The plan further focuses on the processes involved and facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions regarding implementations of the Patient Safety Plan will be based on data and facts and will be reported to and tracked by the QAPI department.

*As per NRS 439.875, a medical facility shall establish a Patient Safety Committee. This Patient Safety Committee should ensure that the Quality and Patient Safety Plan is promoted and executed successfully. The Patient Safety Committee organizational chart for Lake's Crossing is as follows:*

**Roles and Responsibilities of the Patient Safety Committee:**

- Meet at least once a month
- Receive reports from the Patient Safety officer as per NRS 439.870
- Evaluate the actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred at Lake's Crossing.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of clients who receive care at Lake's Crossing.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections at Lake's Crossing.
- Make recommendations to the governing body to reduce the possible number and severity of sentinel events and infections that could occur at Lake's Crossing.
- Report to the governing body at least once each quarter regarding the number of sentinel events occurring at Lake's Crossing during the preceding calendar quarter; the number and severity of infections that occurred at Lake's Crossing during the preceding calendar quarter; any identified recommendations to reduce the number and severity of any sentinel events and infections that occur at Lake's Crossing.

- Adopt and put into use, patient safety checklists and patient safety policies, as required in NRS 439.877, review the checklists and policies annually and revise as determined by the patient safety committee.
- On or before March 1 of each year, submit a report to the Director of the Legislative Counsel Bureau that will be transmitted to the Legislative Committee on Health Care. This report is to include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review.

**Roles and Responsibilities of the Patient Safety Officer:**

- Serve on the Patient Safety Committee
- Conduct root cause analysis through utilization of interviews, analysis, investigation and corrective action plan implementations.
- Perform the duties as required in NRS 439.835 regarding the reporting of sentinel events.
- Take such action as is determined to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at Lake's Crossing.
- Report to the Patient Safety Committee regarding any action taken in accordance with the above responsibilities.

**Roles and Responsibilities of the Infection Control Officer:**

- Serve on the Patient Safety Committee
- Monitor the occurrences of infections at Lake's Crossing to determine the number and severity of infections.
- Report to the Patient Safety Committee concerning the number and severity of infections at Lake's Crossing
- Take such action as is determined to prevent and control infections as identified at Lake's Crossing.
- Carry out the provisions of the infection control program pursuant to NRS 439.865 and ensure compliance with the program.

**Roles and Responsibilities of the Governing Body**

- Provide vision, leadership and oversight to the Patient Safety and Quality Improvement process and develop and foster a safe learning and improving culture at Lake's Crossing.
- Plan, discuss, and work with the committee and its members in accomplishing the patient safety goals and activities.

**Objectives, Goals and Assessment of the Quality and Patient Safety Plan**

Pursuant to NRS 439.837, Lakes Crossing will utilize the proper procedures to report any sentinel events and conduct an investigation concerning the causes or contributing factors and implement a plan to remedy the causes or contributing factors of the sentinel event through the use of Root Cause Analysis. Also considered for analysis will be near misses, repeated problems such as medication errors and events which have or could have resulted in patient harm. The objective will be to determine where gaps lie and how to determine them; not to place a blame in any particular department or individual.

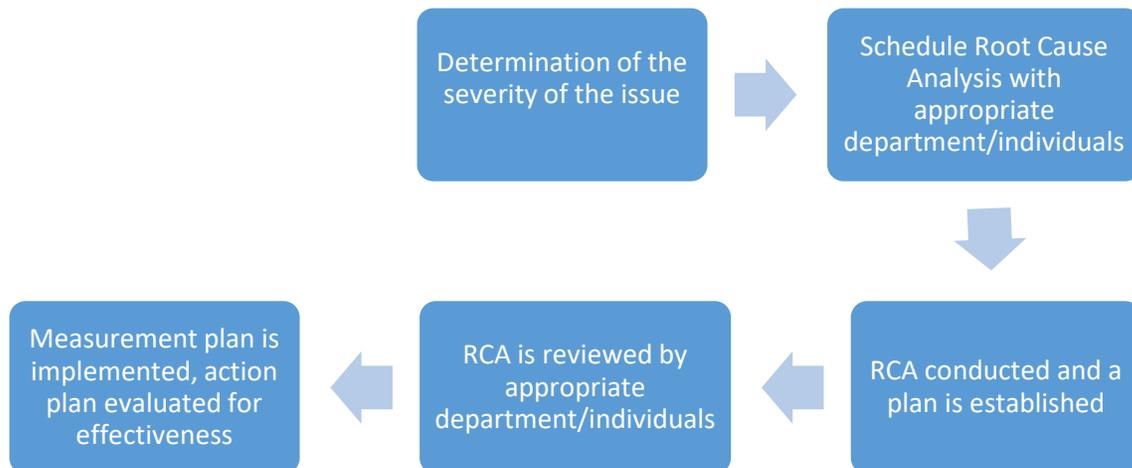

The event will be analyzed based on the factors of *catastrophic, major, moderate and minor*. The probability will be measured on the frequency – is it a frequent occurrence, occasional occurrence, uncommon occurrence or remote occurrence.

**TABLE 1: Safety Assessment Matix**

| Severity  | Catastrophic | Major | Moderate | Minimal | Comments |
|--------------------------------------------------------------------------------------------|--------------|-------|----------|---------|----------|
| Frequent                                                                                   | 3            | 3     | 2        | 1       |          |
| Occasional                                                                                 | 3            | 2     | 1        | 1       |          |
| Uncommon                                                                                   | 3            | 2     | 1        | 1       |          |
| Remote                                                                                     | 3            | 2     | 1        | 1       |          |

The above matrix will be used as a determining factor for if a Root Cause Analysis would be necessary for the incident with “3” being the highest rating.

Upon identification of an incident necessitating a Root Cause Analysis a meeting will be held with determination steps as follows:

According to NRS 439.865, the patient safety plan must include certain required checklists relating specifically to our facility. The specific checklists which are **required** to be included are listed below as well as others pertinent to Lake’s Crossing Center.

**Patient Safety Checklists and Patient Safety Policies:**

| <b>Check Lists Include:</b>                         | <b>Usage</b>             | <b>Existing</b> | <b>Developed</b> | <b>Reviewed</b> | <b>Revised</b> |

|-----------------------------------------------|-----------------------|
| SUBJECT: PATIENT SAFETY IN THE PROCEDURE ROOM | REFERENCE #7002       |
| DEPARTMENT: AMBULATORY CARE SERVICES          | PAGE: 1<br>OF: 3      |
|                                               | EFFECTIVE: 02/15/2010 |
| APPROVED BY:                                  | REVISED: 01/19/11     |

**PURPOSE:**

To identify and eliminate potential safety hazards, thereby reducing risk to patients, personnel and visitors.

**POLICY:**

Patient safety refers to a systematic facility-wide program to minimize preventable physical injuries, accidents and undue psychological stress during the visit. The HSC nursing practice for safety standards is as follows:

1. Patient Identification:

The RN always identifies the patient by checking the wristband with the patient's chart and the operating schedule. In addition, the RN verifies patient identification through verbal communication with the patient and/or caregiver.

2. Patient Observation:

Side rails are always to be in the UP position when a patient is on a gurney. Special care is ensured by provision of an adequate number of personnel when positioning patients. When positioning patients, it is essential to provide supportive devices to protect nerves and blood vessels. Limbs are never to be hyperextended.

3. Dedication to Meticulous Aseptic Technique:

Facility team members must know and apply the principles of aseptic technique at all times to avoid life- threatening postoperative infection.

4. Use of Operating Equipment:

All equipment and appliances must be set up and used according to the recommendations and instructions of the manufacturer. All new electrical equipment must be inspected prior to use and every six (6) months thereafter by the biomedical engineer. Electrical equipment must be properly grounded to prevent electric shock and burns.

5. Prevention of Burns:

All electrical equipment must be inspected by the bio medical contractor prior to use.

|                                               |                       |
|-----------------------------------------------|-----------------------|
| SUBJECT: PATIENT SAFETY IN THE PROCEDURE ROOM | REFERENCE #7002       |
| DEPARTMENT: AMBULATORY CARE SERVICES          | PAGE: 2               |
|                                               | OF: 3                 |
| APPROVED BY:                                  | EFFECTIVE: 02/15/2010 |
|                                               | REVISED: 01/19/11     |

6. Administration of Drugs:

All drugs used by the anesthesiologist are logged in the anesthesia record.

7. Preparation of Specimens:

- Tissue removed from a patient is sent to the Pathology Laboratory and labeled with the site of the specimen as ordered by physician.
- It is the responsibility of the physician to communicate to the RN the origin of each specimen.
- It is the responsibility of the RN to label and record each specimen accurately.
- All specimens for frozen section are placed in a dry container and forwarded to the Pathology Laboratory.

8. Fire Safety:

Response of the facility's staff to a fire is outlined in the Fire/Emergency Management Plan. Facility personnel participate in the quarterly fire drills as appropriate and review fire precautions in the annual recertification program.

9. Emergency Management Responses:

Response of the facility team in a disaster situation is outlined in the Fire/Emergency Management Manual. Facility personnel participate in disaster drills and review emergency management precautions in their annual recertification program.

10. Equipment Maintenance:

All operating room equipment is inspected for operational integrity by facility personnel prior to each use. Equipment is to be removed from service immediately, if needed repair or a malfunction is evident.

11. Disposal of Waste:

All infectious (bio hazardous) wastes, including glass, are single red-bagged, placed in the special collection container marked "Bio hazardous Waste" and disposed of by contracted medical waste company.

|                                               |                       |
|-----------------------------------------------|-----------------------|
| SUBJECT: PATIENT SAFETY IN THE PROCEDURE ROOM | REFERENCE #7002       |
| DEPARTMENT: AMBULATORY CARE SERVICES          | PAGE: 3<br>OF: 3      |
|                                               | EFFECTIVE: 02/15/2010 |
| APPROVED BY:                                  | REVISED: 01/19/11     |

12. Disposal of Needles and Syringes:

Used needles and syringes are disposed of by placement in a rigid sharps disposal container which is present in each operating room. When container is 3/4 full it is capped and disposed of in the bio hazardous waste collection container.

13. Use of Adapters:

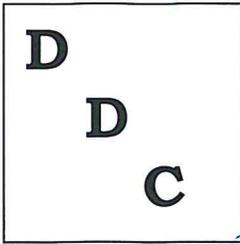

Adaptor use within the facility is prohibited.

14. Anesthesia Safety:

Refer to Anesthesia Policy and Procedures' for other anesthetic safety standards.

15. Visitor Safety:

Visitor safety in the facility is based on the safety practices and standards developed by the facility Safety Committee. All visitors entering the facility shall be instructed by the appropriate supervisor as to proper attire and safety hazards. Visitors who are injured in the facility are referred to the Administrator for evaluation and treatment. Visitor injuries are summarized on an unusual occurrence form by the supervisor and forwarded to administration. The facility Safety Committee reviews visitor injury reports, identifies hazardous conditions and recommends preventive measures.

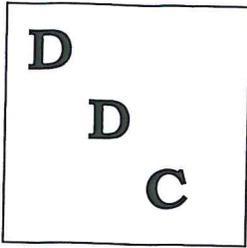

**P A T I E N T   S A F E T Y  
P O L I C Y & P R O C E D U R E**

**Policy:**

The policy set forth by the Digestive Disease Center (DDC) is to ensure patient safety, before, during, and after a patient's procedure.

**Procedure:**

- A. Each patient will have a history & physical examination documented in their chart within 7 days prior to their procedure.
- B. Each patient will complete the Medical History Questionnaire prior to his or her procedure.
- C. All patients will receive a copy of the Patient Rights and Responsibilities at the time of scheduling of procedure.
- D. All medical staff is CPR certified, and aware of the location and use of all emergency equipment. All DDC Physicians are ACLS certified.
- E. At least one ACLS certified Registered Nurse is staffed when patients are present in the facility, along with ACLS trained Anesthesiologist is present with sedated patients.
- F. Once a patient has been admitted to the facility, non-sedated patients are visualized frequently to ensure needs are met. Sedated patients are monitored closely checking vital signs with observation to assure patients are free from complications related to the procedure and /or medical problems
- G. Each patient will meet the required discharge criteria set forth by DDC, and ANOR anesthesia standard, prior to being discharged. The physician will have the final decision, to discharge the patient, which will be documented, signed and become part of the patient's record.
- H. A written physician discharge order will be issued to each patient post procedure, providing them with post procedure instructions, precautions, and contact information in case of an emergency. A copy of this document will become part of the patient's record.
- I. The facility staff will make a follow up appointment for the patient as ordered by the physician.
- J. Each patient will be contacted within 24 hours after having their procedure to ensure that they are not experiencing any complications related to the procedure.
- K. A patient safety committee will be formed to include one physician from each site, the nurse manager from each site, the pharmacy consultant, and the medical director. The committee will meet quarterly to discuss patient safety.

Digestive Disease Center

**P A T I E N T   S A F E T Y   C O M P L I A N C E  
P O L I C Y   &   P R O C E D U R E**

**Policy:**

The policy set forth by the Digestive Disease Center (DDC) is to ensure that staff, physicians, vendors, and contracted employees are compliant with patient safety including checklists, policies & procedures established by the DDC.

**Procedure:**

- A. All staff, physicians, vendors & contracted services are required to read and comply with the safety checklists, policies & procedures prior to working in the center.
- B. Policies & checklists will be provided to vendors & contracted services to provide to their employees.
- C. Staff educated upon hire & annually thereafter on the process for reporting violations to the Director of Nursing Services.
- D. Audits performed monthly utilizing the Infection Control Surveillance Tool to ensure compliancy & sanitation.
- E. The safety committee will meet monthly to discuss patient safety issues, review audits & monitor & document effectiveness of the patient identification policy.
- F. Safety Policies & Procedures, checklists will be reviewed at least annually & more often if needed.

# Centennial Hills Hospital MEDICAL CENTER

*A Member of The Valley Health System™*

## Risk Management/ Patient Safety Plan

Nevada Acute Care Division

## I. Overview

**Centennial Hills Hospital** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. **Centennial Hills Hospital** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **Centennial Hills Hospital** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **Centennial Hills Hospital** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan ("Plan") provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at **Centennial Hills Hospital**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the "Just Culture" concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **Centennial Hills Hospital** policies. **Centennial Hills Hospital** employees, contractors, vendors, and members of each facility's medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.

- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.
- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**Centennial Hills Hospital's** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**Centennial Hills Hospital** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

## III. ROLES AND RESPONSIBILITIES

## A. Risk Management/Patient Safety Officer

**Centennial Hills Hospital** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon NRS 439.870 includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to NRS 439.835.
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

## B. Infection Control Officer

The infection control officer designated for each facility, based on NRS 439.873, responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to NRS 439.865 and ensure compliance with the program.

Based on NRS 439.865, the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World

- Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**Centennial Hills Hospital** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **Centennial Hills Hospital** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to NRS 439.875, a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

#### Membership:

In accordance with NRS 439.875, the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on NAC 439.920, a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF)) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**Centennial Hills Hospital's** PSC is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility's claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the "Best Practice."
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon NRS 439.875 and NRS 439.877, include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to NRS 439.877(4)(b).
- Receive reports from the Patient Safety Officer pursuant to NRS 439.870.
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.

- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
    - Adopt patient safety checklists and patient safety policies as required by NRS 439.877, review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## II. Patient Safety Advisories

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**Centennial Hills Hospital** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## C. TERM Program

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title "Risk Manager," this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. MIDAS**

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

#### **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

### **G. Root Cause Analysis (RCA)**

Pursuant to NRS 439.837, a medical facility shall, upon reporting a sentinel event pursuant to NRS 439.835, conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

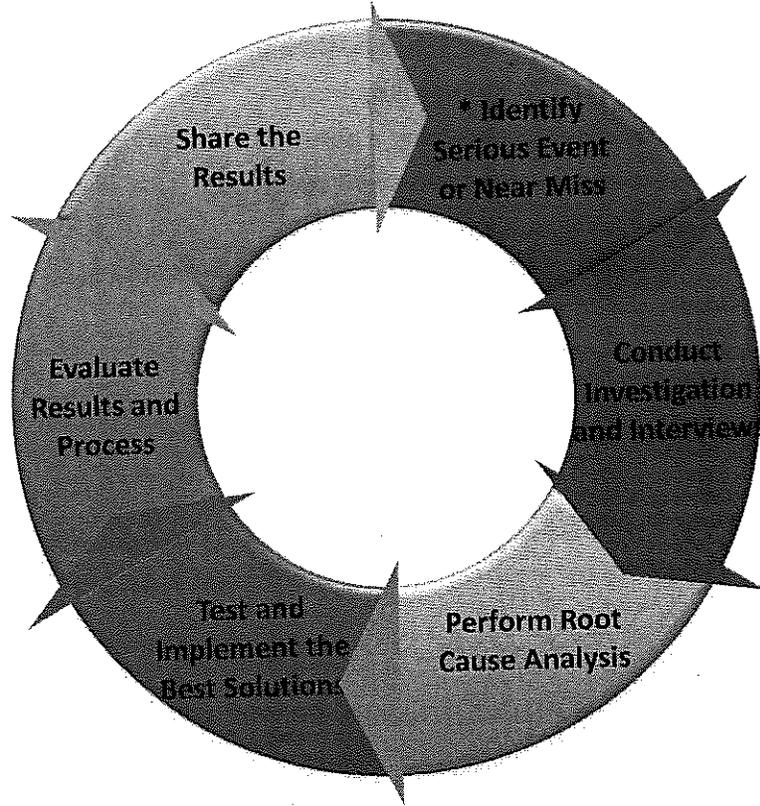

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

#### **RCA Responsibilities**

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By NRS 439.865, the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a "workforce" of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System ("Member PSES"). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Increase MIDAS manager completion within 10 days compliance from percentage of 75% to 90%.
- Decrease fall rate from 2.63 to  $\leq 2.24$ .
- Decrease harm level E-I events from 0.423 to  $\leq 0.357$ .
- Increase Medication Reconciliation compliance from 40% to 85%
- Complete formal risk assessments of the following areas:
  - Emergency Department
  - Culture of Safety
  - Fall Prevention

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to

these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## **VI. Evaluation/Review:**

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## **VII. Confidentiality**

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## **VIII. Approval of Patient Safety Plan**

According to NRS 439.865, a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan. The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to NRS 439.843, on or before March 1 of each year, a copy of the most current patient safety plan established to NRS 439.865 must be submitted to the Division of Public and Behavioral Health.

## **Appendix A: Terms and Definitions**

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event (NRS 439.830)**

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by 2002 Special Session, 13; A 2005, 599; 2013, 217)

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection: (NRS 439.802)**

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;

- Central line-related bloodstream infections;
  - Urinary tract infections; and
  - Other categories of infections as may be established by the State Board of Health by regulation pursuant to NRS 439.890.
- (Added to NRS by 2005, 599; A 2009, 553)

**Medical facility (NRS 439.805)**

“Medical facility” means:

- A hospital, as that term is defined in NRS 449.012 and 449.0151;
- An obstetric center, as that term is defined in NRS 449.0151 and 449.0155;
- A surgical center for ambulatory patients, as that term is defined in NRS 449.0151 and 449.019; and
- An independent center for emergency medical care, as that term is defined in NRS 449.013 and 449.0151.

(Added to NRS by 2002 Special Session, 13)

**Near miss**: An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting**: Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk**: Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event**: Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI)**: A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at

[http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

**Appendix B: Checklist Example: Injuries from Falls and Immobility**

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

- Keep stretcher in low position with side rails raised when patient is unattended.
- Assist patient when getting on or off stretcher.
- Never leave post-sedated patient unattended in restroom.
- Always lock stationary stretchers and wheelchairs to prevent falls.
- Offer assistance to patient dressing or undressing to prevent falls.
- Any spillage of water or liquid substance will be cleaned up immediately to avoid falls.
- Patients should not walk around without shoes.
- Patients may not drive themselves home after being sedated.
- Be aware of patients, family and your working environment and watch for safety hazards.

# **PATIENT SAFETY PLAN**

## **Carson Tahoe Continuing Care Hospital**

### **2018**

*Effective:* February 2005 (combines Organization Safety and Patient Safety Plans)  
*Revised:* October, 2005  
*Revised:* December, 2006  
*Revised:* December, 2007  
*Revised:* January, 2009  
*Revised:* January, 2010  
*Revised:* January, 2011  
*Revised:* January, 2012  
*Revised:* February, 2014  
*Revised:* November 2014  
*Revised:* January 2016  
*Revised:* January 2017  
*Revised:* January 2018

## **INTRODUCTION**

The Carson Tahoe Continuing Care Hospital is a part of Carson Tahoe Health System, a Nevada not-for-profit hospital. We are committed to patient safety, quality patient care and quality patient outcomes consistent with our Mission and Core Values.

## **MISSION**

To enhance the health and well being of the communities we serve.

## **CORE VALUES**

Putting patients first and treating everyone with dignity and respect.

## **PURPOSE**

The Patient Safety Plan provides a planned, systematic, coordinated approach for continually improving the health and safety of patients who are treated at the medical facility, by reducing patient harm and maintaining a safety culture.

## **PLAN**

- Continue Patient Safety Committee:
  - Mandatory Membership includes:
    - Patient Safety Officer
    - Infection Control Officer
    - At least 3 providers of health care team who treat patient at the medical facility, including one medical, nursing and pharmaceutical staff
      - In 2016 added Lead Pharmacist, CNA, Nurse Manager, Respiratory Therapist, Physician, & Physical Therapist
    - One member of the executive or governing body
- Committee required to meet on a monthly basis (NRS 439.875).
- Inclusion of
  - Infection Control Program to prevent and control infections within the medical facility (this is a document separate from the Patient Safety Plan that meets the requirements for NRS 439.865)
  - Patient Safety checklists and patient safety policies as required by NRS. 439.877
    - 2018 Checklist Inventory *Attachment A*
    - Annual review and revision of checklists and policies
- Annual Report to Legislative Committee on Health Care
- Integration of all patient safety activities both ongoing and developing
- Ongoing orientation, education and training to emphasize specific job related aspects of patient safety to maintain and improve staff awareness
- Encourage internal reporting of medical / healthcare incidents and events, effectively respond to actual occurrences, manage occurrences and events with a non-punitive approach, and focus on processes and systems to minimize individual blame and retribution
- Periodic survey of the staff regarding willingness to report, actions taken and outcomes of occurrences and events
- Internal reporting of findings, actions taken and resolution; organizational learning and communication of occurrence and event information

- Consideration of patient safety priorities when designing and redesigning of relevant processes, functions and services
- Involvement and education of patients, their families about their role in facilitating safe delivery of care, identifying potential risks and suggesting improvement to patient safety

## **SCOPE OF ACTIVITIES**

The Carson Tahoe Continuing Care Hospital (CTCCH) Patient Safety Committee integrates all components of safety into the organizationwide safety program in collaboration with the Carson Tahoe Health System Quality, Environmental Safety, Infection Control, Patient Care areas, Risk Management, Compliance and Ethics.

### **Patient Safety Committee activities include:**

- Sentinel Events pursuant to NRS Chapter 439
  - Review alleged events reported to State of Nevada, RCA investigations and resulting action plans.
  - Recommendations to the executive or governing body for reducing the number and severity of sentinel events and infections that occur
  - Provide emotional support for staff involved in incidents or events, through Human Resources, leadership, department supervisors and other resources as appropriate
  - Report at least quarterly to the executive or governing body
    - The number of sentinel events occurring in the previous quarter
    - The number/severity of infections occurring in the previous quarter
- Review and evaluate Quality Measures
  - To improve the patient safety and outcomes
  - To reduce and/or prevent infections
- Monitor patient/ environment safety issues identified throughout the organization
- Promote internal and external knowledge and experience to prevent patient harm, adverse events and occurrences, to maintain and improve patient safety
- Review aggregated or trended data including: No harm events, Mild or moderate adverse outcomes, Near miss, Medication events, Adverse drug reactions, Transfusion reactions, Hazardous conditions, Present on admission / Hospital acquired conditions, Online incident reports,
- Utilize a proactive approach to recognize and acknowledge medical/healthcare events and risks to patient safety, initiate actions and recommendations to reduce or prevent these events and risks
- Prioritize and recommend Patient Safety activities, as appropriate.
  - Utilizing trended data from Environmental safety, Security, Employee health, Emergency management, Lab or radiation safety, Utilities management, Bio Med, Fire drills or inspections.

## **PATIENT SAFETY OFFICER**

The Patient Safety Officer is designated by the medical facility and has administrative responsibilities as prescribed by NRS chapter 439 (specifically outlined in NRS 439.815 through NRS.439.875) and by other regulatory agencies and accrediting bodies. Duties and responsibilities include but are not limited to:

- Serving as Chair of the Patient Safety Committee
- Supervising sentinel event reporting to the State
- Conducting mandatory investigations; developing and implementing action plans

- Ensuring notification as appropriate within the medical facility

**STRUCTURE**

The CTCCH Patient Safety Reporting Structure Model visually diagrams the reporting structure.

**CTCCH Patient Safety Reporting Structure**

**STRUCTURE**

*The Hospital Board of Directors has the ultimate responsibility for Patient Safety.*

*The CTCCH Director of Nursing oversees the Hospital Safety Program and, as appropriate, reports Patient Safety and Quality activities and issues or concerns directly to Administration and the Hospital Board of Directors.*

*The CTCCH Director of Nursing is the hospital Patient Safety Officer. The Patient Safety Officer has the administrative responsibilities as prescribed by Nevada State law NRS chapter 439 (specifically outlined in NRS 439.815 through NRS 439.875, other regulatory agencies and accrediting bodies.) The Patient Safety Officer chairs the Patient Safety Committee which reports at least quarterly to the Hospital Board of Directors, and reports to the Medical Staff via Quality Management Committee and Medical Executive Committee as needed.*

# 2018 Patient Safety Plan

"The key to reliable, safe care does not lie in exhorting individuals to be more careful and try harder. It lies in learning about causes of error and designing systems to prevent human error whenever possible" (IHI, 2008, p. 19).

## Mission Statement

### Seven Hills Hospital

"It is the Mission of Seven Hills Hospital to improve the quality of life for our patients, their families and communities by providing consistently excellent and compassionate behavioral health and substance abuse treatment services."

### Patient Safety

Through a robust Patient Safety Program, the Patient Safety Committee fulfills its commitment to aiming for the elimination of medical errors through the use of best practice and setting the standards of excellence of quality mental health care.

## Guiding Principles

The Patient Safety Plan is a conceptualized model of care founded on the belief that a just culture holds the key to a patient safety focused organization. Seven Hills Hospital supports a just culture and focusses on analyzing structural, process, and outcome measures and using an evidence-based approach to support interventions.

Data and safety monitoring is a system for auditing and analyzing outcome data from continuous research. The Patient Safety Committee provides guidance for clinical staff while confirming compliance to organizational goals of providing a safe and therapeutic environment that enhances recovery. Patterson (2011) reported on an innovative quality improvement success describing an interview with an Infection Prevention Coordinator, who credited their success in overcoming communication barriers by stating that "if workers own the solutions and share them with their colleagues, the solutions are adopted a lot better than if someone from Infection Control comes in and tells them they have to do things a certain way" (p.22). Similarly, the Patient Safety Plan operates on the premise that front-line staff are untapped resources with the ability to influence peers towards best practice.

## Goals & Objectives for Patient Safety

Prioritize opportunities for improvement that have the greatest potential impact on safety, patient care, treatment, and services provided.

Goal # 1: Reduce the likelihood of falls by 5% in 2018.

- o Objectives:

1. Increase accessibility to wheelchairs with anti-tippers and rollers for the Geriatric Unit. This will provide patients with a safer alternative for mobility.
2. Eliminate the use of unsafe and inefficient assistive devices (e.g. rollator walkers) on the Generations Unit.

3. Assessment of Geriatric Unit staffing matrix identify opportunities to provide additional support for current staff.
4. Review and implementation of refined process for initiating Special Precautions upon Intake/Admission.
5. Collaborative initiative with nursing leadership to utilize the Preventing Falls Targeted Solutions Tool, endorsed by The Joint Commission, to achieve significant improvement in all falls and falls with injuries.

Goal # 2: Reduce Medication variances by 5% in 2018

- o Objectives:
  1. Identify and assess medication variances on a monthly basis to maximize patient safety and identify causes of and trends in preventable events that may cause or lead to inappropriate medication use.
  2. Develop an effective relationship with Pharmacy and Nursing to enhance major methods of detecting medication errors.
  3. Promote major methods for detecting medication errors and associated adverse drug-related events such as chart audits, computerized monitoring, direct observation, voluntary reporting, patient monitoring and incident reporting.
  4. A newly appointed Assistant Director of Nursing has been providing direct oversight in appropriate follow-ups and continuing education to operators and witnesses.

Goal # 3: Promote the Culture of Safety

- o Objectives:
  1. Promote compliance with the National Patient Safety Goals.
  2. Improve the dissemination of safety related efforts across the organization readily.
  3. Enhance the Patient Safety Committee transitioning to a more active committee with monthly meetings.

## Responsibility

All staff employed or contracted through Seven Hills Hospital are responsible for knowledge of policies and procedures. This plan supports the staff compliance towards established policies and procedures. Staff supervisors work alongside front-line staff to identify deviations from policy, procedures, or standards and promptly resolve errors. In addition, opportunities for enhancing or policies or procedures are identified and routed through the Patient Safety Committee or the Patient Safety Officer.

In a culture of safety, each staff member is a provider of service—the consumer is both the patient and organization. Staff provide services with safety in mind. The organization is provided with an environment rich in safe practices and ultimately benefits all patients and staff receiving best practices.

Sullivan et al. (2011) suggests patient safety to begin with prevention of adverse events. Preventable adverse events are often the result of missing systems, checks and balances, or failure to comply with existing systems designed to catch and prevent these adverse events as demonstrated in Figure 1. Staff work together to promote safety awareness across the organization and influence policy and procedures through supporting resiliency and risk reduction efforts.

## Hazards

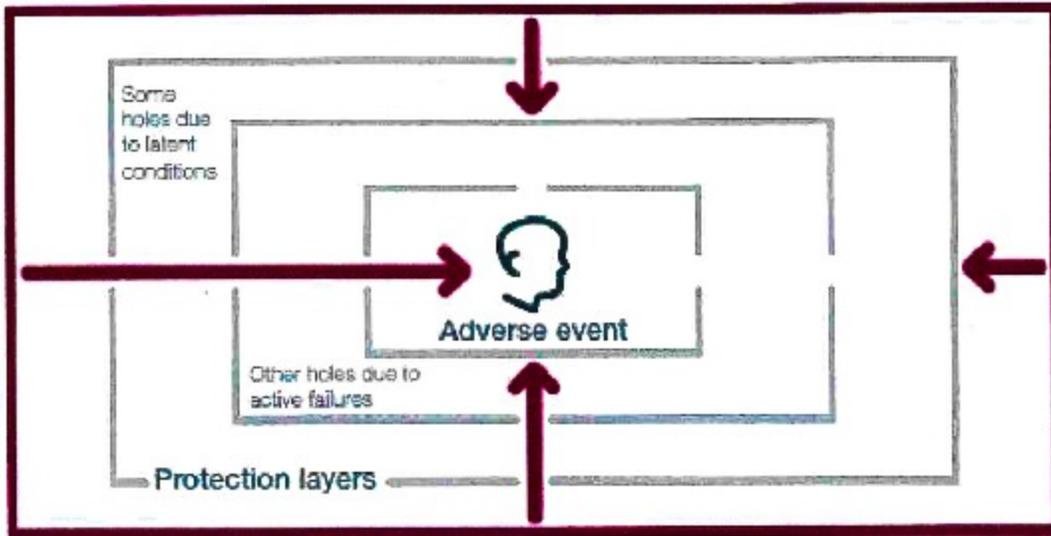

Figure 1. Active failures and latent conditions cause adverse events. Based on the "swiss cheese" model by J. Reason.

## Patient Safety Committee

The Patient Safety Committee consists of a Physician, a member of the Executive Staff, the Director of Performance Improvement and Risk Management/Patient Safety Officer, Infection Control Officer, Pharmacist, and front-line staff. Data is received, analyzed, processed and problems identified, and prioritized depending on the urgency of needed interventions. Problems deemed outside the scope of the Patient Safety committee will be sent to other committees for collaboration or referrals.

The Infection Control Officer reports to the Patient Safety Committee and works alongside to reduce or eliminate threats to patient care involving organisms. See Infection Control Plan.

## QUALITY AND PATIENT SAFETY PLAN

VERSION: 2

This plan was created and revised by the Stonecreek Surgery Center Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program**  
**Stonecreek Surgery Center**

## Commitment to Patient Safety

---

[Stonecreek Surgery Center](#) is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, [Stonecreek Surgery Center](#) Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.

- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in [Stonecreek Surgery Center](#) are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, [Stonecreek Surgery Center](#) has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

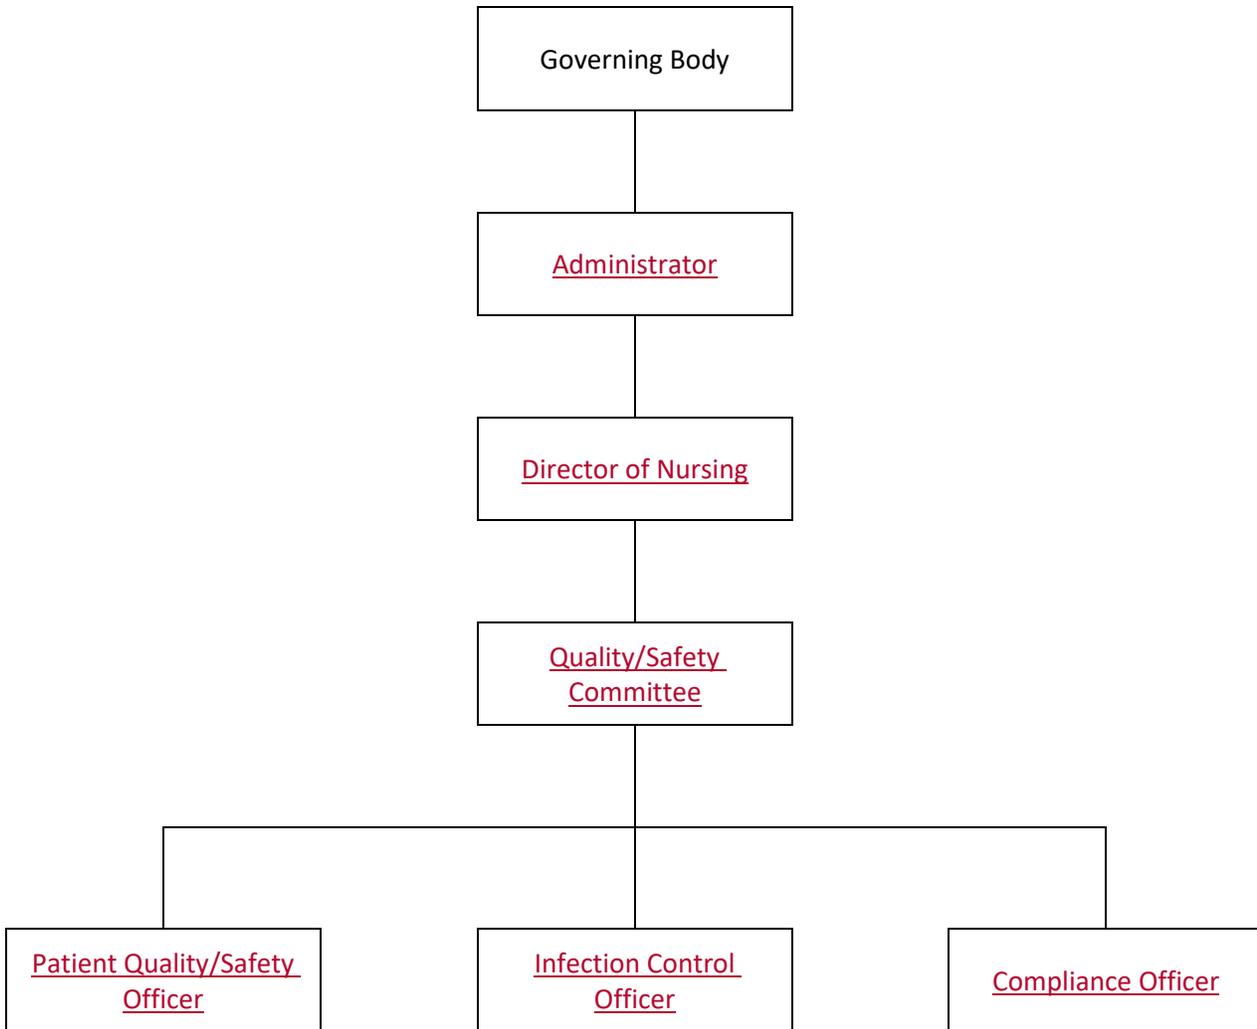

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and

*Patient Safety and Quality Improvement Plan*

executed successfully.

The Patient Safety Committee Organization

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Board of Managers for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

*Patient Safety and Quality Improvement Plan*

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
  - Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar Quarter.
  - Number of severe- infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

*Patient Safety and Quality Improvement Plan*

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                                               | Goals                                                                 | Plan                                                                                                     | Planned Completion Date | Responsible Party      |
|---------------------------------------------------------|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|-------------------------|------------------------|
| Timely reporting of all variances                       | All staff will be able to independently complete variance reports     | Educate all staff to the variance reporting system and forms                                             | 3/1/2018                | Patient Safety Officer |
| Garner greater physician participation                  | Have physicians report all variances reported outside of the facility | Educate physicians to the patient safety plan. Encourage reporting of all variances regardless of cause. | 3/15 /2018              | Patient Safety Officer |
| Increase accountability of the Quality/Safety Committee | Increase the number of quality and safety projects at the facility    | Create sub-Committees within the group to specialize in projects related to their areas.                 | 3/15/2018               | Patient Safety Officer |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

{[Stonecreek Surgery Center](#) will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully

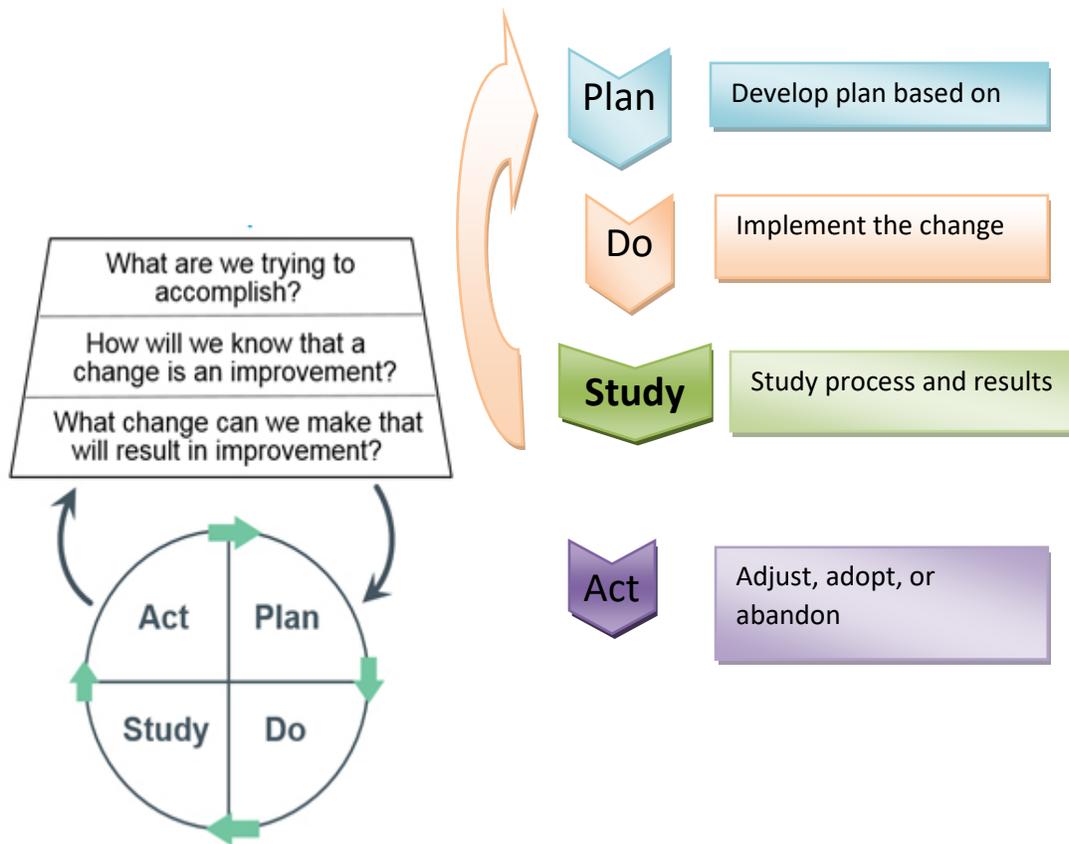

conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases.

**5 Whys** technique will be used in (facility name) to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. [Stonecreek Surgery Center](#) is using a [paper system](#) for tracking the sentinel events, healthcare infection data, [and](#) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction

with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization- (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E**.)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F**.)

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.” [http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event (NRS 439.830)**

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical

treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

## Appendix D-1: PDSA Worksheet

### PDSA Worksheet

|                                                                                 |  |        |  |
|---------------------------------------------------------------------------------|--|--------|--|
| Topic:                                                                          |  |        |  |
| Person Completing Worksheet:                                                    |  | Date:  |  |
| Telephone/ Email:                                                               |  | Cycle: |  |
| Patient Safety Committee Members                                                |  |        |  |
| CEOs/CFOs                                                                       |  |        |  |
| Patient Safety Officer                                                          |  |        |  |
| Infection Control Officer                                                       |  |        |  |
| Other Medical Staff                                                             |  |        |  |
| Other team members                                                              |  |        |  |
| <b>Aim:</b> (Describe the overall SMART goal that your team wishes to achieve.) |  |        |  |
|                                                                                 |  |        |  |
| <b>Plan:</b>                                                                    |  |        |  |
| 1. List the tasks needed to set up this test of change.                         |  |        |  |
|                                                                                 |  |        |  |
| 2. Predict what will happen when the test is carried out.                       |  |        |  |
|                                                                                 |  |        |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

|                                              |                                                                                    |
|----------------------------------------------|------------------------------------------------------------------------------------|
| Did you meet your measurement goal? Explain. | <b>Summarize what was learned: success, failure, unintended consequences, etc.</b> |
|                                              |                                                                                    |

**Act:** (Describe what you concluded from this cycle.)

|                                                                            |                                                                                                           |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Based on what was learned, please indicate what action will be considered. | <b>Describe what modifications to the plan will be made for the next cycle based on what you learned.</b> |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle       |                                                                                                           |
| <input type="checkbox"/> Adopt: expanding changes throughout organization  |                                                                                                           |
| <input type="checkbox"/> Abandon: change approach and repeat PDSA cycle    |                                                                                                           |

## Appendix D-2: PDSA Monthly / Quarterly Progress Report

|                                                                                         |                    |                      |  |

| DEPARTMENT: AMBULATORY CARE<br>SERVICES | PAGE 1 OF 10                                       |
|                                         | EFFECTIVE:                                         |
|                                         | REVISED: JANUARY 3, 2016                           |

### I. PURPOSE:

Attention to maintaining and improving patient safety and well being is inherent in Ambulatory Surgical Center of Southern Nevada's (ASC of Southern Nevada) commitment to the relief of suffering and improvement in the quality of life to those in the community it serves. In committing ourselves to safeguarding individuals, ASC of Southern Nevada must fully understand the processes and systems that are utilized by the organization to deliver patient care. From this deeper understanding, ASC of Southern Nevada will be able to analyze, evaluate, develop and implement changes that will continuously improve the way we deliver care to patients.

The results of these efforts will:

- Demonstrate ASC of Southern Nevada's commitment to the community it serves.
- Unite ASC of Southern Nevada and individuals who work and practice at ASC to respond appropriately to adverse events, proactively identify risk reduction strategies and participate in process and system redesigns to reduce risk of patient harm.
- Allow ASC to implement processes technology or systems that will reduce the risk of errors reaching patients and causing harm.
- Promote greater medical staff and employee involvement in improving clinical care which will result in improved employee and medical staff satisfaction.
- Translate into a more efficient and cost-effective model of care at ASC.

Ambulatory Surgical Center of Southern Nevada's leadership and employees must actively embrace and support the patient safety plan in order to achieve the results outlined above.

### II. SCOPE:

The Ambulatory Surgical Center of Southern Nevada Patient Safety Plan is an all-inclusive, integrated method to planning, designing, measuring, assessing and improving patient safety quality care and outcomes. Assessing day to day operations, employee input and customer needs are integrated into the development of the program. This program will incorporate all patient related activities and use interdisciplinary teams whenever possible.

Important aspects of patient care and service that involves the monitoring of activities and making improvements include:

- Complications of anesthesia
- Post procedure bleeding
- Post procedure infection
- Medication errors/Look alike sound alike medications

|                                         | REVISED: JANUARY 3, 2016                           |

- Allergic reaction
- Medical Equipment related adverse event
- Technical difficulty with procedure
- Proper indication
- Proper consent
- Current H & P
- Risk Stratification
- Anticoagulation Problems
- Patient Satisfaction
- Pathology Specimen errors
- Time outs
- Patient Education/discharge instructions
- Day of Procedure Cancellations
- Identity Theft/Lack of ID
- Reprocessing errors
- Non-compliant patients with pre-procedure instructions
- Communication with referring providers
- Sentinel Events
- Medical Records Documentation
- Scheduling errors
- Infection Control Survey Rounds
- Help patients to be involved in their care.
- Medication reconciliation
- Improve staff communication
- Hand hygiene
- Prevent patient from falls
- Responsible adult to accompany patient home
- Patient Identification
- Single use of injection devices
- Fire Prevention and Safety in the Procedure Rooms

The Ambulatory Surgical Center of Southern Nevada recognizes that risk management and patient safety are priorities that include establishing, maintaining and improving the safety of patients and the facility.

### III. STRUCTURE:

#### **Governing Body**

The Governing Body of the Ambulatory Surgical Center of Southern Nevada (ASC of Southern Nevada) is comprised of members including: ASC principal owners, Administrator and Medical Director. The Governing Body assumes full legal responsibility for determining, implementing and monitoring policies so as to provide quality health care in a safe environment and to protect the health and safety of patients and employees. When services are provided through a contract with an outside resource, the Ambulatory Surgical Center of Southern Nevada (ASC of Southern Nevada) will, to the best of its ability, assure that these services are provided in a safe and effective manner. The Governing Body will carry out the following duties and responsibilities either directly or by delegation to committee(s).

The Governing Body oversees this responsibility by:

- Ensuring each patient admitted to the facility is under the care of a physician.
- Ensuring each patient admitted to the facility has had a pre-surgical exam within seven days prior to the date of the procedure.
- Ensuring that a physician is on the premises and is immediately available at all times while patients are in procedure rooms or in the recovery area.
- Maintaining an adequate number of qualified and competent staff to meet the needs of the patients.
- Oversight and accountability for developing a program of quality improvement and risk management appropriate to the specific needs of ASC of Southern Nevada that follow all federal, state and third party regulatory requirements.
- Ensuring that the facility policies and procedures are administered in such a manner that provides health care in a safe environment.

#### **Medical Director**

The Medical Director who also serves as the Patient Safety Officer represents the ASC and the medical staff in decision-making processes through direct participation and/or formal referral recommendations. The Medical Director is responsible for determinations as to needed resources when providing services relating to patient care.

The duties of the Medical Director include:

- Oversee and actively participate in the Quality Assurance/Risk Management activities.
- Oversee and actively participate in the Patient Safety Committee
- Participate in the development and have final approval on all service specific policies and procedures associated with patient care.
- Responsible for providing continuing educational in-services for the facility and medical staff in regards to patient care when necessary.
- Active role in evaluating and identifying staffing needs.

|                                         | EFFECTIVE:                                         |
|                                         | REVISED: JANUARY 3, 2016                           |

### **Risk Management/Patient Safety Officer**

The Patient Safety Officer will have primary oversight of the facility-wide patient safety program. The Patient Safety Officer will direct others within the facility towards process improvements that will support the reduction of medical/health care errors and other factors that contribute to unexpected adverse patient outcomes.

The duties of the Patient Safety Officer include:

- Notify the liability insurance carrier when adverse or reportable events occur.
- Coordinates the activities of the Patient Safety Committee.
- Investigate patient safety issues, along with the patient safety committee, within the facility.
- Recommend and facilitate change within the organization to improve patient safety based on identified risks.
- Serve as a resource on issues of patient safety.
- Support and encourage error reporting throughout the facility through a non-punitive error reporting system.
- Take such action as he/she determines necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the Governing Body on the occurrence of known medical and health care errors and identified near misses and dangerous conditions within the facility.

### **Patient Safety Committee**

Patient Safety Committee is a part of the Quality Assessment Performance Improvement Committee and is comprised of the Medical Director, Administrator/ Patient Safety Officer,, Director of Nursing and the charge. The Patient Safety Committee/Quality Assessment Performance Improvement Committee is responsible to the Governing Body and Administration for the overall operation of the Risk Management and Patient Safety Plan. The Patient Safety Committee meets on a quarterly basis or as needed. Patient Safety Goals will be developed on a yearly basis.

The duties of the Patient Safety Committee include:

- Reviewing and evaluating the quality of patient safety measures.
- Review all adverse outcomes.
- Review incidents
- Making recommendations to eliminate future serious events or incidents.
- Reporting to the Governing Body on a quarterly basis to include the occurrence of medical/health care errors and actions taken to improve patient safety.

- Make recommendations to the Governing Body to reduce the number and severity of sentinel events that occur at the facility.
- Assess the quality indicators that affect patient safety and patient health outcomes.
- Coordinate the collection of data from the quality indicators where needed, perform QI studies and improve our patient care processes.

#### IV. Definitions

*Incident* - any occurrence that is not consistent with the routine care or operation of the organization. Incidents may involve patients, visitors, employees and medical staff members (i.e. patient fall, employee injury, etc.).

*Adverse Incident/Sentinel event* – Is defined as an unexpected occurrence during a healthcare visit involving, death or serious physical or psychological injury or the risk thereof, including, loss of limb or function, not related to the natural course of the patient's illness or underlying condition (AAAHC/Nevada Revised Statutes).

*Root Cause Analysis* – Is a process for identifying the basic or causal factors that underlies variation in performance, including the occurrence or possible occurrence of a sentinel event. A root cause analysis focuses primarily on systems and processes, not on individual performance. It progresses from special causes in clinical processes to common causes in organizational processes and systems and identifies potential improvements in processes or systems that would tend to decrease the likelihood of such events in the future or determines, after analysis, that no such improvement opportunities exist. [Joint Commission on Accreditation of Healthcare Organizations]

*Action Plan* – The product of the root cause analysis is an action plan that identifies the strategies that the organization intends to implement in order to reduce the risk of similar events occurring in the future. The plan should address responsibility for implementation, oversight, pilot testing as appropriate, time lines, and strategies for measuring the effectiveness of the actions. [Joint Commission on Accreditation of Healthcare Organizations]

*Near Miss* – any process variation that did not affect an outcome but for which a recurrence carries a significant chance of a serious adverse outcome. [Joint Commission on Accreditation of Healthcare Organizations] It is an event or situation that could have resulted in an accident, injury or illness, but did not, either by chance or by timely intervention. Near misses are opportunities. Examples of near miss that would require the use of an incident form include but are not limited to:

- Equipment Reprocessing errors not used on patients.

|                                         | REVISED: JANUARY 3, 2016                           |

## V. Reporting Mechanisms

To effectively reduce adverse patient outcomes, there must be an environment that supports employees by identifying and learning from errors and system failures. Ambulatory Surgical Center of Southern Nevada (ASC) encourages all employees to report any errors or work methods that may lead to potential adverse patient outcomes. The ASC supports a non-punitive, open communication culture.

### A. Non-Punitive Reporting

The facility recognizes that if we are to create a safe environment for our patients and visitors, we must create an environment that is safe for caregivers to report and learn from events and near misses. The facility requires that employees report errors and encourages them to do so.

1. The goal is to identify and track errors in order to continuously improve our systems and to provide the necessary education to prevent reoccurrence.
2. All events, especially those of a clinical nature need to be reported immediately. It is expected that complete disclosure shall occur. Reporting will be in confidence and shall not suffer harassment or retaliation.
3. An employee who knowingly fails to report a clinical error will be subject to disciplinary action.

### B. Adverse Event/Incident/Complication/Infection Tracking System

1. All information regarding Complications and Adverse events is collected and documented in the Incident Tracking Report and the Adverse Reactions and Complications Report.
2. The data reviewed that is not consistent with the normal operations of the facility or the anticipated disease/treatment process of the patient is communicated to the Medical Director and or Administrator.
3. The facility's processes will be reviewed to determine methods to prevent reoccurrence, improve quality care and ensure patient and visitor safety.

### C. Sentinel Events

When a sentinel event occurs, appropriate individuals are notified and immediate attention investigation is undertaken. The sentinel event policy describes the reporting structure and responsibilities of the designated individuals. A root cause analysis and action plan may be implemented if necessary.

### *D. Patient Complaint/Grievance*

Complaints can be reported to the Director of Nursing, Administrator or Medical Director. Employees should report all complaints immediately to their supervisor. Patients should notify the Director of Nursing. All complaints will be investigated and a response or corrective action will be made.

## **VI. Communicating With Patients About Safety**

1. Patients Rights and Responsibilities, Advance Directive, Complaint and Grievance Process and Physician Ownership Disclosure shall be explained to the patient at the time the procedure is scheduled via the written copy provided to them.
2. Patients are also provided instructions prior to their procedure.
3. Patient education is provided on safe use of medication regarding their procedure.
4. The day of procedure, the nurse reviews the procedure with the patient and what is involved in the pre and post op care.
5. The nurse verifies the allergies with the patient and medications' confirming that the patient has withheld the anticoagulants, anti-inflammatory and aspirin as ordered by the physician.
6. Verify procedure with patient.
7. Encourage patient to ask questions.
8. If there is a language barrier provide interpretation.
9. Use side rails once patient is in gurney to prevent falls.
10. Make sure the patient uses the call light to ambulate off gurney.
11. Involve patients in Time Outs in procedure room before start of case.
12. Review post-op instructions with patient or family member and verify that the patient understands his/her instructions.
13. Confirm that the patient has an adult to drive them home and does not operate vehicle post procedure if sedation was administered.
14. Confirm that follow-up appointment is communicated with patient if needed.
15. Provide educational pamphlets on diagnosed conditions for patient education.

## **VII. Staff Education**

1. Initial and annual training is provided to all employees on safety in the work environment.
2. Risk Management, Infection Control, Hand Hygiene, Blood Borne Pathogens, Personal Protective Equipment and Safe Injection Practices Training is provided to staff.
3. Educating and following the Time Out Policy to assure that we have the right patient and

and the right procedure.

4. Importance of verifying color of arm band for the correct patient, correct procedure.
5. Staff meetings are held to communicate quality improvement and patient safety issues.
6. Ongoing education to staff is provided regarding patient safety issues.
7. Staff education on all disinfectants used throughout the facility.
8. Patient safety checkpoints are added to the pre, intra and post documentation.

### VIII. Safety Improvement Activities/Methodologies

*Medication/Pharmacy Surveillance* – All matters pertaining to the use of drugs in the Center will be monitored on a monthly basis by a contracted pharmacist. See service Contracts for facility.

*High Alert Medications* – All employees or providers that handle patient medication will follow the procedure for the safe storage and handling of high alert medications. See High Alert Medication Policy.

*Infection Surveillance* – Infection surveillance will be completed by the Director of Nursing, or his/her designee, on a monthly basis or as needed and the findings reviewed with the Patient

Safety Committee and staff. Identifying processes that can cause potential risk to patient and visitor safety will be addressed. Recommendations will be communicated to staff members on any new measures to be implemented to ensure patient and visitor safety.

*Facility Safety Surveillance* – Facility safety surveillance will be done on a monthly basis by a designated employee or as needed to ensure there are no hazardous conditions that would be a safety concern for patients, visitors or employees.

*Follow-up Phone Calls to Patients* – All patients are called post procedure to document any Complications they may be having or questions they may have.

*Patient Satisfaction Survey* – Patient Satisfaction surveys are completed on a random number of patients on a monthly basis. The results are communicated to the employees Physicians and the Administrator which function collaboratively to achieve positive patient outcomes when possible.

*Monthly Physician Infection Control Reports* – Physicians communicate to the Director of

Nursing any patient that may have developed an infection that was not identified on the Follow-up phone call made by the nurse.

*High-Level Disinfectant Solution Checks* – Before each endoscope is placed in the automated endoscope reprocessor, the minimum effective concentration is checked to ensure that the active ingredient in the solution still passes the manufacturer’s guidelines for reuse before the endoscope is placed in the machine. This is done for each endoscope with all data documented into log books.

*Cleaning and Disinfection of Patient Care Equipment* – All reusable equipment is classified and processed according to the CDC’s guidelines. Employees clean all reusable equipment to ensure the health and safety of our patients.

*Safe Injection Practices* – All patient care providers follow safe injection practices to prevent patient to patient transmission of bloodborne pathogens. See Safe Injection Practices policy.

*Time Outs* – Performed with the anesthesia provider, physician and GI Tech before the start of each procedure to verify right patient, right procedure and allergies.

*Hospital Transfers* – Any patient transferred to the hospital post procedure will have a peer review process performed to recommend areas of improvement if necessary and quality of care.

*Cecal Intubation Rates* – All physicians are monitored and reported on a monthly basis. Rates are benchmarked against best practices for colonoscopy completion rate. Effective colonoscopists should be able to intubate the cecum in more than 90% of all cases and in more than 95% when the indication is screening and healthy adult.

*Withdrawal Time* – All physicians are monitored and reported on a monthly basis. Rates are benchmarked against best practice which is more than or equal to 6 minutes.

*Physician Peer Review* – All physicians are monitored quarterly. Ten charts are reviewed per physician and anesthesia provider. Results are communicated to the Medical Director.

### IX. Annual Review of Patient Safety Plan

The Patient Safety Committee is responsible for the annual review of the Patient Safety Plan. Included in this review the committee will set goals for the new year and focus on

GASTROENTEROLOGY CONSULTANTS LTD  
RENO ENDOSCOPY CENTER LLC  
SOUTH MEADOWS ENDOSCOPY CENTER LLC  
CARSON ENDOSCOPY CENTER LLC**

**POLICY AND PROCEDURE MANUAL**

**Policy:** Patient Safety Plan  
**Owner:** Center  
**Date last updated:** Revised 4/2016

**Purpose:** Gastroenterology Consultants, Ltd (GIC) and affiliated Endoscopy Centers are committed to ensuring the ongoing safety of our patients. To ensure the ongoing safety and care of our patients we follow specific guidelines and policies which, at a minimum, include:

**I Infection Control (IC):** Refer also to the Infection Control (IC) Policy

**Guidelines followed include:**

- a. American Society for Gastrointestinal Endoscopy (ASGE) Multisociety Guideline on Reprocessing Flexible Gastrointestinal Endoscopes 2011
- b. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standards of Infection Prevention in Reprocessing Flexible Gastrointestinal Endoscopes 2015
- c. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Standard of Infection Prevention in the Gastroenterology Setting 2015
- d. Society of Gastroenterology Nurses and Associates, Inc. (SGNA) Guideline for Use of High Level Disinfectants and Sterilants for Reprocessing Flexible Gastrointestinal Endoscopes 2013
- e. American Society for Gastrointestinal Endoscopy (ASGE) Infection Control during GI Endoscopy 2008
- f. Center for Disease Control (CDC) Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings 2007
- g. CDC Guide to Infection Prevention for Outpatient Settings 2014
- h. Association for Professionals in Infection Control and Epidemiology (APIC) Guide to the Elimination of Clostridium difficile in Healthcare Settings 2013
- i. CDC Safe Injection Practices

**The IC Policy includes at a minimum processes or guidelines for:**

- a. Patient selection and placement within the facility
- b. Infection Control Monitoring and Surveillance, Reporting
- c. Standard and Transmission Precautions, Hand Hygiene, Personal Protective Equipment, Respiratory Hygiene / Cough Etiquette and General Infection Control Practices in Healthcare Facilities as developed by the CDC and APIC
- d. Environmental and Terminal Cleaning
- e. Infection Control Officer

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

*The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.117 - 49.123 and NRS 49.265.*

- f. Equipment Processing: Cleaning, Disinfection, High Level Disinfection and Sterilization

**II □ Patient Selection and Screening:** Refer also to the Criteria for Scheduling Patients at ASC Policy.

1. To ensure patients are appropriate for the planned procedure in the planned setting patients undergo:
  - a. Pre-procedure scheduling evaluation with referral for office visit or consultation as appropriate
  - b. Pre-procedure assessment which includes at a minimum:
    - i. Review of past medical & surgical history
    - ii. Medication reconciliation, review
    - iii. Allergy and reaction, review of
    - iv. Physical assessment; assessment for communicable diseases
    - v. Vital signs

**III □ Patient Identification:** Refer to Patient Identification Policy. Patient identity is verified with at minimum two (2) identifiers at check-in and at multiple points throughout care.

**IV □ Safe Surgery Checklist:** Refer to Safe Surgery Checklist Policy. Patient and procedure are verified immediately prior to procedures.

**V □ Discharge Teaching:** Patients are provided with written discharge instructions which are reviewed with patient and driver, as applicable, prior to discharge. Medications are reconciled prior to discharge if any new medications are ordered. Information specific to diagnosis, as best as known, is given to the patient. Patients are educated about signs and symptoms to report and given a twenty-four (24) hour telephone number to call in event of questions or concerns.

**VI □ Post Procedure Callbacks:** Patients are contacted one (1) to two (2) business days post-procedure for follow up of any concerns and questions regarding discharge instructions.

**VII □ Pathology follow up:** Patients are notified of pathology results and given information and follow up orders as applicable within two (2) weeks.

**VIII □ Pharmaceutical Services:** Refer to Pharmaceutical Services Policy. Safe injection practices are strictly followed. Pharmaceutical services are overseen by a contracting pharmacist on a monthly basis.

**I □ Quality Assurance and Benchmarking:** Refer to the Quality Management Plan. More than one hundred (100) quality assurance checkpoints are monitored on per patient, per case, per day, per week or per month basis as applicable. Benchmarking of multiple facility and nursing care factors are completed on an ongoing basis. In addition, multiple procedure-related factors are tracked and trended in aggregate and specific to individual

Approved Board of Managers REC/SEC/ CEC 10/11/11; Revised 8/9/12, Approved Board of Managers REC/SEC 1-31-16; CEC 1-25-16; Approved Medical Directors 4/2016

|------------------------------------------|----------------------------|
| Section 3<br>Safety Management           | Smoke Ranch Surgery Center |
| <b>Policy Name: PATIENT SAFETY GOALS</b> |                            |
| Page 1 of 3                              |                            |
| Approved:<br><b>JAN 27 2010</b>          | Revised:                   |

The Governing Body of this facility is committed to providing the patients at Smoke Ranch Surgery Center the safest environment within the control of the organization. This facility will incorporate these patient safety goals as a part of the overall Safety Program.

- **Goal 1: Improve the accuracy of patient identification.**
  - Use at least two patient identifiers when providing care, treatment or services, such as medication administration.
  - Eliminate transfusion errors related to patient misidentification.
- **Goal 2: N/A**
- **Goal 3: Improve the safety of using medications.**
  - Label all medications, medication containers and all other solutions on and off the sterile field in perioperative and other procedural settings. Note: Medication containers include syringes, medicine cups and basins.
  - Remove all labeled containers on the sterile field and discard their contents at the conclusion of the procedure.
- **Goal 4, 5, 6: N/A**
- **Goal 7: Reduce the risk of health care-associated infections.**
  - Comply with CDC or WHO hand hygiene guidelines.
  - Implement evidence-based practices for preventing surgical site infections.
- **Goal 8: Accurately and completely reconcile medication across the continuum of care.** (Note: all requirements for Goal 8 are not in effect at this time)
  - Obtain an accurate list of the patient's current medications (including OTC and herbal) and known allergies, prior to surgery.
- **Goal 9, 10, 11: N/A**
- **Goal 12, 13: N/A**
- **Goal 14, 15, 16: N/A**

|                                          |                                |             |
|------------------------------------------|--------------------------------|-------------|
| Section 3<br>Safety Management           | Smoke Ranch Surgery Center     |             |
| Policy Name: <b>PATIENT SAFETY GOALS</b> |                                | Page 1 of 3 |
| Approved:<br><b>JAN 27 2010</b>          | Revised:<br><b>FEB 01 2011</b> |             |

The Governing Body of this facility is committed to providing the patients at Smoke Ranch Surgery Center the safest environment within the control of the organization. This facility will incorporate these patient safety goals as a part of the overall Safety Program.

- Goal 1: **Improve the accuracy of patient identification.**
  - Use at least two patient identifiers when providing care, treatment or services, such as medication administration. Patient identifiers can be the individual's name, date of birth, assigned identification number, telephone number or other person specific identifier.
  - Eliminate transfusion errors related to patient misidentification.
- Goal 2: **N/A**
- Goal 3: **Improve the safety of using medications.**
  - Label all medications, medication containers and all other solutions on and off the sterile field in perioperative and other procedural settings. Note: Medication containers include syringes, medicine cups and basins.
  - Remove all labeled containers on the sterile field and discard their contents at the conclusion of the procedure.
  - See also policies in the Anesthesia/Pharmacy manual and the Nursing manual.
- Goal 4, 5, 6: **N/A**
- Goal 7: **Reduce the risk of health care-associated infections.**
  - Comply with CDC or WHO hand hygiene guidelines.
  - Set goals for improving hand hygiene compliance.
  - Implement evidence-based practices for preventing surgical site infections.
  - Conduct Infection Control risk assessments.
- Goal 8: **Medication Reconciliation.** (Note: all requirements for Goal 8 are not in effect at this time. This goal will be updated when it is in effect.)
- Goal 9, 10, 11: **N/A**
- Goal 12, 13: **N/A**
- Goal 14, 15, 16: **N/A**

|                                          |                            |
|------------------------------------------|----------------------------|
| Section 3<br>Safety Management           | Smoke Ranch Surgery Center |
| Policy Name: <b>PATIENT SAFETY GOALS</b> | Page 2 of 3                |

- **Universal Protocol for Preventing Wrong Site, Wrong Procedure and Wrong Person Surgery**

- Create and use a preoperative verification process, such as a checklist, to confirm that appropriate documents (e.g., medical records, imaging studies) are available.
- Implement a process to mark the surgical site, and involve the patient in the marking process.
- Conduct a TIME OUT immediately before starting the procedure.

The National Quality Forum's (NQF) new report, *Safe Practices for Better Healthcare*, lists best practices that experts agree would significantly improve patient safety. Some of the practices that will be incorporated in Smoke Ranch Surgery Center's safety plan include, but are not limited to:

- Create a culture of safety by establishing policies on issues such as prioritizing and analyzing patient safety events and training staff in teamwork-based problem solving skills.
- Specify a protocol to ensure that you have adequate nursing care based on your patient mix and nurse experience.
- Record and read back verbal orders to the prescriber immediately.
- Use only abbreviations and doses that the organization has standardized.
- Prepare patient care summaries from original source documents, not from memory.
- Transmit care information, such as order changes or diagnostic information, on time and in an understandable format to all providers who may need the information to care for a patient.
- Ask patients or legal surrogates to repeat what providers explained to them about informed consent.
- Prominently display patient's preferences for life-sustaining treatment in their charts.
- Standardize protocols for preventing wrong-site or wrong-patient procedures by using a pre-surgical checklist and establishing a process to mark the operative site.
- Evaluate preoperative patients for the risk of surgical site infection and implement appropriate preventive measures such as antibiotic prophylaxis.
- Use a hygienic hand rub or wash your hands with disinfectant soap before and after contact with patients or objects immediately around them.
- Keep the medication preparation area clean, orderly, well lit and free of clutter, distraction and noise.
- Use standard methods for labeling, packaging and storing medications.
- Identify all "high-alert" drugs, such as chemotherapy agents, anticoagulants, insulin or narcotics.

|                                                          |                            |
|----------------------------------------------------------|----------------------------|
| Section 3<br>Safety Management                           | Smoke Ranch Surgery Center |
| Policy Name: <b>PATIENT SAFETY IN THE OPERATING ROOM</b> | Page 1 of 4                |
| Approved:<br><b>JAN 27 2010</b>                          | Revised:                   |

**POLICY:**

Patient safety refers to a systematic facility-wide program to minimize preventable physical injuries, accidents and undue psychological stress during the visit. The nursing practice for safety standards is as follows:

- Patient Identification
  - The Operating Room RN always identifies the patient by checking the wristband with the patient's chart and the operating schedule. In addition, the RN verifies the patient identification through verbal communication with the patient and/or caregiver.
- Patient Observation
  - Patients on stretchers or operating tables are never left unattended. Side rails and/or safety straps are utilized.
  - Special care is ensured by provision of an adequate number of personnel when moving patients to and from the operating table or when positioning patients on the operating table. When positioning patients, it is essential to provide supportive devices to protect nerves and blood vessels. Limbs are never to be hyperextended.
- Dedication to Meticulous Aseptic Technique
  - Facility team members must know and apply the principles of aseptic and sterile technique at all times to avoid life-threatening postoperative infection.
- Execution of Accurate Counts
  - The responsibility of accounting for all sponges, instruments, needles and sharps before the surgery begins and at the time of closure rests with the circulating and scrub persons per established policy. The Operating Room RN must document on the operative record the outcome of all final counts. Patients are not to leave the operating room until final counts are correct. If necessary x-ray will be used to determine that the missing item is not located in a patient cavity.

*using two patient identifiers, i.e. Name and DOB*

- Use of Operating Equipment
  - All equipment and appliances must be set up and used according to the recommendations and instructions of the manufacturer. The biomedical engineer must inspect all new electrical equipment prior to use and every six (6) months thereafter. Electrical equipment must be properly grounded to prevent electric shock and burns.
  
- Prevention of Burns
  - The scrub person shall immerse all hot instruments in a basin of cool sterile water prior to handing them to the surgeon.
  - Proper placement of the electrosurgical ground pad is essential to prevent electrical burns. Cautery devices, when not in use, are to be secured in a holster. Coagulation/cutting settings on the electrosurgical units are set at the lowest setting and gradually increased.
  - Flammable solutions (i.e., alcohol) are not to be utilized when electrosurgery is in progress.
  - All electrical equipment must be inspected prior to use.
  
- Administration of Drugs
  - All drugs used by the surgeon are documented in the operative record. The Operating Room RN and the scrub person identify all drugs transferred to the sterile field.
  - The scrub person repeats the name and dosage of the drug when transferring it to the surgeon.
  - If more than one drug is present on the sterile field, each drug must be correctly identified.
  
- Preparation of Specimens
  - All tissue removed from a patient, unless exempt, is sent to the pathology laboratory and labeled with the site of the specimen.

- *It is the responsibility of the scrub person to communicate to the Operating Room RN the origin of each specimen. It is the responsibility of the Operating Room RN to label and record each specimen accurately.*
- All specimens for frozen section are placed in a dry container and forwarded to the pathology laboratory. **NOTE:** Frozen section specimens are delivered to the pathology laboratory by a special courier. The courier signs the specimen log denoting delivery of the frozen section specimen.
- Fire Safety
  - Response of the facility team to a fire is outlined in the Safety Manual. Facility personnel participate in the quarterly drills as appropriate and review fire precautions annually.
- Emergency Management Responses
  - Response of the facility team in a disaster situation is outlined in the Comprehensive Emergency Management Plan. Facility personnel participate in regularly scheduled disaster drills and inservice education.
- Radiation Safety
  - X-ray badges are issued quarterly to all scrub persons and Operating Room RNs and are to be worn at all times in the operating suite. Badges are forwarded to the radiation detection company. Dosimetry reports are reviewed by the Clinical Director for current and cumulative dose per employee. These reports are filed in the facility.
  - Radiation barrier gloves are available for use whenever there is a potential for radiation exposure to hands.
- Equipment Maintenance
  - All operating room equipment is inspected for operational integrity by facility personnel prior to each use and on a monthly basis. Equipment is to be removed from service immediately if needed repair or a malfunction is evident. A repair tag is attached indicating the name of the department and the source of the malfunction.

- Disposal of Waste
  - All infectious (biohazardous) wastes, including glass, are single red-bagged, placed in a special collection container marked "Biohazardous Waste" and disposed of appropriately.
- Disposal of Needles and Syringes
  - Used needles and syringes are placed in rigid sharps disposal container, which are located throughout the facility. When container is 3/4 full, it is disposed of with the biohazardous waste and replaced with a new sharps disposal container.
- Use of Extension Cords
  - Under normal conditions, extension cords shall not be used. Temporary use of extension cords may be permitted under specified conditions and with the proper approval.
  - Power failure: Extension cords may be used to connect items to limited charged power outlets.
  - Extension cords will be 16 AWG or heavier.
- Use of Adapters
  - Adaptor use within the facility is prohibited.
- Anesthesia Safety
  - Only nonflammable anesthetic agents are utilized in the operating rooms.
  - Refer to Anesthesia Policy and Procedure Manual for other anesthetic safety standards.

# CORONADO SURGERY CENTER

## QUALITY AND PATIENT SAFETY

This plan was created and revised by the Coronado Surgery Center Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program  
Coronado Surgery Center**

## Commitment to Patient Safety

---

Coronado Surgery Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Coronado Surgery Center Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Coronado Surgery Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Coronado Surgery Center has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and

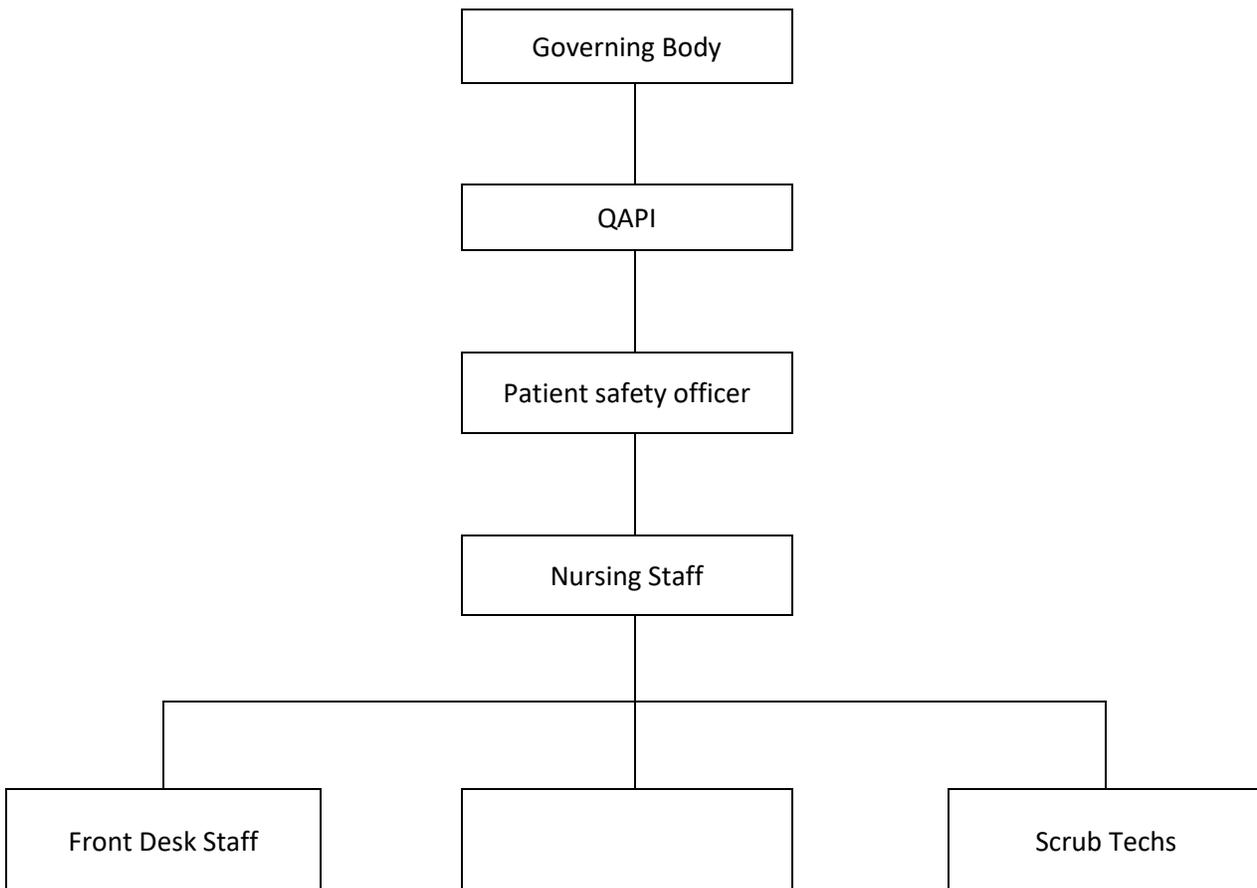

external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

#### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

- Collect Data
- Reconstruct event
- Record review
- Interview Staff
- Identify how/why event occurred
- Expose actions that led to event to prevent future harm
- Use swiss cheese model

#### Executive or Governing Body Staff Responsibilities

Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.

- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet quarterly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous or quarter.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.

- Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

### Quality Guiding Principles

1. Focus on Quality and Patient Safety – it is everyone's responsibility
2. Improve all that is undertaken
3. Provide service excellence to our customers
4. Align Mission, Vision, and Strategy
5. Ensure continuous improvement that is process-focused, data-driven, and measures results
6. Foster creativity and innovation in an environment that values and encourages employee participation
7. Practice teamwork and collaboration, recognizing the unique and valuable contribution each member makes to the team
8. Ensure the program is a continuing one, not just a one-time effort
9. Ensure the program identifies in a systematic manner what data will be collected to measure various aspects of quality of care, the frequency of data collection, and how the data will be collected and analyzed.
10. Ensure the data collected is used to assess quality and stimulate performance improvement.

### Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Coronado Surgery Center will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used at Coronado Surgery Center to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

## Fishbone Diagram

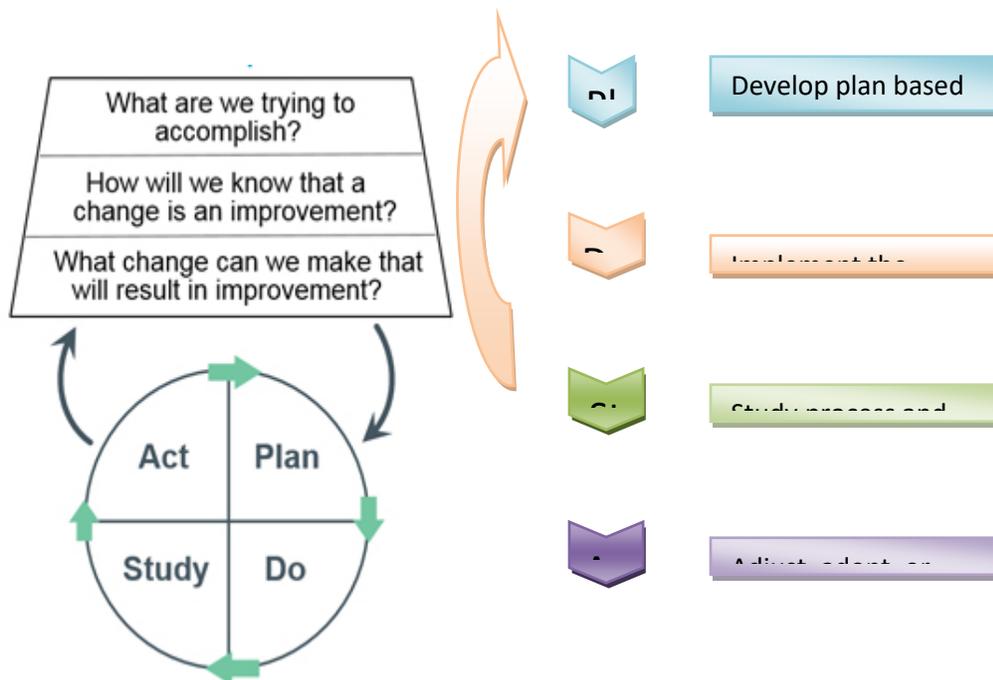

*Patient Safety and Quality Improvement Plan*

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. Coronado Surgery Center is using Redcap for tracking the sentinel events, healthcare infection data, and variance reports for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

## Ongoing Reporting and Review

*Patient Safety and Quality Improvement Plan*

Data points such as the following will be reviewed per the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |

## Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers

for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. checklists for your reference—

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                            | Q3 2014                                                                                                                                                                                                                                                                                                      | Q4 2014                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                 |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.<br>b. Establish an automated surveillance process.<br>c. Conduct a proactive risk assessment in a high risk area. |                                                                                                                                                                                                                                                                                                              | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                                                      |
|                                                                                                                                                                     | <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                   | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.<br>b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.<br>c. Establish a process for providing feedback regarding reported events. | Implemented e-MERS & PSO with UHC.<br>Create process for reviewing & closing reports in e-MERS.<br>Create process for communicating outcome of reported events. |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. |                                                                                                                                                                  | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.<br>b. Establish a recognition program that rewards safe practices.<br>c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.   |                                                                                                                                                                 |
|                                                                                                                                                                     | <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                             | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.<br>b. Facilitate the development of action plans associated with measures not meeting benchmarks.<br>c. Assess and improve processes related to hand-off, transition and communication                                   | Complete 2014 Leapfrog Safety Survey.<br>Develop method to track & report departmental progress and compliance of RCA action plans.                             |
| <b>5. Charter Safety Programs</b> through teams, workgroups or projects.                                                                                            |                                                                                                                                                                  | a. Coordinate Improvement Efforts in order to ensure that capital, people, facilities & technologies are matched to strategic priorities for safe practices.<br>b. Reduce and eliminate variation in care.                                                                                                   |                                                                                                                                                                 |

|  |  |  |  |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

Did you meet your measurement goal? Explain.

**Summarize what was learned: success, failure, unintended consequences, etc.**

**Act:** (Describe what you concluded from this cycle.)

Based on what was learned, please indicate what action will be considered.

**Describe what modifications to the plan will be made for the next cycle based on what you learned.**

- Adapt: modify changes and repeat PDSA Cycle
- Adopt: expanding changes throughout organization
- Abandon: change approach and repeat PDSA cycle

## Appendix D-2: PDSA Quarterly Progress Report

---

Event:

|                                                                                         |                    |                      |  |

## Appendix F: Policy Example

- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992

Rationale:

Coronado Surgery Center will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

*Patient Safety and Quality Improvement Plan*

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

**Objectives:**

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

**Implementation:**

**Risk Management**

Department Managers, Infection Prevention and Control Nurse and Safety Officer will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager's Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

**Employee's Responsibilities** All employees must ensure that:

|                                                                                             |                                                                                   |                                                        |
|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|--------------------------------------------------------|
| <p>Coronado<br/>Surgery Center</p>                                                          | <p>POLICY AND INFORMATION MANUAL</p>                                              |                                                        |
| <p><a href="#">PERSONAL PROTECTIVE EQUIPMENT POLICY</a><br/><a href="#">Page 2 of 2</a></p> | <p>Date Issued:<br/>Date Last Revised:<br/>Next Review Date:<br/>Approved By:</p> | <p>1/1/2017<br/><br/>1/1/2018<br/>Policy Committee</p> |

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

### Safety committee:

**The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the Federal, State, Local and OSHA guidelines. The “Safety Plan” includes identification, evaluation and prevention of workplace hazards relating to the elements and specific criteria. The safety management of the Facility is composed of several elements regarding the safety features necessary for the protection and security of its patients and healthcare workers.**

**These elements are composed of two parts; one “Life Safety Enterprise Safety Plan” which is wide in scope, organizational and effectiveness, and the “Environmental Safety Management” which oversees the working environment elements of the Facility. These areas overlap each other but also provide individual elements which manage the overall security and safety of the Facility. A report from the Safety Committee is provided quarterly to the Medical Executive Committee (MEC) and onto the Governing Board. The Safety Committee meets and discusses how to improve and/or maintain patient and employee well-being and safety, items discussed range from falls to how to properly lift boxes, and the execution of a disaster drills, etcetera. If any incidents have occurred they will be discussed in detail, and prevention and safety will be implemented.**

|                                                             |                                                                                                                  |                                              |

**Policy:** The facilities shall provide guidelines and implement proactive practices, which provide a safe environment of care in relation to property, equipment, patients, personnel and the public.

**Purpose:** The reduction of physical hazards and the implementation of safe practices enhance environmental safety.

**Procedure Guidelines:**

**Responsibility:**

1. Employees are responsible for:
  - A. Intervention when, safety conditions pose a threat to life or health, or threaten damage to equipment or buildings.
  - B. The continuing maintenance of the facility property, eliminating hazards upon discovery.
  - C. Reporting equipment or maintenance problems and incidents of property damage to the Safety Officer or Administrator/ Clinical Director upon discovery.
  - D. Reporting injuries and illness to the Administrator/Clinical Director.
  - E. Obtaining the information necessary to perform tasks in a manner that prevents injury to themselves, patients and others.
2. The Administrator/Clinical Director and designated Safety Officer, as agents of the Quality Assurance Committee are responsible for:
  - A. Environment of Care development, implementation and monitoring.

- B. Report of Safety Surveillance and activities to the Quality Assurance Committee.
- C. Annual review of the Environment of Care policies and guidelines for objectives, scope, performance and effectiveness.

**Maintenance and Supervision:**

1. Comply with the NFPA 101®, Life Safety Code® (LSC) for maintaining and supervising the facility grounds, buildings and equipment.
2. Maintain equipment and utilities following a preventative maintenance schedule.
3. Maintain sufficient light in the parking and entrance areas to reduce the potential for falls and security concerns.
4. Maintain signs and emergency systems to meet the needs of the visual and hearing impaired.
5. Maintain smoke free environment.
6. Provide facility cleaning, maintenance, and inspection, following a schedule for daily, weekly, monthly, semi-annual and annual activities.
7. Construction and Renovation (Interim Life Safety Plan):
  - A. Meet the existing ambulatory health care occupancy health code requirements for construction or renovation.
  - B. Train staff in alternative safety processes including the use of new specialized equipment and space.
  - C. Train staff to compensate for changes in Life Safety Plan.
  - D. Provide increased facility safety monitoring with construction and renovation included reference to the NFPA 101®, Life Safety Code® (LSC).
  - E. Inspect and monitor components of Life Safety Plan weekly or more frequently if indicated.

**Risk Assessment:**

1. Provide risk assessment and hazard surveillance to evaluate the impact of the center building, grounds, equipment, occupants, and internal physical systems on patient, employee and public safety.
  - A. Assign a Safety Officer to maintain risk and hazard surveillance.
  - B. Record Hazard surveillance.
  - C. Report environmental hazard and safety surveillance to the Quality Assurance Committee. Provide follow-up to staff concerning safety issue recommendations.
2. Report and document patient, personnel or visitor injury, and occupational illness. Document

incidents on a Variance Report, Occurrence Report, or Incident Report.

- A. Investigate and evaluate each report for opportunities to improve performance.
- B. Include injuries and occupational illness in the report to the Quality Assurance Committee.

**Product Safety Recalls:**

1. Address a product safety recall upon notification.
  - A. Inventory and remove recalled product from possible use.
  - B. Notify affected medical staff and evaluate a substitute product.
  - C. Inventory patients who may have received a recalled medical device from implant logs or records.
  - D. Consult with the Medical Director and/or Quality Assurance Committee to evaluate the situation and determine an appropriate method for patient notification if an implanted medical device has been recalled. The medical director, as an agent of the Quality Assurance Committee reports the incident to the Medical Executive Committee.

**Safety Education:**

1. Provide Safety Education and Training at orientation and at least annually thereafter. Address general safety processes; area specific safety and job related hazards.
2. Provide Safety Guidelines in the General Orientation including:
  - A. Review of Safety Policies and Guidelines.
  - B. Body Mechanics.
  - C. Hazardous Materials Communication.
  - D. SDS/ Hazardous Waste.
  - E. Safety Risk / Responsibilities.
  - F. Equipment Safety/Operations Manuals.
  - G. Emergency Preparedness.
  - H. Utility Systems and Electrical Safety.
  - I. Infection Control/Exposure OSHA.
  - J. Reporting of Sentinel Events.

- K. Variance, accidents/injuries, Security and Safety concerns.
  - L. Fire and Life Safety.
  - M. Safety Concerns.
  - N. Security.
  - O. OSHA.
3. Include specific safety standards related to safe practices and the safe use, inspection, cleaning and maintenance of specialized equipment in the Department /Job Specific orientation.
  4. Provide updates when new equipment is introduced.
  5. Review General Safety Guidelines annually.

## **Patient Safety Plan**

**Premium Surgical Services Center**

**Las Vegas, Nevada**

**Originating Department: Environment of Care/Patient Safety Committee**

|                            |                                |
|----------------------------|--------------------------------|
| TITLE: Patient Safety Plan | POLICY #: EOC - 1              |
| AFFECTED DEPARTMENTS: All  | APPROVED: EOC/Pt. Safety Comm. |
| EFFECTED DATE: 10/01/10    | REVISED DATE: 12/01/2017       |

### **PURPOSE:**

The purpose of the Patient Safety Plan at Premium Surgical Services Center (PSSC) is to improve patient safety and reduce risk to patients through an environment that encourages:

- Recognition and acknowledgment of risks to patient safety and medical/health errors;
- The initiation of actions to reduce these risks;
- The internal reporting of what has been found and the actions taken;
- A focus on processes and systems;
- Minimization of individual blame or retribution for involvement in a medical/health care error
- Organizational learning about medical/health care errors;
- Support of the sharing of that knowledge to effect behavioral changes

The Patient Safety Plan provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety. This is accomplished through the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.

As patient care, and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at PSSC. The Patient Safety Plan developed by the interdisciplinary EOC/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) outlines the components of the Patient Safety Program.

## **PATIENT SAFETY PROGRAM:**

### **I. SCOPE OF ACTIVITIES:**

A. The scope of the Patient Safety Program includes an ongoing assessment, using internal and external knowledge and experience, to prevent error occurrence and maintains and improves patient safety. Patient safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed by the Environment of Care/Patient Safety Committee (includes Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included in data analysis are:

1. No Harm Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome - that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient
2. Mild-Moderate Adverse Outcome Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient
3. Any Medication Error
4. Any Adverse Drug Reaction
5. Any Transfusion Reaction
6. Hazardous Condition - any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome chance of a serious adverse outcome.
7. Sentinel Event

B. The scope of the Patient Safety Program encompasses the patient population, visitors, volunteers and staff (including Medical Staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility. There will be an emphasis on important hospital and patient care functions of:

1. Patient Rights
2. Assessment of Patients
3. Care of Patients
4. Patient/Family Education
5. Continuum of Care
6. Leadership
7. Improving Organization Performance
8. Management of Information
9. Management of Human Resources
10. Management of the Environment of Care
11. Surveillance, Prevention, and Control of Infection

## II. METHODOLOGY:

A. The Interdisciplinary EOC/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) is responsible for the oversight of the Patient Safety Program. The EOC/Patient Safety Committee Chairperson (Dr. Name Here) will have administrative responsibility for the program, or the EOC/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) may assign this responsibility to another member of the committee (Name Here, RN ).

B. All departments within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences and potential occurrences to the Administrator (Dr. Name Here), who will aggregate occurrence information and present a report to the EOC/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) on a quarterly basis. The EOC/Patient Safety Committee will analyze the report information and determine further patient safety activities as appropriate.

C. Through review of internal data reports and reports from external sources (including, but not limited to JCAHO sentinel event report information, ORYX and Core Measure performance data, occurrence reporting information from state and federal sources and current literature), and through the Performance Improvement priority criteria grid, the EOC/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) will select at least one high-risk safety process for proactive risk assessment annually. The proactive risk assessment will include:

1. Assessment of the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation. Identify the possible effects of the undesirable variation on patients, and how serious the possible effect on the patient could be.
2. For the most critical effects, conduct a root cause analysis to determine why the undesirable variation leading to that effect may occur
3. Redesign the process and/or underlying systems to minimize the risk of that undesirable variation or to protect patients from the effects of that undesirable variation
4. Test and implement the redesigned process
5. Identify and implement measures of the effectiveness of the redesigned process
6. Implement a strategy for maintaining the effectiveness of the redesigned process over time
7. Ensure that all components of the health care organization are integrated into and participate in the organization-wide program.

D. Upon identification of a medical/health care error, the patient care provider will immediately:

1. Perform necessary healthcare interventions to protect and support the patient's clinical condition
2. As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others - example: immediate removal of contaminated IV fluids from floor stock should it be discovered a contaminated lot of fluid solutions was delivered and stocked
3. Contact the patient's physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.
4. Preserve any information related to the error (including physical information). Examples of preservation of physical information are: preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record
5. Report the medical/health care error to the staff member's manager and Administrator.
6. Submit the occurrence report to the Administrator (Dr. Stile) per organizational policy.

E. Any individual in any department identifying a potential patient safety issue will immediately notify his or her manager and document the findings on an occurrence report. The occurrence report will be submitted to the Administrator

F. Staff response to medical/health care errors is dependent upon the type of error identified:

1. No harm errors - (including "no harm" medication errors) - staff will document in the medical record the circumstances regarding the no harm error on an occurrence report form, submit the form to the Administrator and notify their immediate supervisor
2. Mild-Moderate Adverse Outcome Errors (including medication errors) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts in the medical record and on an occurrence report - submitting the report to the Administrator.
3. Medication Errors - the staff member identifying a medication error (no harm and mild-moderate harm) will document facts on an occurrence report - submitting the report to the Administrator.
4. Adverse Drug Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate;

- notify his/her manager (Name Here, RN or Name Here) and Administrator (Dr. Name Here), document facts in the medical record and on an occurrence report - submitting the report to the Administrator.
5. Transfusion Reaction – We do not handle blood products at our facility.
  6. Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify his or her supervisor, take appropriate action and document the findings on an occurrence report. The occurrence report will be submitted to the Administrator (Dr. Name Here).
  7. Sentinel Event - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, and his/her manager (Name Here, RN or Name Here) and Administrator (Dr. Name Here) carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure document facts appropriately in the medical record and on an occurrence report - submitting the report to the Quality Management Division.
  8. Near Miss - staff will report the near miss event to his/her manager (Name Here RN or Name Here), describe the facts of the near miss on an occurrence report and submit the report to the Administrator (Dr. Name Here) .
  9. At the direction of the Administrator (Dr. Name Here) of the Medical Staff all sentinel events and near miss occurrences will have a root cause analysis conducted.

G. It is the intent of this organization to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment.

H. The organization will focus on improving systems and processes and on remedial actions to assist rather than punish staff members. The Environment of Care/Patient Safety will review the course of action to prevent error recurrence.

I. Sentinel Events - staff members involved in a sentinel event occurrence will receive support from the Administrator (Dr. Name Here) of the Medical Staff regarding the staff member's professional and emotional reconciliation of the sentinel event. The Environment of Care/Patient Safety and Care Oversight Committees (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) encourage the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the department supervisor

J. On at least an annual basis, staff will be queried regarding their willingness to report medical/health care errors.

K. The Patient Safety Program includes an annual survey of patients, their families, volunteers and staff (including medical staff) opinions, needs and perceptions of risks to patients and requests suggestions for improving patient safety.

L. Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. The Environment of Care/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) will receive a report verifying compliance with informing the patient about outcomes of care.

M. Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care.

N. Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. Staff will be educated and trained on the provision of an interdisciplinary approach to patient care

O. Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally, per hospital policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.

P. Quarterly reports from the Environment of Care/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here) will be submitted to the Quality Council, Care Oversight Committee of the Medical Staff and Board QI Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here), which exists as the oversight committee for the Environment of Care/Patient Safety Committee (Dr. Name Here, Name Here, RN, Dr. Name Here, ST, Name Here).

# INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

## I. Introduction:

The Patient Safety Program supports and promotes the mission, vision and values of Innovative Procedural and Surgical Center through organization prioritization of patient, visitor, and employee safety.

The Patient Safety Program is implemented through the Patient Safety Committee and is supported by leadership's promotion of a safety culture that:

- Encourages recognition, reporting, and acknowledgment of risks to patient/visitor and employee safety and medical/healthcare errors
- Initiates/monitors actions to reduce risks/errors
- Internally reports findings and actions taken
- Promotes a blame-free culture facilitating the reporting and follow-up on safety concerns, errors and adverse events
- Educates staff and physicians to assure participation in the program

## II. Purpose:

The Patient Safety Program is designed to enhance patient care delivery and prevent adverse outcomes of care by utilizing a systematic, coordinated and continuous approach to the improvement of patient safety. This approach focuses on actual and potential occurrences; ongoing proactive risk management; and integration of patient-safety priorities in the development and revision of processes, functions and services.

## III. Mission, Vision and Values:

In support of the mission, vision and values of this organization the Patient Safety Program promotes:

- Collaboration among staff members, physicians and other providers to deliver comprehensive, integrated and quality health care
- A focus on comprehensive, integrated quality service
- Open and honest communication to foster trust relationships among staff members, physicians, other providers and patients

## IV. Objectives:

The objectives of the Patient Safety Program are to:

- Encourage organizational learning about adverse or potentially adverse events
- Incorporate recognition of patient safety as an integral job responsibility
- Provide patient safety education

## INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

- Involve patients in decisions about their health care and promote open communication
- Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate proactive measures
- Report internally the finding and actions taken to reduce risk
- Support sharing of knowledge to effect change

### V. Responsibilities/Duties:

The Patient Safety Committee provides a multidisciplinary collaboration for the collection and analysis of risk to patient safety and the dissemination of information on identified risk for the purpose of improving patient care. It shall review reports on occurrences including near misses to sentinel events. It shall identify those individuals or groups best situated to perform a root cause analysis and develop and implement an action plan for identified issues. It shall review, analyze and disseminate the information it receives, as appropriate, to the QI Committee and the Governing Board of Managers. It shall provide recommendations concerning identified risks, approve plans for corrective action and evaluate the implementation of corrective actions taken.

The Patient Safety Committee of Innovative Procedural and Surgical Center is comprised of the Patient Safety Officer, two providers of health care who treat patients at the facility, including one member of the medical staff and one member of the nursing staff, and the Chief Executive Officer of the facility.

The Patient Safety Committee shall meet at least once every calendar quarter.

The Governing Board of Managers shall designate an officer or employee of Innovative Procedural and Surgical Center to serve as the Patient Safety Officer of the facility.

The Patient Safety Officer of the facility will:

- Serve on the Patient Safety Committee
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties pursuant to NRS 439.835.

Duties pursuant to NRS 439.835 are

- a) A person who is employed by IPSC shall, within twenty-four (24) hours after becoming aware of a sentinel event that occurred at IPSC, notify the Patient Safety Officer of the event
- b) The Patient Safety Officer will, within thirteen (13) days after receiving notification, report the date, the time and a brief description of the sentinel event to the Nevada State Health Division and facility representative if that person is different from the Patient Safety Officer.

## **INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)**

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

- c) If the Patient Safety Officer of IPSC personally discovers or becomes aware, in the absence of notification by another employee, of a sentinel event that occurred at IPSC, the Patient Safety Officer will, within fourteen (14) days after discovering or becoming aware of the sentinel event report the date, time and brief description of the event to those listed in b) above.
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at IPSC
  - Report to the IPSC Patient Safety Committee regarding any action taken in accordance to the above paragraph
  - Upon discovery notify the CEO immediately

The Patient Safety Committee shall:

- Receive reports from the Patient Safety Officer
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred at the medical facility
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment at the facility
- Make recommendations to the Governing Board of Managers to reduce the number and severity of sentinel events and infections that occur at the facility
- At least once each calendar quarter, report to the Governing Board of Managers of the facility regarding:
  - a) The number of sentinel events that occurred at the facility during the preceding calendar quarter
  - b) The number and severity of infections that occurred at the facility during the preceding calendar quarter
  - c) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the facility
- Adopt patient safety checklists and patient safety policies
  - a) The patient safety checklists adopted pursuant to this section must follow protocols to improve the health outcomes of patients at the facility and must include without limitation:
    - \*Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care
    - \*Checklists for ensuring that employees of the facility and contractors with the facility who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary
    - \*A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received proper

## INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

instructions concerning prescription medications, instructions concerning aftercare, and any other instructions concerning his or her care upon discharge

\*Any other checklists which may be appropriate to ensure the safety of patients at the facility

\*A policy for appropriately identifying a patient before providing treatment.

Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of health care. The personal identifiers may include, without limitation, the name and date of birth of the patient

\*A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of health care at the facility including, without limitation, protocols relating to hand hygiene

\*A policy to ensure compliance with the patient safety checklists and patient safety policies adopted, which may include, without limitation, active surveillance. Active surveillance may include, without limitation, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials

- Focus on fall prevention activities: Staff is trained on fall-related topics including extrinsic and intrinsic risk factors, occurrence of syncope during IV starts, anti-fall precautions, importance of proper equipment use and maintenance, fall reporting procedures.
  - A fall is any unintentional change in position where the patient ends up on the floor or other lower level. This includes witnessed and un-witnessed falls and includes whether there is an injury or not. Serious injuries can occur including fractures, lacerations and can lead to emergency room visits or hospital admissions.
  - There are many factors that can increase the risk of patient falls which include, but are not limited to: use of medications affecting the central nervous and/or cardiovascular system, i.e. benzodiazepines, sedatives, hypnotics, antihypertensives; chronic degenerative illnesses i.e. arthritis, cataracts, dementia and diabetes; visual impairment; unsteady gait.
  - Ensure a safe environment for patients:
    - Floors will be flat, dry, nonslip and free of area/throw rugs or other loose coverings
    - All spaces will be clear of obstacles and evenly illuminated
    - Assistive devices are present in bathrooms to accommodate disabled patients
    - Functioning emergency call systems are present in all patient care areas, bathrooms and changing rooms
    - Procedure tables are equipped with proper safeguards, such as side rails, grip handles and step risers

## INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

- Wheelchairs have appropriate seat cushioning and anti-rollback devices, and are locked when in a stationary position
- Nonskid footstools are available to assist patients climb on and off procedure tables
- Side rails and wheel locks are engaged whenever patients are on procedure tables or gurneys
- Patients are instructed to dangle their legs over the side of the table before moving to an upright position
- Whenever patients are left unattended, procedure tables and gurneys are left in the lowest position
- Patients receiving sedative agents are always under close supervision
- Monitor and document the effectiveness of the patient identification policy adopted
- At least annually, review the patient safety checklists and patient safety policies adopted, and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at this facility
- Revise a patient safety checklist and patient safety policy as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols
- On or before July 1<sup>st</sup> of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted.
- The proceedings and records of a patient safety committee are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.265.

### VI. Scope:

The types of occurrences to be addressed include, but are not limited to, sentinel events, near misses, and actual events related to:

- Patient Safety
- Adverse drug events (medication errors and adverse drug reactions)
- Health acquired infections
- Patient Falls
- Other patient incidents/unexpected clinical/medical events
- Unsafe conditions
- Visitor safety/Visitor incidents
- Employee Safety

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

- Blood/body fluid exposures
- Occupational diseases
- Communicable disease exposures
- Musculoskeletal injuries
- Immunization programs
- Other employee incidents
- Environmental safety
- Product recalls
- Drug recalls
- Product/equipment malfunction
- Construction-Infection Control Risk Assessment
- Water Quality
- Air Quality
- Disaster Planning
- Security Incidents
- Workplace Violence

Data from external sources, including but not limited to:

- Centers for Disease Control (CDC)
- Accreditation Association for Ambulatory Health Care (AAAHC)
- Occupational Safety and Health Administration (OSHA)
- Nevada State Health Division
- Published literature

## VII. Definitions:

**Sentinel Event** is defined as an unexpected occurrence involving death or serious physical or psychological injury or the risk thereof including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function.

**Occurrence** is an event that is not consistent with routine patient care of procedure in which either did not or could have resulted in injury, loss to a patient or visitor or which may give rise to a claim against the facility, an employee of the facility, or a member of the facility medical staff.

**Near Misses** are any process variation which did not affect the outcome due to a screening by chance but for a recurrence carries a significant chance of a serious adverse outcome. Some may call it a potential for error.

**Error** is an unintended act, either omission or commission, or an act that does not achieve its outcome such as medication errors and adverse drug events or reactions.

# INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

**Hazardous Condition** is any set of circumstances, exclusive of the disease or condition the patient is being treated for, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.

**Facility Acquired Infections** are a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was treated at the facility, including surgical site infections.

## VIII. Structure:

The authority for the Patient Safety Plan rests with the CEO, Governing Board of Managers, Quality Improvement/Quality Assurance Committees, and Patient Safety Officer, and has delegated the authority to implement and maintain activities described in this plan to the IPSC Patient Safety Committee.

## IX. Quality Review Information

To the extent possible, and in a manner consistent with the protection of confidentiality of quality assurance and patient safety data, pertinent information will be shared between the Quality Improvement Program and the Patient Safety Program.

In an attempt to protect quality review information from discovery, all quality review documents must be labeled as a Quality Review document. Documents should be in a formal format, handled by a limited number of individuals and secured in the Director of Nursing's office accessible only to designated individuals. Nevada Revised Statutes protecting Quality documents in NRS 49.265.

## X. Education:

Quarterly/Annual Staff and Physician/Provider education as applicable includes, but is not limited to the following topics:

- Fire Drills (Quarterly)
- Emergency and Disaster Drills
- Workplace violence
- Customer service
- Creating, implementing, achieving and maintaining a culture of safety
- Risk management and error prevention
- Teamwork

# INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

## XI. Safety Improvement Activities:

Specify Measures for an annual focus (Examples listed below)

- Patient Satisfaction Surveys
- Medical Records review; legible documentation, clear, complete, signed
- Complaint and resolution-to improve care and satisfaction (trends)
- Confidentiality; ensure patient and employee information is secure
- Appointments/scheduling process; accessibility to physician
- Informed consent policy and procedure
- Medication management and reconciliation
- Telephone response time to callers
- Occurrence review

Give consideration to measures that facilitate safe practices (Examples listed below)

- Involve patients in their health care; consider literacy issues and cultural values, partner with patients in developing and planning their care
- Use a team approach to safety; hold focused safety meetings
- Endorse open, effective communication; identify shared values and attitudes among all members. Interview and/or survey staff for attitudes, perceptions and communication barriers
- Encourage error reporting to include near miss events. Institute a non-punitive reporting that is confidential and timely.
- Ensure employee and patient information or event reports shared with staff for educational purposes do not identify individuals
- Facilitate communication skills learning (teamwork)
- Examine physical premises to identify and correct potential hazardous conditions
- Orient physicians and new employees to risk management and patient safety concepts
- Conduct patient safety rounds
- Provide education and training on high risk processes

## XII. Methodology:

Structure:

- Proactive risk prevention strategies
- Identification of high risk areas
- General incidences (Patient injuries)
- Potential or actual adverse events (medication errors)

Method: Establish a process for

- Identification, selection, prioritization
- Data collection and analyses

## INNOVATIVE PROCEDURAL AND SURGICAL CENTER (IPSC)

**Subject: Patient Safety Plan**

**Effective Date 01/2012**

**Revised: 03/2012**

**Reviewed/Accepted: 03/2012, 7/2013, 03/2014, 03/2015, 01/2016, 1/2017**

---

- Development of actions
- Implementation
- Reporting
- Follow-up

Process Improvement: Establish teams/individual staff members to implement processes and to monitor for effectiveness. Utilize applicable tools to facilitate improvement for example

- PDCA: Plan, Do, Check, Act with focus on process improvement
- FMEA: Failure Mode Effect Analysis a systematic process for identifying potential process failures before they occur with the intent to eliminate or minimize risk
- RCA: Root Cause Analysis is a retrospective approach to error analysis that identifies what and how the event occurred and why it happened. The focus in on the process and systems not individuals

### XIII. Program Evaluation:

The Patient Safety Committee will submit an Annual Report to the Quality Improvement Committee and include:

- Definition of the scope of occurrences including sentinel events, near misses and serious occurrences
- Detail of activities that demonstrate the Patient Safety Program has a proactive component by identifying the high-risk process selected
- Results of the high-risk or error-prone processes selected for ongoing measurement and analysis
- A description of how the function of process design that incorporates patient safety has been carried out using specific examples of process design or redesign that include patient safety principles
- The results of how input is solicited and participation from patients and families in improving patient safety is obtained
- The results of the program that assesses and improves staff willingness to report errors
- A description of the examples of ongoing education and training programs that are maintaining and improving staff competence

### SAFETY PLAN

#### Components of Plan:

##### I. NRS 439.875

1. **Patient Safety committee (PSC)** – VVSC has established a patient safety committee. VVSC's Patient Safety Committee is the Medical Executive Committee and will fulfill the functions as required by NRS439.875.
2. Composed of:
  - (a) (1) The infection control officer (ICO) of VVSC. The ICO will fulfill the designation and duties as required by NSR439.873.  
The ICO and the PSO are employed by VVSC.
  - (2) The PSO (PSO) The PSO will fulfill the designation and duties as required by NSR439.870.
  - (3) At least three providers of health care who treat patients at VVSC facility, including, without limitation, at least one member of the medical, nursing and contract Consultant Pharmacist VVSC.
  - (4) One member of the governing body of VVSC.
  - (b) Frequency of meetings: The PSC shall meet at least once each month via the monthly Pharmaceutical and Therapeutic Meeting.
3. VVSC has more than 25 employees and the PSC meets monthly.
4. The PSC shall:
  - (a) Receive reports from the PSO pursuant to NRS 439.870.
  - (b) Evaluate actions of the PSO in connection with all reports of sentinel events alleged to have occurred at VVSC.
  - (c) Review and evaluate the quality of measures carried out by VVSC to improve the safety of patients who receive treatment at the medical facility.
  - (d) Review and evaluate the quality of measures carried out by VVSC to prevent and control infections at VVSC.
  - (e) Make recommendations to the Governing Board (GB) of VVSC to reduce the number and severity of sentinel events and infections that occur.
  - (f) At least once each calendar quarter, report to the GB of the VVSC regarding:
    - (1) The number of sentinel events that occurred during the preceding calendar quarter;
    - (2) The number and severity of infections that occurred during the preceding calendar quarter;
    - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occurs at VVSC.
  - (g) Adopt patient safety checklists and patient safety policies etc., as required by [NRS 439.877](#), review the checklist and policies annually and revise the checklist and policies as the PSC determines necessary. See NRS439.877 at end of Safety Plan.
5. The proceedings and records of the PSC are subject to the same privilege and protection from discovery as the proceedings and records described in NRS 49.265.

## Chapter 5.3.1

**Policy: Quality Management and Improvement**

**Subject: Sentinel Events: Safety Plan**

**Effective Date: 07/12**

**Revision/Reviewed Date: 08/13, 12/13, 03/15, 12/16, 12/17, 2/18**

**Page 2 of 7**

---

### **II. NRS 439.835 Mandatory Reporting of sentinel events.**

1. Except as otherwise provided in subsection 2:
  - (a) Any person employed by VVSC will, within 24 hours after becoming aware of a sentinel event that occurred at VVSC, notify the PSO of VVSC of the sentinel event; and
  - (b) The PSO shall, within 13 days after receiving notification pursuant to paragraph (a), report the date, the time and a brief description of the sentinel event to:
    - (1) The Division; and
    - (2) The representative designated pursuant to [NRS 439.855](#), who is the attending MD.
2. If the PSO of VVSC personally discovers or becomes aware, in the absence of notification by another employee, of a sentinel event that occurred at VVSC, the PSO shall, within 14 days after discovering or becoming aware of the sentinel event, report the date, time and brief description of the sentinel event to:
  - (a) The Division; and
  - (b) The representative designated pursuant to [NRS 439.855](#), if that person is different from the PSO.
3. The State Board of Health shall prescribe the manner in which reports of sentinel events must be made pursuant to this section.

### **III. NRS 439.837 Mandatory investigation of sentinel event by VVSC.**

VVSC shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.

### **IV. NRS 439.855 Notification of patients involved in sentinel events.**

1. VVSC designates the attending physician to notify the his/her patient who have been involved in sentinel events at VVSC.
2. The attending physician to notify the his/her patient shall, not later than 7 days after discovering or becoming aware of a sentinel event that occurred at VVSC, provide notice of that fact to each patient who was involved in that sentinel event.
3. The provision of notice to a patient pursuant to subsection 2 must not, in any action or proceeding, be considered an acknowledgment or admission of liability.
4. A representative designated pursuant to subsection 1 may or may not be the same person who serves as VVSC's PSO.

### **V. NRS 439.856 Provision of certain information relating to facility-acquired infections to patients.** These certain information is provided in VVSC Patient's Information Packet, (VVSC PIP) that the patient receives when scheduling procedure at VVSC.

1. VVSC shall:
  - (a) Provide to each patient of VVSC, upon admission of the patient, the general and its-specific information relating to its acquired infections required by subsection 2.

# VALLEY VIEW SURGERY CENTER

## Chapter 5.3.1

### Policy: Quality Management and Improvement

### Subject: Sentinel Events: Safety Plan

Effective Date: 07/12

- (b) Post in publicly accessible areas of VVSC information on reporting its acquired infections, including, without limitation, the contact information for making reports to the Division. Such information may be added to other required notices concerning the making of reports to the Division.
2. The following information is contained in VVSC PIP and is provided to each patient pursuant to paragraph (a) of subsection 1 must include, without limitation: This
  - (a) The measures used by VVSC for preventing infections, including VVSC acquired infections;
  - (b) Information on determining whether a patient had an infection upon admission to VVSC, risk factors for acquiring infections and determining whether an infection has been acquired;
  - (c) Information on preventing VVSC acquired infections;
  - (d) Instructions for reporting VVSC acquired infections, including, without limitation, the contact information for making reports to the Division; Posted instructions are listed on the Patients' Bill of Rights for reporting facility-acquired infections, including, without limitation, the contact information for making reports to the Southern Nevada Health District at 775-684-1068 Department of Health and Human Services, Health Division, Bureau of Health Care Quality and Compliance (BHQC) at 702-486-6515, Fax 775-684-1073.
  - (e) Any other information that VVSC deems necessary.

#### **VI. NRS 439.857 Procedure for informing patient, legal guardian or other person that patient at VVSC has infection, immunity from liability for providing certain information.**

1. Except as otherwise provided in subsection 2, when VVSC confirms that a patient at its facility has an infection, the attending physician shall, as soon as practicable but not later than 5 days after the diagnosis is confirmed, inform the patient or the legal guardian or other person authorized by the patient to receive such information that the patient has an infection.
2. The attending physician may delay providing information about an infection if the patient does not have a legal guardian, has not authorized any other person to receive such information and:
  - (a) is not capable of understanding the information;
  - (b) is not conscious; or
  - (c) in the judgment of the provider of health care, is (c) likely to harm himself or herself if informed about the infection.
3. If the attending physician delays providing information about an infection pursuant to subsection 2, such information must be provided as soon as practicable after:
  - (a) The patient is capable of understanding the information;
  - (b) The patient regains consciousness;
  - (c) In the judgment of the attending physician, the patient is not likely to harm himself or herself if informed about the infection; or

---

- (d) A legal guardian or other person authorized to receive such information is available.
- 4. VVSC shall ensure that the providers of health care of the VVSC follows its protocols in accordance with this section that provide the manner in which a provider of health care or his or her designee must:
  - (a) Inform a patient or the legal guardian or other (a) person authorized by a patient to receive such information that the patient has an infection with 5 days of determination; and
  - (b) If known or determined while a patient remains at VVSC, inform the patient or the legal guardian or other person authorized by the patient to receive such information whether the infection was acquired at the VVSC and of the apparent source of the infection.
  - (c) A person or governmental entity who, with reasonable care, informs a patient or the legal guardian or other person authorized by the patient to receive such information that an infection was not acquired at the medical facility and of the apparent source of the infection pursuant to subsection 4 is immune from any criminal or civil liability for providing that information.

## **VII. NRS.865 Patient safety plan: Development; inclusion of infection control program to prevent and control infections; approval; notice' compliance' annual review and update.**

- 1. VVSC has an internal patient safety plan to improve the health and safety of patients who are treated at VVSC.
- 2. The patient safety plan must include, without limitation:
  - (a) The patient safety checklists and patient safety policies most recently adopted pursuant to [NRS 439.877](#).
  - (b) An infection control program to prevent and control infections within VVSC. To carry out the program, VVSC shall adopt an infection control policy. The policy must consist of:
    - (1) The current guidelines appropriate for VVSC's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, without limitation, the Association for Professionals in Infection Control and Epidemiology, Inc., the Centers for Disease Control and Prevention of the United States Department of Health and Human Services, the World Health Organization and the Society for Healthcare Epidemiology of America; and
    - (2) VVSC-specific infection control developed under the supervision of a trained infection preventionist.
- 3. The program to prevent and control infections within VVSC must provide for the designation of a person, who is the Infection Control Officer, is responsible for infection control at all times.
- 4. VVSC shall submit its patient safety plan to the GB of VVSC for approval in accordance with the requirements of this section.

---

5. After VVSC's patient safety plan is approved, VVSC shall notify all providers of health care who provide treatment to patients at VVSC of the existence of the plan and of the requires of the plan. VVSC shall require compliance with its patient safety plan.
6. The patient safety plan must be reviewed and updated annually in accordance with the requirements for approval set forth in this session.

### **VIII. NRS 439.877 Patient safety checklists and patient safety policies: Adoption by patient safety committee; required provisions; duties of patient safety committee.** Some of the required checklists below are contained in VVSC's Surgical/Procedural Safety Check list form, VVSC's S/P Safety Check List.

1. The PSC established pursuant to [NRS 439.875](#) by VVSC adopts patient safety checklists and patient safety policies for use by:
  - (a) Providers of health care who provide treatment to patients at VVSC;
  - (b) Other personnel of VVSC who provide treatment or assistance to patients;
  - (c) Employees of VVSC who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the VVSC, including, without limitation, a janitor of VVSC. VVSC contracts with an independent cleaning services and uses the checklist entitled Surgery Center Nightly Checklist as its safety and infection checklist: and
  - (d) Persons with whom VVSC enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients at VVSC.
2. The patient safety checklists adopted pursuant to subsection 1 must follow protocols to improve the health outcomes of patients at VVSC and must include, without limitation:
  - (a) Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of health care. This is #4 and #5 in VVSC's S/P Safety Check List.
  - (b) Checklists for ensuring that employees of VVSC, (this is #1, #12, and #19 VVSC's S/P Safety Check List) and contractors with VVSC who are not providers of health care follow protocols to ensure that the room and environment of the patient is sanitary.
  - (b) A checklist to be used when discharging a patient from VVSC is included in VVSC's PACU Record or Post Procedure Record, includes, without limitation, verifying that the patient received:
    - (1) Proper instructions concerning prescription medications
    - (2) Instructions concerning aftercare; and
    - (3) Any other instructions concerning his or her care upon discharge.
  - (c) Any other checklists which may be appropriate to ensure the safety of patients at VVSC.
3. The patient safety policies adopted pursuant to subsection 1 must include, without limitation:
  - (a) A policy, located in VVSC's Policy and Procedure (P&P) Manual, Section: Appendix

Nursing Services, Subject Patient Identifiers, for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of health care. The personal identifiers include, without limitation, the name and date of birth of the patient.

- (b) A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of health care at VVSC including, without limitation, protocols relating to hand hygiene.
  - (c) A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, without limitation, active surveillance. Active surveillance may include, without limitation, a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.
4. The patient safety committee shall:
- (a) Monitor and document the effectiveness of the patient identification policy adopted pursuant to paragraph (a) of subsection 3.
  - (b) At least annually, review the patient safety checklists and patient safety policies adopted pursuant to this section and consider any additional patient safety checklists and patient safety policies that may be appropriate for adoption for use at VVSC.
  - (c) Revise a patient safety checklist and patient safety policy adopted pursuant to this section as necessary to ensure that the checklist or policy, as applicable, reflects the most current standards in patient safety protocols.
  - (d) On or before July 1 of each year, submit a report to the Director of the Legislative Counsel Bureau for transmittal to the Legislative Committee on Health Care. The report must include information regarding the development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to paragraph (b).

## PATIENT SAFETY PLAN

DATE: 02/19/18

---

This plan was created and revised by the Kindred Hospital Las Vegas DeLima Campus Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Kindred Hospital Las Vegas DeLima Campus is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Kindred Hospital Las Vegas DeLima Campus Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

### Scope and Purpose

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Kindred Hospital Las Vegas DeLima Campus are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Kindred Hospital Las Vegas DeLima Campus has developed this Patient Safety Plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

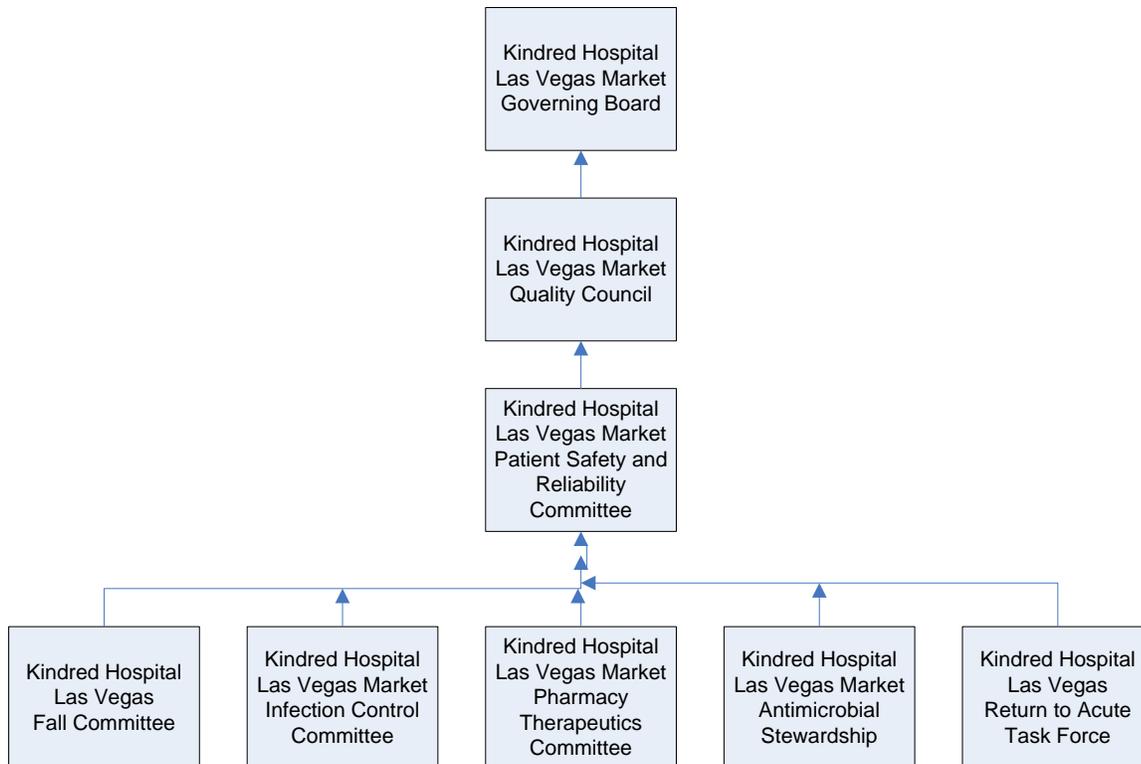

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

## Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA Team Leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

- Provide vision and leadership to the Root Cause Analysis process
- Work with the Director of Quality Management to assure process changes are implemented
- Guide the staff in the process of discovery and mitigation of future process failures

#### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans
- Provide fiduciary responsibilities

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.

- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                | Goals                | Plan                                                                                                                                                                                                                                                                                                     | Planned Completion Date | Responsible Party                                 |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Kindred Hospital Las Vegas DeLima Campus will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care

Improvement, which we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Kindred Hospital Las Vegas DeLima Campus to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

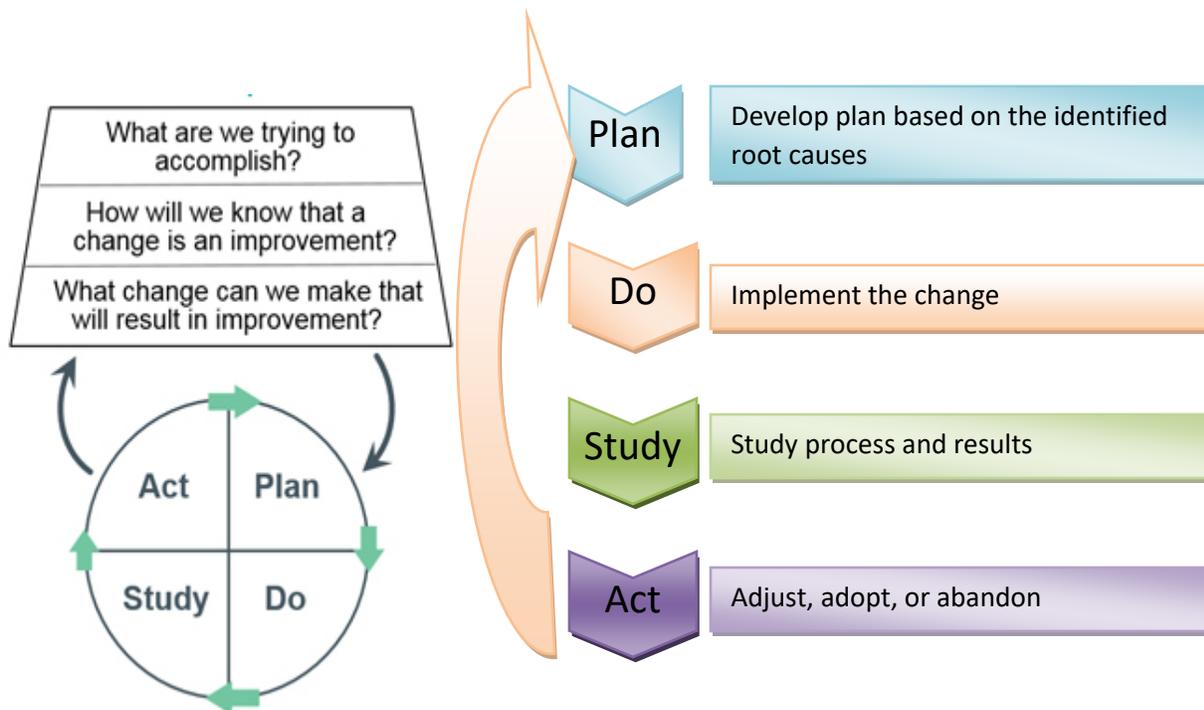

### Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Kindred Hospital Las Vegas Sahara Campus is using the Kindred Event Reporting System for tracking the incident and sentinel events, NHSN for reporting healthcare infection data, WebIZ for reporting vaccinations, and Business Warehouse and Meditech for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network

- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

|         |           |          |
|---------|-----------|----------|
| Monthly | Quarterly | Annually |
|---------|-----------|----------|

|                                                                                                         |                                                                                                                                                                                                                                             |                                                                                                           |

## Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving

a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and

- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

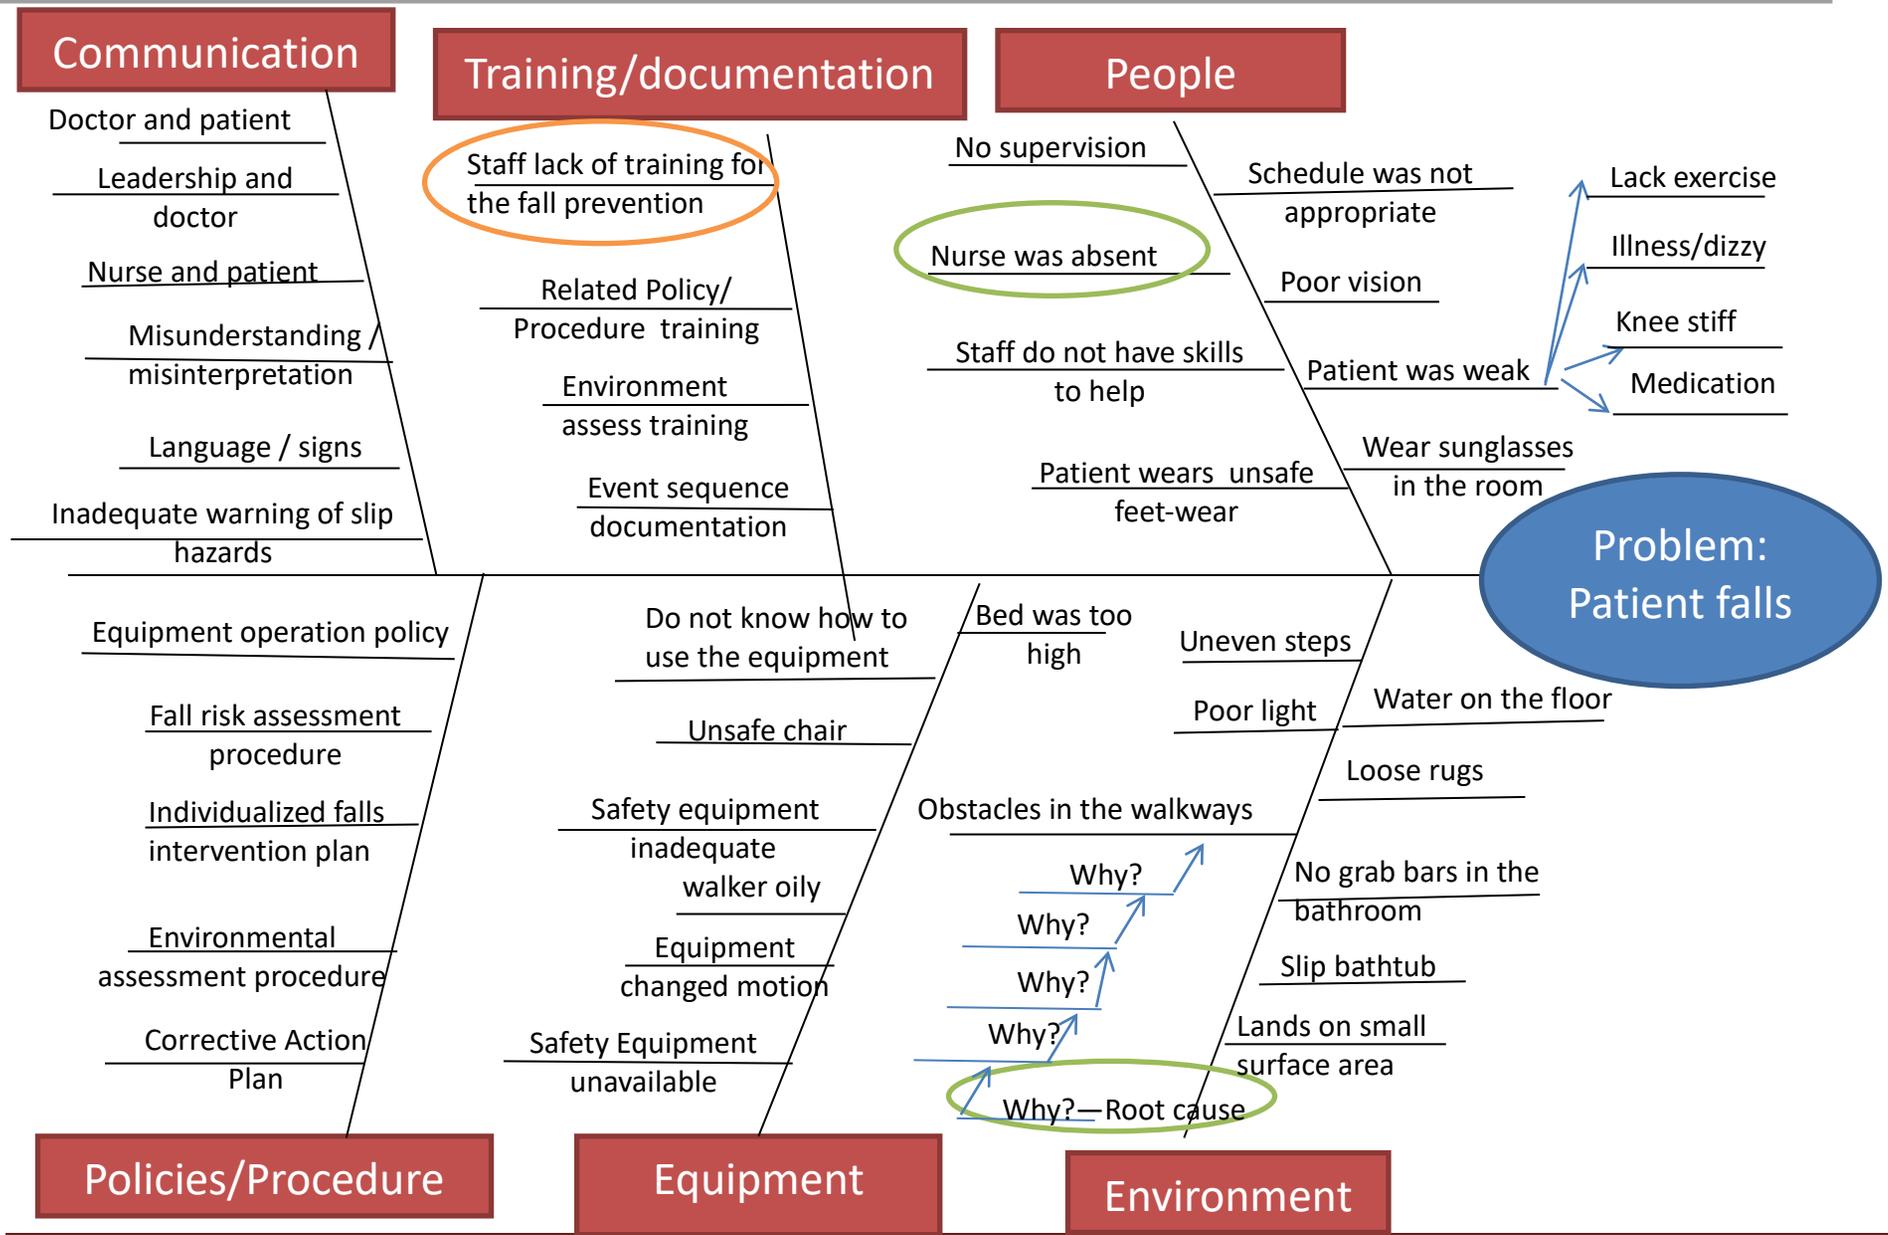

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                         | Q1 2015                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                              |                                                                                            |                                                                                                                                 |                                                                                      |

| <b>Aim:</b> (Describe the overall SMART goal that your team wishes to achieve.) |  |        |  |
|                                                                                 |  |        |  |
| <b>Plan:</b>                                                                    |  |        |  |
| 1. List the tasks needed to set up this test of change.                         |  |        |  |
|                                                                                 |  |        |  |
| 2. Predict what will happen when the test is carried out.                       |  |        |  |
|                                                                                 |  |        |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

|                                              |                                                                                    |
|----------------------------------------------|------------------------------------------------------------------------------------|
| Did you meet your measurement goal? Explain. | <b>Summarize what was learned: success, failure, unintended consequences, etc.</b> |
|                                              |                                                                                    |

**Act:** (Describe what you concluded from this cycle.)

|                                                                            |                                                                                                           |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Based on what was learned, please indicate what action will be considered. | <b>Describe what modifications to the plan will be made for the next cycle based on what you learned.</b> |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle       |                                                                                                           |
| <input type="checkbox"/> Adopt: expanding changes throughout organization  |                                                                                                           |
| <input type="checkbox"/> Abandon: change approach and repeat PDSA cycle    |                                                                                                           |

**Appendix D-2: PDSA Monthly / Quarterly Progress Report**

|                                                                                         |                    |                      |  |

Key Words: personal protective equipment, PPE, safety equipment,

### Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

### Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

### Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

### Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

### Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

|                                                                                              |                                                                                                                                      |                                                                                     |

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

# Physicians' Surgery Center of Nevada

## QUALITY AND PATIENT SAFETY PLAN Template

DATE:12/13/2017  
VERSION: 1

This plan was created and revised by the Physicians' Surgery Center of Nevada Patient Safety committee. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee**  
**Physicians' Surgery Center of Nevada**  
3475 G.S. Richards Blvd Suite 110  
Carson City, NV 89703

## Commitment to Patient Safety

---

Physicians' Surgery Center of Nevada is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Physicians' Surgery Center of Nevada Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Physicians' Surgery Center of Nevada are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Physicians' Surgery Center of Nevada has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

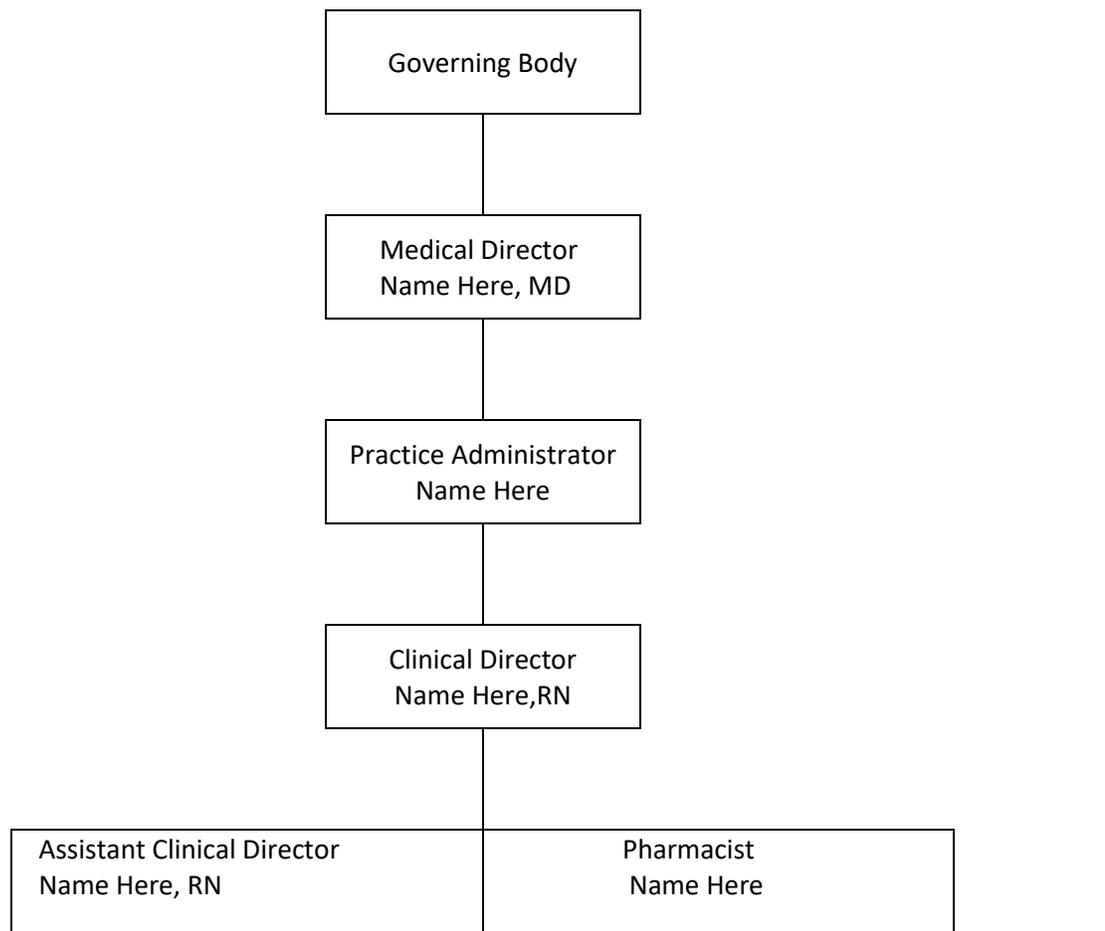

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

### Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader/facilitator Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.

- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet quarterly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous quarter.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

---

| Objective | Goals | Plan | Planned Completion Date | Responsible Party |
|-----------|-------|------|-------------------------|-------------------|
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Physicians' Surgery Center of Nevada will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Physicians' Surgery Center of Nevada to explore the cause and effect relationship underlay a problem. One can find the root causes by asking "why" no less than five times. This technique can be used individually or as a part of the fishbone diagram.

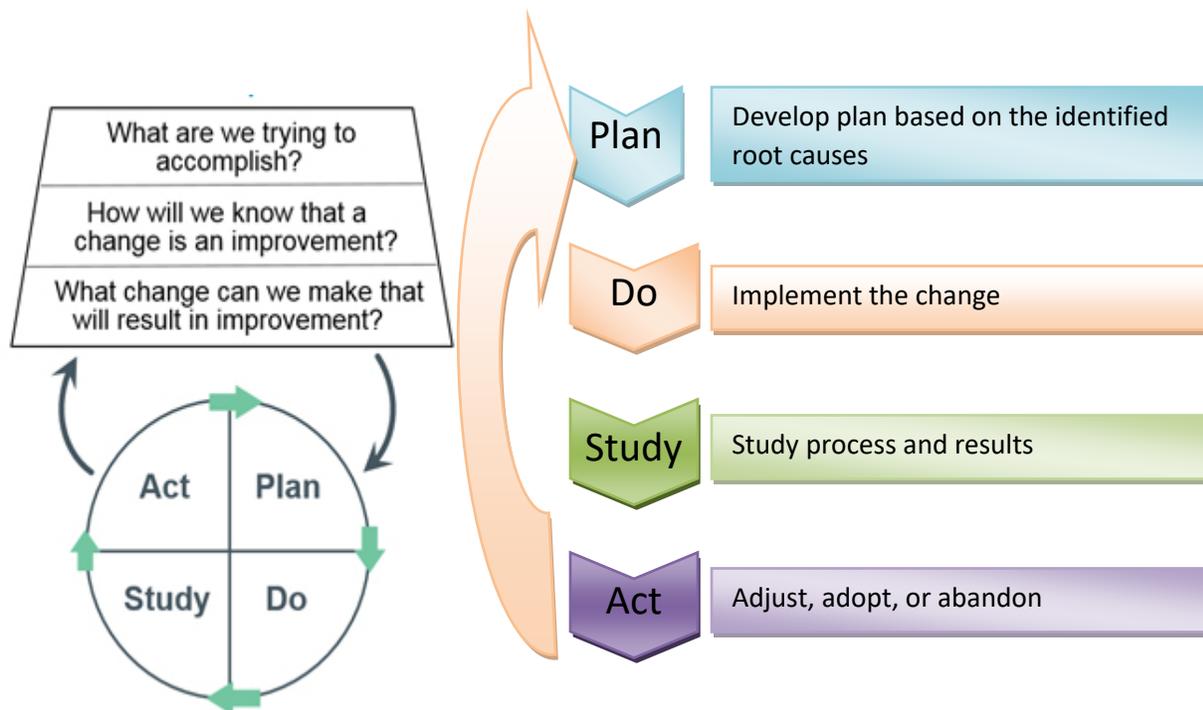

### Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, "why did this happen?" for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why's technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.

- What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Physicians' Surgery Center of Nevada is using Redcap for tracking the sentinel events, healthcare infection data, and for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CURRENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

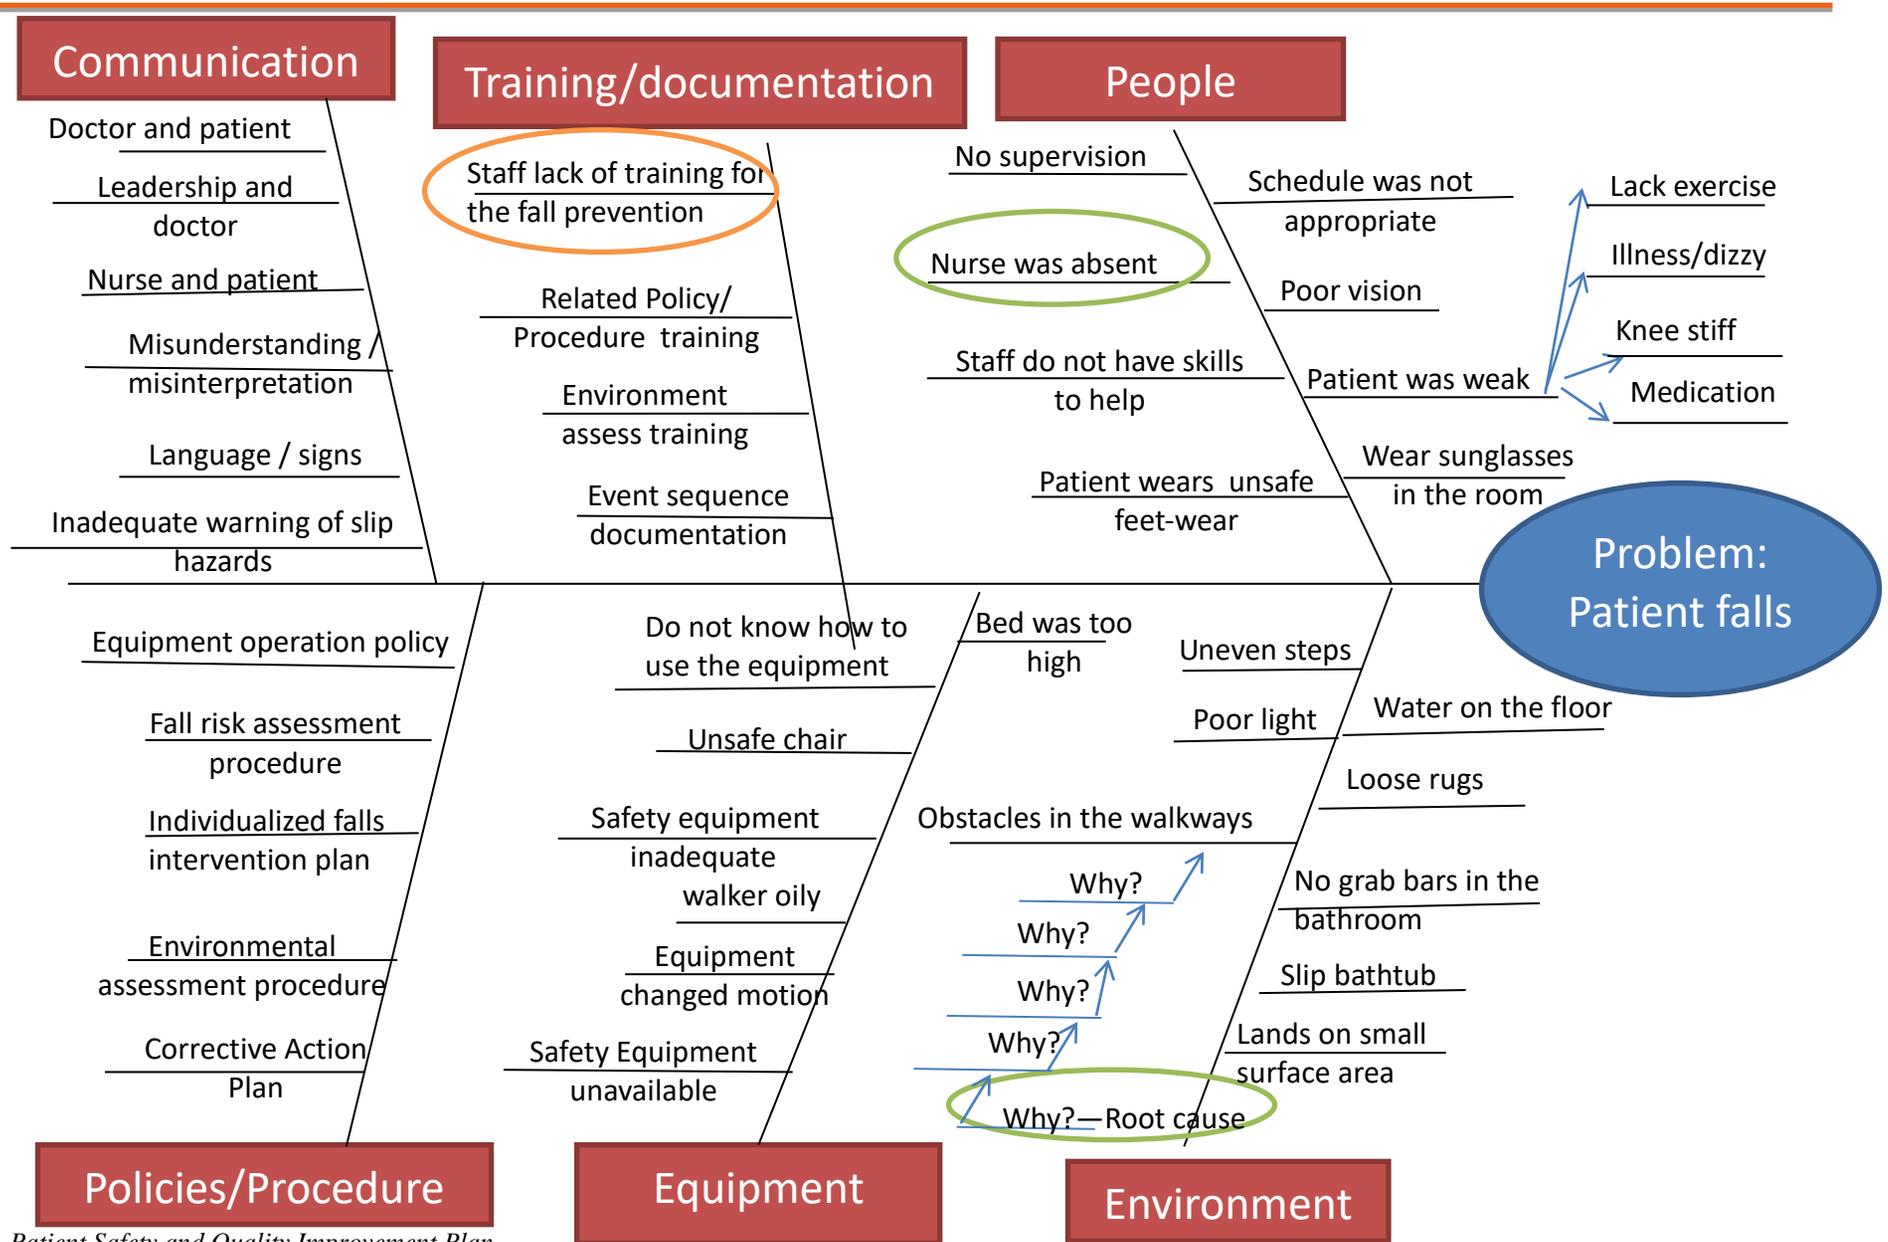

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                                                                                                                                              | Q1 2015                                                                       |

| 1. What is your goal?                                                                   |                    |                      |  |
| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

## Appendix F: Policy Example

[Reference: Hospital Policies. MERCY Hospital. <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>]

|                                                                                   |                                                                                   |                                                   |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------------------------------|
|  | HOSPITAL POLICY AND INFORMATION MANUAL                                            |                                                   |
| <p>PERSONAL PROTECTIVE EQUIPMENT POLICY<br/>Page 1 of 2</p>                       | <p>Date Issued:<br/>Date Last Revised:<br/>Next Review Date:<br/>Approved By:</p> | <p>07/01 08/14<br/>08/17<br/>Policy Committee</p> |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

#### Risk Management

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

#### Process

##### Manager's Responsibilities

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee's Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

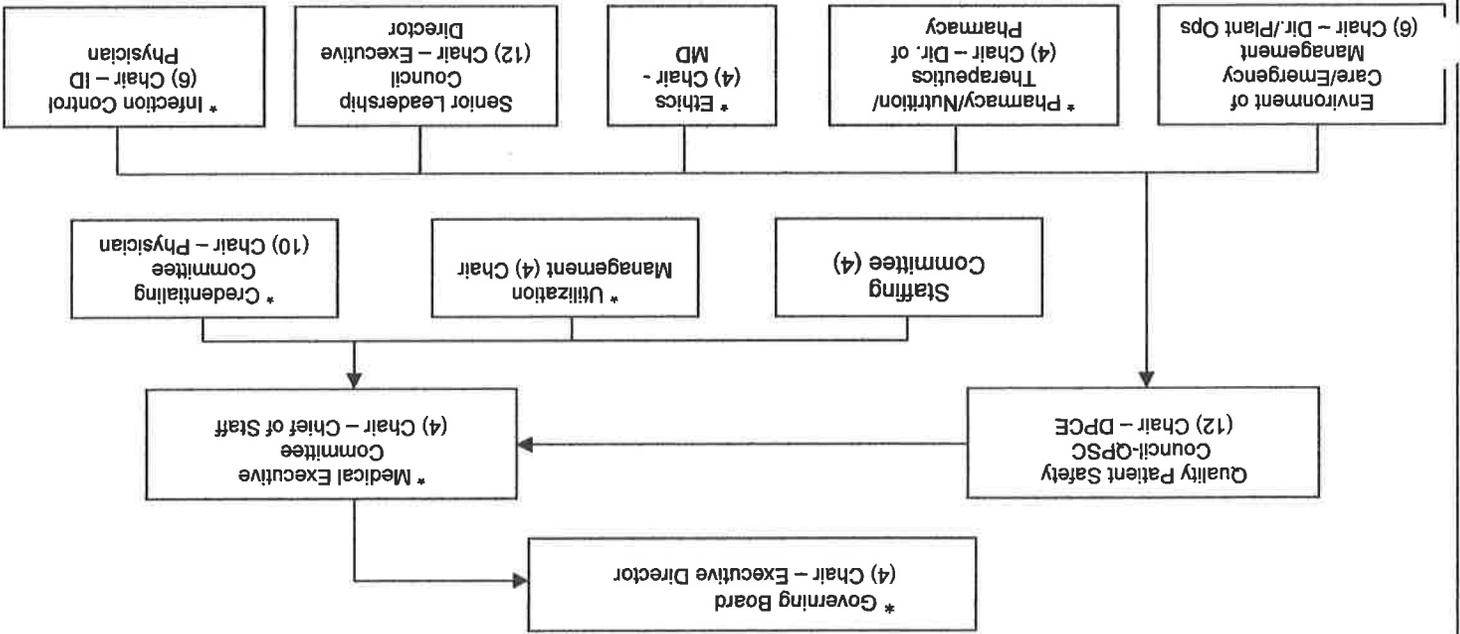

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

COMMITTEE ORGANIZATIONAL  
CHART**

\*MD on Committee

## QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT PLAN

### PURPOSE

The Governing Body, Administration, Medical Staff, and staff of Horizon Specialty Hospitals will demonstrate a consistent endeavor to deliver optimal care to all patients through the establishment of a hospital-wide continuous Quality Assessment and Performance Improvement (QAPI) plan. The organization's leaders will plan and implement a hospital-wide continuous Quality Assessment and Performance Improvement Plan in accordance with our mission, vision, and values as well as applicable laws and regulations. QAPI is incorporated into each aspect of our patient care delivery process. Quality is multidisciplinary and the processes for monitoring, analyzing, and improving quality involve various methodologies. Multiple tools and techniques are used to gather data, analyze information, evaluate solutions, and demonstrate improvement. Organizational functions and processes that most significantly impact patient care and outcomes will be evaluated in accordance with clinically valid criteria, indicators, and standards. Data can be obtained through a variety of sources (Appendix A). Performance measures may include efficacy, appropriateness, availability, timeliness, effectiveness, continuity, safety efficiency, respect, and caring. Continuously monitoring, analyzing, and improving performance of clinical and other processes are the focus of the QAPI Plan.

### OBJECTIVES

The objective of the plan is to provide an optimal, uniform level of care through reduction and/or elimination of unnecessary and correctable risks, hazards, and expense within the hospital by:

- Establishing a planned and systematic approach to monitor, analyze, and improve performance to optimize patient outcomes
- Coordinating the integration of all quality improvement activities throughout the organization
- Implementing a system for evaluation of information collected through ongoing monitoring/evaluation and utilization of comparative data sources to identify trends, risks, or opportunities for improvement
- Objectively assessing the cause and scope of identified risks and variations
- Implementing appropriate processes for improvement and sustaining improved performance
- Documenting improved patient care and improved patient outcomes through quality improvement initiatives
- Assuring communication and reporting of quality improvement activities between hospital staff and administration, Medical staff, and the Governing Body

**AUTHORITY AND ACCOUNTABILITY**

The normal operation and administrative structure of the hospital and its Medical Staff are not altered by this plan.

**A. Governing Body**

The Governing Body of Horizon Specialty Hospital has the responsibility for the QAPI Plan. The Governing Body has delegated these functions to be carried out by the medical and hospital staff.

**B. Medical Staff**

The Medical Executive Committee (MEC) has the authority and responsibility to take necessary corrective action based on findings and recommendations of the quality improvement activities. This action could be in the form of, but is not limited to the following:

- a. New or revised policies and procedures
- b. Changes in privileges and assignments
- c. Educational and training programs
- d. Recommendations for equipment or facility changes
- e. Counseling of hospital or Medical staff
- f. Recommending a Performance Improvement Team

**C. Quality Patient Safety Council (QPSC) Committee**

The QPSC shall have the responsibility for coordinating and integrating the hospitals QAPI Plan and shall be accountable to the MEC of the Medical Staff, Administration, and the Governing Body. The council will monitor all quality improvement activities of the Medical Staff and hospital departments/programs.

**D. Administration and Hospital Staff**

The Executive Director (ED) has the responsibility for assuring that necessary action is taken in the administrative area based on findings of quality improvement activities.

The department and program directors shall be responsible for the implementation of quality improvement activities within their department/program. The quality department and program directors shall be accountable to the ED for taking necessary corrective action based on findings of the quality improvement activities as related to their area of responsibility.

**CONFLICT OF INTEREST**

In quality improvement activities which include Medical Staff ongoing Professional Practice Review (OPPE) and Focused Professional Practice Review (FPPPE), no physician shall have primary review responsibility for any case in which he/she is involved. This does not preclude the physician from participating in the case presentation process which facilitates education.

**CONFIDENTIALITY**

When monitoring, analyzing, and reporting quality improvement data, all reasonable steps shall be taken to ensure the confidentiality rights of patients, physicians, and staff that are affected by the data reviewed. All information related to quality improvement activities performed by the Medical Staff or hospital staff in accordance with this plan is confidential. Some information may be disseminated on a "need to know" basis as required by agencies, such as federal review agencies, regulatory bodies, the National Practitioners Data Bank, or others approved by the MEC, Hospital Administration, and/or the Governing Body. QPSC meeting minutes and reports generated are considered confidential. Official actions pertinent to individual clinical performance are personal and confidential.

**QUALITY PATIENT SAFETY COUNCIL (QPSC) COMMITTEE**

**A. Membership/Organization**

The membership of the QPSC Committee will be composed to all hospital departments, both internal and contracted. Meetings will be held on a monthly basis. More frequent meetings may be called at the discretion of the Committee Chairperson.

**B. Responsibilities**

The QPSC shall coordinate all quality improvement activities, having the responsibility for the following functions:

1. Setting priorities for hospital-wide quality improvement activities designed to provide quality outcomes and improved efficiency. Prioritizations of quality improvement activities is based on the following:

- a. Impact on patient care
- b. Urgency
- c. Information on unanticipated adverse occurrences affecting patients
- d. Potential for resistance to change, manageability and measurability
- e. Special attention will be given to those activities that are determined to involve high volume, high risk, and/or problem-prone aspects of care
- f. Quality improvement priorities will be established annually and specified in Appendix B of this plan

2. Chartering Performance Improvement Teams (PIT) as recommended and reviewing team activities. Proposed action from PIT's will be reviewed by the QPSC Committee for approval.

3. Ensuring that directors, staff, and teams have appropriate education, time, and resources for quality improvement activities.
  4. Reviewing all performance improvement reports and data from hospital departments and committees as well as contracted services.
  5. Assisting in the development of goals and selecting criteria to be used for ongoing monitoring and quality improvements activities.
  6. Assisting in determining methods for review and assessment of identified concerns.
  7. Requesting reports of performance improvement activities.
  8. Recommending corrective action for identified concerns as appropriate.
  9. Determining if further review should be done prospectively, concurrently, or retrospectively.
  10. Monitoring corrective action through resolution.
  11. Selecting and reviewing performance of comparative indicators and core measures.
  12. Reviewing the results Sentinel Event or Near Miss investigations, including any analysis of the adequacy of staffing. Making recommendations based on event and investigation conducted.
  13. Forwarding findings to the MEC and Governing Body as appropriate.
  14. Performing an annual review of each clinical department's performance improvement indicators.
  15. Performing an annual evaluation of the Hospital-wide QAPI Plan.
- C. QPSC Committee Chairperson**
- The Chairperson is the vital link to ensure communication between the QPSC Committee, the ED, MEC, Governing Board, IP Committee, Environment of Care/Emergency Management and the medical and hospital staff. The chairperson is responsible for the administration of the QAPI and Safety Plan. His/her responsibilities include, but are not limited to:
1. Chairmanship of multidisciplinary QPSC Committee.
  2. Presents final PSC activities and reports to the MEC and Governing Board.

- Performance improvement priorities identified by hospital administration
  - Invasive procedure monitoring
  - Adverse events related to the use of procedural sedation
  - Blood and blood component use, including reported and confirmed transfusion reactions.
- A. Ongoing monitoring and assessment of important aspects of care, processes, and functions, as well as review of occurrences identified through the medical record screening process and incident reporting. Monitoring will be carried out utilizing objective criteria and indicators that reflect current knowledge and clinical experience. Performance measurement data will be collected on the following as appropriate:

**REVIEW PROCESS/SCOPE OF ACTIVITIES**

Quality assessment and performance improvement shall be complete through:

1. Assuring that all quality improvement activities are documented with a focus on effective communication of conclusions, recommendations, actions, and follow-up evaluation.
2. Keeping the QPSC Committee informed of the results of all ongoing quality improvement activities and initiatives.
3. Assisting departments and services in developing a monitoring and assessment system to evaluate patient outcomes and important processes of the department or service in a continuous manner
4. Facilitation and training of Performance Improvement Teams as needed.
5. Informing ancillary and contracted services of quality improvement activities in process or completed that may be relevant to their respective areas.
6. Storing and retaining all departmental, committee, and team reports presented to the QPSC Committee.
7. Evaluation of the QAPI Plan annually.
8. Requesting follow-up information on concerns from hospital administration and Medical staff members.

**D. Director of Patient/Customer Experience (DPCE)**

3. Screening of sensitive information that should be referred to the appropriate authority other than the QPSC Committee because of the urgent or privileged nature of the information.
4. Reviewing medical staff and departmental quality improvement activities with the Senior Leadership Council, MEC, and Governing Board to determine patterns/trends, integration of information and compliance with CMS and The Joint Commission standards.
5. Providing input to the Credentials Committee as needed.
6. Participation in identification of multidisciplinary or departmental issues or concerns.

A. **Blood Usage Measurement**- Blood usage measurement shall be conducted on an ongoing basis. Blood usage data is reviewed and analyzed quarterly by the MEC. Clinically valid criteria and indicators will be used in the screening process and in the more intensive evaluation of any identified or suspected concerns in blood usage. Blood usage measurement will include the following:

**MEDICAL STAFF AND/OR QUALITY IMPROVEMENT FUNCTIONS**

Reports of the Medical Staff department quality improvement activities are reviewed by the MEC, Governing Board, the Executive Director (ED), and the Chief Nursing Officer (CNO). As part of the annual evaluation of the hospital's QAPI Plan, the effectiveness of the quality assessment and improvement activities by the Medical Staff department shall be evaluated.

- B. Periodic analysis of the data collected through ongoing monitoring and assessment including information collected by appointed Medical Staff committees, task forces, and PTT's to identify trends or opportunities for improvement.
- C. Taking action when concerns regarding patient care and clinical performance or opportunities for improvement have been identified.
- D. Evaluation of the effectiveness of action taken.
- E. Documentation of the results of monitoring and assessment activities, including conclusions, recommendations, actions taken, and follow-up and evaluation of the effectiveness of actions taken in the minutes of the departmental or committee meetings.

- The results of resuscitation
- Restraint utilization and safety
- Medication Management, including significant medication errors and adverse drug reactions
- Patient perception of the safety and quality of care, treatment, and services
- Staff perception of hospital safety culture (surveys to be completed no less than every two years)
- Fall reduction and Safety activities
- Effectiveness of response to a change or deterioration of a patient's condition
- Review of Rapid Response Team response
- Organ Procurement conversion rate
- Infection Prevention activities
- Mortality and Morbidity reviews including use of autopsy criteria
- Utilization Management
- Timeliness of reporting critical test results and compliance with all National Patient Safety Goals (NPSG)

- Monitoring the use of whole blood and blood components
  - Evaluation of all reported and confirmed transfusion reactions
  - Development/approval of policies and procedures relating to the distribution, handling, and administration of blood and blood components
  - Measuring, assessing, and improving the ordering, distribution, handling, dispensing, administration, and monitoring of the effects of blood and blood components
  - Review of the adequacy of transfusion services
- B. Credentials Committee-** The Credentials Committee shall meet monthly, but no less than quarterly. This committee shall ensure that each medical staff member is qualified for membership, and shall strive to maintain the optimal level of professional performance of the medical staff through the appointment/reappointment process, the specific delineation of privileges, the approval of physician assistant/nurse practitioner, and physician employees, and the periodic review of each staff member.
- C. Medical Executive Committee (MEC)-** The Medical Staff Executive Committee is delegated the primary authority over activities related to functions of quality assessment and performance improvement of the professional services provided by individuals with clinical privileges. The MEC shall meet quarterly to receive and act upon reports and recommendations from medical staff committees, clinical departments, assigned activity groups, and the QPSC Committee.
- D. Quality Patient Safety Council Committee (QPSC) -** The QPSC shall meet monthly. There shall be representation from the Medical Staff, hospital Administration and all hospital departments, services and programs as well as contracted services. The committee shall adopt, implement, and monitor a comprehensive hospital-wide Quality, Risk, and Safety Program. The committee is responsible for the oversight of the Patient Safety Program and to evaluate effectiveness and recommend changes in equipment, policies & procedures, and processes as appropriate for the safe, effective delivery of care. The committee shall oversee the Patient Complaint and Grievance process and all adverse occurrences.
- In addition, the QPSC shall review and evaluate The Joint Commission Sentinel Event Alerts and National Patient Safety Goals as they are published, make recommendations regarding further action and determine which areas within the hospital shall be involved with review/evaluation of each alert/goal and implementation of risk reduction strategies to ensure compliance.
- E. Infection Prevention Committee-** The Infection Prevention committee shall meet bi-monthly to review and evaluate the hospital-wide infection control activities. The committee shall have representation from the Medical Staff, Hospital Administration, the person directly responsible for management of infection surveillance, prevention

- Based on clinical experience, it is known or suspected that the drug causes adverse reactions or interacts with another drug(s) in a manner that represents significant health risk
- following reasons:
- monitoring of medications. Drugs may be selected for evaluation for one or more of the selection, ordering and transcribing, preparing and dispensing, administering, and meet quarterly and oversee the measurement, assessment, and improvement of the **G. Pharmacy, Nutrition, and Therapeutics Committee (PNT)**- The PNT Committee shall
- to patients, hospital staff, and visitors.
- characteristics and practices, and to eliminate or reduce, to the extent possible, hazards and utility systems of the hospital, which shall be designed to produce safe security, hazardous materials, emergency management, life safety, medical equipment, The committee shall adopt, implement, and monitor requirements related to safety, management, clinical leader, Human Resource Director, and Central Supply Manager. person directly responsible for all aspects of plant operations and emergency at least quarterly. Committee representation shall include Hospital Administration, the **F. Environment of Care/Emergency Management Committee**- The committee shall meet
- Control, OSHA, APIC and other agencies as indicated.
  - Current literature and/or new recommendations from the Centers for Disease
  - Procedures and practices of new services instituted and any problems identified
  - Prevalence and incidence studies
  - above the usual baseline infection rates
  - Unusual epidemics, clusters of infections, unusual pathogens, and occurrences of antimicrobial susceptibility/resistance trend studies
  - Annual program evaluation of risk assessments and outcomes using the results hospital.
  - proposals for special infection control studies conducted throughout the employee infection surveillance and environmental sampling. This includes other
  - Special collection of surveillance data directed by the committee such as
  - Data trend analyses generated by surveillance activities
- The surveillance activities and system are selected by reviewing:
- targeted surveillance, problem-oriented surveillance, or a combination of these systems. the detection of nosocomial infection will be selected from total house surveillance, approve the type and scope of surveillance activities. The type of surveillance system for hospital from the community. The committee will evaluate, revise as indicated, and prevent, identify, and control infections acquired in the hospital or brought into the function will include the use of pre-established criteria and will be performed to and control program, and, as appropriate, other department and services. The review

The quality and appropriateness of patient care will be monitored and evaluated in all important aspects of care, key processes, and important functions of clinical departments and support services. This review may include the following dimensions of performance:

**HOSPITAL AND/OR CONTRACTED SERVICES**

Results of quality improvement activities are considered when evaluating each physician at the time of reappointment. As part of the annual evaluation of the hospital's QAPI Plan, the effectiveness of quality assessment and performance improvement activities by medical staff committees shall be evaluated.

Documentation of the results of monitoring and evaluation activities shall be included in the minutes of the committee meetings. The minutes will reflect all conclusions, recommendations, follow-up, and actions taken. All concerns and review activities are presented to the MEC and Governing Board.

H. **Utilization Management (UM) Committee**- The UM Committee shall meet quarterly to address over-utilization, under-utilization, and inefficient scheduling of resources for federal (QIO) and non-federal patients. This shall be accomplished through screening of admissions, evaluation of ancillary services as to inappropriate utilization, evaluation of "avoidable days", and evaluation of the results of discharge planning.

Department-specific information is forwarded to the appropriate medical staff department for review and follow-up.

- The drug is used in the treatment of patients who may be at high risk for adverse drug reactions because of age, disability, or unique, metabolic characteristics
- The drug has unusual toxicity or potential for causing serious complications from their pharmacologic effects if not prescribed correctly
- The drug has been designated, through the hospital's Antibiotic Stewardship Program or other continuous quality improvement activities for monitoring and evaluation
- The drug is one of the most frequently prescribed drugs; and/or The drug has greater cost than other drugs of comparable pharmacologic effect
- Monitor medication errors and adverse drug reaction and take appropriate follow-up actions
- Develop and approve policies and procedures related to the selection and procurement, storage, ordering and transcribing, preparing and dispensing, administering and monitoring of medications
- Develop and maintain a drug formulary or drug list

Performance Improvement Teams and/or Task Forces are comprised of individuals from cross-functional groups. Teams are chartered to improve systems and operational processes involved

**QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT TEAMS & TASK FORCES**

and/or contracted services shall be evaluated. the hospital's QAPI Plan, the effectiveness of the quality improvement activities by clinical the office of the Director of Patient/Customer Experience. As part of the annual evaluation of evaluation activities of the medical staff. All evaluation activities will be coordinated through Where possible, clinical and/or support services evaluation activities will be integrated with the effectiveness of actions taken shall be documented and submitted to the QPSC Committee. Results of the quality improvement activities including evaluation, actions taken, and the QPSC on a quarterly basis. Laboratory, Diagnostic Imaging, Dialysis, and Rehabilitation quality data will be reported to the issues/concerns impacting system processes and functions which affect patient care and safety; Each department/service is also responsible for identifying and participating in the analysis

- **Nursing Services- Chief Nursing Officer**
- **Respiratory Care Services- Director of Ancillary Services**
- **Dietary Services- Registered Dietician via PNT Committee**
- **Wound Care Services- Wound Care Services Registered Nurse**
- **ABG Laboratory Services- Director of Ancillary Services**
- **Pharmacy Services- Director of Pharmacy via the PNT Committee**
- **Patient & Family Services- Chief Nursing Officer**

responsible individual listed: Each department/service is responsible for establishing specific quality improvement indicators or projects which are reflective of the hospital-wide plan and prioritizes aspects of care to be studied. The indicator results will be presented to the QPSC at least quarterly by the

documentation of quality improvement activities) will be used. The same process as outlined for the medical staff and clinical departments (ongoing monitoring, periodic evaluation, the use of objective criteria, establishing thresholds, taking action for identified concerns, evaluation of the effectiveness of actions taken, and

**POLICY:**

The surgery center maintains a safety program to address the centers environment of care, safety of patients, staff, and others. The safety program is directly linked to the Quality Assurance Performance Improvement Program. The Governing Body has approved the Safety Program.

**PROCEDURE:**

- A. The safety program processes for the management of identified hazards, potential threats, near misses, and other safety concerns like
  - 1. Adverse Incidents
  - 2. Incidents/Injuries
  - 3. Medication Errors
  - 4. Recalls
  - 5. Fall Prevention
  - 6. Fire Safety/Prevention (see chapter 8 policies for specifics)
- B. Referenced items have their own individualized policies in the policy and procedure manual.
- C. The safety program is supervised by the Quality Assurance Performance Improvement Committee. The DON is designated as the Safety Officer.
- D. The Safety Officer and Administrator will provide education. Staff in-servicing and/or drills are conducted at the center. In-services/drills provide education and training on safety issues to all staff, such as:
  - 1. Disaster and Emergency Drills and/or Fire Prevention/Safety
  - 2. Universal Precautions
  - 3. Sharps Prevention

The center also provides code drills such as:

- 1. Malignant Hyperthermia
- 2. CPR

- E. At time of employment personnel is oriented, provided training and competency (s).
- F. Unique patient identifiers are consistently used throughout care.
- G. Center has policies for anesthesia support, and post-procedural care.
- H. Center has a written emergency and disaster preparedness plan and documentation of requesting to participate on a community level.
- I. Environmental hazards associated with safety are identified and safe practices are established.
- J. Measures are implemented to prevent skin and tissue from injury from chemicals, cleaning solutions, and other hazardous exposure.
- K. Patients are educated about prescribed medical devices and associated protocols and guidelines.
- L. Methods for ensuring food and drink for patient use is stored, served, and disposed of properly
- M. A process to assess and reduce risks associated with physical hazards.
- N. Products including medications and solutions that carry an expiration date are monitored. The center has policies for disposal of expired medications and supplies in accordance with local, state, and federal guidelines.
- O. The center will designate the DON or surgeon if applicable to provide appropriate education to intended operators of newly acquired devices or products to be used in the care of patients. At MINIMALLY INVASIVE CENTER OF EXCELLENCE the Director of Nursing is designated the Safety Program Officer.

## **I. PURPOSE**

The purpose of the organizational Patient Safety Plan at the hospital is to improve patient safety and reduce risk to patients through an environment that encourages:

- Integration of safety priorities into all relevant organization processes, functions, services, departments and programs
- Recognition and acknowledgment of risks to patient safety and medical/health care errors
- The initiation of actions to reduce these risks
- The internal and external reporting of what has been found and the actions taken
- A focus on processes and systems, and the reduction of process and system failures through use of failure mode effect analysis
- Minimization of individual blame or retribution for involvement in a medical/health care error
- Organizational learning about medical/health care errors
- Support of the sharing of that knowledge to effect behavioral changes in itself and other healthcare organizations
- The Patient Safety Plan provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through the establishment of mechanisms that support effective responses to potential or actual occurrences; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.
- As patient care, and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at the hospital. The Patient Safety Plan, developed by the interdisciplinary Safety/Environment of Care Committee and approved by the medical staff, Governing Body and administration, outlines the components of the organizational Patient Safety Program.

## II. PATIENT SAFETY PLAN

- Scope of Activities:
  - The scope of the Patient Safety Plan includes ongoing proactive risk assessments, using internal and external knowledge and experience, to prevent error occurrence, maintain and improve patient safety.
  - Patient safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed by the Safety/Environment of Care Committee to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included in data analysis, maybe, but not limited to:
    - No Harm Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome - that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
    - Mild-Moderate Adverse Outcome Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
    - Any Medication Variance
    - Any Adverse Drug Reaction
    - Hazardous Condition - any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
    - Sentinel Event: The following events as outlined on NQF Serious Reportable Events in Healthcare:
      - Surgical Invasive Procedure Events
      - Product or Device Events

- Patient Protection Events
- Radiologic Events
- Care Management Events
- Environmental Events
- Potential Criminal Events
- Near Miss - any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- Hospital Acquired Conditions (HACs):
  - a. Falls and trauma (fracture, dislocation, intracranial injury, crushing injury, burn, other injuries)
- The scope of the Patient Safety Plan encompasses the patient population, visitors, volunteers and staff (including medical staff). The plan addresses maintenance and improvement in patient safety issues in every department throughout the facility. There will be an emphasis on important hospital and patient care functions of:
  - Environment of Care
  - Emergency Management
  - Human Resources
  - Infection Prevention and Control
  - Information Management
  - Leadership
  - Life Safety
  - Medication Management

| <b>Desert Parkway Behavioral HealthCare Hospital</b> |                      |

| REVIEWED: 01/2018, 12/2016, 12/2015, 12/2014         | REVISED:             |

- Medical Staff
- Nursing
- Provision of Care, Treatment and Services
- Performance Improvement
- Record of Care, Treatment and Services
- Rights and Responsibilities of the Individual
- Waived Testing

Methodology:

- The Interdisciplinary Safety/Environment of Care Committee is responsible for the oversight of the Patient Safety Plan. The Safety/Environment of Care Committee Chairperson will have administrative responsibility for the plan, or the Safety/Environment of Care Committee may assign this responsibility to another member of the committee.
- All departments within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences and potential occurrences to the Director PI/Risk Management, who will aggregate occurrence information and present a report to the Safety/Environment of Care Committee. The report will contain aggregated information related to type of occurrence, severity of occurrence, number/type of occurrences per department, occurrence impact on the patient, remedial actions taken, and patient outcome. The Safety/Environment of Care Committee will analyze the report information and determine further patient safety activities as appropriate.
- Through review of internal data reports and reports from external sources (including, but not limited to, sentinel event report information, ORYX and Core Measure performance data, occurrence reporting information from state and federal sources and current literature), and through the performance improvement priority criteria grid, the Safety/Environment of Care Committee will select at least one high-risk safety process for proactive risk assessment annually. All elements of the high-risk safety related process will be described using work tools as necessary (i.e., flowcharts, cause and effect diagrams). The proactive risk assessment will include:

| <b>Desert Parkway Behavioral HealthCare Hospital</b> |                      |
|------------------------------------------------------|----------------------|
| SUBJECT: PATIENT SAFETY PLAN                         | POLICY #600.22       |
| SECTION 06: LEADERSHIP                               | PAGE: 5<br>OF: 10    |
|                                                      | EFFECTIVE: 12-2-2013 |
| REVIEWED: 01/2018, 12/2016, 12/2015, 12/2014         | REVISED:             |

- Identification of the ways in which the process could break down or fail to perform. This will be done through assessment of the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation. Identify the possible effects of the undesirable variation on patients, and how serious the possible effect on the patient could be
- Prioritizing the potential processes breakdowns or failures
  - For the most critical effects, conduct a root cause analysis to determine why the undesirable variation leading to that effect may occur
  - Redesign the process and/or underlying systems to minimize the risk of that undesirable variation or to protect patients from the effects of that undesirable variation
  - Test and implement the redesigned process
  - Identify and implement measures of the effectiveness of the redesigned process
  - Implement a strategy for maintaining the effectiveness of the redesigned process over time
- Description of mechanisms to ensure that all components of the healthcare organization are integrated into and participate in the organizationwide program.
- Upon identification of a process or system failure and/or medical/health care error, the patient care provider will immediately:
  - Perform necessary healthcare interventions to protect and support the patient's clinical condition.
  - As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others.
  - Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.

Preserve any information related to the error (including physical information). Examples of preservation of medication label for medications administered to the incorrect patient.

|                                                      | REVISED:             |

Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.

- Report the process/system failure or medical/health care error to the staff member's immediate supervisor.
- Submit the occurrence report to the Performance Improvement Department per organizational policy.
- Any individual in any department identifying a process/system failure and/or potential patient safety issue will immediately notify his/her supervisor and document the findings on an incident report. The report will be submitted to the Director PI/Risk Management per organizational policy.
- Staff response to process/system failures and/or medical/health care errors is dependent upon the type of error identified:
  - No Harm Failures or Errors (including "no harm" medication errors) - staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an occurrence report form, submit the form to the Performance Improvement Department and notify their immediate supervisor.
  - Mild-Moderate Adverse Outcome Failures or Errors (including medication errors/variances) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report - submitting the report to the PI/Risk Management Department per organizational policy.
  - Medication Variances/errors - the staff member identifying a medication variance/error (no harm and mild-moderate harm) will notify the Pharmacy Department of the event.
  - Adverse Drug Reaction (ADR) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders.

| <b>Desert Parkway Behavioral HealthCare Hospital</b> |                      |
|------------------------------------------------------|----------------------|
| SUBJECT: PATIENT SAFETY PLAN                         | POLICY #600.22       |
| SECTION 06: LEADERSHIP                               | PAGE: 7              |
|                                                      | OF: 10               |
|                                                      | EFFECTIVE: 12-2-2013 |
| REVIEWED: 01/2018, 12/2016, 12/2015, 12/2014         | REVISED:             |

Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report, submitting the report to the PI/Risk Management Department. Staff will complete ADR report and forward to Pharmacy.

- Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify his/her supervisor and document the findings on an incident report. The report will be submitted to the PI/Risk Management Department per organizational policy.
- Sentinel Event - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure.
- Near Miss - staff will report the near miss event to his/her immediate supervisor, describe the facts of the near miss on an incident report and submit the report to the PI/Risk Department.
- Hospital Acquired Conditions - staff will follow all established protocols, guidelines and policies and procedures. Staff shall complete incident reports for any breaks in technique or policy not followed.

Established organizational policy (such as the Sentinel Event Policy) and/or the Safety/Environment of Care Committee will determine the organizational response to process/system failures and/or medical/health care errors and occurrences. All sentinel events and near miss occurrences will have a root cause analysis conducted. The determination of the Safety/Environment of Care Committee members, based on internal and external data analysis and prioritizing of patient safety criticality, will determine:

- Further remedial action activities necessary for identified occurrences
- Proactive occurrence reduction activities
- Necessity and benefit of root cause analysis performance for identified occurrences or proactive reduction activities

| <b>Desert Parkway Behavioral HealthCare Hospital</b> |                      |

| REVIEWED: 01/2018, 12/2016, 12/2015, 12/2014         | REVISED:             |

- An effective Patient Safety Plan cannot exist without optimal reporting of process/system failures and medical/health care errors and occurrences. Therefore, it is the intent of this institution to adopt a non-punitive approach in its management of failures, errors and occurrences. All staff is required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the Safety/Environment of Care Committee and the individual staff member's department supervisor determining the appropriate course of action to prevent error recurrence.
- Sentinel Events - staff members involved in a sentinel event occurrence will receive support from the Safety/Environment of Care Committee regarding the staff member's professional and emotional reconciliation of the sentinel event. The Safety/Environment of Care Committee encourages the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the Social Service Department, Human Resources Department and/or his/her department supervisor.

As part of this organization's culture of safety and quality, any staff member who has concerns about the safety or quality of care provided by the organization may report these concerns to their accrediting organization. The organization supports the staff member's right to report these concerns and will take no disciplinary or retaliatory action against the staff member for reporting the safety or quality of care concern to their accrediting organization.

- On at least an annual basis, staff will be queried regarding their willingness to report medical/health care errors.
- The Patient Safety Plan includes implementation of the recommendations set forth by the accrediting organization, or identified alternative recommendations defined by this institution, to achieve compliance with established safety standards. The selected recommendations will be monitored on a routine basis to evaluate the organization's effectiveness in the implementation of the recommendations in achieving compliance with the identified safety standards.

|                                                      | OF: 10               |
|                                                      | EFFECTIVE: 12-2-2013 |
| REVIEWED: 01/2018, 12/2016, 12/2015, 12/2014         | REVISED:             |

- The Patient Safety Plan includes an annual survey of staff (including medical staff) opinions, needs and perceptions of risks to patients and requests suggestions for improving patient safety.
- Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. The Safety/Environment of Care Committee will analyze error reporting data submitted through the PI/Risk Management Department for evidence of this information.

Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care.

The Patient Safety Plan includes consideration, at least annually, of data obtained from the organizational Information Management Needs Assessment, which includes information regarding barriers to effective communication among caregivers.

- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. Education includes the staff member's right to report any safety or quality of care concerns to the organization's accrediting organization. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.
- Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally, per hospital policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.
- Lessons learned from a root cause analysis shall be communicated to staff who provide services or are affected by a patient safety incident
- Patient safety reports from the Safety/Environment of Care Committee will be submitted to the organizational Quality, which exists as the oversight committee for the Safety/Environment of Care Committee. A data report and recordings of meeting minutes will be forwarded to the Quality Committee.

A written Patient Safety Report shall be forwarded to the Governing Body, at a minimum, once per year. Information in the report shall include:

- All system or process failures
- Number and type of sentinel events
- If patients and families were informed of the adverse events
- All actions taken to improve safety, both proactively and in response to actual occurrences
- All results of the analyses related to the adequacy of staffing and actions taken to resolve the identified problem(s)

| Section 6<br>Patient Safety                | Sun Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 1 of 7               |

## **POLICY:**

Sun Valley Surgery Center will institute and administer a comprehensive and continuous Patient Safety Program for all patients to improve patient safety and reduce risk to patients through an environment that encourages:

- Recognition of risks to patient safety and medical/health care errors
- Actions to reduce these risks
- Internal reporting of incidents and potential incidents and actions taken
- Focus on processes and systems rather than individual blame

## **PURPOSE:**

The Patient Safety Program provides a systematic, coordinated and continuous approach to maintenance and improvement of patient safety by using established mechanisms to support responses to actual occurrences, have an ongoing proactive plan to reduce medical/health errors, and integrate patient safety as a high priority in all relevant organizational processes and services.

## **RESPONSIBILITY:**

As with patient care, it is a coordinated and collaborative effort of the entire organization to maintain and improve patient safety.

The Governing Body approves the data-driven Patient Safety Program and ensures the program reflects the complexity of the facility's organization and services, including those services furnished under contract or arrangement and focuses on the prevention and reduction of medical/health errors and adverse effects.

The Clinical Director is responsible for the management of the Patient Safety Program by:

- Coordinating all patient safety activities
- Facilitating assessment and appropriate responses to reportable events
- Monitoring Root Cause Analysis and resulting action plans

|                                            |                           |
|--------------------------------------------|---------------------------|
| Section 6<br>Patient Safety                | Sun Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 2 of 7               |

- Serving as a liaison among the departments to assure facility wide integration of the Patient Safety Program.

Each individual employee within the organization acts as a patient advocate for safety and is responsible to report patient safety occurrences and potential occurrences to the QAPI Coordinator and the Clinical Director, who will aggregate the occurrence information and report to the Governing Body.

**PROGRAM:**

The scope of the Patient Safety Program includes an ongoing assessment to prevent error occurrence, maintain and improve patient safety.

Patient Safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed to prioritize organizational patient safety efforts.

**Types Of Patient Safety Or Medical/Health Care Errors:**

- No Harm Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
- Mild-Moderate Adverse Outcome Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error
- Any Adverse Drug Reaction
- Any Transfusion Reaction
- Hazardous Condition – any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Sentinel Event – an unexpected occurrence involving death or serious physical or psychological injury or the risk thereof, including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function. Sentinel event criteria includes:

- The event has resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient's illness or underlying condition.
- The event is one of the following (even if the outcome was not death or major permanent loss of function):
  - Suicide of a patient.
  - The sexual assault of a patient during treatment or while the patient was on the premises of the facility.
  - A hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities.
  - Medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient.
  - A surgical procedure on the wrong patient or on the wrong body part of a patient.
  - A foreign object accidentally left in a patient during a procedure.
  - A patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.
  - Near Miss – any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.

### **What To Do When A Patient Safety Error Occurs**

Upon identification of a medical/health care error, the patient care provider will immediately:

- Perform necessary healthcare interventions to protect and support the patient's clinical condition.
- As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others – example: immediate removal of contaminated IV fluids from supply should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
- Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.

|                                            |                           |
|--------------------------------------------|---------------------------|
| Section 6<br>Patient Safety                | Sun Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 4 of 7               |

- Preserve any information related to the error (including physical information). Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, piggyback fluid for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
- Report the medical/health care error to the staff member's immediate supervisor.
- Submit the incident occurrence report to the QAPI Committee per organizational policy.

### **Internal Reporting Of The Error/Event**

Staff response to medical/health care errors is dependent upon the type of error identified:

- **No Harm Errors** – (including “no harm medication errors), staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an incident occurrence report form, submit the form to the QAPI Committee and notify their immediate supervisor.
- **Mild-Moderate Adverse Outcome Errors** (including medication errors), staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts in the medical record and on an incident occurrence report, submitting the report to the QAPI Committee per policy.
- **Adverse Drug Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts appropriately in the medical record and on an incident occurrence report, submitting the report to QAPI Committee per organizational policy.
- **Transfusion Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary orders. Staff will then follow the organization policy and procedure for this event.

|                                            |                           |
|--------------------------------------------|---------------------------|
| Section 6<br>Patient Safety                | Sun Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 5 of 7               |

- **Hazardous Condition/Patient Safety Issue** - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify their supervisor and document the findings on an incident occurrence report which is then submitted to QAPI Committee
- **Sentinel Event** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure, which includes a root cause analysis and action plan.
- **Near Miss** – staff will report the near miss event to their immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to QAPI Committee.
- It is the intent of this facility to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to, their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the individual staff member's supervisor determining the appropriate course of action to prevent error recurrence.

### **Root Cause Analysis**

- All sentinel events and near miss occurrences will have a root cause analysis conducted to examine the cause and effect of the event through an impartial process
- A Root Cause Analysis is an interdisciplinary review process for identifying the basic or contributing causal factors that underlie a variation in performance associated with an adverse event or reportable patient safety event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.
- The QAPI Committee is responsible for conducting the root cause analysis. It will be completed within 45 days of becoming aware of one of the reportable events. They will encourage the staff members' involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution.

|                                            |                           |
|--------------------------------------------|---------------------------|
| Section 6<br>Patient Safety                | Sun Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 6 of 7               |

A written Root Cause Analysis and “Action Plan” will be created which includes specific measures to correctly identify problems or areas of concern, identify strategies for implementing system improvements; and also includes outcome measures to indicate the effectiveness of system improvements in reducing, controlling or eliminating identified problem areas. The action plan must specifically address responsibility for implementation and oversight, time frames for implementation, and the strategy for measuring the effectiveness of the actions.

- The Joint Commission recommended “A Framework for a Root Cause Analysis and Action Plan In Response to a Sentinel Event” format may be used. See attached.
- Results of the entire Root Cause Analysis will be presented to the Governing Body for evaluation.

### **Communication of Action Plans and Root Cause Analysis**

- Action Plans related to a Root Cause Analysis will be shared with the entire staff upon Completion by the QAPI Committee. Possible recommendations to update or change policy and procedures may be presented to the staff, management and Governing Body to improve patient safety.
- Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care. There will be a random record review verifying compliance with this educational process.
- Root Cause Analysis and Action Plans will be made available to the state health department representatives during onsite reviews.

### **Reporting Obligations**

- Medical/Health care errors and occurrences, including sentinel events, will be reported internally and externally, through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.

### **Patient Safety Program Staff Education/Training**

- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.

- Medical errors results from multiple factors. Flawed systems or processes can combine with active failures by caregivers in the clinical setting to produce accidents and errors. Some contributing factors are:
  - Inadequate communication among team members
  - Incomplete review of patient health records and diagnostic studies
  - Traditional hierarchical and autocratic cultures
  - Patient – related decisions made only by physicians
  - Unclear instructions
  - Confusing packaging of medications and supplies
  - Time pressures and constraints, Multi-tasking
  - Failure to include the patient and family members in assessment and decision-making
  
- Staff will be trained about error reduction, which requires the commitment of all members of the health care team. Besides correcting the identified factors above, the following individual and facility changes will be focused on:
  - Reduce reliance on memory by using checklists and protocols.
  - Standardize processes as much as possible for procedures and other activities.
  - Focus on the safety aspects of products during the selection and evaluation process.
  - Promote safety related clinical competency.
  - Educate employees about the potential for errors and how to avoid them.
  - Creating a “Culture of Safety” whereby there is a change of environment from blaming individuals for errors to one in which errors are treated as opportunities to improve systems. This is accomplished by:
    - establishing a sense of trust among team members;
    - dissemination and verifying receipt of information to all levels of staff and management;
    - developing and supporting a proactive approach rather than a reactive approach;
    - making a sincere commitment to affirming safety as the first priority.
  
- Quarterly Patient Safety Program meetings will be incorporated into the QAPI Program and conducted to review any incident occurrence reports and review any new patient safety recommendations or alerts.

# ROOT CAUSE ANALYSIS AND ACTION PLAN

| Level of Analysis                     |                                                      | Questions                                                                             | Findings | Root Cause? | Ask Why? | Take Action? |
|---------------------------------------|------------------------------------------------------|---------------------------------------------------------------------------------------|----------|-------------|----------|--------------|
| What happened?                        | Sentinel Event                                       | What are the details of the event? (Brief Description)                                |          |             |          |              |
|                                       |                                                      | When did the event occur? (Date, day of week, time)                                   |          |             |          |              |
|                                       |                                                      | What area/service was impacted?                                                       |          |             |          |              |
| Why did it happen?                    | The process or activity in which the event occurred. | What were the steps in the process, as designed? (A flow diagram may be helpful here) |          |             |          |              |
|                                       |                                                      | What steps were involved in (contributed to) the event?                               |          |             |          |              |
|                                       | Human factors                                        | What human factors were relevant to the outcome?                                      |          |             |          |              |
| What were the proximate factors?      | Equipment factors                                    | How did the equipment performance affect the outcome?                                 |          |             |          |              |
|                                       | Controllable environmental factors                   | What factors directly affected the outcome?                                           |          |             |          |              |
| (typically "special cause" variation) | Uncontrollable external factors                      | Are they truly beyond the organization's control?                                     |          |             |          |              |
|                                       | Other                                                | Are there any other factors that have directly influences this outcome?               |          |             |          |              |
|                                       |                                                      | What other areas of services are impacted?                                            |          |             |          |              |

## ROOT CAUSE ANALYSIS AND ACTION PLAN

The following template is provided as an aid in organizing the steps in a root cause analysis. Not all possibilities and questions will apply in every case and there may be others that will emerge in the course of the analysis. However, all possibilities and questions should be fully considered in your quest for "root cause" and risk reduction.

As an aid to avoiding "loose ends" the three columns on the right are provided to be checked off for later reference.

- **"Root Cause?"** - should be answered "yes" or "no" for each finding. A root cause is typically a finding related to a process or system that has a potential for redesign to reduce risk. If a particular finding that is relevant to the event is not a root cause, be sure that is addressed later in the analysis with a "why?" question. Each finding that is identified as a root cause should be considered for an action and addressed in the action plan.
- **"Ask Why?"** - should be checked off whenever it is reasonable to ask why the particular finding occurred (or didn't occur when it should have (in other words, to drill down further). Each item checked in this column should be addressed in the analysis with a "Why?" question. If it is expected that any significant finding that are not identified as root causes themselves have "roots."
- **"Take Action?"** - should be checked for any finding that can reasonably be considered for a risk reduction strategy. Each item checked in this column should be addressed later in the action plan. It will be helpful to write down the number of the associated Action item on page 3 in the "Take Action?" column for each of the findings that requires action.

# ROOT CAUSE ANALYSIS AND ACTION PLAN

| Level of Analysis                                                                                                                                                                                                                       | Questions                                                                                                     | Findings | Root Cause? | Ask Why? | Take Action? |

### Safety committee:

**The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the Federal, State, Local and OSHA guidelines. The “Safety Plan” includes identification, evaluation and prevention of workplace hazards relating to the elements and specific criteria. The safety management of the Facility is composed of several elements regarding the safety features necessary for the protection and security of its patients and healthcare workers.**

**These elements are composed of two parts; one “Life Safety Enterprise Safety Plan” which is wide in scope, organizational and effectiveness, and the “Environmental Safety Management” which oversees the working environment elements of the Facility. These areas overlap each other but also provide individual elements which manage the overall security and safety of the Facility. A report from the Safety Committee is provided quarterly to the Medical Executive Committee (MEC) and onto the Governing Board. The Safety Committee meets and discusses how to improve and/or maintain patient and employee well-being and safety, items discussed range from falls to how to properly lift boxes, and the execution of a disaster drills, etcetera. If any incidents have occurred they will be discussed in detail, and prevention and safety will be implemented.**

## **2018 QUALITY AND PATIENT SAFETY PLAN**

DATE: 02-05-2018  
VERSION: 1.1

This plan was created and revised by the Nevada Surgical Suites Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program

## Commitment to Patient Safety

---

Nevada Surgical Suites is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Nevada Surgical Suites Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high-quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Nevada Surgical Suites are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Nevada Surgical Suites has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

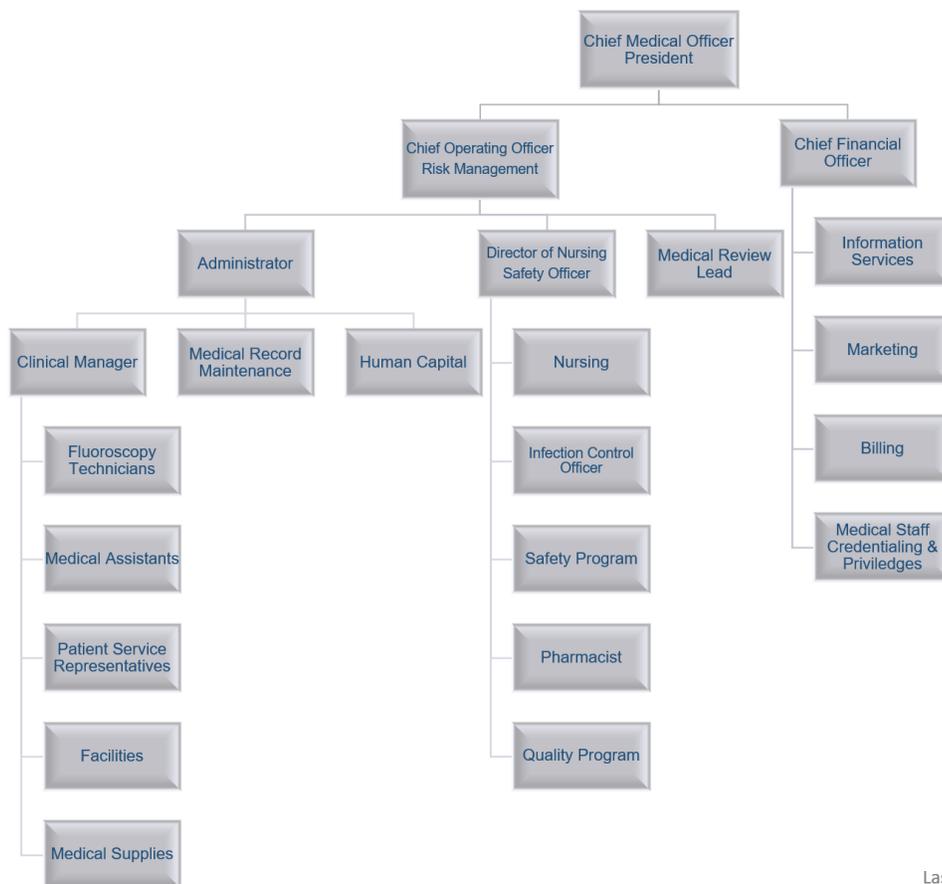

## Roles and Responsibilities

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Organizational Chart

Last Revised: 03-01-2018

## Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:

*Patient Safety and Quality Improvement Plan*

- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below:

- Member 1: Medical Provider, Governing Board Member, Executive Team Member
- Member 2: Governing Board Member, Billing Manger
- Member 3: Governing Board Member, Pharmacist
- Member 4: Medical Provider, Governing Board Member, Executive Team Member
- Member 5: Clinical Manager
- Member 6: Chief Financial Officer, Governing Board Member, Executive Team Member
- Member 7: Governing Board Member, Director of Nursing, Infection Control & Safety Officer
- Member 8: Governing Board Member, Administrator

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                 | Goals                        | Plan                                        | Planned Completion Date | Responsible Party   |
|---------------------------|------------------------------|---------------------------------------------|-------------------------|---------------------|
| Medication Reconciliation | Increase accuracy to ≥ 95%   | Increase chart audits with focused training | 12-31-2018              | Pharmacist          |
| Allergy Documentation     | Increase accuracy to ≥ 100%  | Continue chart audits with focused training | 12-31-2018              | Pharmacist          |
| Hand Washing              | 100% compliance              | Observations, training                      | 12-31-2018              | Nurse Manager       |
| Patient Privacy           | Decrease complaints by ≥ 20% | Survey monitoring, training                 | 12-31-2018              | Director of Nursing |
|                           |                              |                                             |                         |                     |
|                           |                              |                                             |                         |                     |
|                           |                              |                                             |                         |                     |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Nevada Surgical Suites will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

**Root Cause Analysis**

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Nevada Surgical Suites to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

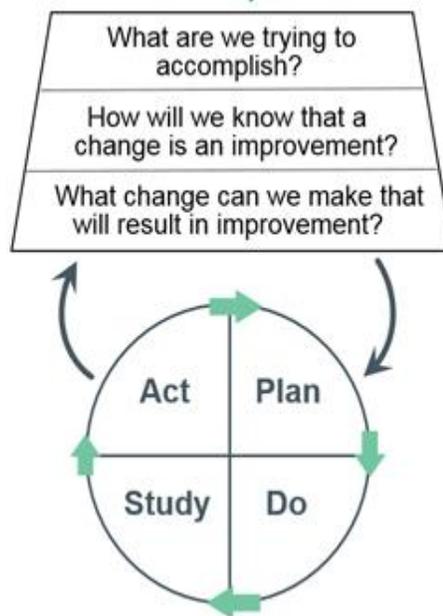

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

**Model for Improvement**

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. Nevada Surgical Suites is using (data system names) for tracking the sentinel events, healthcare infection data, and (any other database) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network

- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

### Assessment of the Quality and Patient Safety Plan

Quality and Patient Safety Plan is updated annually and submitted through the REDcap Sentinel Event Registry after approval by the organization governing board.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**) <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

### **Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);

- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_ENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_ENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

## **1.0 OVERVIEW**

The General Safety Program has been created to provide and maintain a safe and healthy environment for all staff members, patients and visitors.

## **2.0 SCOPE & RELEVANCY**

The program has been designed to prevent or diminish accidents injuries and illnesses in the workplace. The personal safety and health of all visitors, patients and employees of the Center is of utmost importance.

## **3.0 DEFINITIONS**

CENTER means Warm Springs Surgical Center.

## **4.0 DUTIES OF KEY MEMBERS**

### **ADMINISTRATOR**

The objective of the Administrator is to promote a safe, healthy environment throughout the Center. They are responsible for the overall implementation and maintenance of the Center's Injury and Illness Prevention Program. Duties include, but are not limited to:

- Education of all Managers on workplace safety and make them aware of potential workplace hazards to their employees.
- Monitoring compliance with training requirements of the program.
- Inspecting, recognizing, and evaluating workplace hazards on a continual basis.
- Developing and implementing methods for diminishing workplace hazards.
- Monitoring hazards to ensure they are taken care of in a timely manner.

### **MANAGERS**

Each manager is responsible for developing within themselves and their employees a positive attitude toward safety. Managers must be familiar with workplace hazards associated with the scope of their employees.

### **EMPLOYEES**

All employees are responsible for knowing policies and procedures as well as working safely and maintaining a safe and healthful work environment.

## **5.0 HAZARD ASSESSMENT**

### **ENVIRONMENTAL SAFETY ROUNDS**

Environmental safety hazards rounds are conducted through the shift. Each patient area is surveyed at least every 6 months. Other areas that may have a greater potential of a hazard are surveyed three times annually. All hazards are identified and corrective action is documented and enforced. Immediate hazards are corrected at the time they are noted; all others as soon as possible, no later than 15 days of discovery. Safety Committee may make unannounced rounds within any area of the Center. These rounds will focus on injury and illness hazards which may need further monitoring. Hazard communications, emergency preparedness, work place hazards and safety training audits will be conducted annually.

### **NEW MATTERS**

The administrator will arrange for the inspection and investigation of any new substances, process, procedure or equipment that is introduced into the facility. This will to evaluate any potential occupational hazards the matter may contain.

### **HOUSEKEEPING**

Good house keeping practices are an essential part of any effective safety program. Keeping the work area clean and neat reduces the risk of injury or accidents. To increase the ability of the workers to perform their jobs more efficiently, well organized work areas are encouraged. Each employee is responsible for their work area, keeping it neat and tidy. Managers are to make housekeeping rounds to ensure compliance.

Immediately Report the following:

1. Wet or Slippery Floors
2. Equipment or furniture left in the halls or obstructing an entrance or exit
3. Storage or use of combustibles near an open flame
4. Improper storage of hazardous waste.

### **HAZARD REPORTING BY EMPLOYEES**

It is the responsibility of all employees to report any unsafe act or condition in their work environment.

Immediately Report the following:

1. Areas that may be Poorly Lit
2. Unattended Children
3. Defective Equipment
4. Smoking on the Premises
5. Careless Handling of the Equipment

There will be no disciplinary action resulting from reporting an unsafe condition. Employees do have the option to remain anonymous when filing a report.

## IMMEDIATE HAZARDS

It is the intent of the Center to abate all hazards once they have been identified. When such a hazard is present and it cannot be resolved immediately, all employees, patients and visitors will be vacated from the area until the hazard can be addressed.

## DOCUMENTATION

All rounds will be documented by the Safety Officer (Administrator). They will be maintained for a period of at least three (3) years. They will include the name of the Administrator conducting the rounds, the areas examined, date of the rounds, if any hazards were identified, recommended corrective action. Course taken, date of compliance and signature of manager overseeing the actions.

### **6.0 EMERGENCY ACTION PLAN**

Warm Springs Surgical Center has put into place a Disaster Plan. This is available to all employees. It is kept in the Administrator's office in the OSHA binder under EMERGENCY PLAN.

### **7.0 POLICIES & PROCEDURES FOR SAFETY**

Safety policies have been developed and implemented to address the issues that apply to all employees. The policies and procedures for safety are kept in the Administrator's office in the OSHA binder under GENERAL SAFETY. It is available to all employees. The need for changes to the safety policies and procedures are reviewed regularly.

### **8.0 COMMUNICATION**

General communication for changes or modifications will be a posting on the bulletin board in the break room and annually during the safety meetings.

### **9.0 ENFORCEMENT**

Enforcement of all safety policies and procedures is the primary responsibility of the Managers. Compliance is mandatory and any violation of this program could result in progressive disciplinary action.

## **10.0 TRAINING**

Awareness of potential health and safety hazards is critical to maintaining a safe work environment and to avoid injuries, illnesses and accidents in the work place. Warm Springs Surgical center is dedicated to instruction all employees in health and safe work practices. To achieve this goal, the Center will provide training to each employee with regard to the general safety programs.

### **TRAINING SCHEDULES**

1. All new employees will receive a general safety orientation according the Human Resource's policy.
2. Employees will receive appropriate safety training upon receiving a new assignment they are unfamiliar with.
3. An annual safety inservice will be conducted.
4. Additional training will be required if re-enforcement is needed.

### **TRAINING OF MANAGERS**

It is the responsibility of Managers to be aware of potential health or safety hazards within their deposit. Annual safety program reviews will be conducted with the Administrator. All training records will be kept for a minimum of three (3) years.

## **11.0 ACCIDENT INVESTIGATION**

### **POLICY**

All occupational injuries and illnesses must be reported in a timely manner. Upon receipt of the incident report, the Administrator will start an investigation.

### **RESPONSIBILITY & PROCEDURE**

Employee is responsible for reporting an occupational injury or illness to the Manager and the Administrator will start an investigation as outlined in the Human Resource Workman's Compensation Policy.

### **CORRECTIVE ACTION**

All hazards are to be identified and corrective action taken as soon as possible to avoid re-occurrence of the same injury. Manager is responsible for compliance to correct the problem. All personal involved int eh correcting the hazardous condition will receive appropriate training on how to do so and will be provided with the necessary PPE and safeguards.

**ADMINISTRATIVE APPROVAL**

**PURPOSE:**

- The purpose of the Organizational Patient Safety Plan at 215 Surgery Center is to improve patient safety and reduce risk to patients through an environment that encourages:
  - Recognition and acknowledgment of risks to patient safety and medical/health care errors;
  - The initiation of actions to reduce these risks;
  - The internal reporting of what has been found and the actions taken;
  - A focus on processes and systems;
  - Minimization of individual blame or retribution for involvement in a medical/health care error;
  - Organizational learning about medical/health care errors;
  - Support of the sharing of that knowledge to effect behavioral changes in itself and other healthcare organizations.
- The Patient Safety Plan provides a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.
- As patient care, and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at Seven Hills Surgery Center. The Patient Safety Plan, developed by the interdisciplinary Safety Committee and approved by the medical staff, Board of Managers and administration, outlines the components of the organizational Patient Safety Program.

## **PATIENT SAFETY PROGRAM:**

- Scope of Activities:
  - The scope of the Patient Safety Program includes an ongoing assessment, using internal and external knowledge and experience, to prevent error occurrence, maintain and improve patient safety. Patient safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed by the Safety Committee to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included in data analysis are:
    - No Harm Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome - that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
    - Mild-Moderate Adverse Outcome Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
    - Any Medication Error
    - Any Adverse Drug Reaction
    - Hazardous Condition - any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
    - Sentinel Event – as defined in Appendix A of the National Quality Forum Serious Reportable Events in Health-Care-2011 Update: A Consensus Report
      - ◆ The event has resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient’s illness or underlying condition.
      - ◆ The event is one of the following (even if the outcome was not death or major permanent loss of function):

|                              |                      |
|------------------------------|----------------------|
| SUBJECT: PATIENT SAFETY PLAN | REFERENCE #1067      |
|                              | PAGE: 3<br>OF: 7     |
|                              | EFFECTIVE: 1/15/2014 |
| APPROVED BY: Governing Body  | REVISED: 1/15/2018   |

- Rape (by another patient, visitor or staff)
    - Surgery on the incorrect patient or incorrect body part
  - Near Miss - any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- The scope of the Patient Safety Program encompasses the patient population, visitors, volunteers and staff (including medical staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility. There will be an emphasis on important facility and patient care functions of:
  - Patient Rights
  - Assessment of Patients
  - Care of Patients
  - Patient/Family Education
  - Continuum of Care
  - Leadership
  - Improving Organization Performance
  - Management of Information
  - Management of Human Resources
  - Surveillance, Prevention and Control of Infection
- Methodology:
  - The Interdisciplinary Safety Committee is responsible for the oversight of the Patient Safety Program. The Safety Officer will have administrative responsibility for the program, or the Safety Committee may assign this responsibility to another member of the committee.

- **All departments** within the organization (patient care and non-patient care departments) are responsible to report patient safety occurrences and potential occurrences to the Safety Officer, who will aggregate occurrence information and present a report to the Safety Committee on a monthly basis. The report will contain aggregated information related to type of occurrence, severity of occurrence, number/type of occurrences per department, occurrence impact on the patient, remedial actions taken, and patient outcome. The Safety Committee will analyze the report information and determine further patient safety activities as appropriate.
- Description of mechanisms to ensure that all components of the healthcare organization are integrated into and participate in the organizationwide program.
- Upon identification of a medical/health care error, the patient care provider will immediately:
  - Perform necessary healthcare interventions to protect and support the patient's clinical condition.
  - As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others - example: immediate removal of contaminated IV fluids from floor stock should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
  - Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.
  - Preserve any information related to the error (including physical information). Examples of preservation of physical information are: Preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
  - Report the medical/health care error to the staff member's immediate supervisor.
  - Submit the occurrence report to the designated individual or committee per organizational policy.

- Any individual in any department identifying a potential patient safety issue will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Quality Assurance Committee per organizational policy
- Staff response to medical/health care errors is dependent upon the type of error identified:
  - No harm errors - (including “no harm” medication errors) - staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an occurrence report form, submit the form to the Performance Improvement Department and notify their immediate supervisor.
  - Mild-Moderate Adverse Outcome Errors (including medication errors) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report - submitting the report to the Performance Improvement Department per organizational policy.
    - ◆ Medication Errors - the staff member identifying a medication error (no harm and mild-moderate harm) will notify the Pharmacy Services Department of the event.
  - Adverse Drug Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an occurrence report - submitting the report to the Performance Improvement Department per organizational policy. Staff will also notify the Pharmacy Services Department.
  - Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify his or her supervisor and document the findings on an occurrence report. The occurrence report will be submitted to the Performance Improvement Department per organizational policy.

|                              |                      |
|------------------------------|----------------------|
| SUBJECT: PATIENT SAFETY PLAN | REFERENCE #1067      |
|                              | PAGE: 6<br>OF: 7     |
|                              | EFFECTIVE: 1/15/2014 |
| APPROVED BY: Governing Body  | REVISED: 1/15/2018   |

- Sentinel Event - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure.
  - Near Miss - staff will report the near miss event to his/her immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to the Performance Improvement Department.
- Established organizational policy (such as the Sentinel Event Policy) and/or the Safety Committee will determine the organizational response to medical/health care errors and occurrences. All sentinel events and near miss occurrences will have a root cause analysis conducted. The determination of the Safety Committee members, based on internal and external data analysis and prioritizing of patient safety criticality, will determine:
  - Further remedial action activities necessary for identified occurrences
  - Proactive occurrence reduction activities
  - Necessity and benefit of root cause analysis performance for identified occurrences or proactive reduction activities
- An effective Patient Safety Program cannot exist without optimal reporting of medical/health care errors and occurrences. Therefore, it is the intent of this institution to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the Safety Committee and the individual staff member's department supervisor determining the appropriate course of action to prevent error recurrence
  - Sentinel Events - staff members involved in a sentinel event occurrence will receive support from the Safety Committee regarding the staff member's professional and emotional reconciliation of the sentinel event. The Safety Committee encourages the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role

|                              |                      |

| SUBJECT: PATIENT SAFETY PLAN | REFERENCE #1067      |
|                              | PAGE: 7<br>OF: 7     |
|                              | EFFECTIVE: 1/15/2014 |
| APPROVED BY: Governing Body  | REVISED: 1/15/2018   |

in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from his or her department supervisor.

- On at least an annual basis, staff will be queried regarding their willingness to report medical/health care errors.
- The Patient Safety Program includes a quarterly survey of patients, their families, volunteers and staff (including medical staff) opinions, needs and perceptions of risks to patients and requests suggestions for improving patient safety.
- Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. The Safety Committee will analyze error reporting data for evidence of this information.
- Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care.
- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.
- Medical/health care errors and occurrences, including sentinel events, will be reported internally and externally, per facility policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.
- A quarterly patient safety report will be forwarded to the Board of Managers on the occurrence of medical/health care errors and actions taken to improve patient safety, both in response to actual occurrences and proactively.

- As patient care, and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at Mountain's Edge Hospital. The Patient Safety Plan, developed by the interdisciplinary Environment of Care Committee and approved by the medical staff, Governing Body and administration, outlines the components of the organizational Patient Safety Program.

### **PATIENT SAFETY PROGRAM:**

- Scope of Activities:
  - The scope of the Patient Safety Program includes ongoing proactive risk assessments, using internal and external knowledge and experience, to prevent error incident, maintain and improve patient safety.
    - One high-risk process shall be selected at least every 18 months and a proactive risk assessment shall be performed.
  - Patient safety incident information from aggregated data reports and individual incident reports will be reviewed by the Safety/Environment of Care Committee to prioritize organizational patient safety activity efforts. Types of patient safety or medical/health care errors included in data analysis are:
    - No Harm Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome - that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
    - Mild-Moderate Adverse Outcome Errors - those unintended acts, either of omission or commission, or acts that do not achieve their intend outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
    - Any Medication Error
    - Any Adverse Drug Reaction

- Any Transfusion Reaction
- Hazardous Condition - any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Sentinel Event - an unexpected event or incident involving death or serious physical or psychological injury or the risk thereof - including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function. (Refer to the Sentinel Event Policy - #1507)
- Near Miss - any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- Hospital Acquired Conditions (HACs), (those in accordance with Mountain's Edge Hospital Scope of Services):
  - ◆ Serious preventable event - object left in surgery (never event)
  - ◆ Serious preventable event - air embolism (never event)
  - ◆ Serious preventable event - blood incompatibility (never event)
  - ◆ Catheter-associated urinary tract infections
  - ◆ Pressure ulcers
  - ◆ Vascular catheter-associated infection
  - ◆ Surgical site infection
  - ◆ Surgical site infections following certain elective procedures, including certain orthopedic surgeries and bariatric surgery
  - ◆ Patient falls (fracture, dislocation, intracranial injury, crushing injury, burn, electric shock)

- ◆ Manifestations of poor control of blood sugar levels, such as diabetic ketoacidosis, hypoglycemic coma
- ◆ Deep vein thrombosis or pulmonary embolism following total knee replacement and hip replacement procedures
- The scope of the Patient Safety Program encompasses the patient population, visitors, volunteers and staff (including medical staff). The program addresses maintenance and improvement in patient safety issues in every department throughout the facility. There will be an emphasis on important hospital and patient care functions of:
  - Environment of Care
  - Emergency Management
  - Human Resources
  - Infection Prevention and Control
  - Information Management
  - Leadership
  - Life Safety
  - Medication Management
  - Medical Staff
  - Nursing
  - Provision of Care, Treatment and Services
  - Performance Improvement
  - Record of Care, Treatment and Services

- Rights and Responsibilities of the Individual
  - Waived Testing
- Methodology:
  - The Interdisciplinary Environment of Care Committee is responsible for the oversight of the Patient Safety Program. The Environment of Care Committee Chairperson will have administrative responsibility for the program, or the Environment of Care Committee may assign this responsibility to another member of the committee (such as the Performance Improvement Director or Risk Manager).
  - **All departments** within the organization (patient care and non-patient care departments) are responsible to report patient safety incidents and potential incidents to the Performance Improvement Director, who will aggregate incident information and present a report to the Environment of Care Committee on a monthly basis. The report will contain aggregated information related to type of incident, severity of incident, number/type of incidents per department, incident impact on the patient, remedial actions taken, and patient outcome. The Environment of Care Committee will analyze the report information and determine further patient safety activities as appropriate.
  - Through review of internal data reports and reports from external sources (including, but not limited to, The Joint Commission sentinel event report information, ORYX and Core Measure performance data, incident reporting information from state and federal sources and current literature), and through the performance improvement priority criteria grid, the Environment of Care Committee will select at least one high-risk safety process for proactive risk assessment annually. All elements of the high-risk safety related process will be described using work tools as necessary (i.e., flowcharts, cause and effect diagrams). The proactive risk assessment will include:
    - Identification of the ways in which the process could break down or fail to perform. This will be done through assessment of the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation. Identify the possible effects of the undesirable variation on patients, and how serious the possible effect on the patient could be

- Prioritizing the potential processes breakdowns or failures
  - For the most critical effects, conduct a root cause analysis to determine why the undesirable variation leading to that effect may occur
  - Redesign the process and/or underlying systems to minimize the risk of that undesirable variation or to protect patients from the effects of that undesirable variation
  - Test and implement the redesigned process
  - Identify and implement measures of the effectiveness of the redesigned process
  - Implement a strategy for maintaining the effectiveness of the redesigned process over time
- Description of mechanisms to ensure that all components of the healthcare organization are integrated into and participate in the organization wide program.
- Upon identification of a process or system failure and/or medical/health care error, the patient care provider will immediately:
  - Perform necessary healthcare interventions to protect and support the patient's clinical condition.
  - As appropriate to the incident, perform necessary healthcare interventions to contain the risk to others - example: immediate removal of contaminated IV fluids from floor stock should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
  - Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.
  - Preserve any information related to the error (including physical information). Examples of preservation of physical information are: Removal and

preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, fluids bags and/or pumps for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an incident report, and in the medical record as appropriate to organizational policy and procedure.

- Report the process/system failure or medical/health care error to the staff member's immediate supervisor.
  - Submit the incident report to the Performance Improvement Department per organizational policy.
- Any individual in any department identifying a process/system failure and/or potential patient safety issue will immediately notify his or her supervisor and document the findings on an incident report. The incident report will be submitted to the Performance Improvement Department per organizational policy.
- Staff response to process/system failures and/or medical/health care errors is dependent upon the type of error identified:
  - No Harm Failures or Errors (including "no harm" medication errors) - staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an incident report form, submit the form to the Performance Improvement Department and notify their immediate supervisor.
  - Mild-Moderate Adverse Outcome Failures or Errors (including medication errors) - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an incident report - submitting the report to the Performance Improvement Department per organizational policy.

- ◆ Medication Errors - the staff member identifying a medication error (no harm and mild-moderate harm) will notify their supervisor and the Pharmacy Department of the event.
  
- Adverse Drug Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify his/her immediate supervisor, document facts appropriately in the medical record and on an incident report, submitting the report to the Performance Improvement Department per organizational policy. Staff will also notify the Pharmacy Department.
  
- Transfusion Reaction - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the Blood/Blood Component Transfusion Reaction Policy and Procedure.
  
- Hazardous Condition/Patient Safety Issue - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify his or her supervisor and document the findings on an incident report. The incident report will be submitted to the Performance Improvement Department per organizational policy.
  
- Sentinel Event - staff will perform any necessary clinical interventions to support and protect the patient and notify the physician staff responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure.
  
- Near Miss - staff will report the near miss event to his/her immediate supervisor, describe the facts of the near miss on an incident report and submit the report to the Performance Improvement Department.
  
- Hospital Acquired Conditions - staff will follow all established protocols, guidelines and policies and procedures. Staff shall complete incident reports for any breaks in technique or policy not followed.

- Established organizational policy (such as the Sentinel Event Policy) and/or the Environment of Care Committee will determine the organizational response to process/system failures and/or medical/health care errors and incidents. All sentinel events and near miss incidents will have a root cause analysis conducted. The determination of the Environment of Care Committee members, based on internal and external data analysis and prioritizing of patient safety criticality, will determine:
  - Further remedial action activities necessary for identified incidents
  - Proactive incident reduction activities
  - Necessity and benefit of root cause analysis performance for identified incidents or proactive reduction activities
  
- An effective Patient Safety Program cannot exist without optimal reporting of process/system failures and medical/health care errors and incidents. Therefore, it is the intent of this institution to adopt a non-punitive approach in its management of failures, errors and incidents. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and incidents. A focus will be placed on remedial actions to assist rather than punish staff members, with the Environment of Care Committee and the individual staff member's department supervisor determining the appropriate course of action to prevent error recurrence.
  - Sentinel Events - staff members involved in a sentinel event incident will receive support from the Environment of Care and Performance Improvement Committees regarding the staff member's professional and emotional reconciliation of the sentinel event. The Environment of Care and Performance Improvement Committees encourages the staff member's involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution. Additionally, any staff member involved in a sentinel event or other medical/health care error may request and receive supportive personal counseling from the Social Service Department, Human Resources Department and/or his or her department supervisor.

- As part of this organization's culture of safety and quality, any staff member who has concerns about the safety or quality of care provided by the organization may report these concerns to The Joint Commission. The organization supports the staff member's right to report these concerns and will take no disciplinary or retaliatory action against the staff member for reporting the safety or quality of care concern to The Joint Commission.
  - On at least an annual basis, staff will be queried regarding their willingness to report medical/health care errors.
- The Patient Safety Program includes implementation of the recommendations set forth by The Joint Commission, or identified alternative recommendations defined by this institution, to achieve compliance with The Joint Commission established National Patient Safety Goals. The selected recommendations will be monitored on a routine basis to evaluate the organization's effectiveness in the implementation of the recommendations in achieving compliance with the identified National Patient Safety Goals.
- The Patient Safety Program includes a quarterly survey of patients, their families, volunteers and staff (including medical staff) opinions, needs and perceptions of risks to patients and requests suggestions for improving patient safety.
- Patients, and when appropriate, their families are informed about the outcomes of care, including unanticipated outcomes, or when the outcomes differ significantly from the anticipated outcomes. The Environment of Care and Performance Improvement Committees will request a report on at least a quarterly basis consisting of random record review verifying compliance with informing the patient about outcomes of care. The Environment of Care and Performance Improvement Committees will analyze error reporting data submitted through the Performance Improvement Department for evidence of this information.
- Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care. The Environment of Care and Performance Improvement Committees will request a report on at least a quarterly basis consisting of random record review verifying compliance with this educational process.

- The Patient Safety Program includes consideration, at least annually, of data obtained from the organizational Information Management Needs Assessment, which includes information regarding barriers to effective communication among caregivers. The Environment of Care and Performance Improvement Committees will also request on at least a quarterly basis, a report identifying the effectiveness of the organization to provide accurate, timely, and complete verbal and written communication among care givers and all other involved in the utilization of data.
- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. Education includes the staff member's right to report any safety or quality of care concerns to The Joint Commission. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.
- Medical/health care errors and incidents, including sentinel events, will be reported internally and externally, per hospital policy and through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.
- Lessons learned from a root cause analysis shall be communicated to staff who provide services or are affected by a patient safety incident. Education shall take place through the Education Department.
- Patient safety reports from the Environment of Care Committee will be submitted to the organizational Performance Improvement Committee, which exists as the oversight committee for the Environment of Care Committee. A monthly data report and recordings of meeting minutes will be forwarded to the Performance Improvement Committee, with all information submitted held under the auspices of the Performance Improvement Committee.
- A written Patient Safety Report shall be forwarded to the Governing Body, at a minimum, once per year. Information in the report shall include:
  - All system or process failures
  - Number and type of sentinel events

| <b>Section Title:</b> Facilities And Environment | <b>Section:</b> 8  |
| <b>Subject :</b> Safety Management Program       | <b>Policy:</b> 8.3 |

## **POLICY**

The purpose of this plan is to establish, support, and maintain a safety program that is based on monitoring and evaluation of organizational experience, applicable federal and state laws and regulations, and accepted practice within the healthcare industry.

### **Goal**

The safety management plan goal is to provide a physical environment free of hazards and to manage staff activities to reduce the risk of human injuries that could affect employees, patients, visitors, and/or guests. To prepare facility's personnel to be able to demonstrate/conduct the evacuation of a patient.

### **Objectives**

This plan is based on the following objectives:

1. Maintaining and supervising all grounds, buildings, and equipment, including special activity areas used by patients.
2. Ensuring that emergency service areas are clearly identified and easily accessible.
3. Establishing a risk-assessment program that proactively evaluates the impact on patient and public safety of the buildings, grounds, equipment, occupants, and internal physical systems.
4. Providing a safety officer, appointed by the administration, who is qualified by experience or education; responsible for developing, implementing, and monitoring the organization's safety program; and intervening whenever conditions exist that either pose an immediate threat to life or health or pose a threat of damage to equipment or buildings.
5. Reporting and investigating all incidents that involve property damage, occupational illness, and patient, employee, or visitor injury.
6. Requiring organization safety policies and procedures that are distributed, practiced, and enforced.
7. Reviewing the organizational safety policies and procedures as frequently as necessary, but no less than annually.
8. Promoting an ongoing hazard surveillance program, including response to product safety recalls.
9. Using safety-related information in the orientation of new employees and continuing education of employees.
10. Requiring an annual plan and evaluation of the objectives, scope, performance, and effectiveness of the documented safety management plan.

## **Policy elements**

1. Safety management policy statement
2. Each employee is required to comply with safety and health standards and with the policies and procedures that apply to their job responsibilities in an effort to maintain a safe environment. Any violation of policy may result in disciplinary action.
3. Anesthesia personnel should review and be familiar with the facility's written emergency protocol for cardio-pulmonary emergencies and other internal and external disasters.
4. Maintenance and supervision of grounds and equipment

The Quality/Risk Management Committee will develop written policies and procedures to enhance safety within the facility and on the grounds. Monitor equipment and utility preventive maintenance and inspection procedures, and monitor the education and training of users to protect against failure or user error.

Equipment Safety Checklist includes but not limited to:

- Back-up emergency power system (UPS)
- Defibrillator
- Electrocautery or Bovie unit
- Laser
- Magnehelic Gauge
- Meds Refrigerator temperature
- Nurse annunciator system
- Operating or procedure table
- Oxygen / Nitrous gas cylinders, regulators, gauges
- Pulse oximeters
- Suction system or aspiration units
- Surgeon's headlights
- Surgery light or procedure lights in operating room(s)
- Vital signs monitores

An environment tour will be made of the buildings and grounds of the facility to ensure maintenance, supervision, and safe use of these buildings and grounds by patients, staff, and visitors. Patient areas will be assessed a minimum of twice yearly, non-patient areas a minimum of annually. All buildings shall comply with the appropriate provisions of the National Fire Protection Association's Life Safety Code®, 2000. Consideration will be given to parking lots/structures and the security and safety needs of these facilities, recreational areas, and special terrain problems. Plans and policies will be developed and implemented to cover security, safety, and the functional needs of patients, visitors, and employees.

## **Risk assessment**

The safety management program, which proactively evaluates the impact of buildings, grounds, equipment, occupants, and internal physical systems on patient and public safety, is carried out by using incident reports, accident investigation, and reports from various agencies, such as insurance companies, state or county health agencies, and fire agencies.

## **Hazard surveillance**

An ongoing hazard surveillance program, including response to product safety recalls, shall be maintained and reported through the Quality/Risk Management Committee.

## **Examination of safety issues**

All safety-related issues shall be examined by the Quality/Risk Management Committee. The Quality/Risk Management Committee shall include representation from those areas deemed appropriate. Nonsupervisory employees will participate in activities of the safety program. All members of the Quality/Risk Management Committee are appointed by the administration/safety officer or designee. The Quality/Risk Management Committee shall evaluate the safety management program compliance by evaluation at least annually.

## **Incident/injury/illness reporting and investigation**

The Quality/Risk Management Committee/risk management committee shall review all reports of accidents or injuries to patients, visitors, and/or personnel. Summary reports of incidents shall include description of the incident, cause, corrective actions taken, and preventive measures taken. Refer to the appropriate policies and procedures. The Quality/Risk Management Committee will establish an incident reporting system for investigating and evaluating all incidents reported and for documenting review of all such reports and actions taken.

## **Safety officer/designee**

The safety officer and the Quality/Risk Management Committee are appointed by the administration. Administration has delegated to the Quality/Risk Management Committee the authority to take action when hazardous conditions or potential hazardous conditions exist that could result in personal injury to individuals or damage to equipment or buildings. This delegated authority has been approved by the administration and the board of directors of the facility.

## **New employee orientation and continuing education**

1. An employee's orientation program shall address general safety processes, area-specific safety, and specific job-related hazards.
2. The Quality/Risk Management Committee will provide safety-related information through orientation of new employees
3. continuing education on employee and patient health issues
4. use of all means of communication to support the program requirements or to communicate safety issues
5. recommendation purchases of safety equipment and suggestions for any necessary physical changes to improve safety conditions

The Quality/Risk Management Committee shall coordinate the facility educational activities to effect improvements in the safety of patients, visitors, and staff. Educational programs shall include general safety procedures, department-specific safety procedures, and specific job-related hazards. Educational programs shall be based on industry standards and literature review and shall be continually adapted to reflect organizational experience and evaluation of effectiveness of training programs.

## **Performance improvement**

The Quality/Risk Management Committee shall meet quarterly/when necessary and record the activities. A review of the safety program's performance shall be conducted at least annually. Summaries of all findings shall be forwarded to administration, the quality improvement (QI) department, and the appropriate oversight committee(s).

## **Performance indicators**

The following indicators shall be utilized in evaluating the performance of the safety management program:

1. Environmental health and safety
2. Life safety management
3. Emergency preparedness
4. Security
5. Hazardous materials and waste
6. Infection control
7. Equipment management
8. Utilities management

## **Inspection, preventive maintenance, and testing of equipment**

Monitor equipment and utilities for preventive maintenance and inspection procedures and monitor education and training of users to protect against failure or user error.

## **Safety policies and procedures**

The Quality/Risk Management Committee or responsible department will develop written policies and procedures to enhance safety within the facility. All safety policies will be reviewed annually in accordance with facility policy. Any revisions, updates, or changes shall be submitted to the appropriate authority for approval. The ultimate responsibility for development and maintenance of current safety policies shall lie with the safety officer.

## **Annual evaluation**

The safety management program will be evaluated at least annually for its effectiveness. Evaluation shall include all areas of safety management.

## **Responsibilities**

1. Executive leadership
2. Toward fulfillment of the general and specific safety goals of the safety management plan, executive leadership shall
3. Appoint a safety officer(s) (of the Quality/Risk Management Committee) who is qualified to oversee the safety management program
4. The facility must have a written list of all equipment, materials and supplies necessary to properly carry out job assignments.

## **Safety officer**

Toward fulfillment of the general and specific safety goals of the safety management plan, the safety officer shall provide oversight for the health and safety program at the facility

## **Management**

Because good safety performance is an essential factor in effective cost and quality control, safety cannot be subordinated to other management interests. It must be considered as part of every operation and every function. Because they are responsible for the actions of persons reporting to them, each supervisor has the obligation to communicate safety policies and enforce safety procedures. To fulfill this responsibility, they shall enforce facility safety rules and regulations, documenting all violations. Supervise and evaluate employee performance with regard to safety on the job. Provide personal support for safety activities and safety procedures. Take prompt corrective action when unsafe acts or conditions are observed. Ensure that a safe work environment is provided for employees. Ensure that safety has been considered prior to the commencement of each task or function, not only for their own personnel, but for others who may be exposed or affected, including patients. When necessary, develop techniques and procedures relative to specific work operations or tasks, ensuring proper consideration of safety. Instruct each employee, during the orientation period and annually (or according to your accreditor or other regulating body), in the hazards associated with assigned duties and how to avoid injuries.

1. Ensure, through instruction and surveillance that each employee is aware that he or she is expected to work safely and that willful violations of safety rules will be cause for disciplinary actions, up to and including termination.
2. Instill safety awareness in each employee by personal example, regular personal contacts, and group meetings.
3. Motivate employee interest and participation in the safety program by setting an example and soliciting suggestions.
  - a. cooperate fully with safety officer/the Quality/Risk Management Committee in the promotion of safety activities.
  - b. Seek assistance from the safety officer relative to safe practices and procedures.
  - c. Ensure that employees receive all required safety training and education.
  - d. Assist in conducting training as needed.
  - e. Know and instruct employees in emergency actions, including evacuation procedures from all work areas.
  - f. Have new or relocated equipment and instrumentation checked and approved by facility services before it is placed in operation.
  - g. Ensure that adequate safety equipment and protective devices are provided for each job in each work area(s), as required, and that such equipment is properly used and maintained by the employees.
  - h. ensure that all injuries are reported and, if necessary, treated immediately.
  - i. investigate all accidents and incidents in their area to determine whether injuries resulted, and make the required reports.
  - j. participate actively when called on to serve on the Quality/Risk Management Committee. Further, appoint an alternate from the department who can attend committee meetings and represent the department in the absence of the department supervisor.

## **All Employees**

For the safety program to be successful, each employee must know and utilize the contents of this policy to the best of his or her ability and with respect to each individual's job requirements. The absence of a safety standard on a specific job or task does not relieve employees of the safety responsibility concerning that job. If employees find that specific safety information is not available in this policy, they should contact their respective management and ask for the required information. Employees have been hired to perform their job safely and are expected to work as safely as possible and to support the safety management program.

They shall:

1. learn the safe and correct way to perform their assigned duties and shall ask their supervisor anything about which they are in doubt
2. perform their jobs in a safe, responsible manner using required safety devices and personal protective equipment provided by the health facility, following established procedures, and wearing proper, clean clothing suitable for the job they were hired to perform take no chances or short cuts in the performance of any task or procedure
3. report any accident, personal injury, or patient complaint regarding the health or safety practices, no matter how slight, to their supervisor
4. immediately report any hazard observed and suggest to the supervisor better and safer ways to perform tasks
5. always be fit for their assigned duties by practicing good health habits and personal cleanliness
6. practice good housekeeping at all times; keep equipment, tools, materials, instruments, and work areas clean and orderly
7. attend all required safety-related training
8. know what actions to take in case of fire or other emergency situation in their work area(s)
9. comply with no-smoking requirements in all patient care and hazardous areas

### Safety committee:

**The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the Federal, State, Local and OSHA guidelines. The “Safety Plan” includes identification, evaluation and prevention of workplace hazards relating to the elements and specific criteria. The safety management of the Facility is composed of several elements regarding the safety features necessary for the protection and security of its patients and healthcare workers.**

**These elements are composed of two parts; one “Life Safety Enterprise Safety Plan” which is wide in scope, organizational and effectiveness, and the “Environmental Safety Management” which oversees the working environment elements of the Facility. These areas overlap each other but also provide individual elements which manage the overall security and safety of the Facility. A report from the Safety Committee is provided quarterly to the Medical Executive Committee (MEC) and onto the Governing Board. The Safety Committee meets and discusses how to improve and/or maintain patient and employee well-being and safety, items discussed range from falls to how to properly lift boxes, and the execution of a disaster drills, etcetera. If any incidents have occurred they will be discussed in detail, and prevention and safety will be implemented.**

## SUNSET RIDGE SURGERY CENTER, L.L.C.

MANUAL: Policy & Procedure Effective Date: 7/21/2014  
SECTION: Safety Management Plan Reviewed Date: 7/1/2016  
POLICY: 14.20 Patient Safety Program Revised Date:

---

**PURPOSE:** To provide quality, safe patient care, thus preventing errors and adverse events during the pre, peri, & post-operative phases of care.

**PROCEDURE:**

- A. The Administrator, Clinical Coordinator, Medical Director, and governing board will emphasize teamwork in building a culture of safety in this setting.
  1. The Center will take a proactive approach to identify and address activities for potential risk before errors occur.
  2. Effective communication will begin with the leaders and continue to other staff via memos, meetings, open discussions and networking.
  3. Educational tools will be given to the staff. In-service programs will be offered. Articles on safety related items will be distributed and maintained.
  4. Leadership will encourage and support cooperative openness and professionalism between the surgeon and nurses. When question arises, the team should stop and review the patient's chart for accurate information. No one should make assumptions.
  5. Leadership will be responsible to create a non-punitive environment that encourages all reporting
  6. The center will report *any incidents/ events resulting in a death or serious physical/psychological injury* or risk there of or near misses.
  7. The Administrator (or designee), Medical Director and or surgeon will be responsible to tell a patient if he or she has been harmed by the care received. There will always be two (2) people present when the patient is notified
  8. All incident reports will be reviewed, analyzed, and trended by the Safety/Risk Management and Continuous Performance Improvement Committee.
  9. The Medical Executive Committee will review the Center's Safety/Risk Management plan annually, & results of incidents as they occur or bi-annually.
- B. Staff members will participate in education and training to improve competence.
  1. Defining potential adverse events:
    - i. *An unexpected occurrence during a health care encounter involving patient death or serious physical or psychological injury or illness, including loss of limb or function, not related to the natural course of the patient's illness or underlying condition.*
    - ii. *Any process variation for which a recurrence carries a significant chance of a serious adverse outcome.*

- iii. *Events such as breaches in medical care, administrative procedures or other breaches resulting in a negative impact on a patient, even if death or loss of limb or function does not occur.*
      2. Immediate verbal and written reporting of any occurrence.
      3. Committee involvement to participate in analysis and possible change in processes to provide a safe patient environment.
    - C. Establish, maintain and review policies to comply with nationally recognized standards of care; i.e., AORN WHO CDC, AAHC, OSHA
      1. Policies include, but not limited to:
        - i. Ensure competency of the staff
          1. Registered nurses will maintain ACLS, BLS, & where appropriate, PALS certification.
          2. Non-professional clinical staff will maintain BLS certification
          3. Annually update & demonstrate competencies.
          4. Emergency drills are practiced annually
        - ii. Safety practices are in place to protect the patient during times of dependence.
          1. An identification bracelet is provided and visually checked before administration of medications or start of procedure
          2. The name of the patient's primary physician is documented on the medical record for reference in case of an emergency situation
          3. Safety devices are used; i.e., non-skid slippers, side rails, safety straps, locks on stretchers and chairs.
          4. Providers protect the patient from pressure and injury through knowledge of proper body mechanics, positioning, and padding of pressure points
          5. Patient asked for verbal identification of the type and site of surgery while in the pre-operative area. The site will be marked pre-operatively by the physician/surgeon while the patient is awake & oriented in the pre-operative area. An intraoperative "TIME OUT" is performed after draping, & prior to incision in presence of the surgeon, anesthesia provides, scrub and circulator.
          6. Sharp objects and unprotected needles are not placed in contact with or near the patient at any time.
          7. Sponges, needles, and instruments are accounted for before closing body cavity
          8. Radiopaque sponges are used intra-operatively
          9. The patient is appropriately protected from radiation, electrical and laser injuries.
          10. Suction is immediately available for unconscious patients.
          11. Patients with artificial airways in place are constantly attended.
          12. Two licensed providers are present at all times when a post-op patient is in the building.
          13. Two providers are available to help with the initial ambulation of patients who are at risk for falling.

14. Discharge of the patient who has received anesthesia or sedation is allowed only when a patient is accompanied by a responsible adult.
- iii. Medications are stored and administered safely
    1. Adequate stock of medications is maintained
    2. Security of medication from tampering, theft, and unauthorized use is ensured
    3. Expiration dates, color & clarity are checked before use.
    4. Outdated medications are removed from the storage area of medications in use
    5. Medication is stored in the appropriately controlled environment.
    6. Emergency drugs are checked for expiration dates at least monthly and are replaced immediately if used or outdated.
    7. Allergies are identified and consistently documented in a prominent and consistent location on all patient records.
    8. All patients with known allergies are identified with a red arm-band. Admitting nurse verifies allergies with the patient & notes allergy and known reaction on the red band.
    9. Nurses follow safe standards of practice identifying the drug, dose, route, time, patient's name and all allergies before administering medications.
    10. All patients are observed for untoward or allergic effects of medications administered.
  - iv. Ensure staff effectiveness
    1. The patient is appropriately attended.
    2. Heavily sedated or anesthetized patients and children are attended at all times.
    3. Patients have a method for summoning assistance within reach at all times
    4. Interventions are employed to prevent patient falls
    5. An anesthesia provider is immediately available until patients have been evaluated and discharged.
  - v. Appropriate and safe equipment is available
    1. All technical and electronic equipment is tested for safety and checked/and or calibrated by a Biomed Engineer bi-annually & records maintained in the administrator's office.
    2. Unsafe or questionable equipment is taken out of service, labeled and service call initiated.
    3. Directions are readily available for all equipment.
    4. Emergency equipment is checked daily for function and staff familiarity.
    5. Portable emergency equipment allows for safe transport to the hospital if necessary.
    6. Emergency generator is checked weekly, monthly and inspected at least twice a year by contracted maintenance personnel
    7. An internal and external communication system is available throughout the facility
  - vi. Principles of asepsis are maintained

1. All providers are knowledgeable of and practice proper techniques to prevent the spread of disease and germs
  2. Strict aseptic technique is followed in the OR and other nursing units for noninvasive or minimally invasive procedures.
  3. All personnel are truthful and ethical about any break in sterile technique
  4. Sterility of supplies is ascertained through ongoing monitoring of autoclave function, checking of expiration dates, rotating of stock, and monitoring of individual techniques of packaging for sterilization
  5. Providers with highly contagious disease will not be involved in the care of surgical patients.
- vii. Decisions about the healthcare are made thoughtfully and with regard to the individual
1. A physician knowledgeable of the patient directs the patient's care, including discharge.
  2. All pertinent and preoperative tests results are available and assessed before administration of anesthesia or the onset of the procedure.
- viii. Management recognizes the need to provide support to staff members involved in a sentinel event. Support systems will focus on the process rather than blaming individuals involved
- ix. Fire Safety- See 12.5- 12.9 in Section 12- Life Safety Management Plan

# Ear Nose and Throat Surgery Center: QUALITY AND PATIENT SAFETY PLAN

DATE: 01/1/2018  
VERSION: 01

---

This plan was created and revised by the Ear Nose and Throat Surgery Center Quality Improvement and Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Ear Nose and Throat Surgery Center LLC is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Ear Nose and Throat Surgery Center LLC Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Ear Nose and Throat Surgery Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Ear Nose and Throat Surgery Center has developed this Quality Improvement and Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

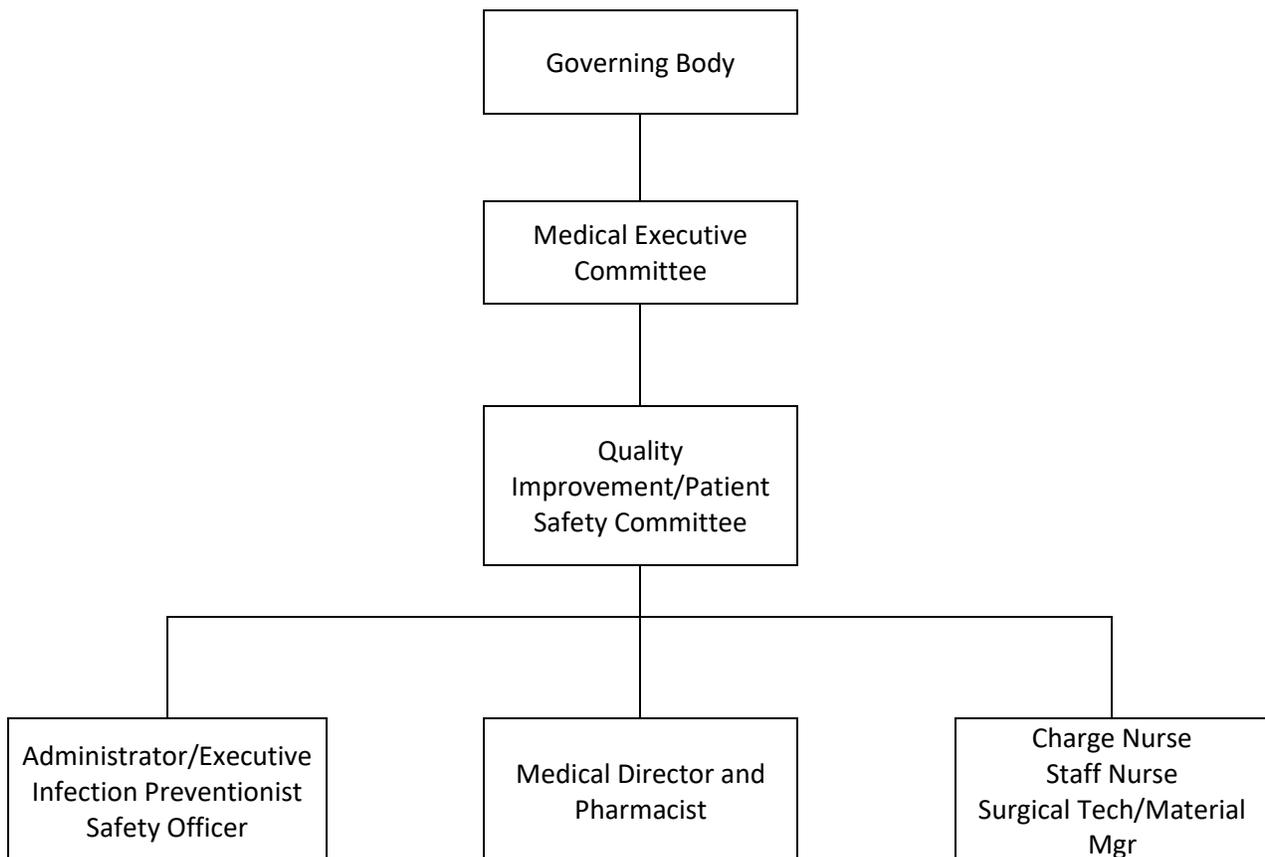

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

**Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))**

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

**Root Cause Analysis (RCA) Team Responsibilities**

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.
- Monitors and reports to the Quality Improvement/Patient Safety Committee safety statistics.

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

RCA team leader/Facilitator Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:

- Number of sentinel events from previous calendar month.
- Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

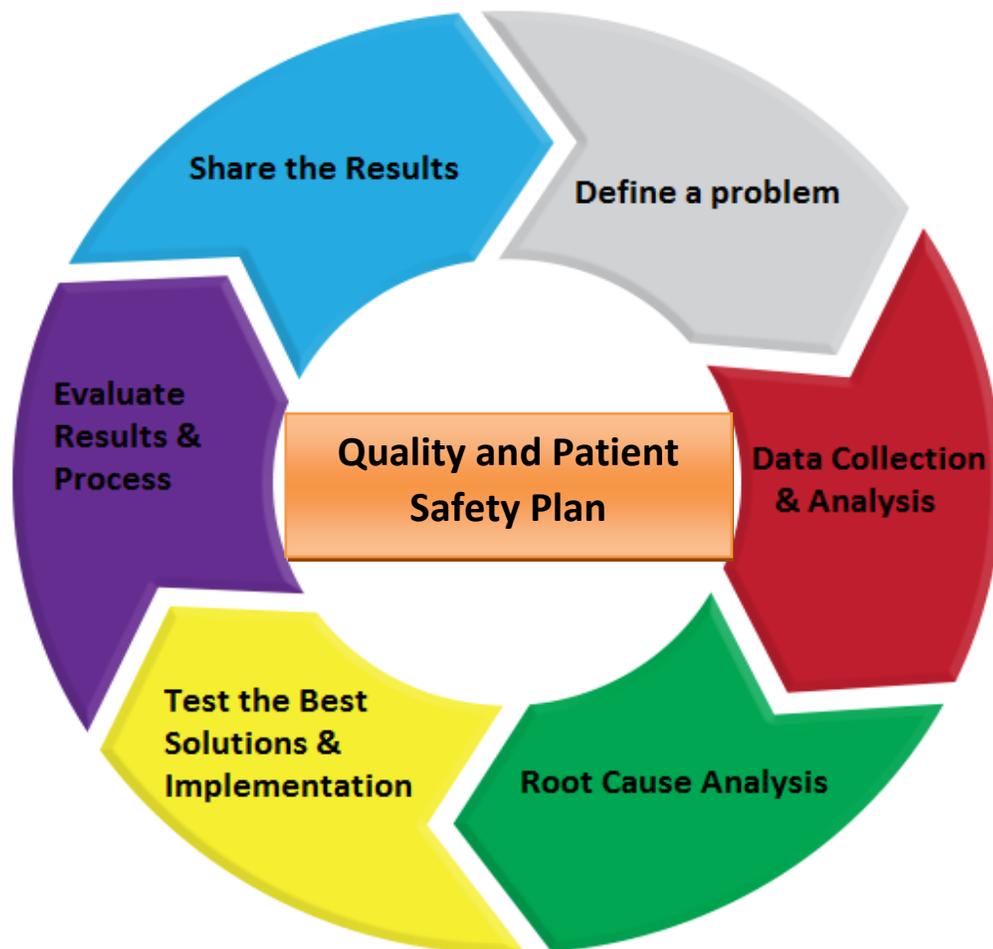

| Objective | Goals | Plan | Planned Completion Date | Responsible Party |
|-----------|-------|------|-------------------------|-------------------|
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |
|           |       |      |                         |                   |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Ear Nose and Throat Surgery Center will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Ear Nose and Throat Surgery Center to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

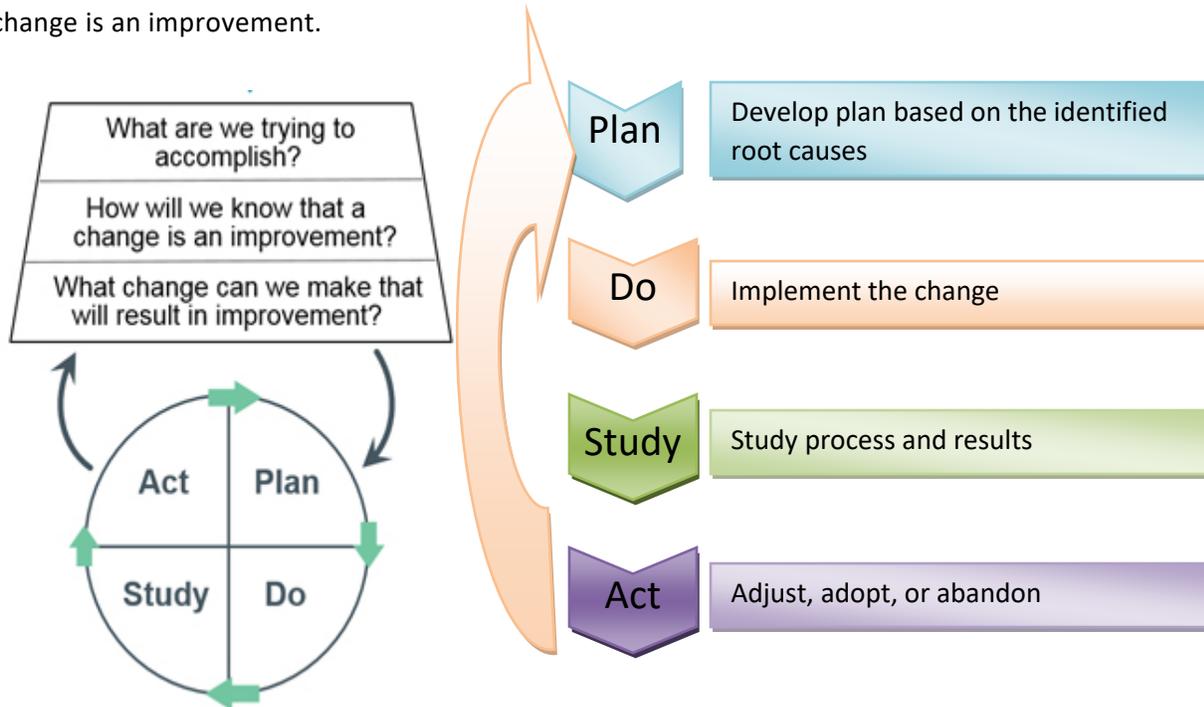

## Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?

- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### Data Collection and Reporting

Data should drive any quality and patient safety effort. (Facility name) is using (data system names) for tracking the sentinel events, healthcare infection data, and (any other database) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                          | Quarterly                                                                                                                                                                                                                            | Annually                                                                                           |

### Assessment of the Quality and Patient Safety Plan

---

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

### Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.” [http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF),

Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

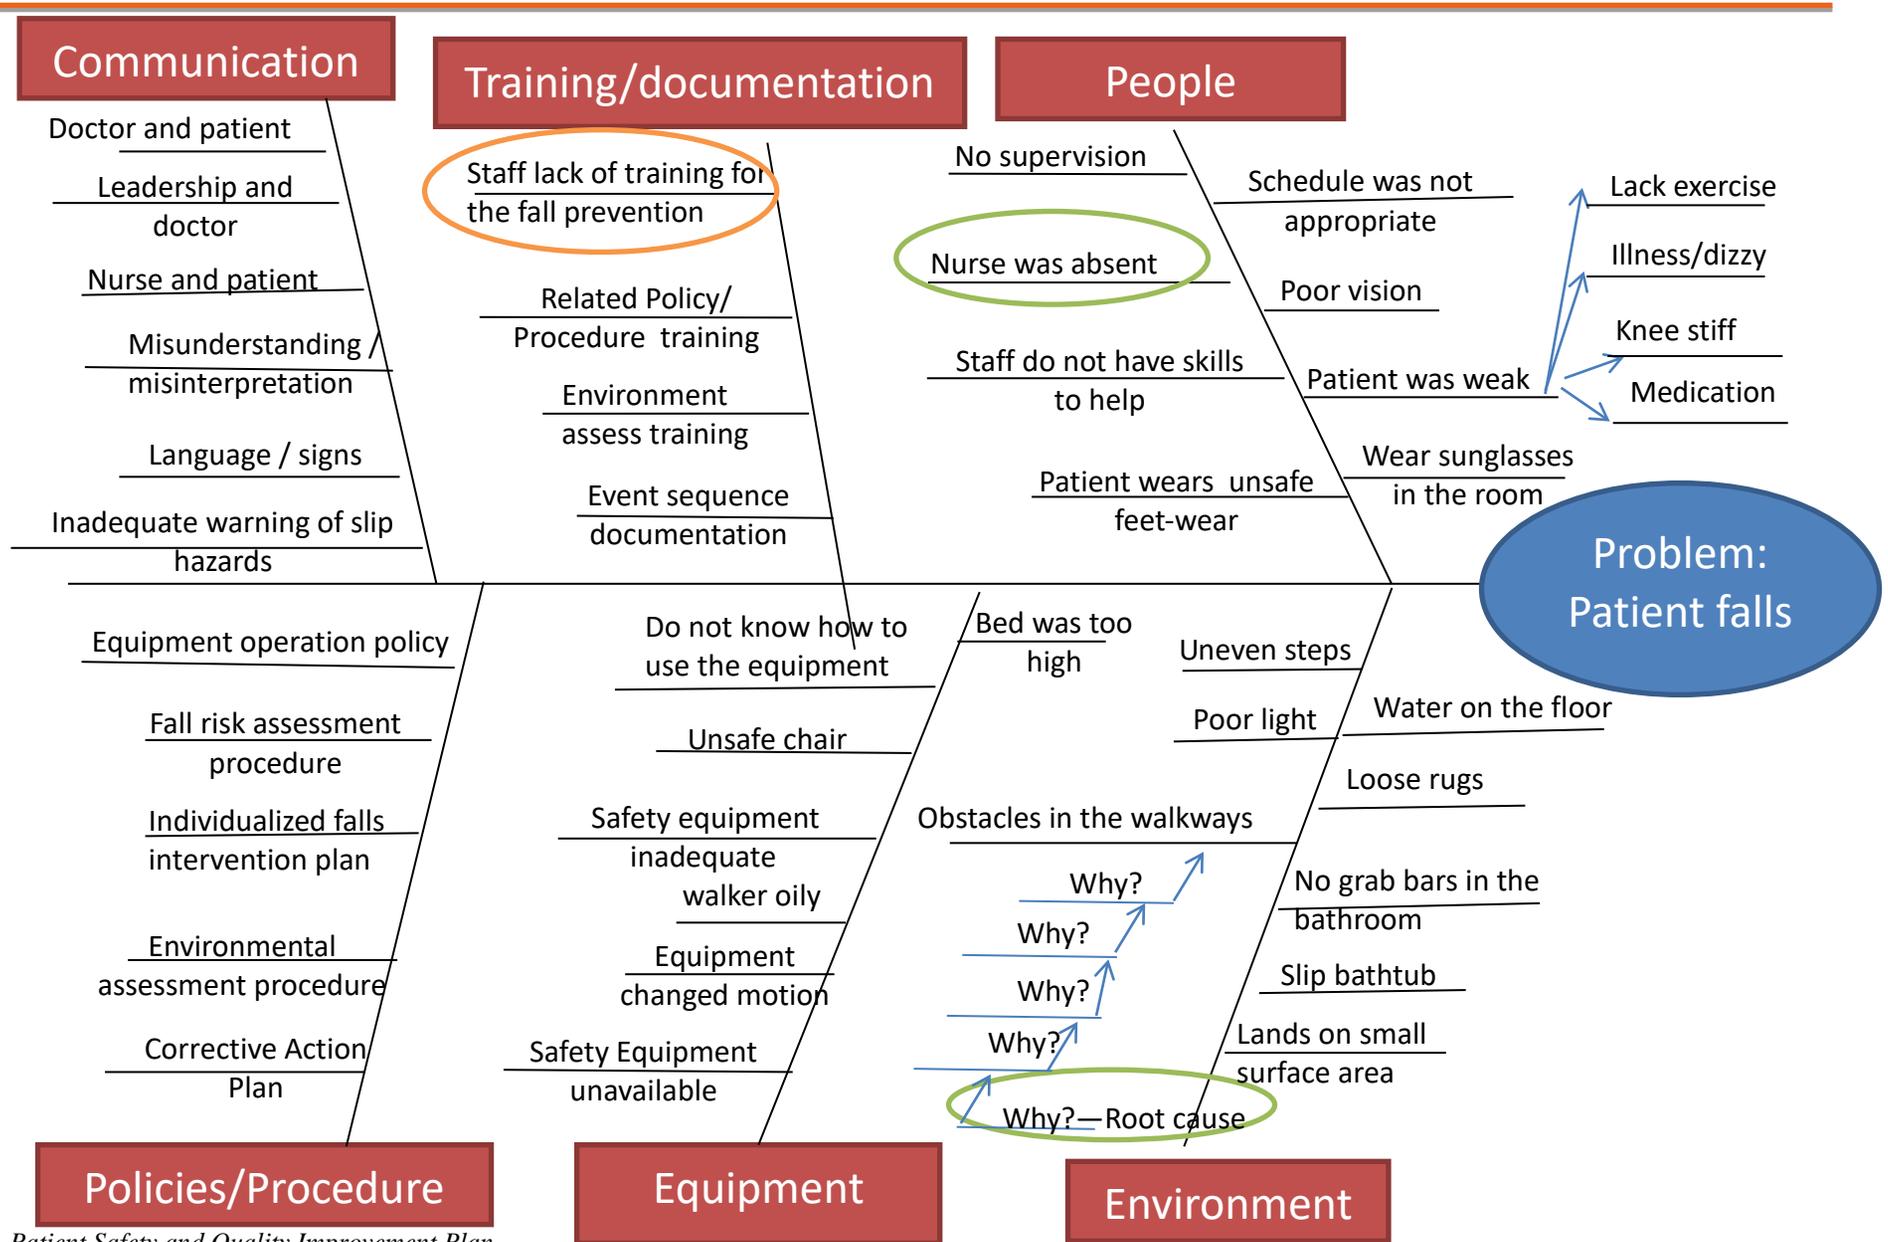

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                                                                                                                                              | Q1 2015                                                                       |

| <b>Items</b>                                                                            | <b>Description</b> |                      |  |
| 1. What is your goal?                                                                   |                    |                      |  |
| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

|  | HOSPITAL POLICY AND INFORMATION MANUAL                                                                               |  |
| <p><a href="#">PERSONAL PROTECTIVE EQUIPMENT POLICY</a><br/>Page 1 of 2</p>       | <p>Date Issued: 07/01 08/14<br/>Date Last Revised: 08/17<br/>Next Review Date: Policy Committee<br/>Approved By:</p> |  |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

**Purpose**

To establish the role of hospital leadership, hospital staff and medical staff in an integrated patient safety program.

**Policy**

Hospital leaders ensure that an integrated patient safety program is implemented throughout the hospital and ensure the participation of hospital staff and medical staff in the Patient Safety Program.

**Procedure**

- A. A patient safety program is established throughout the hospital. A qualified individual or team is assigned to manage the hospital safety program.
- B. The scope of the patient safety program encompasses potential negative to actual negative and serious events (near misses to sentinel events).
- C. All components of the hospital participate in the patient safety program.
- D. Patient Safety Program Reports are presented at least annually to the Governing Board regarding system or process failures and actions taken to improve patient safety

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018  
**Patient Safety Program**

**Purpose**

Tahoe Pacific Hospital has developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital. It is the intent of the leadership of Tahoe Pacific to foster a safe and safety-conscious environment that promotes wellbeing, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

**Scope**

Overall Patient Safety Goals include the following:

1. Improve the accuracy of patient identification
2. Improve the effectiveness of communication among caregivers
3. Improve the safety of using high-alert medications
4. Eliminate wrong-site, wrong patient and wrong-procedure surgery
5. Improve the safety of using infusion pumps
6. Improve the effectiveness of clinical alarms systems
7. Ensure the prevention and control of infections

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

**Methodology**

The Patient Safety Program includes both pro-active and responsive components.

Proactive: The proactive patient safety component emphasizes a pro-active error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect Analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report Trending

Failure Mode Event Analysis (FMEA) will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership and staff. Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and the Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Responsive: The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues:

1. Root Cause Analysis
  2. Intensive Assessment and Analysis
  3. Occurrence Report Findings
  4. Patient complaint response
  5. Performance improvement measures
- Patient Safety Committee and Reporting

Patient safety is the responsibility of all employees and Medical Staff Members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is multidisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from each performance improvement team are sent to the Quality Council, and reported to the Medical Executive Committee and the Governing Board.

The Patient Safety Committee is also multidisciplinary with representation from the following areas at a minimum: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management and Infection Control.

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:
  - a. Risk and Safety Management
  - b. External Data Reports
  - c. Sentinel Event Alerts from the Joint Commission
  - d. Healthcare Reports
  - e. Regulatory Reports
  - f. Patient/Family members
2. Continually improve processes of care delivery based on data analysis.
3. Develop policies and procedures that result from process improvement activities.
4. Develop and approve Patient Safety Education for the medical and hospital staff
5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

The Tahoe Pacific Lifecare Hospital believes in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator/CEO

The activities of the Patient Safety Program will be reported up to the Quality Council, the Medical Executive Committee and the Governing Board as outlined in the Performance Improvement Plan. Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care.

## Patient Safety Program

### **Purpose**

Tahoe Pacific has developed a Patient Safety Program in conjunction with the Performance Improvement Plan and Program, the Risk Management Plan and Program, and the Hospital Scope of Services, in order to provide guidelines for implementation of an integrated patient safety program throughout the hospital and to comply with the requirements of the state of Nevada. It is the intent of the leadership of the hospital to foster a safe and safety-conscious environment that promotes wellbeing, acknowledges and addresses risks, and encourages interdisciplinary safety and education focusing on process improvement.

### **Scope**

Overall Patient Safety responsibilities include the following:

- 1. Improve the accuracy of patient identification.** The LifeCare policy, National Patient Safety Goals contains the policy and procedure detailing the use of 2 patient identifiers whenever performing procedures, administering medications or blood, taking blood samples or other specimens, or providing any other treatments or procedures.
- 2. Improve the effectiveness of communication among caregivers** as contained in Handoff Communication Guidelines, Located under Best Practices in LifeCare Policies and Procedures
- 3. Improve the safety of using high-alert medications** as contained in the LifeCare policy, Medication Safety: High Alert Medications
- 4. Ensure the identification,** reporting, prevention and control of infections, including the role of proper hand hygiene as contained in the LifeCare policies, The Infection Control Plan and its addendums; Hand Hygiene, and other policies covering Blood and Body Fluid Exposure, Environmental Disinfection, Single Use of Drugs and Devices and Use of Isolation Precautions as contained in the Quality Management policy section.
- 5. Reduce patient falls and injuries from falls** as contained in the LifeCare policy, Fall Prevention, through recommendations from the Falls Committee Performance Improvement Team and information about falls gathered from the Post Fall Assessment Form.
- 6. Improve the effectiveness of clinical alarms systems** as contained in the LifeCare policy, Safety – Alarms- Clinical Equipment.
- 7. Identifying, preventing and correcting errors in the labeling, storing, prescription or administration of medications** as contained in the LifeCare policies, Medication Storage, Dispensing – Labels, Dispensing Medications – General, and other policies contained in the Pharmacy section.

**8. Ensuring the safe administration of prescription drugs, controlled substances, pharmaceutical services and other medications** as contained in the LifeCare policy, Administration of Drugs, and other policies contained in the Pharmacy section.

**9. The identification, investigation and reporting of Sentinel Events** as contained in the LifeCare policy, Sentinel Events, and as prescribed by NRS 439.800 and following guidelines established by the Nevada State Health Department's Sentinel Event Registry. The Patient Safety Officer will also be responsible for the maintenance of Sentinel Event records.

**10. Oversight of the maintenance of a sanitary environment** by the facility through conduction of Environmental Rounds, Infection Control Rounds and day to day observations by supervisory and charge staff, as contained in the LifeCare policies, Safety Management Plan,; the Infection Control Plan, and other policies under Quality Management and Engineering.

**11. Adoption and implementation of patient safety checklists to improve the health outcomes of patients in the medical facility** and ensure the knowledge to provide care safely is applied consistently and correctly. These checklists may include best practices and competencies for treatments ordered by an independent licensed practitioner. Other examples may include the proper sequence for environmental cleaning and proper use of personal protective equipment. Also included are discharge checklists explaining discharge medications, aftercare instruction and other instruction needed for safe discharge.

Current examples in use include:

- a. Insertion of PICC lines.
- b. Maintenance of foley catheters
- c. Discharge checklist
- d. Respiratory Treatment competencies

The primary focus of the Patient Safety Program is the patient; however the program also addresses the safety of visitors and staff from all clinical and organizational functions. The scope of the Patient Safety Program includes but is not limited to the occurrence of the following:

1. Adverse Drug Reactions
2. Falls
3. Restraints
4. Medication Errors
5. Hazardous Condition(s)
6. Near Misses
7. Sentinel Events

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

The role of the Patient Safety Program also crosses over into the safety of the environment of the hospital including oversight of the 7 Environment of Care Plans:

1. Safety Management Plan
2. Security Management Plan
3. Life Safety Management Plan
4. Medical Equipment Plan
5. Emergency Preparedness Plan
6. Hazardous Materials and Waste Management Plan,
7. Utilities – Utilities Management Plan

Annual Reviews of each of the 7 plans are performed annually and reported to the Environment of Care Committee, the Medical Executive Committee and the Governing Board

### **Methodology**

The Patient Safety Program includes both proactive and responsive components.

Proactive: The proactive patient safety component emphasizes a proactive error reduction and avoidance program. The following will be reviewed to proactively identify patient safety issues:

1. Medical equipment and medication risk assessment activities
2. Sentinel event alert risk reduction activities
3. Performance improvement indicators and monitoring activities
4. Patient Satisfaction reports
5. Medical Record review reports
6. Staff orientation, evaluation, training, and education activities
7. Failure Mode and Effect analysis (FMEA) activities
8. Medical Staff Credentialing issues
9. Occurrence Report trending

**Failure Mode Event Analysis (FMEA)** will be conducted annually. The process to be studied each year will be determined in collaboration with medical staff, hospital leadership, and staff. Information from patient safety organizations such as the Institute for Medicine, Institute for Safe Medication Practices, and The Joint Commission will be disseminated to the appropriate departments and committees for action and implementation of recommendations.

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

**Responsive:** The hospital will utilize information gathered from risk assessments, sentinel event alerts, performance improvement measures, medical record review, and other data in order to track, trend, and respond to patient safety issues. Patient safety related issues will be ranked based on severity. The following will be reviewed for reactive patient safety issues.

1. Root Cause Analysis
2. Intensive Assessment and Analysis
3. Occurrence Report Findings
4. Patient Complaint Response
5. Performance Improvement Measures
6. Patient Satisfaction Survey Reports

### **Patient Safety Committee and Reporting**

Patient Safety is the responsibility of all employees and Medical Staff members. The Patient Safety Program will be multi-faceted and that responsibility will be shared among several individuals, groups, and teams. Each performance improvement team is multidisciplinary in nature with representatives from the hospital and medical staff. Imbedded in each performance improvement team are safety issues relevant to the team's focus. Reports from the performance improvement teams are sent to the Quality Council and reported to the Medical Executive Committee and the Governing Board.

In compliance with State of Nevada Regulations, the Patient Safety Committee is comprised of:

- (1) The patient safety officer of the medical facility.
- (2) At least three providers of health care who treat patients at the medical facility, including, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility.
- (3) One member of the executive or governing body of the medical facility.

The Patient Safety Committee is also multidisciplinary with representation from the following areas: Clinical Departments, Pharmacy and Therapeutics Committee, Safety Committee, Quality/Risk Management, and the Hospital's Infection Control Preventionist.

The Patient Safety Committee functions include but are not limited to:

1. Review and evaluate internal and external patient safety data from the following sources for opportunities for improvement in the safety of patient care processes:
  - a. Risk and Safety Management
  - b. External Data Reports
  - c. Sentinel Event Alerts from the Joint Commission

Patient Safety Plan  
Tahoe Pacific Hospitals North  
2018

d. Healthcare Reports

e. Regulatory Reports

f. Patient/Family Members

2. Continually improve processes of care delivery based on data analysis.
3. Develop policies and procedures that result from process improvement activities.
4. Develop and approve Patient Safety Education for the medical and hospital staff.
5. Conduct an annual risk assessment of patient safety issues/strategies from internal and external reports.

The Hospital believe in a non-punitive reporting environment in order to maximize reporting of near misses, adverse outcomes, and sentinel events as it has been demonstrated that many errors are directly related to system and process failures. Disciplinary action may be considered when an involved individual takes action to hide the incident, is malicious or untruthful in reporting, when facts and circumstances suggest that the error was deliberate or in reckless disregard to patient and staff safety, or when the individual consistently fails in the detection, reporting or remedies to prevent mistakes. Reporting of patient safety issues to an outside agency will be done when required by regulation or as determined by the Administrator/CEO.

The activities of the Patient Safety Program and an annual review of the Patient Safety Plan, appropriate policies, forms, checklists and best practices will be reported to the Patient Safety Committee, the Medical Executive Committee, and the Governing Board as outlined in the Performance Improvement Plan and the LifeCare Reporting Calendar. Communication within the hospital and medical staff is the key to a successful patient safety program and will be encouraged.

Education and training is an important and effective tool in assuring that the Patient Safety Program is clearly understood, particularly error identification and reporting and the basic approaches to Patient Safety. Education and training on patient safety is included in new employee general and department orientation and reviewed annually. Additionally, education will be provided to patients and their families about their role in helping to facilitate the safe delivery of care.

# QUALITY AND PATIENT SAFETY PLAN Template

DATE: 01/06/2017  
VERSION:1

This plan was created and revised by the Siena Heights Surgery Center Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Siena Heights Surgery Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Siena Heights Surgery Center Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Siena Heights Surgery Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Siena Heights Surgery Center has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The *Patient Safety and Quality Improvement Plan*

core principles of this plan include:

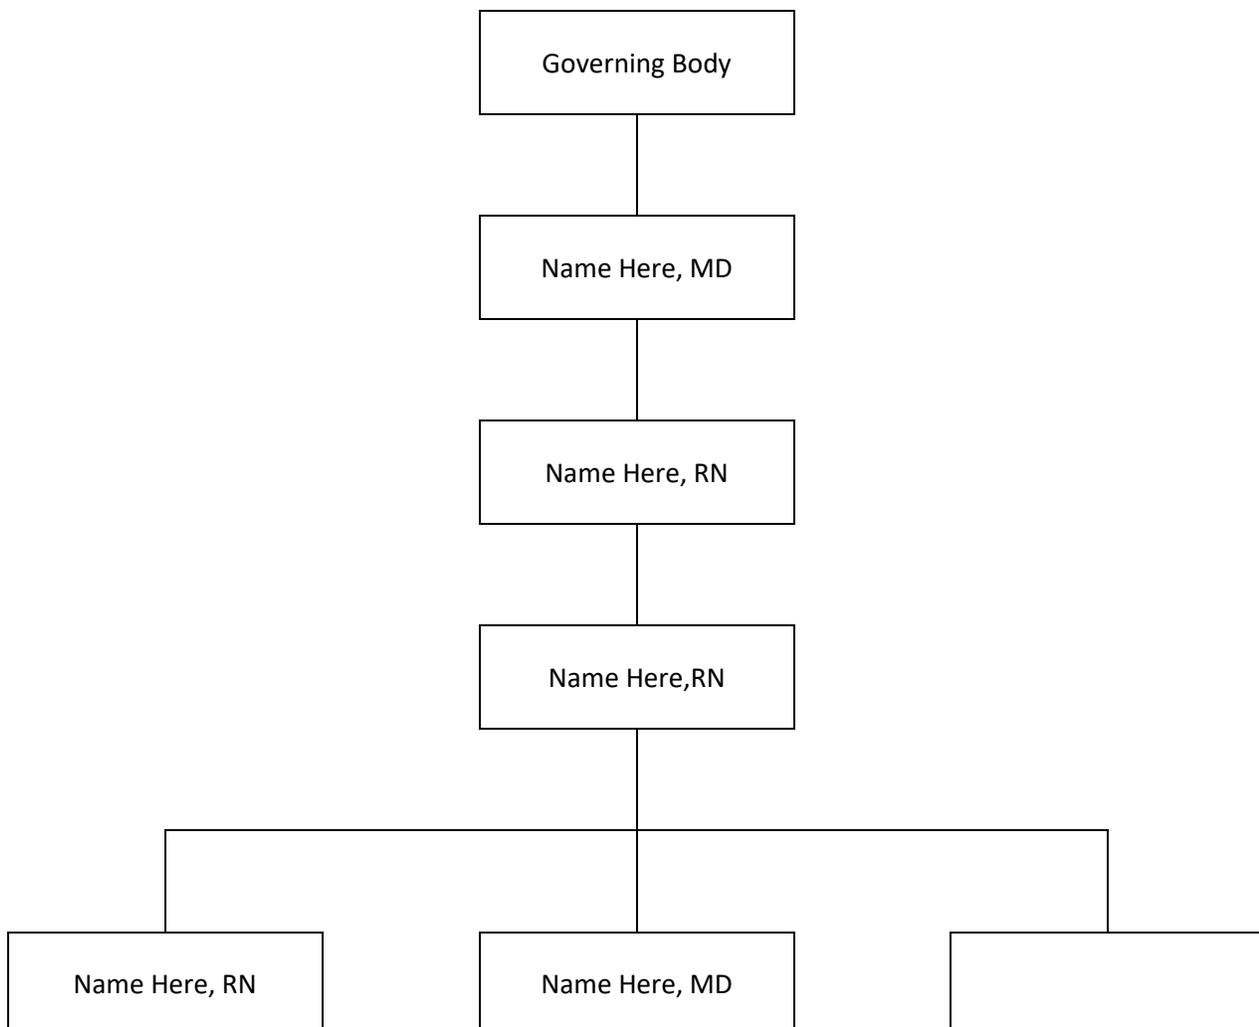

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

**Patient Safety Committee Responsibilities** (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities (please revise as needed)

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities ([based on NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

RCA team leader Responsibilities (please revise as needed)

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

#### RCA Facilitator Responsibilities

(Please provide the responsibilities here)

#### Executive or Governing Body Staff Responsibilities (please revise as needed)

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

(Please provide additional responsibilities here if needed)

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                                  | Goals                           | Plan                                                                                                                                                                                                       | Planned Completion Date | Responsible Party        |
|--------------------------------------------|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------|
| Minimize risks and hazards of patient care | Attain zero burn injuries       | Ensure all jewelry is removed preoperatively when ESU is to be used. Ensure grounding pad is properly placed. Assess patient's skin pre and post procedure. Allow prep to completely dry prior to draping. | 3/05/2018               | All preop and OR nurses. |
| Reduction of patient infections            | Attain zero infection rate      | Ensure antibiotic is given within 1 hour of incision time. Ensure skin is properly prepped prior to procedure start. Maintain greater than 90% compliance in hand hygiene.                                 | 3/05/2018               | All staff                |
| Prevent surgical mistakes                  | Maintain zero surgical mistakes | Develop reference cards to promote consistency among staff in time out procedure. Ensure surgeon marks site prior to procedure.                                                                            | 3/05/2018               | All preop and OR nurses. |
|                                            |                                 |                                                                                                                                                                                                            |                         |                          |
|                                            |                                 |                                                                                                                                                                                                            |                         |                          |
|                                            |                                 |                                                                                                                                                                                                            |                         |                          |
|                                            |                                 |                                                                                                                                                                                                            |                         |                          |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event."

(Facility name) will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Siena Heights Surgery Center to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

### Fishbone Diagram

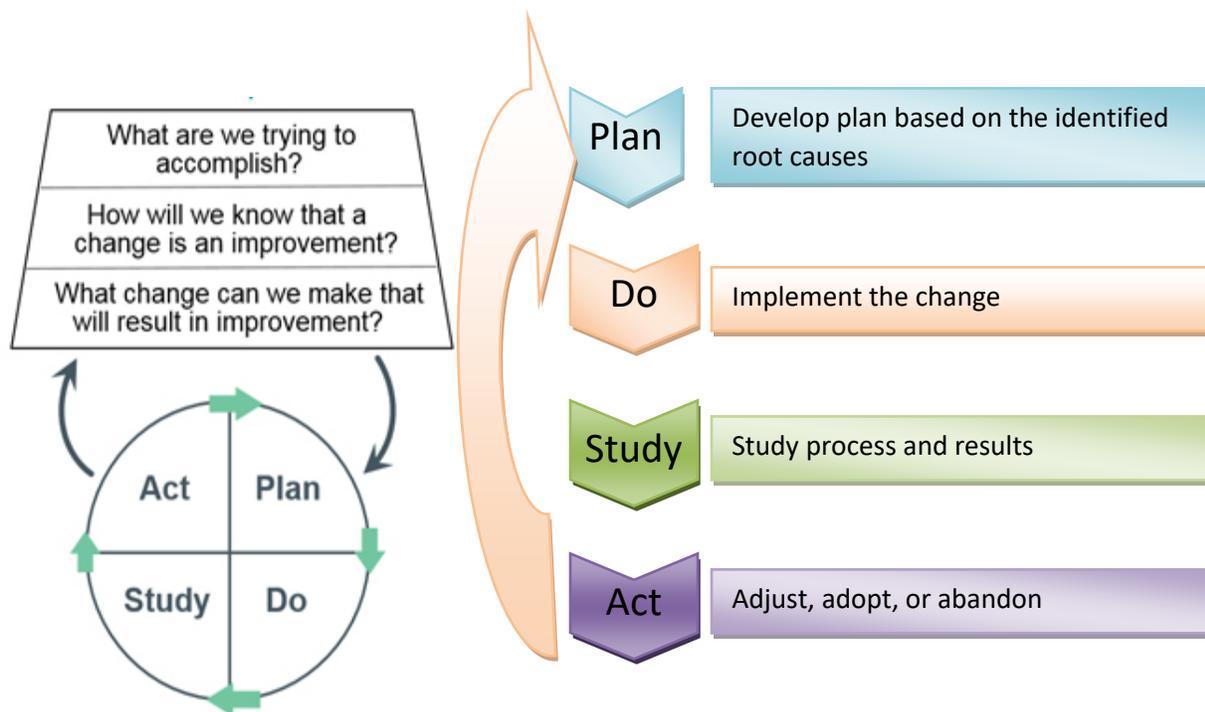

*Patient Safety and Quality Improvement Plan*

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
    - What were the results of the test?
    - Was the cycle carried out as designed or planned?
    - What did you observe that was unplanned or expected?
  - Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
    - Did the results match your prediction?
    - What did you learn?
    - What do you need to do next?
  - Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Siena Heights Surgery Center is using (data system names) for tracking the sentinel events, healthcare infection data, and (any other database) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

**Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CURRENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

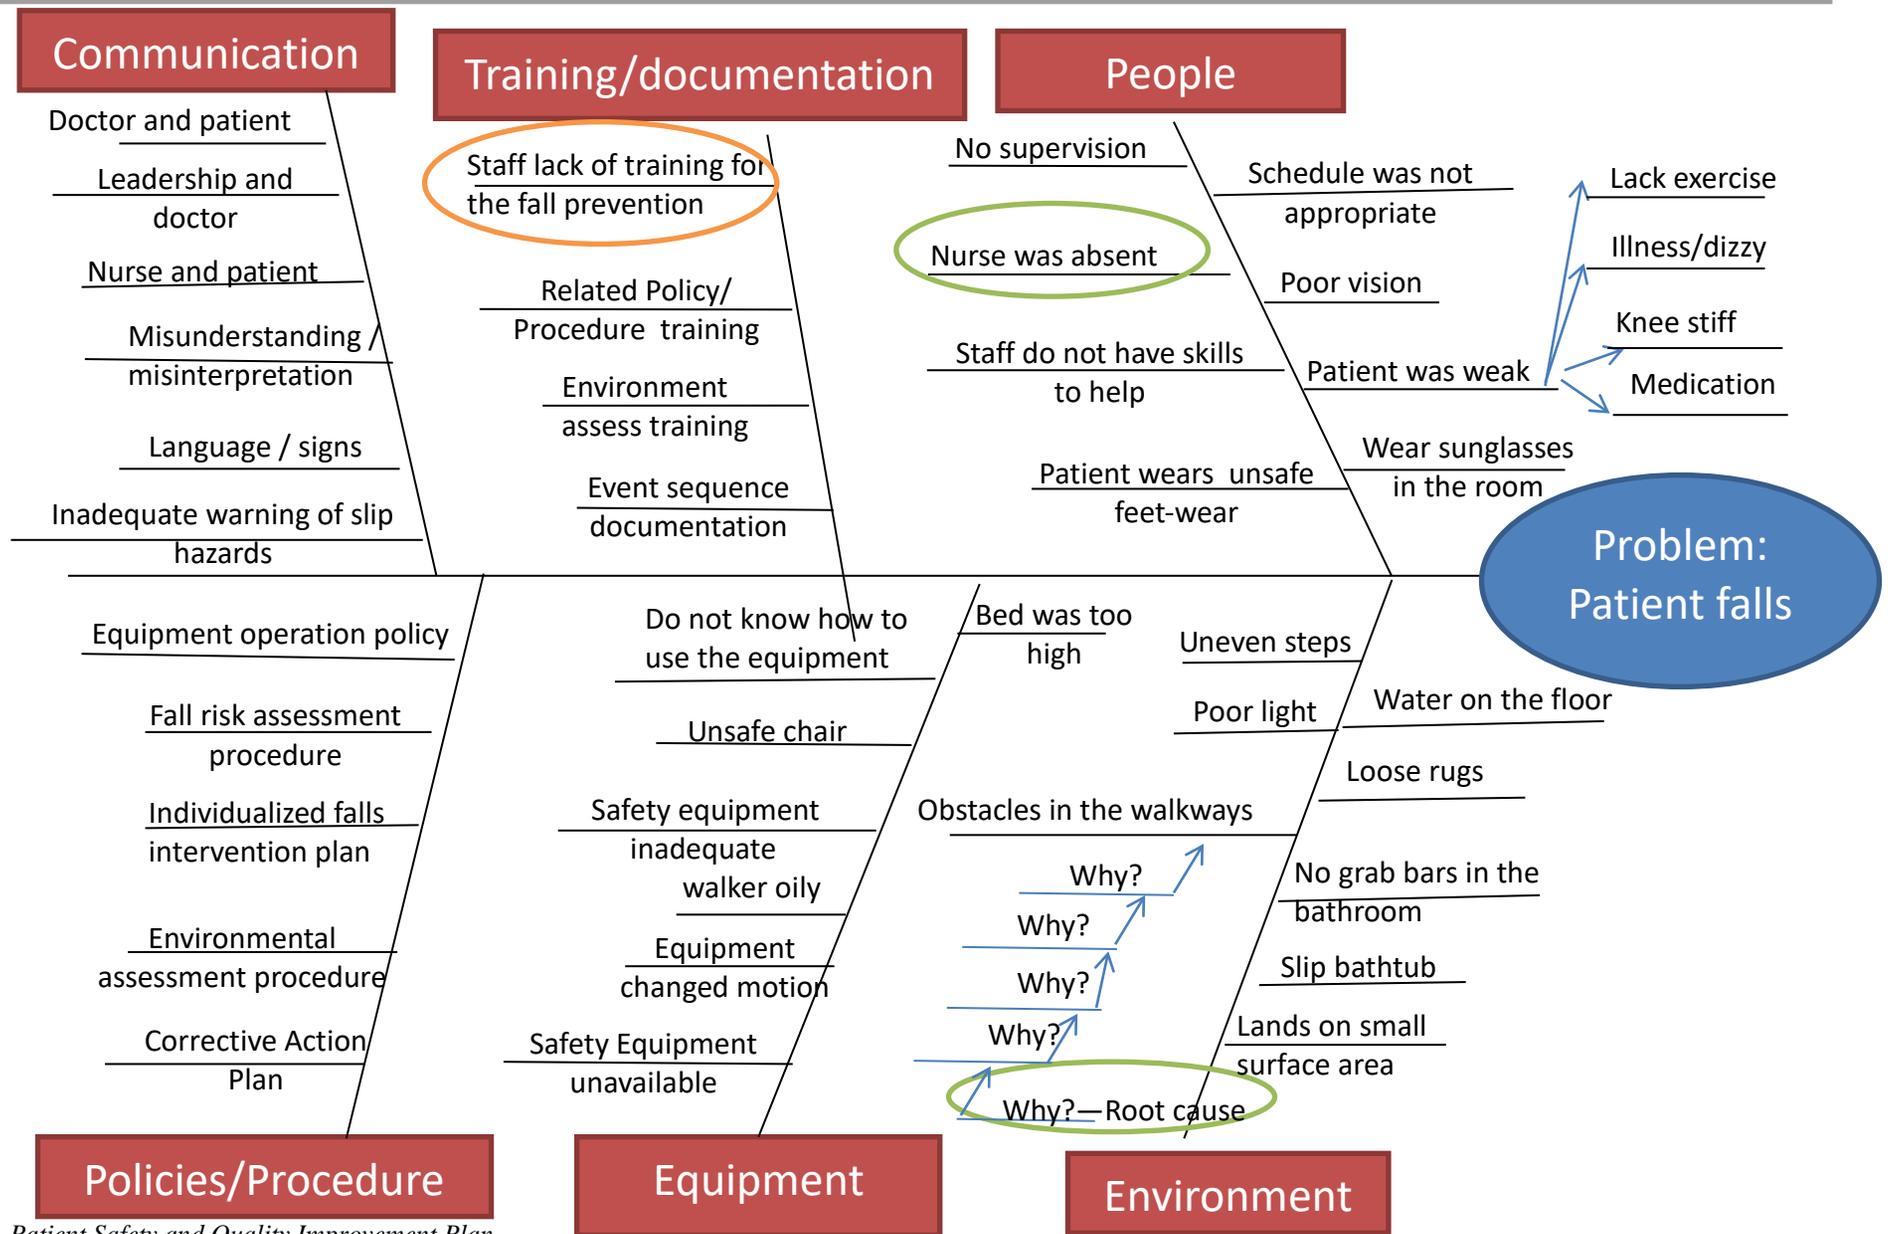

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                                                                                                                                              | Q1 2015                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <b>ACTION PLAN:</b>                                                                                                                                                 |                                                                                                                                                                                                                                                                                                              |                                                                                            |                                                                                                                                                                                                                                                      |                                                                               |
| <b>1. Create Systems</b> that anticipate errors & either prevent or catch them before they cause harm.                                                              | a. Enhance retrospective chart review process.<br>b. Establish an automated surveillance process.<br>c. Conduct a proactive risk assessment in a high risk area.                                                                                                                                             |                                                                                            | Complete an in-depth analysis of risk point utilizing the methods of FMEA.                                                                                                                                                                           | Implement Trigger Tools.<br>Develop automated surveillance reports in Cerner. |
|                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                              | Implemented e-MERS & PSO with UHC.                                                         | Create process for reviewing & closing reports in e-MERS.<br>Increase number of events reported by 10%.<br>Create process for communicating outcome of reported events.                                                                              |                                                                               |
| <b>2. Establish Structures</b> for reporting and a process for managing reports in the event reporting system.                                                      | a. Implement new electronic Voluntary Reporting System & participate in Patient Safety Organization.<br>b. Develop a structure to educate employees system-wide of the process for reporting hazards, errors and adverse events.<br>c. Establish a process for providing feedback regarding reported events. |                                                                                            |                                                                                                                                                                                                                                                      |                                                                               |
|                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                              |                                                                                            |                                                                                                                                                                                                                                                      |                                                                               |
| <b>3. Develop a Culture of Safety</b> where providers feel safe and supported when they report medical errors or near misses & voice concerns about patient safety. | a. Provide education on patient safety plan that emphasizes importance of blending a systems focus with appropriate individual accountability.<br>b. Establish a recognition program that rewards safe practices.<br>c. Improve overall perceptions of safety as measured by the Culture of Safety Survey.   |                                                                                            | Educate Medical staff, Hospital Wide Oversight & the Quality Committees on the objectives and goals of the patient safety plan.<br>Include patient safety presentation in monthly New Employee Orientation.<br>Develop 'Great Catch' awards program. | Re-evaluate culture of safety and develop action plan.                        |
|                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                              |                                                                                            |                                                                                                                                                                                                                                                      |                                                                               |
| <b>4. Establish Safety Priorities &amp; Targets.</b>                                                                                                                | a. Develop Patient Safety Dashboard that includes national measures and benchmarks.<br>b. Facilitate the development of action plans associated with measures not meeting benchmarks.<br>c. Assess and improve processes related to hand-off, transition and communication                                   | Complete 2014 Leapfrog Safety Survey.                                                      | Present Patient Safety Dashboard monthly to Hospital Wide Oversight Committee.<br>Establish & implement a plan to improve performance of each leap.                                                                                                  |                                                                               |
|                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                              | Develop method to track & report departmental progress and compliance of RCA action plans. |                                                                                                                                                                                                                                                      |                                                                               |

| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

|  | HOSPITAL POLICY AND INFORMATION MANUAL                                                                               |  |
| <p><a href="#">PERSONAL PROTECTIVE EQUIPMENT POLICY</a><br/>Page 1 of 2</p>       | <p>Date Issued: 07/01 08/14<br/>Date Last Revised: 08/17<br/>Next Review Date:<br/>Approved By: Policy Committee</p> |  |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

|                                         |                       |  |
|-----------------------------------------|-----------------------|--|
| Section 6<br>Patient Safety             | The LV Surgery Center |  |
| Policy Name: <b>PATIENT SAFETY PLAN</b> | Page 1 of 7           |  |
| Approved:                               | Revised:              |  |

**POLICY:**

The LV Surgery Center will institute and administer a comprehensive and continuous Patient Safety Plan for all patients to improve patient safety and reduce risk to patients through an environment that encourages:

- Recognition of risks to patient safety and medical/health care errors
- Actions to reduce these risks
- Internal reporting of incidents and potential incidents and actions taken
- Focus on processes and systems rather than individual blame

**PURPOSE:**

The Patient Safety Plan provides a systematic, coordinated and continuous approach to maintenance and improvement of patient safety by using established mechanisms to support responses to actual occurrences, have an ongoing proactive plan to reduce medical/health errors, and integrate patient safety as a high priority in all relevant organizational processes and services.

**RESPONSIBILITY:**

As with patient care, it is a coordinated and collaborative effort of the entire organization to maintain and improve patient safety.

The Governing Body approves the data-driven Patient Safety Plan and ensures the plan reflects the complexity of the facility’s organization and services, including those services furnished under contract or arrangement and focuses on the prevention and reduction of medical/health errors and adverse effects.

The Clinical Director is the Patient Safety Officer and is responsible for the management of the Patient Safety Plan by:

- Coordinating all patient safety activities
- Facilitating assessment and appropriate responses to reportable events
- Monitoring Root Cause Analysis and resulting action plans

|                                         |                       |
|-----------------------------------------|-----------------------|
| Section 6<br>Patient Safety             | The LV Surgery Center |
| Policy Name: <b>PATIENT SAFETY PLAN</b> | Page 2 of 7           |

- Serving as a liaison among the departments to assure facility wide integration of the Patient Safety Plan.

Each individual employee within the organization acts as a patient advocate for safety and is responsible to report patient safety occurrences and potential occurrences to the QAPI Coordinator/Patient Safety Officer/Clinical Director, who will aggregate the occurrence information and report to the Governing Body.

**PLAN:**

The scope of the Patient Safety Plan includes an ongoing assessment to prevent error occurrence, maintain and improve patient safety.

Patient Safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed to prioritize organizational patient safety efforts.

**Types Of Patient Safety Or Medical/Health Care Errors:**

- No Harm Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
- Mild-Moderate Adverse Outcome Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error
- Any Adverse Drug Reaction
- Any Transfusion Reaction
- Hazardous Condition – any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Sentinel Event – an unexpected occurrence involving death or serious physical or psychological injury or the risk thereof, including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function. Sentinel event criteria includes:

- The event has resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient's illness or underlying condition.
- The event is one of the following (even if the outcome was not death or major permanent loss of function):
  - Suicide of a patient.
  - The sexual assault of a patient during treatment or while the patient was on the premises of the facility.
  - A hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities.
  - Medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient.
  - A surgical procedure on the wrong patient or on the wrong body part of a patient.
  - A foreign object accidentally left in a patient during a procedure.
  - A patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.
  - Near Miss – any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.

### **What To Do When A Patient Safety Error Occurs**

Upon identification of a medical/health care error, the patient care provider will immediately:

- Perform necessary healthcare interventions to protect and support the patient's clinical condition.
- As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others – example: immediate removal of contaminated IV fluids from supply should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
- Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.

|                                         |                       |
|-----------------------------------------|-----------------------|
| Section 6<br>Patient Safety             | The LV Surgery Center |
| Policy Name: <b>PATIENT SAFETY PLAN</b> | Page 4 of 7           |

- Preserve any information related to the error (including physical information).  
Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, piggyback fluid for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
- Report the medical/health care error to the staff member's immediate supervisor.
- Submit the incident occurrence report to the QAPI Committee per organizational policy.

### **Internal Reporting Of The Error/Event**

Staff response to medical/health care errors is dependent upon the type of error identified:

- **No Harm Errors** – (including “no harm medication errors), staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an incident occurrence report form, submit the form to the QAPI Committee and notify their immediate supervisor.
- **Mild-Moderate Adverse Outcome Errors** (including medication errors), staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts in the medical record and on an incident occurrence report, submitting the report to the QAPI Committee per policy.
- **Adverse Drug Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts appropriately in the medical record and on an incident occurrence report, submitting the report to QAPI Committee per organizational policy.
- **Transfusion Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary orders. Staff will then follow the organization policy and procedure for this event.

|                                         |                       |
|-----------------------------------------|-----------------------|
| Section 6<br>Patient Safety             | The LV Surgery Center |
| Policy Name: <b>PATIENT SAFETY PLAN</b> | Page 5 of 7           |

- **Hazardous Condition/Patient Safety Issue** - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify their supervisor and document the findings on an incident occurrence report which is then submitted to QAPI Committee
- **Sentinel Event** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure, which includes a root cause analysis and action plan.
- **Near Miss** – staff will report the near miss event to their immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to QAPI Committee.
- It is the intent of this facility to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to, their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the individual staff member’s supervisor determining the appropriate course of action to prevent error recurrence.

### **Root Cause Analysis**

- All sentinel events and near miss occurrences will have a root cause analysis conducted to examine the cause and effect of the event through an impartial process
- A Root Cause Analysis is an interdisciplinary review process for identifying the basic or contributing causal factors that underlie a variation in performance associated with an adverse event or reportable patient safety event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.
- The QAPI Committee is responsible for conducting the root cause analysis. It will be completed within 45 days of becoming aware of one of the reportable events. They will encourage the staff members’ involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution.

|                                         |                       |
|-----------------------------------------|-----------------------|
| Section 6<br>Patient Safety             | The LV Surgery Center |
| Policy Name: <b>PATIENT SAFETY PLAN</b> | Page 6 of 7           |

A written Root Cause Analysis and “Action Plan” will be created which includes specific measures to correctly identify problems or areas of concern, identify strategies for implementing system improvements; and also includes outcome measures to indicate the effectiveness of system improvements in reducing, controlling or eliminating identified problem areas. The action plan must specifically address responsibility for implementation and oversight, time frames for implementation, and the strategy for measuring the effectiveness of the actions.

- The Joint Commission recommended “A Framework for a Root Cause Analysis and Action Plan In Response to a Sentinel Event” format may be used. See attached.
- Results of the entire Root Cause Analysis will be presented to the Governing Body for evaluation.

### **Communication of Action Plans and Root Cause Analysis**

- Action Plans related to a Root Cause Analysis will be shared with the entire staff upon Completion by the QAPI Committee. Possible recommendations to update or change policy and procedures may be presented to the staff, management and Governing Body to improve patient safety.
- Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care. There will be a random record review verifying compliance with this educational process.
- Root Cause Analysis and Action Plans will be made available to the state health department representatives during onsite reviews.

### **Reporting Obligations**

- Medical/Health care errors and occurrences, including sentinel events, will be reported internally and externally, through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.

### **Patient Safety Plan Staff Education/Training**

- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.

- Medical errors results from multiple factors. Flawed systems or processes can combine with active failures by caregivers in the clinical setting to produce accidents and errors. Some contributing factors are:
  - Inadequate communication among team members
  - Incomplete review of patient health records and diagnostic studies
  - Traditional hierarchical and autocratic cultures
  - Patient – related decisions made only by physicians
  - Unclear instructions
  - Confusing packaging of medications and supplies
  - Time pressures and constraints, Multi-tasking
  - Failure to include the patient and family members in assessment and decision-making
  
- Staff will be trained about error reduction, which requires the commitment of all members of the health care team. Besides correcting the identified factors above, the following individual and facility changes will be focused on:
  - Reduce reliance on memory by using checklists and protocols.
  - Standardize processes as much as possible for procedures and other activities.
  - Focus on the safety aspects of products during the selection and evaluation process.
  - Promote safety related clinical competency.
  - Educate employees about the potential for errors and how to avoid them.
  - Creating a “Culture of Safety” whereby there is a change of environment from blaming individuals for errors to one in which errors are treated as opportunities to improve systems. This is accomplished by:
    - establishing a sense of trust among team members;
    - dissemination and verifying receipt of information to all levels of staff and management;
    - developing and supporting a proactive approach rather than a reactive approach;
    - making a sincere commitment to affirming safety as the first priority.
  
- Quarterly Patient Safety Plan meetings will be incorporated into the QAPI Program and conducted to review any incident occurrence reports and review any new patient safety recommendations or alerts.

## **2018 QUALITY AND PATIENT SAFETY PLAN**

DATE: 02-05-2018  
VERSION: 1.1

This plan was created and revised by the Nevada Surgical Suites Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

**Patient Safety Committee/Program

## Commitment to Patient Safety

---

Nevada Surgical Suites is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, Nevada Surgical Suites Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high-quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Nevada Surgical Suites are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Nevada Surgical Suites has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

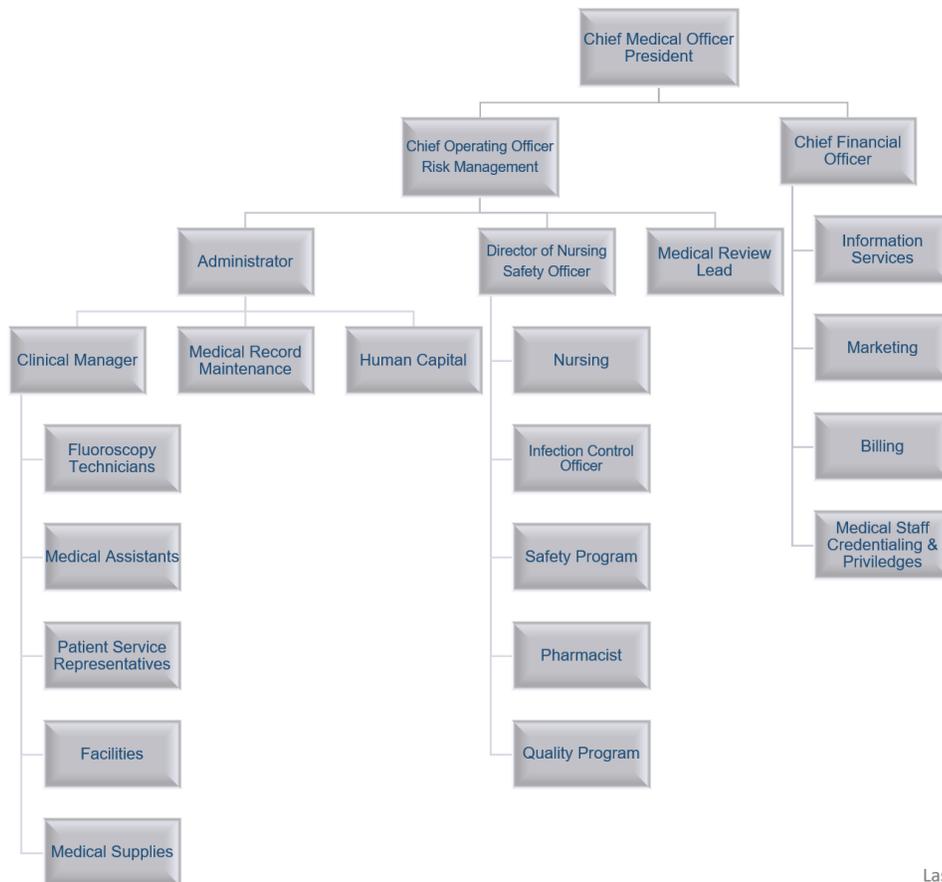

## Roles and Responsibilities

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Organizational Chart

Last Revised: 03-01-2018

## Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:

*Patient Safety and Quality Improvement Plan*

- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below:

- Member 1: Medical Provider, Governing Board Member, Executive Team Member
- Member 2: Governing Board Member, Billing Manger
- Member 3: Governing Board Member, Pharmacist
- Member 4: Medical Provider, Governing Board Member, Executive Team Member
- Member 5: Clinical Manager
- Member 6: Chief Financial Officer, Governing Board Member, Executive Team Member
- Member 7: Governing Board Member, Director of Nursing, Infection Control & Safety Officer
- Member 8: Governing Board Member, Administrator

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet monthly (or quarterly) to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                 | Goals                        | Plan                                        | Planned Completion Date | Responsible Party   |
|---------------------------|------------------------------|---------------------------------------------|-------------------------|---------------------|
| Medication Reconciliation | Increase accuracy to ≥ 95%   | Increase chart audits with focused training | 12-31-2018              | Pharmacist          |
| Allergy Documentation     | Increase accuracy to ≥ 100%  | Continue chart audits with focused training | 12-31-2018              | Pharmacist          |
| Hand Washing              | 100% compliance              | Observations, training                      | 12-31-2018              | Nurse Manager       |
| Patient Privacy           | Decrease complaints by ≥ 20% | Survey monitoring, training                 | 12-31-2018              | Director of Nursing |
|                           |                              |                                             |                         |                     |
|                           |                              |                                             |                         |                     |
|                           |                              |                                             |                         |                     |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Nevada Surgical Suites will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement, that we will use to test the changes.

**Root Cause Analysis**

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in Nevada Surgical Suites to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

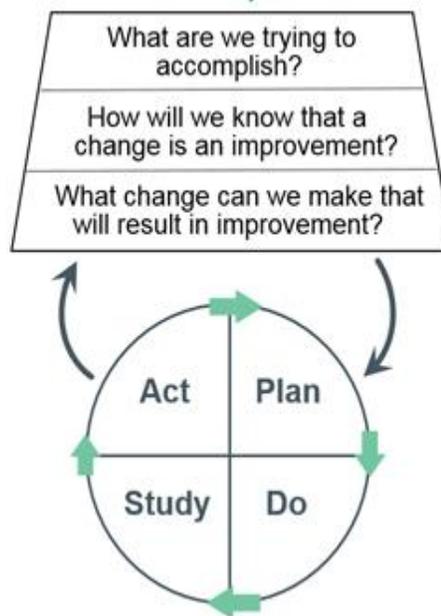

### Fishbone Diagram

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. Nevada Surgical Suites is using (data system names) for tracking the sentinel events, healthcare infection data, and (any other database) for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network

- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|

### Assessment of the Quality and Patient Safety Plan

Quality and Patient Safety Plan is updated annually and submitted through the REDcap Sentinel Event Registry after approval by the organization governing board.

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.

- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and
- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E**.)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F**.) <https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

### **Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);

- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_C\\_UR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_C_UR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

Chapter 5: Quality and Risk management

Chapter 7 Sub-Chapter 1 & 2: Infection Control and Safety

Chapter 8: Emergency Preparedness

Sunset Surgery Center  
Infection Control Guidelines  
Revised 1/29/2018

**Sunset Surgery Center**  
**INFECTION CONTROL POLICY**

This policy is consistent with Centers for Disease Control Recommendations for Standard Precautions. The policy is established to maintain a program for the prevention and control of infections and communicable diseases.

A. General Principles

1. Designed to reduce possible infection while performing surgical procedures as outlined in our policies and procedures.
2. Takes into consideration the health status of our patients.
3. Consider all patients' blood, and bodily fluids as infectious materials.
4. In order to reduce the possibility of infection we hold a 2:1 Nurse to Patient ratio. All RN's are licensed in the state of Nevada.
5. Equipment, instruments, and utensils which come in contact with patient excretions, secretions and bodily fluids are considered contaminated.
6. Infectious waste includes, but is not limited to, the following:
  - a. All dressings
  - b. Used soiled pads/diapers
  - c. Intravenous tubing/catheters
  - d. All used needles/sharps

- e. Trash, gloves, gowns, masks, etc. from isolation room.
- f. Sanitary napkins
- g. Used suction containers and tubing
- h. Specimens
- i. Disposable equipment and supplies once used on a patient
- j. Endotracheal tube, laryngoscope blades, airways

## B. Precautions

All health-care workers should routinely use appropriate barrier precautions to prevent skin and mucous-membrane exposure when contact with blood or other body fluids of any patient is anticipated. The purpose of protective equipment is to keep blood and other potentially infectious material from contacting skin, eyes, and mucous membranes. In some cases, adequate protection is provided solely by gloves. In other cases, masks and eye protection will also be needed. And in still other situations, gowns, aprons, and head covering may be required. All staff will be trained on an annual basis and retrained if needed.

## C. Procedures

1. Wash hands frequently and always between patients and after glove removal. Gloves should be changed after contact with each patient and immediately if they're torn or punctured.
2. Wear gloves when exposed to any patient's blood and body excretions and/or secretions such as when touching mucous membranes or non-intact skin, handling soiled equipment or vascular access procedures such as finger or heel sticks and venipunctures. (Other examples include):
  - a. Collecting specimens
  - b. Cleaning up fecal/urinary incontinence or handling linen and soiled garments
  - c. Bathing a patient
  - d. Mouth care and eye care
  - e. Removing soiled bed linens

- f. Beginning/discontinuing/converting intravenous and intraosseous therapies
  - g. Administering parenteral injections
  - h. Emptying Foleys, bedpans, urinals, emesis basins, NG drainage and wound drainage, sitz baths
  - i. Changing dressings, perineal pads, and diapers
  - j. Cleaning any surface the patient has contact with, spills of blood or body fluids
  - k. Handling tissues or clothing contaminated with tears or perspiration
  - l. Performing suctioning or intubation
3. Place disposable syringes and needles, scalpel blades, and other sharp items into designated, puncture-resistant containers. Do not recap, bend or break off needles.
  4. Place all infectious waste not suitable for disposal in "sharps" container into red (biohazard) plastic bags.
  5. Wear gowns if splashing or soiling by blood and body fluids is likely. After exposure, remove protective clothing to avoid contaminating self. Place in the assigned area or container.
  6. Wear other protective covering (e.g. masks, goggles, face shields, etc.) as indicated by particular situations such as patients with infections, during invasive procedures, or when splashing is likely. Wash after removing protective equipment and as soon as possible after blood contact with skin, eyes, or mucous membranes.
  7. Individuals with exudative lesions or exposed skin surfaces should refrain from direct patient care and from handling patient-care equipment. Small cuts and scrapes should be covered with an occlusive adhesive dressing or bandage and monitored closely for integrity during patient care activities.

#### D. CPR

Although saliva has not been implicated in HIV transmission, mouth-to-mouth resuscitation should not be performed. Use available resuscitation bags, mouthpieces and ventilation devices when resuscitating patients.

## E. Exposure Incident

1. A significant exposure is defined as:
  - a. A needle stick or cut caused by a needle or sharp that was actually or potentially contaminated with blood or body fluids.
  - b. A mucous membrane exposure (i.e. splash to the eye or mouth) to blood or body fluids.
  - c. A cutaneous exposure involving large amounts of blood or prolonged contact with blood- especially when the exposed skin was chapped, abraded, or afflicted with dermatitis.

If you are directly exposed, **report it immediately** to your supervisor.

2. Use a specific solution such as alcohol or Fertisafe if contaminated with blood or body fluids from a patient with, or at risk for, HIV infection, Hepatitis B or C virus.
3. If an accidental exposure occurs staff should follow CDC guidelines for occupational exposure: if needle stick, test for HIV to establish seronegativity first, then retest at 6 weeks, 3 months, 6 months, and 1 year.
4. You will be directed to your personal physician for any treatment and follow-up required as a result of any exposure you encounter. Sunset Surgery Center is not responsible for covering the costs of any associated treatments. Employees are strongly urged to obtain their own health insurance.

## **Department of Health Notification**

---

**Purpose:** To comply with the Department of Health's regulations for notification.

**Procedure:**

1. If our health care facility is aware of information which shows that the facility is not in compliance with any of the Department's regulations applicable to our health care facility, and that noncompliance seriously compromises quality assurance or patient safety, we will immediately act to correct the noncompliance.
2. If our health care facility is aware of a situation or the occurrence of an event at our facility which could seriously compromise quality assurance or patient safety, we will follow all laws requiring proper notification of proper authorities. The notification will include sufficient detail and information to alert the Department as to the reason for its occurrence and the steps that our health care facility will take to rectify the situation.
3. For purposes of subsections, (1) and (2) events which seriously compromise quality assurance or patient safety include, but are not limited to, the following:
  - a. Deaths occurring at the facility.
  - b. Rape occurring at the facility.
  - c. Surgery performed on the wrong patient or on the wrong body part.
  - d. Notification of termination of any services vital to the continued safe operation of the facility or the health and safety of its patients and personnel, including, but not limited to, the anticipated or actual termination of electric, gas, steam heat, water, sewer and local exchange telephone service.
  - e. Unlicensed practice of a regulated professional.

**Policy: Mandatory Reporting of Infectious Diseases by Clinicians/Lab Personnel**

It is the policy of all Employees at SSC to adhere to the Nevada State and Local laws regarding the mandatory reporting of infectious diseases and infectious disease-related conditions to the appropriate state health departments and Centers for Disease Control.

Nevada State Department and Human Resources Division of Health

505 E. King St. Room 201

Capitol Complex

Carson City, NV 89710

Phone: 1-702-885-4740

**I adhere to the State and Local policies of reporting infectious disease and infectious disease related conditions to the appropriate state health departments and CDC.**

## **Airborne precautions**

---

**Purpose:** To provide guidance to perioperative personnel for using and implementing airborne precautions if necessary in perioperative areas.

**Policy:** Elective surgery will be postponed for perioperative patients requiring airborne precautions until the patient is determined to be noninfectious.

### **Procedure:**

- A. The following steps will be followed when using and implementing airborne precautions for perioperative patients:
  - a. When a patient suspected of measles infection enters the facility, all personnel will use respiratory protection if available.
  - b. When a patient with confirmed or suspected varicella infection enters the facility, airborne and contact precautions will be implemented and followed, and only personnel with evidence of immunity will provide care to the patient.
  - c. When caring for a perioperative patient who requires airborne precautions, perioperative personnel will don a surgical mask or an N95 respirator, depending on the disease-specific recommendations, before entering the room of the patient don personal protective equipment (PPE) before entering the room discard PPE and perform hand hygiene when exiting the room.
  - d. Infected skin lesions will be covered and contained.
  - e. Standard cleaning and disinfection procedures will be followed after surgery on a patient requiring airborne precautions, but only after the appropriate amount of time for air ventilation.
    - i. Personal respiratory protective equipment is not necessary for cleaning an OR if the appropriate ventilation time has been allowed.
    - ii. If room cleaning activities must begin before the appropriate amount of time for air ventilation, cleaning personnel will wear an N95 or powered air-purifying respirator.
  - f. When transporting perioperative patients who require airborne precautions from an airborne infection isolation room to the OR, the patient will wear a surgical mask if clinically appropriate.
    - i. Patients will be transported directly to the OR, bypassing the preoperative area, and at the end of the procedure transferred directly to an airborne infection isolation room in the post anesthesia care unit or other designated area of the facility.
  - g. Documentation
    - i. The perioperative RN will document in the patient's chart the care of the patient known or suspected to be infected or colonized with microorganisms that are transmitted by airborne droplet nuclei and the physiologic responses throughout the continuum of care, including patient assessment, plan of care, nursing diagnoses, desired outcomes, and interventions.

## **Contact precautions**

---

**Purpose:** To provide guidance to perioperative personnel for using and implementing contact precautions in perioperative areas. The expected outcome is that the patient will be free from signs and symptoms of infection

### **Policy:**

- A. It is the policy of Sunset Surgery Center not to schedule patients who are known or suspected to be infected or colonized with microorganisms that are transmitted by direct or indirect contact (eg, methicillin-resistant *Staphylococcus aureus*, vancomycin-resistant *Enterococci*, *Clostridium difficile*).
- B. An infection preventionist will be consulted for guidance when measures are indicated to prevent the spread of highly transmissible or epidemiologically important pathogens.

### **Procedure:**

- A. If a patient is discovered to have a potential infection, contact precautions by the staff will be mandatory.
- B. When caring for a patient who requires contact precautions, perioperative personnel will don personal protective equipment (PPE) before entering the room and discard PPE and perform hand hygiene when exiting the room.
- C. When patient transport is necessary, precautions will be taken to reduce the opportunity for transmission of microorganisms to other patients, personnel, and visitors, and to reduce contamination of the environment.
  - a. Use appropriate barriers to cover affected areas if infectious skin lesions or drainage are present.
  - b. Before transporting the patient:
  - c. The perioperative nurse will notify the receiving team members that the patient is coming and what precautions to take to prevent transmission.
    - i. Contaminated PPE will be removed and discarded and then hand hygiene performed.
    - ii. Clean PPE will be donned to handle the patient at the transport destination.
- D. Unscrubbed personnel (eg, anesthesia professionals, circulating RNs) will wear gloves whenever touching the patient's skin or items that are in close proximity to the patient, wear a gown when it can be anticipated that clothing will come into contact with the patient or contaminated environmental surfaces, don a gown before entering the room, and remove the gown and perform hand hygiene when exiting the room.
- E. Preoperative personnel will hold the patient in a single patient room, if possible, or keep a separation of at least 3 feet between patients.
- F. Environmental cleaning will be implemented to help control the spread of microorganisms that are transmitted by direct or indirect contact.

- a. Routine cleaning of perioperative environmental surfaces (eg, floors, walls) will be performed according to Terminal Cleaning Policy.
  - b. Thorough cleaning and disinfection practices will be implemented for frequently touched surfaces (eg, bedrails, doorknobs).
  - c. All noncritical equipment (eg, IV pumps, ventilators) will be cleaned and disinfected before use on another patient and will be handled in a manner to prevent provider or environmental contact with potentially infectious materials.
    - i. Dedicated noncritical items such as stethoscopes, blood pressure cuffs, and electronic thermometers may be used.
- G. Perioperative RNs will evaluate and manage any negative patient outcomes potentially caused by using contact precautions (eg, reduced patient-to-provider contact, increased symptoms of depression and anxiety, decreased satisfaction with care).

**Documentation:**

- A. The perioperative RN will document the care of the patient known or suspected to be infected or colonized with microorganisms that are transmitted by direct contact or indirect contact and the physiologic responses throughout the continuum of care, including: patient assessment, plan of care, nursing diagnoses, desired outcomes, and interventions.

## **Tuberculosis precautions**

---

**Purpose:** To establish guidelines to identify and handle tuberculosis within the facility..

**Reference:** U. S. Department of Health and Human Services, Centers for Disease Control and Prevention (CDC) Recommendations and Reports (December 30, 2005, 54 (#RR-17):i-147), Guidelines for Preventing the Transmission of Mycobacterium tuberculosis in Health-Care Settings.

**Definitions:** None

**Policy:** Sunset Surgery Center will not knowingly admit a patient with tuberculosis or similar symptoms.

1. Signs and Symptoms of tuberculosis include:
  - a. A cough lasting for three (3) weeks or longer
  - b. Bloody sputum
  - c. Chest pain
  - d. Night sweats
  - e. Weight Loss
  - f. Anorexia
  - g. Fever
  - h. Easily fatigued
2. Susceptible groups include:
  - a. Medically under-served populations including some African-Americans, Hispanics,
  - b. Asians and Pacific Islanders, American Indians and Alaskan Natives
  - c. Homeless persons
  - d. Current or past prison inmates
  - e. Alcoholics
  - f. Intravenous (IV) drug users
  - g. Elderly
  - h. Foreign-horn persons from Asia, Africa, the Caribbean, Latin America and the former
  - i. Soviet Republic areas
  - j. Contacts with persons having active TB
  - k. Chronic steroid use (as in arthritis patients)
3. All employees and physicians are required to have tuberculosis screening annually.
4. All new employees must present tuberculosis screening within 10 days of employment.
5. All physicians practicing within the Center must maintain annual screening for tuberculosis.

**Procedure:**

- A. All patients are screened by the referring physician prior to surgery. If it is discovered that a patient has been diagnosed or shows potential symptoms, any surgical procedures will be cancelled. Once the patient is free from all signs/symptoms, the surgery can be rescheduled.
- B. Any patient suspected to have tuberculosis will be masked and transported to the hospital for treatment in an Isola.
- C. Clinic receptionist staff should immediately notify the nurse if they observe patient or visitor in the lobby exhibiting suspicious respiratory symptoms. Patients suspected of, or known to have active TB should be given a surgical mask and be shown how to wear it. All patients should be asked to cover their mouth and nose with tissues when coughing/sneezing and dispose of used tissues in a lined trash receptacle. Arrangements should be made to transfer the patient to an appropriate isolation room as soon as possible.
- D. Any employee suspected of tuberculosis will be suspended until such treatment can be completed and all signs/symptoms are resolved.
- E. If the employee fails to show proof of tuberculosis screening, they will be suspended until current proof can be provided.
- F. If a possible exposure is reported by an employee:
- G. Employees with previous negative TB tests:
  - a. All previous negative reactor employees should have a baseline TB skin test done as soon as possible after an exposure has occurred.
  - b. Eight to Ten weeks after the exposure, these employees should be retested and assessed for conversion.
  - c. If an employee begins showing symptoms of active TB, the Infection Control Nurse should be notified immediately.
- H. Employees with previous positive TB tests:
  - a. TB Questionnaire will be done as soon as possible after exposure.
  - b. Eight to Ten weeks after a TB exposure, employees should complete a follow-up TB Questionnaire.
  - c. If an employee begins showing symptoms of active TB or notes positive symptoms on the TB Questionnaire, the Infection Control Nurse (or designee) should be notified immediately.

**Documentation:**

- A. If a procedure is cancelled due to suspected tuberculosis, it is to be documented in the patient's chart
- B. All proof of employee and physician's tuberculosis screening is to be filed in their medical chart.
- C. If exposure is discovered, an Event Report will be documented and the employee will be sent for Medical treatment

**SUNSET SURGERY CENTER**  
**INFECTION CONTROL**  
**EMPLOYEE COMMUNICABLE DISEASE POLICY**

**CATEGORY: INFECTION CONTROL PRECAUTIONS FOR EMPLOYEES  
WITH COMMUNICABLE DISEASE**

**PURPOSE:** The purpose of this policy is to control and prevent the spread of communicable disease from employees in the health care setting to patients, visitors, other employees and third parties. Sunset Surgery Center Infection Control will monitor those employees or contract employees who have an unscheduled absence. The CDC guidelines on communicable diseases will be followed to determine when an employee on contract employee is free of communicable disease and may return to work.

**PROCEDURE:**

1. An employee is required to follow department guidelines when due to a medical reason he/she is unable to work as scheduled. The employee will be advised to follow the communicable disease policy if symptomatic of infectious disease(s).
2. Department managers are responsible for having a sick call-in process in place to identify employees with signs and symptoms of communicable diseases. Infection Control is available for consultation (Julie Smink, R.N.)
3. Employees and contract employees are to notify Infection Control immediately if diagnosed with one of the diseases listed or if he/she develops symptoms of an infectious/communicable disease.

4. An employee who is absent due to communicable disease must be deemed free of the communicable disease and/or non-transmissible to others at the work place before returning to work. Infection Control will notify the manager that the employee is required to have return to work permission from IC. IC will not disclose the disease to the manager.
5. CDC Guidelines will be posted in each department for determining when an employee is free of communicable disease.
6. All employees who report a communicable disease medical diagnosis to Infection Control, are required to comply with the IC instructions for return to work.
7. Managers will not allow any employee on restriction from IC to work until notified by IC that the employee is allowed to return to work.
8. All employees are required to read this policy and attachments, which list all the communicable disease that must be reported to the manager and Infection Control Coordinator. Review of this policy will be done at the time of hire or before providing patient care services, and an acknowledgement will be signed at the time. An annual review will be conducted of all employees.
  - a. Infection Control will log and document all communicable disease process, reported by all employees.
  - b. All managers will notify the Infection Control Coordinator of unusual occurrences or trends in communicable disease occurrence that require further investigation.
  - c. Infection Control will report occurrences by listed disease annually to the Infection Control and Safety Committee and provide an evaluation of the program's effectiveness.

## **INFECTION CONTROL**

### **MANAGEMENT RESPONSIBILITIES**

1. Teach employees that all patients' blood and body fluids are considered potentially infectious for human immunodeficiency virus (HIV), hepatitis B (HBV), hepatitis C (HCV) and other blood borne pathogens.
2. Provide a general explanation of the epidemiology, modes of transmission, and symptoms of blood borne pathogens. Exposure incidents can lead to infection from HIV, HBV, or HCV. Early symptoms of HIV include: fever, sore throat, lethargy, swollen glands. Early symptoms of HBV are: fever, runny nose, flu-like symptoms, skin rash, loss of appetite, fatigue, headache, nausea, vomiting, and diarrhea.
3. Demonstrate/describe protective barriers such as gloves, gowns, goggles and masks/face shields including use, location, removal, handling, decontamination, and disposal of personal protective equipment.
4. Emphasize that it is mandatory that Standard Precautions be followed as outlined in the Infection Control Policy.
5. Provide information on appropriate actions to take if an exposure incident occurs including the method of reporting that incident and the medical follow-up.
  - Document the circumstances of the incident and route of exposure.
  - The source individual's blood is tested for HIV, HBV, and HCV as soon as feasible, after consent is obtained.
  - The results of the source individual's blood test are made available to the exposed person.
  - The exposed person's blood is collected as soon as practical and tested after consent is obtained.
  - Post-exposure follow-up may be indicated.
6. Provide an opportunity for interactive questions and answers. Management must work closely with inexperienced staff and choose assignments for which the employee is prepared in terms of both knowledge and skill level.

7. Management and staff should understand and follow rules of confidentiality pertaining to test results and health records.
8. Career counseling should be initiated in a situation in which an employee refused to care for any client.

**Sunset Surgery Center**  
**EXPOSURE CONTROL PLAN**  
**For**  
**PROCEDURE SKILLS**

Employee Preparation

Employees attend a required practice session to prepare for this skill.

A review of precautions includes instructing employees to wash their hands thoroughly with soap and water and to wear gloves.

After "sharps" are used, the invasive piece of equipment is placed in a standard hospital "sharps" box. Supplies are "red bagged." Contaminated materials are disposed of at an approved site at the end of the day or as needed.

If suspected contamination occurs, the employee is instructed to soak the area with a 1:50 Clorox solution followed by thoroughly washing with soap and water. He/she is then referred to his/her physician or health care agency for follow-up testing. An incident report is filed through the program coordinator/director. Sunset Surgery Center is not responsible for covering the costs of any associated testing or treatments. Employees are strongly urged to obtain their own health insurance.

**Sunset Surgery Center**

**OCCUPATIONAL EXPOSURE INFECTION CONTROL POLICY**

CATEGORY: PREVENTING TRANSMISSION OF PATHOGENIC MICROORGANISMS

SUBJECT: HAND HYGIENE

---

DEFINITION:

A general term that applies to hand wash, antiseptic hand rub or surgical hand antisepsis.

The major concern of any infection control program is the prevention of infection. Because many types of infections may be caused by organisms transmitted on the hands of healthcare personnel, *hand hygiene is generally considered the single most important procedure in preventing the spread of infection.* For this reason guidelines are being provided for the use of appropriate hand hygiene procedures.

General Information: This includes patient care and non-patient care areas.

1. Hands are washed when visibly soiled with either an antimicrobial soap or a regular soap and tepid water. (Hot water can irritate skin.)
  2. An alcohol based hand sanitizer product (60-95% alcohol) can be utilized if hands are not visible soiled. This kind of product is not appropriate for use when hands are visibly dirty or contaminated with proteinaceous material.
- I. Non-patient Contact Areas (e.g. public rest rooms, break rooms, laboratories and/or other research areas, etc.)
    - a. Hand-washing facilities including sinks with running water (hot and cold), waste receptacles, soap and disposable paper towel dispensers should be conveniently located for frequent use by all personnel.
    - b. A hand washing product that is generally acceptable to personnel is to be provided.
    - c. Hand washing is done after going to the bathroom, before eating, etc.
  - II. Patient Care Areas
    - a. Hand-washing facilities including sinks with running water (hot and cold), waste receptacles, soap, and disposable paper towel dispensers should be conveniently located for frequent use by personnel.
    - b. For routine patient contacts and procedures, cleaning of patient care equipment involves a vigorous rubbing together of all surfaces of soap lathered hands for at least

fifteen seconds, followed by a rinsing under a stream of water is recommended, using a product which is generally acceptable to personnel. After drying hands thoroughly with a disposable paper towel, discard the used paper towel in the waste receptacle and use a dry paper towel to turn off faucets and open the exam room door.

***Rationale: Using a wet paper towel to turn off faucets and open exam room doors creates a "strike through" where bacteria on these surfaces can cross over the wet paper towel and re-contaminate clean hands.***

- c. In the absence of a true emergency, personnel must always wash their hands, even when gloves are used:
  1. Before putting on gloves and after removing gloves.
  2. Before direct care of patients when the potential for contamination by blood/body fluids exists. This is mandated by OSHA.
  3. After contact with intact skin such as after taking blood pressure, lifting patients, taking temperatures, etc. This prevents cross-examination from one site to another on the patient. (Patients carry microorganisms on their intact skin and may be colonized with infectious microbes.)
  4. Before performing invasive procedures, such as urinary catheter placement or manipulations, peripheral intravenous line placement, etc.
  5. Before taking care of particularly susceptible patients, such as those who are severely immune-compromised (HIV, transplant, chemotherapy, radiation patients, etc.) and newborns.
  6. Before and after touching wounds, whether surgical, traumatic, or associated with an invasive device.
  7. After situations during which microbial contamination of hands is likely to occur, especially those involving contact with mucous membranes, blood or body fluids, secretions, or excretions.
  8. After touching inanimate sources that are likely to be contaminated with virulent or epidemiologically important microorganisms. These sources include urinary measuring devices or secretion collection apparatus, and any inanimate objects in immediate vicinity of patients (e.g. exam tables, chairs, sinks, desk tops, etc.)
  9. After taking care of an infected patient or one who is likely to be colonized with microorganisms of special clinical or epidemiological significance; i.e. multiply-resistant organisms.
  10. Between tasks and procedures in the same patient to prevent cross contamination of different body sites-- such as wound dressing and then placing a peripheral IV site.
  11. Between contacts with different patients.
  12. After gloves are removed.
  
- d. Healthcare worker's fingernails
  1. Healthcare workers working in patient care areas must not wear artificial fingernails or nail extenders.

2. Healthcare workers working in patient care areas must keep natural nail tips at or less than  $\frac{1}{4}$  of an inch long.
3. Nail polish should be intact. If chipped the nail polish should be removed.
4. No current recommendation can be made regarding wearing rings in health-care settings. This is an unresolved issue at present.

**Sunset Surgery Center**  
**HANDWASHING TECHNIQUE**

1. If necessary, push up sleeves and your watch.
2. Turn faucets on and adjust water to as warm a temperature as you can tolerate.
3. Wet hands with water. Spread a thin film of soap over the entire skin surface. Wash thoroughly, rubbing all the surfaces of the hands together briskly for at least 30 seconds.
4. Rinse under running water with hands pointed downwards.
5. Dry with paper towels.
6. Turn off faucets using a dry paper towel and use a paper towel to open the door to exit.

**Examples of: WHEN TO WASH YOUR HANDS**

1. Before beginning work.
2. Before and after caring for each patient.
3. After collecting a urine specimen, giving a bedpan, or handling a commode.

4. After sneezing or coughing into your hand or using a Kleenex.
5. Before and after taking a temperature, either oral or rectal.
6. Before eating.
7. Before and after using the bathroom.
8. After any contaminated contact.
9. After finishing work—before leaving.

## Sunset Surgery Center

### PROCEDURES FOR HAND HYGIENE

#### A. Hand washing procedure for soap and water:

1. When washing hands with soap and water, wet hands first with water (preferably warm water), apply an amount of product recommended by the manufacturer to hands, and rub hands together vigorously covering all surfaces of hands and fingers and around fingernails.
2. Rinse hands with water and dry thoroughly with a disposable towel. Dispose of wet paper towel in waste receptacle.
3. Use dry towel to turn off the faucets and to open exam room door or restroom door.
4. Avoid using hot water because repeated exposure to hot water may increase the risk of dermatitis.

#### B. Hand hygiene with alcohol based products for routine care:

1. When decontaminating hands with an alcohol-based hand rub, apply product to palm of one hand and rub hands together, covering all surfaces of hands and fingers until hands are dry.
2. Follow the manufacturer's recommendations regarding the volume of product to use.
3. Store supplies of alcohol-based hand rubs in cabinets or areas approved for flammable materials.

**Hands contaminated with spores such as bacillus anthracis (anthrax) should be washed with soap and water; because alcohol based products as well as other antiseptics have poor activity against spores.**

#### Antiseptics

- A. Antiseptics used in the clinics and research areas/laboratories must be approved by the Infection Control and Safety Committee.
- B. All hand soaps have antimicrobial activity.
- C. Antiseptics are used to decontaminate the skin and other superficial tissues. They do not sterilize the skin but they can reduce microbial contamination depending on the amount and type of contamination, the antiseptic agent

used, the length of exposure to the agent, the presence of residual activity and the technique used.

- D. Alcohol based antiseptics, hand sanitizers that do not require water to use (e.g. foams, gels, and rinses) are adjuncts for either hand washing or the surgical scrub. However, these products may be used in the following instances:
1. As a supplement to the surgical scrub (applied after the first routine scrub for identical procedures).
  2. In the event that there is no soap and running warm water available.
  3. De-germing of hands after gloves are removed in the procedure/patient exam room cleaning process.
  4. Hands must be visibly free of soil/debris.
  5. Hands must be washed with soap and running warm water after the alcohol based hand sanitizer/antiseptic is used two or three consecutive times, based on the manufacturer's guidelines for their prospective products.
- E. Antiseptics approved by the Infection Control and Safety Committee for hand scrubs are:
1. Alcohol
  2. Alcohol gels or foams (at least 60-95% alcohol)
  3. 4% chlorhexidine gluconate
  4. Hexachlorophene
  5. Iodine/Iodophors
  6. Para-chloro-meta-xylene (PCMX)
  7. Triclosan (or Irgasan DP-300)

## Sunset Surgery Center

### COMMUNICABLE DISEASE POLICY FOR EMPLOYEES: LIST OF DISEASES

CALL INFECTION CONTROL COORDINATOR IF YOU ARE DIAGNOSED WITH ANY OF THE FOLLOWING ILLNESSES:

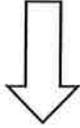

Diseases named as or caused by:

- Chicken pox
- Chicken pox, if you have been exposed and not had Chicken pox
- Diarrhea caused by Amebiasis, Cholera, Cryptosporidiosis, E. coli 0-157, Giardia, Salmonella, Shigella, C. Diff.
- Draining wound caused by Staphylococcus aureus (both MRSA/MSSA)
- Hepatitis A
- Herpes simplex on the hand- like a cold sore on the hand
- Impetigo
- Influenza
- Lice
- Measles
- Mumps, active
- Mumps, if you have been exposed and not had Mumps
- Pink eye- conjunctivitis (viral)
- Resistant organisms colonized or infected such as MRSA, VRE, others
- Rubella, active
- Rubella, if you have been exposed and not had Rubella
- Scabies
- Shingles
- Shingles, if you have been exposed and not had Chicken pox
- Strep throat caused by Group A Streptococcus
- Tuberculosis (TB)
- Anthrax
- Boils caused by Staphylococcus aureus (Staph)
- Brucellosis
- Diphtheria
- Leprosy (Hansen disease)
- Meningitis caused by Neisseria meningitis
- Typhoid fever
- Whooping cough
- Noro Virus

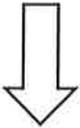

## Sunset Surgery Center

### COMMUNICABLE DISEASE POLICY FOR EMPLOYEES FLOWCHART OF PROCESS

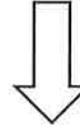

Employee ill at work

Supervisor reminds employee of Communicable Disease Policy and Sends employee home

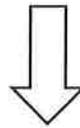

Employee call in ill

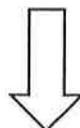

Supervisor reminds employee of Communicable Disease Policy

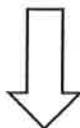

If employee is diagnosed with communicable disease listed he/she is to call immediately. Leave a message if IC is not available. Phone number: (702) 262-0079 ext. 234

Infection Control notifies employee supervisor that employee has restrictions before he/she can return to work.

Employee takes document to meet the disease criteria to return to work to IC prior to returning to work. Copies of document will be given to HR.

IC will notify the employee's supervisor that the employee can return to work.

**SUNSET SURGERY CENTER**  
**INFECTION CONTROL**  
**EMPLOYEE COMMUNICABLE DISEASE POLICY**

**CATEGORY: INFECTION CONTROL PRECAUTIONS FOR EMPLOYEES  
WITH COMMUNICABLE DISEASE**

**PURPOSE:** The purpose of this policy is to control and prevent the spread of communicable disease from employees in the health care setting to patients, visitors, other employees and third parties. Sunset Surgery Center Infection Control will monitor those employees or contract employees who have an unscheduled absence. The CDC guidelines on communicable diseases will be followed to determine when an employee or contract employee is free of communicable disease and may return to work.

**PROCEDURE:**

1. An employee is required to follow department guidelines when due to a medical reason he/she is unable to work as scheduled. The employee will be advised to follow the communicable disease policy if symptomatic of infectious disease(s).
2. Department managers are responsible for having a sick call-in process in place to identify employees with signs and symptoms of communicable diseases. Infection Control is available for consultation (Julie Smink, R.N.)
3. Employees and contract employees are to notify Infection Control immediately if diagnosed with one of the diseases listed or if he/she develops symptoms of an infectious/communicable disease.
4. An employee who is absent due to communicable disease must be deemed free of the communicable disease and/or non-transmissible to others at the work place before returning to work. Infection Control will notify the manager that the employee is required to have return to work permission from IC. IC will not disclose the disease to the manager.
5. CDC Guidelines will be posted in each department for determining when an employee is free of communicable disease.
6. All employees who report a communicable disease medical diagnosis to Infection Control, are required to comply with the IC instructions for return to work.

7. Managers will not allow any employee on restriction from IC to work until notified by IC that the employee is allowed to return to work.
8. All employees are required to read this policy and attachments, which list all the communicable disease that must be reported to the manager and Infection Control Coordinator. Review of this policy will be done at the time of hire or before providing patient care services, and an acknowledgement will be signed at the time. An annual review will be conducted of all employees.
  - a. Infection Control will log and document all communicable disease process, reported by all employees.
  - b. All managers will notify the Infection Control Coordinator of unusual occurrences or trends in communicable disease occurrence that require further investigation.
  - c. Infection Control will report occurrences by listed disease annually to the Infection Control and Safety Committee and provide an evaluation of the program's effectiveness.

## **Contaminated Needle Stick HIV/HIB Awareness Policy**

---

Purpose: To provide for the safety of the employees and patients of the Center.

Policy: A uniform routine will be followed after an occurrence of an employee of the Center being pricked by a contaminated needle.

Procedure:

- Routine:
  1. Break scrub as soon as is compatible with patient safety.
  2. Wash thoroughly with hand scrub solution, “milking” the wound.
  3. Normal wound treatment, including tetanus prophylaxis, if indicated.
  4. Inform patient, or next of kin, and obtain permission for HIV/HIB screening.
  
- Abraded Skin:
  1. Break scrub as soon as possible.
  2. Clean area thoroughly with scrub solution.
  3. Apply occlusive dressing if further patient contact is necessary.
  4. If mucous membranes exposed (eye, oral, cavity), flush with saline.
  5. Obtain permission from patient, or next of kin, for HIV/HIB screening.
  
- High Risk Patients:
  1. Break scrub as soon as possible.
  2. Clean area thoroughly.
  3. Inform patient, or next of kin, and obtain permission for HIV/HIB screening.
  4. Obtain personal HIV screening.
  5. Begin AZT 600 mg/day for six weeks.
  6. CBC every two weeks while taking AZT.
  7. If patient not available for further screening (negative HIV), health care worker should be tested at six weeks, twelve weeks, and six months.

## **Contaminated Patient Policy**

---

### **Policy:**

- Due to the nature of our practice, FDA infectious disease panels are required and performed prior to admission.
- If it is found that the patient is positive for any transmittable/contagious infectious disease, the patient is referred to seek care from their primary care physician and admission to Sunset Surgery Center is at the discretion of the Governing body.
- If admission is approved all universal precautions per the CDC and OSHA are implemented and followed by all staff.

## **Cleaning Blood and Bodily Fluid Spills and Blood-borne Pathogens**

**Purpose:** A protocol for the proper clean-up of bodily fluids has been universally established to ensure the safety of all those who are potentially exposed. Blood and other bodily fluids should be immediately cleaned up to lessen the danger of spreading HIV and Hepatitis B and C

### **Principles:**

1. All human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other airborne pathogens. (i.e. the concept of Universal Precautions). A bodily fluid spill kit for SSC is kept in the clean room under the sink.

### **Procedure:**

1. Cover the spill with absorbent paper towels to avoid stepping in it.
2. Block off the area of the body fluids spill to prevent further spread.
3. Put on vinyl gloves and carefully wipe up the spill with the paper towels and carefully place the mess in a biohazard bag.
4. Pour a mixture of 1 part household bleach to 10 parts of water carefully on the area of the spill. Avoid splashing. The bleach and water solution should remain in contact with the spill area for at least 20 minutes.
5. Carefully wipe up the area with paper towels and avoiding dripping.
6. Double-bag all towels from the body fluids spill along with the gloves used to clean the mess and tie the bags closed.
7. Dispose of the double-bagged materials in red biohazard bags and place in the biohazard bins located in the closet marked with biohazard stickers and wash your hands thoroughly with soap and warm water.

### **Tips and Warnings**

1. Many companies make bodily fluids spill kits that can be hung on the wall and contain all the needed supplies to clean up these spills quickly and easily.
2. All bodily fluid spills should be treated as potentially dangerous and need to be cleaned up immediately to ensure the safety of others.

## **Principles of Aseptic Technique**

---

**Purpose:** To define the principles of aseptic technique:

1. Pathogenic organisms: those microorganisms that may cause infection or disease.
2. Sterile: free from microorganisms.
3. Asepsis: absence of infection by mechanical and chemical methods of cleanliness.
4. Aseptic technique: manner in which objects are kept sterile.
5. Sterilization: any process by means of which all bacterial, including spores, can be destroyed.
6. "Disinfection:" any process by means of which all, except the spore-bearing pathogenic organisms, are destroyed.
7. Surgically clean: mechanically cleansed but not sterile.
8. Antiseptics: chemical substances, which inhibit the growth and multiplication of bacteria without necessarily destroying them.
9. Deodorants: substances, which neutralize disagreeable odors.

### **I. Principles of Aseptic Technique:**

A. Skin cannot be sterilized, therefore:

1. Patient's skin over operative area is thoroughly scrubbed in surgery or just prior to surgery.
2. All operators scrub their hands and arms thoroughly before sterile gowning and gloving.
3. Nurses and doctors gown and glove without touching outside of gown and gloves with skin.
4. If a glove gets a hole in it during an operation, it is to be changed at once.

B. Persons who sterile touch only sterile articles; persons who are not sterile touch only unsterile articles.

C. Non-sterile persons should avoid reaching over a sterile field. Sterile persons should avoid leaning over an unsterile field.

D. If in doubt as to sterility, consider an article not sterile. Examples may be:

1. If uncertain about actual timing of a sterilizer.
2. If a non-sterile person brushed close to a sterile table and vice versa.
3. If an autoclave tape looks as if the color has not been changed or if the control has not melted.
4. Any sterile package dropped on the floor is contaminated.
5. Re-autoclave all sterile equipment when questionable contamination has occurred.

E. Although entire gown was sterilized, consider a person sterile only from waist to axilla level, and only in front.

1. Tables are sterile only at table level.
2. Things dropped below waist level are considered contaminated.

3. Sterile persons should keep hands always in sight and above waist level.
  4. Do not fold arms when sterile as armpits may be damp from perspiration.
  5. Always face sterile areas. In passing other persons, use back-to-back, front-to-front technique.
  6. Sterile person is to keep contact with sterile areas to a minimum. Do not lean elbows on table. Stand back a few inches and work on table with hands.
  7. Sterile person is to keep work at a non-sterile field to a minimum:
    - a. In gloving, pick up sterile glove and step away from the table to pull it on.
    - b. Pick up total contents of package rather than one article to a time.
- F. Consider edges (table cover, wrappers, etc.) as unsterile.
1. Avoid touching edges of a wrapper when lifting contents from packages. Lift all contents by reaching down and lifting them up straight.
  2. If linen falls over side of table, discard it.
  3. If suture falls over the side of the table, cut it off at the table height or discard it.
- G. Wet areas are considered contaminated.
1. If a solution soaks through a sterile area to an unsterile area, the sterile area becomes contaminated when this is done.
  2. Be careful to lay sterile packages on dry areas.
  3. Cover a damp area on a sterile table with a thick sterile towel.
  4. Put Vaseline and lubricating jelly on a sponge on sterile table. Place wet ampoules, instruments, needles, etc. on double thickness or in sterile basin.
  5. In checking rooms, dry shelf well after damp dusting before replacing sterile packages.
- H. Keep air contamination at minimum.
1. Mask worn over nose as well as mouth.
  2. Keep all main corridor doors closed as much as possible.
- I. Sterile persons must keep within their sterile field and allow a wide margin of safety when passing unsterile areas.
1. Scrub nurse stands back away from operating table when drapes are being applied.
  2. Ask an unsterile person to step aside rather than trying to squeeze past them.
- J. Articles must be submerged when soaking. A floating article does not become sterile. If necessary, put a piece of gauze over the article so that it stays damp.
- K. Wrapping sterile packages.
1. Article to be completely covered and corners of the wrapper turned inside the wrapper.
  2. Leave a small cuff or underfold of wrapper so that the package may be opened without contaminating any part of it.

- L. A foolproof method of distinction between sterile and unsterile articles must be used.
  - 1. Sterile articles or equipment must be labeled, dated and kept within their own area.
  - 2. Unsterile articles and supplies must be clearly labeled and kept within their own area.
- M. In gloving, use skin to skin, outside of glove to outside of glove technique.
- N. In draping, the gloved hand should be on top of the drape and protected by a cuff of the drape.
- O. Grossly contaminated operative areas include:
  - 1. Any infected tissue.
  - 2. Purulent material or fluid.
  - 3. Gas gangrene or active pulmonary tuberculosis.
- P. Sterile tables are first considered contaminated to a case when the patient first enters the rooms.

## **II. What to do about contamination:**

- A. Stop what you are doing and step away from the sterile field. Remove contaminated instruments if they are cause of contamination as with a needle stick.
- B. Discard contaminated articles.
- C. Request a new gown, gloves, drape, etc.
- D. Regown, reglove, or redrape. If glove contaminated let unsterile person remove the gloves so that you do not contaminate the other glove.

## **III. Instruments:**

- A. Check instruments and supplies for each case, especially if someone else has picked them. If you are circulating, you are responsible for having all the necessary equipment. Checking in advance avoids unnecessary trips out of the room.
- B. Check preference cards and update frequently.
- C. Be careful with sharps (scissors, etc.) and do not put heavy instruments on smaller and more delicate instruments.
- D. Scrub nurses are to be sure that doctors' special instruments are cleaned, counted, and returned to the doctor.
- E. No scrubbed personnel are to leave the room during surgery except to obtain instruments from the autoclave.

## Sunset Surgery Center TB Skin Test Policy

It is the policy of SSC to identify those healthcare workers with latent TB (LTBI) or active TB. Importantly, TST helps identify those who require preventative therapy to prevent latent infection from progressing to clinically active TB.

For practical purposes, the Mantoux PPD skin test is used.

Administer the Mantoux skin test, intradermally, injecting 0.1 ml of 5TU purified protein derivative (PPD) tuberculin on the inner forearm. Two PPD preparations are currently available in the US: Tubersol (Pasteur Merieux-Connaught) and Aplisol (Parkdale Pharmaceuticals). Administer the tuberculin syringe with the bevel facing up.

Test all healthcare workers in your facility that could be exposed to a patient with symptoms of TB. Include all employees who have patient contact, including paid and unpaid persons, part-time personnel, volunteer workers, maintenance and clerical staff, as well as temporary or contract workers. Exclude only those employees in your practice who have never had patient contact, such as certain billing staff.

### **Recommendations for Tuberculin Skin Testing (TST) for Healthcare Workers**

|                              | <b>Low Risk</b>                       | <b>Medium Risk</b>                    | <b>Potential Ongoing transmission</b>                                                                                                                    |
|------------------------------|---------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Baseline TST                 | Yes, 2-step (PPD skin test) upon hire | Yes, 2-step (PPD skin test) upon hire | Yes, 2-step (PPD skin test) upon hire                                                                                                                    |
| Ongoing serial/screening TST | No                                    | Every 12 months                       | Administer one TST (2-step PPD skin test) as soon as possible after exposure to <i>M. tuberculosis</i> . If negative, re-test 8-10 weeks after exposure. |

### **Baseline Employee TST: The Two-step PPD Skin Test**

It is the policy of SSC to provide an initial baseline two-step PPD skin test to every healthcare worker that has patient contact, at no charge to the employee.

The two-step method differentiates boosted reactions for reactions due to new infections. Two-step testing also reduces the likelihood that a LTBI is misinterpreted as a new infection. For some people who are infected with *M. tuberculosis*, delayed-type hypersensitivity to tuberculin may wane over the years. When tested many years later, they may have a negative skin test. However, this initial skin test may boost their ability to react to tuberculin, causing a positive reaction to subsequent PPD tests. This boosted reaction may be misinterpreted as a new infection.

To prevent this misinterpretation, perform two-step PPD testing on all newly employed healthcare workers who have *not* had a documented negative PPD test result during the previous 12 months. Perform a second test within 1-3 weeks after the first test. If the second test result is positive, this is most likely a boosted reaction and the healthcare worker should be classified as previously infected. If the second test result remains negative, classify the healthcare worker as uninfected; a positive reaction on a subsequent PPD test is likely to represent a new infection with *M. tuberculosis*.

### **Two-step TST Interpretation**

- If the first test is positive, consider the person infected.
- If the first test is negative, test again one to three weeks later.
- If the second test is positive, consider person infected (boosted reaction).
- If the second test is negative, consider person uninfected.

### **Interpreting the TST**

After 48 to 72 hours, measure the diameter of induration (palpable swelling). A negative test should produce a discrete, pale elevation (a wheal) 6 mm to 10 mm in diameter in most individuals, and a wheal of 0 mm to 5 mm in high-risk individuals.

#### A positive test is:

- $\geq 5$  mm for very high-risk groups (HIV, persons with recent contact with an infected individual, injecting drug users whose HIV status is unknown, etc.).
- $\geq 10$  mm for other high-risk groups (foreign born persons from high-risk areas, healthcare workers who serve high-risk groups, medically underserved, low-income populations including ethnic minorities such as blacks, Hispanics, and Native Americans, residents of long-term institutions, persons with conditions that increase the risk of TB (silicosis, more than 10% below body weight, chronic renal failure, diabetes mellitus, high dose corticosteroid and immunosuppressive therapy, some leukemias and lymphomas, and some other malignancies).
- $\geq 15$  mm for those with no risk factors for TB.

### **False Positive/False Negative TB Tests**

#### False Positive Results

Some causes of false positive TB skin test results are:

- A boosted reaction in an adult from childhood exposure to TB.
- Infection with other non-tuberculous mycobacteria.
- Previous vaccination with BCG. (i.e., BCG, or bacilli Calmette-Guerin, is a TB vaccine used in many countries with a high prevalence of TB. BCG is generally not used in the U.S.)

#### False Negative Results

Anergy can sometimes cause false negative TB skin test results. Consider anergy in persons with no reaction and those:

- With HIV (33%) and AIDS (60%).
- With overwhelming miliary or pulmonary TB.

- Who have severe or febrile illness.
- Who have measles or other viral infections.
- With Hodgkin's disease or sarcoidosis.

Detect anergy by administering at least two other delayed-type hypersensitivity antigens, such as tetanus toxoid, mumps, or Candida, by the Mantoux technique, in conjunction with TB skin testing.

Those with reactions of  $\geq 3$  mm to any antigens, including PPD, are NOT anergic. Record results as mm of induration, not positive or negative. If anergy testing is less than 3 mm, patient is anergic. Assess the probability of infection. If risk is high (known contact of persons with TB or persons from a group of high prevalence of TB), evaluate for preventive therapy.

### **Periodic Retesting of Employees**

Based on risk assessment: If your facilities falls into the medium risk category, provide TB skin testing to all employees annually.

Based on exposure to a person with TB: If there is employee exposure to an individual with infectious TB, repeat skin testing as soon as possible after the exposure and if that TST is negative, perform another TST 8-10 weeks afterwards. It takes 2 to 10 weeks from the time of infection for an exposed person to react to the skin test.

Do not repeat TSTs annually or after an exposure for employees with positive skin test. For those employees, it's necessary to rely on chest x-rays and symptoms to see if they have tuberculosis. Require them to get a chest x-ray if they have a cough lasting for 3 weeks and 2 or more TB symptoms. Routine yearly chest x-rays are not necessary.

TUBERCULOSIS TEST FORM

I hereby request that I be given a PPD test through the Practice in order to meet the state public health requirements of a screening test for tuberculosis. I understand that the Practice assumes no liability for this test and that if I have a positive reaction, I will consult my primary care physician.

### **HEPATITIS B VACCINATION FACT SHEET**

#### **WHAT IS HBV?**

Hepatitis B virus (HBV) is a potentially life-threatening bloodborne pathogen. It causes hepatitis, an inflammation of the liver and although most people with hepatitis B recover completely, approximately 6-10% become chronic carriers and 1-2% die. In the group of chronic carriers, many have no symptoms but can transmit the virus. Carriers also face a significantly higher risk for other liver ailments such as cirrhosis of the liver and liver cancer.

HBV infection is transmitted through exposure to blood and other infectious body fluids and tissues including semen, tears, saliva, urine, breast milk, and vaginal secretions. Health workers and students are at high risk of acquiring Hepatitis B because of frequent contact with blood and potentially contaminated body fluids. Approximately 8,700 health care workers each year contract Hepatitis B. Health care persons must use work practices and protective clothing and equipment to prevent exposure to potentially infectious materials. These procedures are described in the HCC Health Sciences Division Infection Control Policy. However, the best defense against hepatitis B is vaccination.

#### **WHAT DOES VACCINATION INVOLVE?**

The hepatitis B vaccination is a noninfectious, yeast-based vaccine given in three injections in the arm. It is prepared from recombinant yeast cultures, rather than human blood or plasma. Thus, there is no risk of contamination from other blood borne pathogens nor is there any chance of developing HBV from the vaccine.

The second injection should be given one month after the first, and the third injection six months after the initial dose. More than 90 percent of those vaccinated will develop immunity to the hepatitis B virus. To insure immunity, it is important for individuals to receive all three injections. At this point it is unclear how long the immunity lasts so booster shots may be required at some point in the future.

No serious side effects or allergic reactions have been reported during the course of clinical trials. A few persons experience tenderness and redness at the site of the injection. Low-grade fever may occur. Rash, nausea, diarrhea, joint pain, fatigue/weakness and headache have also been reported. Other more serious adverse reactions have occurred infrequently.

Each employee should receive counseling from a health care professional before making a decision about vaccination. This discussion should help the employee make an informed decision.

**WHAT IF I DECLINE VACCINATION?**

A person who initially declines to receive the vaccine, must sign and return the attached waiver. If the employee later chooses to take the vaccine, the verification must be submitted to the coordinator/director.

## **Sunset Surgery Center**

### **Single Use Vial Policy**

The transmission of bloodborne viruses and other microbial pathogens to patients during routine healthcare procedures continues to occur due to unsafe and improper injection, infusion, and medication vial practices being used by healthcare professionals within various clinical settings throughout the United States.

Breaches in safe injection, infusion and medication vial handling practices continue to result in unacceptable and devastating events for patients. More than 35 outbreaks of viral hepatitis have occurred in the United States in the past 10 years due to these unsafe practices and other breaches of infection prevention procedures. These outbreaks have resulted in the transmission of either hepatitis B or C to more than 500 patients. The unsafe practices that were used by physicians and/or nurses in these outbreaks can be categorized by:

- a) Syringe reuse between patients during parenteral medication administration to multiple patients
- b) Contamination of medication vials or intravenous (IV) bags by accessing them with a used syringe and/or needle
- c) Failure to follow basic injection safety practices when preparing and administering parenteral medications to multiple patients
- d) Inappropriate use of finger stick devices and glucometer equipment between patients

APIC strongly supports adherence to the following safe injection, infusion, and medication vial practices.

#### **Aseptic Technique**

- Perform hand hygiene prior to accessing supplies, handling vials and IV solutions, and preparing or administering medications.
- Use aseptic technique in all aspects of parenteral medication administration, medication vial use, injections, and glucose monitoring procedures.
- Store and prepare medications and supplies in a clean area on a clean surface.
- Never store needles and syringes unwrapped as sterility cannot be assured.
- Discard all opened vials, IV solutions, and prepared or opened syringes that were involved in an emergency situation.

#### **IV Solutions**

- Never use intravenous solution containers (e.g. bags or bottles) to obtain flush solutions, etc. for more than one patient.
- Never use infusion supplies such as needles, syringes, flush solutions, administration sets or intravenous fluids on more than one patient.

- Being/initiate administration of spiked IV solutions (IV bag entered by the spiking tube) within one hour of preparation. If administration is not begun within 1 hour of spiking the bag, the IV and tubing shall be promptly discarded.
- For unspiked IV solutions (not accessed by IV tubing spike) follow the pharmacy prepared or manufacturer prepared IV solution expiration date.
- Use a USP 797 pharmacy clean room (ISO 5) to prepare admixtures of IV solutions.
- Disinfect IV ports using friction and 70% alcohol, an iodophor or an approved antiseptic agent. Allow to dry prior to accessing.
- Always use single-dose containers for flush solutions .

### **Syringes**

- Remove sterile needle/cannula and/or syringe from package just prior to use.
- Never use medication in a syringe for more than one patient even if the needle is changed between patients. Changing the needle but not the syringe is unacceptable.
- Utilize sharps safety devices whenever possible.
- Discard syringes, needles and cannulas after used directly on an individual patient or in their IV administration system.
- Dispose of used needles at the point of use in an approved sharps container.
- Do not prepare medication in one syringe to transfer to another syringe, i.e. nurse draws up solution into syringe then transfers the solution to a syringe with plunger removed or injected into the bevel of the syringe to then be injected into the patient.

### **Vials**

- Always follow the manufacturer's instructions for storage and use.
- Use single-use or single-dose vials only.
- Always use a sterile syringe and needle/cannula when entering a vial. Never enter a vial with a syringe or needle/cannula that has been used on a patient.
- Cleanse the access diaphragm of vials using friction and 70% alcohol or other antiseptic. Allow to dry before inserting a device into the vial.
- Discard single-dose vials after use. Never use them again for another patient.
- Never store vials in clothing or pockets.
- Use filter needles to withdraw solution from an ampule.
- Never pool or combine leftover contents of vials for later use.
- Never leave a needle, cannula, or spike device inserted into a medication vial rubber stopper because it leaves the vial vulnerable to contamination.
- Inspect vials and discard if sterility has been, or is thought to be compromised. Examine the vial for any particular matter, discoloration or turbidity. If present, do not use and discard immediately. All vials used during an emergency should be discarded as sterility cannot be guaranteed.

## **Healthcare Workers**

- Provide the hepatitis B vaccination series to all previously-unvaccinated healthcare personnel whose activities involve contact with blood or body fluids.
- Check and document post-vaccination titers one to two months after completion of the vaccination series.
- Report body fluid and needle-stick/sharps injuries immediately.
- Evaluate needle-stick/sharps injuries for preventability.
- Use safety devices for liquid injection syringes. Sharps (syringes/needles) with attached safety devices must be activated prior to disposal.
- Ensure staff preparing or administering injections or other parenteral medications are competent to aseptically perform these tasks.
- Periodically assess compliance with safe injection practices by observing and evaluating personnel performing these procedures.

## **Conclusion:**

Use of safe injection practices is critical to prevent microbial contamination of products administered to patients. The ongoing reports in the United States of hepatitis B and C transmission to patients and outbreaks of bacterial infections associated with unsafe injection practices is an indication that diligence is needed to assure that these preventative practices are being scrupulously followed in all healthcare settings. Healthcare workers and their managers must understand, practice and promote safe injection, infusion and medication vial practices. Administrators of medical facilities must support safe injection practices and provide resources to ensure employees have the training and equipment to safely implement these procedures. The role of the Infection Preventionist is to assess procedures for safety, develop programs, train, and implement safe injection, infusion and medication vial practices so they are the absolute standard of care throughout the variety of healthcare settings that exist today. The health and safety of our patients require adherence to infection prevention practices by all healthcare workers. These infection prevention practices should prevent cross contamination, transmission, and outbreaks of infection due to unsafe injection, infusion and medication handling, and preparation and administration practices.

### **SAFE INJECTION PRACTICES and SINGLE and MULTI-DOSE VIALS:**

**In order to maintain compliance it is the policy of Sunset Surgery Center to adhere to the following rules and ensure all medications, vials and usage of liquid or solid medications be dispensed and administered in compliance with CDC guidelines.**

1. **Single Use:** Single needle and single syringe are used for a single patient. Medications, regardless of single dose or multi dose, are always drawn up utilizing sterile technique into a new needle and new syringe.
2. **Intravenous Tubing:** New intravenous tubing and connectors shall be used for each patient.
3. **Intravenous Solution:** Bags of Intravenous solution are used per patient and are discarded in compliance with CDC regulations when the solution runs out or the IV is discontinued from the patient. No bag of intravenous solution shall be used on multi patients at any time.
4. **Single Dose Vials:** single dose vials are for single patient and single dose usage. These should be opened sterilely and administered in a single dose to a single patient. Any unused medication should be discarded.
5. **Multi-dose vials definition:** A multi-dose vial is a vial of liquid medication intended for injection or infusion that contains more than one dose of medication. Multi-dose vials are labeled as such by manufacturers. No vial shall be considered multi-dose unless labeled as such by the manufacturer.
6. **Usage of Multi-Dose Vials:** multi-dose vials should be dedicated to a single patient whenever possible. When a multi-dose vial is used for more than one dose or used for more than one patient, strict sterile policy must be used.
7. **Sterile technique for usage of Multi-Dose vials.** Strict sterile technique is always used when giving any medication. For multi-dose vials, the injection port must always be cleaned with alcohol prior to withdrawal of the medication. Always a completely new sterile syringe and sterile needle must be used to draw up the medication. For each dosage withdrawn, a completely new syringe and completely new needle must be used. For example, it is not appropriate to withdraw medication inject into a patient and then withdraw from the bottle again with the same syringe, even if the needle is changed. To withdraw from the multi-dose vial, always a completely empty and new sterile syringe must be used with a completely new and sterile needle.
8. **Pre-Drawn Medications:** Medications pre-drawn at the beginning of the day must be specially labelled with the time drawn, initials of the individual drawing up the medication, name of the medication, strength of the medication and expiration date of the medication.
9. **Manufactured Pre-filled medications:** Regardless of the amount of medication present in the pre-filled syringe, they must only be used on one patient and discarded.

10. **All medications must be discarded according to expiration date.** The only exception to this is if a lifesaving medication is on back order or not readily available. All attempts must be made to replace any expired medication in a timely fashion.
11. **Opened multi-dose vials:** if a multi-dose vial has been opened or accessed, the vial should be dated and discarded within 28 days unless the manufacturer specifies a different (shorter or longer) date for the opened vial.
12. **Multi-dose vials should not be mixed:** multi-dose vial should not be mixed with other multi-dose vials unless directly specified by the manufacturer.
13. **Injections are to be given only by trained personnel:** all injections are to be given only under the direction of a physician by trained personnel. Personnel must have a valid state license to give injections and/or be under the direct supervision of the physician. All laws regarding the administration of medications are to be followed strictly.
14. **Sterility must be maintained.** Whenever sterility is compromised or questionable the vial must be discarded.
15. **Disposal of sharps:** All sharps are disposed of in a puncture resistant sharps container. Sharps containers should be replaced when the fill-line is reached or when the container is 2/3 full.
16. **Point-of-care devices, e.g. blood glucose monitoring devices or machines.** Point of care devices need to be cleaned with an EPA registered disinfectant/germicidal wipe.

## **Continuity and Excellence of Care Policy**

(Physical Examination and Pre-surgical Evaluation, Intraoperative, and Postoperative Policy)

Policy: To ensure that each patient of the center is under the proper care of a physician, each patient admitted to the center receives a:

1. Physical Examination, which must include a medical history of the patient, within the 30 days immediately preceding the date of the patient's surgery
2. Pre-surgical Evaluation conducted by a physician on the day of the patient's surgery or with the 7 days immediately preceding the date of the patient's surgery
3. Consent forms should be completed on the day of the patient's surgery or within the 7 days immediately preceding the date of the patient's surgery
4. Any clinical observations of the patient, such as the notes of the physician, a nurse, or any professional person in attendance
5. Reports of all studies ordered, including laboratory and radiological examinations
6. Confirmation of the original diagnosis, or diagnosis at the time of discharge
7. A report of any surgery performed by the surgeon on the patient, prepared by the operating surgeon.
8. A description of the procedure followed in any administration of anesthesia to the patient
9. A recovery report for the patient
10. A summary of discharge, including without limitations, the disposition of the patient and any recommendations and instructions given to the patient
11. Documentation that a member of the nursing staff interviewed the patient 72 hours after the patient was discharged from the center to determine the condition of the patient and whether or not the patient was satisfied with the services provided, and to receive any complaints of problems the patient may have

## **Admission Criteria/Patient Selection**

**Purpose:** To provide the highest quality of healthcare to patients, while ensuring their safety. It shall be the responsibility of the physician to correctly evaluate the patient and the procedure preoperatively for suitability for outpatient surgery

**Policy:** In order for Sunset Surgery Center to deliver the highest quality of care, our services will be provided according to the highest standards of professional practice through adherence to the following:

### **1. Medical Clearance**

- a. If applicable, medical clearance should be recorded. A current history and physical examination by the surgeon, anesthesia provider, or the patient's personal physician is recorded within thirty (30) days of surgery on all patients for major surgery, and for those patients for minor surgery who require a physical exam. The medical record must contain a current medical history taken on the same day as the surgical procedure, and recorded by the surgeon or anesthesia provider prior to the admission of anesthesia.
- b. Not more than 30 days before the date of scheduled surgery, each patient must have a comprehensive medical history and physical assessment completed by a physician, or other qualified practitioner in accordance with applicable State health and safety laws, standards of practice and ASC policy.
- c. The center will ensure that each patient has the appropriate pre-surgical and post-surgical assessments completed and all the elements of the discharge requirements are completed.
  - i. The patient can tolerate a surgical experience;
  - ii. The patient's anesthesia risk and recovery are properly evaluated
  - iii. The patient's post-operative recovery is adequately evaluated;
  - iv. The patient received effective discharge planning; and
  - v. The patient is successfully discharged from the ASC
- d. The purpose of the comprehensive medical history and physical assessment is to determine whether there is anything in the patient's overall condition that would affect the planned surgery, such as a medication allergy, or a new or existing co-morbid condition that requires additional interventions to reduce risk to the patient, or which may even indicate that an ASC setting might not be the appropriate setting for the patient's surgery. The H & P must be comprehensive in order to allow assessment of the patient's readiness for surgery and is required regardless of the type of surgical procedure. The H & P should specifically indicate that the patient is cleared for surgery in an ambulatory setting.
- e. It is a requirement of the facility that the H & P be completed and documented for each ASC patient no more than 30 calendar days prior to date the patient is scheduled for surgery in the ASC.
- f. In cases where the patient is scheduled for two surgeries in the ASC within a short period of time, the H & P may be used so long as it is completed no more than 30 calendar days before each surgery.

- g. Other qualified licensed individuals are those licensed practitioners who are authorized in accordance with their State scope of practice laws or regulations to perform an H & P and who are also formally authorized by the ASC to conduct an H & P. Other qualified licensed practitioners could include nurse practitioners and physician assistants.

## **2. Admission and Pre-Surgical Assessment**

- a. Upon admission, each patient must have a pre-surgical assessment completed by a physician or other qualified practitioner in accordance with applicable State health and safety laws, standards or practice, and ASC policy that includes an updated medical record entry documenting an examination for any changes in the patient's condition since completion of the most recently documented medical history and physical assessment, including documentation of any allergies to drugs and biologicals.
- b. In accordance with requirement 416.42 (a) (1), the physician will examine the patient immediately before surgery to evaluate the risk of the anesthesia and of the procedure for that patient. The patient must be assessed for any changes in his/her condition since the patient's H & P was performed that might be significant for the planned surgery. Any changes in health and medication can have an impact on the patient's ability to tolerate the surgery or anesthesia, and the post-admission pre-surgical assessment is designed to identify these changes and take appropriate action, up to and including postponing or cancellation of the surgery. Further, if the practitioner finds that the H & P done before admission is incomplete, inaccurate, or otherwise unacceptable, the practitioner reviewing the H & P, examining the patient, and completing the update may disregard the existing H & P, and conduct and document in the medical record a new H & P prior to the surgery.
- c. If upon examination, the licensed practitioner finds no change in the patient's condition since the H & P was completed, he/she may indicate in the patient's medical record that the H & P was reviewed, the patient was examined, and that "no change" has occurred in the patient's condition since the H & P was completed. Likewise, any changes in the patient's condition must be documented by the practitioner in the update note prior to the start of surgery.
- d. The comprehensive H & P must be submitted to the ASC prior to the patient's scheduled surgery date, in order to allow sufficient time for review of the H & P by the ASC's medical staff and adjustments if necessary. At a minimum, the H & P must be placed in the patient's medical record prior to the pre-surgical assessment required under 416.52 (a) (2), since that assessment must first consider the findings of the H & P before examining the patient for changes. Both the H & P and the pre-surgical assessment must be placed in the patient's medical record before the surgery.

**3. The following conditions do not warrant admission to the facility:**

- a. Cases where compromise of the airways is expected
- b. Cases where considerable blood loss is expected
- c. Cases where considerable postoperative pain is expected
- d. Cases where the patient is not ASA I or ASA II
  - i. ASA-I patients are those without any organic, physiologic, biochemical, or metabolic disturbance.
  - ii. ASA-II patients are those with a systemic disturbance which may be of a mild to moderate degree but which is either controlled or has not changed in its severity for some time.
- e. ASA III patients may be done at the discretion of the anesthesiologist
  - i. ASA-III patients may be operated upon in Plastic Surgery Institute on a case-by-case basis, determined by the medical director and the anesthesiologist
- f. Cases where anesthesia is expected to be prolonged; i.e. over 6 hours

## **Patient Identification Policy**

---

**Policy:** Valid Identification will be checked for every procedure performed at Sunset Surgery Center.

**Procedure:**

1. When a patient signs in to Sunset Surgery Center for procedures, they will be asked for their valid picture ID
2. The valid Picture ID will be scanned into the system. If for some reason the patient refuses to present a valid picture ID, their social security number is to be used as another identifying marker.
3. Arm bands are required for both the patient and their partner when performing IVF procedures.
4. The name and date of birth indicated on the valid photo ID will be compared against the arm band. If there is a discrepancy, the supervisor is to be notified immediately, and the check in process is to be stopped until a resolution has been found.
5. The ID number and expiration date will be entered into the computer to document that valid identification was checked.
6. The receptionist will place the arm band on the patient having the procedure. For IVF procedures, the receptionist will place an arm band on the patient's partner and send this patient to the RRFC for sample collection.
7. Once completed, the supervisor shall be notified to begin the consent signing process.

## **Discharge of a Patient**

---

**Purpose:** To set guidelines to establish criteria for discharging a patient that has been determined to have fully recovered from anesthesia. To ensure a safe transition of the post anesthesia patient in an outpatient setting.

### **Policy/Procedure:**

#### **1. Minimum Requirements – Length of Stay**

- a. Patients undergoing general anesthesia will be monitored in the PACU area until criteria has been met. Minimum length of stay 30 minutes.
- b. Patients must remain in PACU for a minimum of 15 minutes after IV narcotics have been administered.

#### **2. Discharge Criteria**

- a. A numeric score of at least eight (8) using the Aldrete Evaluation Scale must be met prior to discharge.
- b. A numeric score of less than eight (8) on the Aldrete Evaluation scale will be observed until a proper discharge score can be reached.
- c. Patient's temperature must be greater than 96F to be discharged.
- d. A numeric score of less than five (5) without any improvements over time warrants the patient to be transferred to outside facility for further monitoring or treatment.

#### **3. Physician Available**

- a. Because anesthesia is administered, a physician is immediately available until the patient is discharged from the PACU.

#### **4. Post-Surgical**

- a. The patient's post-surgical condition will be assessed and documented in the medical record by a physician, other qualified practitioner, or a registered nurse with a minimum, post-operative care experience in accordance with applicable State health and safety laws, standards of practice and ASC policy.
- b. Patient will be given adequate written post-operative instructions to include the procedures to follow if complications or emergency situations occurs. The instructions will be given to an adult who is responsible for the patient's care and transportation.
- c. Follow-up appointments will be made at time of discharge and overnight supplies given if applicable.

#### **5. Discharge – from Center**

- a. Patients must be discharged in the company of a responsible adult.
- b. Center personnel will assist with discharge from the recovery area; every patient is discharged by wheel chair.
- c. For any patient receiving anesthesia in the Center, the staff ensures that the patient is transported in a vehicle with a responsible adult.
- d. Patients receiving local anesthesia can transport themselves.

**6. Documentation**

- a. At discharge, the following will be documented: ambulatory status, instructions given with copy for the chart and patient, any postop meds or prescriptions given, IV/HL removed, post-op appointment made, discharge to care of responsible adult, and discharge nurse's signature.
- b. Each patient is provided a discharge order signed by the physician who performed the surgery or procedure. The discharge instruction sheet will be reviewed with the patient and the responsible adult who transports the patient home.
- c. Documentation will be completed in the patient's chart.

## **Handling the Unruly Patient or Significant Other**

### **Purpose:**

Sunset Surgery Center would like to handle unruly patients and/or significant others in the most humane manner possible while maintaining a level of decorum in the Center that makes patients, significant others, and staff comfortable.

**Policy:** Should a patient/significant other become disruptive for any reason, staff are to act immediately and without hesitation. As there are different areas where patients may be in the office, different procedures must be undertaken to manage each situation.

### **Procedure:**

1. Don't respond in kind to the patient (don't fight fire with fire). BE CALM.
2. GET HELP. While you don't want to "gang up" on the individual, you don't want to try to resolve the situation without help, or at least, without a witness.
3. Convince the patient to move to a pre-designated area where there is no contact (or at least reduced contact) with other patients/significant others.
4. Listen to the patient's demands, requests, and desires. Most people get upset when they believe they are being misunderstood or their needs are not being responded to.
5. Find the manager of the area where the disruption occurred (Business Manager for the waiting area, Clinic Director for the exam area, Operating Room supervisor for the OR area) and a physician
6. If you are concerned regarding anyone's physical safety, call 911

The designated areas for patient amelioration are as follows

:

|                         |                |                                       |
|-------------------------|----------------|---------------------------------------|
| If the person is in the | WAITING AREA   | direct them to the SURGERY SCHEDULERS |
| If the person is in the | PRE-OP/PACU    | direct them to the OFFICE             |
| If the person is in the | OPERATING ROOM | KEEP THEM IN THE OR                   |

## **Emergency Return of Patient to Operating Room**

---

**Purpose:** To ensure patient safety at all times.

**Procedure:**

If the patient has been discharged from Sunset Surgery's Care

- Patient is instructed to report to the nearest Emergency Department and the Surgeon is notified immediately.
- Anesthesia must be alerted immediately to provide emergency cover.
- If possible patient and partner or accompanying adult must be informed of the need and purpose for the return to the operating room.
- In an emergency situation the patient should be moved to the operating room and all monitoring equipment set up. Any medication likely to be required by the anesthesiologist should be available.
- An RN or MD should monitor the patient until the anesthesiologist arrives.
- Surgical prep and draping can take place before anesthesiologist arrives.
- It is as the surgeon's discretion whether or not to move patient to the operating room before the arrival of the anesthesiologist.

If the patient is under Sunset Surgery's Care Post Operatively and the notification is received that a patient needs to return to the Operating Room after a procedure, the following steps are to be followed:

- Notify the Surgeon immediately.
- The Surgeon/Physician notifies the Surgery Scheduler and instructs her about the time the patient needs to return to the Operating Room.
- The Surgery Scheduler then notifies the following personnel:
  - Anesthesiologist
  - Certified Surgical Technician
  - Registered Nurse
  - Surgery Center Administrator

## **Transfer of a Patient to the Hospital**

---

**Purpose:** To ensure that a patient can be transferred safely and efficiently to the nearest E.R. with least amount of trauma and risk to patient. The following problems fit the criteria for transfer to a hospital:

1. Preoperative complications
2. Patients needing postop IM or IV pain control
3. Patients with intra-operative complications
4. Patients with post-operative complications
5. Patients with an exacerbation of a comorbidity such as uncontrolled diabetic reaction or hypertension

**Policy:** The need to transfer a patient will be decided by an M.D. The M.D. must state Routine, Urgent or Emergency transfer.

1. For routine transfers:
  - a. Notify the emergency department at Southern Hills Hospital: (702) 880-2800.
  - b. After the physician has discussed the patient's transfer with the family, the office staff will maintain communication with family members to alleviate anxiety.
  - c. Notify the ER that the patient is ready for transport and give a brief report to the nurse or physician including but not limited to:
    - i. Doctor's name
    - ii. Patient's name and DOB
    - iii. Diagnosis
    - iv. Vitals
  - d. Ambulance service will be notified to transport the patient to the hospital.
  - e. For Quality Assurance purposes, the pre/postop nurse makes a follow-up telephone call within 24 hours to evaluate patient's progress or the patient will be visited at the hospital by a staff member or physician on staff.
2. For Urgent transfers, which require transfer of the patient within 30 minutes to the ER:
  - a. Call Ambulatory Service:
  - b. Give all information requested.
  - c. Do not hang up until instructed to do so.
  - d. Call Southern Hills Hospital: (702) 880-2800
  - e. Give Doctor's name
  - f. Give patient's name
  - g. Give patient's DOB
  - h. Give diagnosis
  - i. Patient fit for interview or not?
  - j. Insurance information.
3. **For emergency transfers which require the immediate transfer of the patient to the ER:**
  - a. Call 911 for immediate transfer and give all information that is requested. Do not hang up until instructed to do so
  - b. Call Southern Hills Hospital: (702) 880-2800
    - i. Give Doctor's name

- ii. Give patient's name and DOB
  - iii. Give diagnosis
  - iv. Give vitals (is OR required?)
  - c. Provide appropriate medical care (according to BLS/ACLS protocol) until emergency personnel arrive.
  - d. Provide assistance to emergency personnel as needed.
  - e. Maintain communication with family members.
  - f. For Quality Assurance purposes, the pre/post-op nurse or physician makes a follow-up telephone call within 24 hours to evaluate patient's progress or visit the patient in the hospital.
4. The nurse responsible for the patient needing transfer will fill out an incident report.

## **Unexpected Blood Loss Policy**

---

**Policy:** In the event of an unexpected blood loss great enough to cause hypotension lower than 80/60 combined with a tachycardia whose rate is greater than 120, it is the responsibility of the anesthesiologist or nurse anesthetist to notify the surgeon if the operative procedure is still taking place. If the patient were to develop hypotension/tachycardia in the recovery room, it is the responsibility of the recovery room nurse to notify the surgeon and anesthesiologist or nurse anesthetist.

If it is felt that a significant blood loss may have occurred, procedures will begin to transfer the patient immediately to Southern Hills Hospital. (See Emergency Transfer Procedure.)

## **Incident Report Policy**

---

### **POLICY:**

Documentation of all unusual incidents in the Center will be made for future reference by completion of an appropriate Incident Report Form.

### **INCIDENTS (defined):**

All incidents that are considered controversial or unusual in nature.

1. Major complaints of any nature made by a patient or visitor.
2. Loss of personal belongings.
3. Accidents occurring in the Center.
4. Incorrect administration of drugs.
5. Serious reactions.

### **PROCEDURE:**

1. Complete a patient incident report with all pertinent information, i.e.:
  - a. All accidents
  - b. Incorrect drug administration
2. Completed incident report will be given to the Director of Nursing.

## **Malignant Hyperthermia (M.H.) Protocol**

---

**Prepared By:** The Malignant Hyperthermia Association of the United States (MHAUS)

**Policy:** To maintain a cart stocked with all drugs and supplies needed during a malignant hyperthermia crisis. This may be included with the other emergency supplies. In addition, every patient shall be screened for a personal or family history of malignant hyperthermia. In the event a patient develops Malignant Hyperthermia it is policy that the staff of Sunset Surgery Center follow the Malignant Hyperthermia algorithm and manual along with the clearly labeled kit that is located in OR 1 next to anesthesia machine.

**Purpose:** To assure patient care and to minimize confusion during a malignant hyperthermia crisis.

### **Procedure:**

#### **Malignant Hyperthermia Cart:**

1. M.H. supplies should be checked after each use and routinely every six months.
2. The refrigerator temperature should be checked regularly.
3. Drugs and fluids on the cart are to be checked for expiration dates and replaced immediately, if outdated.

#### **Drugs and Equipment for Treatment of M.H.:**

1. Ensure that the following are available for immediate use in the OR suite:
  - a. ECG monitor
  - b. Pulse oximeter, electronic temperature measuring device with appropriate probes for monitoring central temperature (e.g. nasal, rectal, axillary, (esophageal).
  - c. Capnograph
  - d. A bag of ice will be kept in the refrigerator
2. Drugs in M.H. cart:
  - a. Dantrolene sodium IV – 18 vials\*
  - b. 3,000 ml sterile water for injection USP (without a bacteriostatic agent to reconstitute Dantrolene.
  - c. 50 cc vials sodium bicarbonate 8.4% x 3
  - d. Amiodarone x 3
  - e. 50% glucose 50 ml x 2
  - f. Regular insulin 100 units/ml x 1 (refrigerated)
  - g. 10% calcium chloride x 2

---

\*\* An additional 18 vials are available with Dr. Andrew Cash at West Sunset Surgery Center

#### Cooling Equipment:

1. 60 ml syringe x 5
2. 60CC Toomey syringe x 2
3. 16F Nasogastric tube x 2
3. Ice Packs

#### Equipment:

1. IV supplies
  - 16G x 4
  - 18G x 4
  - 20G x 4
  - 22G x 4
  - 24G x 4
  - IV Tubing x 2
2. Tympanic Membrane Thermometer x 1
- 3.. Dynaesthetics Vapor Clean Charcoal Filters X 4

#### Training

1. An annual in service will be conducted to train and re-educate staff on what to do in a malignant hyperthermia crisis. A mock drill will be conducted at the conclusion of the in service.

#### Clinical Management/Procedure:

- Use Emergency Alarm System (800#). All available nurses and doctors must report.
- Call 911
- Call West Sunset Surgery and instruct them to bring the other 18 vials of Dantrolene immediately.
- Note time of diagnosed malignant hyperthermia.
- Stop all inhalational anesthetics.
- Hyperventilate with 100% oxygen.
- Obtain crash cart (located in recovery) and MH box (located in OR 2)
- Start mixing Dantrium with 60 ml sterile water for injection per vial. Two nurses should be allocated to this task.
- Obtain fluids and ice.
  - IV n/saline 1000 ml—in fridge in OR
  - NaCl for irrigation 500 cc—also in fridge in OR
  - Bags of ice—in freezer in staff lounge
- One RN must keep written record of all medications and procedures.
- Start cooling with bags of ice in axilla, groin, and as much body surface as possible.

- Lavage stomach, bladder, rectum if possible—have nasogastric tube available with 60 ml Toomey syringe.
- Change anesthesia circuit and bag. Disconnect vaporizers from fresh gas circuit.
- Have available blood sample tubes
  - Red top
  - Lavender
  - Blue
  - Green
- Have sodium bicarbonate ready
- When temperature stabilized, transfer to hospital with anesthesiologist and RN in attendance.

## **Medication Policy**

---

**Policy:** In order to maintain compliance with all state, federal, regulatory and accrediting Agencies, Sunset Surgery Center shall adhere to the following:

- IV fluids such as Lactated Ringers and normal saline, tubing needles will be readily available in the facility as a single use supply
- Emergency medications are located and readily available in the locked crash cart located in the nursing station, PACU, as well as in the locked anesthesia carts in each operating room.
- Any medications that need to be refrigerated must be stored in a locked refrigerator. Food must not be stored in this refrigerator except if the food is used as a vehicle for the administration of drugs.
- All narcotic drugs must be logged into and checked out of stock only by a licensed health care professional. The dated narcotic logbook, which includes the use of narcotics on individual patients, is kept in the locked narcotic cabinet in the nurse's station. This logbook has sequentially numbered pages in a bound journal.
- The Director of Nursing will oversee the control of dangerous drugs and controlled substances. Controlled substances are stored in a double locked narcotics cabinet which is fastened to the wall which is located in the nurse's station. The narcotic inventory is verified by two licensed members of the surgery center at least weekly and on every day that narcotics are used.
- All drugs must be prescribed by a physician and administered by a physician or a Registered Nurse.
- All drugs are checked monthly for expiration. All drugs that are expired are disposed of properly and recorded in the "discard log" located in the narcotics cabinet. Any narcotics that are to be wasted are logged and signed by two licensed health care providers.
- If medication or treatment orders are given verbally by qualified physicians to the RN, the RN will get signed written orders by the end of the business day. If the doctor calls the order in on the phone, the order will be written, and read it back to verify the order. When the RN charts it, the RN writes (TO) to signify this is a telephone order.
- The RN prepares any medication using aseptic technique at the nurse's station. The medication syringe will be labeled with the patient's name, medication, dosage, the date and time prepared, by whom the medication was prepared, and the expiration date and time of the medication that was drawn. Whoever prepares the medications will be the same person giving the medications. The patient ID armband will be checked and verified before administering any medications.
- All IV insertion and monitoring will be done by a trained and licensed Registered Nurse.

- Whenever an adverse effect of medication occurs that the medication infusion be immediately stopped and the physician notified. The RN will stay with the patient, monitor the patient and treat any symptoms until the physician arrives.
- All medications will be prepared and administered in a safe and effective manner in accordance with the program of infections and communicable diseases and in accordance with manufacturer's instructions. It is the policy of SSC that all medication vials are single use only.
- A copy of the current ACLS algorithm is kept with the AED on the code cart located in the PACU station. The following medication must be kept within the crash cart as required by ACLS algorithm:
  - Epinephrine
  - Plain lidocaine
  - Vasopressors other than epinephrine, such as neosynephrine and ephedrine
  - Narcotic antagonists such as narcan
  - Seizure arresting medication such as Dilantin or Valium
  - Bronchospasm arresting medications such as albuterol or aminophylline
  - IV corticosteroids such as dexamethasone
  - Antihistamines
  - Anti-hypertensives
  - Non-depolarizing muscle relaxants such as rocuronium or vecuronium
  - Benzodiazepine revering agent such as flumazenil
  - Atropine

## **Medication/ Product Recall**

---

**Purpose:** To establish procedures which are to be implemented **immediately** upon receipt of a notice of a medication or medical device alert or notification from a manufacturer or the Food and Drug Administration (FDA) issuing a caution or recall of a product.

**Principles:**

1. Products affected by a FDA or manufacturer's recall should **not** be used for patients and should be discarded or sent back to the company upon request and in accordance with instruction from the issuing agency.
2. All recalled products should be collected immediately and taken to the Office Manager.
3. Defective products/medication used on patients prior to recall notification must be tracked and findings documented.
4. Manufacturers are responsible for products affected by a recall.

**Procedure:** Receipt of all recall notices by the FDA, Manufacturers, distributors or other vendors shall be handled by the Director of Nursing. Upon receipt, the Director of Nursing will:

1. Verify that the particular item is stocked in the center.
2. If stocked:
  - a. Alert all personnel.
  - b. Issue instructions to collect all recalled products.
  - c. Assist with the collection.
  - d. Record all recalled products collected, including numbers of each, and initial and date documentation to include all staff involved.
  - e. If instructions for return or destruction are provided in the recall notice, they shall be followed.
  - g. Investigate situations where the product had been utilized by patients prior to the recall
  - h. If possible, trace the disposition of potential stock that may have been used under recall and notify the physician to address patient safety concerns.
3. If not stocked:
  - a. It will be noted that the product was not in inventory.
4. If the recalled product is a medication:
  - a. Record it on the Medication Supply Inventory Record that the product was returned, due to a product recall.
  - b. Fill out the Product Return form to accompany the package, and make a copy for our records.
  - c. Return the medication to the appropriate company and locatio

- d. If the medication to be returned is a controlled substance, **two** staff members **must package and seal** the delivery device. This will be recorded on the narcotic count sheet as "returned for product recall." It will be documented on the Medication Supply Inventory Record and a **Narcotic Return Form** will accompany the package.

## **Personal Protective Equipment Policy**

---

**Purpose:** To ensure the employee is protected from possible contamination with potentially hazardous materials. To comply with OSHA recommendations for dealing with blood borne pathogens. PPE includes:

- Disposable, impervious gloves
- Gloves
- Shoe covers
- Masks
- Goggles
- Mask with eye shield
- Head coverings

**Policy:** All staff will use the appropriate personal protective equipment when performing certain tasks throughout the surgery center.

### **Procedure:**

1. Employees working in the decontamination area should wear full PPE, to include but not limited to head coverings, shoe covers, eye protection, gown, and gloves, as the possibility of contamination by splashing is very likely. Tasks included are:
  - a. Washing instruments/equipment after surgery
  - b. Washing basins
  - c. Loading washer/disinfector
  - d. Emptying suction canisters
  - e. Mixing solutions
  - f. Pouring out expired solutions
  - g. Gathering up soiled disposables after surgery
  - h. Decontamination of the OR suite
2. Employees cleaning the autoclaves should wear full PPE, as the possibility of contamination by splashing is likely. In addition, fumes from the cleaners can be irritating to the airway passages.
3. For those performing surgical procedures, the employee should utilize:
  - a. Sterile Gloves
  - b. Face Mask to cover mouth and nose
  - c. Gown
  - d. Head covering
  - e. Shoe covers
4. For those performing tasks in pre-op and /or PACU:
  - a. When conducting any patient care or invasive procedures
  - b. Gown/mask if deemed necessary or bodily fluid splashes are anticipated

- c. Gathering trash for disposal
  - d. Gathering linen for disposal
  - e. Damp dusting with germicidal solution
  
5. Glove should ALWAYS BE WORN when:
  - a. Picking up any item used on a patient
  - b. When conducting any patient care or invasive procedures
  - c. Gathering trash for disposal
  - d. Gathering linen for disposal
  - e. Damp dusting with germicidal solution
  
6. Employees should review the OSHA manual and familiarize themselves with all the tasks that have been identified as hazardous.
  
7. Removed PPE should be disposed of in the appropriate waste receptacle.
  
8. Employees should thoroughly wash their hands and forearms after removal of PPE
  
9. Non-disposable PPE should be cleaned and disinfected as needed.

# Risk Management/ Patient Safety Plan

## Nevada Acute Care Division

Revised 1/2018

## I. Overview

**HENDERSON HOSPITAL** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. **HENDERSON HOSPITAL** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **HENDERSON HOSPITAL** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **HENDERSON HOSPITAL** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems at **HENDERSON HOSPITAL**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **HENDERSON HOSPITAL** policies. **HENDERSON HOSPITAL** employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.

- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**HENDERSON HOSPITAL** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**HENDERSON HOSPITAL** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

## III. ROLES AND RESPONSIBILITIES

### A. Risk Management/Patient Safety Officer

**HENDERSON HOSPITAL** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The designated Risk

Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

## **B. Infection Control Officer**

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**HENDERSON HOSPITAL** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **HENDERSON HOSPITAL** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and Midas) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

##### **Membership:**

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**HENDERSON HOSPITAL PSC** is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility's claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the "Best Practice."
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.
- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.

- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:

(1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);

(2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and

(3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## **II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**HENDERSON HOSPITAL** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## **C. TERM Program**

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the

Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. MIDAS**

The MIDAS system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into MIDAS through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

#### **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the

facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

### **G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

#### **RCA Responsibilities**

- Organize and coordinate the RCA process. For Serious OB events, RCAs are to be done within 72Hrs. of the event.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix C. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Reduce the 2018 fall rate to 1.65 with ultimate target of zero.
- Improve moderate sedation compliance to 100%.

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## VI. Evaluation/Review:

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## VII. Confidentiality

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## VIII. Approval of Patient Safety Plan

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility’s patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the

requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## **Appendix A: Terms and Definitions**

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;

- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility ([NRS 439.805](#))**

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at

[http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

**Appendix B: Checklist Example: Injuries from Falls and Immobility**

| <b>Process Change</b>                                                                                                                                    | <b>In Place</b> | <b>Not Done</b> | <b>Will Adopt</b> | <b>Notes (Responsible &amp; By When?)</b> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------|-------------------|-------------------------------------------|
| <b>Conduct fall and injury risk assessment upon admission</b>                                                                                            |                 |                 |                   |                                           |
| <b>Reassess risk daily and with changes in patient condition</b>                                                                                         |                 |                 |                   |                                           |
| <b>Implement patient-specific intervention to prevent falls and injury</b>                                                                               |                 |                 |                   |                                           |
| <b>Communicate risk across the team; use handoff forms, visual cues, huddles</b>                                                                         |                 |                 |                   |                                           |
| <b>Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs)</b> |                 |                 |                   |                                           |
| <b>Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds</b>               |                 |                 |                   |                                           |
| <b>Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives</b>                                                                        |                 |                 |                   |                                           |
| <b>Incorporate multidisciplinary input for falls</b>                                                                                                     |                 |                 |                   |                                           |
| <b>Prevention from PT, OT, MD, RN and PharmD</b>                                                                                                         |                 |                 |                   |                                           |
| <b>Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient</b>              |                 |                 |                   |                                           |
| <b>Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls</b>                                      |                 |                 |                   |                                           |

## POLICY

- This policy applies to all employees, medical staff, contractors, patients, visitors and patients of this hospital.
- All unexpected events or occurrences involving death or serious physical or psychological injury or risk thereof are to be reported to the administrative team immediately upon identification (regardless of time of day or night).
- Any and all adverse event or medical errors require immediate action to examine the event in-depth to determine why the incident occurred and how to reduce the likelihood of recurrence.
- The governing body must ensure that the Patient Safety Program (PSP) reflects the complexity of the hospital's organization and services, including those services furnished under contract or arrangement, and focuses on the prevention and reduction of medical errors and adverse events.
- All adverse events or medical errors are errors; but not all errors are adverse events or medical errors.
- Failure to report an adverse event or medical error will be addressed through the Disciplinary process
- Event data will be preserved and collected per hospital policy.<sup>1</sup>
- Event equipment will be preserved and removed from patient care until cleared

## PATIENT SAFETY SYSTEM:

- To have a means for establishing clear expectations for identifying and detecting the prevalence and severity of incidents that impact or threaten patient safety. This includes medical errors and adverse patient events.
- To identify, implement and regularly assess the means by which incidents are prevented or when they occur. The incidents are studied to detect nonconformance and where risk points or failures are an inherent part of the process and work to remove these risk points or failures from the system.
- To address customer (patient) communication when such incidents occur, how the patients are informed and their right to know the circumstances of events.

## DEFINITIONS:

- Administrative Team: Interdisciplinary organizational team, whose members have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.
- Adverse Event: An Adverse Event shall be defined as an unexpected occurrence or variation that led to death or serious physical or psychological harm. This definition includes the National Quality Forum (NQF) "never or adverse events" that are errors in medical care that are clearly identifiable, preventable and serious in their consequences for patients.<sup>2</sup> An event that results in unintended harm to the patient by an act of commission or omission rather than by underlying disease or condition of the patient.

<sup>1</sup> Control of Internal and External Documents (#7067)

<sup>2</sup> NIAHO Standard; QM.7 (p 16) Adverse Event definition

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 2 of 8             |
|                              | REFERENCE #: 7046-NVREG |

- **Medical Error:** The failure of a planned action to be completed as intended, the use of a wrong plan to achieve an aim, or the failure of an unplanned action that should have been completed, that results in an adverse event.
- **Reportable Event:** A medical error or adverse event or occurrence which the hospital is required to report to the State.
- **Root Cause Analysis:** An interdisciplinary review process for identifying the basic or contribution causal factors that underlie a variation in performance associated with an adverse event or reportable event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.

### SCOPE:

List of events and occurrences to report:

- **No Harm Errors:** those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome-that do not result in a physical or psychological negative outcome or the potential for a negative outcome, for the patient.
- **Hospital Acquired Infection/Condition:** infections/conditions that are a result of treatment in a hospital or healthcare service unit.
- **Patient Fall**
- **Mild/Moderate Adverse Outcome Errors:** those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- **Any Medication Error**
- **Any Adverse Drug Reaction**
- **Hazardous Condition:** any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- **Near Miss:** any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- **Reportable Events to the State:**
  - (i) a medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient;
  - (ii) a perinatal death unrelated to a congenital condition in an infant with a birth weight greater than 2,500 grams;
  - (iii) the suicide of a patient in a setting in which the patient received care 24 hours a day;
  - (iv) the abduction of a newborn infant patient from the hospital or the discharge of a newborn infant patient from the hospital into the custody of an individual in circumstances in which the hospital knew, or in the exercise of ordinary care should have known, that the individual did not have legal custody of the infant;

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 3 of 8             |
|                              | REFERENCE #: 7046-NVREG |

- (v) the sexual assault of a patient during treatment or while the patient was on the premises of the hospital or facility;
  - (vi) a hemolytic transfusion reaction in a patient resulting from the administration of blood or blood products with major blood group incompatibilities;
  - (vii) a surgical procedure on the wrong patient or on the wrong body part of a patient;
  - (viii) a foreign object accidentally left in a patient during a procedure; and
  - (ix) a patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.
- Required by the State: a health care-associated adverse condition or event for which the Medicare program will not provide additional payment to the facility under a policy adopted by the federal Centers for Medicare and Medicaid.
  - Other events: as included in the list of adverse events identified by the National Quality Forum that is not included in the list required by the State (see Appendix A for National Quality Forum events).

## PROCEDURE:

- Upon the identification of an adverse event or medical error, after the patient is safe (as applicable), the administrative team has been notified prior to leaving duty, employees, members of the medical staff and any witnesses must complete an incident occurrence and submit it to their immediate supervisor who will follow the incident reporting process.<sup>3</sup>
- Adverse events or medical errors will be reviewed by the Administrative Team within 24 hours of incident notification. The administrative team will determine if the incident warrants conducting a root cause analysis.
- The licensed independent practitioner responsible for managing the patient's care, treatment, and services, or his/her designee, shall inform the patient or their representative, within 24 hours of the adverse events or medical errors about unanticipated outcomes of care, treatment, and services related to adverse events or medical errors when the patient or their representative is not already aware of the occurrence or when further discussion is needed.
- If it is determined by the administrative team that an RCA is warranted, it will commence within five (5) business days of the decision.
- The RCA will be conducted by the administrative team, staff and licensed independent practitioners who have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.

Specifically the administrative team will:

- Complete an RCA to examine the cause and effect of the event through an impartial process.
- The RCA will focus primarily on the systems and processes, not individual performance. It will include the following elements:
  - A clear definition of the issue(s) pertaining to the event, that is, a determination of the human and other factors most directly associated with the event, and the process (es) and systems related to its occurrence.

---

<sup>3</sup> Corrective/Preventive Action Plan (#7070)

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 4 of 8             |
|                              | REFERENCE #: 7046-NVREG |

- Identification of risk points and their potential contributions to the type of event
  - Develop an action plan identifying the strategies that the hospital intends to employ to reduce the risk of similar events occurring in the future.
  - The action plan must:
    - Designate responsibility for implementation and oversight;
    - Specify time frames for implementation, analysis and follow-up
    - Include a strategy for measuring the effectiveness of the actions taken.
  - The administrative team will not, in any circumstance, delay implementation of the action plan or, as appropriate, elements of its components, over seven (7) days from the date of the completion of the RCA.
  - The administrative team will be afforded the time and resources by Quality Management Oversight to implement the approved plan.
  - If the RCA determines that the adverse event or medical error is related to an organizational systems approach or process challenge, the team will utilize the PDCA (Plan, Do, Check, Act) to design, implement and evaluate an improvement plan to correct the system issue and/or problem.<sup>4</sup>
- Reporting requirements:
  - The administrative team or their designee will report any and all activities of the RCA to the Quality Management Oversight
  - The administrative team or their designee will report any and all findings of the RCA to the Medical Executive Committee, and any other committees, teams, workgroups, or individuals within the organization, as appropriate to the defined issue.
  - The adverse event or medical error and/or the corrective action plan will be communicated to other organizations or individuals at sole discretion of the Chief Executive Officer or his/her designee.
- Other issues related to the RCA:
  - If the RCA finds the adverse event or medical error is to be caused by the performance and/or competence of an independent licensed practitioner holding clinical privileges, the corrective action will be managed through the supervision and direction of the Medical Executive Committee.
  - If the RCA finds the adverse event or medical error to be caused by the performance and/or competence of a clinical staff member not holding clinical privileges, or of a non-clinical staff member, then the corrective action shall be managed by the facility administrative team.

**Appendix A  
National Quality Forum  
Serious Reportable Events**

**1. SURGICAL OR INVASIVE PROCEDURE EVENTS**

**1A. Surgery or other invasive procedure performed on the wrong site (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1B. Surgery or other invasive procedure performed on the wrong patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1C. Wrong surgical or other invasive procedure performed on a patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1D. Unintended retention of a foreign object in a patient after surgery or other invasive procedure (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1E. Intraoperative or immediately postoperative/postprocedure death in an ASA Class 1 patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**2. PRODUCT OR DEVICE EVENTS**

**2A. Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2B. Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2C. Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

|                                                 |                         |
|-------------------------------------------------|-------------------------|
| SUBJECT:                    PATIENT SAFETY PLAN | Page 6 of 8             |
|                                                 | REFERENCE #: 7046-NVREG |

### 3. PATIENT PROTECTION EVENTS

**3A. Discharge or release of a patient/resident of any age, who is unable to make decisions, to other than an authorized person (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3B. Patient death or serious injury associated with patient elopement (disappearance) (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3C. Patient suicide, attempted suicide, or self-harm that results in serious injury, while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

### 4. CARE MANAGEMENT EVENTS

**4A. Patient death or serious injury associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration) (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4B. Patient death or serious injury associated with unsafe administration of blood products (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4C. Maternal death or serious injury associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers

**4D. Death or serious injury of a neonate associated with labor or delivery in a low-risk pregnancy (new)**

Applicable in: hospitals, outpatient/office-based surgery centers

**4E. Patient death or serious injury associated with a fall while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

|                                                |                         |

|                                                | REFERENCE #: 7046-NVREG |

**4F. Any Stage 3, Stage 4, and unstageable pressure ulcers acquired after admission/presentation to a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

**4G. Artificial insemination with the wrong donor sperm or wrong egg (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**4H. Patient death or serious injury resulting from the irretrievable loss of an irreplaceable biological specimen (new)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4I. Patient death or serious injury resulting from failure to follow up or communicate laboratory, pathology, or radiology test results (new)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5. ENVIRONMENTAL EVENTS**

**5A. Patient or staff death or serious injury associated with an electric shock in the course of a patient care process in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5B. Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5C. Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care process in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5D. Patient death or serious injury associated with the use of physical restraints or bedrails while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**6. RADIOLOGIC EVENTS**

|                                     |                             |

|                                     | REFERENCE #: 7046-<br>NVREG |

**6A. Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area (new)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**7. POTENTIAL CRIMINAL EVENTS**

**7A. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7B. Abduction of a patient/resident of any age (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7C. Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7D. Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

## POLICY

- This policy applies to all employees, medical staff, contractors, patients, visitors and patients of this facility.
- All unexpected events or occurrences involving death or serious physical or psychological injury or risk thereof are to be reported to the administrative team immediately upon identification (regardless of time of day or night).
- Any and all adverse event or medical errors require immediate action to examine the event in-depth to determine why the incident occurred and how to reduce the likelihood of recurrence.
- The governing body must ensure that the Patient Safety Program (PSP) reflects the complexity of the facility organization and services, including those services furnished under contract or arrangement, and focuses on the prevention and reduction of medical errors and adverse events.<sup>1</sup>
- All adverse events or medical errors are errors; but not all errors are adverse events or medical errors.
- Failure to report an adverse event or medical error will be addressed through the Disciplinary process
- Event data will be preserved and collected per facility policy.<sup>2</sup>
- Event equipment will be preserved and removed from patient care until cleared

## PATIENT SAFETY SYSTEM:

- To have a means for establishing clear expectations for identifying and detecting the prevalence and severity of incidents that impact or threaten patient safety. This includes medical errors and adverse patient events.
- To identify, implement and regularly assess the means by which incidents are prevented or when they occur. The incidents are studied to detect nonconformance and where risk points or failures are an inherent part of the process and work to remove these risk points or failures from the system.
- To address customer (patient) communication when such incidents occur, how the patients are informed and their right to know the circumstances of events.

## DEFINITIONS:

- Administrative Team: Interdisciplinary organizational team, whose members have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.
- Adverse Event: An Adverse Event shall be defined as an unexpected occurrence or variation that led to death or serious physical or psychological harm. This definition includes the National Quality Forum (NQF) "never or adverse events" that are errors in medical care that are clearly identifiable, preventable and serious in their consequences for patients.<sup>3</sup> An event that results in unintended harm to the patient by an act of commission or omission rather than by underlying disease or condition of the patient.<sup>4</sup>

- Medical Error: The failure of a planned action to be completed as intended, the use of a wrong plan to achieve an aim, or the failure of an unplanned action that should have been completed, that results in an adverse event.<sup>5</sup>
- Reportable Event: A medical error or adverse event or occurrence which the facility is required to report to the State.<sup>6</sup>
- Root Cause Analysis: An interdisciplinary review process for identifying the basic or contribution causal factors that underlie a variation in performance associated with an adverse event or reportable event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.<sup>7</sup>

### SCOPE:

List of events and occurrences to report:

- No Harm Errors: those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome-that do not result in a physical or psychological negative outcome or the potential for a negative outcome, for the patient.
- Facility Acquired Infection/Condition: infections/conditions that are a result of treatment in a facility or healthcare service unit.
- Patient Fall
- Mild/Moderate Adverse Outcome Errors: those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error
- Any Adverse Drug Reaction
- Hazardous Condition: any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Near Miss: any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
  
- Reportable Events to the State<sup>8</sup>:
  - (i) a medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient;

| SUBJECT: PATIENT SAFETY PLAN | Page 3 of 9             |
|                              | REFERENCE #: 7046-TXREG |

- (ii) a perinatal death unrelated to a congenital condition in an infant with a birth weight greater than 2,500 grams;
- (iii) the suicide of a patient in a setting in which the patient received care 24 hours a day;
- (iv) the abduction of a newborn infant patient from the facility or the discharge of a newborn infant patient from the facility into the custody of an individual in circumstances in which the facility knew, or in the exercise of ordinary care should have known, that the individual did not have legal custody of the infant;
- (v) the sexual assault of a patient during treatment or while the patient was on the premises of the facility or facility;
- (vi) a hemolytic transfusion reaction in a patient resulting from the administration of blood or blood products with major blood group incompatibilities;
- (vii) a surgical procedure on the wrong patient or on the wrong body part of a patient;
- (viii) a foreign object accidentally left in a patient during a procedure; and
- (ix) a patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.

- Required by the State: a health care-associated adverse condition or event for which the Medicare program will not provide additional payment to the facility under a policy adopted by the federal Centers for Medicare and Medicaid.<sup>9</sup>
- Other events: as included in the list of adverse events identified by the National Quality Forum that is not included in the list required by the State (see Appendix A for National Quality Forum events).<sup>10</sup>

## PROCEDURE:

- Upon the identification of an adverse event or medical error, after the patient is safe (as applicable), the administrative team has been notified prior to leaving duty, employees, members of the medical staff and any witnesses must complete an incident occurrence and submit it to their immediate supervisor who will follow the incident reporting process.<sup>11</sup>
- Adverse events or medical errors will be reviewed by the Administrative Team within 24 hours of incident notification. The administrative team will determine if the incident warrants conducting a root cause analysis.
  - The licensed independent practitioner responsible for managing the patient's care, treatment, and services, or his/her designee, shall inform the patient or their representative, within 24 hours of the adverse events or medical errors about unanticipated outcomes of care, treatment, and services related to adverse events or medical errors when the patient or their representative is not already aware of the occurrence or when further discussion is needed.
- If it is determined by the administrative team that an RCA is warranted, it will commence within five (5) business days of the decision.
- The RCA will be conducted by the administrative team, staff and licensed independent practitioners who have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.

<sup>10</sup> Title 25, Texas Administrative Code; 98.1045 (2)

<sup>11</sup> Corrective/Preventive Action Plan (#7070)

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 4 of 9             |
|                              | REFERENCE #: 7046-TXREG |

Specifically the administrative team will:<sup>12</sup>

- Complete an RCA to examine the cause and effect of the event through an impartial process.
- The RCA will focus primarily on the systems and processes, not individual performance. It will include the following elements:
  - A clear definition of the issue(s) pertaining to the event, that is, a determination of the human and other factors most directly associated with the event, and the process (es) and systems related to its occurrence.
  - Identification of risk points and their potential contributions to the type of event
- Develop an action plan identifying the strategies that the facility intends to employ to reduce the risk of similar events occurring in the future.
- The action plan must:
  - Designate responsibility for implementation and oversight;
  - Specify time frames for implementation, analysis and follow-up
  - Include a strategy for measuring the effectiveness of the actions taken.
- The administrative team will not, in any circumstance, delay implementation of the action plan or, as appropriate, elements of its components, over seven (7) days from the date of the completion of the RCA.
- The administrative team will be afforded the time and resources by Quality Management Oversight to implement the approved plan.
- If the RCA determines that the adverse event or medical error is related to an organizational systems approach or process challenge, the team will utilize the PDCA (Plan, Do, Check, Act) to design, implement and evaluate an improvement plan to correct the system issue and/or problem.<sup>13</sup>
- Reporting requirements:
  - The administrative team or their designee will report any and all activities of the RCA to the Quality Management Oversight
  - The administrative team or their designee will report any and all findings of the RCA to the Medical Executive Committee, and any other committees, teams, workgroups, or individuals within the organization, as appropriate to the defined issue.
  - The adverse event or medical error and/or the corrective action plan will be communicated to other organizations or individuals at sole discretion of the Chief Executive Officer or his/her designee.
- Other issues related to the RCA:
  - If the RCA finds the adverse event or medical error is to be caused by the performance and/or competence of an independent licensed practitioner holding clinical privileges, the corrective action will be managed through the supervision and direction of the Medical Executive Committee.

**Appendix A  
National Quality Forum  
Serious Reportable Events**

**1. SURGICAL OR INVASIVE PROCEDURE EVENTS**

**1A. Surgery or other invasive procedure performed on the wrong site (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1B. Surgery or other invasive procedure performed on the wrong patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1C. Wrong surgical or other invasive procedure performed on a patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1D. Unintended retention of a foreign object in a patient after surgery or other invasive procedure (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1E. Intraoperative or immediately postoperative/postprocedure death in an ASA Class 1 patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**2. PRODUCT OR DEVICE EVENTS**

**2A. Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2B. Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2C. Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

|                                               |                                |

### 3. PATIENT PROTECTION EVENTS

**3A. Discharge or release of a patient/resident of any age, who is unable to make decisions, to other than an authorized person (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3B. Patient death or serious injury associated with patient elopement (disappearance) (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3C. Patient suicide, attempted suicide, or self-harm that results in serious injury, while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

### 4. CARE MANAGEMENT EVENTS

**4A. Patient death or serious injury associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration) (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4B. Patient death or serious injury associated with unsafe administration of blood products (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4C. Maternal death or serious injury associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers

**4D. Death or serious injury of a neonate associated with labor or delivery in a low-risk pregnancy (new)**

Applicable in: facilities, outpatient/office-based surgery centers

**4E. Patient death or serious injury associated with a fall while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4F. Any Stage 3, Stage 4, and unstageable pressure ulcers acquired after admission/presentation to a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

**4G. Artificial insemination with the wrong donor sperm or wrong egg (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**4H. Patient death or serious injury resulting from the irretrievable loss of an irreplaceable biological specimen (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4I. Patient death or serious injury resulting from failure to follow up or communicate laboratory, pathology, or radiology test results (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5. ENVIRONMENTAL EVENTS**

**5A. Patient or staff death or serious injury associated with an electric shock in the course of a patient care process in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5B. Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5C. Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care process in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5D. Patient death or serious injury associated with the use of physical restraints or bedrails while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**6. RADIOLOGIC EVENTS**

|                                               |                                |

**6A. Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**7. POTENTIAL CRIMINAL EVENTS**

**7A. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7B. Abduction of a patient/resident of any age (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7C. Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7D. Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

# Red Rock Pain Surgery Center

## QUALITY AND PATIENT SAFETY PLAN

VERSION: 2

This plan was created and revised by the Red Rock Pain Surgery Center Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

Red Rock Pain Surgery Center is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

## Mission, Vision, and Values

In support of our mission, vision, and values, Red Rock Pain Surgery Center Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in Red Rock Pain Surgery Center are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, Red Rock Pain Surgery Center has developed this Patient Safety plan.

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.

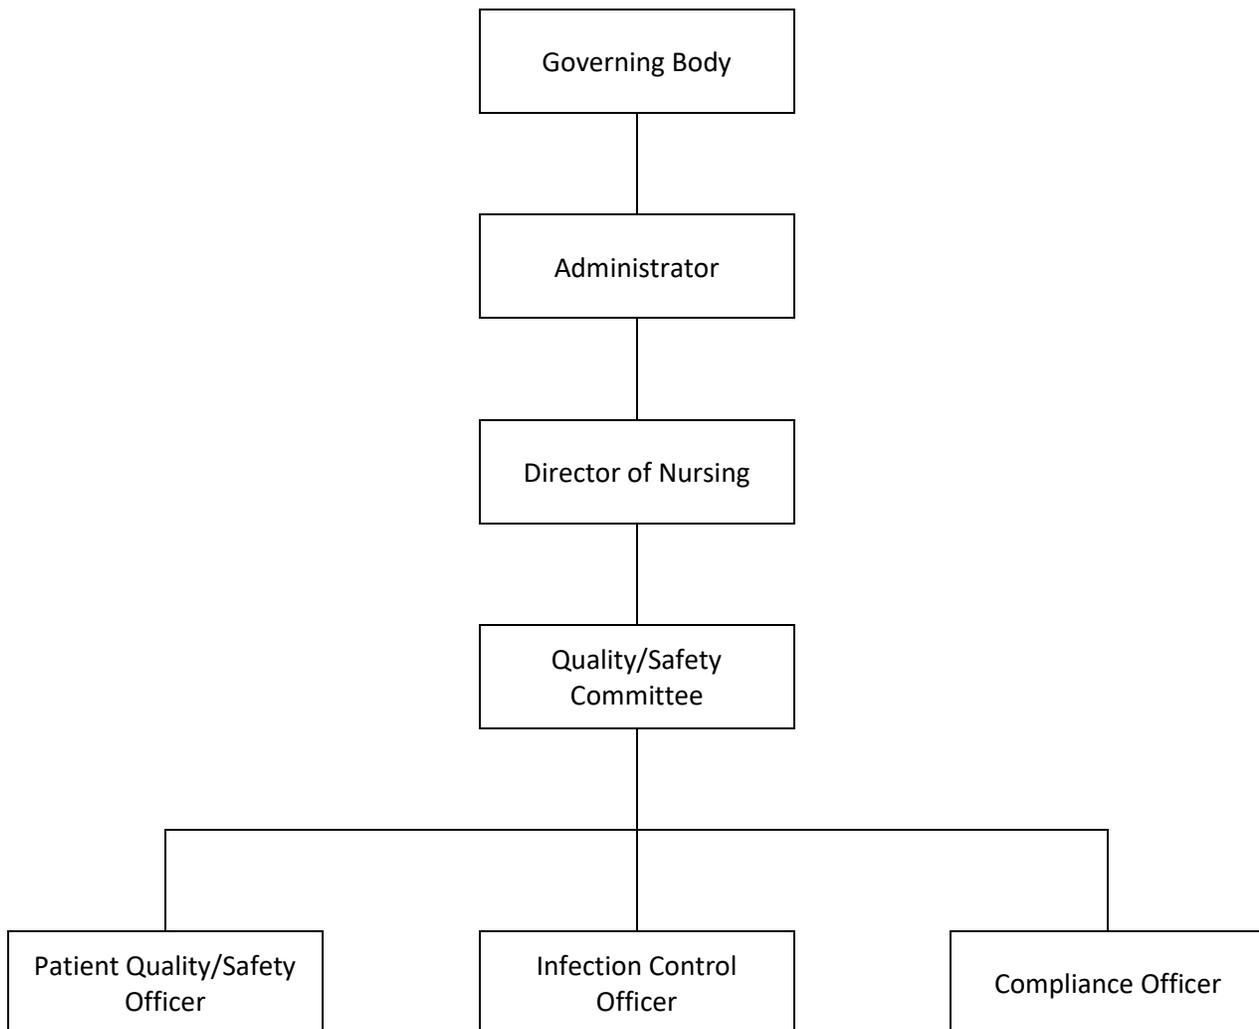

- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

The Patient Safety Committee Organization

### Roles and Responsibilities

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;

- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below (Please modify them as needed.)

Patient Safety Committee Responsibilities (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Board of Managers for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

Root Cause Analysis (RCA) Team Responsibilities

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.

*Patient Safety and Quality Improvement Plan*

- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

(Additional responsibilities here if needed)

Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

(Additional responsibilities here if needed)

RCA team leader Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.

*Patient Safety and Quality Improvement Plan*

- Provides oversight to the healthcare quality improvement processes and teams.

Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plans

The Patient Safety Committee will meet quarterly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar Quarter.
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA efforts.

A meeting agenda and minutes noting follow-up tasks will be kept.

## Objectives and Goals of the Quality and Patient Safety Plan

| Objective                         | Goals                                                     | Plan                                                         | Planned Completion Date | Responsible Party      |
|-----------------------------------|-----------------------------------------------------------|--------------------------------------------------------------|-------------------------|------------------------|
| Timely reporting of all variances | All staff will be able to independently complete variance | Educate all staff to the variance reporting system and forms | 3/1/2018                | Patient Safety Officer |

|                                                         |                                                                       |                                                                                                          |            |                        |
|---------------------------------------------------------|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|------------|------------------------|
|                                                         | reports                                                               |                                                                                                          |            |                        |
| Garner greater physician participation                  | Have physicians report all variances reported outside of the facility | Educate physicians to the patient safety plan. Encourage reporting of all variances regardless of cause. | 3/15 /2018 | Patient Safety Officer |
| Increase accountability of the Quality/Safety Committee | Increase the number of quality and safety projects at the facility    | Create sub-Committees within the group to specialize in projects related to their areas.                 | 3/15/2018  | Patient Safety Officer |
|                                                         |                                                                       |                                                                                                          |            |                        |
|                                                         |                                                                       |                                                                                                          |            |                        |
|                                                         |                                                                       |                                                                                                          |            |                        |

## Components and Methods

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Red Rock Pain Surgery Center will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement that we will use to test the changes.

### Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in (facility name) to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

### Fishbone Diagram

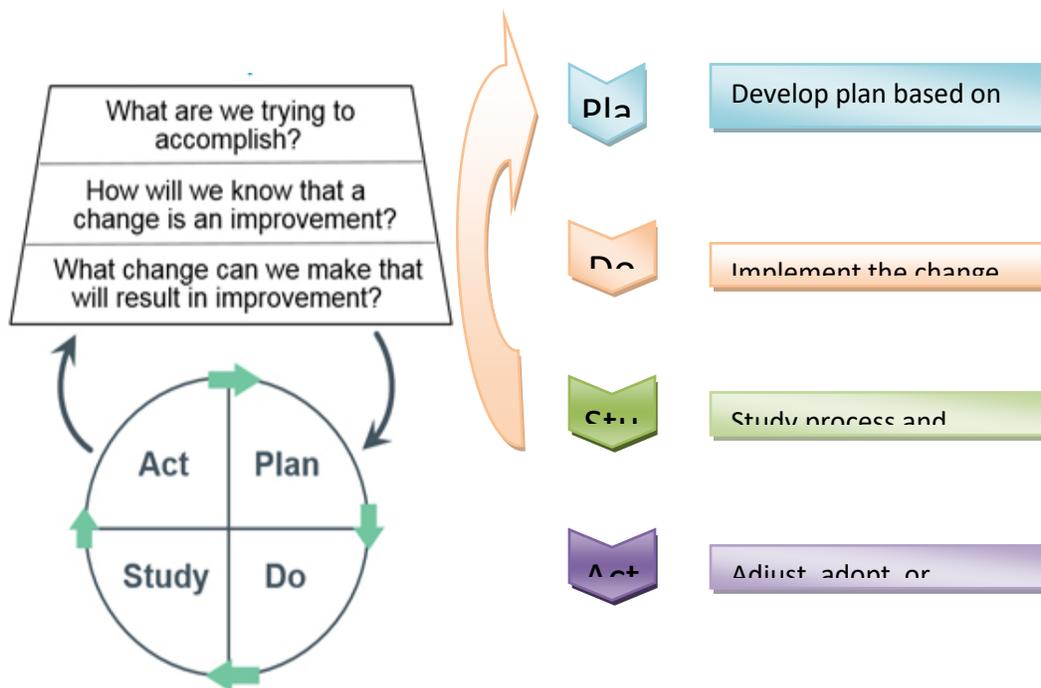

*Patient Safety and Quality Improvement Plan*

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

### Model for Improvement

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?

- What are the steps for the test - who, what, when?
- How will you measure the impact of the test?
- What is your plan to collect the data needed?
- What do you predict will happen?
  
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
  
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
  
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

### **Data Collection and Reporting**

Data should drive any quality and patient safety effort. Red Rock PainSurgery Center is using a paper system for tracking the sentinel events, healthcare infection data, and for internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                                                                                | Quarterly                                                                                                                                                                                                                                                                                    | Annually                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|

## Patient Safety Checklists and Patient Safety Policies

---

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction

with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.

- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event (NRS 439.830)**

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

**Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

## Appendix D-1: PDSA Worksheet

### PDSA Worksheet

|                                                                                 |  |        |  |
|---------------------------------------------------------------------------------|--|--------|--|
| Topic:                                                                          |  |        |  |
| Person Completing Worksheet:                                                    |  | Date:  |  |
| Telephone/ Email:                                                               |  | Cycle: |  |
| Patient Safety Committee Members                                                |  |        |  |
| CEOs/CFOs                                                                       |  |        |  |
| Patient Safety Officer                                                          |  |        |  |
| Infection Control Officer                                                       |  |        |  |
| Other Medical Staff                                                             |  |        |  |
| Other team members                                                              |  |        |  |
| <b>Aim:</b> (Describe the overall SMART goal that your team wishes to achieve.) |  |        |  |
|                                                                                 |  |        |  |
| <b>Plan:</b>                                                                    |  |        |  |
| 1. List the tasks needed to set up this test of change.                         |  |        |  |
|                                                                                 |  |        |  |
| 2. Predict what will happen when the test is carried out.                       |  |        |  |
|                                                                                 |  |        |  |

3. List the steps to develop the test-who, what, and when.

| Steps | By Whom | By When | Desired Outcome |
|-------|---------|---------|-----------------|
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |
|       |         |         |                 |

**Do:** (Describe what actually happened when you ran your test, including any problems and unexpected findings.)

**Study:** (Describe what you learned and did you meet your measurement goal?)

|                                              |                                                                                    |
|----------------------------------------------|------------------------------------------------------------------------------------|
| Did you meet your measurement goal? Explain. | <b>Summarize what was learned: success, failure, unintended consequences, etc.</b> |
|                                              |                                                                                    |

**Act:** (Describe what you concluded from this cycle.)

|                                                                            |                                                                                                           |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Based on what was learned, please indicate what action will be considered. | <b>Describe what modifications to the plan will be made for the next cycle based on what you learned.</b> |
| <input type="checkbox"/> Adapt: modify changes and repeat PDSA Cycle       |                                                                                                           |
| <input type="checkbox"/> Adopt: expanding changes throughout organization  |                                                                                                           |

| <b>Items</b>                                                                            | <b>Description</b> |                      |  |
| 1. What is your goal?                                                                   |                    |                      |  |
| 2. Report on the PDSA cycle                                                             |                    |                      |  |
| 3. What system and practices are working well? Explain.                                 |                    |                      |  |
| 4. What areas for improvement did the data identify?                                    |                    |                      |  |
| 5. What barriers or system issues have been encountered implementing action activities? |                    |                      |  |
| 6. Action plans to address the barriers or system issues                                |                    |                      |  |
| 7. Lesson learned                                                                       |                    |                      |  |
| 8. Support needed                                                                       |                    |                      |  |
| 9. Additional discussion                                                                |                    |                      |  |
| Notes:                                                                                  |                    |                      |  |

## Appendix E: Checklist Example: Injuries from Falls and Immobility

| Process Change                                                                                                                                    | In Place | Not Done | Will Adopt | Notes (Responsible & By When?) |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------|------------|--------------------------------|
| Conduct fall and injury risk assessment upon admission                                                                                            |          |          |            |                                |
| Reassess risk daily and with changes in patient condition                                                                                         |          |          |            |                                |
| Implement patient-specific intervention to prevent falls and injury                                                                               |          |          |            |                                |
| Communicate risk across the team; use handoff forms, visual cues, huddles                                                                         |          |          |            |                                |
| Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs) |          |          |            |                                |
| Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds               |          |          |            |                                |
| Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives                                                                        |          |          |            |                                |
| Incorporate multidisciplinary input for falls                                                                                                     |          |          |            |                                |
| Prevention from PT, OT, MD, RN and PharmD                                                                                                         |          |          |            |                                |
| Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient              |          |          |            |                                |
| Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls                                      |          |          |            |                                |

## Appendix F: Policy Example

|                                                                                              |                                                                                                                                      |                         |
|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|                                                                                              |                                                                                                                                      |                         |
| <p><a href="#">PERSONAL PROTECTIVE EQUIPMENT POLICY</a><br/> <a href="#">Page 1 of 2</a></p> | <p>Date Issued:<br/>                 Date Last Revised:<br/>                 Next Review Date:<br/>                 Approved By:</p> | <p>Policy Committee</p> |

Key

Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

|                                                                    |                                                                                   |                         |

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

|                                            |                             |  |
|--------------------------------------------|-----------------------------|--|
| Section 6<br>Patient Safety                | Green Valley Surgery Center |  |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 1 of 7                 |  |
| Approved:<br>AUG 22 2017                   | Revised:                    |  |

**POLICY:**

Green Valley Surgery Center will institute and administer a comprehensive and continuous Patient Safety Program for all patients to improve patient safety and reduce risk to patients through an environment that encourages:

- Recognition of risks to patient safety and medical/health care errors
- Actions to reduce these risks
- Internal reporting of incidents and potential incidents and actions taken
- Focus on processes and systems rather than individual blame

**PURPOSE:**

The Patient Safety Program provides a systematic, coordinated and continuous approach to maintenance and improvement of patient safety by using established mechanisms to support responses to actual occurrences, have an ongoing proactive plan to reduce medical/health errors, and integrate patient safety as a high priority in all relevant organizational processes and services.

**RESPONSIBILITY:**

As with patient care, it is a coordinated and collaborative effort of the entire organization to maintain and improve patient safety.

The Governing Body approves the data-driven Patient Safety Program and ensures the program reflects the complexity of the facility's organization and services, including those services furnished under contract or arrangement and focuses on the prevention and reduction of medical/health errors and adverse effects.

The Clinical Director is responsible for the management of the Patient Safety Program by:

- Coordinating all patient safety activities
- Facilitating assessment and appropriate responses to reportable events
- Monitoring Root Cause Analysis and resulting action plans

|                                            |                             |
|--------------------------------------------|-----------------------------|
| Section 6<br>Patient Safety                | Green Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 2 of 7                 |

- Serving as a liaison among the departments to assure facility wide integration of the Patient Safety Program.

Each individual employee within the organization acts as a patient advocate for safety and is responsible to report patient safety occurrences and potential occurrences to the QAPI Coordinator and the Clinical Director, who will aggregate the occurrence information and report to the Governing Body.

**PROGRAM:**

The scope of the Patient Safety Program includes an ongoing assessment to prevent error occurrence, maintain and improve patient safety.

Patient Safety occurrence information from aggregated data reports and individual incident occurrence reports will be reviewed to prioritize organizational patient safety efforts.

**Types Of Patient Safety Or Medical/Health Care Errors:**

- No Harm Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that do not result in a physical or psychological negative outcome, or the potential for a negative outcome, for the patient.
- Mild-Moderate Adverse Outcome Errors – those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error
- Any Adverse Drug Reaction
- Any Transfusion Reaction
- Hazardous Condition – any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Sentinel Event – an unexpected occurrence involving death or serious physical or psychological injury or the risk thereof, including any process variation for which a recurrence would carry a significant chance of serious adverse outcome. Serious injury specifically includes loss of limb or function. Sentinel event criteria includes:

- The event has resulted in an unanticipated death or major permanent loss of function, not related to the natural course of the patient's illness or underlying condition.
- The event is one of the following (even if the outcome was not death or major permanent loss of function):
  - Suicide of a patient.
  - The sexual assault of a patient during treatment or while the patient was on the premises of the facility.
  - A hemolytic transfusion reaction involving administration of blood or blood products having major blood group incompatibilities.
  - Medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient.
  - A surgical procedure on the wrong patient or on the wrong body part of a patient.
  - A foreign object accidentally left in a patient during a procedure.
  - A patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.
  - Near Miss – any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.

### **What To Do When A Patient Safety Error Occurs**

Upon identification of a medical/health care error, the patient care provider will immediately:

- Perform necessary healthcare interventions to protect and support the patient's clinical condition.
- As appropriate to the occurrence, perform necessary healthcare interventions to contain the risk to others – example: immediate removal of contaminated IV fluids from supply should it be discovered a contaminated lot of fluid solutions was delivered and stocked.
- Contact the patient's attending physician and other physicians, as appropriate, to report the error, carrying out any physician orders as necessary.

|                                            |                             |
|--------------------------------------------|-----------------------------|
| Section 6<br>Patient Safety                | Green Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 4 of 7                 |

- Preserve any information related to the error (including physical information).  
Examples of preservation of physical information are: Removal and preservation of blood unit for a suspected transfusion reaction; preservation of IV tubing, piggyback fluid for a patient with a severe drug reaction from IV medication; preservation of medication label for medications administered to the incorrect patient. Preservation of information includes documenting the facts regarding the error on an occurrence report, and in the medical record as appropriate to organizational policy and procedure.
- Report the medical/health care error to the staff member's immediate supervisor.
- Submit the incident occurrence report to the QAPI Committee per organizational policy.

### Internal Reporting Of The Error/Event

Staff response to medical/health care errors is dependent upon the type of error identified:

- **No Harm Errors** – (including “no harm medication errors), staff will document appropriately in the medical record according to organizational policy, document the circumstances regarding the no harm error on an incident occurrence report form, submit the form to the QAPI Committee and notify their immediate supervisor.
- **Mild-Moderate Adverse Outcome Errors** (including medication errors), staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts in the medical record and on an incident occurrence report, submitting the report to the QAPI Committee per policy.
- **Adverse Drug Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then preserve any physical evidence as appropriate, notify their immediate supervisor, document facts appropriately in the medical record and on an incident occurrence report, submitting the report to QAPI Committee per organizational policy.
- **Transfusion Reaction** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary orders. Staff will then follow the organization policy and procedure for this event.

| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 5 of 7                 |

- **Hazardous Condition/Patient Safety Issue** - as appropriate, and if possible, staff will contain the hazardous condition or patient safety issue. Staff identifying a hazardous condition or potential patient safety issue will immediately notify their supervisor and document the findings on an incident occurrence report which is then submitted to QAPI Committee
- **Sentinel Event** – staff will perform any necessary clinical interventions to support and protect the patient and notify the physician responsible for the patient, carrying out any necessary physician orders. Staff will then follow the organizational Sentinel Event Policy and Procedure, which includes a root cause analysis and action plan.
- **Near Miss** – staff will report the near miss event to their immediate supervisor, describe the facts of the near miss on an occurrence report and submit the report to QAPI Committee.
- It is the intent of this facility to adopt a non-punitive approach in its management of errors and occurrences. All personnel are required to report suspected and identified medical/health care errors, and should do so without the fear of reprisal in relationship to, their employment. This organization supports the concept that errors occur due to a breakdown in systems and processes, and will focus on improving systems and processes, rather than disciplining those responsible for errors and occurrences. A focus will be placed on remedial actions to assist rather than punish staff members, with the individual staff member’s supervisor determining the appropriate course of action to prevent error recurrence.

### Root Cause Analysis

- All sentinel events and near miss occurrences will have a root cause analysis conducted to examine the cause and effect of the event through an impartial process
- A Root Cause Analysis is an interdisciplinary review process for identifying the basic or contributing causal factors that underlie a variation in performance associated with an adverse event or reportable patient safety event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.
- The QAPI Committee is responsible for conducting the root cause analysis. It will be completed within 45 days of becoming aware of one of the reportable events. They will encourage the staff members’ involvement in the root cause analysis and action plan processes, to allow the staff member an active role in process resolution.

|                                            |                             |
|--------------------------------------------|-----------------------------|
| Section 6<br>Patient Safety                | Green Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 6 of 7                 |

A written Root Cause Analysis and “Action Plan” will be created which includes specific measures to correctly identify problems or areas of concern, identify strategies for implementing system improvements; and also includes outcome measures to indicate the effectiveness of system improvements in reducing, controlling or eliminating identified problem areas. The action plan must specifically address responsibility for implementation and oversight, time frames for implementation, and the strategy for measuring the effectiveness of the actions.

- The Joint Commission recommended “A Framework for a Root Cause Analysis and Action Plan In Response to a Sentinel Event” format may be used. See attached.
- Results of the entire Root Cause Analysis will be presented to the Governing Body for evaluation.

### **Communication of Action Plans and Root Cause Analysis**

- Action Plans related to a Root Cause Analysis will be shared with the entire staff upon Completion by the QAPI Committee. Possible recommendations to update or change policy and procedures may be presented to the staff, management and Governing Body to improve patient safety.
- Staff will educate patients and their families about their role in helping to facilitate the safe delivery of care. There will be a random record review verifying compliance with this educational process.
- Root Cause Analysis and Action Plans will be made available to the state health department representatives during onsite reviews.

### **Reporting Obligations**

- Medical/Health care errors and occurrences, including sentinel events, will be reported internally and externally, through the channels established by this plan. External reporting will be performed in accordance with all state, federal and regulatory body rules, laws and requirements.

### **Patient Safety Program Staff Education/Training**

- Staff will receive education and training during their initial orientation process and on an ongoing basis regarding job-related aspects of patient safety, including the need and method to report medical/health care errors. And, because the optimal provision of healthcare is provided in an interdisciplinary manner, staff will be educated and trained on the provision of an interdisciplinary approach to patient care.

|                                            |                             |
|--------------------------------------------|-----------------------------|
| Section 6<br>Patient Safety                | Green Valley Surgery Center |
| Policy Name: <b>PATIENT SAFETY PROGRAM</b> | Page 7 of 7                 |

- Medical errors results from multiple factors. Flawed systems or processes can combine with active failures by caregivers in the clinical setting to produce accidents and errors. Some contributing factors are:
  - Inadequate communication among team members
  - Incomplete review of patient health records and diagnostic studies
  - Traditional hierarchical and autocratic cultures
  - Patient – related decisions made only by physicians
  - Unclear instructions
  - Confusing packaging of medications and supplies
  - Time pressures and constraints, Multi-tasking
  - Failure to include the patient and family members in assessment and decision-making
  
- Staff will be trained about error reduction, which requires the commitment of all members of the health care team. Besides correcting the identified factors above, the following individual and facility changes will be focused on:
  - Reduce reliance on memory by using checklists and protocols.
  - Standardize processes as much as possible for procedures and other activities.
  - Focus on the safety aspects of products during the selection and evaluation process.
  - Promote safety related clinical competency.
  - Educate employees about the potential for errors and how to avoid them.
  - Creating a “Culture of Safety” whereby there is a change of environment from blaming individuals for errors to one in which errors are treated as opportunities to improve systems. This is accomplished by:
    - establishing a sense of trust among team members;
    - dissemination and verifying receipt of information to all levels of staff and management;
    - developing and supporting a proactive approach rather than a reactive approach;
    - making a sincere commitment to affirming safety as the first priority.
  
- Quarterly Patient Safety Program meetings will be incorporated into the QAPI Program and conducted to review any incident occurrence reports and review any new patient safety recommendations or alerts.

# ROOT CAUSE ANALYSIS AND ACTION PLAN

| Level of Analysis                |                                                      | Questions                                                                             | Findings | Root Cause? | Ask Why? | Take Action? |
|----------------------------------|------------------------------------------------------|---------------------------------------------------------------------------------------|----------|-------------|----------|--------------|

|                                  |                                                      | What other areas of services are impacted?                                            |          |             |          |              |

## ROOT CAUSE ANALYSIS AND ACTION PLAN

The following template is provided as an aid in organizing the steps in a root cause analysis. Not all possibilities and questions will apply in every case and there may be others that will emerge in the course of the analysis. However, all possibilities and questions should be fully considered in your quest for “root cause” and risk reduction.

As an aid to avoiding “loose ends” the three columns on the right are provided to be checked off for later reference.

- **“Root Cause?”** - should be answered “yes” or “no” for each finding. A root cause is typically a finding related to a process or system that has a potential for redesign to reduce risk. If a particular finding that is relevant to the event is not a root cause, be sure that is addressed later in the analysis with a “why?” question. Each finding that is identified as a root cause should be considered for an action and addressed in the action plan.
- **“Ask Why?”** - should be checked off whenever it is reasonable to ask why the particular finding occurred (or didn’t occur when it should have (in other words, to drill down further). Each item checked in this column should be addressed in the analysis with a “Why?” question. If it is expected that any significant finding that are not identified as root causes themselves have “roots.”
- **“Take Action?”** - should be checked for any finding that can reasonably be considered for a risk reduction strategy. Each item checked in this column should be addressed later in the action plan. It will be helpful to write down the number of the associated Action item on page 3 in the “Take Action?” column for each of the findings that requires action.

# ROOT CAUSE ANALYSIS AND ACTION PLAN

## POLICY

- This policy applies to all employees, medical staff, contractors, patients, visitors and patients of this facility.
- All unexpected events or occurrences involving death or serious physical or psychological injury or risk thereof are to be reported to the administrative team immediately upon identification (regardless of time of day or night).
- Any and all adverse event or medical errors require immediate action to examine the event in-depth to determine why the incident occurred and how to reduce the likelihood of recurrence.
- The governing body must ensure that the Patient Safety Program (PSP) reflects the complexity of the facility organization and services, including those services furnished under contract or arrangement, and focuses on the prevention and reduction of medical errors and adverse events.<sup>1</sup>
- All adverse events or medical errors are errors; but not all errors are adverse events or medical errors.
- Failure to report an adverse event or medical error will be addressed through the Disciplinary process
- Event data will be preserved and collected per facility policy.<sup>2</sup>
- Event equipment will be preserved and removed from patient care until cleared

## PATIENT SAFETY SYSTEM:

- To have a means for establishing clear expectations for identifying and detecting the prevalence and severity of incidents that impact or threaten patient safety. This includes medical errors and adverse patient events.
- To identify, implement and regularly assess the means by which incidents are prevented or when they occur. The incidents are studied to detect nonconformance and where risk points or failures are an inherent part of the process and work to remove these risk points or failures from the system.
- To address customer (patient) communication when such incidents occur, how the patients are informed and their right to know the circumstances of events.

## DEFINITIONS:

- Administrative Team: Interdisciplinary organizational team, whose members have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.
- Adverse Event: An Adverse Event shall be defined as an unexpected occurrence or variation that led to death or serious physical or psychological harm. This definition includes the National Quality Forum (NQF) "never or adverse events" that are errors in medical care that are clearly identifiable, preventable and serious in their consequences for patients.<sup>3</sup> An event that results in unintended harm to the patient by an act of commission or omission rather than by underlying disease or condition of the patient.<sup>4</sup>

<sup>1</sup> Title 25, Texas Administrative Code, 133.48 (2) (A)

<sup>2</sup> Control of Internal and External Documents (#7067)

<sup>3</sup> NIAHO Standard; QM.7 (p 16) Adverse Event definition

|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 2 of 9             |
|                              | REFERENCE #: 7046-TXREG |

- Medical Error:** The failure of a planned action to be completed as intended, the use of a wrong plan to achieve an aim, or the failure of an unplanned action that should have been completed, that results in an adverse event.<sup>5</sup>
- Reportable Event:** A medical error or adverse event or occurrence which the facility is required to report to the State.<sup>6</sup>
- Root Cause Analysis:** An interdisciplinary review process for identifying the basic or contribution causal factors that underlie a variation in performance associated with an adverse event or reportable event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.<sup>7</sup>

### SCOPE:

List of events and occurrences to report:

- No Harm Errors:** those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome-that do not result in a physical or psychological negative outcome or the potential for a negative outcome, for the patient.
- Facility Acquired Infection/Condition:** infections/conditions that are a result of treatment in a facility or healthcare service unit.
- Patient Fall**
- Mild/Moderate Adverse Outcome Errors:** those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error**
- Any Adverse Drug Reaction**
- Hazardous Condition:** any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Near Miss:** any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
  
- Reportable Events to the State<sup>8</sup>:**
  - (i) a medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient;

| SUBJECT: PATIENT SAFETY PLAN | Page 3 of 9             |
|                              | REFERENCE #: 7046-TXREG |

- (ii) a perinatal death unrelated to a congenital condition in an infant with a birth weight greater than 2,500 grams;
- (iii) the suicide of a patient in a setting in which the patient received care 24 hours a day;
- (iv) the abduction of a newborn infant patient from the facility or the discharge of a newborn infant patient from the facility into the custody of an individual in circumstances in which the facility knew, or in the exercise of ordinary care should have known, that the individual did not have legal custody of the infant;
- (v) the sexual assault of a patient during treatment or while the patient was on the premises of the facility or facility;
- (vi) a hemolytic transfusion reaction in a patient resulting from the administration of blood or blood products with major blood group incompatibilities;
- (vii) a surgical procedure on the wrong patient or on the wrong body part of a patient;
- (viii) a foreign object accidentally left in a patient during a procedure; and
- (ix) a patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.

- Required by the State: a health care-associated adverse condition or event for which the Medicare program will not provide additional payment to the facility under a policy adopted by the federal Centers for Medicare and Medicaid.<sup>9</sup>
- Other events: as included in the list of adverse events identified by the National Quality Forum that is not included in the list required by the State (see Appendix A for National Quality Forum events).<sup>10</sup>

## PROCEDURE:

- Upon the identification of an adverse event or medical error, after the patient is safe (as applicable), the administrative team has been notified prior to leaving duty, employees, members of the medical staff and any witnesses must complete an incident occurrence and submit it to their immediate supervisor who will follow the incident reporting process.<sup>11</sup>
- Adverse events or medical errors will be reviewed by the Administrative Team within 24 hours of incident notification. The administrative team will determine if the incident warrants conducting a root cause analysis.
  - The licensed independent practitioner responsible for managing the patient's care, treatment, and services, or his/her designee, shall inform the patient or their representative, within 24 hours of the adverse events or medical errors about unanticipated outcomes of care, treatment, and services related to adverse events or medical errors when the patient or their representative is not already aware of the occurrence or when further discussion is needed.
- If it is determined by the administrative team that an RCA is warranted, it will commence within five (5) business days of the decision.
- The RCA will be conducted by the administrative team, staff and licensed independent practitioners who have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.

<sup>10</sup> Title 25, Texas Administrative Code; 98.1045 (2)

<sup>11</sup> Corrective/Preventive Action Plan (#7070)

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 4 of 9             |
|                              | REFERENCE #: 7046-TXREG |

Specifically the administrative team will:<sup>12</sup>

- Complete an RCA to examine the cause and effect of the event through an impartial process.
- The RCA will focus primarily on the systems and processes, not individual performance. It will include the following elements:
  - A clear definition of the issue(s) pertaining to the event, that is, a determination of the human and other factors most directly associated with the event, and the process (es) and systems related to its occurrence.
  - Identification of risk points and their potential contributions to the type of event
- Develop an action plan identifying the strategies that the facility intends to employ to reduce the risk of similar events occurring in the future.
- The action plan must:
  - Designate responsibility for implementation and oversight;
  - Specify time frames for implementation, analysis and follow-up
  - Include a strategy for measuring the effectiveness of the actions taken.
- The administrative team will not, in any circumstance, delay implementation of the action plan or, as appropriate, elements of its components, over seven (7) days from the date of the completion of the RCA.
- The administrative team will be afforded the time and resources by Quality Management Oversight to implement the approved plan.
- If the RCA determines that the adverse event or medical error is related to an organizational systems approach or process challenge, the team will utilize the PDCA (Plan, Do, Check, Act) to design, implement and evaluate an improvement plan to correct the system issue and/or problem.<sup>13</sup>
- Reporting requirements:
  - The administrative team or their designee will report any and all activities of the RCA to the Quality Management Oversight
  - The administrative team or their designee will report any and all findings of the RCA to the Medical Executive Committee, and any other committees, teams, workgroups, or individuals within the organization, as appropriate to the defined issue.
  - The adverse event or medical error and/or the corrective action plan will be communicated to other organizations or individuals at sole discretion of the Chief Executive Officer or his/her designee.
- Other issues related to the RCA:
  - If the RCA finds the adverse event or medical error is to be caused by the performance and/or competence of an independent licensed practitioner holding clinical privileges, the corrective action will be managed through the supervision and direction of the Medical Executive Committee.

**Appendix A  
National Quality Forum  
Serious Reportable Events**

**1. SURGICAL OR INVASIVE PROCEDURE EVENTS**

**1A. Surgery or other invasive procedure performed on the wrong site (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1B. Surgery or other invasive procedure performed on the wrong patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1C. Wrong surgical or other invasive procedure performed on a patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1D. Unintended retention of a foreign object in a patient after surgery or other invasive procedure (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1E. Intraoperative or immediately postoperative/postprocedure death in an ASA Class 1 patient (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**2. PRODUCT OR DEVICE EVENTS**

**2A. Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2B. Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2C. Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

|                              |                         |

|                              | REFERENCE #: 7046-TXREG |

### 3. PATIENT PROTECTION EVENTS

**3A. Discharge or release of a patient/resident of any age, who is unable to make decisions, to other than an authorized person (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3B. Patient death or serious injury associated with patient elopement (disappearance) (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**3C. Patient suicide, attempted suicide, or self-harm that results in serious injury, while being cared for in a healthcare setting (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

### 4. CARE MANAGEMENT EVENTS

**4A. Patient death or serious injury associated with a medication error (e.g., errors involving the wrong drug, wrong dose, wrong patient, wrong time, wrong rate, wrong preparation, or wrong route of administration) (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4B. Patient death or serious injury associated with unsafe administration of blood products (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4C. Maternal death or serious injury associated with labor or delivery in a low-risk pregnancy while being cared for in a healthcare setting (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers

**4D. Death or serious injury of a neonate associated with labor or delivery in a low-risk pregnancy (new)**

Applicable in: facilitys, outpatient/office-based surgery centers

**4E. Patient death or serious injury associated with a fall while being cared for in a healthcare setting (updated)**

Applicable in: facilitys, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

|                              |                         |

**4F. Any Stage 3, Stage 4, and unstageable pressure ulcers acquired after admission/presentation to a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

**4G. Artificial insemination with the wrong donor sperm or wrong egg (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**4H. Patient death or serious injury resulting from the irretrievable loss of an irreplaceable biological specimen (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**4I. Patient death or serious injury resulting from failure to follow up or communicate laboratory, pathology, or radiology test results (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5. ENVIRONMENTAL EVENTS**

**5A. Patient or staff death or serious injury associated with an electric shock in the course of a patient care process in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5B. Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5C. Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care process in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**5D. Patient death or serious injury associated with the use of physical restraints or bedrails while being cared for in a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**6. RADIOLOGIC EVENTS**

|                                               |                                |

**6A. Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area (new)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

## **7. POTENTIAL CRIMINAL EVENTS**

**7A. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7B. Abduction of a patient/resident of any age (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7C. Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**7D. Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting (updated)**

Applicable in: facilities, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

# PAM Rehabilitation Hospital of Centennial Hills

## QUALITY AND PATIENT SAFETY PLAN

DATE: 02/19/2018

This plan was created by the PAM Rehabilitation Hospital of Centennial Hills Patient Safety committee/team. Implementation of this plan is intended to optimize the healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, as well as reduce the medical/healthcare errors and /or preventable events.

## Commitment to Patient Safety

---

PAM Rehabilitation Hospital of Centennial Hills is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems, and processes.

### Mission, Vision, and Values

In support of our mission, vision, and values, PAM Rehabilitation Hospital of Centennial Hills Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients and their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Responsibility for every healthcare related decision and action.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure participation of healthcare providers.

## Scope and Purpose

---

The scope of this Quality and Patient Safety Plan is organizational-wide/hospital-wide/agency-wide which includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

All staff in PAM Rehabilitation Hospital of Centennial Hills are required to fully support and participate in this plan, and devote their expertise to the patient safety and healthcare quality improvement process.

This plan is action oriented and solution focused. The purpose of this plan is to address patient safety related concerns, challenges and revise the program to better serve the patients and their families. To this end, PAM Rehabilitation Hospital of Centennial Hills has developed this Patient Safety plan.

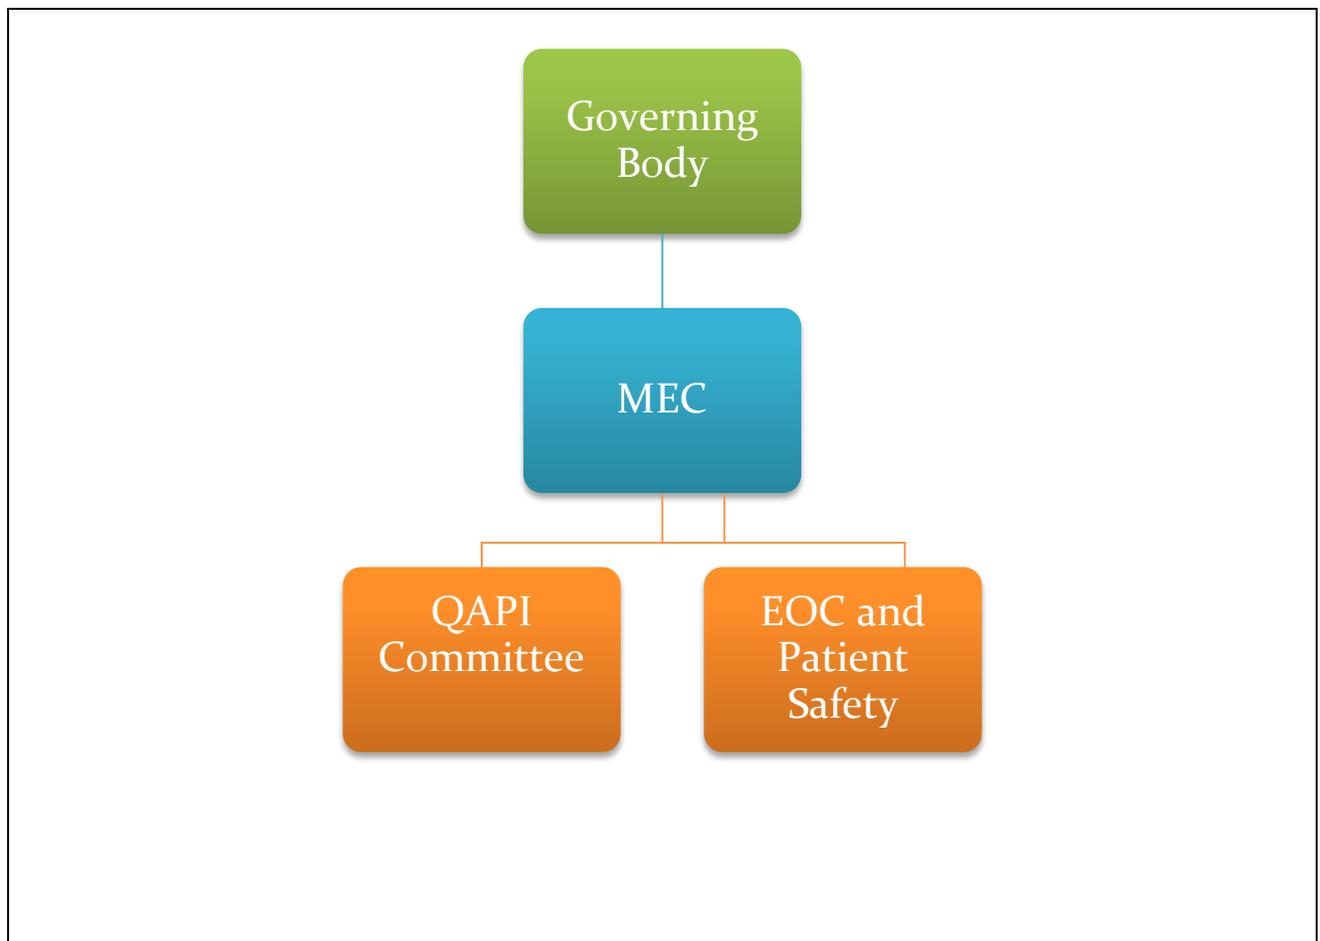

The plan focuses on the process rather than the individual, and recognizes both internal and external customers, as well as facilitates the need of analyzing and improving processes. The core principles of this plan include:

- All staff have the same goal and contribute their knowledge, vision, skill, and insight to improve the process of the Patient Safety Plan.
- Decisions will be based on data and facts, and staff will be encouraged to learn from the experiences.
- Customer based including patients, families, and visitors.
- Promote systems thinking.
- Employ well-trained and competent staff maintaining high healthcare quality.

## Roles and Responsibilities

---

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully.

**Roles and Responsibilities**

- In accordance with [NRS 439.875](#), a patient safety committee must be comprised of:
- The infection control officer of the medical facility;
- The patient safety officer of the medical facility, if he or she is not designated as the infection control officer;
- At least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff of the medical facility; and
- One member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of:

- The patient safety officer of the medical facility;
- At least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of the nursing staff of the medical facility; and
- The Chief Executive Officer (CEO) or Chief Financial Officer (CFO) of the medical facility.

The roles and responsibilities are defined below.

**Patient Safety Committee Responsibilities** (based on [NRS 439.875](#) and [NRS 439.877](#))

- Monitor and document the effectiveness of the patient identification policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\) \(b\)](#).
- Receive reports from the patient safety officer pursuant to [NRS 439.870](#).
- Evaluate actions of the patient safety officer in connection with all reports of sentinel events alleged to have occurred.
- Review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- Review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the executive or governing body of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the executive or governing body of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.

- Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

#### Root Cause Analysis (RCA) Team Responsibilities (please revise as needed)

- Root Cause interviews, analysis, investigation, and corrective action plan implementations.
- Participates in the RCA meetings and discussions.
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders.

#### Patient Safety Officer Responsibilities (based on [NRS 439.870](#))

- Serve on the patient safety committee.
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Take such action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the patient safety committee regarding any action taken in accordance with the responsibilities above.

#### Infection Control Officer Responsibilities (based on [NRS 439.873](#))

- Serve on the patient safety committee.
- Monitor the occurrences of infections at the facility to determine the number and severity of infections.
- Report to the patient safety committee concerning the number and severity of infections at the facility.
- Take such action as determines is necessary to prevent and control infections alleged to have occurred at the facility.
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

#### RCA team leader/facilitator Responsibilities

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements.

Executive or Governing Body Staff Responsibilities

- Provide vision and leadership to Patient Safety and Quality Improvement process, and develop and foster a safe learning and improving culture.
- Provides oversight to the healthcare quality improvement processes and teams.
- Plan, discuss, and generate the organization patient safety goals and activities, in conjunction with the patient safety action plan.

The Patient Safety Committee will meet monthly to accomplish the following:

- Report and discuss sentinel events which include:
  - Number of sentinel events from previous calendar month (or quarter).
  - Number of severe infections that occurred in the facility.
- Corrective Action Plan for the sentinel events and infections
  - Evaluate the corrective action plan.
- Patient safety policies and checklists
  - At least annually evaluate Patient Safety policies and checklists
  - Revise the patient safety policies and checklists as needed.
  - Monitor and document the effectiveness of the patient safety policy.

A RCA meeting will meet as needed to accomplish the following:

- Define the healthcare issues or potential risks.
- Conduct Root Cause Analysis
  - Reviewing and analyzing the data.
  - Reviewing the RCA process and quality improvement related activities and timelines.
  - Brainstorming issues or the potential risks by using the fishbone diagrams.
  - Identify the contributing factors and conduct the Root Cause Analysis.
- Conduct Corrective Action Plan
  - Identifying the Plan-Do-Study-Act (PDSA) topics.
  - Discussing corrective action process and activities.
  - Discussing and presenting possible changes in procedure to improve areas indicated.
  - Identifying strengths and areas that need improvement.
  - Developing strategies, solutions, and steps to take next.
- Identify barriers and technical assistance needs for supporting the RCA effort

**Objectives and Goals of the Quality and Patient Safety Plan**

| Objective               | Goals | Plan                                                        | Planned Completion Date | Responsible Party    |
|-------------------------|-------|-------------------------------------------------------------|-------------------------|----------------------|
| Hand hygiene compliance | 90%   | Observations and training, one on one coaching if indicated | 12/31/2018              | Entire clinical team |

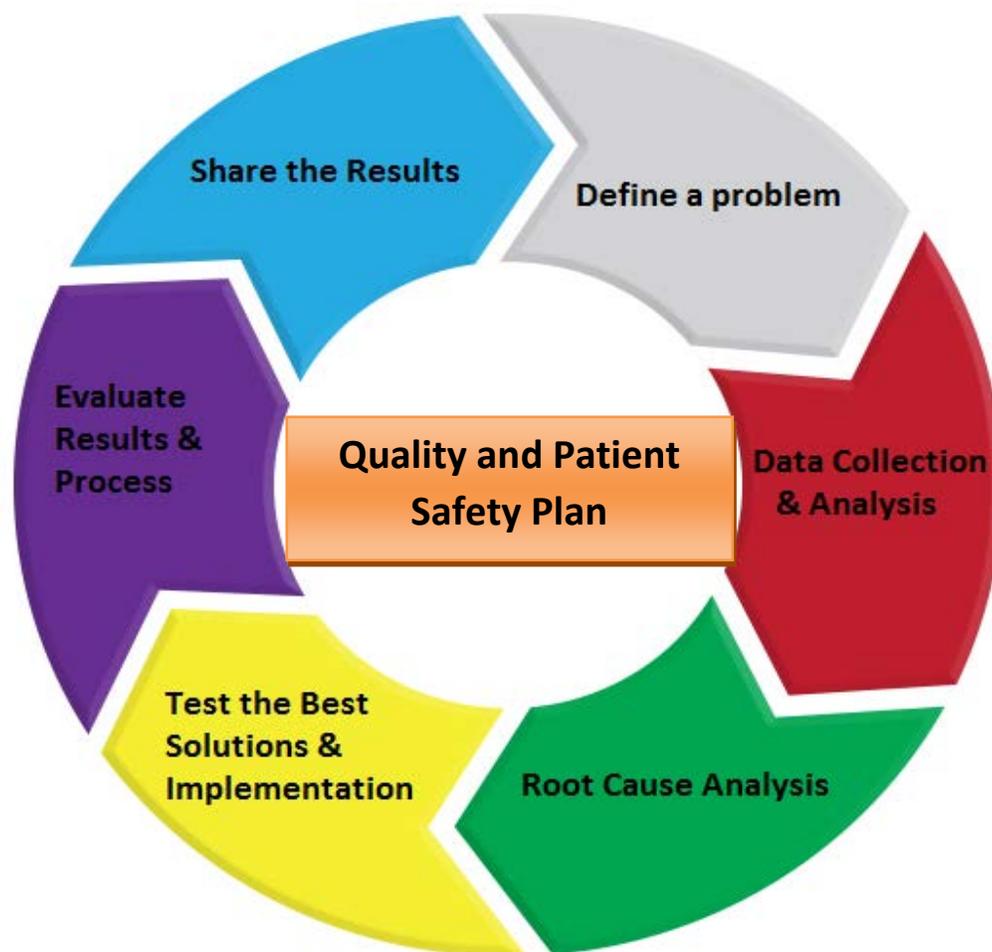

|                                                                               |                       |                                                                                                           |          |                      |
|-------------------------------------------------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------|----------|----------------------|
| Patient Safety with scanning medications                                      | 100%                  | Scan all medications, all medications will have barcode and be scanned; education and monitoring          | 12/31/18 | Pharmacy and Nursing |
| Keep falls at a minimum; no injuries                                          | Fall rate $\leq 3.99$ | Risk assessments; fall precautions implemented; monitoring                                                | 12/31/18 | Nursing, therapy     |
| Safe and successful discharges, keep LOA and acute transfers out to a minimum | Rate <9.0             | Hourly rounding; rapid responses if indicated and change in condition, post-acute huddles for information | 12/31/18 | Entire clinical team |
| No hospital acquired pressure ulcers                                          | Zero                  | Daily and weekly skin assessments; education;                                                             | 12/31/18 | Nursing              |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

PAM Rehabilitation Hospital of Centennial Hills will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. The Plan-Do-Study (check)-Act (PDSA or PDCA) is the model, which was developed by the Institute of Health Care Improvement that we will use to test the changes.

## Root Cause Analysis

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals.

Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

**Root cause analysis and action plan framework table**, which was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used in PAM Rehabilitation Hospital of Centennial Hills to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

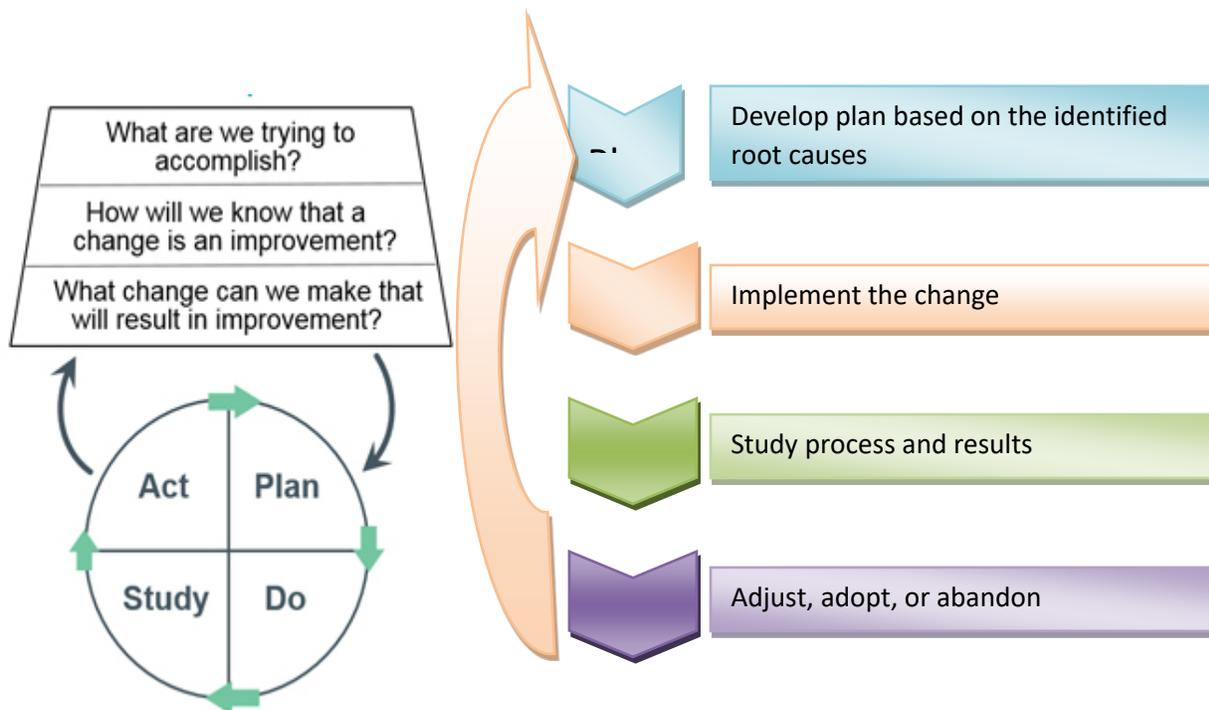

**Fishbone Diagram**

Once the problems are identified, a Fishbone Diagram (Appendix C) will be used for analyzing the problems. You can use the fishbone diagram individually to analyze the root causes, or use it with the root cause analysis and action plan framework table.

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories used include: people, methods, materials, measurements, education, procedures, process, location, environment, etc. RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes.

**Model for Improvement**

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions.
  - What is the objective of the test?
  - What are the steps for the test - who, what, when?
  - How will you measure the impact of the test?
  - What is your plan to collect the data needed?
  - What do you predict will happen?
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance.
  - What were the results of the test?
  - Was the cycle carried out as designed or planned?
  - What did you observe that was unplanned or expected?
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance.
  - Did the results match your prediction?
  - What did you learn?
  - What do you need to do next?
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

PDSA worksheet will be used to map the potential change strategies and to establish a course of action. The PDSA worksheet and the PDSA progress report are attached in Appendix D-1.

## Data Collection and Reporting

Data should drive any quality and patient safety effort. PAM Rehabilitation Hospital of Centennial Hills is using from RMPRO, erehab, meridian, for tracking the sentinel events, healthcare infection data, and internal data collection.

External data sources are those data sources which are collected outside the supervisory structure of the case. External data which will be utilized for Quality and Patient Safety plan include the data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

### Ongoing Reporting and Review

Data points such as the following will be reviewed according to the schedule prescribed:

| Monthly                                                                                  | Quarterly                                                                                                                                                                                                                | Annually                                                                                       |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1) Sentinel event monthly report<br>2) Severity of infection report<br>3) RCA assessment | 1) Sentinel event quarterly report<br>2) Severity of infection report<br>3) Review and evaluate the measure of improvement of patient safety<br>4) Review and evaluate the measurement to prevent and control infections | 1) Quality and Patient Safety Plan update<br>2) Checklists and Policies reviewing and revising |

### Assessment of the Quality and Patient Safety Plan

Please see the Patient Safety Assessment Tool (PSAT) from the VA National Center for Patient Safety for your reference.

### Patient Safety Checklists and Patient Safety Policies

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and

- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may

include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix E.**)

<http://www.who.int/patientsafety/implementation/checklists/en/>

The patient safety policies are listed in Appendix F. (The following link provides you some patient safety policies for your reference—a policy example is shown in **Appendix F.**)

<https://www.mercyhospital.org.nz/about-us/mercy-hospital/policies/ruleFile/1>

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan.

The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## Appendix A: Terms and Definitions

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”  
[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;
- Central line-related bloodstream infections;

- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility** ([NRS 439.805](#))

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985; 254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

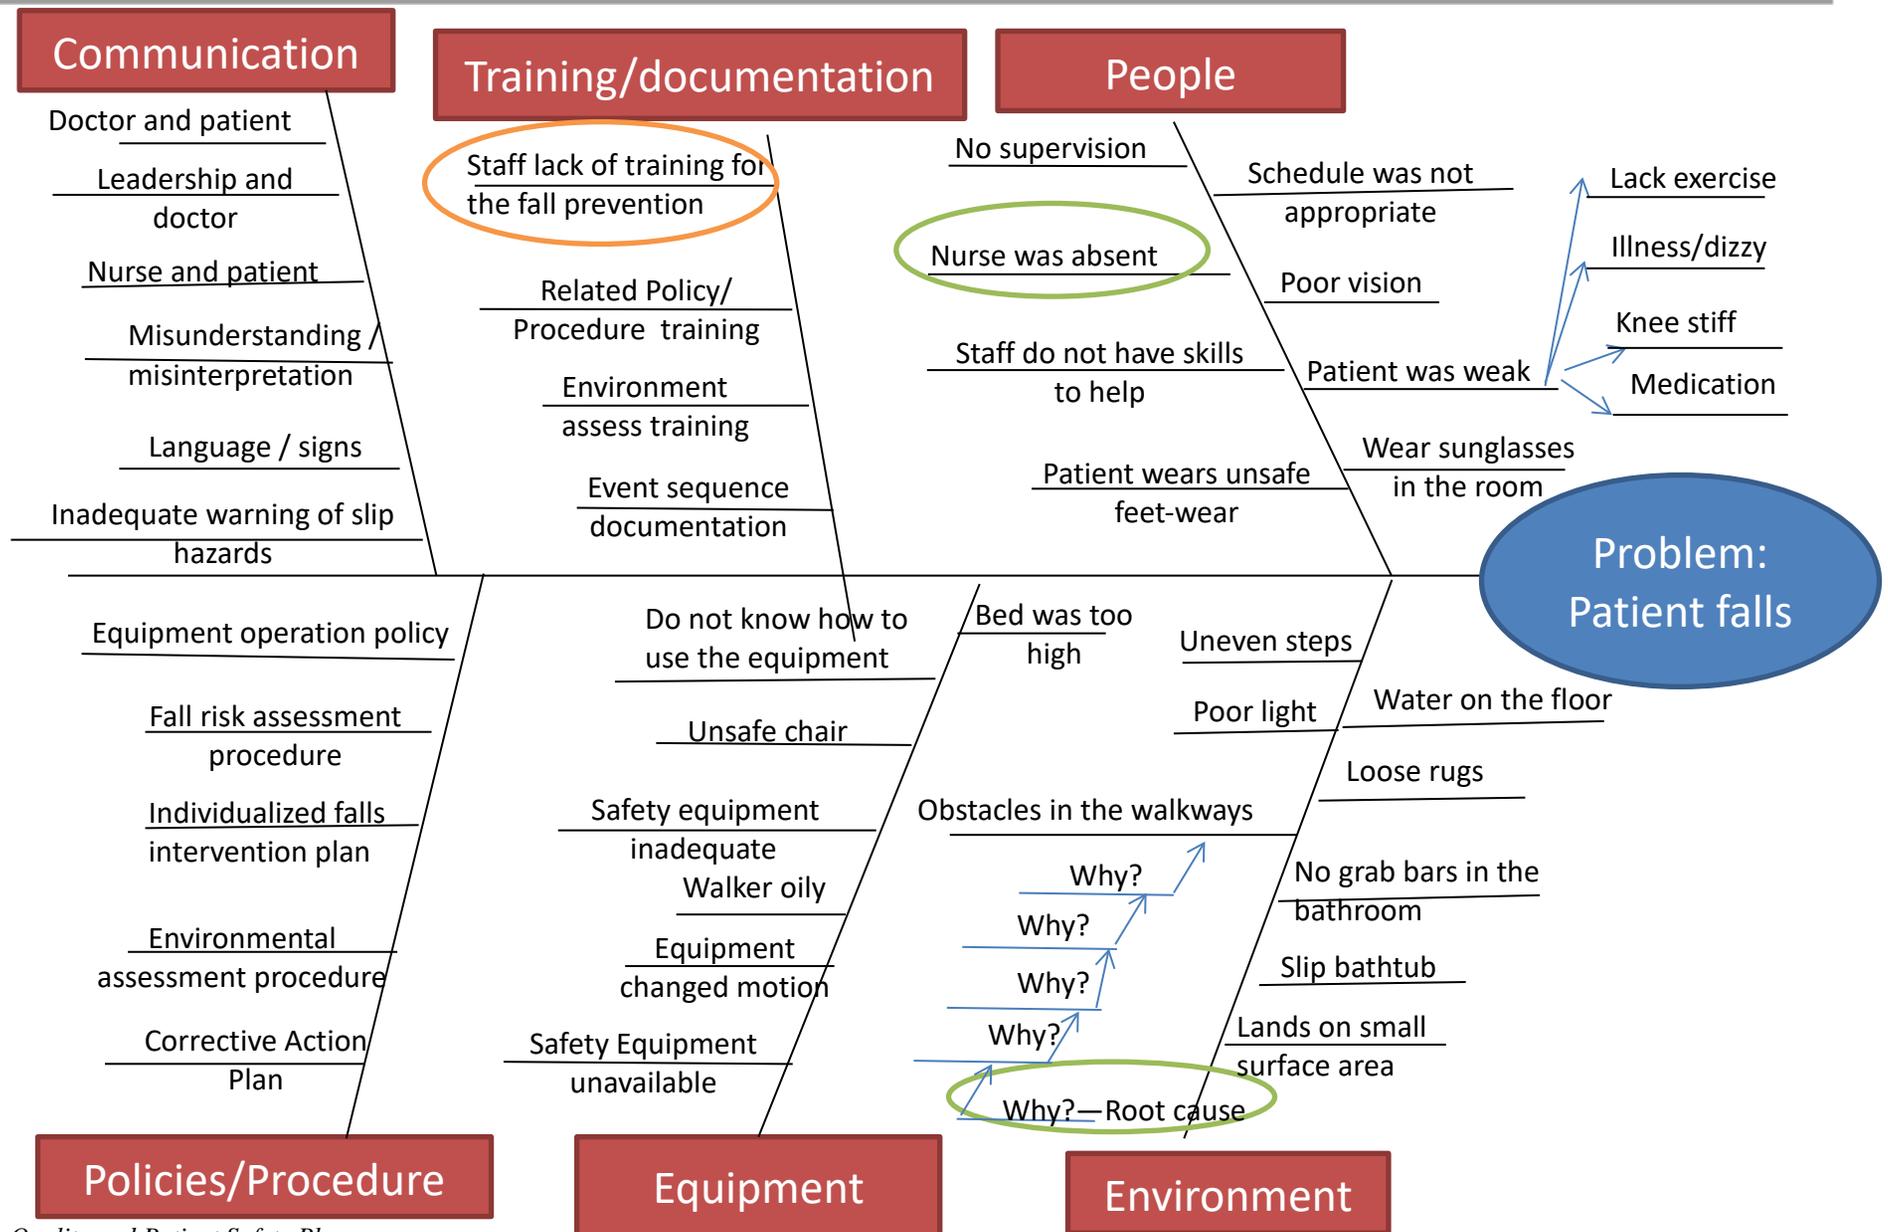

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

## Appendix B: Patient Safety Goals

| OBJECTIVE:                                                                                                                                                          | GOAL:                                                                                                                                                        | Q3 2014                                                                                    | Q4 2014                                                                                                                         | Q1 2015                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| PERSONAL PROTECTIVE EQUIPMENT POLICY<br>Page 1 of 2 | Date Issued:<br>Date Last Revised:<br>Next Review Date:<br>Approved By: | 07/01 08/14<br>08/17<br>Policy Committee |

Key Words: personal protective equipment, PPE, safety equipment,

Policy Applies to:

- All staff employed by Mercy Hospital;
- Credentialed Specialists, Allied Health Professionals, patients, visitors and contractors will be supported in meeting policy requirements.

Related Standards:

- Infection and Prevention and Control Standards NZS 8134.3:2008
- Health and Safety in Employment Act 1992
- EQulP5 - 1.5.1 and 1.5.2 Infection Control
- EQulP5 - Standard 3.2 Criterion 3.2.1 Health and Safety

Rationale:

Mercy Hospital will provide suitable personal protective equipment (PPE) when the risk to health and safety cannot be eliminated or adequately controlled by other means.

Definitions:

Personal protective equipment (PPE) means all equipment which is intended to be worn or held by a person to protect them from risk to health and safety while at work.

Examples of PPE include: protective footwear, gloves, hard hats/helmets, clothing affording protection from the weather, visibility clothing, eye and face protection.

Objectives:

- To ensure appropriate PPE is identified to minimize hazards not able to be controlled by elimination or isolation;
- To ensure fit for purpose PPE is provided at Mercy Hospital for use by staff;
- To ensure adequate training in the use of PPE is provided;
- To monitor the use of PPE and evaluate effectiveness.

Implementation:

**Risk Management**

Department Managers, the Occupational Health/ Infection Prevention and Control Nurse (OH/IPC Nurse) and Health and Safety/ Infection Control Representatives (HSIC reps) will in consultation with staff:

Ensure PPE requirements are identified when carrying out risk assessments of activities;

- Regularly review the risk assessment of activities if substances or work processes change;
- Identify the most suitable type of PPE that is required;
- Ensure PPE is available to those who need it;
- Inform staff of the risks involved in their work and why PPE is required;
- Monitor compliance.

**Process**

**Manager’s Responsibilities**

Must ensure that:

- PPE requirements are considered when risks are assessed;
- Suitable PPE is provided and made accessible to employees;
- PPE is properly stored, maintained, cleaned repaired and replaced when necessary;
- Adequate information and training is provided to those who require PPE;
- PPE is properly used;
- Use of PPE is monitored and reviewed.

Employee’s Responsibilities All employees must ensure that:

- They use PPE whenever it is required;
- Attend and comply with training, instruction and information;
- Check the condition of their PPE;
- Store, clean and maintain their PPE;
- Report losses, defects or other problems with PPE to their manager.

Evaluation:

- Staff health and safety orientation
- Environmental audits
- Incident reports

| SUBJECT: PATIENT SAFETY PLAN | Page 1 of 8             |
|                              | REFERENCE #: 7046-NVREG |

## POLICY

- This policy applies to all employees, medical staff, contractors, patients, visitors and patients of this hospital.
- All unexpected events or occurrences involving death or serious physical or psychological injury or risk thereof are to be reported to the administrative team immediately upon identification (regardless of time of day or night).
- Any and all adverse event or medical errors require immediate action to examine the event in-depth to determine why the incident occurred and how to reduce the likelihood of recurrence.
- The governing body must ensure that the Patient Safety Program (PSP) reflects the complexity of the hospital's organization and services, including those services furnished under contract or arrangement, and focuses on the prevention and reduction of medical errors and adverse events.
- All adverse events or medical errors are errors; but not all errors are adverse events or medical errors.
- Failure to report an adverse event or medical error will be addressed through the Disciplinary process
- Event data will be preserved and collected per hospital policy.<sup>1</sup>
- Event equipment will be preserved and removed from patient care until cleared

## PATIENT SAFETY SYSTEM:

- To have a means for establishing clear expectations for identifying and detecting the prevalence and severity of incidents that impact or threaten patient safety. This includes medical errors and adverse patient events.
- To identify, implement and regularly assess the means by which incidents are prevented or when they occur. The incidents are studied to detect nonconformance and where risk points or failures are an inherent part of the process and work to remove these risk points or failures from the system.
- To address customer (patient) communication when such incidents occur, how the patients are informed and their right to know the circumstances of events.

## DEFINITIONS:

- Administrative Team: Interdisciplinary organizational team, whose members have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.
- Adverse Event: An Adverse Event shall be defined as an unexpected occurrence or variation that led to death or serious physical or psychological harm. This definition includes the National Quality Forum (NQF) "never or adverse events" that are errors in medical care that are clearly identifiable, preventable and serious in their consequences for patients.<sup>2</sup> An event that results in unintended harm to the patient by an act of commission or omission rather than by underlying disease or condition of the patient.

<sup>1</sup> Control of Internal and External Documents (#7067)

<sup>2</sup> NIAHO Standard; QM.7 (p 16) Adverse Event definition

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 2 of 8             |
|                              | REFERENCE #: 7046-NVREG |

- Medical Error: The failure of a planned action to be completed as intended, the use of a wrong plan to achieve an aim, or the failure of an unplanned action that should have been completed, that results in an adverse event.
- Reportable Event: A medical error or adverse event or occurrence which the hospital is required to report to the State.
- Root Cause Analysis: An interdisciplinary review process for identifying the basic or contribution causal factors that underlie a variation in performance associated with an adverse event or reportable event. It focuses primarily on systems and processes, includes an analysis of underlying cause and effect, progresses from special causes in clinical processes to common causes in organizational processes, and identifies potential improvements in processes or systems.

## SCOPE:

List of events and occurrences to report:

- No Harm Errors: those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome-that do not result in a physical or psychological negative outcome or the potential for a negative outcome, for the patient.
- Hospital Acquired Infection/Condition: infections/conditions that are a result of treatment in a hospital or healthcare service unit.
- Patient Fall
- Mild/Moderate Adverse Outcome Errors: those unintended acts, either of omission or commission, or acts that do not achieve their intended outcome, that result in an identified mild to moderate physical or psychological adverse outcome for the patient.
- Any Medication Error
- Any Adverse Drug Reaction
- Hazardous Condition: any set of circumstances, exclusive of the disease or condition for which the patient is being treated, which significantly increases the likelihood of a serious physical or psychological adverse patient outcome.
- Near Miss: any process variation which did not affect the outcome, but for which a recurrence carries a significant chance of a serious adverse outcome.
- Reportable Events to the State:
  - (i) a medication error resulting in a patient's unanticipated death or major permanent loss of bodily function in circumstances unrelated to the natural course of the illness or underlying condition of the patient;
  - (ii) a perinatal death unrelated to a congenital condition in an infant with a birth weight greater than 2,500 grams;
  - (iii) the suicide of a patient in a setting in which the patient received care 24 hours a day;
  - (iv) the abduction of a newborn infant patient from the hospital or the discharge of a newborn infant patient from the hospital into the custody of an individual in circumstances in which the hospital knew, or in the exercise of ordinary care should have known, that the individual did not have legal custody of the infant;

|                              |                         |
|------------------------------|-------------------------|
| SUBJECT: PATIENT SAFETY PLAN | Page 3 of 8             |
|                              | REFERENCE #: 7046-NVREG |

- (v) the sexual assault of a patient during treatment or while the patient was on the premises of the hospital or facility;
  - (vi) a hemolytic transfusion reaction in a patient resulting from the administration of blood or blood products with major blood group incompatibilities;
  - (vii) a surgical procedure on the wrong patient or on the wrong body part of a patient;
  - (viii) a foreign object accidentally left in a patient during a procedure; and
  - (ix) a patient death or serious disability associated with the use or function of a device designed for patient care that is used or functions other than as intended.
- Required by the State: a health care-associated adverse condition or event for which the Medicare program will not provide additional payment to the facility under a policy adopted by the federal Centers for Medicare and Medicaid.
  - Other events: as included in the list of adverse events identified by the National Quality Forum that is not included in the list required by the State (see Appendix A for National Quality Forum events).

**PROCEDURE:**

- Upon the identification of an adverse event or medical error, after the patient is safe (as applicable), the administrative team has been notified prior to leaving duty, employees, members of the medical staff and any witnesses must complete an incident occurrence and submit it to their immediate supervisor who will follow the incident reporting process.<sup>3</sup>
- Adverse events or medical errors will be reviewed by the Administrative Team within 24 hours of incident notification. The administrative team will determine if the incident warrants conducting a root cause analysis.
- The licensed independent practitioner responsible for managing the patient’s care, treatment, and services, or his/her designee, shall inform the patient or their representative, within 24 hours of the adverse events or medical errors about unanticipated outcomes of care, treatment, and services related to adverse events or medical errors when the patient or their representative is not already aware of the occurrence or when further discussion is needed.
- If it is determined by the administrative team that an RCA is warranted, it will commence within five (5) business days of the decision.
- The RCA will be conducted by the administrative team, staff and licensed independent practitioners who have specific knowledge and authority to determine and correct the identified causative factors of the adverse event or medical error.

Specifically the administrative team will:

- Complete an RCA to examine the cause and effect of the event through an impartial process.
- The RCA will focus primarily on the systems and processes, not individual performance. It will include the following elements:
  - A clear definition of the issue(s) pertaining to the event, that is, a determination of the human and other factors most directly associated with the event, and the process (es) and systems related to its occurrence.

- Identification of risk points and their potential contributions to the type of event
  - Develop an action plan identifying the strategies that the hospital intends to employ to reduce the risk of similar events occurring in the future.
  - The action plan must:
    - Designate responsibility for implementation and oversight;
    - Specify time frames for implementation, analysis and follow-up
    - Include a strategy for measuring the effectiveness of the actions taken.
  - The administrative team will not, in any circumstance, delay implementation of the action plan or, as appropriate, elements of its components, over seven (7) days from the date of the completion of the RCA.
  - The administrative team will be afforded the time and resources by Quality Management Oversight to implement the approved plan.
  - If the RCA determines that the adverse event or medical error is related to an organizational systems approach or process challenge, the team will utilize the PDCA (Plan, Do, Check, Act) to design, implement and evaluate an improvement plan to correct the system issue and/or problem.<sup>4</sup>
- Reporting requirements:
  - The administrative team or their designee will report any and all activities of the RCA to the Quality Management Oversight
  - The administrative team or their designee will report any and all findings of the RCA to the Medical Executive Committee, and any other committees, teams, workgroups, or individuals within the organization, as appropriate to the defined issue.
  - The adverse event or medical error and/or the corrective action plan will be communicated to other organizations or individuals at sole discretion of the Chief Executive Officer or his/her designee.
- Other issues related to the RCA:
  - If the RCA finds the adverse event or medical error is to be caused by the performance and/or competence of an independent licensed practitioner holding clinical privileges, the corrective action will be managed through the supervision and direction of the Medical Executive Committee.
  - If the RCA finds the adverse event or medical error to be caused by the performance and/or competence of a clinical staff member not holding clinical privileges, or of a non-clinical staff member, then the corrective action shall be managed by the facility administrative team.

---

**Appendix A  
National Quality Forum  
Serious Reportable Events**

**1. SURGICAL OR INVASIVE PROCEDURE EVENTS**

**1A. Surgery or other invasive procedure performed on the wrong site (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1B. Surgery or other invasive procedure performed on the wrong patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1C. Wrong surgical or other invasive procedure performed on a patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1D. Unintended retention of a foreign object in a patient after surgery or other invasive procedure (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**1E. Intraoperative or immediately postoperative/postprocedure death in an ASA Class 1 patient (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices

**2. PRODUCT OR DEVICE EVENTS**

**2A. Patient death or serious injury associated with the use of contaminated drugs, devices, or biologics provided by the healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2B. Patient death or serious injury associated with the use or function of a device in patient care, in which the device is used or functions other than as intended (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, ambulatory practice settings/office-based practices, long-term care/skilled nursing facilities

**2C. Patient death or serious injury associated with intravascular air embolism that occurs while being cared for in a healthcare setting (updated)**

Applicable in: hospitals, outpatient/office-based surgery centers, long-term care/skilled nursing facilities

|                                                 |                             |

### Safety committee:

**The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the The Administration has established a “Life Safety Enterprise Safety Program” designed to keep patients, Physicians, employees and the public safe while on the premises of the Facility. This program consists of elements which meet the requirements as defined by the Federal, State, Local and OSHA guidelines. The “Safety Plan” includes identification, evaluation and prevention of workplace hazards relating to the elements and specific criteria. The safety management of the Facility is composed of several elements regarding the safety features necessary for the protection and security of its patients and healthcare workers.**

**These elements are composed of two parts; one “Life Safety Enterprise Safety Plan” which is wide in scope, organizational and effectiveness, and the “Environmental Safety Management” which oversees the working environment elements of the Facility. These areas overlap each other but also provide individual elements which manage the overall security and safety of the Facility. A report from the Safety Committee is provided quarterly to the Medical Executive Committee (MEC) and onto the Governing Board. The Safety Committee meets and discusses how to improve and/or maintain patient and employee well-being and safety, items discussed range from falls to how to properly lift boxes, and the execution of a disaster drills, etcetera. If any incidents have occurred they will be discussed in detail, and prevention and safety will be implemented.**

FACILITY NAME

# Risk Management/ Patient Safety Plan

Nevada Acute Care Division

Revised 1/2018

## I. Overview

**Desert View Hospital** endorses an integrated, system-wide patient safety program designed to improve patient safety and reduce risk to patients.

Patient safety is a cornerstone of quality care and is a leadership priority. **Desert View Hospital** operates as a Patient Safety Organization to further its commitment in promoting patient safety and assuring that **Desert View Hospital** remains at the forefront in the delivery of safe and effective clinical care. The Member Patient Safety Evaluation System (PSES) is utilized by **Desert View Hospital** to track safety information, generate Patient Safety Work Product (PSWP) analysis of safety and clinical performance, and promote best practices. This Acute Care Division Risk Management/Patient Safety Plan (“Plan”) provides the general framework to identify, manage, reduce, and eliminate patient safety risks.

The Plan identifies the mechanisms to continually assess and improve the patient safety systems a **Desert View Hospital**. It is our strategy to utilize statistical tools and defined project work to achieve breakthrough gains in patient safety. Performance improvement tools are used in developing and delivering consistent processes and services. The cultural aspect of the Plan is to promote a non-punitive approach to identifying and reporting adverse events. This is consistent with the “Just Culture” concept to promote patient safety practices by instituting a culture of safety and embracing concepts of teamwork and communication.

Most patient safety events are due to a failure of systems; therefore, a systems analysis approach is utilized in evaluations. The goal is to identify and track errors, deficiencies, and problematic trends in order to continuously improve the underlying systems and to intervene as necessary to improve system processes. Although a non-punitive culture is promoted, this approach is balanced by holding caregivers personally responsible for at-risk behaviors and failures to meet the standard of care. When warranted, discipline measures will be initiated as needed consistent with **Desert View Hospital** policies. **Desert View Hospital** employees, contractors, vendors, and members of each facility’s medical staff share responsibility to participate in detection, reporting, and remediation to prevent errors.

### GENERAL STATEMENTS ON GOALS AND OBJECTIVES

To support, maintain and enhance the quality of patient care delivered by:

- Systematic and objective monitoring and evaluation of reports of injuries, accidents, patient safety issues, safety hazards, and/or clinical services findings.
- Identification and assessment of general areas of actual or potential risk in the clinical aspects of the delivery of patient care and safety.
- Implementation of appropriate corrective action, to the extent possible, to alleviate and resolve identified problems or concerns with patient safety issues.
- Evaluation and documentation of the effectiveness of actions implemented.

- Aggregation of data/information collected for integration in information management systems and use in managerial decisions and operations.

## II. Mission and Vision

**Desert View Hospital** mission, vision and values drive the Plan and serve as the foundation in identifying strategic goals, objectives and priorities. Our mission is to improve patient safety and the quality of health care delivery through the provision of excellence in clinical care while fostering safe care to our communities, that our patients will recommend to their families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. The vision is to be recognized as the provider of choice for healthcare services in the local community where we are trusted by our patients, families and physicians to create a safe, caring and compassionate experience.

In support of our mission, vision, and values, the Plan promotes:

- Collaboration of administrative leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare.
- Communicate honestly and openly to foster trusting and cooperative relationships among healthcare providers, staff members, and patients along with their families, to ensure accountability for the patient safety priorities.
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers.
- Accountability for every healthcare related decision and action based on the level of risk-taking or egregious behavior identified.
- A focus on continuous learning and improving, system design, and the management of choices and changes, bringing the best possible outcomes or performances to the facility.
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare.
- Education of staff and physicians to assure coordination and integration of care across disciplines and specialties.

**Desert View Hospital** recognizes that providing safe patient care requires significant coordination and collaboration. The optimal approach to patient safety involves multiple departments and disciplines to establish and effectively implement the processes and mechanisms that comprise this plan.

### III. ROLES AND RESPONSIBILITIES

#### A. Risk Management/Patient Safety Officer

**Desert View Hospital** has a designated risk director/manager responsible for patient safety risk identification and reduction for their respective facilities. The designated Risk Director/Manager is also the Patient Safety Officer. Each facility is required to submit scheduled reports to the Board of Governors describing risk reduction efforts associated with facility specific, or industry identified risk exposures, including environmental risks and emergency management. Reports are thoroughly reviewed and analyzed by the risk staff to determine effectiveness and follow-through of identified corrective action plans.

The Patient Safety Officer responsibilities based upon [NRS 439.870](#) includes:

- Serving on the Patient Safety Committee (PSC)
- Supervising the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#).
- Taking action as he or she determines to be necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility.
- Report to the PSC regarding any action taken in accordance with the responsibilities above.

#### B. Infection Control Officer

The infection control officer designated for each facility, based on [NRS 439.873](#), responsibilities include:

- Serving on the Patient Safety Committee
- Monitoring the occurrences of infections at the facility to determine the number and severity of infections.
- Reporting to the PSC concerning the number and severity of infections at the facility each month.
- Taking such action as determined necessary to prevent and control infections alleged to have occurred at the facility.
- Carrying out the provisions of the Infection Control Program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program.

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of

Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA); and

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist.

### C. Patient Safety

**Desert View Hospital** has an established Patient Safety Councils (PSC) to support patient safety activities. The PSC should ensure that its Patient Safety Plan is promoted and executed successfully. **Desert View Hospital** has also assembled participants to serve in the Member Workforce and to utilize the Member PSES to generate PSWP and exchange analysis and recommendations with the Acute Care PSO Workforce. The main vehicles for these analytic activities occurring within the Member PSES and the member facility Patient Safety Council meetings. The Member PSES is made up of both electronic and physical spaces for the reporting, storing, and generation of PSWP, including secure SharePoint site, and other electronic databases (including but not limited to ClearSight (STARS) and CCD) to maintain and manage PSWP.

According to [NRS 439.875](#), a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plans are promoted and executed successfully.

#### I. Facility Patient Safety Committee

Each facility establishes a Patient Safety Committee (PSC) that meets on a regular basis and at least monthly.

#### Membership:

In accordance with [NRS 439.875](#), the committee core membership consists of the following Key Members: (CEO, CNO, Physician, Risk/ Patient Safety Officer, Infection Prevention Nurse, Pharmacy, and Quality). The COO, CMO and Regional CMO attend, as applicable. NRS requires that at least three providers of healthcare who treat patients at the medical facility, including but, without limitation, at least one member of the medical, nursing, and pharmaceutical staff of the medical facility. In addition, the infection control officer, patient safety officer, and one member of the executive or governing body of the medical facility.

Based on [NAC 439.920](#), a medical facility that has fewer than 25 employees and contractors must establish a patient safety committee comprised of: the Patient Safety Officer, at least two providers of healthcare who treat patients at the medical facility, including but without limitation, one member of the medical staff and one member of

the nursing staff of the medical facility; and the Chief Executive Officer (CEO) or Chief Financial Officer (CF) of the medical facility.

**Meetings:**

The required members attend the meetings on a monthly basis. If a required member is absent, the facility makes a suitable replacement with someone that has authority to implement actions identified by the PSC.

**Duties and Responsibilities:**

**Desert View Hospital PSC** is charged with the assessment and improvement of high-risk processes related to patient safety. This is to be carried out using a four-step methodology.

- **Issue Identification:** The primary issue is the most important risk issue facing the facility and is determined by reviewing the facility’s claims history, claims history unique to the facility, patient safety concerns, industry claims, and through discussions with the risk staff. Other issues may be related to process initiatives.
- **Best Practice:** Once identified, the primary issue is dissected to determine its component issues. For each component issue, a best practice is selected. Best practices represent the most appropriate method for performing the delineated process and should not be selected until the PSC is assured that it is truly the “Best Practice.”
- **Implementation:** Implementation strategies are those methods used to put the best practices into place. Often this includes revising policies, education, newsletters, phone calls, meetings, formal training, etc. Responsible parties and dates for completion are identified to ensure success.
- **Monitoring and Accountability:** Monitoring is essential to ensure that the strategies identified have been effective. Improvement should be demonstrated statistically whenever possible.

Additional Patient Safety Committee Responsibilities, based upon [NRS 439.875](#) and [NRS 439.877](#), include:

- Monitor and document the effectiveness of the Patient Identification Policy.
- **On or before July 1** of each year, submit a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#).
- Receive reports from the Patient Safety Officer pursuant to [NRS 439.870](#).
- Evaluate actions of the Patient Safety Officer in connection with all reports of sentinel events alleged to have occurred.

- The Quality member of the PSC will review and evaluate the quality of measures carried out by the facility to improve the safety of patients who receive treatment.
- The Quality member in conjunction with the Infection Control Officer will review and evaluate the quality of measures carried out by the facility to prevent and control infections.
- Make recommendations to the Board of Directors of the medical facility to reduce the number and severity of sentinel events and infections that occur.
- At least once each calendar month (or quarter depending on the number of employees and contractors in the facility), report to the Board of Directors of the facility regarding:
  - (1) The number of sentinel events that occurred at the medical facility during the preceding calendar month (or quarter);
  - (2) The number and severity of infections that occurred at the facility during the preceding calendar month or quarter; and
  - (3) Any recommendations to reduce the number and severity of sentinel events and infections that occur at the medical facility.
    - Adopt patient safety checklists and patient safety policies as required by [NRS 439.877](#), review the checklists and policies annually and revise the checklists and policies as the patient safety committee determines necessary.

In addition to the work done on the primary issue, the PSC is charged with addressing issues identified through claims reporting, Safety Watch Newsletters, the Joint Commission (Sentinel Event Alerts) and others, HRUs and from the TERM evaluation or other surveys, such as the OBHRU Site Assessments. Feedback is provided on an ongoing basis as to the functioning of the Patient Safety Committee.

## **II. Patient Safety Advisories**

When an untoward event occurs at a facility or in the industry, it is important that we respond in a positive manner. Systems that lead to failure at one facility can be assessed at other facilities to avoid the same or similar occurrence. To this end, the Acute Care PSO distributes Safety Watch newsletters. These alerts detail the circumstances that lead to the negative outcome and facilities are charged with assessment and improvement of their own processes.

**Desert View Hospital** is required to address the Safety Watch newsletters via their Patient Safety Council and this is evidenced in their monthly minutes. Responses to the Safety Watch are reviewed for the opportunity to generate a best practice to implement.

## C. TERM Program

The facility has utilized its formalized risk management program identified as TERM: the Technical Elements of Risk Management. Each element focuses on a separate organizational function and details specific strategies for managing risk in these areas. These elements are summarized as follows:

**Element I. Administration of the Risk Management Program:** The tenets outlined in Element 1 lay the foundation for an effective risk management program. The Risk Manager/Director must be seen as a resource to administration, facility, and medical staff. Written plans, goals, and objectives provide a clear vision to meet the purpose of the risk program. Although the TERM program uses the title “Risk Manager,” this applies equally to Risk Directors.

**Element II. Risk Identification:** Risk identification is essential in order to avoid, mitigate, and eliminate risk-generating practices. This Element focuses on those steps taken to identify exposures faced by the facility.

**Element III. Risk Education:** Education is a cornerstone of the TERM program. Risk management education is intended to reduce and eliminate risk-generating practices and to promote best practices that enhance the provision of safe patient care.

**Element IV. Patient Safety Initiative:** Imperative to a comprehensive RM program is one that focuses on the improvement of patient and staff safety through the creation of an environment that maximizes safety and reduces liability claims exposure. The mechanism used to drive the culture of safety is the Patient Safety Committee (PSC) at each facility. The PSC operates using a four-step process. These steps include: identification of the problem, determining best practice, implementing the recommendations, and monitoring and accountability. Corrective actions are discussed, monitored, and validated by the PSC.

**Element V. Patient Safety Priority: Root Cause Analysis (RCA):** The cornerstones of an effective Patient Safety and Risk Management Program are (i) the performance of a thorough and credible RCA when a serious, sentinel, never event or a significant near miss event occurs; and (ii) implementation of systemic improvements to enhance patient safety and improve healthcare outcomes going forward.

**Element VI. Environment of Care; Safety and Security Programs:** The safety and security programs in the facility serve to protect and preserve both life and property. Areas of safety include licensing, accreditation and federal, state, and local safety practices and programs, including the EPA, TJC, etc.

**Element VII. Claims and Litigation Management:** The risk manager serves as the on-site representative of the insurance program in the management of general and professional claims and litigation.

**Element VIII. Patient Safety Organization (PSO):** Participants of the Member Workforce are expected to perform identified patient safety activities and to be trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the Patient Safety and Quality Improvement Act (PSQIA), and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws.

**Element IX. Measuring the Effectiveness of the Risk Management Program:** In order to assure the effectiveness of the Risk Management Program, certain activities should be conducted to ensure that implementation of the TERM program has been successful. This includes, but is not limited to, data analysis and trending of events and potential claims, which are shared with the respective oversight committees.

#### **D. CCD**

The CCD system is the electronic event reporting system utilized by the facilities to report patient and visitor safety events. The risk management module allows for the collection, categorization, and analysis of incident data using electronic reporting functions (Remote Data Entry - RDE). The facility enters incidents into CCD through identification of the type of incident and characteristics of the event using risk parameters and outcomes. Additional information can be attributed to a department, physician, or individual, along with further details of the event. This allows the retrieval of information in a variety of ways for analysis and review.

#### **E. ClearSight (STARS)**

STARS is an integrated claims management program that allows for complete claims management, including extensive analysis of reportable fields associated with reported claims. STARS also provides for the electronic submission of potential claims by user facilities.

Delineation of issues featured in the probable claim module allows for the facility staff to identify causation factors associated with any reported event. The system also provides for the entry of details that will describe the event and liability concerns.

Trending of claim information is performed on a scheduled basis to operations leadership metrics to form strategies on facilitating risk reduction efforts. Previous examples of this function include the formation of an OB HRU and Perioperative

concepts. Quarterly reports should be provided by the Facility's RM to the Governing Board of all claims activities.

## **F. Event Notification Site**

The Risk Department developed the Event Notification Site or ENS, a web-based system that allows for contemporaneous reporting of serious adverse events and key near miss sentinel events to facility and corporate management. The ENS also provides an environment in which stakeholders can post questions and additional information to the facility reporting the event. Updates to the event are reported in real-time to all identified facility and stakeholders via the ENS. The Risk Management staff reviews each ENS to determine if follow-up is needed; if follow-up is indicated, it is to be completed within 45 days.

## **G. Root Cause Analysis (RCA)**

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both of the sentinel event.

A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals. Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis.

It is recommended that the Joint Commission's root cause analysis and actions plan framework table are utilized. It contains analysis questions and guides the organization in the steps of a root cause analysis. Not all of the questions apply to all of the events or cases.

Utilization of the "5 Whys" technique should be used to explore the cause and effect relationship underlying a problem. One can find the root causes by asking "why" no less than five times.

### **RCA Responsibilities**

- Organize and coordinate the RCA process.
- Assemble and encourage a supportive and proactive team.
- Assign investigative and implementation tasks to the team members.
- Conduct and be actively involved in the investigation, RCA and corrective action plan implementation process.
- Communicate the progress of the investigation, institutional barriers and finalized action plan to executive leadership.
- Monitor goals and progress towards completion of the Corrective Action Plans.

#### H. Patient Safety Checklists

By [NRS 439.865](#), the patient safety plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility;
- Other personnel of the facility who provide treatment or assistance to patients;
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, a janitor of the medical facility; and
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients.

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare.

- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary.
- A checklist to be used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications;
  - Instructions concerning aftercare;
  - Any other instructions concerning his or her care upon discharge; and
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility.

The patient safety checklists are listed in Appendix E. (The following links provide some patient safety checklists for your reference— a checklist example is shown in **Appendix B.**)

[http://www.hpoe.org/Reports-HPOE/CkLists\\_PatientSafety.pdf](http://www.hpoe.org/Reports-HPOE/CkLists_PatientSafety.pdf)

<http://www.who.int/patientsafety/implementation/checklists/en/>

## **I. Patient Safety Policies**

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. Such a policy must require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers may include, the name and date of birth of the patient.
- A policy regarding the nationally recognized standard precautionary protocols to be observed by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene.
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials.

## **J. MEMBER PATIENT SAFETY EVALUATION SYSTEM (PSES)**

The Patient Safety and Quality Improvement Act of 2005 (PSQIA) and its regulations govern the operations and activities of the UHS Acute Care PSO and its Members. This includes assembling a “workforce” of employees, volunteers, trainees, contractors, and other persons who carry out patient safety activities on behalf of the Members within the Member Patient Safety Evaluation System (“Member PSES”). Participants in the Member Workforce are expected to perform identified patient safety activities and to be well trained in their responsibilities. They must also understand and acknowledge their obligations, including maintaining the confidentiality of PSWP, as required by the PSQIA, and of Protected Health Information, as required by the Health Insurance Portability and Accountability Act (HIPAA) and its regulations, and other federal and state laws. The Member PSES serves as a means by which patient safety information is collected, maintained, reported, and analyzed for the UHS Acute Care PSO for the purposes of improving patient safety.

## **K. Training and Education**

Training is essential to successful implementation of the Patient Safety and TERM program. All facility risk managers undergo extensive orientation and education related to Patient Safety, TERM program and other healthcare, risk-related topics. Newly hired risk managers receive both on-site and collaborative corporate-based education and training to afford them the requisite skills to manage their facility assignment. Each risk manager is provided a copy of the TERM source documents and other reference materials that guide the risk management function. In addition, formalized supplemental training is provided to all facility risk managers as needed, including quarterly risk management meetings. Risk leadership provides ongoing support and consultation to their assigned facility to facilitate the minimization of liability exposures and enhancement of safe patient care.

The leadership risk management staff provides consultative services to each facility and as members of designated projects. These activities include on-site assistance, research, and consulting from off-site. Examples of designated projects are as follows.

- Facility specific risk Issues
- Safety Watch newsletters
- MIDAS Focus advisories

## **IV. Risk Management Goals and Objectives 2018**

- Surgical and Procedural Safety
  - Monitor compliance through tracer methodology and report monthly with oversight by leadership.

- Goal: Zero harm events: Prevent mistakes in surgeries and procedures
- OB HRU-Zero Preventable Harm
  - Goal: Reduction/ Elimination of Maternal Hemorrhage
  - Goal: Reduction/ Elimination of Serious Harm from Shoulder Dystocia
  - Goal: Reduction/ Elimination of Serious Harm by decreasing response time to changes in Fetal Monitoring Tracings
- Emergency Department
  - Goal: Reduction/ Elimination of Workplace Violence
- Medication Safety
  - Goal: Implement an effective Opioid – Pain Management strategy, as evidenced by compliance with Assembly Bill 474, NRS 233B.066, regarding prescribing of controlled substances and reporting of controlled substance overdoses.
- Perform monthly *Safety Watch* Gap Analysis and complete within 90 days.
- Reduce falls with injury by 10%.
- 

## V. Monitoring and Accountability

### A. Evaluation of TERM Program

These evaluations consist of both a core risk and clinical risk review. The facility is required to submit a written corrective action plan for noted deficiencies determined during the TERM evaluation. All information is shared with senior staff and monitored through the facility PSC.

### B. Patient Safety Council Coaching

As detailed above, each facility is required to post their monthly reports or minutes that details the work conducted by their Patient Safety Committee to the facility PSES site. These are then reviewed minutes and detailed feedback is provided to coach the committee on their form and function.

### C. Dashboards

The Risk Management/Patient Safety Dashboard and the Environment of Care Dashboard include multiple indicators to demonstrate the facility's performance as to these markers. These include: event reporting statistics, fall rate including harmful

event rate, medication event rate including harmful medication events, timeliness of event review and closure, risk management education, events that meet the ECRI Top Patient Safety Concerns, and environment of care concerns.

## **VI. Evaluation/Review:**

The risk staff reviews the effectiveness of the Patient Safety/Risk Management Plan to ensure activities are appropriately focused on improving patient safety, decreasing harmful errors, decreasing rate of compensable events, facility risk program consistency/functionality and support of clinical delivery in the field. Evaluation will include the following:

- The culture supports the identification and reporting of “Near Miss” events
- There is a framework that advances a “Just Culture”
- Accountability is promoted when acts of “at risk” or “reckless behavior” occur resulting in potential/actual adverse outcomes;
- Comparison of trended incident data to include analysis of performance to stated targets, submission of incident data in compliance to SOX stipulations and review of trended data submitted to the PSC for potential action;
- Review of annualized and prior year’s probable claim reports to determine needs for corporate-based projects designed to improve outcomes in an identified service line;
- Review of educational products distributed for the concluding operating year that were intended to improve outcomes associated with a particular clinical emphasis;
- Review information, analyses and reports from the Acute Care PSO for integration into the Patient Safety Evaluation System.

## **VII. Confidentiality**

All patient safety/risk management work products are considered Patient Safety Work Products (PSWP) as defined by federal guidelines governing Patient Safety Organizations (PSO). All PSWP reported, stored, or generated in the Member PSES is confidential and privileged under Federal law. The Member PSES will only be accessed by authorized staff. Workforce participants will be trained on policies and procedures governing their patient safety activities and responsibilities.

## **VIII. Approval of Patient Safety Plan**

According to [NRS 439.865](#), a medical facility shall submit its patient safety plan to the governing board of the facility for approval. After a facility's patient safety plan is approved, the facility shall notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan. The patient safety plan must be reviewed and **updated annually** in accordance with the requirements for approval set forth in this section.

According to [NRS 439.843](#), on or before March 1 of each year, a copy of the most current patient safety plan established to [NRS 439.865](#) must be submitted to the Division of Public and Behavioral Health.

## **Appendix A: Terms and Definitions**

---

**Patient Safety:** The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### **Sentinel event** ([NRS 439.830](#))

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum.

2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:

(a) January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or

(b) July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published.

3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist.

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

Institute for Healthcare Improvement (IHI) defines **medical harm** as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### **Facility-Associated Infection:** ([NRS 439.802](#))

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections;
- Ventilator-associated pneumonia;

- Central line-related bloodstream infections;
- Urinary tract infections; and
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#).

(Added to NRS by [2005, 599](#); A [2009, 553](#))

**Medical facility ([NRS 439.805](#))**

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near miss:** An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention. (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Mandatory reporting:** Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report. (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk:** Possibility of loss or injury. (Merriam-Webster’s Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable event:** Describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infection (CAUTI):** A urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at

[http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CUR\\_RENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CUR_RENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI):** Primary bloodstream infections that are associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection.

**Appendix B: Checklist Example: Injuries from Falls and Immobility**

| <b>Process Change</b>                                                                                                                                    | <b>In Place</b> | <b>Not Done</b> | <b>Will Adopt</b> | <b>Notes (Responsible &amp; By When?)</b> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------|-------------------|-------------------------------------------|
| <b>Conduct fall and injury risk assessment upon admission</b>                                                                                            |                 |                 |                   |                                           |
| <b>Reassess risk daily and with changes in patient condition</b>                                                                                         |                 |                 |                   |                                           |
| <b>Implement patient-specific intervention to prevent falls and injury</b>                                                                               |                 |                 |                   |                                           |
| <b>Communicate risk across the team; use handoff forms, visual cues, huddles</b>                                                                         |                 |                 |                   |                                           |
| <b>Round every 1 to 2 hours for high-risk patients; address needs (e.g., 3Ps: pain, potty, position-pressure). Combine with other tasks(vital signs)</b> |                 |                 |                   |                                           |
| <b>Individualize interventions. Use non-skid floor mats, hip protectors, individualized toileting schedule; adjust frequency of rounds</b>               |                 |                 |                   |                                           |
| <b>Review medications (by pharmacist); avoid unnecessary hypnotics, sedatives</b>                                                                        |                 |                 |                   |                                           |
| <b>Incorporate multidisciplinary input for falls</b>                                                                                                     |                 |                 |                   |                                           |
| <b>Prevention from PT, OT, MD, RN and PharmD</b>                                                                                                         |                 |                 |                   |                                           |
| <b>Include patients, families and caregivers in efforts to prevent falls. Educate regarding fall prevention measures; stay with patient</b>              |                 |                 |                   |                                           |
| <b>Hold post-fall huddles immediately after event; analyze how and why; implement change to prevent other falls</b>                                      |                 |                 |                   |                                           |

| <b>POLICY</b>  | <p>The safety of patients undergoing procedures is a primary responsibility of the peri-operative staff, Administration and the attending physician. As such, this organization is adopting a zero tolerance for breakdowns in patient safety practices. This organization is declaring “high reliability” as a mantra in patient safety. This organization promotes and monitors patient safety and has defined these parameters in this program. The Board shall appoint both a Patient Safety Officer and a Patient Safety Advocate. The Patient Safety Officer shall complete a quarterly report for submission to the QA/PI/Risk Management Committee. The QA/PI/RM Committee shall function as the Patient Safety Committee by reviewing, monitoring and assessing patient safety issues through observation, data collection, aggregation and analysis, planning, implementation and outcome analysis at its quarterly meeting. Reports will be forwarded to the MAC and Board. In addition, the Patient Safety Officer completes an annual Patient Safety Review and submits this to these committees.</p> <p>Furthermore, this organization embraces the National Patient Safety Goals identified by the Joint Commission. These goals are inserviced annually to all staff members to include an overview of past National Patient Safety Goals, but also present goals and those being proposed for the upcoming year. These goals are incorporated into our Patient Safety Program as well as the policies and procedures approved for use in this organization.</p> <p>One aspect of the Patient Safety Program is the appointment of a Patient Safety Officer by the Governing Board of this organization. The Patient Safety Officer performs internal patient safety review along with the Risk Manager Designee. In addition, a licensed Risk</p> |

## Policies & Procedures

---

Manager is contracted to review, among other things, patient safety issues.

The Patient Safety Advocate is a volunteer from the community who is neither employed nor contracted with this organization who attends the Annual Board Meetings.

Error reduction is a critical aspect of patient safety and requires the commitments of all members of the healthcare team. Identifying and reducing contributing factors are paramount in promoting patient safety. Contributing factors for errors occurring include:

- Inadequate communication among team members
- Incomplete review of patient health records and diagnostic studies
- Traditional hierarchical and autocratic cultures
- Patient-related decisions made only by physicians
- Rapidly and frequently changing technology
- Intimidating management styles
- Absent or inconsistently applied policies and procedures
- Fatigue
- Multitasking
- Time pressures and constraints
- Emergency surgery
- Cultural differences between patients and staff members and among staff members
- Staffing shortages
- A blaming culture
- Confusing packaging of medications and supplies
- Unclear instructions
- Insufficient orientation and training
- Patient characteristics requiring unusual setup or requirements, and
- Failure to include the patient and family members in assessment and decision making

### **Error-reduction strategies**

Error reduction requires the commitment of all members of the surgical team. In addition to the contributing factors identified above, individual and institutional strategies can also include the following actions.

- Reduce reliance on memory by using checklists, protocols and computerized decision aids.
- Improve information access of patient records

# Medical Development Corporation-Nevada

## Policies & Procedures

---

- Support contracts for new equipment and supplies that include clauses providing staff member education on the use of the equipment and supplies
- Standardize processes as much as possible for **instrument tables and setups**, medication doses, pre-operative procedures, and other activities
- Establish mechanisms to update procedure / preference cards.
- Participate in quality and process improvement initiatives.
- Develop policies and procedures that address unsafe practices.
- Focus on the safety aspects of products during the selection and evaluation process.
- Promote safety-related clinical competency
- Include the patient and family members (when possible) in confirming the correct patient identity, the correct surgical procedure, and the correct surgical site.
- Educate employees about the potential for errors and how to avoid them.

One of the most effective team strategies is to create and nurture a culture of safety. Such a culture is founded on a sense of trust among team members and a feeling of safety when the need for change or improvement must be addressed. Establishing a culture of safety and trust is a process of changing a culture from one of blaming individuals for errors to one in which errors are treated not as personal failures but as opportunities to improve the system and prevent harm. Success in the creation of a safety culture depends on the commitment of all team members to report, address, and correct system failures. Four elements are required to create such an environment:

- A sense of trust among team members;
- Disseminating and verifying receipt of information to all levels of staff and management;
- Developing and supporting a proactive approach rather than a reactive, blaming approach; and
- Making a sincere commitment to affirming safety as the first priority.

Staff members who have been involved in a sentinel event shall be provided support services commiserate with the event to include professional counseling and support.

## Policies & Procedures

---

**PROGRAM/PROCESS** The Patient Safety Program encompasses multiple processes to include the caregiver(s), the patient and the systems and policies implemented within the organization:

### The Healthcare Provider

The healthcare provider utilizes a mental checklist using the "I'm Safe" acronym to check themselves out to assure he/she is safe and fit for duty. The caregiver is accountable to ask him/herself:

- **Illness:** Am I feeling well enough to carry out my duties effectively?
- **Medication:** Am I taking any medications that might cloud my thinking, such as a tranquilizer or even an antihistamine?
- **Stress:** What is going on in my personal or work environment that might interfere with my performing well?
- **Alcohol or drugs:** Am I impaired in a way that might jeopardize patient care?
- **Fatigue:** Am I too tired to function well?
- **Emotions and eating:** Am I doing what I need to do to take care of myself emotionally and physically?

Note: Staff members have the right, too, to contact the state licensing agency, Medicare and The Joint Commission should they have concerns regarding patient safety and/or the quality of care.

### The Patient

Patient safety includes the patients responsibilities as defined in the posted Patient's Rights and Responsibilities to include the responsibility to report physical and mental health conditions, medication usage, allergies, and life situations which could adversely effect the outcome of the procedure.

The patient's safety responsibilities further include his/her agreement to follow instructions to ask questions for clarification and to report any unanticipated or unusual occurrence, reaction or symptom.

Patients and their caregivers are educated regarding their right to contact the Joint Commission regarding any issues concerning the quality of care and/or patient safety.

**The systems and processes used by this organization to assure, implement and measure patient safety include:**

# Medical Development Corporation-Nevada

## Policies & Procedures

---

- Providing qualified staff in the correct numbers for the correct ratios
- Staff orientation, competency evaluation, staff education, measuring staff orientation and education effectiveness
- Falls Prevention Program and Risk to Fall Assessment
- Identifying correct patient, site **and** procedure
- Preventing medication errors
- Medication Administration programs
- Discharge planning and instruction
- Pre-Operative assessment, instruction and teaching
- Controlling heat sources to reduce the possibility of fires
- Safe use of infusion pumps
- Use of patient identifiers to include a “time out” process
- The identification of dangerous drugs
- Improving effectiveness and clarification of hands-off communication
- The proper labeling of medications and solutions
- The verification and validation of verbal orders
- Reconciling patient medication inventories
- Reducing the risk of healthcare associated infections
- Use of protective devices
- Patient ambulation and transportation
- Follow-up phone calls
- Physician credentialing, privileging and competency assessment
- Anesthesia Safety
- Equipment Safety Programs/Safe Medical Device
- Hazard mitigation and vulnerability assessment
- Preventive maintenance programs
- Domestic Violence/Abuse Assessment
- Infection Prevention/Sterilization Practice Assessment
- Interpreter and Sensory Impaired Services
- Risk Management Program
- Root Cause Analysis
- **Staff competency assessments**

Data Collection Forms used in the Patient Safety Program are used to collect and to preserve factual information for subsequent analysis as per the policies and procedures adopted by this organization addressing these processes. The data collected is aggregated by the Patient Safety Officer and presented to the QA/PI/RM Committee for process analysis, planning, implementation and outcome analysis. The QA/PI/RM Committee submits these reports to the MAC and Board for further input and recommendations.

- Medical chart forms to include especially:

## Policies & Procedures

---

### PROCEDURE

1. Where a system or process failure either occurs and causes harm or has the potential to cause harm involving services, care or treatment, or where a risk or potential risk is identified, the discoverer completes an incident report and follows that process through completion.
2. The Patient Safety Officer forwards the Patient Safety Random Review tool to the Patient Safety Advocate for review and comments and recommendations at least annually.
3. Where an adverse event/unanticipated sequela has occurred, the discoverer attains that completed form and follows the process defined.

|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SUBJECT</b>   | <b>VISITOR SAFETY</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>PURPOSE</b>   | To provide a broad base for the overall safety surveillance program and to assure that the possibility of injuries is minimized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>SCOPE</b>     | All Staff Members and Visitors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>POLICY</b>    | The accident and fire prevention program includes all visitors to the Facility and will encompass both internal and external safety rules. Visitors in this organization include vendors, consultants, maintenance and repair persons, i.e., persons who will be in the Center longer than persons with deliveries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>PROCEDURE</b> | <ol style="list-style-type: none"><li>1. Demand identification of vendors; i.e., a picture ID and a business card.</li><li>2. Restrict visitors to defined areas such as Waiting, Conference, Lounge, Lavatories and Pre-Op/Recovery.</li><li>3. Orient visitors/observers in the patient care areas to basic safety rules and regulations.</li><li>4. Provide ID cards or tags for persons authorized to go into otherwise restricted zones; e.g., vendors, physicians, consultants, maintenance persons.</li><li>5. Scan the area periodically for the presence of unwanted or unsavory visitors.</li><li>6. Provide a sign-in log for visitors/vendors—other than patient sponsors and vendors merely dropping off or picking up supplies, equipment, linen, etc.; i.e., any vendor who will be present in the Center for a period of time.</li><li>7. Advise staff to watch all guests for possible untoward events that would warrant immediate intervention and documentation.</li><li>8. Provide immediate medical first aid, if and when applicable.</li><li>9. Advise Administrative Director and Medical Director should an injury occur.</li></ol> |

| <b>POLICY</b>    | Basic safety techniques and policies will be strictly inserviced and enforced within the OR environment. Staff members will be routinely monitored for compliance to these. Staff members will be corrected instantly when deviation from good safety practices are made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>PROCEDURE</b> | <ol style="list-style-type: none"><li>1. Follow basic policies for cuts, punctures, body mechanics and electrical safety to include mild shocks.</li><li>2. Report damaged or defective equipment immediately, remove from use and tag "Not For Use".</li><li>3. Keep traffic areas free of clutter.</li><li>4. Stabilize equipment and supplies to prevent injury from falling.</li><li>5. Before using check for damaged electric cords, plugs or receptacles and report immediately. Never use extension cords. Have surge protectors checked for safety and routinely inspected.</li><li>6. Inservice new equipment and supplies prior to their use and document.</li><li>7. Know the location of fire exits from the OR. Know location of nearest fire extinguishers and alarms to the OR.</li><li>8. Know location of emergency equipment.</li><li>9. Follow procedures for sponge, instrument and needle care and counts.</li><li>10. Handle specimens, sharps and linens according to established procedure.</li><li>11. If battery operated equipment is in use, observe the battery condition indicator prior to the patient being brought into the room. If batteries are low, recharge by plugging the equipment into a main outlet. Most equipment may be used while being charged.</li><li>12. To prevent tipping of OR tables, do not exceed the maximum load specifications provided by the manufacturer. Lock the table.</li><li>13. Before articulating the table, check the patient and staff are clear of all pinch points.</li><li>14. Check for currency of biomedical checks on all electrical equipment and outlets.</li><li>15. Label all medication presented to the sterile table(s).</li></ol> |

## Policies & Procedures

---

16. Clearly identify the full name of the drug when handing off to another staff member.
17. Distinguish monitoring alarms ranges specific to each patient.
18. Check patient's ID, site and procedure with the pre-op nurse, the surgeon, the patient and the pre-operative consent.
19. Assure that any radiographic films are authenticated in the OR by the attending surgeon.
20. Check safety alarms on all infusion pumps.
21. Label dangerous drugs as "dangerous" and store away from other general drugs; e.g., succinylcholine, anectine, concentrated electrolyte solutions.
22. Perform safety checks to determine trace gases are properly eliminated.
23. Safety check all equipment prior to beginning the procedure.
24. Use safety syringes/scalpels/sharps.
25. Use "lay down/pick up" to pass sharps. Do not pass hand to hand.
26. Never lay hot scopes or electro surgical pencils on patient or on paper drapes.
27. Remove flammable agents from the room immediately after use; e.g., alcohol, betadine scrub/paint and let alcohol and/or betadine dry prior to using ESU.

| <b>POLICY</b>    | Controls shall be established to minimize electrical, fire or explosion hazards in all anesthetizing areas and to maximize safety in anesthesia management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>PROCEDURE</b> | <ol style="list-style-type: none"><li>1. Inspect anesthetizing equipment before each use.</li><li>2. Use only non-flammable agents.</li><li>3. Use only fabrics that are flame retardant in the area.</li><li>4. Plug electrical equipment into receptacles connected to the Line Isolation Monitor.</li><li>5. Move anesthesia equipment with extreme care.</li><li>6. Routinely inspect air exchanges and document.</li><li>7. Perform at least one annual functioning test on lines and machines and document.</li><li>8. Perform a complete pre-anesthesia assessment and develop a comprehensive anesthesia management plan with the patient.</li><li>9. Label and secure all dangerous anesthesia drugs.</li><li>10. Secure all anesthesia cart medications. Never leave syringes containing medications on the top of the cart.</li><li>11. Label multi-dose syringes. Draw up medications for one patient at a time.</li><li>12. Do not "tent" patient's face with oxygen being administered unless a scavenger/exhaust system is in place.</li><li>13. Remove oxygen prior to ESU being used on face or in throat.</li><li>14. Do not draw drugs up for more than one patient at a time.</li><li>15. Secure drugs between cases in the anesthesia cart.</li><li>16. Do not allow "tenting" and oxygen under drapes.</li><li>17. Ensure the scavenging system for waste gases is in good working order.</li><li>18. Always receive a "hand-off" communication from the pre-op nurse.</li><li>19. Participate actively in the "time-out" process</li><li>20. Provide a complete "hand-off" communication to the recovery nurse.</li><li>21. Check the patient's IV site regularly during the procedure.</li><li>22. Check pressure points periodically throughout the patient's procedure.</li><li>23. Never turn off alarms or turn them down to a dangerously low level.</li><li>24. Keep distractions to a minimum.</li></ol> |

| <b>POLICY</b>  | <p>All licensed persons handling pharmaceuticals will practice standards as follows:</p> <ol style="list-style-type: none"><li>1. Store disinfectants and drugs for external use separately from oral and injectable medications and solutions.</li><li>2. Check drug inserts for proper storage requirements.</li><li>3. Store biological and thermolabile medications in a refrigerator used solely for that purpose and capable of maintaining the required temperature. Check temperature daily. Be aware and monitor drugs needing refrigeration once removed from the refrigerator to ensure they are administered within the acceptable time frame. Check temperature in the drug storage area if it seems too warm or too cold.</li><li>4. Destroy or return outdated drugs. Maintain Expired Drug Log.</li><li>5. Destroy drugs in an environmentally safe way.</li><li>6. Document distribution and administration of controlled drugs.</li><li>7. Stock emergency drugs in adequate and appropriate supply.</li><li>8. Lock storage and controlled drug preparation areas.</li><li>9. Keep intravenous solutions and other solutions classified as a medication—in a secured area/cupboard.</li><li>10. Flammables, caustics, corrosives and poisons must be so labeled and handled accordingly. These should be stored in secured areas that meet local fire regulations.</li><li>11. Pour liquids at eye level and check to determine the proper dosage has been poured.</li><li>12. Identify and secure dangerous drugs and solutions such as succinylcholine, anectine, concentrated electrolytes and anesthetic drugs.</li><li>13. Store similarly shaped and/or labeled drugs apart from one another.</li><li>14. Label any drug or solution poured from one container to another with name and dosage.</li><li>15. Label syringes of medication prepared in advance in readiness for the patient with name and dosage.</li><li>16. Check orders. If uncertain of dose or unaware of a drug's side-effects, dosages, etc., check the PDR. Notify the physician. If unfamiliar with a drug, check the PDR before administering it.</li></ol> |

## Policies & Procedures

---

17. Know signs and symptoms and observe for adverse reactions. Check patient history and query patient regarding drug allergies before administering any drug.
18. Be aware of time limits on drugs that are time sensitive once pulled up for administration and label syringes with the time limit.
19. Label all multi-dose vials as per that policy.
20. Be aware of all expiration dates. Label drugs and solutions accordingly and check for expirations.
21. Only spike intravenous solutions on the day to be administered and make every effort to use as near the "spike" time as possible.
22. Label intravenous solutions to be administered with your initials, date and time.
23. Never give a drug drawn up by another person.

| <b>SUBJECT</b>   | <b>SAFETY EDUCATION AND PROMOTION PROGRAM</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>PURPOSE</b>   | To provide Safety Education as an essential component in the Environment of Care Program; to provide for the safety of the staff and the maintenance of a safe environment to be in compliance with required standards of regulatory agencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>SCOPE</b>     | All ASC Staff/Safety and Security Officer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>POLICY</b>    | <ol style="list-style-type: none"><li>1. All staff (i.e., associates and students) are required to participate in safety education programs as part of new employee orientation and on an annual basis thereafter.</li><li>2. The Surgery Director is responsible for assuring that the staff participate, to the extent required, in safety education; that they receive safety education and training specific to job related functions and that documentation as to safety education participation is maintained.</li><li>3. The specific safety education requirements will be detailed by the QA/PI Committee and approved by the Board.</li><li>4. Facility staff is expected to participate fully in all required safety education programs and training; and to perform their assigned duties in a safe manner; and abide by all rules, policies and procedures; etc., relating to safety.</li><li>5. Standard forms of documentation will be used to record attendance and content of educational sessions to create continuity in the preservation and presentation of records.</li></ol> |
| <b>PROCEDURE</b> | <ol style="list-style-type: none"><li>1. The orientation program for new staff members will consist of the following safety related segments:<ol style="list-style-type: none"><li>a. Safety and Security Management Plan</li><li>b. Essential Utility Management Plan</li><li>c. Emergency Preparedness Management Plan (CEMP)</li><li>d. Life Safety Management Plan</li><li>e. Hazardous Material and Waste</li><li>f. Medical Equipment</li></ol></li><li>2. All documentation regarding safety education and orientation will be maintained in the Medical Staff, Allied Health and Center Staff personnel files and is available for inspection by safety personnel or regulatory agency surveyors. Specific documentation forms to be used are available through Inservice Coordinator.</li><li>3. Failure by ASC staff to participate in required safety education programs or to perform their job related duties in a safe manner or to abide by facility and department safety policies is grounds for disciplinary action.</li></ol>                                                    |

| <b>POLICY</b>    | This organization will, on occasion, admit prisoners for outpatient care. Such prisoners will be accompanied by armed guards throughout their stay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>PROCEDURE</b> | <ol style="list-style-type: none"><li>1. Follow normal process for pre-op assessment through the physicians practice.</li><li>2. If possible, contact the correctional institution for specific pre-op instructions advising the health care guardian to arrive with the prisoner as near the procedure time as possible.</li><li>3. Upon arrival escort the guard and the prisoner to a private waiting area, if possible allowing the guard to maintain his/her weapon securely holstered.</li><li>4. Advise both the guard and prisoner of the sequence of events.</li><li>5. Follow the procedure for pre-op care with the guard in attendance.</li><li>6. Transport the patient to the OR, again, with the guard in attendance.</li><li>7. Advise the guard of safe non-sterile area in the OR and events to occur.</li><li>8. At the end of the procedure transport the patient escorted by the guard to the recovery area.</li><li>9. Discharge per protocol in the care of the attending guard.</li><li>10. Contact the correctional institution within 72 hours for a post-op assessment or collect assessment from the physician's office.</li></ol> |

**PATIENT SAFETY PLAN**

---

MARCH 1 2018

**Southwest Medical™**  
Part of OptumCare™

The Southwest Medical Patient Safety committee/team created the plan and revises/updates it annually. Implementation of this plan is intended to optimize healthcare quality and patient safety outcomes, encourage recognition, reporting, and acknowledgment of risks to patient, visitor, and employee safety, and reduce the medical/healthcare errors and /or preventable events

## Commitment to Patient Safety

---

Southwest Medical is committed to a comprehensive approach to improving healthcare quality and patient safety by aligning with our Mission, Vision, and Values, creating an environment that supports a dynamic, proactive, and safe culture for patients, family members, visitors, and employees, through continuous learning and improving patient safety policies, systems and processes.

### **Mission, Vision, and Values**

In support of our mission, vision and values, Southwest Medical's Patient Safety and Quality Improvement program promotes:

- Collaboration of healthcare, leadership, medical staff, and other healthcare providers to deliver integrated and comprehensive high quality healthcare
- Open and honest communication to foster trusting and cooperative relationships among healthcare providers, staff members and patients and their families and to ensure accountability for the patient safety priorities
- Preservation of dignity and value for each patient, family member, employee, and other healthcare providers
- Responsibility for every healthcare related decision and action
- A focus on continuous learning and improving, system design and the management of choices and changes, bringing the best possible outcomes or performances to the facility
- Incorporation of evidence-based practice guidelines to deliver high quality healthcare
- Education of staff and physicians to assure participation of healthcare providers

## Plan Scope and Purpose

---

The scope of the Patient Safety Committee organizational-wide and includes but is not limited to

- Patient safety
- Visitor safety
- Employee safety

The Committee provides oversight for patient safety activities, infection control activities, initiatives to promote patient safety and monitoring and review of medical/healthcare errors/potential errors involving patients, visitors, SMA staff, students and volunteers

All staff members at Southwest Medical are expected to fully support and participate in this plan and devote their expertise, knowledge, vision, skill, and insight to the patient safety and healthcare quality improvement process

Leadership assumes a role in establishing a culture of safety that minimizes hazards and patient harm by focusing on processes of care. The leaders of the organization are responsible for fostering a culture of safety through personal example by:

- Emphasizing patient safety as an organizational priority
- Providing education to medical and facility staff regarding the commitment to reduction of medical errors
- Supporting proactive reduction in medical/health care errors
- Integrating patient safety priorities into the new design and redesign of all relevant organization processes, functions and services

The purpose of the Patient Safety Plan is:

- To address patient safety related concerns and challenges
- To reduce risk
- To respect the dignity of those Southwest Medical serves by assuring a safe environment
- To periodically evaluate and revise the program to better serve patients and their families

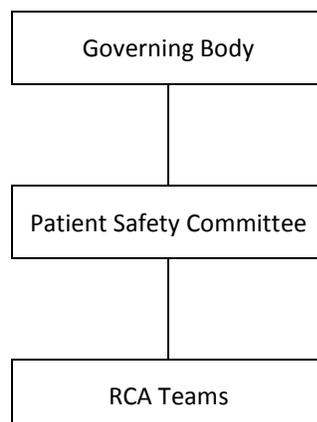

## Roles and Responsibilities

---

Southwest Medical created an organization-wide Patient Safety Plan that includes the medical facilities (Surgery Centers) as directed by [NRS 439.875](#) a medical facility shall establish a Patient Safety Committee (PSC). The PSC should ensure that the Quality and Patient Safety Plan is promoted and executed successfully

### The Southwest Medical Patient Safety Committee

- Is a standing confidential interdisciplinary committee formed to manage the Southwest Medical’s Patient Safety Program and Infection Prevention and Control Program through a systematic, coordinated, continuous approach
- Will meet monthly to assure maintenance and improvement of patient safety with the establishment of plans, processes and mechanisms involved in the provision of the patient care
- Will report and discuss events including:
  - Number of sentinel events from previous calendar quarter
  - Number of severe infections from previous calendar quarter
  - Corrective action plans
  - Corrective action plan evaluation
  - Patient safety policies and checklists
- Will monitor and document the effectiveness of the patient safety policy
- Will evaluate patient safety policies and checklists at least annually
- Will revise patient safety policies and checklists as needed
- Will convene a RCA meeting/team as necessary
- Review the RCA process and quality improvement related activities and timelines
- Identify barriers and technical assistance needs for supporting the RCA efforts
- Discuss corrective action process and activities

### Patient Safety Committee Membership

In accordance with [NRS 439.875](#), the Patient Safety Committee will include:

- The Patient Safety Officer
- The Infection Prevention and Employee Health Medical Director

- At least three providers of healthcare who treat patients , including but, without limitation, at least one member of the medical, nursing and pharmaceutical staff
  - Medical Director Specialties
  - Medical Director Primary Care
  - Medical Director On Demand Medicine
  - Medical Director Clinical Education Programs
  - Medical Director Surgery Centers
  - Associate Vice President Surgery Centers (RN and Administrator)
  - Chief Nursing Officer
  - RN Executive Director On-Demand Medicine
  - RN Director Specialties
  - Director Imaging Services
  - Pharmacy Consultant (PharmD)
  - RN Managers Surgery Centers
  - RN Clinical Quality
  - Infection Prevention RN
- One member of the governing body
- Optum Legal
- Vice Presidents Clinic Operations
- UHG Safety Regional Manager

**Patient Safety Committee Responsibilities**\_(based on [NRS 439.875](#) and [NRS 439.877](#))

The Patient Safety Committee is a standing confidential interdisciplinary committee formed that manages the Southwest Medical’s Patient Safety Program and Infection Prevention and Control Program through a systematic, coordinated, continuous approach

- Evaluating and improving the quality of care rendered by Southwest Medical
- Collecting data and evaluating aggregate data related to individual occurrences in order to utilize performance improvement methodologies to promote patient safety and infection prevention
- Maintaining and improving patient safety with the establishment of plans, processes and mechanisms involved in the provision of the patient care
- Monitoring and documenting the effectiveness of the patient identification policy
- On or before July 1 of each year, submitting a report to the Director of the Legislative Counsel Bureau for development, revision and usage of the patient safety checklists and patient safety policies and a summary of the annual review conducted pursuant to [NRS 439.877\(4\)\(b\)](#)
- Receiving reports from the Patient Safety Officer pursuant to [NRS 439.870](#)
- Evaluating actions of the Patient Safety Officer in connection with all reports of potential or actual sentinel events
- Reviewing and evaluating the quality of measures carried out by Southwest Medical to improve the safety of patients who receive treatment
- Reviewing and evaluating the quality of measures carried out by Southwest Medical to prevent and control infections
- Making recommendations to the governing body to reduce the number and severity of sentinel events and infections that occur
- At least once each quarter, reporting to the governing body regarding
  - The number of sentinel events at the medical facility (Surgery Centers) during the preceding calendar quarter
  - The number and severity of infections at the medical facility (Surgery Centers) during the preceding calendar quarter
  - Any recommendations to reduce the number and severity of sentinel events and infections

- Adopting patient safety checklists and patient safety policies as required by [NRS 439.877](#), reviewing checklists and policies annually and revising the checklists and policies as necessary
- Directing root cause analysis teams when indicated
- Providing oversight/direction for Surgery Centers QAPI program and quality studies
- Providing oversight/direction for the Surgery Centers participation in NHSN
- Providing oversight and monitoring for the Optum Practice Health and Safety Clinical Assessment Process

**Patient Safety Officer Responsibilities ([based on NRS 439.870](#))**

- Chair the Patient Safety Committee
- Supervise the reporting of all sentinel events alleged to have occurred at the facility, including, without limitation, performing the duties required pursuant to [NRS 439.835](#)
- Take such action as necessary to ensure the safety of patients as a result of an investigation of any sentinel event alleged to have occurred at the facility
- Report to the Patient Safety Committee regarding any action taken in accordance with the responsibilities above
- Promote compliance with patient safety standards and initiatives
- Reinforce expectations of the Patient Safety Plan
- Accept accountability for measurably improving safety and reducing errors
- Liaison with Southwest Medical clinical leadership including surgery center leadership, other quality committees and the Board of Directors

**Infection Prevention Officer Responsibilities ([based on NRS 439.873](#))**

- Serve on the Patient Safety Committee
- Liaison with Southwest Medical clinical leadership including surgery center leadership, other quality committees and the Board of Directors
- Provide medical direction as indicated (for both patient and employee infection control issues)
- Monitor the occurrences of infections to determine the number and severity of infections
- Report to the Patient Safety Committee concerning the number and severity of infections
- Take such action as necessary to prevent and control infections alleged to have occurred
- Carry out the provisions of the infection control program adopted pursuant to [NRS 439.865](#) and ensure compliance with the program
- Ensure compliance with current infection prevention and control standards
- Direct infection prevention initiatives
- Reinforce expectations of the Infection Control program
- Complete at least four hours of continuing education each year on topics relating to current practices in infection control and prevention
- Be a certified Infection Preventionist or complete a nationally recognized basic training program in infection control

**RCA Team/Meeting**

Will meet as needed to:

- Define the healthcare issues or potential risks
- Conduct Root Cause Analysis
- Review and analyze data
- Brainstorm issues or the potential risks by using the fishbone diagrams
- Identify the contributing factors
- Develop Corrective Action Plan
- Identify Plan-Do-Check -Act (PDCA) topics

- Discuss and present possible changes in procedure to improve areas indicated
- Identify strengths and areas that need improvement
- Develop strategies, solutions, and next steps

#### **RCA Team Leader Responsibilities**

- Organize and coordinate the RCA process
- Assemble and encourage a supportive and proactive team
- Assign investigative and implementation tasks to the team members
- Conduct and be actively involved in the investigation, RCA, and corrective action plan implementation process
- Communicate the progress of the investigation, institutional barriers, and finalized action plan to executive leadership
- Monitor goals and progress towards completion of the Corrective Action Plans
- Provide training, education and direction to create RCA process that incorporate the Patient Safety and Quality Improvement elements

#### **Root Cause Analysis (RCA) Team Responsibilities**

- Root cause interviews, analysis, investigation and corrective action plan implementations
- Participate in the RCA meetings and discussions
- Communicate honestly and openly about only data and facts to the team members and their supervisors/leaders

#### **Governing Body Staff Responsibilities**

- Provide vision and leadership to Patient Safety and Quality Improvement process
- Develop and foster a safe learning and improving culture
- Provide oversight to healthcare quality improvement processes and teams
- Plan, discuss and generate patient safety goals and activities

#### **Quality Studies -Process Analysis (Surgery Centers)**

The Surgery Centers will complete quality studies each year that include:

1. A statement of the purpose of the QI activity that includes a description of the known or suspected problem and explained significance to the SSC
2. Identification of the performance goal against which SSC will compare current performance
3. Description of the data that will be collected in order to determine the SSC's current performance
4. Evidence of Data Collection
5. Data analysis that describes findings about the frequency, severity and source of issue
6. Comparison of the SSC's current performance against identified performance goal
7. Implementation of corrective action
8. Re-measurement to objectively determine whether corrective actions achieved and sustained improvement
9. Implementation of any additional corrective action to achieve and/or sustain improved performance (and plan for on-going re-measurement)
10. Communication of findings to SSC Leadership, The Patient Safety Committee, the Board of Directors and SSC staff and incorporating findings into educational activities

For quality studies, the Surgery Center(s) may base topic selection on information published by accrediting bodies, National Patient Safety Goals and/or other sources of information including risk management, performance improvement, quality assurance, infection prevention and control, patient/family suggestions/expectations or process outcomes

The Surgery Centers quality studies will focus on redesign or implementation of new processes to incorporate patient safety principles and will place an emphasis on the important facility and patient care functions of:

- Rights of Patients
- Governance
- Administration
- Quality of Care
- Quality Management and Improvement
- Clinical Records and Health Information
- Infection Prevention and Control and Safety
- Facilities and Environment
- Anesthesia Services
- Surgical and Related Services
- Pharmaceutical Services
- Pathology and Medical Laboratory Services
- Diagnostic and Other Imaging Services

#### **Infection Prevention Program**

- The purpose of the Infection Control Programs is to prevent and control infections
- The Infection Control Program and the surgery Centers Infection Control Program (SSC and SCT 1600-3 Infection Control Program for Southwest Medical Surgery Center) are components of the Patient Safety Plan
- The Infection Control Programs are based on current guidelines developed by nationally recognized infection control organizations
- The Infection Control Professionals will report regularly on the number and severity of infections that occurred in the prior quarter

#### **Infection Prevention RN**

Southwest Medical will maintain at least one Registered Nurse with training and education in infection prevention and control. While supporting the entire organization, the Infection Prevention RN will dedicate specific hours to the SSC

#### **NHSN**

- The medical facilities (Surgery Centers) will participate in the CDC's National Healthcare Surveillance Network
- Infection Prevention staff will report aggregate data and patient follow-up to the Patient Safety Committee at regularly scheduled intervals

#### **Medical/Health Care Error**

- Staff will immediately report the event to supervisor

The supervisor will:

- Immediately communicate the event through appropriate channels to the Patient Safety Officer; should this occur during off-hours, the supervisor/designee will leave a voice mail message for the Patient Safety Officer
- Initiate investigation and follow-up actions
- Staff will complete the Incident/Occurrence Report or Quality of Care form
- Staff will obtain required orders to support the patient's clinical condition
- Staff/supervisor will notify the UHG Safety Liaison of any situations of potential risk to others
- The Patient Safety Officer will follow usual protocols to investigate the error and coordinate the factual information/investigation for presentation, review and action by the Patient Safety Committee and/or other quality committees as applicable

### **Identification and Reporting**

- SMA Policy # 1600-29 (Sentinel Event Policy) and SMA Policy 190-4 (Incident Occurrence Reporting Policy) will describe the mechanism for identification and reporting a Sentinel Event/other medical error
- Southwest Medical will promote willingness of staff to report and will support a Just Culture that focuses on process not individuals

### **Root Cause Analysis**

- The Patient Safety Committee/Patient Safety Officer will provide oversight and direction for any root cause analysis of facility processes conducted for either Sentinel Events or near miss events
- The Patient Safety Officer will act as the liaison to quality committees and the Board of Directors for review/recommendations

### **Staff Involvement**

As Southwest Medical actively supports the concept that errors occur due to a breakdown in systems and processes, staff involved in an event with an adverse outcome will be supported by:

- A non-punitive approach and without fear of reprisal
- Voluntary participation in the root-cause analysis for educational purposes and prevention of further occurrences

### **Reporting Requirements/Sentinel Event Reporting**

- The Patient Safety Officer will report sentinel events to the Patient Safety Committee
- The Patient Safety Officer will direct reporting of any sentinel event at a medical facility per state of Nevada requirements as defined in NRS (Nevada Revised Statutes) and NAC (Nevada Administrative Code)
- The Patient Safety Officer will report the number of sentinel events and recommendations to reduce the number or severity of sentinel events to the SMA Board of Directors
- The Patient Safety Officer/Committee will provide education and support to providers to ensure providers report the occurrence of a sentinel event resulting from any surgery to the Board within fourteen days after the occurrence of the sentinel event
- The Patient Safety Committee shall evaluate the actions of the Patient Safety Officer in connection with the reporting of sentinel events
- The Patient Safety Committee shall make recommendations to the SMA Board of Directors to reduce the number and severity of sentinel events and infections that occur at the facility

### **HealthCare Acquired Infections (HAI) Reporting**

The Patient Safety Officer/Committee will provide education and support to providers to ensure if a provider identifies a patient with an infection, the provider will notify, within five days or as soon as practicable, the patient or the legal guardian or other person authorized by the patient to receive such information that the patient has an infection

The Patient Safety Officer/Committee will provide education and support to providers so that providers understand the notification may be delayed if the patient does not have a legal guardian, has not authorized any other person to receive such information and:

- Is not capable of understanding the information
- Is not conscious
- In the provider's judgment, the notification is likely to result in the patient harming himself

The Patient Safety Officer/Committee will provide education and support to providers so that providers understand if the notification is delayed, the information must be provided as soon as practicable after:

- The patient is capable of understanding the information

- The patient regains consciousness
- In the judgment of the provider, the patient is not likely to harm himself if informed about the infection
- A legal guardian or other person authorized to receive such information is available

### **Internal Reporting**

The Patient Safety Committee will report internally to provide a comprehensive view of both the clinical and operational safety activity of the organization by submitting Patient Safety Committee minutes/reports to the SMA Board of Directors

The Patient Safety Committee will include ongoing activities such as data collection and analysis, actions taken and monitoring for the effectiveness of actions

### **External Reporting**

The Patient Safety Committee will report externally in accordance with all state, federal and regulatory body rules, regulations and requirements.

- On or before March 1 of each year, The Patient Safety Committee will submit an annual sentinel event report to the Office of Public Health Informatics and Epidemiology, Bureau of Health Statistics, Planning, Epidemiology and Response, Nevada State Health Division
- The Surgery Centers will participate in the CDC National Healthcare Surveillance Network per State of Nevada NRS and NAC

### **Annual Report**

The Patient Safety Officer will report to the SMA Board of Directors and will include:

- Defining the scope of occurrences including sentinel events, near misses and serious occurrences
- Demonstrating a pro-active component of the patient safety program through selection of high risk or problem prone processes for ongoing measurement and analysis
- Reporting results ongoing measurement and analysis of the high-risk or error-prone processes
- Describing how the function of process design incorporates patient safety using specific examples of process design or redesign that include patient safety principles
- Describing the process for soliciting and obtaining input for improving patient safety from patient/families
- Describing staff willingness to report medical/health care errors
- Describing the procedures for communication with patients/families about adverse events or unanticipated outcomes of care
- Describing examples of ongoing in-service, education and training programs to maintain and improve staff competence and support an interdisciplinary approach to patient care

### **Medical Facility (Surgery Centers) Reporting Requirements**

The Patient Safety Officer/Committee will report to the appropriate licensing Board, within five days, after a change in the privileges of a physician, perfusionist, physician assistant or practitioner of respiratory care that is based on:

- An investigation of the mental, medical or psychological competency of the physician, perfusionist, physician assistant or practitioner of respiratory care
- Suspected or alleged substance abuse in any form by a physician, perfusionist, physician assistant or practitioner of respiratory care

### **Public Disclosure**

The Surgery Centers will provide the name of each physician who performed a surgical procedure at the Surgery Centers, the total number of surgical procedures performed by the physician, reported by type of medical treatment, principal diagnosis, if the information is available, by principle surgical procedure and secondary surgical procedure (SB340)

## Objectives Patient Safety Plan

---

| Objective                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------|
| Encourage organizational learning about medical/health care errors                                                                   |
| Incorporate recognition of patient safety as an integral job responsibility                                                          |
| Include patient safety into job specific competencies                                                                                |
| Encourage recognition and reporting of medical/health care errors and risks to patient safety without judgment or placement of blame |
| Involve patients in decisions about their health care and promote open communication about medical errors/consequences which occur   |
| Collect and analyze data, evaluate care processes for opportunities to reduce risk and initiate actions                              |
| Report internally what has been found and the actions taken with a focus on processes and systems to reduce risk                     |
| Support sharing of knowledge to effect behavioral changes in and within SMA                                                          |

## Components and Methods

---

Pursuant to [NRS 439.837](#), a medical facility shall, upon reporting a sentinel event pursuant to [NRS 439.835](#), conduct an investigation concerning the causes or contributing factors, or both, of the sentinel event and implement a plan to remedy the causes or contributing factors, or both, of the sentinel event.”

Southwest Medical will use RCA process to determine the contributing factors and the underlying reasons for the deficiencies or failures. Southwest Medical will use the Plan-Do-Study (check)-Act (PDSA or PDCA) model, developed by the Institute of Health Care Improvement, to test changes

### Root Cause Analysis

- A Root Cause Analysis is a process for identifying the root causes of the problem(s). It focuses on the process, instead of individuals
- Before analyzing the root causes, defining problems based on facts and data is essential for successfully conducting root cause analysis
- Root Cause Analysis and action plan framework table was introduced by the Joint Commission. It contains 24 analysis questions. It guides the organization to the steps in a root cause analysis. Not all the questions apply to all the events or cases. This table can be used individually or with the fishbone diagram.

**5 Whys** technique will be used at Southwest Medical to explore the cause and effect relationship underlay a problem. One can find the root causes by asking “why” no less than five times. This technique can be used individually or as a part of the fishbone diagram.

### Fishbone Diagram

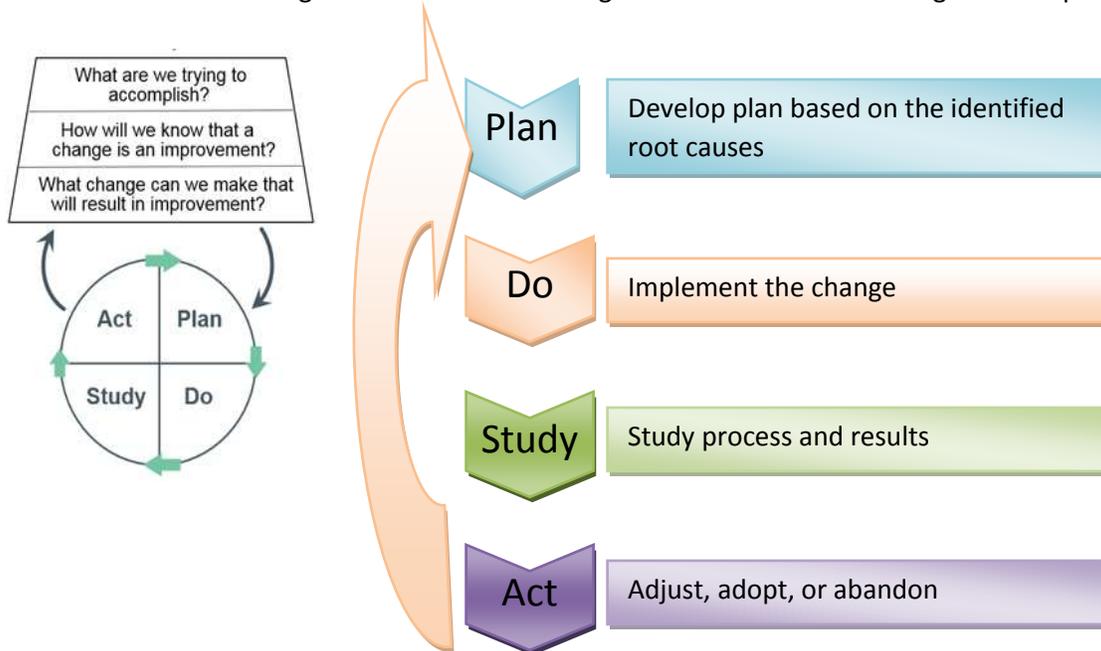

Once the problems are identified, a Fishbone Diagram can be used for analyzing the problems. Southwest Medical can use the fishbone diagram individually to analyze the root causes or can use it with the Root Cause Analysis and action plan framework table

A Fishbone Diagram, also called a Cause-and-Effect diagram, is a useful tool for a team to structurally brainstorm by discovering possible underlying factors or root causes from different major categories for the chosen problems. General categories include: people, methods, materials, measurements, education, procedures, process, location and environment.

RCA team members will brainstorm and ask multiple times, “why did this happen?” for each cause until all ideas are exhausted. The highest priority root causes will be chosen for PDSA topics. Once all the categories are established on the fishbone diagram, 5 Why’s technique also can be used to drill down the problem and find the root causes

**Model for Improvement**

The Model for Improvement is a collaborative and ongoing effort model to improve the product and services quality and process. It provides multi-disciplinary quality team guidance from identifying the root causes; conducting the best tests to assess possible changes, and working in collaboration for implementation of the new approaches and solutions. It guides the test of a change to determine if the change is an improvement.

The cycle is defined as follows:

- Plan--collect data and establish appropriate goals. Identify the problem and the possible root causes, and answer the following questions:
- Do--make changes designed to correct or improve the situation. Use the following questions for the guidance:
- Study -- Study the effect of the changes on the situation. Data should be collected on the new process and compared to the baseline or expected results. Results should be evaluated and by using the following questions as guidance:
- Act--If the result is successful or desirable, standardize the changes and then work on the next prioritized problem or the further improvements. If the outcome is not yet successful, look for different ways to identify the causes or change the testing process.

**Data Collection and Reporting**

Data should drive any quality and patient safety effort. Southwest Medical will track sentinel events, healthcare infection data and other internal data collection

External data sources are those data sources which are collected outside the supervisory structure of the case. Southwest Medical may use external data from:

- AHRQ: Agency for Healthcare Research & Quality
- CDC: Centers for Disease Control and Prevention
- CMS: Centers for Medicare & Medicaid Services
- NQF: National Quality Forum
- NHSN: National Healthcare Safety Network
- TJC: The Joint Commission

**Ongoing Reporting and Review**

The Patient safety committee will review Elements of the Patient Safety Plan at scheduled intervals

| Monthly                                                                                                                                                                                                                                                             | Quarterly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Annually                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|

## Assessment of the Quality and Patient Safety Plan

---

---

Southwest Medical will review and evaluate the Patient Safety Plan at least annually

## Patient Safety Checklists and Patient Safety Policies

---

---

By [NRS 439.865](#), the Patient Safety Plan must include the patient safety checklists and patient safety policies for use by:

- Providers of healthcare who provide treatment to patients at the facility
- Other personnel of the facility who provide treatment or assistance to patients
- Employees of the facility who do not provide treatment to patients but whose duties affect the health or welfare of the patients at the facility, including, without limitation, environmental services at any medical facility
- Persons with whom the facility enters into a contract to provide treatment to patients or to provide services which may affect the health or welfare of patients

The patient safety checklists must follow protocols to improve the health outcomes of patients at the medical facility and must include, without limitation:

- Checklists related to specific types of treatment. Such checklists must include, without limitation, a requirement to document that the treatment provided was properly ordered by the provider of healthcare
- Checklists for ensuring that employees of the medical facility and contractors with the medical facility who are not providers of healthcare follow protocols to ensure that the room and environment of the patient is sanitary
- A checklist used when discharging a patient from the facility which includes, without limitation, verifying that the patient received:
  - Proper instructions concerning prescription medications
  - Instructions concerning aftercare
  - Any other instructions concerning his or her care upon discharge
  - Any other checklists which may be appropriate to ensure the safety of patients at the facility

The patient safety policies must include, without limitation:

- A policy for appropriately identifying a patient before providing treatment. The policy will require the patient to be identified with at least two personal identifiers before each interaction with a provider of healthcare. The personal identifiers are full patient name and date of birth
- A policy regarding the nationally recognized standard precautionary protocols utilized by providers of healthcare at the medical facility including, without limitation, protocols relating to hand hygiene
- A policy to ensure compliance with the patient safety checklists and patient safety policies adopted pursuant to this section, which may include, active surveillance. Active surveillance may include a system for reporting violations, peer-to-peer communication, video monitoring and audits of sanitation materials

Based on [NRS 439.865](#), the patient safety plan must also include an infection control program that carries out the infection control policy. The policy must consist of:

- The current guidelines appropriate for the facility's scope of service developed by a nationally recognized infection control organization as approved by the State Board of Health which may include, the Association for Professionals in Infection Control and Epidemiology (APIC), the Centers for Disease Control and

Prevention (CDC), the World Health Organization (WHO) and the Society for Healthcare Epidemiology of America (SHEA)

- Facility-specific infection control developed under the supervision of a certified Infection Preventionist

## Approval of Patient Safety Plan

---

According to [NRS 439.865](#), Southwest Medical will submit its Patient Safety Plan to the Governing Board for approval. After the patient safety plan is approved, Southwest Medical will notify all providers of healthcare who provide treatment to patients of the existence and requirements of the plan

Southwest Medical will review and update the plan annually in accordance with State of Nevada requirements

Southwest Medical, according to [NRS 439.843](#), will submit the most current copy of the Patient Safety Plan on or before March 1 of each year, to the Division of Public and Behavioral Health

## Terms and Definitions

---

### Patient Safety

The Agency for Healthcare Research Quality (AHRQ) defines patient safety as “a discipline in the healthcare sector that applies safety science methods toward the goal of achieving a trustworthy system of healthcare delivery. Patient safety is also an attribute of healthcare systems; it minimizes the incidence and impact of, and maximizes recovery from, adverse events.”

[http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick\\_110.pdf](http://www.ahrq.gov/downloads/pub/advances2/vol1/advances-emanuel-berwick_110.pdf)

### Sentinel event (NRS 439.830)

1. Except as otherwise provided in subsection 2, “sentinel event” means an event included in Appendix A of “Serious Reportable Events in Healthcare--2011 Update: A Consensus Report,” published by the National Quality Forum
2. If the publication described in subsection 1 is revised, the term “sentinel events” means the most current version of the list of serious reportable events published by the National Quality Forum as it exists on the effective date of the revision which is deemed to be:
  - January 1 of the year following the publication of the revision if the revision is published on or after January 1 but before July 1 of the year in which the revision is published; or
  - July 1 of the year following the publication of the revision if the revision is published on or after July 1 of the year in which the revision is published but before January 1 of the year after the revision is published
3. If the National Quality Forum ceases to exist, the most current version of the list shall be deemed to be the last version of the publication in existence before the National Quality Forum ceased to exist

(Added to NRS by [2002 Special Session, 13](#); A [2005, 599](#); [2013, 217](#))

### Medical Harm

The Institute for Healthcare Improvement (IHI) defines medical harm as “unintended physical injury resulting from or contributed to by medical care (including the absence of indicated medical treatment) that requires additional monitoring, treatment or hospitalization, or results in death.”

### Facility-Associated Infection: (NRS 439.802)

“Facility-acquired infection” means a localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility, including, without limitation:

- Surgical site infections
- Ventilator-associated pneumonia
- Central line-related bloodstream infections
- Urinary tract infections
- Other categories of infections as may be established by the State Board of Health by regulation pursuant to [NRS 439.890](#)

(Added to NRS by [2005, 599](#); A [2009, 553](#))

### Medical Facility (NRS 439.805)

“Medical facility” means:

- A hospital, as that term is defined in [NRS 449.012](#) and [449.0151](#);
- An obstetric center, as that term is defined in [NRS 449.0151](#) and [449.0155](#);
- A surgical center for ambulatory patients, as that term is defined in [NRS 449.0151](#) and [449.019](#); and
- An independent center for emergency medical care, as that term is defined in [NRS 449.013](#) and [449.0151](#).

(Added to NRS by [2002 Special Session, 13](#))

**Near Miss**

An event or a situation that did not produce patient harm, but only because of intervening factors, such as patient health or timely intervention (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update)

**Mandatory Reporting**

Legal requirement for physicians and other professionals providing health services to report suspected incidents of abuse and neglect. As mandated reporters, they are generally afforded legal immunity for such reports and most jurisdictions impose a civil or criminal penalty for failure to report (Council on Scientific Affairs. AMA Diagnostic and Treatment Guidelines Concerning Child Abuse and Neglect. JAMA. 1985;254(6):796-800.)

**Risk**

Risk is the possibility of loss or injury. (Merriam-Webster's Online Dictionary, Risk, Available at <http://www.merriamwebster.com/dictionary/risk>. Last Accessed August 2009.)

**Preventable Event**

Preventable event describes an event that could have been anticipated and prepared for, but that occurs because of an error or other system failure (National Quality Forum (NQF), Serious Reportable Events in Healthcare 2009 Update.)

**Catheter Associated Urinary Tract Infections (CAUTI)**

A CAUTI is a urinary tract infection (UTI) that occurs in a patient who had an associated indwelling urethral urinary catheter in place within the 7-day period before the onset of the UTI (Centers for Disease Control and Prevention, The National Healthcare Safety Network (NHSN) Manual: Patient Safety Component Protocol; 2009. Available at [http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN\\_Manual\\_PatientSafetyProtocol\\_CURRENT\\_b.pdf](http://www.premierinc.com/safety/topics/guidelines/downloads/NHSN_Manual_PatientSafetyProtocol_CURRENT_b.pdf).)

**Central Line Associated Bloodstream Infections (CLABSI)**

A CLABSI is a primary bloodstream infection that is associated with the presence of a central line or an umbilical catheter, in neonates, at the time of or before the onset of the infection

|                                                                                   |                                                 |                              |

|                                                                                   | <b>Administrator:</b>                           |                              |

**PURPOSE:**

It is the intent of the Patient Safety Program to create a culture that values safety, disclosure of errors, and process improvement. The program will provide for a nonpunitive process that encourages the reporting of medical errors, the use of quality and system analysis to identify, analyze, and design measures to prevent patient safety events from occurring, the creation of knowledge from accident learning, and the sharing of the knowledge to improve patient safety.

**Policy:**

The Patient Safety Program shall be organization wide and shall apply to all department and services of the hospital. The types of events to be addressed will be patient occurrences ranging from “no-harm” to “near misses” to sentinel events.

**Mission, Vision, Values**

Sana Behavioral Healthcare Hospital (SBH) is dedicated to meeting the health care needs of its community and region. SBH will work with its medical staff to provide a continuum of high quality health care and life enhancement services.

In carrying out its mission, SBH will emphasize personalized, patient centered care, manage its human and financial resources in a professional, prudent, and just manner: seek to be an early adopter of new, proven technology; explore and develop innovative approaches to health care delivery; conduct appropriate educational programs for staff and community; and nurture its tradition of values and caring.

**Vision**

It is our belief that if people are willing to invest in therapy and commit to learning new coping skills, the Program will be of proportionate benefit to the people we serve. SBH is created specially to help the geriatric population of Las Vegas and surrounding areas live healthier and happier lives and maintain a positive balance regarding mental health needs.

**Our Program’s Values**

In all that we do, to all whom we serve, we promise caring and compassion, dignity and respect, responsiveness and courtesy, and we will strive for excellence, consistent with the values on which this Hospital was founded

**SCOPE:**

The types of occurrences to be addressed include, but are not limited to, sentinel events, near misses, and actual events related to:

|                                                                                   |                                                 |                              |

## DEFINITIONS

- **Error:** An unintended act, either of omission or commission, or an act that does not achieve its intended outcome.
- **Facility acquired infection:** A localized or systemic condition which results from an adverse reaction to the presence of an infectious agent or its toxins and which was not detected as present or incubating at the time a patient was admitted to a medical facility.
- **Failure Mode Effect Analysis (FMEA):** A systematic way of examining a process to eliminate the possibility of failure before it harms, or minimize the consequences of the failure.
- **Medical Accident:** An unintended event in the system of care with actual or potentially negative consequences to the patient.
- **Near-Miss Medical Accident:** An event that would have constituted a medical accident but that was intercepted at the point of patient care service before it actually reached the patient.
- **Patient Safety:** Freedom from injury while receiving health care services.
- **Patient Safety Event:** Any identified defect, error, medical accident, near-miss medical accident, sentinel event, medication error, significant procedural variance, or other threat to safety that could result in patient injury.
- **Proactive Risk Assessment:** Evaluation of institutional policies and practices against accepted standards of care.
- **Root Cause Analysis(RCA):** A process for identifying the basic or casual factors that underlie variation in performance, including the occurrence or possible occurrence of a sentinel event.
- **Sentinel Event:** An unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof. Serious injury specifically includes loss of limb or function. This includes any process variation from which a recurrence carries a significant chance of a serious adverse outcome.

## Responsibility:

A. **Board of Trustees:** The authority for the Patient Safety Plan rests with the Hospital Board of Trustees. The Board of Trustees delegates the authority to implement and maintain the activities described herein to the Chief Executive Officer (CEO) of the hospital.

B. **Quality Assurance/Risk Management Board Committee:** Is responsible for reviewing and approving patient safety issues.

C. **Hospital Quality Committee:** This is the hospital oversight committee. The Patient Safety Committee is chartered by the hospital Quality Committee.

D. **Medical Executive Committee (MEC):** The MEC will advise and consult on matters relative to patient safety.

|                                                                                   | <b>Department: Safety</b>                       |                              |
|                                                                                   | <b>Medical Director:</b>                        |                              |
| <b>Page 4 of 8</b>                                                                | <b>Chief Nursing Officer:</b>                   |                              |
|                                                                                   | <b>Administrator:</b>                           |                              |

E. **Patient Safety Committee:** Is responsible for implementation of the Patient Safety Plan. The committee membership includes Quality Officer, Medical Staff Director, Chief Nursing Officer, Chief Executive Officer, Risk Manager, Director of Pharmacy, Safety Officer and Infection Preventionist. Other individuals will be invited to attend the meetings on an as needed basis.

F. **Chief Executive Officer:** The CEO of the hospital, through the management and administrative staff, will support ongoing efforts to identify risks to patient safety and reduce the likelihood of injury.

G. **Risk Manager:** The Risk Manager will oversee the activities of the Patient Safety Program, gather information from organizational experience, and identify, coordinate, and resolve issues related to patient safety.

H. **Directors and Managers:** Will be responsible for correcting work conditions, processed, and procedures that increase the chance a patient will be harmed; ensure that employees under their direction received relevant information and education concerning the Patient Safety Program; ensure prompt reporting of events or situations of actual or potential patient harm; and promote a climate of nonpunitive error reporting and continuous patient safety improvement.

## STRUCTURE

The authority for the Patient Safety Plan rests with the CEO, CNO, Quality Improvement Coordinator, Patient Safety Officer, and Medical Chief of Staff and has delegate the authority to implement and maintain activities described in this plan to the Safety Committee.

## QUALITY REVIEW INFORMATION

To the extent possible, and in the manner consistent with the protection of confidentiality of quality assurance and patient safety data, pertinent information will be shared between the Quality Improvement and Safety Committees. Per Nevada Revised Statute (NRS49.265) that protects all quality work documents, these must be labeled as a Quality Review document. This protects any attempt to acquire Quality Review documents during the discovery phase. All documents will be marked "PSWP".

## Reporting of Patient Safety Events

### *Nonpunitive Reporting Policy*

The hospital recognizes that if we are to succeed in creating a safe environment for our patients, we must create an environment in which it is safe for caregivers to report and learn from errors. For hospital wide safety improvements to occur, events must be reported, analyzed, and lessons learned must be broadly communicated. The hospital will promote openness and require that mistakes be reported, while ensuring that reported mistakes are handled without a threat of punitive action.

| <b>Page 5 of 8</b>                                                                | <b>Chief Nursing Officer:</b>                   |                              |
|                                                                                   | <b>Administrator:</b>                           |                              |

- The hospital recognizes that most clinical incidents are due to a failure of systems. Our goal is to identify and track errors in order to continuously improve the system.
- All incidents, particularly clinical errors, need to be reported, with the desire that systemwide improvements, rather than individual disciplinary action, will occur. Initiation of additional education and training for individuals may be warranted. This policy will not protect individuals who consistently fail to participate in the detection, reporting, and remedies to prevent errors, nor will it protect individuals where there is reason to believe criminal activity or criminal intent may be involved. Employees who knowingly fail to report a clinical error will be subject to disciplinary action in accordance with existing hospital policies.

### Event Reporting

Employees and professional staff members are required to report any defect, error, medical accident, near-miss medical accident, event, significant procedural variance, other risk to safety that could result in patient injury, hazardous condition, or risk in the environment of care.

A Patient Safety Event form should be completed and submitted to the Risk Manager in accordance with the policy on the patient safety event reporting. The area manager is responsible for ensuring completion of the patient safety event form. Any manager receiving a report of a possible sentinel event or near-miss sentinel event will ensure that the Risk Manager and the Department Director are promptly notified to determine the status of the event.

- The employee(s) and professional staff and manager(s) involved in an event or accident will take immediate action to ensure safety of the patient, staff, and others in the environment. Preservation of all items involved in the incident will be undertaken. If an immediate procedural change is determined to be necessary, the involved manager(s) and professional staff members will work with Risk Management to communicate a safety alert and immediate changes that might be required.
- When an event or accident has occurred with significant consequences for the patient, appropriate support from within the hospital should be mobilized in a coordinated fashion to assist the patient, family, and the caregiver.
- When a sentinel event or an outcome occurs that differs significantly from the anticipated outcome, the patient, and when appropriate, his or her family should be informed. This fact-based disclosure should occur as soon as reasonably possible after consultation with the physician.
- Disclosure should, in most instances, be handled by the physician who has responsibility for overall care of the patient.

### Proactive Risk Assessment

|                                                                                   |                                                 |                              |

|                                                                                   | <b>Department: Safety</b>                       |                              |
|                                                                                   | <b>Medical Director:</b>                        |                              |
| <b>Page 6 of 8</b>                                                                | <b>Chief Nursing Officer:</b>                   |                              |
|                                                                                   | <b>Administrator:</b>                           |                              |

Leaders will provide direction and resources to conduct the following proactive activities to reduce risk to patients.

- At least annually, select one high-risk process for proactive risk assessment; such selection to be based, in part, on information published periodically by the Joint Commission that identifies the most frequently occurring types of sentinel events and patient safety risk factors.
- Assess the intended and actual implementation of the process to identify the steps in the process where there is, or may be, undesirable variation (what engineers call potential “failure modes”).
- For each “failure mode” identify the possible effects on patients (what engineers call the effect”), and how serious the possible effects on the patient would be (what engineers call the “criticality” of the effect).
- For the most critical effects, conduct an analysis to determine why the variation (the failure mode) leading to that effect may occur.
- Redesign the process and/or underlying systems to minimize the risk of that failure mode or to protect patients from the effects of that failure mode.
- Test and implement the redesigned process.
- Identify and implement measures of the effectiveness of the redesigned process.
- Implement a strategy for maintaining the effectiveness of the redesigned process over time.

### **New Process Design**

Whenever a process, function, or service is designed or redesigned, a guiding document for planning, implementing, and evaluating the program must be utilized. Questions on this guide should address these critical elements: the mission and values of the hospital, the needs of the community, and whether the program is clinically sound, is based on sound business practices and is designed to meet performance expectations. A variety of information sources from within and outside the organization about the potential risks to patient’s safety, including the occurrence of sentinel events and sentinel event alerts, are considered to minimize risks to patients affected by the new or redesigned process, function, or service. Analysis and/or pilot testing may occur prior to widespread implementation to determine whether the proposed design or redesign is an improvement.

### **Performance Improvement/Patient Safety/Risk Management Operational Linkage**

There is an operational linkage between performance improvement, patient safety, and risk management functions to facilitate identification, follow-up, and corrective action or prevention of potential problems or needs in patient care and safety, and visitor untoward events. The same data

|                                                                                   |                                                 |                              |

|                                                                                   | <b>Department: Safety</b>                       |                              |
|                                                                                   | <b>Medical Director:</b>                        |                              |
| <b>Page 7 of 8</b>                                                                | <b>Chief Nursing Officer:</b>                   |                              |
|                                                                                   | <b>Administrator:</b>                           |                              |

sources are utilized, such as Quality Screens and Occurrence Reporting, as well as the same peer-review process to assess individual occurrences and process problems and trends.

### Data Collection and Assessment

The goal of data collection and risk assessments are to compile data about error frequency and type to identify and reduce the likelihood of patient incidents or negative experiences, which have the potential to result in injury, accident, or other loss to patients.

Evaluation of collected data will be promptly undertaken to monitor and identify levels of performance, trends or patterns that vary significantly from what is expected, and the need for possible change or improvement in systems or processes. This evaluation will occur as part of the peer-review process by established work teams.

When undesirable variations are identified, the hospital will use appropriate resources and involve those individuals, disciplines, and department or services closest to the process for improvement initiatives. There will be a specific set of actions generated through the analysis process, including recommendations for process redesign and communication plan for lessons learned that will be disseminated throughout the organization.

### Education / Communication

The organization will disseminate internally and externally generated data and information to health care workers to ensure that the lessons are communicated and utilized to reduce the risk of patient error.

When possible, de-identified (absent any identifiers such as names) case study will be produced to communicate lessons learned.

Information on the Patient Safety Program will be included in employee orientation. Education in the form of a refresher course (relative to patient safety) is mandatory for all staff on an annual basis.

### PROGRAM EVALUATION

The Patient Safety Officer will submit a monthly report to the Safety Committee, Medical Staff and The Board of Trustees.

1. Definition of the scope of occurrences including sentinel events, near misses and serious occurrences, that occurred at Sana Behavioral Healthcare during the preceding month:
  - Employee injuries
  - Potential lawsuits
  - Resolutions

|                                                                                   | <b>Administrator:</b>                           |                              |

- Recommendations to the decrease of the number and severity of Sentinel Events

### Annual Evaluation

Annual appraisal of the Patient Safety Program will address the effectiveness of the program in:

- Improving quality of care to patients and improving outcomes
- Identifying risks
- Resolving problems
- Reducing liabilities
- Achieving liabilities

The written plan may be modified at any time with the approval of the Hospital Quality Committee and the Board of Trustees

## PRECISION SURGERY CENTER

|---------------------------------------------------------------------|-------------------------|-------------------------------------------------|
| Chapter Name:<br>7 - Infection Prevention and Control and<br>Safety | Policy#:<br>7.35        | AAAHC Standard:<br>2I-H.18, 5II-B, 7II-A, 7II-B |
| Title:<br>Safety Program and Safety Officer                         | Date: 04/2017 Rev.05/18 | Medicare CfC:                                   |

### Policy Statement

It is a goal of the Precision Surgery Center to insure that every employee is provided safe and healthful working conditions free from recognized hazards.

The Precision Surgery Center will maintain a comprehensive safety / environmental control program relative to safety and sanitation that involves staff, equipment operation, and maintenance in order to provide a functional and environmentally safe atmosphere for patients, personnel, and visitors.

The Governing Board has adopted the following policy.

### Safety Officer

The Board has designated Ada Ezeanolue, Director of Nursing and Zar Quassani, Assistant Administrator, as the center's designated safety officer.

***Refer to policy # 2.12, Appointment of Administrative Officers.***

### Responsibilities of Safety Officer:

1. Conduct the following drills:
  - a. Fire and Evacuation, Quarterly
  - b. Cardiopulmonary resuscitation (CPR) technique drill, Annually
  - c. Malignant Hyperthermia (if applicable), Annually
  - d. One disaster plan drill such as bomb threat, tornado etc., Annually
2. Document all fire drills and report to Safety Committee and QI Management Committee.
3. Counsel staff on any fire drill errors.
4. In the event of a real fire situation, the Fire Marshall shall coordinate the efforts of all personnel until the Fire Department arrives.
5. Ensure that all members of the Fire/Disaster Team are trained and can fulfill the role of the Fire Marshall if necessary.
6. Assures that halls and doorways are clear of obstruction.
7. Document function of all exit lights monthly on the FIRE SAFETY MONITOR.
8. Check fire extinguishers monthly and document on the FIRE SAFETY MONITOR.
9. Check emergency generator and fuel level monthly and document on the FIRESAFETY MONITOR.
10. Check vacuum pump and oil level monthly and document on the FIRE SAFETY MONITOR.
11. Arrange for the following annual checks and document on the FIRE SAFETY MONITOR:
  - a. Fire extinguisher, sprinkler, and smoke alarm checks.
  - b. Preventive maintenance on emergency generator and vacuum pump.

## PRECISION SURGERY CENTER

All employees will participate in implementing the safety and environmental control program of the Outpatient Surgery Center ("Center").

1. All employees will collaborate with the Safety Officer as needs are identified.
2. There will be an annual group meeting to address safety issues.
3. The Safety Officer will be responsible for conducting the business of the Safety meeting.
4. All employees are expected to:
  - a. Implement and review policies and procedures concerning functional safety and environmental control annually.
  - b. Maintain communication with the Safety and Infection Control Officers.
  - c. Participate in the conduction of hazard surveillance including all accidents or near accidents.
  - d. Investigate all accidents and evaluate findings and recommend action. Follow up is essential to make certain that corrective action has been implemented and is appropriate.
  - e. Participate in the in-service education and orientation program as they apply to new and existing employees.
  - f. Be familiar with community safety oriented agencies, especially those involved with fire and other disasters.
5. Findings of the safety meeting and recommended action will be reported to the Quality Management Committee.

### **I. STAFF RESPONSIBILITIES**

- A. Management – In effectively executing their safety responsibilities, Management will:
  1. Familiarize them with the safety program and ensure its effective implementation.
  2. Be aware of all safety considerations when introducing a new process, procedure, machine, or material to the workplace.
  3. Give maximum support to all programs and committees whose function is to promote safety and health.
  4. Review serious accidents to ensure that proper reports are completed and appropriate action is taken to prevent repetition.
- B. Supervisors – Supervisors' responsibilities are to:
  1. Familiarize themselves with the Surgery Center's safety policies, programs and procedures.
  2. Provide complete safety training to employees prior to the assignment of duties.
  3. Consistently and fairly enforce all safety rules.
  4. Investigate injuries to determine cause, then take action to prevent repetition.
  5. See that all injuries, no matter how minor, are treated immediately and referred to the Administrator and/or Director of Nursing to ensure prompt reporting to the insurance carrier.
  6. Inspect work areas often to detect unsafe conditions and work practices.
- C. Employees – All Surgery Center employees shall:
  1. Adhere to all safety rules and regulations.
  2. Wear appropriate safety equipment as required.
  3. Maintain equipment in good condition, with all safety guards in place when in operation.
  4. Report all injuries, no matter how minor, immediately to a supervisor.
  5. Encourage co-workers to work safely.
  6. Report unsafe acts and conditions to a supervisor.

### **II. SURGERY CENTER SAFETY RULES**

- A. All injuries, no matter how slight, *must be reported at once* to your immediate supervisor.

## PRECISION SURGERY CENTER

- B. Defective equipment and unsafe conditions and practices must be reported to your supervisor as soon as possible.
- C. All electrical or mechanical equipment must be shut down when it becomes necessary to make repairs or adjustments.
- D. Do not tamper with electrical or mechanical equipment. Adjustments or repairs of electrical equipment will not be permitted, except by authorized persons.
- E. Where safety guards are provided on equipment, guards must be in place before operating equipment.
- F. Wear proper eye protection, if required.
- G. "Horse play" in the Center is prohibited.
- H. Avoid lifting objects that may be too heavy for you. Get help if needed.
- I. Special equipment or instruments must be used only as designated by supervisors and may not be taken off Center property for personal use.
- J. Loose clothing must not be worn around mechanical equipment.
- K. Equipment must be maintained in a satisfactory working condition.
- L. Equipment and supplies must always be stored in a careful manner.
- M. Aisles, storage space and work areas must be clear and clean. You are responsible for your own work area. It is dangerous to leave supplies or equipment in aisles or doorways.
- N. It is mandatory that all employees wear sturdy shoes with proper soles and or heels. Rubber soled shoes are preferable for safety reasons.
- O. Know location of safety and fire protection equipment.
- P. When handling hazardous materials, follow prescribed Safety Procedures and use required safety equipment. When using secondary containers filled by others, ensure that they are labeled as to their contents and hazards.
- Q. Unnecessary and excessive haste is the cause of many accidents. Exercise caution at all times. WALK, DON'T RUN!!

Your cooperation is requested in making the Surgery Center a safer place to work. You should feel free at all times to call the attention of your supervisor to conditions and unsafe practices which may cause injury. The Center will make every effort to eliminate mechanical and physical hazards, but it is up to you to protect yourself and others by developing and maintaining safe work habits. Learn your job thoroughly. The more you know about your job, the more safely you can perform it. Violation of safety rules may be subject to disciplinary action up to and including discharge.

### III. HAZARD COMMUNICATION

- A. Hazard Evaluation - Chemical manufacturers and importers are required to review the available scientific evidence concerning the hazards of the chemicals they produce, then report that information to employers who purchase their product. In most cases, the Surgery Center will choose to rely on the evaluations performed by our suppliers. If we have cause to distrust the evaluation of a particular manufacturer, we will arrange for additional testing.
- B. Labels and Other Forms of Warning
  - 1. We will ensure that containers are adequately labeled to identify the hazardous chemicals contained therein, and will show hazard warnings appropriate for employee protection. The warnings will employ a combination of words, pictures and symbols which convey the hazards of the chemical(s) in the container. The labels will be legible and prominently displayed.
  - 2. Exceptions to this rule are as follows:
    - a) We are permitted to post signs which convey the hazard information when there are a number of stationary containers in a given area with similar contents and hazards.
    - b) We are not required to label portable containers, as long as the transferred chemical is for immediate use by the employee who made the transfer.

## PRECISION SURGERY CENTER

3. Our employee-training program will include instruction on how to read and interpret label information.

### IV. SAFETY DATA SHEETS (SDS)

- A. The Surgery Center management is responsible for obtaining or developing a SDS for each chemical used in the workplace. Each SDS includes the specific chemical identity of the chemical involved and the common names. Each data sheet will provide information on the physical and chemical characteristics of the chemical; known acute and chronic health effects and related health information; exposure limits; whether the chemical is considered to be a carcinogen; precautionary measures; emergency and first aid procedures; and the identification of the organization responsible for preparing the sheet.
- B. Our employee-training program will include instruction on how to read and interpret information on an SDS, and how employees can obtain and use the available hazard information.

### V. EMPLOYEE TRAINING

- A. The Surgery Center's goal is to provide hazard communication upon initial orientation and whenever a new chemical is introduced to a given work area annually. Training will be conducted by the Director of Nursing or another who has been properly trained.
- B. The Training Program will consist of:
  1. How the hazard communication program is implemented, how to read and interpret information on labels and MSDS, and how employees can obtain and use the available hazard information.
  2. The hazards of chemicals in the work area.
  3. Measures employees can take to protect themselves from the hazards.
  4. Specific procedures put into effect by the Center to provide protection, such as personal protective equipment.
  5. Methods and observations, such as visual appearance or smell, workers can use to detect the presence of a hazardous chemical they may be exposed to.

### VI. RIGHT-TO-KNOW PROGRAM

- A. Explain applicable safety and health requirements mandated by OSHA and state standards.
- B. Explain how to recognize potential health and safety hazards and review monitoring techniques used to detect potential health hazards.
- C. Explain how to read MSDSs and related information (labels).
- D. Explain safety precautions to be taken by the individual worker.
- E. Explain in detail the labeling system used by the Center.

---

# **PRECISION SURGERY CENTER**

## **SECTION IV**

### **QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**

# **PRECISION SURGERY CENTER**

## **SECTION IV**

### **QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**

#### **1. Governing Body Responsibilities**

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**1. Governing Body Responsibilities**  
**A. Preamble**

**I. PREAMBLE:**

1. The Governing Body of Precision Surgery Center has developed, defined, implemented, and continues to maintain an ongoing, data-driven Quality Assessment and Performance Improvement (QAPI) Program by addressing the Precision Surgery Center's priorities and that all improvements are evaluated for effectiveness; specifying data collection methods, frequency, and details; by clearly establishing its expectations for safety; and by adequately allocating sufficient staff, time, information systems, and training to implement the QAPI program.
2. The Governing Body has established a Quality Improvement Coordinator to assess and improve the quality of care provided. The Governing Body has also established an Infection Control Program Coordinator, to pursue opportunities to improve patient care with the resolution of identified problems.

**II. OBJECTIVES**

1. The Governing Body strives to improve the quality of care provided by requiring and supporting the establishment and maintenance of an effective organization-wide QAPI program.
2. The Governing Body sets the expectations, develops plans, and implements procedures to assess and improve the quality of the Center's government, management, clinical and support processes.
  - A. The leaders of the Center undertake education responsibilities concerning the approaches and the methods of QAPI.
  - B. The Governing Body sets priorities for organization-wide QAPI activities that are designed to improve patient outcomes.
  - C. The Governing body ensures to allocate adequate resources for management and improvement of the Center, government, managerial, clinical, and support processes through assignment of needed personnel, provision for adequate time to participate in these activities, and information systems and appropriate data management processes to facilitate the collection, management, and analysis of data needed for QAPI activities.
4. The QAPI program is ongoing and not just a one-time effort.
  - A. Precision Surgery Center, apart from collecting quality data at regular intervals, analyzes the data at regular intervals, and updates records of actions taken to address quality problems identified in the analysis, as well as collects new data to determine if the corrective actions were effective.

5. The QAPI program is data-driven as it identifies in a systematic manner what data it will collect to measure various aspects of quality of care; the frequency of data collection; how the data will be collected and analyzed; and evidence that the program uses the data collected to assess quality and stimulate performance improvement.
6. The Governing Body ensures that the Center's staff is trained in assessing and improving the process that contributes to improved patient outcomes.
7. The Governing Body, in conjunction with staff members, individually and jointly develops and participates in mechanisms designed to foster communication among individuals and among components of the Center and to coordinate internal activities.
8. The Governing Body, with the Medical Director and other staff members analyzes and evaluates the effectiveness of contributions to improving quality.
9. Clinical and administrative staff monitors and evaluates the quality and appropriateness of patient care and clinical performance, resolve identified problems and give the Governing Body the information it needs to fulfill its responsibilities for the quality of patient care.
10. The Center maintains a plan that describes the QAPI program, objectives, organization, scope and mechanisms for overseeing the effectiveness of monitoring, evaluation, and improvement of problem solving activities.
11. Implementation of the QAPI program is the responsibility of Quality Improvement Coordinator and the Governing Body of the Center.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**1. Governing Body Responsibilities**  
**B. Scope of the program**

**I. PREAMBLE**

1. The QAPI program is a comprehensive data-driven program designed to objectively and systematically evaluate the quality and appropriateness of services provided, opportunities to improve care, identify things that warrant evaluation or action, modify processes to improve care in a continuous manner and to resolve identified problems.
2. The program includes, but is not limited to, an ongoing program that demonstrates measurable improvement in patient health outcomes, and improves patient safety by using quality indicators or performance measures associated with improved health outcomes and by the identification and reduction of medical errors.
3. The program also measures, analyzes, and tracks quality indicators, adverse patient events, infection control and other aspects of performance that includes care and services furnished by the Center.

**II. SCOPE:**

1. The quality and appropriateness of diagnostic and treatment procedures are evaluated on a continual basis.
2. The Center delivers health care services that demonstrate a high quality of care and this service is provided in a manner consistent with principles of professional practice and concern for accessibility, availability, and cost of services.
3. The quality of treatment is that consistent with the clinical impression or working diagnosis.
4. Content, completeness, and quality of medical record entries are evaluated.
5. Quality of care in various departments including pain management and ambulatory surgery outcomes are included..
6. The patient's satisfaction is evaluated on a continual basis by various means.
7. Review of cases of patients who require hospitalization following ambulatory surgery are reviewed.
8. Evaluation of the quality and appropriateness of all ancillary services.
9. Monitoring and evaluation of all the services provided at the Center in accordance with; A planned, systematic, and ongoing process for monitoring, evaluating, and improving the quality of care in governing, managerial, and support activities.
10. Evaluation of those aspects of care that are most important to the health and safety of the patient are identified, with frequency or affect large numbers of patients, place patients at risk, substantial benefits when the care is not provided correctly, when care is not provided but is indicated, or the care is provided but is not indicated and/or tend to produce problems for patients or staff.

# **PRECISION SURGERY CENTER**

## **SECTION IV**

### **QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**

#### **2. The Program Activities and Data Synthesis**

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**2. The Program Activities and Data Synthesis**  
**A. The Program Activities**

**I. PURPOSE**

1. The purpose of the QAPI program is to ensure that patients are provided high quality care in an environment of minimal risk. The program has the responsibility for monitoring every aspect of patient care in order to identify and rectify breakdowns that result in suboptimal care and/or safety while striving to continuously improve and facilitate positive patient outcomes.
  - A. There is a planned, systematic, collaborative ongoing process for monitoring, evaluating, and improving the quality and appropriateness of patient care.
  - B. When patient care problems or opportunities to improve care are identified, actions are taken and the effectiveness of the actions are evaluated.
  - C. The Governing Body will support and have the final authority and responsibility for the assurance of a flexible, comprehensive and integrated QAPI program and will delegate the authority and accountability for the operation of the program to the administration and medical staff.
  - D. Administration shall provide the resources, equipment, and personnel reasonably required to maintain and support the program.

**II. OBJECTIVES**

1. Maintain an ongoing performance improvement program conducted in a cost effective manner that include mechanisms for monitoring and evaluating the quality and appropriateness of patient care.
2. Focus of quality assessment data at a central point for examination analysis and documentation on ongoing implementation.
3. Improvement of existing processes and functions through a systematic approach that includes identifying potential improvement, testing the strategy for change assessing data from the test to determine if the change produced improved performance, and implementing the improvement strategy system-wide.
4. Review of adverse outcomes in order to ensure systems and procedure correction.
5. Assurance of effective communication systems for reporting QAPI activities to Medical Staff and Governing Body.
6. Assurance of compliance with the requirements of all federal, state, and accrediting agencies in regard to QAPI activities.
7. To identify and evaluate all urgent situations requiring immediate action.

**III. GOALS**

To ensure the following:

1. That clinical and administrative staffs monitor and evaluate the quality and appropriateness

of patient care and clinical performance, resolve identified problems, and report information to the Governing Body that the Governing Body needs to assist it in fulfilling its responsibility for the quality of patient care.

2. That the necessary information is communicated among departments/services when problems or opportunities to improve patient care involve more than one department/service.
3. The status of identified problems is tracked to ensure improvement and resolution.
4. Information from departments/services and the findings of discrete quality improvement activities are used to detect trends, patterns of performance or potential problems that affect more than one department/service.
5. The objective, scope, organization, and mechanisms for overseeing effectiveness of monitoring, evaluation, and problem-solving activities in the performance improvement program are evaluated annually and revised as necessary.
6. Important aspects of care to the health and safety of patients include those that occur frequently or affect large numbers of patients; place patients at risk of serious consequences or deprivation of substantial benefit if care is not provided correctly or not provided when indicated; or care provided was not indicated or tends to produce problems for patient or staff, are identified.

#### **IV. PRIORITIES**

1. The Precision Surgery Center has set priorities for its performance improvement activities by:
  - A. Focusing on high risk, high volume, and problem-prone areas.
  - B. Considering incidence, prevalence, and severity of problems in those areas.
  - C. Evaluating health outcomes, patient safety, and quality of care.

#### **V. SCOPE OF ACTIVITIES**

1. Performance measures are identified to monitor the quality and appropriateness of key performance areas of care. The measures are objective, measurable, and based on current knowledge and clinical experience. Collaborative and specific indicators of both key processes and outcomes of care are designed, measured, and assessed by all appropriate departments/services and disciplines of the Center in an effort to improve performance.
2. Assessment of the performance of the following functions will be included:
  - A. Assessment of patients
  - B. Education of patients and family
  - C. Management of information
  - D. Infection control
  - E. Utilization management
  - F. Safety management
  - G. Risk management
  - H. The monitoring and evaluation of the quality and appropriateness of patient care and clinical performance of all individuals with clinical privileges will be accomplished through the following activities:
    - I. Surgical and invasive procedure monitoring
    - J. Medication usage evaluation

- K. Medical record review
- L. Peer reviews performed by health care professionals

## **VI. INDICATORS (BENCHMARKING)**

Multiple indicators utilized are outcome indicators, process of care indicators, and patient perception indicators.

1. Outcome indicators: These measure results of care. The outcome measures in the Precision Surgery Center focus on adverse incidents, pain relief and increase in functional status. Data will be collected on each of these benchmarks for comparison with previous data and data obtained from other ambulatory surgical centers. Data will be analyzed quarterly and presented to the Governing Body at the scheduled quarterly meetings.
  - A. Examples of internal benchmarks Precision Surgery Center monitors routinely;
    - a. pain relief
    - b. same day cancellations
    - c. peer review data
    - d. chart audits
    - e. results of patient satisfaction surveys
    - f. adverse events/incidents;
      - infections
      - hospital transfer
      - medication errors
      - wrong side surgeries/procedures
  - B. Examples of external benchmarks Precision Surgery Center uses (all data are obtained from valid and reliable local, state or national data):
    - a. Cost utilization measurements
    - b. Procedure/Operating room time utilization
    - c. Staff utilization measurements
    - d. Number of procedures performed
    - e. Adverse events (infections, transfers,ect.)
2. Process of care indicators: These measure how often the standard of care was met for patients with a diagnosis related to that standard. At Precision Surgery Center, this is evaluated based on the diagnosis for interventional techniques with an algorithmic approach based on the patient's symptomatology, physical examination, and diagnostic probabilities and repeat treatments are provided based on return of pain and deterioration in functional status.
  - A. Precision Surgery Center also measures the administration and time of prophylactic antibiotics. But, this is only in a small number of cases.
3. Patient perception indicators: These measure a patient's experience of the care they received in our Center.
  - A. Patient care surveys are offered routinely with each visit during postoperative follow-up, and all patients are encouraged to participate. *All the outcome measures are data driven and ongoing.*

## **VII. DATA SOURCES**

1. Quality Improvement flow sheets reflecting trends
2. Risk Management data
3. Patient/family complaints/patient survey results
4. Patient charts
5. Data from third party payers/fiscal intermediaries
6. Data from peer reviews performed by health care professionals
7. Calculated data from studies conducted
8. Information obtained from outside benchmarking sources via reliable local, state or national data(ie other ASCs)

## **VIII. OVERSIGHT RESPONSIBILITY**

1. Problem identification, assessment, and resolution will be monitored by the Quality Improvement Coordinator.
2. The monitoring mechanism for the Medical Staff activities shall be through the Quality Improvement Coordinator and Governing Body. Problems identified concerning Medical Staff Members shall be referred to the Medical Director.
3. The administration and coordination of the Center's overall QAPI Program are designed to ensure that the activities described are accomplished and that each of the monitoring and evaluation activities outlined are also performed appropriately and effectively.
4. The Administrator will be responsible for monitoring problems identified. If a department's problems remain unsolved, it will be reviewed and resolved by the Chief Executive Officer (CEO). If the problem still remains unresolved after administrative review, it will be forwarded as an unresolved problem to the Governing Body.

## **IX. ACTIONS THAT MAY BE TAKEN TO SOLVE PROBLEMS OR IMPROVE CARE**

1. System problems: Changes in communication channels, changes in organizational structure, adjustments in staffing, and changes in equipment.
2. Knowledge problems: In-service education/training, continuing education, and circulating informational material.
3. Behavior problems: Informal or formal counseling, changes in assignments, and disciplinary action.

## **X. ANNUAL EVALUATION**

1. The program shall be reappraised annually by the Governing Body.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**2. The Program Activities and Data Synthesis**  
**B. The Program Data and Activities**

**I. PREAMBLE**

Precision Surgery Center implements preventive strategies throughout the Center targeting adverse patient events and ensures that all staff are familiar with these strategies.

1. The QAPI program of the Precision Surgery Center incorporates quality indicator data, including patient care and other relevant data regarding services furnished in the Precision Surgery Center.
2. Precision Surgery Center uses the data collected to:
  - A. To monitor the effectiveness and safety of its services and quality of its care.
  - B. Identify opportunities that could lead to improvements and changes in its patient care.
3. Precision Surgery Center's performance improvement activities track adverse events, examine their causes, implement improvements, and ensure that improvements are sustained over time.
4. Specific components within the Center's QAPI program include:
  - A. The ongoing monitoring of performance indicators to systematically assess and evaluate the department's performance in relation to appropriateness and quality of important aspects of care provided. This includes pain relief, amount of time in the center for a procedure, results of patient surveys, ect.
  - B. Systematic evaluation of care provided by personnel employed herein.
  - C. Ongoing evaluation, study, and modification of processes within the department to continue to improve the services provided.

Whenever appropriate and possible, interdepartmental study of processes involved in the provision of services will be conducted, and activities will be reported to the Governing Body by all during routinely scheduled quarterly meetings.

**II. SPECIFIC PROGRAM**

Specific program description is as follows:

1. Monitoring and evaluation process – This process is designed to help the Center effectively utilize its management resources by focusing on high priority quality of care services. The responsibility of the Quality Improvement Coordinator with the Medical Director is associated with the implementation and ongoing management of the program or delegated to various administrative staff. Employees from within the departments who are knowledgeable about the care/services provided are actually involved in the entire QAPI program.

2. The monitoring and evaluation activities of all the departments and services provided are performed in accordance with a:
  - A. Planned, systematic, and ongoing process for monitoring, evaluating, and improving the quality of care and all key governing, managerial, and support activities herein.
  - B. Those efforts of care that are most important to the health and safety of the patients are identified. These important aspects of care are those that occur frequently or affect large numbers of patients herein, place patients at risk of serious consequences or of deprivation of substantial benefits when the care is not provided correctly, the care is not provided but is indicated, or the care is provided but is not indicated herein, and/or tends to produce problems for patients or staff.
3. In order to accomplish the above, the monitoring and evaluation process involves:
  - A. Identifying the most important aspects of care provided at the Center which includes procedures and treatments (high risk, high volume, problem prone areas);
  - B. Using measurable indicators to systematically monitor those aspects of care in an ongoing way (outcome indicators, process of care indicators, and patient perception indicators);
  - C. Evaluating the care at least when level, patterns or trends and indicator data by identifying incidence, prevalence, and severity of the problem to improve the quality of care; and
  - D. Taking actions to improve care and evaluating the effectiveness of these actions.

Because the use of indicators to monitor the important aspects of care involve the collection and aggregation of data about a series of events or activities, the monitoring and evaluation process can be used to identify trends or patterns of care that may not be evident when only a case by case review is performed. Indicators can also be used to identify important similarities that warrant further evaluation.

### **III. DELINEATION OF THE SCOPE OF CARE/SERVICES PROVIDED**

The Center provides the following services:

1. Ambulatory Surgical Services
2. Pharmaceutical Services for procedures/surgeries

These services are provided to ambulatory, adult patients. Precision Surgery Center does not admit children under the age of 18. These are provided in the following locations:

1. Operating/Procedure rooms
2. Recovery Rooms
3. Pre and postoperative Holding Areas

The services are regularly provided 5 days per week by qualified physician(s), physician's assistant(s), nurse practitioner(s), certified registered nurse anesthetist(s), registered nurse(s), medical assistant(s), and other personnel within the various service areas.

### **IV. IDENTIFICATION OF IMPORTANT ASPECTS OF CARE**

Main key functions and/or processes/procedures that are the most important to the patients served

at the Center have been identified by teams of employees from within the Center including staff, specific employees, physicians and other personnel involved in this process who are identified within QAPI meeting minutes. Important aspects of care identified in each department have been further prioritized based upon the recommendations of the Governing Body which the following list was compiled from. The key functions/processes/procedures of ambulatory care include:

1. Procedural Appropriateness
2. Appointments
3. Patient Education
4. Patient Recovery

## **V. IDENTIFICATION INDICATORS FOR MONITORING MAJOR ASPECTS OF CARE**

Indicators that will assist in monitoring the quality and appropriateness of major aspects of care provided have been identified. These indicators have been designed to be objective, measurable, based upon current knowledge and clinical experience, and may relate to the structure of care/service, processes of care/service or outcome of care/service.

## **VI. DATA COLLECTION AND ANALYSIS**

1. After identification of the indicators for monitoring important and major aspects of care or measures of quality and patient safety, Precision Surgery Center collects data actively related to those measures at the intervals called for by the QAPI program.
  - A. The staff responsible for collection of the data are trained in appropriate techniques to collect and maintain the data.
  - B. Once data has been collected, it is analyzed to monitor the Precision Surgery Center performance to determine what the data suggests about the Precision Surgery Center's quality of care and the effectiveness and safety of its services.
  - C. Analysis takes place at regular intervals, in order to avoid too much time elapsing before the Precision Surgery Center is able to detect problem areas.
  - D. In the case of data related to adverse events, the Precision Surgery Center uses the data to analyze cause(s) of the adverse events.
  - E. Data collection and analysis is conducted by personnel with appropriate qualifications to collect and interpret quantitative data.
2. The Precision Surgery Center conducts a thorough analysis that focuses on systematic issues such as medication errors, serious injuries to a patient, and infections.
3. The derived data is incorporated for improvements and preventive strategies.
  - A. Any adverse event or "near miss" is considered a threshold that triggers further evaluation to validate the existence of the problems so that corrective measures designed to eliminate potential negative impact on patient care/service may be instituted, as dictated by the Quality Improvement Coordinator.

## **VII. IMPORTANT ASPECTS OF CARE**

Monitoring that important aspects of care are carried out is accomplished by collecting and organizing data for each indicator in an ongoing and systematic manner. Data is collected through a systematic process and organized on the Quality Assurance Data Sheet, in addition to other

forms. Organization of data in this manner assists with the identification of events warranting further evaluation and identification of patterns or things that are at variance with established thresholds.

Specific sources of data suggested by various departments and the clinical personnel include:

1. Clinical observation.
2. Medical records review.
3. Review of data generated through risk management activities.
4. Ambulatory surgery and recovery room flow sheets; and
5. Review of physician orders.

### **VIII. INITIATE FURTHER EVALUATION WHENEVER AN EVENT OCCURS**

Initiation of further evaluation whenever an adverse event occurs is performed to identify either opportunities to improve care/processes or problems in the provision of care.

Further evaluation must be conducted whenever an event occurs, a pattern or trend that may negatively impact care/services is identified, or an opportunity to improve care is recognized. Additionally, further evaluation of any indicator may be triggered by associated customer complaint, department comparison of their performance with that of another institution (external benchmarking), or when there is a desire by the department to improve performance.

Whenever initiated the evaluation of an important aspect of care includes:

1. A more detailed analysis of patterns/trends in the data collected on the indicators.
2. Consistent review of any single occurrence through the use of "secondary screen."
3. Identification of specific processes involved.
4. Flow charting of processes involved.
5. Review by peers when analysis of the care provided by a practitioner is undertaken.

All evaluation activities are reported to the Governing Body by the Quality Improvement Coordinator during the quarterly meeting.

### **IX. ACTIONS TO IMPROVE CARE OR CORRECT IDENTIFIED PROBLEMS**

Whenever an opportunity to improve or a problem in the quality of care is identified, appropriate action is taken to improve the care or correct the problem. The action taken may be either a testing of a strategy on a limited basis prior to full implementation, if appropriate, or the immediate implementation in all departments or services to each that may be applicable.

The effectiveness of the action taken is assessed by monitoring of the care. The actions taken may reflect systems change, process change, educational intervention, or human resource management. Emphasis is placed on the correction/improvement or systems/processes involved.

Actions taken, as well as follow up plans, are included within the Quality Improvement Coordinator's study report along with documentation of suggestions and implementation of actions, which are considered as vital to the success of the program.

### **X. ASSESSMENT OF EFFECTIVENESS OF THE MONITORING AND EVALUATION**

The monitoring and evaluation activities are used primarily to study and improve processes that affect patient care and outcome and, when relevant to the performance of an individual or used as a complement of the evaluation of the individual's capabilities.

In monitoring the evaluation activities, findings may relate to:

1. Factors not easily changed by the Center, such as patient age or severity of illness.
2. Systems or processes of care such as standards of patient care on staffing levels.
3. How individuals, including independent practitioners, exercise judgment and carry out clinical activities.
4. Findings that fall into this category dealing with the knowledge, skill, and judgment of individuals are relevant to individual performance. Findings of this nature may lead to such actions as changing the support systems around the individual, providing the individual with education and/or assessing the individual's clinical privileges or assignments.

As an ongoing process and part of the annual reappraisal of the Center's QAPI program, the effectiveness of the monitoring of evaluation processes are assessed.

Effectiveness of problem resolution and care improvement activities are assessed and documented through the ongoing QAPI program.

Administration and coordination of the overall QAPI program of the center is designed to ensure quality, competence and ease by monitoring an evaluation of activities appropriately and effectively by communicating necessary information among departments, services, or programs when opportunities to improve problems in patient care involves more than one department, service, or program.

The problem resolution is achieved by:

1. Tracking the status of identified problems to ensure improvement or resolution.
2. Utilizing interdepartmental strategy and collecting information from departments, services, or programs and findings of management and improvement activities to detect trends, patterns of performance, or potential problems that affect more than one department, service or program.

Following the implementation of actions to improve the care or correct the problem, the findings, conclusions, recommendations or actions taken, and the results of the actions taken are:

1. Documented
2. Reported through established channels to the Quality Improvement Coordinator and the Governing Body.

## **XI. COMMUNICATION OF THE RESULTS**

Findings, conclusions, recommendations, actions taken and the results/effectiveness of action taken are communicated through:

1. Reporting on a quarterly basis to the Governing Body.
2. Inclusion of a report on QAPI activities at each staff meeting.
3. Additionally, it is the responsibility of the department members to assist with dissemination of quality improvement information to the staff.

## **XII. ANNUAL EVALUATION OF THE QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT (QAPI) PROGRAM**

The effectiveness of the QAPI program of the center is evaluated on an annual basis as part of the total facility appraisal. The report of this evaluation is submitted to the Governing Body. This report includes:

1. Problems identified in care provided or opportunities to improve care identified.
2. Corrective actions and preventative measures taken to resolve the issues identified. All actions are communicated to every staff member involved.
3. Educational programs related to continual QAPI activities; and
4. Program changes planned as a result of the annual evaluation (changes in scope, organization, objectives, etc.).
5. Sustained improvements – a method to ensure that the improvements made are sustained over time by demonstrating that whatever solution is adopted to address the problem, continues to work over time, which indicates that Precision Surgery Center collects data on indicators that measure those aspects of care.

# **PRECISION SURGERY CENTER**

## **SECTION IV**

### **QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**

#### **3. Performance Improvement Projects and Evaluation**

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**A. Scope**

**I. PREAMBLE**

1. The number and scope of distinct improvement projects conducted annually by the Precision Surgery Center reflects the scope and complexity of our services and operations.
2. The Precision Surgery Center documents the projects that are being conducted.
3. The documentation, at a minimum, includes the reason(s) for implementing the project and a description of the project's results.

**II. THE FOCUS**

The focus of Precision Surgery Center is on high risk, high volume, and problem-prone areas.

**III. ANALYSIS**

1. The Precision Surgery Center will analyze the data for incidence, prevalence, and severity of problems in those areas.
2. The Precision Surgery Center will evaluate the health outcomes, patient safety and quality of care.

**IV. INDICATORS (BENCHMARKING)**

The Precision Surgery Center will utilize outcome indicators, process of care indicators, and patient perception indicators. These include but are not limited to;

1. Patient satisfaction survey results
2. Pain scores/pain relief
3. Hospital transfers
4. Healthcare associated infections
5. Cancellation of procedure/surgery (same day)
6. Medication errors resulting in patient injury (or possibility of injury)

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**B. Program Evaluation**

The Center's program evaluation system enables the Center to identify the results of services and the effects of the program on the person's served. Program evaluation information is integrated into the Center's decision making at all levels.

1. The relationship between the needs of the persons served and the services being provided is reviewed and evaluated at least annually by the Center's staff and Governing Body.
2. The Center has a program evaluation system which meets the following criteria:
  - A. Measures results of all services and procedures.
  - B. Includes all persons served or a represented sample. When sampling of these served is used to assess performance, the methods used are consistent with acceptable sampling procedures.
  - C. Evaluates post-discharge information
3. The program evaluation includes the following:
  - A. Admission criteria
  - B. A listing of services offered
  - C. Measurable objectives
  - D. Measures of effectiveness and efficiency
  - E. Measures of satisfaction of patients/ persons served
4. The system maintains the following
  - A. Case load character states, example diagnosis, functional limitations, types of disabilities
  - B. Services rendered
  - C. Dates of services, including admission and discharge
  - D. Results of services provided
5. Program evaluation management reports reflect the following
  - A. Measures of effectiveness, example benefits achieved by persons served
  - B. Measures of efficiency, for example, time cost utilization etc.
  - C. Measures of satisfaction of persons served with the program
  - D. Case load character states the interpretation of the results
6. Information produced by the program evaluation system is made available to all appropriate levels of management and staff on a timely basis. Such information is used by management to discontinue, maintain, or improve the program.

- A. The Center has the means to determine when performance is less than acceptable
  - B. When performance falls below the acceptable level, the reasons are identified
  - C. Management takes the action to improve the program performance to an acceptable level
  - D. Follow up monitoring of current directions takes place at specific times along with documentation of the results.
7. There is a systematic procedure for professional and administrative staff with review of the nature of the case load. This review occurs annually and includes:
- A. Consideration of the appropriateness of the case load for the intensity and type of services provided.
  - B. Result in determination as to whether changes are occurring in the service population which indicates a need for service modification or expansion.
  - C. The Center protects itself and its services in a manner which is accurate such as what the Center reports to accomplish in brochures, advertisements etc. is consistent with the results shown in the Center's program evaluation system.
8. A mechanism to provide for continual review of the adequacy of the program evaluation system is also maintained. The mechanism ensures that:
- A. Formal reviews take place on an annual basis
  - B. Staff affected by the evaluation system have an opportunity to recommend or make modification.
  - C. An assessment of the system's success occurs relative to increasing benefits controlling or reducing program costs, and maintaining or improving community support.
  - D. A determination of the adequacy of the program evaluation system is made.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**C. Utilization Review**

**I. PURPOSE**

To Monitor ambulatory care activity for appropriateness, effective scheduling of resources, over and under utilization of available resources.

**II. PROCEDURE**

1. A minimum of 5% or 30 (whichever is greater) of relevant medical records will be reviewed.
2. Incomplete records will be referred to Medical Records for completion and then re-reviewed.
3. Records reflecting inadequate documentation to perform procedures will be referred to a physician member of the Governing Body.
4. Records which reflect a patient complication resulting from a procedure will be referred to the Quality Improvement Coordinator and Governing Body.
5. Records complete and with medical necessity documented will be noted on the review sheet and returned to Medical Records.
6. The Physician Reviewer will refer charts that do not meet the criteria to the Quality Improvement Coordinator.
7. The following guidelines will be utilized as screening criteria in the review.

**III. CRITERIA**

1. History and Physical
  - A. Completed timely; by physician within 30 days of scheduled procedure/operation
  - B. Reflects indications for procedure/operation
  - C. Must include any known allergies, any medication reactions, list of current medications.
  - D. Documentation reflective of type of anesthesia planned (if applicable)
  - E. Documentation of care or lack of care that potentially places patient at risk. (if applicable)
  - F. Documentation of relevant comorbidities

2. Lab, X-ray, and EKG reports
  - A. On chart as ordered.
  - B. Abnormal results addressed prior to surgery.
  - C. Necessary/relevant to the patient's health status and for procedure being performed.
3. Informed Consent
  - A. Signed, dated, and witnessed.
  - B. Same as procedure performed.
  - C. Surgeon identified on consent.
4. Blood Pressure, pulse, respiratory rate and temperature within 30 minutes of actual start of surgery and prior to surgery.
5. Mental status noted.
6. Discharge instructions given, documented, with discharge plan including patient education and provisions for follow-up care.
7. Seen by physician prior to discharge.
8. Postoperative Stability
  - A. Vital signs documented within normal limits
  - B. Absence of respiratory difficulty or hypoxia.
  - C. Wound condition noted.
  - D. Mental status noted.
  - E. Serious or potentially serious complication noted and addressed.

Lack of documentation in these areas is a quality issue.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**D. Quality of Care**

**I. PREAMBLE**

The Center develops health services that demonstrate a high quality of care which is provided in a manner consistent with principles of professional practice and reflect concern for the accessibility, availability, and cost of services.

**II. POLICY**

1. The Center provides high quality of care services by demonstrating availability and accessibility of health services. This is shown by the scope of services which include surgical/procedural services, physician services, radiology, physical therapy, nursing, psychological and administrative services. Part of the laboratory, physical therapy, radiology and psychological services are provided indirectly (referred), to meet patients' needs. All referrals and consultations are clinically appropriate and timely based on the working diagnosis. This is also demonstrated by adequate coverage which exists for planned and unplanned staff absences.
2. All health care services provided at the Center are and within the current standards of care, with appropriate timely diagnosis based on findings of current history and physical examination.
2. The hours of operation of the Center reflect the needs of the patients and convenience. Waiting times for elective and scheduled cases are monitored and maintained at a reasonable level, as per the policies of the Governing Body. The Center provides an intake and assessment system for patients during normal hours of operation.
3. The Center has a written description of the mechanisms by which patients obtain care – including appointments, walk-ins, referrals – during the Center's normal hours of operation. No patients are accepted after hours of operation except in case of emergency and they are cared for at the hospital via transfer agreement. The patients are also able to get information by telephone regarding access to the services at the Center. The Center and its physicians have made provisions for emergency and after hours care. The Center provides written information about emergency and after hours care to the patients. The patients are also able to get information by telephone to such services.
4. The Center provides the mechanism for informing patients of names, professions, and titles of the professionals providing and/or responsible for their care by the Center properly identifying both orally and in writing the professionals involved in the care.
5. The Center utilizes appropriate diagnostic procedures including laboratory and radiology studies when indicated. Patients are contacted as quickly as possible for follow-up regarding any abnormal findings with diagnostic reports.

6. The Center provides treatment that is consistent with the clinical impression or working diagnosis. Medication reconciliation is performed at each patient visit.
7. The Center utilizes appropriate specialty consultations and makes them available when needed.
8. All professionals at the Center instruct and educate the patients with regards to their diagnosis and treatment program including the use of medication, appropriate preventive measures, and use of the health care system.
9. All health care professionals of the Center are encouraged to participate in educational programs and activities that are consistent with the Center's mission, goals and objectives. The Center provides access to reliable, up-to-date information pertinent to the and educational and administrative services provided.
10. The Center strives for timely and adequate transfer of appropriate documents and information when patients are transferred to us from other health care providers within and/or outside the Center. The transferred information includes any advance directives given by the patient to the Center, documents and other evidence of continuity of care. Referral to another health care professional is clearly outlined to the patient and arranged with the accepting health care professional.
11. The Center also maintains reasonable continuity of care with patient follow up regarding patient adherence to the plan of care and post-operative status.
12. The Center identifies and notifies the patients who require additional follow up for significant problems or illnesses including results of laboratory and radiology studies.
13. The Center uses performance measures to improve outcomes and assesses patient satisfaction with their care. Corrective action is taken when necessary.
14. The Center provides the resources to respond to medical emergencies which may arise in connection with services provided to patients and emergency carts are kept in adequate and proper supply and written policies address the time and review inspection of each cart. At least one physician certified in advanced cardiac life support (ACLS) is present in the facility when a patient is in the facility.
15. The Center is a cost conscious facility and the concern for the cost of care is demonstrated by:
  - A. Relevance of health care services provided and ancillary services used to the needs of patients
  - B. Avoiding duplicate diagnostic procedures
  - C. Appropriate treatment frequency
  - D. Using the least expensive alternative resources when suitable
  - E. Evaluation of cost benefit factors by appropriate personnel to determine which, if any, routine laboratory and extra studies are required.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**E. Peer Review**

The Center maintains an active, integrated and organized process of peer review as part of its peer-based QAPI program as shown by the following characteristics:

1. The professional and administrative staff understands, supports, and participates in programs of QAPI, through an organized mechanism responsible to the Governing Body.
2. At least two physicians are involved in QAPI activities in order to provide peer-based review.
3. The Medical Director and other physicians along with other health care providers also participate in the QAPI program.
4. The Center provides ongoing monitoring of important aspects of the care provided.
5. All health care practitioners participate in the development and application of the criteria used to evaluate the care they provide.
6. Data related to established criteria are collected in an ongoing and defined manner. Each physician is responsible to perform 3 random peer reviews per quarter of another physician of similar qualifications.
7. Collected data are evaluated quarterly to identify unacceptable or unexpected trends or occurrences that influence patient outcomes.
8. The results of peer review are used as part of the basis for granting continuation of clinical privileges.
9. The results of peer review activities are reported to the Governing Body, and are used as part of the granting continuation of clinical privileges.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**F. Quality Improvement**

The Center maintains an active, integrated, organized, peer based quality improvement program as shown below:

1. The quality improvement program addresses clinical, administrative, and cost of care issues as well as actual patient outcomes (results of care).
2. Quality improvement activities conducted by specific clinical disciplines within the Center (i.e. pain management, physical therapy, ambulatory surgery, nursing etc) are consistent with the characteristics of the overall quality improvement program.
3. Quality improvement activities incorporate the following:
  - A. Important problems or concerns in the care of patients are identified. Sources of identifiable problems include, but are not limited to:
    - ? Unacceptable or unexpected results of ongoing monitoring of care, such as complications, hospital transfers, malpractice cases, lack of follow up on abnormal test results, prescribing errors for medications, specific diagnoses, ect.
    - ◆ The clinical performance and practice patterns of all health care practitioners
    - ◆ Medical records review for quality of care and completeness of entries
    - ◆ Quality controls for and use of diagnostic imaging, pathology, medical laboratory and pharmaceutical services
    - ◆ Other professional and technical services provided
    - ◆ Assessment of patient satisfaction
    - ◆ Direct observation
    - ◆ Staff concerns
    - ◆ Accessibility
    - ◆ Medical/legal issues
    - ◆ Wasteful and undesirable practices
    - ◆ Over-utilization and under-utilization of diagnostic and therapeutic services
  - B. The frequency, severity, and source of suspected problems or concerns are evaluated. Health care practitioners participate in the evaluation of identified problems or concerns.
  - C. Measures are implemented to resolve important problems or concerns that have been identified. Health care practitioners as well as administrative staff participate in the resolution of the problems or concerns that are identified.

- D. The problems or concerns are re-evaluated to determine objectively whether the corrective measures have achieved and sustained the desired result. If the problem remains, alternative corrective actions are taken as needed to resolve the problem.
  - E. Through the designated mechanisms of the Center quality improvement activities are reported as appropriate to the Governing Body.
4. Findings of quality improvement activities are incorporated into the Center's educational activities.
  5. Appropriate records of quality improvement activities are maintained.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**G. Risk Management**

The Center has developed and maintains a program of risk management designed to protect the life and welfare of its patients and employees, with the following characteristics:

1. The Governing Body of the Center is responsible for oversight of the risk management program. The Risk Manager and Safety and Maintenance Coordinator is responsible for consistent application, implementation and ongoing maintenance of the program throughout the Center.
2. Education in risk management, safety and infection control policies and procedures is provided to all staff members within 30 days of commencement of employment, annually thereafter, and when there is an identified need.
3. All risk management program processes are consistently implemented throughout the Center, addressing patient safety and other issues, including;
  - A. The definition of an adverse event which is: (Sentinel Events defined as per the Nevada State regulations in section IV.3.H)
    1. An unexpected occurrence during a health care encounter involving patient death or serious physical or psychological injury or illness, including loss of limb or function, not related to the natural course of the patient's illness or underlying condition.
    2. Any process variation for which a recurrence carries a significant chance of a serious adverse outcome.
    3. Events such as actual breaches in medical care, administrative procedures, or other events resulting in an outcome that is not associated with the standard of care or acceptable risks associated with the provision of care and service for a patient.
    4. All events involving reactions to drugs and materials.
    5. Circumstances or events that could have resulted in an adverse event.
  - B. The identification, reporting, and appropriate analysis of all adverse events. This analysis involves basic or causal factors underlying the incident and identifies potential improvements in processes to reduce the likelihood of such events in the future.
  - C. Near miss events are reported to the Risk Manager for evaluation.
  - D. Periodic review of all litigation involving the organization and its staff and health care professionals is performed by the Governing Body at regular quarterly meetings.
  - E. All patient complaints and grievances are reviewed promptly by the Administrator per the grievance policy. (Section
  - F. Periodic review of clinical records and clinical record policies.

G. Documentation of timely notification to the professional liability insurance carrier when adverse or reportable events occur.

H. Methods by which a patient is discharged against medical advice, dismissed from care or refused care.

I. Established guidelines for managing a situation in which a physician becomes incapacitated during medical or surgical procedures, and a process for communicating concerns regarding an impaired health care professional.  
(Section III.7.J and VI.3.B)

J. Reporting and reviewing all incidents reported by employees, visitors, or patients.

K. Establishment of responsibility for, and documentation of coverage after normal working hours.

4. The Center has written policies restricting observers in patient care areas and addressing those persons authorized by the governing body to perform or assist in the procedure area.
5. The Center has established a requirement for evidence of patient consent for all other persons allowed in patient care areas that are not authorized staff members. This includes students, physicians, health care industry representatives, surveyors, ect.
6. The Center has established methods of dealing with inquiries from governmental agencies, attorneys, consumer advocate groups, reporters, and the media.
7. The Center has established guidelines to deal with methods for complying with all applicable government regulations, and to deal with methods for prevention of unauthorized prescribing.
8. Collection of unpaid accounts is always reviewed before referral to a collection agency with consideration of multiple factors including patient financial status.

**PRECISION SURGERY CENTER**  
**IV. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**  
**3. Performance Improvement Projects and Evaluation**  
**H. Sentinel Events Policy**

**I. PREAMBLE**

An integral part of any risk management program is the establishment of a sentinel event intervention plan. This plan is designed to ensure maximum risk-prevention and loss-reduction activities on the part of the health system in response to a sentinel event.

**II. DEFINITION OF A SENTINEL EVENT**

The Nevada Division of Public and Behavioral Health has previously defined a sentinel event as any unexpected occurrence involving death or serious physical or psychological injury or the risk thereof. The phrase “the risk thereof” includes “any process variance for which a recurrence would carry a significant chance of an adverse outcome.” Assembly Bill 28 was passed and became effective October 1<sup>st</sup>, 2013. It replaced the former definition of a sentinel event (above) with those defined in the National Quality Forum's (NQF) Serious Reportable Events in Healthcare – 2011 Update: A Consensus Report. The following is the new definition of a sentinel event as per “Appendix A.” Some of the events below do not apply to the ambulatory surgical healthcare setting specifically but are included for completeness. All events listed below are reportable to the Nevada Division of Public and Behavioral Health via their Sentinel Event Registry. Contact and event forms are located online at: [http://health.nv.gov/SER\\_forms.htm](http://health.nv.gov/SER_forms.htm)

1. Surgery or invasive procedure performed on the wrong patient, wrong side or site.  
Or wrong procedure performed on a patient.
2. Unintended retention of a foreign object in a patient after surgery or invasive procedure.
3. Intraoperative or immediate postoperative death in and ASA Class I patient.
4. Patient death or serious injury associated with the use of contaminated drugs, devices or biologics provided by the healthcare setting. Or associated with the use of function of a device in patient care, in which the device is used or functions other than as intended. Or associated with intravascular air embolism that occurs while being cared for in a healthcare setting.
5. Discharge or release of a patient who is unable to make decisions, to other than an authorized person. (ex. of such person, child or adult with Alzheimer's)
6. Patient death or serious injury associated with patient elopement or disappearance.
7. Patient suicide, attempted suicide or self-harm that results in serious injury while being cared for in a healthcare setting.
8. Patient death or serious injury associated with a medication error (i.e. wrong drug, wrong preparation, wrong patient, wrong dose, wrong time, wrong route)
9. Patient death or serious injury associated with unsafe administration of blood products.
10. Maternal death or serious injury associated with labor or delivery in a low risk pregnancy while being cared for in a healthcare setting. Or death or serious injury of a neonate associated with labor and delivery in a low risk pregnancy.
11. Patient death or serious injury associated with a fall while being cared for in a healthcare setting.

12. Any Stage 3, Stage 4 or unstageable pressure ulcer acquired after admission to a healthcare setting.
13. Artificial insemination with the wrong donor sperm or wrong egg
14. Patient death or serious injury associated with loss of irreplaceable biological specimen. Or from failure to follow up or communicate laboratory, pathology or radiology test results.
15. Patient or staff death or serious injury associated with an electric shock in the course of patient care in a healthcare setting.
16. Any incident in which systems designated for oxygen or other gas to be delivered to a patient contains no gas, the wrong gas, or are contaminated by toxic substances.
17. Patient or staff death or serious injury associated with a burn incurred from any source in the course of a patient care in a healthcare setting.
18. Patient death or serious injury associated with the use of physical restraints or bed rails while being cared for in a healthcare setting
19. Death or serious injury of a patient or staff associated with the introduction of a metallic object into the MRI area
20. Any instance of care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed healthcare provider
21. Abduction of a patient/resident of any age
22. Sexual abuse/assault on a patient or staff member within or on the grounds of a healthcare setting
23. Death or serious injury of a patient or staff member resulting from a physical assault (i.e., battery) that occurs within or on the grounds of a healthcare setting.

### **III. RESPONSIBILITY**

Upon notification of the incident, the initiation of the sentinel event intervention plan is the responsibility of the Administrator (if unavailable, the Medical Director, or Clinical Director) who has the authority to implement any of the following procedures applicable to the nature of the event.

Any member of the medical or Center staff may report the incident.

1. Stage I: Immediately after the event (the first 24 hours)
  - A. Make sure the Center is doing everything possible to provide follow-up care/services to ensure the best possible outcome for injured parties/property and/or staff members.
  - B. Ensure that all parties to the event receive appropriate information (for example, the patient's attending physician, the patient, family members, staff members) to avoid miscommunications. Establish a mechanism for updates as needed, using a designated spokesperson for consistency. The spokesperson should be someone familiar to and trusted by the patient and family, such as the Administrator, Clinical Director or Medical Director.
  - C. Inform the appropriate members of the administration and public/media relations so they can consistently provide information to the appropriate outside parties.

- D. Follow any immediate regulatory reporting requirements, such as the Nevada Division of Public and Behavioral Health, Occupational Safety and Health Administration in the case of an employee injury/death, ect. Further information can be found in the Injury and Illness Prevention Program Manual.

The Institutional Review Board will receive information if the event involves a research patient or experimental procedure.

- ◆ Determine if the event fits the Nevada Division of Public and Behavioral Health's definition of a reportable sentinel event. The Medical Director and Assistant Medical Director are ultimately responsible for determining if the event necessitates reporting to the accreditation agency and the State reporting agency. If a sentinel event meets this criteria, the Center will notify the Accreditation Agency within three business days of the occurrence (or within three business days of our Center's awareness of the event).

- E. Document all information in the medical record.
- F. Consult with legal counsel and other resources as needed.
- G. Obtain, sequester, or preserve appropriate evidence (for example, photographs of the location of the injury or the equipment that malfunctioned).
- H. Gather detailed information about the event.
- I. Remind staff of the confidentiality surrounding the incident and the patient.

2. Stage II: Within 24 hours to one week of the event

- A. Interview all parties to the event. Obtain written statements to gather an accurate description of the sequence of events. The team may invite involved staff to the meeting to review what happened, provide an opportunity for shared feelings about the event, promote a "business as usual" approach to patient care, and jointly work together to do a root-cause analysis and action plan. This would be at the discretion of the staff member's or members' department-head and is optional for staff who already provided information via an interview.
- B. Determine the root cause(s) of the event, including analysis of all processes and systems related to its occurrence. Involve all appropriate staff in this analysis. See the Accreditation Agency framework for conducting a root-cause analysis to use as a guideline for discussion.
- C. Determine the potential improvements in processes or systems that would tend to decrease the likelihood of such events occurring in the future. Examples may include a change in communications, forms, training, equipment, policies, and procedures. If none exist, indicate the analysis with the determination that no such opportunities exist.
- D. Establish a plan to address identified opportunities for improvement or formulation of a rationale for not undertaking such changes. Indicate time frame, person responsible, and criteria to evaluate effectiveness of the actions.
- E. If a piece of equipment is involved in the incident, the risk manager will submit the

appropriate forms to the Food and Drug Administration and manufacturer within 10 days. The risk manager will preserve the equipment in its last-used state and have an objective, third-party vendor review the equipment.

- F. The risk manager will initiate the Bill Forgiveness Protocol if applicable to the nature of the event.
  - G. The Risk Manager or Medical Director will notify all appropriate insurance carriers and plan for the proper handing and protection of the medical record and other potential evidence (including log books, policies, procedures, or schedules) needed in anticipation of possible litigation.
3. Stage III: Post-event reporting
- A. If the event meets the Accreditation Agency definition of a sentinel event, the Center will submit a report of the root-cause analysis and process improvement plans to the Accreditation Agency within 30 days of the event.
  - B. The risk manager will, on a quarterly basis, provide a summary to the Governing Body, on all incidents managed through the sentinel event intervention action plan.

#### **IV. DEFINITION OF ADVERSE EFFECT**

In medicine, an adverse effect is a harmful and undesired effect resulting from a medication or other intervention such as surgery. An adverse effect may be termed a “side-effect,” when judged to be secondary to a main or therapeutic effect, and may result from an unsuitable or incorrect dosage or procedure, which could be due to medical error. Some adverse effects only occur when starting, increasing or discontinuing a treatment. Using a drug or other medical intervention which is contraindicated may increase the risk of adverse effects. Adverse effects may cause medical complications of a disease or procedure and negatively affect its prognosis. They may also lead to noncompliance with a treatment regimen.

#### **V. PREVENTION**

- 1. To prevent an adverse effect/reaction:
  - A. Verify allergies.
  - B. Mark on the patient’s wrist band.
  - C. Double check medication list with another registered nurse.
- 2. In the event that an adverse effect occurs, watch for the following signs:
  - A. Rash
  - B. Itching
  - C. Anaphylaxis
  - D. Cardiac arrhythmias
  - E. Cutaneous eruptions

#### **VI. MONITORING**

- 1. In the event that an adverse reaction occurs:
  - A. Alert physician.
  - B. Monitor all patient vitals.

- C. Follow orders given by physician.
- D. Investigate all medications given.
- E. Document all symptoms.
- F. Document the event by completing incident report.
- G. Discharge patient per physician's orders.
- H. Follow up with post-op phone call same day/next day

## **VII. DEFINITIONS OF TERMINOLOGY**

1. Incidence: The incidence is a technical term used in epidemiology, referring to the frequency with which something, such as a disease, appears in a particular population or area.
  - A. In this epidemiology, the incidence is the number of newly diagnosed cases during a specific time period.
  - B. As an example, the annual incidence of surgical site infections in Precision Surgery Center would be the rate that results when dividing the number of such infections that occurred in a calendar year by the total number of surgical cases in the Precision Surgery Center during that same year.
  - C. An annual incidence of emergency transfers to a hospital would be the rate that results when dividing the number of such transfers by the total number of surgical cases during the same year.
  - D. The annual incidence of falls would be the rate that results when dividing the number of such falls by the total number of surgical cases during the same year.
  - E. The annual incidence of any type of complication would be the rate that results when dividing the number of such a complication by the total number of surgical cases during the same year.
2. Prevalence: The prevalence is a technical term used in epidemiology, and is a statistical concept referring to the number of cases of a disease that are present in a particular population at a given time.
  - A. The prevalence may be measured by observing the hand hygiene practices of all staff providing direct patient care, in order to assess the prevalence of good versus deficient practices.
  - B. The prevalence of facet joint pain in the population presenting to interventional pain management programs may be determined by performing appropriate diagnostic blocks.
  - C. The prevalence of illicit drug use, drug abuse, or lack of compliance may be determined by appropriate history, by review prescription monitoring program results, and urine drug testing.
3. Severity of Problems: Any single incident of a transfer of a patient to a hospital represents a serious, adverse, unplanned outcome of the surgical procedure.
  - A. Precision Surgery Center tracks and evaluates all such cases, due to their severity, even if they are low volume incidences.
  - B. Any patient death, paralysis, coma, or other major permanent loss of function associated with a procedure or medication error are considered as severe and are monitored, even though they are low volume.

4. Error: An error is defined as the failure of a planned action to be completed as intended (i.e., error of execution) or the use of a wrong plan to achieve an aim (i.e., error of planning).
5. Adverse event: An unexpected occurrence during a health care encounter involving patient death or serious physical or psychological injury or illness, including loss of limb or function, not related to the natural course of the patient's illness or underlying condition. This includes all events involving reactions to drugs and materials, and circumstances that could have resulted in an adverse event.

Any process variation for which a recurrence carries a significant chance of a serious adverse outcome.

Events such as actual breaches in medical care, administrative procedures, or other events resulting in an outcome that is not associated with the standard of care or acceptable risks associated with the provision of care and service for a patient.

- A. An adverse event attributable to error is a preventable adverse event.
- B. Example; a surgeon operates on the right shoulder of a patient with a left shoulder rotator cuff injury requiring surgery, this is an error resulting in sentinel event.
- C. Not every adverse event or sentinel event is the result of an error. If the result is due to the unknown nature of the patient's reaction, then even if the procedure was performed appropriately or a particular medication was administered appropriately, it is an adverse event.
- D. Not every error results in an adverse event. Even then it is considered an error.
  - ◆ Precision Surgery Center employs a time-out procedure to verify the identity of the patient and site of surgery and recognizes the error before surgery begins.
- E. Precision Surgery Center tracks all patient adverse events in order to determine through subsequent analysis whether they were the result of errors that should have been preventable, to reduce the likelihood of such events in the future.
  - ◆ Precision Surgery Center also identifies errors that result in near misses, since such errors have the potential to cause further adverse events.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **1. Purposes**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **1. Purposes**

#### **A. Principles**

#### **I. PREAMBLE**

1. The Governing Body strives to ensure a safe and sanitary environment, properly constructed, equipped, and maintained to protect the health and safety of patients and personnel. All facilities are operated in a safe and secure manner, with written policies addressing safety and security practices. Further safety and emergency information is provided by Compliance Alliance, LLC, and is located in the employee Injury and Illness Prevention Manual.
2. Precision Surgery Center provides a safe, functional and sanitary environment for the provision of surgical services.
  - A. Precision Surgery Center has separate operating/procedure rooms, recovery rooms and waiting area. Each operating room is designed and equipped so that the types of surgery conducted can be performed in a manner that protects the lives and assures the physical safety of all individuals in the area.
  - B. Reception areas, toilets, and telephones are provided in accordance with patient and visitor volume.
  - C. Examination rooms, dressing rooms and reception areas are constructed and maintained in a manner that ensure patient privacy during interviews, examinations, treatment and consultation as applicable.
3. Precision Surgery Center has established a program for identifying and preventing infections and environmental hazards that could lead to injury of patients, visitors or staff members. The program focuses on maintaining a safe and sanitary environment, and reporting the any issues to appropriate authorities.
4. Precision Surgery Center has established a program for providing safety from fire.
5. Precision Surgery Center provides appropriate emergency equipment in the operating/procedure, and recovery rooms.
6. Personnel trained in the use of emergency equipment and in advanced cardiac life support (ACLS) are available whenever there is a patient in Precision Surgery Center and during hours of operation.
7. Necessary personnel, equipment and procedures are established and available to deliver safe care, and to handle medical and other emergencies that may arise.

#### **II. PRINCIPLES**

1. The policies and procedures are approved in writing by the Chief Executive Officer (CEO) who with the Governing Body evaluates the safety management program on an annual basis and if necessary revises the objectives, scope, organization, and effectiveness of the safety management program.
2. The Center has designed a safe, accessible effective and efficient environment of care consistent with its mission, vision, values, services, and objectives as well as law and

regulation.

- A. All the facilities in which patients receive treatment comply with all applicable local, state and federal building codes and regulations. The facilities are also in compliance with applicable state and local fire prevention regulations, published by the National Fire Protection Association 101, *Life Safety Code*.
  - B. During the design and construction of these buildings (environment of care) the Center used appropriate guidelines for construction of medical facilities meeting the local, state Department of Human Health and Services, Division of Licensing and Regulation as well as Medicare regulations as established by the Health Care Financing Administration.
  - C. The Center provides a life safety management program which exists to protect patients, personnel, visitors, and property from fire and products of combustion and to provide for the safe use of buildings and grounds. This is established and maintained by regulations in compliance with appropriate provisions of the current edition of NFPA 99 Health Care Facilities Code of the National Fire Protection Association.
  - D. The Center maintains an ongoing program designed to ensure the building and grounds are suitable to the nature of the services provided and the ages and other characteristics of the patient population served.
  - E. The Center also establishes safe use of buildings and grounds for physically disabled individuals by providing reasonable accommodations.
  - F. The Center maintains emergency services which are readily identifiable and easily accessible.
  - G. The Center maintains an ongoing program to establish and maintain fire safety. Periodic inspection by the local fire control agency is done at the discretion of the Las Vegas Fire Department, as appropriate.
3. The Center ensures that its facilities and its personnel are adequately protected from fire or other disasters. This is achieved by;
- A. Fire-fighting equipment is appropriately maintained and fire extinguishers are placed in adequate numbers and are the proper type for each potential type of fire.
  - B. All staff members are provided with documented periodic instruction in the proper use of safety, emergency and fire-extinguishing equipment.
  - C. All exits are prominently illuminated with a sign that operates on emergency 1 power, including exits from each floor or hall.
  - D. Emergency lighting is present as appropriate throughout the facility to provide adequate illumination for evacuation of patients and staff in case of an emergency.
  - E. Stairwells are protected by fire doors, as appropriate, and smoking is prohibited within the Center. The designated smoking area is located in the vacant lot 30 feet from the building's entrance.
  - F. At least one drill is conducted every quarter for evaluation and training of the internal emergency and disaster preparedness plan. At least one drill is for fire evacuation and one drill is for Code 99 procedure evaluation for CPR techniques. Each drill is documented and evaluated to promptly implement any necessary

corrections or modifications to the plan.

4. Safety is the utmost priority of the Center. Safety management is achieved by:
  - A. Maintaining and supervising all grounds and equipment by qualified personnel.
  - B. Conducting risk assessments that proactively evaluate the impact of buildings, grounds, equipment, patients and internal physical systems on patient and public safety by periodic inspections and other means such as examining safety issues by appropriate representatives from various departments including administrative, clinical, and support services.
  - C. Hazards that might lead to slipping, falling, electrical shock, burns, poisoning or other trauma are identified and addressed appropriately. Processes for the management of identified hazards, potential threats, near misses and other safety concerns are established.
  - D. Reporting and appropriately investigating all incidents of property damage, occupational illness, and patient, personal or visitor injury in conjunction with continued and ongoing hazardous surveillance, including response to product safety recalls.
  - E. Appointing a Safety and Maintenance Coordinator to oversee the development, implementation, and monitoring of safety issues. It is the responsibility of the Administrator to intervene whenever conditions pose an immediate threat to life or health or threaten damage to equipment or buildings.
  - F. The Center also has established an orientation and education program which addresses:
    - ◆ General safety processes.
    - ◆ Department specific safety.
    - ◆ Specific job-related hazards
    - ◆ Provision of safety-related information through new employee orientation.
    - ◆ Provision of safety-related information and education through inservice and continuing education.
  - F. The Center has requested total staff participation in safety management activities.
  - G. The Governing Body monitors the inspection activities.
  - H. The Governing Body has established emergency and incident reporting procedures and communication. It has also established a process for reporting known adverse incidents to appropriate state and federal agencies when required by law.
  - I. The Governing Body has assigned appropriate inspection, preventive maintenance and testing of safety equipment on a periodic basis.
  - J. Safety policies have been established for the prevention of falls or physical injuries involving patients, staff and visitors. The reporting of falls or injuries is accurate and timely as required by Nevada State regulations.
5. The Center recognizes that security of the Center's staff and patients is of paramount importance. The safety coordinator manages an ongoing organization-wide process to collect and evaluate information about hazards and safety practices that is used to identify

safety management issues. The information collection and evaluation system includes:

- A. Summaries of safety management, life safety management, equipment management, and utilities management problems, failures, usage errors and relevant published reports of hazards associated with any of these areas.
  - B. Documented service, performed at least semi-annually, of all areas of the Center to identify environmental hazards and unsafe practices.
  - C. A system for reporting and investigating all incidents that involve property damage, occupational illness, outpatient, personnel, risk and;
  - D. Summaries of actions taken as a result of other organization-wide monitoring activities, including Quality Assessment and Performance Improvement (QAPI) activities.
  - E. The safety coordinator analyzes identified safety management issues and develops recommendations for resolving them by working with the appropriate staff to implement recommendations and to monitor the effectiveness of the changes. The results of monitoring are important to the safety coordinator.
  - F. Summaries of all identified safety management issues are communicated at least annually to the Governing Body, CEO, directors of all departments/services, and those responsible for other monitoring activities, including QAPI.
  - G. All new personnel including medical staff members, allied health providers and other employees are oriented to the employee Injury and Illness Prevention Program Manual, and all personnel take part in continuing safety education and training and in compliance with all requirements.
  - H. Policies, procedures, and different criteria for identifying, handling, storing, using, and disposing of hazardous materials including its use as well as generation and disposal of hazardous waste. These policies are detailed in the employee Injury and Illness Prevention Program Manual.
  - I. Training for and, as appropriate, monitoring of personnel who manage and/or regularly come into contact with hazardous materials and/or waste.
  - J. Monitoring of compliance with the program's requirements.
6. All equipment is evaluated for inclusion in the safety program, and its evaluation is documented prior to this usage. This is performed by:
- A. Equipment and testing procedures and user training programs designed to manage clinical and physical risk.
  - B. By testing each piece of equipment prior to its use and at least annually thereafter, per manufacturer's recommendations
  - C. Orientation and at least annual continuing education of individuals who use and/or maintain the equipment is also performed. All newly acquired equipment and devices for patient use are tested and staff is educated appropriately to their use prior to use on patients.
  - D. In general the equipment management program is used to identify and document

equipment problems, failures, and user errors that have or might have an adverse effect on patient safety and/or quality of care.

- E. When problems are identified, appropriate actions are taken to resolve these issues and such actions are documented.
  - F. The Center has a policy whenever information is received that reasonably suggests the medical equipment may have caused or contributed to the death, serious injury, or serious illnesses of patients or other individuals. The Center reports this information as required by the State of Nevada Department of Public and Behavioral Health.
7. The Center maintains a utilities management program designed to ensure the operation's reliability, assess the special needs, and respond to failures of utility systems that support the patient care environment. These include:
- A. Criteria which include utilities for life support, infection control, environmental support, and equipment support elements.
  - B. Summary of the evaluation, including identified problems, failures, user errors, and published information about environmental and occupational hazards is reported to the safety coordinator.
  - C. Adequate lighting and ventilation are provided in all areas of the Center, all facilities are clean and properly maintained.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **1. Purposes**

#### **B. Environmental Security**

#### **I. POLICY**

1. The Safety and Maintenance Coordinator shall be responsible for maintaining the following, in order to provide increased security for patients, visitors, personnel, and property.
2. The Safety and Maintenance Coordinator will be responsible for tracking and reporting all security incidents involving employees or patients to the Governing Body at least quarterly, or more often when indicated.

#### **II. RESPONSIBILITY OF SAFETY AND MAINTENANCE COORDINATOR**

1. Building and grounds patrol
2. Investigation of thefts, disturbances, suspicious activity
3. Facility access, including locking, unlocking, and restricting traffic at various times
4. Monitoring systems response
5. Staff assistance with patient restraint and intervention in disruptions by patients, visitors, and staff
6. Safety responsibilities, including disaster, fire, and hazard surveillance
7. Record keeping and incident reports
8. All facility areas not in use during evening and night hours, weekends, and holidays are to be locked.

#### **III. IDENTIFICATION**

1. Facility name badges shall be worn by all employees and staff.

#### **IV. EMPLOYEE RESPONSIBILITIES**

1. Employees shall be responsible for knowing who should legitimately be in their work area and request that all facility staff display their name badge.
2. Secure offices not in use, secure lockers, and lock desks.
3. Observe and report suspicious activities or personnel and confront unauthorized personnel.
4. Direct any individuals who are without visible form of identification to the appropriate place.
5. Whenever possible, not only provide directions, but take time to escort visitors to their destination.
6. Notifying Safety and Maintenance Coordinator immediately when a person is observed not wearing name badge who acts suspicious.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **1. Purposes**

#### **C. Risk Management**

#### **I. PURPOSE**

1. The Center has developed and maintains a safe program of risk management designed to protect the life and welfare of its patients and employees, as well as to provide high quality patient care.
2. The Risk Management Program shall be responsible to assist patient care processes and outcomes and to improve them where indicated.
3. The Risk Management Program shall identify risks to patient safety, physician liability, facility, property damage, and theft, and to minimize these risks.

#### **II. POLICY**

1. The Governing Body delegated the Risk Manager and Safety and Maintenance Coordinator, who are responsible for investigating and determining applicable standards of care as per national, state, and local requirements.
2. The Risk Manager, Safety and Maintenance Coordinator, and Quality Improvement Coordinator are established for purposes of complying with the risk management statutes and to evaluate and improve the quality of health care services provided in this Center.
3. The reports, statements, memorandums, proceedings, findings, and other records related to this and the Center in evaluating and improving the quality of health care services provided by the Center or peer review records, are privileged and shall not be subject to discovery, subpoena, or used as evidence in any judicial or administrative proceeding, except as otherwise provided by statute.
4. It is the policy of the Center that all records and reports of the Risk Manager, Safety and Maintenance Coordinator or Quality Improvement Coordinator are confidential and privileged.

#### **III. OBJECTIVES**

The Risk Management Program is designed to:

1. Identify areas of risk in the clinical aspects of patient care and safety, as well as employee safety.
2. Identify criteria for screening cases with risk potential regarding clinical aspects of patient care and safety, as well as employee safety.
3. Establish the investigative and evaluative process applied to cases with risk potential.
4. Ensure timely intervention in events that fall below standards of practice.
5. Develop policies and programs to reduce risk in clinical aspects of patient care and safety, as well as employee safety.

6. Establish communication between Risk Management and Quality Assurance functions in the Center.
7. Report risk management activities to the appropriate local, state, and national authorities, as well as licensing agencies as mandated by the law.

#### **IV. PROCEDURE**

1. Consistent application of the risk management program throughout the Center, including all departments and service locations.
2. Methods by which a patient is discharged against medical advice.
3. Collection of unpaid accounts is always reviewed before referral to a collection agency with consideration of multiple factors including patient financial status.
4. Reporting and reviewing all incidents reported by employees, visitors, or patients.
5. Periodic review of all litigation involving the Center and its staff and independent health care practitioners.
6. Review of all deaths, trauma, adverse events, and patient complaints.
7. The Center has established methods of dealing with inquiries from governmental agencies, attorneys, consumer advocate groups, reporters, and the media.
8. The Center has established guidelines for managing a situation in which a physician becomes incapacitated during a medical or surgical procedure.
9. The Center has established guidelines to deal with methods for complying with all applicable government regulations, and to deal with methods for prevention of unauthorized prescribing.
10. The risk management program at the Center conducts a periodic review of clinical records and clinical record policies, as well as provides education in risk management activities to all staff.

#### **V. METHODS OF OBSERVATION**

1. Variance Reports – the form used to report “significant incidents.”
2. Frequent review of logs for equipment maintenance, emergency carts, automated external defibrillator (AED), monitors, etc.
3. Maintenance of volume and cost statistics.
4. Post-operative follow-up calls to patients – all adverse comments referred to the Risk Manager and/or Quality Improvement Coordinator.
5. Patient satisfaction surveys – with a high return rate – adverse comments reviewed and followed up by the Quality Improvement Coordinator.
6. Use of appropriate credentialing requirements for the staff.
7. Continuous monitoring of patient care areas.
8. Peer review by chart sampling review for compliance with staff physician and nursing standards.

9. The Risk Manager will be responsible for surveying variance reports, active litigation files, potential litigation incidents, and reporting to the Governing Body.
10. All reports submitted to the Governing Body, all complications submitted to the Risk Manager and Quality Improvement Coordinator. All hospital transfers should be reviewed in detail.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **2. Physical Environment**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **2. Physical Environment**

#### **A. Preamble**

#### **I. POLICY**

The Precision Surgery Center provides a safe, functional and sanitary environment for the provision of surgical services.

#### **II. PROCESS**

1. Each operating/procedure room is designed and equipped so that the type of surgery/procedure conducted can be performed in a manner that protects lives and ensures the physical safety of all individuals in the area.
  - A. Operating rooms are designed in accordance with industry standards and state licensure requirements with specifications for the operating room design and construction for the types of surgical procedures performed in the room.
  - B. The operating room temperature and humidity are monitored and maintained in accordance with the accepted standards of practice.
  - C. The entire surgery center is appropriately equipped for the types of surgery performed in Precision Surgery Center with appropriate facility equipment including lighting, generators, air handlers, medical gas systems, air compressors, vacuum systems, and medical equipment.
  - D. The operating room equipment is inspected, tested, and maintained by Precision Surgery Center in accordance with federal and state laws including regulations and manufacturers' recommendations.
  - E. Prior to use, appropriate education and training is provided to intended operators of all equipment, including newly acquired devices or products used in the care of patients. The Safety Coordinator and Clinical Director are responsible to ensure that appropriate clinical education occurs prior to use of a newly acquired device in the care of patients.
2. Precision Surgery Center has a separate recovery area and waiting area.
  - A. The waiting room and recovery are not shared with the physician's office.
  - B. Precision Surgery Center has a separate "Phase 1" recovery area equipped with 4 recovery beds and appropriate equipment. It also has a step down area for "Phase 2" recovery with 4 patient chairs. It has a separate area for preoperative preparation of patients which also has appropriate equipment.
  - C. The recovery area is not used as a general waiting area and is semi-restricted.
3. Precision Surgery Center has established a program for identifying and preventing infections, maintaining a sanitary environment, and reporting to appropriate authorities as required.
  - A. Precision Surgery Center has a program to follow-up on each patient after discharge, in order to identify and track infections associated with the patient's stay

in the Precision Surgery Center.

- B. Precision Surgery Center has not established routine post surgical laboratory testing for infectious diseases. However, if the information becomes available of an infection in the post-discharge period from the patient or patient's physician, Precision Surgery Center will inquire whether there is a lab confirmation of infectious disease, and, if there are indications that the infection was associated with the patient's stay in Precision Surgery Center.
  - C. If it is a reportable disease, the case will be reported to the appropriate state authorities.
4. Precision Surgery Center has delegated a portion of the follow-up responsibility to the physicians on Precision Surgery Center's staff who will see the patients in their office post-discharge.
- A. Further, Precision Surgery Center's program includes a mechanism for ensuring that the results of follow-up are reported back to Precision Surgery Center and documented in the patient's medical record.
5. During times of construction, demolition or renovation, the Center will perform a proactive and ongoing risk assessment for existing or potential environmental hazards. implement, document and enforce Interim Life Safety Measure (ILSM), to temporarily compensate for hazards posed by Life Safety Code (LSC) deficiencies or construction activities.
5. Emergency Equipment
- A. Appropriate emergency equipment and supplies are located in the crash cart(s) and are readily accessible to all areas of each patient care area. All emergency equipment is checked and maintained by appropriate staff members and contracted companies. It includes at least the following:
    - B. Emergency call system
    - C. Oxygen
    - D. Mechanical ventilatory assistance equipment including airways, manual breathing bag (AMBU bag)
    - E. Cardiac defibrillator
    - F. Cardiac monitoring equipment
    - G. Tracheostomy set (Nu-Trake)
    - H. Laryngoscope and endotracheal tube suction equipment
    - I. Emergency medical equipment and supplies specified by the medical staff
7. Precision Surgery Center consists of multiple operating rooms and ensures that there is sufficient equipment to handle multiple simultaneous emergencies.
8. Precision Surgery Center's medical staff has adopted a policy, in writing, that addresses

additional emergency equipment and supplies, such as medications routinely used in emergencies, which are immediately available in the operating rooms and crash carts.

9. Emergency Personnel

- A. Policy: Precision Surgery Center has at all times when a patient is in the Precision Surgery Center, personnel trained in the use of emergency equipment and in advanced cardiac life support (ACLS).

**III. PROCESS OF PROCEDURE**

1. Whenever there is a patient who has been registered in the reception area and not yet discharged from Precision Surgery Center, including patients in the waiting area, in preoperative preparation, in surgery, or in the recovery area, Precision Surgery Center has clinical personnel present who have appropriate training and competence in the use of required emergency equipment and supplies.
2. There is a staff member present in Precision Surgery Center who is trained in CPR techniques, including ACLS.
3. The Center provides training facilities for all employees. Thus, there are multiple nurses and physicians trained in advanced cardiac life support techniques.
4. The training personnel are in sufficient numbers in multiple areas.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **2. Physical Environment**

#### **B. Physical Facilities**

The location of the program in the community ensures accessibility to persons served, to the staff and visitors. There is adequate parking, driving areas, and other common services. The physical area is adequate in size and design to promote efficiency and flexibility in operations and is equipped to meet established standards of all professional, industrial, or general services. Size, design and equipment reflects appropriate professional and legal requirements for safe and efficient operations and promotes the dignity and self-worth of persons served.

Suitable locations are designated within the office building for activities such as interviews, case dictations, staff conferences, psychometric testing, etc to provide for confidentiality of information of the persons served. The physical space allocated for a specific function or service is adequate for the activities performed.

The building has adequate lighting to allow safe exit from the building in the event of a power failure. Since functions are held during evening hours and since power outages frequently occur during storms which reduce natural lighting, the physical plant has an alternate system of lighting which is not dependent on the primary source of power. This is accomplished by emergency lighting all over the Center, along with an emergency generator for major hallways and the entire Precision Surgery Center.

This building has installed equipment for fire detection and warning devices which are appropriate to the needs of the patients and staff. Testing of fire alarm and inspection of fire suppression systems, including verification of signal transmission is performed and documented.

Environmental hazards associated with safety are identified and safe practices are implemented throughout the Center. Daily operations reflect an awareness of the need to maintain a safe and healthy environment.

Equipment used in all programs is calibrated and maintained in accordance with manufacturer's recommendations. All personnel received adequate education and training for use of all equipment, supplies and medical devices during orientation. Any newly acquired equipment obtained at the Center will not be used for patient care until appropriate education and training has been provided to all staff members involved with its use. The Safety Coordinator and Clinical Director are responsible to ensure this training is performed and documented. Vendor representatives are not used as a sole source of clinical education and training.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **3. Fire Safety**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **3. Fire Safety**

#### **A. Introduction**

#### **I. FORWARD**

When fire strikes, the actions taken during the first few minutes make the difference between containment and disaster. The following general and specific instructions shall be followed as closely as possible by all Center personnel. Additional guidelines for disaster preparedness are in the employee Illness and Injury Prevention Program Manual.

#### **II. TO EACH AND EVERY EMPLOYEE**

Each employee should know the following: where fire extinguishers and alarm pulls are located and how to use them, and where the oxygen shut-off valves are located. This is reviewed with each employee upon initial orientation and at least annually.

#### **III. FIRE EXTINGUISHERS**

The Center is equipped with general purpose portable fire extinguishers that can safely be used on any type of fire. They are in multiple locations throughout the Center. Each employee is provided documented periodic instruction in the proper use of emergency and fire-extinguishing equipment.

#### **IV. OXYGEN SHUT-OFF**

The main shut-off is located in the surgery center's medical gas supply room. It is the responsibility of the Clinical Director or the Administrator to shut this valve off if he/she deems it necessary. No other employee is to touch the valve without specific instructions from the Administrator, Clinical Director or Medical Director. Patients on oxygen could be endangered if the oxygen supply is shut down before portable units are enacted.

#### **V. FIRE EMERGENCY PRE-PLAN**

1. Know the location of the nearest fire alarm, fire extinguishers, and exits.
2. Dial 911.

#### **VI. DUTIES AND TRAINING**

1. The Safety and Maintenance Coordinator, with the advisory support of the Fire Department, and in conjunction with Compliance Alliance, LLC, undertakes the organization and training of all Center employees in a Fire-Safety Program. All medical staff members and other employees are educated in fire prevention, fire hazard reduction and the Center's policies and procedures of fire safety and response. Compliance Alliance, LLC manages the employee Injury and Illness Prevention Program and further disaster preparedness instructions are located in the employee Manual.

2. The Administrator and Clinical Director will be responsible to see that all employees under their supervision are completely informed and trained, and that each person knows his/her duties and responsibilities in the event of a fire. All training and education is done during initial orientation and annually, or more often as needed.
3. Fire drills are performed at least one per quarter with annual updates in fire safety and prevention. These are performed by the Safety and Maintenance Coordinator in conjunction with other members of the Governing Body, as appropriate.

## **VII. IN CASE OF FIRE**

R = Rescue patients immediately from fire and/or smoke area.

A = Pull fire alarm station and call emergency number – 911. Give exact location.

C = Contain the smoke or fire by closing all doors to rooms and corridors.

E = Extinguish the fire (when safe to do so).

## **VIII. DIRECT FIRE DEPARTMENT**

One person shall be dispatched to the front entrance to direct the Fire Department to the fire area.

## **IX. GENERAL INSTRUCTIONS FOR ALL EMPLOYEES**

1. Turn off all electrically operated equipment, except lights. Safety personnel will shut off air conditioning and ventilation systems if necessary.
2. Keep telephone lines clear for fire control.
3. Make sure all fire, corridor and room doors are closed.
4. Clear all corridors and exits of unnecessary traffic and obstructions.
5. If the fire is in another department or area of the building, all personnel shall report to the nurses station and remain there for instructions. If the fire is located inside the surgery center, begin evacuation protocol (V.3.C) starting with patients first. All employees are to meet in the vacant lot across the street from the building.
6. Assure patients, if any are aware of the fire. Inform them that the alarm has been turned on, the emergency plan is in effect, there is an abundance of help to assist as needed.

## **X. EVACUATION**

If evacuation is required, expect to fully assist with the evacuation under the direction of any of the following persons (full evacuation procedure detailed in V.3.C):

1. Fire Department
2. Administrator
3. Clinical Director
5. Safety and Maintenance Coordinator

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **3. Fire Safety**

#### **B. Prevention of Fire in an Oxygen Enriched Atmosphere**

1. There is a need for the establishment and continuous use of safety practices concerning oxygen administration.
2. Materials not normally considered to be combustible may be so in an oxygen enriched atmosphere.
3. The following precautions shall be observed to eliminate sources of ignition:
  - A. Smoking materials (matches, cigarettes, lighters, lighter fluid, etc.,) removed from patients receiving oxygen therapy and from the area of administration.
  - B. No source of open flame shall be permitted in the area of oxygen administration.
  - C. Patients, visitors, and personnel in the area shall be advised of the hazards and regulations.
  - D. Precautionary signs shall be conspicuously displayed at the site of administration.
  - E. There is no smoking of any kind in or around the surgery center for fire safety purposes. All visitors and staff who smoke will be informed of the designated smoking area 30 feet away from the building near the vacant lot on the south side.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **3. Fire Safety**

#### **C. Evacuation Procedures**

#### **I. GENERAL CONSIDERATION**

Patients in most immediate danger shall be moved first.

If evacuation is required, expect to fully assist with the evacuation under the direction of any of the following persons:

1. Fire Department
2. Administrator
3. Clinical Director
5. Safety and Maintenance Coordinator

#### **II. METHODS OF EVACUATION**

##### 1. Non-Ambulatory Patients

A. Stretchers or blankets, if possible

B. Carrying patients – the following apply

- ◆ Small patients – one person piggyback
- ◆ Two-man extremity
  - ◆ Bring patient to sitting position
  - One person locks arms under patient's shoulders from behind and another carries the legs.
- Three-man horizontal carry
  - ◆ Pull patient to edge of stretcher
  - Three persons side-by-side slip arms under patient
  - At a given signal, lift patient together with patient facing rescuers; holding close, carry to safety.

##### 2. Wheelchair Patients

A. Move to nearest exit.

##### 3. Ambulatory Patients

A. Have patients line up and follow a lead person to safety.

#### **III. PROCEDURES**

##### 1. Teams to be assigned by Clinical Director to the fire area as follows:

A Loading Teams

- Bring all available stretchers, wheelchairs, or blankets to area.
- ◆ Assist with preparing all non-ambulatory patients to be moved.

B. Moving and Carrying Teams

- ◆ Transport all patients through the nearest safe exit to a vacant lot that is a safe distance from the burning area.

C. Receiving Teams

- ◆ Accurate accounting of patients
- ◆ Objective of receiving teams is to provide for continuation of care
  - ◆ Nurse to evaluate condition of patients in receiving area
  - Administer O<sub>2</sub> to those requiring it as well as any other form of respiratory maintenance and see that all patients have blankets over and/or under them as needed.

# PRECISION SURGERY CENTER

## V. ENVIRONMENTAL SAFETY

### 3. Fire Safety

#### D. Responsibilities: Front Office Clerk/Receptionist

1. Upon being notified of a fire:
  - A. By telephone – ask the area and location of the fire, or
  - B. By the speaker system – ask the area and location of the fire.
  - C. Announce over the speaker system "CODE RED \_\_\_\_\_ AREA" (give area name).  
Make announcement three times.
2. Call the Fire Department by dialing **911**. Give the following information:
  - A. Name of the Facility: Precision Surgery Center  
Apex Medical Center
  - B. Phone Number – (702)-(310-9110)
  - C. Location of the Facility – (1701 Bearden Dr. Suite 202)
  - D. Cross Street - (Bearden Drive and Shadow Lane)
3. Dispatch an office employee to the street to direct the Fire Department to the area.
4. Notify: The Fire Marshall and the CEO/Medical Director.
5. Keep phone lines open in fire area. Do not permit any unnecessary phone calls.
6. If phone systems are out, send office personnel to a neighboring building or outside public phone to call the Fire Department; stand by your phone system.
7. If the speaker system does not function, use office personnel as runners.
8. Upon receiving "ALL CLEAR" announce "CANCEL CODE RED". Repeat 3 times, every 15 seconds.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **4. Emergency Policies**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **4. Emergency Policies**

#### **A. Emergency Equipment**

##### **I. Standard Emergency Equipment**

1. Emergency call system
2. Oxygen with face masks
3. Respiratory assistance equipment including airways, resuscitation (AMBU) bag
4. Cardiac defibrillator/AED
5. Crash cart – stocked with emergency medications per ACLS protocols
6. Cardiac monitoring equipment
7. Tracheostomy set (Nu-Trake)
8. Laryngoscopes and endotracheal tubes (multiple sizes) and combitube
9. Suction equipment including portable suction machine, tubing, suction tips, canisters.
10. Emergency medical equipment and supplies specified by the medical staff.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **4. Emergency Policies**

#### **B. Emergency Personnel**

##### **I. POLICY:**

1. It is the policy of Precision Surgery Center that a physician trained in basic and advanced cardiac life support is physically present in the center and is trained in the use of all emergency equipment. The physician is present until all patients have been discharged and are physically off the property.
2. All licensed practical nurses and registered nurses have current training in BLS. All certified registered nurse anesthetists (CRNAs), physician's assistants, nurse practitioners and physicians have current training in ACLS.
3. A physician is present at all times until all patients are discharged from the Center and off the property.
4. Nursing staff has appropriate training in malignant hyperthermia, although there is no general anesthesia used in Precision Surgery Center and no triggers are used in daily practice. Succinylcholine is the only known trigger kept on property and would only be used for emergency intubation purposes.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **5. General Safety**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **5. General Safety**

#### **A. Statement of Policy**

#### **I. STATEMENT**

1. Precision Surgery Center shall be functionally safe and sanitary for all patients, staff and visitors.
2. In keeping with this commitment, the center has established a Safety Program. The Safety and Maintenance Coordinator has been delegated responsibility for administering and implementing the program. Further details of this program is outlined in the employee Injury and Illness Prevention Program Manual, provided by Compliance Alliance, LLC. The program will include, but is not limited to:
  - A. Selecting, training and continuing safety education for all employees.
  - B. Developing safe techniques and procedures for specific operations.
  - C. Stimulating all employees' interest in participation in the Safety Program.
  - D. Eliminating all unsafe conditions and unsafe acts.
  - E. Designating a Safety and Maintenance Coordinator for promotion of activities of the Safety Program.
  - F. Maintaining an ongoing preventative maintenance program on all equipment.

#### **II. DUTIES OF SAFETY AND MAINTENANCE COORDINATOR**

The Safety and Maintenance Coordinator shall represent the Center in all safety activities. The Safety and Maintenance Coordinator develops, implements, and administers the complete safety program in accordance with management's policies and Compliance Alliance, LLC. The Safety and Maintenance Coordinator's duties include, but are not limited to:

1. Providing leadership and stimulation necessary to ensure and maintain full employee interest and participation.
2. Developing and recommending new procedures and approaches to safety and loss prevention based on reports of incidents, accidents and other relevant information.
3. Disseminating information regarding toxic and hazardous waste and materials, safe medical devices and supplies, emergency preparedness and other safety information.
4. Developing reviews and participating in safety training (annual update) for personnel.
5. Assisting department heads and administration in enforcing safety regulations and codes.

6. Conducting building and group hazard surveillance surveys on a periodic basis to detect code violations, hazards and incorrect work practices and procedures.
7. Measuring and evaluating effectiveness of safety program, using established goals and eliminating all unsafe acts and conditions in the department.
8. Advising management on the development and progress of the Safety Program.
9. In conjunction with Compliance Alliance, LLC, train all new hires on safe procedures and operation of equipment within the department. Training shall be updated annually and whenever new devices are acquired.
10. Be responsible for the degree to which his/her employees have gained knowledge and skills necessary to perform safely and effectively in their particular position.

### **III. AUTHORITY OF SAFETY AND MAINTENANCE COORDINATOR**

The Governing Body of the Center and its CEO has authorized the Safety and Maintenance Coordinator to enforce the Safety Regulations and take corrective action as deemed necessary.

### **IV. DUTIES OF EMPLOYEE**

1. The employee shall be the one most concerned for his/her own safety as well as the safety of fellow employees, volunteers, patients and visitors. Each employee has certain duties to ensure this on-the-job safety which include:
  - A. Knowing job requirements and following the rules of safe work practices.
  - B. Becoming familiar with the equipment and machinery used on the job.
  - C. Recognizing job hazards and taking precautions to ensure safety to self and others.
  - D. Avoiding poor safety attitudes that set the stage for accidents, such as:
    - Forgetfulness
    - ◆ Ignorance
    - ◆ Laziness
    - ◆ Overconfidence
  - E. Informing supervisors of hazards and recommending how to eliminate them or improve safety performance.
  - F. Knowing what to do in an emergency, including the following Emergency Codes:
    - ◆ Code 99 – Cardiac arrest or respiratory arrest
    - ◆ Triage I – Internal Disaster --The following Emergency Color Code System is utilized as the recognized code message system used to differentiate Triage I disasters at the Facility; the codes are:
      - Code Red- Fire
      - Code Adam- Infant/Child Abduction
      - Code Black- Bomb/Bomb Threat Terrorism
      - Code Orange- Hazardous Material Spill/Release
      - Code 99 - Medical Emergency- Adult cardiac arrest
      - Code Silver – Person with weapon/violent situation

◆ Triage II – External Disaster (Example: Earthquake, Tornado)

- G. Emergency Number: 911
  - H. Reading and understanding the employee Infection Control Manual and the employee Injury and Illness Prevention Program Manual with all disaster plans and protocols.
  - I. Actively participating in and cooperating with the Safety Program.
  - J. Maintaining cleanliness and good personal health habits.
2. Employees must understand that compliance with safety requirements is a condition of employment and will be evaluated, together with other aspects of an employee's performance, as part of the performance appraisal process. Employees who are particularly effective in following safe and healthful work practices may receive recognition for their effectiveness. Due to the importance of safety considerations to the Center, employees who violate safety standards, who cause hazardous or dangerous situations, or who allow such conditions to remain when they could be effectively remedied, may be subject to disciplinary action, up to and possibly including termination.
  3. It is therefore essential that all employees comply fully with the standards and practices of the Center that are designed to promote a safe and healthful working environment. As part of the policy, programs have been established through Compliance Alliance, LLC to train and retrain employees as appropriate to assist them to avoid dangerous or unhealthful conditions and to remedy problems or hazards before they cause accidents or injuries.
  4. Whenever an employee identifies an unsafe condition or an occupational safety and health risk, the employee shall report the matter immediately to their supervisor if he/she is unable to remedy the situation himself. If the supervisor is not readily available, the employee shall immediately inform the Safety and Maintenance Coordinator so that any dangerous condition can be corrected. Employees are strongly encouraged to report any situations of this nature and need not fear any form of reprisal as a result of their compliance with this policy. Employees who identify any hazards in the workplace can also choose to report the situation anonymously to the Safety and Maintenance Coordinator if they prefer not to identify themselves.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **5. General Safety**

#### **B. Safety Education**

- I. Continuous and repetitious methods are necessary to obtain the acceptance of the basic principles of safe work performance. Methods for dissemination of information pertaining to safety shall include:
  - A. Quarterly Meetings – a formal meeting of the Governing Body scheduled quarterly where safety policies and procedures are discussed and the current Safety Program is evaluated and updated as needed. Any safety issues or variances are discussed as appropriate.
  - B. Individual Evaluations – conference between the department head and an employee to correct a specific safety problem.
2. Visual aids may include posters, the employee Injury and Illness Prevention Manual, payroll inserts, newsletter articles, signs, and films.
3. All employees will review the safety and disaster policies in the new hire orientation sessions held for all new hires. They will also receive on-the-job training from their supervisors or fellow workers as they orient into their new departments. Ongoing training will occur from time to time if new equipment/machinery is introduced onto the department, or a new hazard is discovered. Refresher training sessions will be held departmentally, as often as deemed necessary, at least yearly.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **5. General Safety**

#### **C. Safety Surveillance Program**

##### **I. PURPOSE**

To ensure that each area is inspected monthly and appropriate corrective measures are taken to correct cited areas in a timely manner.

##### **II. GENERAL GUIDELINES**

1. Identification and reporting of hazards is the responsibility of all employees and is an on-going, daily process.
2. It is the specific responsibility of the Safety and Maintenance Coordinator to ensure that inspections are completed and documented, and appropriate actions are taken.
3. It is the responsibility of the Administrator to ensure requisitions of repair and/or other action is completed.

##### **III. GENERAL SAFETY CRITERIA**

1. Ceilings
  - A. Vents/grates
    - ◆ Fire hazard due to lint build-up and foreign-body source.
  - B. Lights covered (to include fluorescent and light bulbs)
2. Floors/Walls/Halls
  - A. Thermostat/other wall mounted items secure
    - ◆ May fall
  - B. Air shafts/other opening secure
    - ◆ May provide inappropriate exit/exploration possibility
  - C. Floor free of debris, spills, slippery areas
    - ◆ Source of slips and falls
  - D. Handrails secure
    - ◆ Handrails: patient care services and stairwells, patient bathrooms
  - E. Hazardous signage appropriate
    - ◆ For example, Oxygen in use, Radiation Caution, Bio-hazardous Waste, Authorized Personnel Only.
3. Patient Transport Equipment

- A. Beds, stretchers, wheelchairs equipped with safety devices (i.e. locking rails and brakes)
- 4. Personal Safety
  - A. Employees identified by name badge.
  - B. Others such as sales representatives, outside agency workers, etc., identified with uniform and identification/business card

#### **IV. FIRE AND ELECTRICAL SAFETY CRITERIA**

- 1. Doors and Exits
  - A. Unobstructed by beds, carts, pallets
  - B. Exit lights operable – not even a flicker. If flickering, notify maintenance immediately.
  - C. Exit directions posted.
- 2. Specific Fire/Electrical Safety
  - A. Fire extinguisher checked quarterly
    - ◆ Card attached shall be dated and initialed by safety personnel
  - B. Approved waste containers
    - ◆ Larger than office size shall be covered.
  - C. Employees in area able to verbalize/identify
    - ◆ Nearest fire exit
    - ◆ Nearest fire alarm pull
    - ◆ Nearest extinguisher
  - D. Storage shelves are 4" to 6" bottom clearance or sealed to floor with 18" top clearance so items are not flush with the ceiling.
    - ◆ Lint build-up is a fire and sanitary hazard.
  - F. Electrical equipment labeled appropriately as indicated
  - G. Extension cords appropriate – must be approved by Safety Coordinator
  - H. Outlet face plates intact and secure
  - I. Floor outlets covered
  - J. Gas cylinders chained or in carts to prevent tipping/falling over.

**V. NURSING UNITS/CLINICAL AREAS**

1. Soiled linen contained appropriately in plastic bag in covered hamper frames.
2. Sharps containers adequate and placed appropriately, i.e., medication prep. areas, soiled utility room by hopper for draining IVs, patient care, common areas.
3. Alcohol based hand rub dispensers are installed and maintained in a manner that minimizes leaks or spills that could lead to falls, and protects against inappropriate access, and in accordance with dispenser manufacturer guidelines.
3. Crash cart accessible and readily mobile and not blocked with equipment nor used for storage on top.
4. All solutions/liquids labeled including liquids found in utility rooms, exam rooms, and housekeeping carts.
5. Medication and food refrigerators maintained at approximately 40 degrees with temperature logged daily and adjusted as needed. Refrigerators will be dedicated to either food or medication and labeled appropriately. Compliance with all local, state and federal guidelines is required regarding preparation, serving, disposal and storing of food and drink for patient use.
6. Needles and syringes secured at all times

**VI. GROUNDS AND PARKING LOT**

1. Pavement/sidewalk free of debris, broken glass, potholes
2. Handicapped areas identified and accessible
3. Emergency entrance identified and accessible
4. Fire lane(s) identified and accessible

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **6. Environmental Control**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **A. Safety**

##### **I. OBJECTIVES**

To adopt, implement and monitor a comprehensive Center-wide environmental control program relative to safety and sanitation which involves staff, equipment operation and maintenance; the establishment of written policies, rules and regulations; the orientation and education of all employees in safety and sanitation, in order to provide a functionally and environmentally safe atmosphere for patients, personnel and visitors.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **B. Safety and Security Management**

#### **I. POLICY**

1. The Center has designed a safe, accessible, effective, and efficient environment of care consistent with its mission, services, law and regulations.
2. The Center has designed a management plan to provide a safe, accessible, effective, and efficient environment of care consistent with its mission, services, and law and regulations.

#### **II. PRINCIPLES**

1. All facilities and personnel of the Center are designed and maintained to comply with the life safety code.
2. The Center has used acceptable guidelines and standards in the design of the facilities.
3. The Center has designed management plans as follows:
  - A. Safety Management Plan – The Center’s plan provides a physical environment free of hazards and manages staff activities to reduce the risk of injuries.
  - B. Security Plan – The Center’s security management plan describes the Center’s responsibilities and management to protect staff, patients, and visitors from harm.
  - C. Hazardous Materials and Waste Management – The Center has developed hazardous materials and waste management safety with processes for selection, handling, storing, using, and disposing of hazardous materials and wastes from receipt or generation through the use of final disposal.
  - D. Emergency Preparedness – The Center has addressed the Emergency Preparedness Management Plan to ensure effective response to disasters or emergencies affecting the environment of care.
  - E. The Center has established a management plan addressing life safety.
  - F. The Center has established a plan addressing medical equipment to promote safe and effective use of medical equipment.

G. The Center has designed a management plan addressing the utility systems. This plan was established and maintains a utilities system management plan to:

- ◆ Promote a safe, controlled, comfortable environment of care;
- ◆ Access and minimize risks of utility failures;
- ◆ Ensure operational reliability of utility systems.

The Center's management plan provides various processes for:

- ◆ Establishing criteria for identifying, evaluating, and taking inventory of critical operating components of systems to be included in the utility management plan. These criteria address the impact of utility systems on life support systems, infection control systems, environmental support systems, equipment support systems, and communications systems.

### **III. UTILITY BACKUP SYSTEMS**

1. The Center is always equipped with a cellular phone with a fully charged battery and a two – way communication system for use in case of loss of the telephone system during bad weather.
2. The Center maintains a routine schedule for testing the emergency lights in the hallways that guide patients and staff to exits in cases of full power loss.
3. In case of an emergency with loss of electrical power, the generator will automatically pick up and the emergency lighting throughout the facility, which is a battery pack independent of the emergency generator, will function automatically.
4. The Center also keeps fully loaded battery pack flashlights in each operating room, reception area, recovery room, medication room, and mechanical and storage equipment room.
5. To ensure appropriate functioning of the emergency power with the generator, its capabilities and limitations are accessed on a regular basis with evaluation of the generator on a weekly basis, along with testing of the generator on a dynamic or full load on a once a year basis.
6. In case of a failure of the water supply, bottled water will be utilized temporarily until the situation is controlled and additional water supply is obtained.
7. Utility systems management plan also established:
  - A. An orientation and education that addresses various issues to all staff members on an annual basis and also at the time of orientation for new employees.
  - B. This plan addresses various capabilities of the utilities systems along with limitations and spatial applications. These include utility equipment, as well as medical equipment.

- C. The staff understands that any equipment can fail and result in disastrous consequences. Hence, a multitude of backup systems are installed and the staff are educated on various aspects of the backup systems.
  - D. Utility management policies, procedures, and maintenance are performed by the Safety and Maintenance Coordinator. All the employees should report any problems or questions to this person.
8. In the event of generator failure, the Center has established a generator failure plan to ensure safety for all patients and personnel. All staff members are provided with appropriate information and trained with the skills necessary to perform assigned maintenance responsibilities in case of generator failure or any type of other utility failure.
  9. The Center has provided all appropriate information and training to all employees to locate the emergency shut-off controls and they have been instructed on the use of shut-off controls.
  10. Utility system management problems, failures, and user errors are reported to the Safety and Maintenance Coordinator and appropriately addressed with the appropriate training.
  11. All utility systems for disruptions or failures are promptly addressed.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **C Safety and Maintenance Coordinator**

#### **I. BASIC FUNCTION**

Provides staff safety support to management and supervisors; assists in review of implementation of safety programs; participates in hazard evaluation problem-solving and decision making; acquires knowledge of the requirements of applicable codes, standards, and regulations pertaining to safety and loss control; interacts with other members of the safety team; participates in planning, developing and conducting safety meetings; evaluates and audits all safety programs.

#### **II. RESPONSIBILITIES**

1. Adheres to and supports the mission, vision, values, goals, philosophy, objectives, policies, and procedures of the Center.
2. Develop and implement programs to enhance employee safety and promote safety awareness.
3. Interpret and evaluate regulatory documents and establish methods to ensure compliance.
4. Provide advice and assistance to all personnel which serve to prevent accidents.
5. Ensure that data and records are properly collected, documented, maintained in a manner which meets regulatory requirements and permits an understanding of the status of the safety program.
6. Promote professional and ethical practices.
7. Perform any and all duties as assigned.

#### **III. MACHINES, TOOLS, EQUIPMENT, AND WORK AIDS**

A working knowledge of all equipment used in the operation of the Precision Surgery Center. This includes but is not limited to the computer systems, equipment technology used, corporate updates and awareness of policy changes as relates to a specific entity.

#### **IV. WORKER TRAITS: APTITUDES, INTERESTS AND TEMPERAMENTS**

##### 1. Aptitudes:

- A. Effective communication skills with staff, physicians, and others as it relates to the business.
- B. Necessary skills required to enable effective understanding of various emergency evacuation procedures and all necessary safety precautions.
- C. Necessary skills for effective and appropriate maintenance.

##### 2. Interests:

- A. An interest in continuous self-development and professional growth.
- B. Continued education on various aspects of safety and the maintenance of all facility equipment to aid in the operations of the business (i.e. necessary seminars to increase understanding and awareness of hazards and necessary precautions.)

##### 3. Temperament:

- A. Ability to perform in situations requiring limited supervision for successful execution of daily operations.
- B. Exhibit confidentiality and good judgment when aware of information requiring discretion.

#### **V. PHYSICAL DEMANDS AND WORKING CONDITIONS**

Ability to be flexible enough to meet the demands and conditions of situations as they arise.

#### **VI. POSITION ROLE**

The role of this position includes: 1) to manage, separate, direct, and administer the human, physical, and financial resources provided for safety and maintenance 2) assign priorities within the department based on resources, and 3) to ensure that the safety program anticipates, identifies, evaluates and recommends controls for accident potentials arising in the workplace.

#### **VII. QUALIFICATIONS**

- 1. High school or college graduate
- 2. Good understanding of safety and maintenance issues.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **D. Departmental Safety: Maintenance**

##### **I. GENERAL**

1. Safety and Maintenance Coordinator is responsible for maintenance and safety.
2. The grounds are kept free from refuse and litter. Areas around the buildings, sidewalks, gardens, and patios are kept clear of dense undergrowth. Walkways, entrances and exits are checked daily and kept safe for traffic.
3. All outside traffic areas are kept free of ice and other hazards.

##### **II. PREVENTIVE MAINTENANCE PROGRAM**

Preventive maintenance is carried out on an annual basis (or more often as required) on all systems, equipment and facilities. For all medical equipment, use is standardized and preventative maintenance and safety checks are performed by a contracted company who performs all checks according to manufacturer's recommendations. A log is kept and updated of all equipment checks and repairs. The log includes the piece of equipment or system, location, type of maintenance or repair performed, testing procedure, inspection interval.

##### **III. ELECTRICAL AND ELECTRONIC SAFETY**

1. All personnel are trained in safety appropriate to the areas in which they work and the equipment they use, operate or are exposed to through orientation and instruction when they are hired and at required in-service meetings for updates on any new equipment..
2. Regulations concerning the use of electric or electronic systems, devices, equipment, appliances, outlets, etc. are strictly enforced. Special precautions must be taken when the care of patients requires the use of any type of electrical or electronic device.
3. Prior to placement into service (when newly installed, or after relocation, or significant alteration) all equipment and systems shall be tested and checked for proper functioning and safety-device requirements by qualified outside contractors under service agreements, or factory representatives.
4. Manufacturers' safety regulations must be kept on all equipment used in the center., these are kept in the administration office. All equipment safety inspections are to include the following: voltage, current resistance, macro-shock hazard, fault current, leakage current, radiation leakage, proper calibration. Each piece of equipment must be tagged with appropriate inspection labels.

#### **IV. ELECTRICAL AND ELECTRONIC PATIENT CARE EQUIPMENT**

1. This equipment is tested annually or more often based on manufacturer's instructions. Critical equipment (life supporting) is tested quarterly by the contracted biomedical engineer company per regulation. New electrical and electronic patient care equipment is tested and evaluated upon installation. The Safety and Maintenance Coordinator keeps a log of each piece of patient care electrical equipment tested with the following information recorded:
  - A. Date of test
  - B. Name of equipment and department where located
  - C. Name of employee or company conducting test
  - D. Type of test conducted
  - E. Results of test
2. Each piece of equipment is appropriately tagged with date of inspection and by whom. Documentation of inspection and repair is also kept on file in the administration office. The Safety and Maintenance Coordinator is informed in writing of any untoward results of tests or repairs needed.
3. In the event of malfunction of a piece of equipment or medical device, the vendor or manufacturer responsible for repair of the device will be contacted by the Safety Coordinator. The device will be cleaned with an appropriate disinfectant prior to transport/pickup for repair by the appropriate individual. A log will be kept of all devices sent for inspection/repair and the dates sent out.

#### **V. ELECTRICAL POWER DISTRIBUTION SYSTEM**

1. All electrical power distribution systems (Generator) in the Facility are checked every week. Evaluation of power systems is in accordance with manufacturers' instructions. The Safety and Maintenance Coordinator keeps a log of each system evaluated with the following information recorded:
  - A. Date of evaluation
  - B. Name of system
  - C. Name of employee or individual conducting evaluation
  - D. Results of evaluation
2. The following are connected to the emergency power system:
  - A. Center's communication system
  - B. All egress illumination
  - C. Exit signs and exit directional signs
  - D. All alarm systems
  - E. Operating rooms, recovery rooms, mechanical storage and gas storage areas in surgery
  - F. Designated refrigerators
  - G. Central suction systems servicing medical and surgical functions

## **VI. FIRE PROTECTION**

### **1. Construction and Compartmentation Requirements**

- A. The Center meets construction requirements for the protection from fire hazards, according to National Fire Protection Association's (NFPA's) definition of acceptable types of fire-safe construction for this type of institution.
- B. The Center meets compartmentation requirements for protection from fire hazards according to Life Safety Code, NFPA 99. Floor is divided into fire sections with main fire doors which close upon activation of fire alarm.
- C. There are exits which lead to the outside of the building. Doors close by activation methods specified by NFPA and can be manually controlled. Exit doors are equipped with panic hardware so they can be kept closed to outside access if desired.
- D. All vertical openings are protected in accordance with NFPA 99 standards.
- E. Doors in fire partitions, smoke stop partitions, and horizontal exits are not equipped with hold-open devices, are self-closing and normally kept in a closed position. If open, fire and smoke doors are automatically closed by electronic activation of fire and sprinkler alarm system.
- G. Doorways, corridors and stairwells are kept free of obstruction at all times.
- H. Louvers in corridor doors are made smoke-tight through the installation of non-combustible materials.
- I. There are appropriate signs at all fire exits such as stairwell doors, indicating that it is a fire exit.
- J. Exits are sufficiently illuminated to permit safe evacuation of patients.

## **VII. FIRE WARNING AND SAFETY SYSTEMS**

- 1. Every building has an electrically supervised, manually opened fire alarm system installed to transmit an alarm automatically. Fire detection and safety systems and alarms are regularly serviced and all components of the warning and safety system is tested quarterly by the contracted fire maintenance company. Results of tests are kept on file by the Safety and Maintenance Coordinator in the administration office.
- 2. A copy of each test conducted is forwarded to the Safety and Maintenance Coordinator along with a statement of any repairs, replacement of equipment or work done and any recommendations for future action.
- 3. All smoke and fire detectors are tested annually. Fire extinguishers are inspected monthly and records are maintained as above by the Safety and Maintenance Coordinator..

## **VIII. STORAGE, HANDLING, AND USE OF GASES, FLAMMABLE LIQUIDS AND COMBUSTIBLES**

1. Compressed gas cylinders must properly be identified "full or empty" and always capped when not in use or connected to a delivery system. All personnel handling compressed gas cylinders are trained and oriented in the proper use and transportation. Freestanding cylinders must be chained to a firm support or supported in appropriate cart or stand.
2. Oxidizing gases, such as oxygen are stored in a locked area. This storage area is separated from all flammable gases and/or liquids and will be kept free of combustible materials. It is the responsibility of the Safety and Maintenance Coordinator to inspect and maintain storage areas daily. Inspection and maintenance will include responsibility to keep all storage areas free of fire hazards. If hazards are found during daily inspections, the hazards shall be removed, corrected and reported to the Safety and Maintenance Coordinator. A record of each hazard found will be kept on file in the administration office.
3. The only anesthetizing locations in the Center will be the operating suites. No general anesthesia will be performed per state regulations. Each operating suite is equipped with its own humidifier with a digital read out and humidity will be maintained at or above 40% per regulations.

## **IX. SANITATION AND ENVIRONMENT MAINTENANCE SERVICES**

1. The Safety and Maintenance Coordinator is involved in environmental maintenance through coordinating any structural repair and refinishing work; including repair of furnishings; furniture and facilities; and heavy duty custodial work and waste collection and removal. Outside companies and/or contractors will be used for the majority of repair work.
2. Only approved products are used for furniture, wall, ceiling, and floor finishes.
3. Pest control involves screening of apertures as necessary.

## **X. IDENTIFICATION SIGNS FOR DOORS, PASSAGES, STAIRWAYS, ETC.**

Doors, passages and stairways which are not exits nor lead to exits are identified by signs reading "NOT AN EXIT," or "TO STAIRWAY-EMPLOYEES ONLY". Restricted areas or rooms are identified by signs.

## **XI. FACILITIES FOR THE HANDICAPPED**

1. Parking spaces located in the first floor parking garage of the Center have been provided for handicapped persons. These parking spaces are identified by appropriate signage.
2. The following facilities and provisions have also been provided for handicapped persons: access to fountains, toilets, and hand washing facilities.

## **XII. MISCELLANEOUS FACILITIES AND SERVICES**

1. Flushing facilities are available for emergency care in cases of chemicals and burns, located in the Laboratory. (nurses' station.)
2. Entrances, exits, walks, roadways, and parking lots are kept free of ice, debris, and hazards.

## **XIII. POWER FAILURE**

1. All personnel are responsible for knowing the procedure to follow in case of power failure.
2. The Clinical Director and personnel of the surgery department are responsible for coordination of activities in the event of power failure. The activities in the surgery center will be coordinated with other activities occurring in the facility.
3. All personnel are responsible for providing for patient safety as the first priority.
4. Back-up generator is inspected once a week.
5. Back-up generator is manually tested once a month.
6. Back-up generator panel is inspected daily and if warning lights are activated, generator service department called.
7. In the event of power failure in the Center, the following procedures will be followed:
  - A. Back-up generator turns on within 10 seconds after failure occurs, without interruption.
  - B. All emergency lights turn on appropriately.
  - C. Safety and Maintenance Coordinator initiates search to locate the reason(s) for failure – city, in-house, etc.
  - D. Safety and Maintenance Coordinator takes appropriate action (e.g., if in-house failure correct or call electrician, etc.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **E. Medical Device Problem and Recall**

## **I. POLICY**

To establish a uniform policy for addressing recall of medical items, including medication, vaccines, blood products, medical devices, equipment, supplies and food products, as applicable to the Center. This is to ensure that product problems and recall information are properly documented, disseminated and reported as per federal guidelines and recalled products do not present a safety risk to patients and personnel.

## **II. PROCEDURE**

1. Product hazards regarding defective equipment or recalls may come from the following sources and are to be managed as follows:
  - A. Patient Incidents
    - ◆ Fill out Incident Report
    - ◆ Notify Administrator, Clinical Director and Medical Director
    - ◆ Notify Safety and Maintenance Coordinator
  - B. Employee Injuries
    - ◆ Notify Clinical Director and Administrator
    - ◆ Fill out Incident Report
    - ◆ Notify Safety and Maintenance Coordinator
  - C. Equipment Malfunctions
    - Notify Safety and Maintenance Coordinator
    - ◆ Contact Biomedical engineering company for repaired
  - D. Product Recalls from Manufacturer
    - Notify Safety and Maintenance Coordinator
    - ◆ Forwarded to Clinical Director or Administrator.
  - E. Possible Defective Product
    - ◆ Report to Safety and Maintenance Coordinator
    - ◆ Fill out Incident Report
    - ◆ Safety and Maintenance Coordinator/Administrator contacts manufacturer to investigate problem.
  - F. Medical Device Action Items from the Food and Drug Administration (FDA) Notices, CDC warnings, corporate or manufacturer warnings or any other third party (including local, state and federal sources)
    - ◆ Alerts are received by the Administrator
    - ◆ Forwarded to the Safety and Maintenance Coordinator who reviews the Alerts involving equipment.

- ◆ Safety and Maintenance Coordinator forwards the Alerts to the Clinical Director for review of stock of medication .

2. The following steps shall be performed by the Safety and Maintenance Coordinator and the Clinical Director for all reported product alerts and problems:

A. Determine if the facility has an affected product by searching inventory of equipment, supplies and medication and supply orders.

B. If an affected product is in the facility, take appropriate action. This should be done per manufacturers recommendations may include:

- ◆ Removal from service/use and return of the product
- ◆ Modification of product, if appropriate, as determined by recall notice
- ◆ Change in use instructions, if appropriate, as determined by recall notice
- ◆ Warning to users; including staff members or patients if affected
- ◆ Determination of availability of alternate product.

C All staff members involved with the use of the equipment, device or medication recalled should be immediately notified of any changes in use or removal from use on patients. This should be done in the form of a written memo or staff meeting with signatures by all staff of acknowledgment. The Clinical Director and the Safety Coordinator will be responsible for such meetings/memos.

D. The Clinical Director will be responsible for contacting patients via phone or written notice describing the recalled product if utilized during their care, what they can expect and the manufacturer's contact information for further questions.

E. Notify the Product Manufacturer for return of the recalled item. All medical devices or equipment previously in contact with patients will be appropriately disinfected prior to return to vendor/manufacturer.

F. If a medical device has in all probability caused a death, serious injury or serious illness of a patient, the FDA must also be notified.

G. The report to the FDA must be made within ten (10) working days after the facility becomes aware of the problem. In addition, summaries of user reports must be submitted to the FDA on January 1 and July 1 of each year. The summary report, as well as the initial FDA notification is the responsibility of the Safety and Maintenance Coordinator.

- ◆ The Summary shall contain the following information: Facility name; the device's name, serial number and model number; the manufacturer's name and address; and a brief description of the event reported to the manufacturer.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **6. Environmental Control**

#### **F. Departmental Safety: Business Office, Front Desk**

1. The Safety and Maintenance Coordinator will over see that all equipment is kept in good working order at all times. It must be checked for electrical, and mechanical safety prior to initial use by the contracted biomedical engineering company and annually thereafter, or more often per manufacturers' instructions. All equipment must be properly maintained according to manufacturers' directions and preventive maintenance schedules. Any equipment found defective must be removed from use, repaired and rechecked by appropriate personnel.
2. Instruction in the proper use, care, and maintenance of department equipment is given to each new employee during the first few weeks of employment by the person in charge of orientation and instruction, and to all employees as new equipment is introduced. Equipment operational and maintenance manuals must be on file in the department, and special safety instructions (if any) must be kept on each piece of equipment where the operator can see them. Personnel must be warned of any potential hazards in the use and/or handling of equipment and they must be instructed on how to avoid accidents, and measures to be taken should an accident occur.
3. Improper lifting, reaching, climbing and carrying are discouraged because of potential injuries to oneself or others.
4. Traffic areas must be kept clear of equipment.
5. Spills must be wiped up immediately.
6. Broken glass must be disposed of properly as soon as it is discovered.
7. Broken furniture must be removed from use until it is repaired.
8. Sharp edges on desks, tables, drawers, etc. shall be filed or covered.
9. Do not obstruct fire fighting equipment.
10. Any and all accidents are reported the Safety and Maintenance Coordinator and Administrator. The employee Injury Report will be completed, and employees are treated at the Center or sent to another facility for treatment. Review employee Injury and Illness Prevention Program Manual for further details of this policy.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **7. Utility Systems Management**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **7. Utility Systems Management**

#### **A. Responsibilities**

1. The building is inspected monthly by the Safety and Maintenance Coordinator with a walk through check list.
2. The emergency generator is tested on a weekly basis and documented.
3. If there is a utility system problem, report to the Safety and Maintenance Coordinator and/or Administrator.
4. Safety and Maintenance Coordinator is responsible to assess the problem, try to resolve or contact a contracted company for repair.
5. If utility systems have failed, immediate service will take place by personnel or a local company.
6. If utility system problems were found to be user error; the Safety and Maintenance Coordinator will address the issue with an in-service for all personnel involved.
7. The utility systems management plan will be evaluated annually by the Safety and Maintenance Coordinator.
  - A. All targeted personnel will demonstrate and/or be tested on the location of all safety valves.
  - B. All targeted personnel will demonstrate proper sequence of turning off valves.
  - C. All personnel will be reviewed on their role in utility systems failure.
8. The Governing Body will also review the Utility systems management plan annually. The Governing Body will evaluate and reevaluate objectives, scope, performance, and effectiveness of the utility management plan. Appropriate additions, deletions, or revisions will be made on an annual basis based on the requirements and performance to meet the objectives.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **7. Utility Systems Management**

#### **B. Emergency Shut-Off Controls**

#### **I. POLICY**

In the event of electrical, natural gas, or water hazards, follow the procedures to properly shut off areas to ensure safety to the building.

1. In the event of an emergency that all outside electrical power needs to be disconnected from the building.
  - A. The Safety and Maintenance Coordinator or Administrator will contact the electric company for services. Keys to the main electrical room are kept secure in the administration office.
  - B. In the event the back up generators need to be disconnected, the generator company will be contacted for immediate service. Keys to the generator enclosure are kept secure in the administration office.
  - C. If any staff or patients are at risk by remaining in the building, follow the evacuation procedure as detailed in the disaster plan.
2. In the event of an emergency that the natural gas needs to be disconnected from the building.
  - A. The Safety and Maintenance Coordinator or Administrator will contact the gas company for appropriate service. Keys to all service closets are kept secure in the administration office.
  - B. The main gas meter is located outside the first floor parking garage to the left. In the event of a gas leak follow evacuation procedures as detailed in the disaster plan.
3. In the event of an emergency that the water supply needs to be disconnected from the building.
  - A. The Safety and Maintenance Coordinator or Administrator will contact the water company for appropriate service. Keys to all service closets are kept secure in the administration office.
  - B. In the event of flooding of the building due to plumbing issues, follow the evacuation procedures as detailed in the disaster plan.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **7. Utility Systems Management**

#### **C. Generator Failure**

#### **I. POLICY**

The generator failure plan is to ensure safety for all patients and personnel.

1. If in the event there is an electrical failure and the emergency generator failed to turn on or has stopped working, the Administrator, Safety and Maintenance Coordinator, and Clinical Director will activate the following plan to ensure safety.
  - A. All personnel locate flashlights.
  - B. First attend to the patients if they are under sedation.
  - C. Staff personnel will be assigned to each patient to ensure safety and attend to their needs.
  - D. Evacuate all patients as directed by supervisors.
  - E. Notify company of generator failure to assess the situation and repair.
  - F. Front desk notified to cancel all remaining cases.
  - G. Resume all function once electricity is restored.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **7. Utility Systems Management**

#### **D. Failure of Utilities**

#### **I. PROCEDURE**

In the event of utility system failure (i.e. electrical, water, gas):

1. Follow instructions from the Administrator and assist patients from the affected areas.
2. Evacuate building as instructed by Medical Director, Safety and Maintenance Coordinator, and Administrator.
3. Safety and Maintenance Coordinator and/or Administrator contact appropriate company for immediate service. Keys to all service closets are kept in the administrative office.
4. Secretary personnel will be notified if necessary and to cancel all patients until all systems are cleared.
5. Utilize alternate sources if available. (i.e. flashlights, ect.)

#### **II. UTILITY BACKUP SYSTEMS:**

1. The Center is always equipped with a cellular phone with a fully charged battery and a two-way communication system for use in case of loss of the telephone system.
2. The Center maintains a routine schedule for testing the emergency lights in the hallways that guide patients and staff to exits in cases of full power loss.
3. In case of an emergency with loss of electrical power, the generator will automatically pick up and the emergency lighting throughout the facility will illuminate.
4. The Center also keeps flashlights equipped with batteries in each operating room, reception area, recovery room, medication room, and mechanical and storage equipment room.
5. To ensure appropriate functioning of the emergency power with the generator, its capabilities and limitations are accessed on a regular basis with evaluation of the generator on a weekly basis, along with testing of the generator on a dynamic or full load on an annual basis per regulation.
6. In case of a failure of the water supply, bottled water will be utilized temporarily until the situation is controlled and additional water supply is obtained.
7. Utility systems management plan is also established:
  - A. New staff orientation and education that addresses basic issues of utility management will occur at initial hire and annually.

- B. This plan addresses various capabilities of the utilities systems along with limitations and spatial applications. These include utility equipment, as well as medical equipment.
  - C. The staff understands that any equipment can fail and result in disastrous consequences. Hence, a multitude of backup systems are installed and the staff are educated on various aspects of the backup systems.
  - D. Utility management policies, procedures, and maintenance are performed by the Safety and Maintenance Coordinator. All the employees should report any problems or questions to this person.
8. In the event of generator failure, the Center has established a generator failure plan to ensure safety for all patients and personnel. All staff members are provided with appropriate information and trained with the skills necessary to perform assigned responsibilities in case of generator or any other type of utility failure.
9. Utility system management problems, failures, and user errors are reported to the Director of Safety and Maintenance Coordinator and appropriately addressed with the additional training.

# **PRECISION SURGERY CENTER**

## **SECTION V**

### **ENVIRONMENTAL SAFETY**

#### **8. Hazardous Materials Management**

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **8. Hazardous Materials Management**

#### **A. Hazardous Materials**

##### **I. PURPOSE**

To establish a policy and procedures to develop and implement a system for the proper identification, management, handling, transport and disposal of hazardous materials and wastes, whether liquids, solids or gas. Also to develop an employee information and training program so that all employees will have the knowledge necessary to perform their work safely with or around any material or substances that could potentially be hazardous. A hazard material analysis will be conducted annually by Compliance Alliance, LLC in conjunction with the Safety Coordinator. Additional guidelines for the Hazard Communication Plan are located in the Injury and Illness Prevention Program Manual.

##### **II. PROCEDURE**

1. A list of hazardous substances present at the workplace is determined and documented by a thorough assessment of all areas of the Center.
2. Hazardous materials are labeled hazardous and stored separate from other substances. Disposal of hazardous waste are done appropriately into hazard containers for pickup by contracted company..
2. Maintain Material Safety Data Sheets (MSDSs) are located on CD inside the Injury and Illness Prevention Program Manual. The MSDS Manual is checked on a regular basis for current information. Components for the Safety Coordinator to monitor include: proper labeling of materials i.e., containers, sharps, storage containers, contaminated materials from procedures, and others as indicated.
3. All employees are informed of potential exposure to hazardous materials. The Center provides secure, environmentally controlled hazardous materials and waste storage spaces as well as personal protective equipment (PPE) for those personnel who must work near or come into contact with hazardous materials and waste.
4. Training will be conducted periodically by Compliance Alliance, LLC so that employees will have the knowledge necessary to perform their work safely with or around any materials or substances that could be potentially hazardous.

##### **III. EMPLOYEE TRAINING AND EDUCATION**

1. Initial hazardous substances information and training will be provided for each employee during orientation by Compliance Alliance, LLC, in conjunction with their direct supervisor.
2. Information or training must subsequently be provided to each employee prior to assignment to any work area in which the employee has not received previous information and training.

3. Employees must be furnished with an explanation of what an MSDS is, either in written form or through a training program.
4. Employees who may be exposed to a hazardous substance must be furnished with information on the contents of the MSDS for that hazardous substance, equivalent information either in written form or through training programs. This information shall include as a minimum:
  - A. Any health hazards known to be associated with exposure to the hazardous substance(s).
  - B. Proper instructions for handling; necessary personal protective equipment; or other safety precautions necessary to prevent or minimize exposure to the hazardous substance(s).
  - C. In an emergency situation, the Local Fire Department or nearest emergency treatment center will be contacted.
5. Training programs will be conducted periodically as required; at a minimum, such programs will be conducted on an annual basis. As new employees enter the workplace, training in regards to hazardous materials and waste management will be the responsibility of the Safety and Maintenance Coordinator, in conjunction with Compliance Alliance, LLC. Training must be accomplished during initial orientation at the time of employment. Records of employee attendance will be maintained in the administration office.

#### **IV. Material Safety Data Sheet (MSDS) UPDATING**

Whenever a new or revised MSDS is received, such information shall be provided to employees on a timely basis, not to exceed 30 days after receipt. The MSDS file is kept on CD and available to all employees upon request. The CD is kept inside the Injury and Illness Prevention Program Manual.

# **PRECISION SURGERY CENTER**

## **V. ENVIRONMENTAL SAFETY**

### **8. Hazardous Materials Management**

#### **B. Chemical Waste**

#### **I. PURPOSE**

1. To describe procedures for the identification and disposal of chemical wastes within the confines of the Center.
2. To ensure that these wastes are handled and disposed of in accordance with the Environmental Protection Agency (EPA), Department of Transportation (DOT), and state regulations.

#### **II. GENERAL INFORMATION**

1. Hazardous chemical waste is defined as any chemicals that are toxic, flammable, corrosive, or reactive, or capable of causing harm or serious injury to humans, animals or the environment.
2. The Safety and Maintenance Coordinator has authority to institute the Emergency Plan in the event of a major chemical waste accident or incident.
3. A MSDS is to be completed on every chemical used in the Center and identified as hazardous.
4. A master file of the MSDS information sheets is maintained in the Injury and Illness Prevention Program Manual.
5. It is the responsibility of the Administrator and Safety and Maintenance Coordinator using a hazardous chemical to determine if a less hazardous one may be substituted.
7. All persons required to handle hazardous chemical wastes shall have written specific policies and procedures that contain information pertinent to that department. These policies and procedures shall be reviewed annually and approved by the Governing Body.

#### **III. IDENTIFICATION**

1. At a minimum, certain chemical wastes from the following departments shall be classified as hazardous by the Safety and Maintenance Coordinator.
  - A. Safety
  - B. Grounds
  - C. Housekeeping/Janitorial
2. All drums, buckets, jugs, pails, or any other container containing a hazardous chemical substance, shall have a clear, complete, conspicuous, and durable label identifying the chemical used.

3. A MSDS shall be completed on all hazardous chemicals identifying the generic and trade name of the product.

#### **IV. STORAGE AND HANDLING**

1. Regular inspections shall be made of the storage site to ensure there are no leaking or spilled containers. If a spill or leak is found, the following actions shall be taken:
  - A. Before attempting to clean up any hazardous chemical spill or splash, know what the chemical is.
  - B. Follow the directions according to the established procedures for cleaning up that kind of chemical spill or leak.
  - C. Evacuate all personnel from the area.
  - D. Extinguish all flames.
  - E. Ensure adequate ventilation.
  - F. Call the Safety and Maintenance Coordinator.
  - G. If a fire occurs, set off the alarm and evacuate the area.
  - H. If no fire occurs, wait by the spill area, out of danger, until help arrives. Avoid tracking through the spill.
  - I. Obtain appropriate protective safety equipment.
  - J. Clean up the spill according to manufacturers' instructions provided in the MSDS manual.
  - K. If it is inside the building, contact Safety and Maintenance Coordinator for cleaning the area.
  - L. Any major spills, splashes, leaks, burns, etc., from a hazardous chemical substance shall be reported to the Safety Coordinator.
2. Materials which ignite easily under normal conditions (flammables) are considered fire hazards and shall be stored in a cool, dry, well ventilated storage space, well away from areas of fire hazard.
3. Highly flammable materials shall be kept in an area separate from oxidizing agents (material susceptible to spontaneous heating; explosives, etc.)
4. The storage area for flammables shall be supplied with fire fighting equipment, either automatic or manual. There is no smoking allowed in these areas.
  - A. Oxidizers shall not be stored close to liquids of low flash point.
  - B. Acids and acid fume sensitive materials shall be stored in cool, dry, well ventilated areas.
  - C. Materials which are toxic as stored or which can decompose into toxic components from contact with heat, moisture, acids, or acid fumes shall be stored in a cool, well ventilated place out of the direct rays of the sun. Incompatible toxic materials shall be isolated from each other.
  - D. Corrosive materials shall be stored in a cool, well ventilated area (above their freeze point). The containers shall be inspected at regular intervals to ensure they are labeled and kept closed.
  - E. Corrosives shall be isolated from other materials.

- F. Protective clothing and equipment shall be available for use when handling these materials.

## **V. DISPOSAL**

1. Disposal of small amounts of liquid chemical wastes (60 cc, 20 oz.) may be disposed of by diluting 1 part chemical to 100 parts water and flushed down the sewer system. These amounts shall be diluted and flushed down the sewer at varying times during the day (varying times during the day shall be approximated according to the quantity of chemicals needing dilution.)
2. In diluting chemicals from flushing down the sewer system, always add one part chemical to 100 parts water. Never add the water to the chemical container.
3. Wear rubber gloves, fume mask, and/or other safety equipment as required when preparing liquid chemicals for disposal.
4. No empty drums, buckets, jugs, pails, or any other container that has held toxic or corrosive materials or chemicals shall ever be reused for anything.
5. The Safety and Maintenance Coordinator will be responsible for disposal of all hazardous chemicals in the surgery center.

# **PRECISION SURGERY CENTER**

## **SECTION VI**

### **MEDICAL STAFF**

# **PRECISION SURGERY CENTER**

## **SECTION VI**

### **MEDICAL STAFF**

#### **1. Organization**

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **1. Organization**

#### **A. Goals**

The purpose of the individual practitioner is to provide appropriate care, while the purposes of the Medical Staff organization shall be:

1. To reflect, influence and maintain the professional nature of medical practice through such organizational activities as collegial discussion, continuing medical education, participation in providing educational opportunities to residents in training (as applicable), nursing, medical assistants and the community.
2. To perform the following functions including, but not necessarily limited to:
  - A. Provide recommendations to the Governing Body regarding applications for Medical Staff membership and clinical privileges.
  - B. Establish rules, regulations, policies, and methods related to professional prerogatives and obligations of Medical Staff members.
  - C. Through Medical Staff leadership with the assistance of qualified support personnel, develop and use physician-specific performance data including objective conclusions.
  - D. Establish mechanisms whereby Medical Staff members have input to the Center's affairs.
  - E. Through the Medical Director, provide periodic reports to the Governing Body, and perform independent peer reviews of other physicians cases done at the center for quality assurance and performance improvement purposes.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **1. Organization**

#### **B. Objectives and Bylaws**

##### **I. OBJECTIVES:**

These Bylaws, which originate with the Medical Staff, are adopted in order to provide for the organization of the Medical Staff of Precision Surgery Center, and to provide a framework for self-governance and accountability in order to permit the Medical Staff to discharge its responsibilities in matters involving the standards for and appropriateness of medical care, and to govern the orderly resolution of those purposes.

These Bylaws provide the professional and legal structure for Medical Staff operations, organized Medical Staff relations with the Governing Body of the Center, and relations with applicants to and members of the Medical Staff.

These Bylaws provide the vehicle wherein issues relating to medical care and administrative functions of the Center can be resolved through the mutual efforts of the Medical Staff and Governing Body.

These Bylaws as adopted or amended create a system of mutual rights and responsibilities between members of the Medical Staff and the Center.

##### **II. ADOPTION OF BYLAWS, RULES, AND REGULATIONS**

The Medical Staff shall adopt such Bylaws, Rules, and Regulations as may be necessary for the proper conduct of its work. Such Rules and Regulations as pertaining to the Medical Staff as a whole shall be a part of these Bylaws. These Rules and Regulations, or amendments to them, shall become effective when approved by the Governing Body.

##### **III. AMENDMENTS OR REVISIONS**

To revise or amend the Bylaws of the Medical Staff, it requires a 2/3 vote of the active medical staff with at least one year of good standing membership present, with notice provided to the entire membership, in addition to approval of any amendments or revisions by the Governing Body.

##### **IV. ADOPTION**

These Bylaws, together with the Rules and Regulations, shall be adopted at any regular meeting of the Medical Staff and shall become effective when approved by the Governing Body of the Precision Surgery Center. They shall, when adopted and approved, be equally binding on the Governing Body and the Medical Staff.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **1. Organization**

#### **C. Non-Physician Clinical Staff**

#### **I. PREAMBLE**

The Governing Body makes provisions for non-physician practitioners providing patient care services under the supervision and/or direction of a physician when required.

#### **II. CREDENTIALING**

Non-physician practitioners licensed to provide patient care with supervision of the physician and the practitioners who are not employees of the Center undergo credentialing by the Governing Body. These practitioners are granted as per their qualifications, privileges consistent with their individual training and experience and other qualifications. Credentialing is performed by the Governing Body and re-appointments will be reviewed every year upon recommendation of the medical staff. A credential file is maintained on each practitioner containing at least the following documents:

1. Current staff application
2. Current (Nevada) licensure
3. Current malpractice insurance certificate
4. Name of supervising physician(s), if applicable
5. Current delineation of privileges
6. Proof of educational training
7. Competence of practitioner and supervisor as indicated by relevant findings of QAPI activities and other reasonable indicators of current qualifications.

#### **III. ELIGIBILITY**

Successful applicants for Clinical Staff appointment must:

1. Hold a current and unrestricted license or certification in respective discipline to practice in the State of (Nevada) and;
2. Provide evidence of training, experience, current clinical competence, good reputation and the character, mental, physical, and emotional stability, and ability to work with and relate well to others to the extent required by the provision of these Bylaws;

#### **IV. EFFECTS AND OTHER AFFILIATIONS**

No practitioner shall be automatically entitled to membership on the Staff, or to the exercise of particular clinical privileges, merely because he/she is licensed or certified to practice in this or in any other state, or because he/she is a member of any professional organization, or because he/she is certified by any clinical board, or because he/she is a member of a faculty, or because he/she had or presently has, Staff membership or privileges at another health care facility or in another practice setting. Nor shall any practitioner be automatically entitled to appointment, reappointment, of particular privileges merely because he/she has or presently has staff membership or those particular privileges at this Center.

## **V. ETHICS AND CONDUCT**

Professional conduct shall be governed by the Code of Ethics of this Center.

In addition, every practitioner (physician and non-physician), at the time of appointment and reappointment and at any time during the appointment period, must demonstrate, to the satisfaction of the Medical Staff and Governing Body, a willingness and capability, based on current attitude and evidence of performance, to work with and relate to other Medical Staff members, members of other health disciplines, the Center's management and employees, patients, and the community in general, in a cooperative, professional manner that is essential for maintaining the Center's operations to provide appropriate patient care.

## **VI. INITIAL APPLICATION**

1. Each applicant shall provide in writing, on a form developed by the Medical Staff for the Clinical Staff, and approved by the Governing Body, at least the following:
  - A. Names of at least three (3) professional references, only one of whom may be from his/her group, employment, or organization;
  - B. Verified information regarding professional diploma, training, current license or certification in the State of (Nevada) and Drug Enforcement Administration (DEA) registration if applicable;
  - C. Information as to whether the applicant's professional license, certification, or DEA registration, or Staff appointment or clinical privileges at another hospital or other health care entity (e.g. Precision Surgery Center) have ever been reduced, revoked, suspended, not renewed, or voluntarily relinquished, and if applications for Medical Staff appointment and/or privileges at other hospitals or other health care entity have been denied.
  - D. Information about the applicant's physical and mental health;
  - E. Evidence of current professional liability insurance coverage in reasonable amounts that may be determined from time to time and at any time by the Governing Body with Medical Staff input;
  - F. Information about malpractice judgments, suits, claims and settlements within the last five (5) years;
  - G. Name(s) of supervising physicians if applicable
  - H. Any additional information required by the Medical Staff or Governing Body to adequately evaluate the applicant, including the applicant's professional conduct.

Failure by the applicant to provide requested information within sixty (60) days of the written request for the information shall result in the application being null and void, with no further processing required and no right to appeal.

Failure by the applicant to provide truthful, accurate, and complete information shall in itself be grounds for denial or revocation of Medical Staff membership/appointment and clinical privileges.

## 2. Application Process

All the appropriate documents along with completed application shall be submitted to the Administrator and once information is verified and the credentials file is deemed complete, it shall be forwarded to the Medical Director for review and/or request for additional information. The Governing Body shall approve, disapprove or defer recommendation and grant privileges accordingly.

### **VII. APPLICANT'S BURDEN**

In all matters pertaining to any application for initial appointment and privileges and pertaining to obtaining of supporting information for reappointment, renewal, or updating of privileges, the burden is the applicant's. Processing of the application cannot begin until all required information is on file and validated.

### **VIII. COMPLETED APPLICATION WHETHER INITIAL OR RENEWAL**

Applications shall not be considered until they have been declared complete by the Medical Director..

"Completed Application" includes all information the applicant has been called upon to provide and validation of the information by a third party verification if required.

When the application has been deemed complete, the applicant will be so notified, but advised that further information may be requested when the Medical Director considers the application.

The next step is the opportunity for the Medical Director to review information concerning education, training, and recent clinical experience, and provide a report on the applicant's qualifications.

An applicant's appointment is effective upon action by the Governing Body.

If the Medical Director issues a favorable recommendation, and the Governing Body action concurs, the Governing Body's action shall be final. If the Governing Body's action is unfavorable, it shall not be final until the applicant has exercised or waived his rights to a hearing under these Bylaws.

If the Medical Staff's action is unfavorable to the applicant, the hearing rights under these Bylaws shall apply. If the applicant waives his/her rights, the Medical Staff's recommendation shall be forwarded to the Governing Body for final action which shall adopt the Medical Staff's action unless there is insufficient reasonable data to support it. If the applicant exercises his/her hearing rights, the Governing Body shall not take final action until the applicant's rights under these bylaws have been exhausted or waived.

When the final action has been taken by the Governing Body, the Medical Director must transmit this decision in writing to the applicant for appointment or reappointment.

# **PRECISION SURGERY CENTER**

## **SECTION VI**

### **MEDICAL STAFF**

#### **2. Membership and Clinical Privileges**

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **A. Organization of Medical Staff**

The physicians practicing at Precision Surgery Center hereby are organized in conformity with the Bylaws, and Rules and Regulations hereinafter stated.

For the purpose of these Bylaws, Rules and Regulations, the following definitions are given:

The term "President of the Governing Body" shall mean the Governing Director of the Center and ultimate authority. He also shall act as Medical Director and Chief Executive Officer of the Center.

The term "Center" shall mean Precision Surgery Center.

The term "Administrator" is the employee of the Center who has overall responsibility for the management of the Center.

The Governing Body, in addition to the Quality Improvement Coordinator, will assume all responsibilities and duties of a QAPI Committee, and manage all aspects of the QAPI Program.

The Center will limit diagnostic and therapeutic procedural activity to treatment of ambulatory patients. It will be staffed and equipped to meet the needs of the patient, support staff and care providers.

The Center will be designed to serve the patients of the practice and the Medical Staff will be limited to physicians of the said practice.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **B. Medical Staff Membership**

##### 1. Nature of Medical Staff Membership

Membership on the medical staff or the exercise of temporary privileges shall be extended only to professionally competent practitioners who continuously meet the qualifications, standards and requirements set forth in these Bylaws. Appointment to and membership on the staff shall confer on the appointee or member only such clinical privileges and prerogatives as have been granted by the Governing Body in accordance with these Bylaws. No practitioner shall admit or provide services to patients in the Center unless he or she is a member of the staff or has been granted temporary privileges in accordance with the procedures set forth.

##### 2. Basic Qualification for Membership

Only practitioners licensed to practice medicine, dentistry, or podiatry in the State of (Nevada) shall:

- A. Be of ethical and professional integrity;
- B. Be of such background, experience, training and demonstrated competence as to assure the Medical Staff that any patient treated by such applicant will be given a high quality of medical care;
- C. Practice within the community within a reasonable distance of the surgery center;
- D. Maintain membership and either admitting or refer and follow privileges in good standing at one of the local accredited acute care hospitals;
- E. Maintain Professional Liability Insurance; and
- F. Be Board Certified or Board Eligible in their particular specialty.

##### 3. Effect on Other Affiliations

No practitioner shall be automatically entitled to membership on the medical staff or to the exercise of particular clinical privileges merely because he/she is licensed to practice in this or in any other state, or because he/she is a member of any professional organization or because he/she is certified by any clinical board, or because he/she had, or presently has, staff membership or privileges at a hospital or at another health care facility or in another practice setting.

##### 4. Nondiscrimination

No aspect of MEDICAL staff membership or particular clinical privileges shall be denied on the basis of sex, race, age, creed, color, or national origin or on the basis of any other criterion unrelated to the delivery of quality patient care in the Center, to professional qualifications, to the Center's purposes, needs and capabilities, or to community need.

##### 5. Basic Responsibilities of Individual Staff Membership

Each member of the medical staff shall:

- A. Provide all patient care at the generally recognized professional level of quality and

- efficiency.
- B. Abide by the medical staff Bylaws and all other lawful standards, policies and rules of the Center.
- C. Discharge such staff, and Center functions as required.
- D. Prepare and complete in timely fashion the medical and other required records for all patients he/she admits or in any way provides care to in the center.
- E. Abide by the ethical principles of his/her profession.

6. Duration of Appointment

All initial appointments are granted by the Governing Body for a period of one year.

7. Reappointments

Reappointments are also granted by the Governing Body and shall be for a period of not more than one year.

8. Staff Qualifications

The active staff shall consist of physicians, each of whom:

- A. Meets the basic qualifications.
- B. Regularly is involved in the care of patients in the Center.

9. Staff Prerogatives

The prerogatives of a staff member shall be to:

- A. Admit patients without limitation, unless otherwise provided in the medical staff rules and regulations.
- B. Exercise granted clinical privileges.
- C. Vote on all matters presented at general and special meetings of the medical staff, unless otherwise provided by resolution of the staff and approved by the Medical Board.
- D. Hold office in the staff organization unless otherwise provided by resolution of the staff, and approved by the Medical Board.

10. Staff Responsibilities

Each member of the staff shall:

- A. Meet the basic responsibilities.
- B. Retain responsibility within his/her area of professional competence for the continuous care and supervision of each patient in the center for whom he/she is providing services.
- C. Actively participate in the patient care evaluation and other quality evaluation and monitoring activities required of the staff, in supervising initial appointees of the same profession, and in discharging such other staff functions as may be required from time to time.
- D. Satisfy the requirements for attendance at meetings as necessary.

## 11. Temporary Privileges

### A. Circumstances

The Medical Director or the Chief of Medical Staff may grant temporary privileges in the following circumstances:

- ◆ Pendency of Application: An appropriately licensed applicant may be granted temporary privileges for an initial period of 20 days, with subsequent renewals at the discretion of the Medical Director.
- ◆ Care of Specific Patients: An appropriately licensed physician who is not an applicant for membership may be granted privileges on a temporary basis for the care of one or more specific patients.
- ◆ Locum Tenens: An appropriately licensed physician may be given temporary privileges for a period of 90 days under these circumstances.

### B. Conditions

Temporary privileges shall be granted only when the information available reasonably supports a favorable determination regarding the requesting practitioner's qualifications, ability and judgment to exercise the privileges requested, and only after the practitioner has satisfied the requirements of Section 2 and 5.

### C. Termination

On the discovery of any information or the occurrence of any event of a nature which raises question about a practitioner's professional qualifications or ability to exercise any of the temporary privileges granted, the Medical Director may terminate such practitioner's temporary privileges, without recourse.

### D. Rights of the Practitioner

A practitioner shall not be entitled to the procedural rights afforded because of his/her request for temporary privileges is refused or because all or any portion of his/her temporary privileges are terminated or suspended.

## 12. Emergency Privileges

For the purposes of this Section, an "emergency" is defined as a condition in which serious or permanent harm would result to a patient or in which the life of a patient is in immediate danger and any delay in administering treatment would add to that danger. In the case of an emergency, any practitioner, to the degree permitted by his/her license and regardless of service, staff status or clinical privileges, shall be permitted to do, and shall be assisted by Center personnel in doing, everything possible to save the life of a patient from serious harm.

## 13. Corrective Action

### A. Routine Corrective Action

- ◆ Criteria for Initiation
- ◆ Whenever the activities or professional conduct of any practitioner with clinical privileges are, or are reasonably likely to be, detrimental to patient safety or to the delivery of quality patient care are, or are reasonably likely to be, disruptive to Center operations, corrective action against such practitioner may be initiated by any member of the medical staff or by the Medical Director.

B. Requests and Notices

- ◆ All requests for corrective action shall be in writing, submitted to the Medical Director, and supported by reference to the specific activities or conduct which constitute the grounds for the request. The Medical Director shall promptly notify the Administrator of all requests for corrective action received and shall continue to keep them fully informed of all action taken in conjunction therewith.

C. Investigation

- ◆ The Medical Director shall immediately investigate the matter or appoint an ad hoc committee to investigate it. As soon as is practicable after the receipt of the request, the Medical Director shall forward a written report of the investigation to the medical staff. The investigative procedures may include consultation with the practitioner involved.

D. Governing Body Action

- ◆ As soon as practicable after the receipt of the report, the Governing Body shall take action upon the request.
- ◆ Such action may include:
  - ◆ Rejecting the request for corrective action.
  - Issuing a warning, a letter of admonition, or a letter of reprimand.
  - Recommending terms of probation or individual requirements of consultation.
  - Recommending reduction, suspension or revocation of clinical privileges.
  - Recommending limitation of any staff prerogatives directly related to patient care.
  - Recommending suspension or revocation of staff membership.

E. Summary Suspension

- ◆ Criteria and Initiation
  - ◆ Whenever a practitioner's conduct requires that immediate action be taken to protect the life of any patient(s) or to reduce the substantial likelihood of

immediate injury or damage to the health or safety of any patient, employee or other person present in the Center, the Medical Director, shall have the authority to summarily suspend the medical staff membership status or all or any portion of the clinical privileges of such practitioner. Such summary suspension shall become effective immediately upon imposition and the Medical Director shall promptly give special notice of the suspension to the practitioner. In the event of any such suspension, the practitioner's patients then in the Center whose treatment by such practitioner is terminated by the summary suspension shall be assigned to another practitioner by the Medical Director. The wishes of the patient shall be considered when choosing a substitute practitioner.

#### F. Automatic Suspension

- License - A staff member whose license is revoked or suspended shall immediately and automatically be suspended from practicing in the Center.
- Drug Enforcement Administration (DEA)– A staff member whose DEA is revoked or suspended shall immediately and automatically lose his/her right.
- Medical Records
  - ◆ An automatic suspension shall, after warning of delinquency, be imposed for failure to complete medical records in a timely fashion. For the purpose of enforcing this Section, justified reasons for delay in completing medical records may include:
    - Unavailability of a physician or other physician due to illness for a period of time due to circumstances beyond his/her control.
    - ◆ Waiting for the results of late reports and the record is otherwise complete.
    - ◆ A practitioner has dictated reports and is waiting for Center personnel to transcribe them.
    - ◆ A practitioner has left town.

#### G. Professional Liability

A practitioner who fails to maintain the amount of professional liability insurance required by the Governing Body (1 million/3 million) shall immediately be suspended from practicing in the Center.

#### 14. Hearing

When the Governing Body initiates an adverse action concerning a practitioner, the practitioner may be afforded his/her due process rights for a review.

#### 15. Hearings and Appellate Review

##### A. Exceptions

- ◆ Neither the issuance of a warning, a letter of admonition, or a letter of reprimand, nor the denial, termination or reduction of temporary privileges shall give rise to any right to a hearing or a review.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **C. Medical Staff Credentialing**

As stated in Governing Body Responsibilities, physicians and non-physicians will be granted privileges consistent with their individual training and experience and other qualifications. Credentialing will be performed by the Governing Body following the recommendations of the Medical Director. Re-appointments will be reviewed every year. Primary or secondary source verification will be performed on every applicant.

#### 1. Eligibility

Successful applicants for Medical Staff appointment must:

- ◆ Hold a current and unrestricted license to practice in the State of (Nevada), and current DEA registration
- ◆ Provide evidence of training, experience, current clinical competence, good reputation and the character, mental, physical, and emotional stability, and ability to work with and relate well to others to the extent required by the provision of these Bylaws;
- ◆ Have satisfactorily completed a full graduate residency program which is as required of him or her in order to take the appropriate Board Certification Examination in his or her medical specialty, or the equivalent for dentists.

Successful applicants for non-physician practitioner appointment must:

- ◆ Hold a current and unrestricted license to practice in the State of (Nevada), and current DEA registration, if applicable.
- ◆ Provide evidence of training, experience, current clinical competence, good reputation and the character, mental, physical, and emotional stability, and ability to work with and relate well to others to the extent required by the provision of these Bylaws;

#### 2. Effects and Other Affiliations

No practitioner shall be automatically entitled to membership on the Medical Staff, or to the exercise of particular clinical privileges, merely because he/she is licensed to practice in this or in any other state, or because he/she is a member of any professional organization, or because he/she is certified by any clinical board, or because he/she is a member of a medical school faculty, or because he/she had or presently has, Medical Staff membership or privileges at another health care facility or in another practice setting. Nor shall any practitioner be automatically entitled to appointment or reappointment of particular privileges merely because he/she has or presently has Medical Staff membership or those particular privileges at this Center.

#### 3. Ethics and Conduct

Professional conduct shall be governed by the Code of Ethics of this Center.

In addition, every practitioner, at the time of appointment and reappointment and at any time during the appointment period, must demonstrate, to the satisfaction of the Medical Staff and Governing Body, a willingness and capability, based on current attitude and evidence of performance, to work with and relate to other Medical Staff members, members of other health disciplines, Center's management and employees, patients, and the community in general, in a cooperative, professional manner that is essential for maintaining the Center's operations to provide appropriate patient care.

#### 4. Initial Application

A. Each applicant shall provide in writing, on a form developed by the Medical Staff and approved by the Governing Body, at least the following:

- ◆ Names of at least three (3) professional references, only one of whom may be from his/her practice group;
- ◆ Verified information regarding professional school diploma, postgraduate training, current license to practice in the State of (Nevada), and DEA registration;
- ◆ Information as to whether the applicant's professional license, or DEA registration, or Medical Staff appointment or clinical privileges at another hospital or other health care entity (e.g. Precision Surgery Center) have ever been reduced, revoked, suspended, not renewed, or voluntarily relinquished, and if applications for Medical Staff appointment and/or privileges at other hospitals or other health care entity have been denied.
- ◆ Information about the applicant's physical and mental health;
- ◆ Evidence of current professional liability insurance coverage in reasonable amounts that may be determined from time to time and at any time by the Governing Body with Medical Staff input;
- ◆ Information about malpractice judgments, suits, claims and settlements within the last five (5) years;
- ◆ Any additional information required by the Medical Staff or Governing Body to adequately evaluate the applicant, including the applicant's professional conduct.

Failure by the applicant to provide requested information within sixty (60) days of written request for the information shall result in the application being null and void, with no further processing required and no right to Hearing and Appeal.

Failure by the applicant to provide truthful, accurate, and complete information shall in itself be grounds for denial or revocation of Medical Staff membership/appointment and clinical privileges.

#### B. Application Process

All the appropriate documents along with completed application shall be submitted to the Administrator and once information is verified and the credentials file is deemed complete, it shall be forwarded to the Medical Director for review and/or request for additional

information. Information from the National Practitioner Data Bank (NPDB) will also be reviewed during the initial application process. Upon recommendation of the Medical Staff, the Governing Body shall approve, disapprove or defer recommendation and grant privileges accordingly. When final action has been taken by the Governing Body, the Medical Director shall be authorized to transmit the decision to the applicant for membership, and if he/she is accepted, to secure his/her signature to those Bylaws, Rules and Regulations. Such signature shall constitute his/her agreement to be governed and abide by the said Bylaws, Rules, and Regulations.

#### 5. Applicant's Burden

In all matters pertaining to any application for initial appointment and privileges and pertaining to obtaining of supporting information for reappointment, renewal, or updating of privileges, the burden is the applicant's. Processing of the application cannot begin until all required information is on file and validated.

#### 6. Completed Application Whether Initial or Renewal

Applications shall not be considered until they have been declared complete by the Medical Director.

"Completed Application" includes all information the applicant has been called upon to provide and validation of the information.

When the application has been deemed complete, the applicant will be so notified, but advised that further information may be requested when the Medical Staff considers the application.

The next step is the opportunity for the Medical Director to review information concerning education, training, and recent clinical experience, and provide a report on the applicant's qualifications. An applicant's appointment is effective upon action by the Governing Body.

If the Medical Staff issues a favorable recommendation, and the Governing Body action concurs, the Governing Body's action shall be final. If the Governing Body's action is unfavorable, it shall not be final until the applicant has exercised or waived his rights to a hearing under these Bylaws.

If the Medical Staff's action is unfavorable to the applicant, the hearing rights under these Bylaws shall apply. If the applicant waives his/her rights, the Medical Staff's recommendation shall be forwarded to the Governing Body or final action which shall adopt the Medical Staff's action unless there is insufficient reasonable data to support it. If the applicant exercises his/her hearing rights, the Governing Body shall not take final action until the applicant's right under these Bylaws have been exhausted or waived.

When the final action has been taken by the Governing Body, the Medical Director must transmit this decision in writing to the applicant for appointment or reappointment.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **D. Appraisals of Physicians and Non-Physician Members of Medical Staff**

##### **I. REAPPOINTMENT AND RENEWAL OF PRIVILEGES**

Appointments and clinical privileges are renewable every year. The following will hold for both Physician Members of the Medical Staff and Non-Physician Members, as applicable.

The purpose of reappointment is not to resolve issues but is to review established facts for the purpose of reappointment and renewal of privileges.

The Governing Body reviews and acts on the Medical Director's recommendations regarding reappointment and renewal of clinical privileges.

Applications for renewal of Medical Staff membership and clinical privileges shall be acted upon only as set forth in these Bylaws and on an annual basis, or by recommendation from the Medical Director.

If the Medical Director issues a favorable recommendation, and the Governing Body action concurs, the Governing Body's action shall be final. If the Governing Body's action is unfavorable, it shall not be final until the applicant has exercised or waived his/her rights to a hearing under these Bylaws.

If the Medical Director's action is unfavorable to the applicant, the hearing rights under these Bylaws shall apply. If the applicant waives his/her rights, the Medical Director's recommendation shall be forwarded to the Governing Body for final action which shall adopt the Medical Director's action unless there is insufficient reasonable data to support it. If the applicant exercises his/her hearing rights, the Governing Body shall not take final action until the applicant's rights under these Bylaws have been exhausted or waived.

At a regularly specified time, each Medical Staff member receives an application for renewal of his/her appointment and clinical privileges. The reappointment/renewal application process includes or elicits at least:

1. Opportunity to request continuation of present Medical Staff status;
2. Opportunity to request a change in Medical Staff category assignment;
3. Opportunity to request either an addition to or a deletion from specific clinical privileges;
4. Opportunity to request that Medical Staff membership and privileges be terminated.
5. Revalidation of licensure and DEA registration.
6. Summary of performance and information accumulated by the Quality Improvement Coordinator, reflecting clinical knowledge, judgment skills, relationship with other physicians, with the Center and its employees and with patients, availability, mental and physical stability, and technical proficiency. Peer reviews are taken into consideration and current competence is verified and

documented.

7. Verification of the practitioner's mental and physical health shall be provided upon request by the Medical Staff.
8. Evidence of continued liability insurance coverage in reasonable amounts established by the Governing Body and information about malpractice judgments, suits, claims, settlements.
9. Information from the National Practitioner Data Bank (NPDB) will also be reviewed during the reappointment process.
10. Information about changes in Medical Staff membership and/or privilege status at other health care entities; such information may be required to perform current performance.

## **II. BETWEEN ROUTINE REAPPOINTMENT DATES**

Practitioners shall immediately furnish to the Medical Director, whenever applicable:

1. Information if the practitioner's professional license in any state has been limited, revoked, restricted, suspended, not renewed or voluntarily relinquished.
2. Information if professional liability insurance is canceled or lapses without renewal.
3. Information about restrictions on, relinquishment of, or revocation of Medical Staff membership and/or privileges at another institution.
4. Information about a significant change in health status that adversely affects the practitioner's ability to practice medicine.
5. Any information reasonably required by the Medical Staff to adequately evaluate the Medical Staff member.

## **III. REAPPOINTMENTS**

1. The procedure for reappointment shall be as follows:

The physician shall submit a Request for Reappointment and Renewal of Clinical Privileges. The Administrator shall, at least 60 days prior to the expiration date of the present staff appointment of each medical staff member, provide such staff member with a Request for Reappointment for use in considering his or her reappointment. Each staff member who desires reappointment shall, at least 30 days prior to such expiration date, send his/her Request for Reappointment to the Administrator.

2. The Administrator shall compile information and submit completed request to the Medical Director. After the Medical Director has reviewed the request, he shall upon recommendation of the Medical Staff, submit recommendation to Governing Body. After the Governing Body has reviewed the request for re-appointment, the Administrator shall be authorized to transmit a decision to the applicant. Any additions, deletions or restrictions to the privileges granted, will be put in writing to the applicant. A notice of change in delineation of privileges shall be forwarded to the scheduling office.

3. Medical staff members not meeting criteria will be informed by a letter of non-compliance.

#### **IV. HEARING AND APPEALS PROCESS**

Recommendation to the Governing Body for withdrawal of any privileges or dismissal from the Medical Staff shall be made only after a thorough investigation, with the subject member being given the right of hearing before the Governing Body.

An appeals process will follow these guidelines:

1. All notification and communication between a physician and Precision Surgery Center will be by certified mail, return receipt requested.
2. Initial correspondence between Precision Surgery Center and the physician will advise the practitioner of his right to a hearing, review and right to review specific charges against him.
3. Failure to request a hearing or review within fourteen (14) days of proper notification by certified mail will constitute a waiver of rights for hearing or review.
4. The administrator will be present at all formal hearings and review.
5. The formal nature of a hearing or review will state in concise language, acts of omission or commission with which the physician or other health related professionals are charged.
6. A record of proceedings will be maintained.
7. Either party will be allowed to have an attorney present at the hearing or review. Should either party elect to have an attorney present, then the other party should be so notified prior to the meeting.
8. Notification and hearing will be conducted within thirty days, the beginning date to commence with the date notification is posted. Review will be conducted and notification delivered within ten (10) days following hearing.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **E. Clinical Privileges**

Diagnostic and treatment privileges for specific procedures to be performed are determined and approved by the Governing Body. A current copy of each physician's Delineation of Privileges form will be maintained in each physician's credentials file identifying which procedures they will be performing and will be updated annually.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **2. Membership and Clinical Privileges**

#### **F. Medical Staff File**

A credentials file will be maintained on each physician containing at least the following:

1. Current Medical Staff Application
2. Current (Nevada) Medical License
3. Current DEA License
4. Current Malpractice Insurance Certificate
5. Current Delineation of Privileges
6. Proof of Educational Training (i.e. medical school, residency, fellowship)
7. Verification of either admitting or refer and follow privileges in one of the nearby hospitals.
8. Competence of Medical Staff Member, as indicated in part by relevant findings of QAPI activities and other reasonable indicators of current qualifications.
9. American Medical Association (AMA) Master Profile
10. National Practitioner Data Bank Profile, updated annually
11. Name(s) of supervising physicians for non-physician practitioners, if applicable

All credentials of the Medical Staff of Precision Surgery Center will be primary or secondary source verified by the Administrator or one of his/her designees.

# **PRECISION SURGERY CENTER**

## **SECTION VI**

### **MEDICAL STAFF**

#### **3. Staff Management Policies**

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **3. Staff Management Policies**

#### **A. Medical Staff Management**

##### **I. PROBLEM IDENTIFICATION**

Confirmed and documented patterns of practice or behavior, or single incidents that adversely affect, or could adversely affect patients, the Medical Staff, the Center or its employees, including its orderly operations, are addressed by the Medical Director and/or Governing Body, with the affected individual in a relevant and timely manner.

Problem identification relating to a practitioner's clinical judgment or skills, compliance with Center and/or Medical Staff rules, physical or mental status, ethical behavior or conduct may be by information developed routinely in the course of performance evaluation activities, or by an incident report, or by complaint from a Medical Staff member, patient or Center employee.

If necessary for fact-finding purposes, or if requested by the affected practitioner, by any member of the Medical Staff, or by the Governing Body, in a written request to the Medical Staff including grounds for the request, then a formal study (review, investigation) shall be conducted. In that event, this procedure shall be used.

1. The initial meeting of Medical Staff shall be held within seven (7) days of the decision to review or investigate, except that the initial meeting shall be held within three (3) days if the practitioner has been summarily suspended.
2. The affected practitioner shall be informed by the Medical Staff of the review or investigation and may be invited to attend its initial meeting.
3. Legal counsel should be asked to advise proper procedure and to evaluate the appropriateness of any resulting recommendation.
4. Within seven (7) days following its initial meeting, the Medical Staff either (a) is ready (has enough reliable information) to report its finding(s) and recommendation(s) to the Governing Body, or (b) obtains further information, from whatever sources, prior to framing its findings and recommendations.

##### **II. MEDICAL STAFF OBLIGATION**

1. The Medical Staff:
  - A. Develops and evaluates reliable, objective information to determine whether there are reasonable grounds to conclude that a problem exists;
  - B. Includes information about resolving the problem in the reports to the Governing Body.

### **III. GOVERNING BODY'S OBLIGATION**

If the Medical Staff fails to investigate or take disciplinary action contrary to the weight of the evidence, the Governing Body will initiate an investigation or disciplinary action. If the Medical Staff fails to take action as directed by the Governing Body, the Governing Body may initiate corrective action but such corrective action must comply with the terms of Bylaws.

### **IV. PROBATIONARY STATUS**

Probation, when imposed, is for a specified time period, and may apply to membership, clinical privileges, or one or more specific clinical privileges. Probationary status is removed as soon as the Medical Staff and the Governing Body are satisfied that the problem necessitating the imposition of probationary status is resolved.

### **V. PRECAUTIONARY SUSPENSION**

In the event that an individual practitioner's action may pose a danger to the health of any person, the Medical Director shall have the authority to suspend all or any portion of the clinical privileges of the Medical Staff member in question. Such suspension does not imply final finding of fact or responsibility for the situation that caused the suspension. Such precautionary suspension shall be deemed an interim precautionary step in the professional review activity and not a complete professional review action.

Such precautionary suspension is immediately effective, is immediately reported to all the individuals named above, and remains in effect until a remedy is affected.

As soon as practical, but in no event later than three (3) days after a precautionary suspension, the Medical Staff shall convene to review the action. The affected practitioner may request to be present at this meeting which is not a Hearing and is not to be construed as such.

Within thirty (30) days the Medical Staff will determine whether to continue or revoke the suspension, or take another action. If the action taken entitles the affected practitioner to a Hearing, then the Hearing and Appeals Procedure shall apply.

### **VI. AUTOMATIC EFFECTS OF ACTIONS OF MEDICAL STAFF MEMBERS**

#### **1. Failure to Complete Medical Records**

- A. Incomplete Medical Records – All portions of each patient's medical record shall be completed within the time period after the patient's discharge as previously stated. Failure to do so (unless there are acceptable extenuating circumstances) automatically results in (a) the record being defined as delinquent, and (b) notification to the practitioner.

- B. Delinquent Medical Records – Failure to complete all aspects of any patient's delinquent medical record within twenty-one (21) additional days after written notice that the record is delinquent (see (b) above), shall constitute voluntary relinquishment of Medical Staff membership and of all clinical privileges.

Reinstatement to the Medical Staff is immediate upon completion of the delinquent record.

## **VII. ACTIONS AFFECTING STATE LICENSE TO PRACTICE OR DEA REGISTRATION**

If a practitioner's actions result in his/her state license to practice or DEA registration being revoked, suspended, limited for disciplinary reasons, not renewed by the relevant agency, or voluntarily relinquished by the individual, then Medical Staff Appointment and clinical privileges are automatically revoked, suspended or limited to at least the same extent, subject to reapplication by the practitioner when/if his license is reinstated, or limitations are removed, whatever the case.

## **VIII. LAPSE OF LIABILITY INSURANCE**

If the Governing Body, with Medical Staff input, have established a requirement for liability insurance coverage for practitioners with clinical privileges, and if a Medical Staff member's liability insurance lapses or is canceled without renewal, then the practitioner's Medical Staff membership privileges and clinical privileges are automatically suspended until the effective date of his/her new liability insurance coverage unless otherwise determined by the Governing Body and the Medical Staff.

## **IX. RIGHT TO HEARING AND APPEAL**

Circumstances under which a Medical Staff applicant or member is entitled to (a) a Hearing on the facts and/or (b) an Appeal of the Governing Body's decision, and the specific procedure to be followed for Hearings and Appeal, are described in the Hearing and Appeal Procedure.

# PRECISION SURGERY CENTER

## VI. MEDICAL STAFF

### 3. Staff Management Policies

#### B. Impaired Physician or Non-Physician Practitioner

1. **General Policy:** The Medical Staff recognizes that impaired providers are individuals who have dedicated their lives to helping others and are now in need of help; and recognizes that providing this help must remain a primary goal of the Impaired Provider Policy. This policy, therefore, follows a non-punitive approach, in which the Medical Staff works as an advocate for, rather than an adversary of, the provider, while seeking to protect patients from harm. The Medical Staff further recognizes that when the provider denies a problem, necessary action must be taken for the protection of both the provider and the patient.
2. **Definitions:** An "impaired provider" is a physician or non-physician practitioner who because of psychiatric or other medical conditions or because of the use of alcohol, illegal drugs or prescribed or over-the counter drugs which impair clinical judgment or ability, may be unable to provide appropriate patient care or may otherwise constitute a direct and immediate threat to the health, welfare, and safety of patients, other staff members, and the Center's personnel.

A "reasonable suspicion" is one based on documentation of specific, contemporaneous physical, behavioral, or performance indicators consistent with probable substance abuse or psychiatric or other medical conditions.

A "positive result" of an alcohol or other drug test means the detection of alcohol or another drug in concentrations deemed significant by the United States Department of Health and Human Resources on both an initial screening test and a confirmatory test of the same specimen.

An "approved treatment program" is a program for alcoholism or substance abuse treatment that is approved by the Nevada State Board of Medicine and Committee on Physician Impairment.

3. **Promotion:** This impaired provider evaluation and intervention policy should be promoted to Medical Staff members and Center employees to ensure visibility and use. The promotion should emphasize the advocacy program and non-punitive nature of the policy. In addition, confidentiality of reports should be stressed to encourage reporting of potentially impaired providers.
4. **Reports**
  - A. **Third Party Reports:** Reports about an individual who may be an impaired provider should be encouraged and accepted from nurses, colleagues, other Center personnel, patients and family members. Anonymous reports will be accepted, with appropriate consideration given to the inherent benefits and detriments of such reports.

Reports of suspected impairment shall be submitted to the Medical Director. The Director will notify the person making the report that the report has been received, reviewed and appropriately acted upon. Such notification shall be made orally and shall generally not specify the action taken. The Medical Director shall be entitled to review substantiated reports of possible impairment as well as follow-up reports of treatment, recovery and wellness.

- B. Self-reporting: All providers must submit a written report to the Medical Staff of any change in the provider's psychiatric or other medical status which might possibly affect the quality of patient care rendered by the provider within the limits of his or her clinical privileges. Such reports should be made immediately upon the provider becoming aware of the change. If the provider desires to continue providing patient care at the Center, he or she must comply with the evaluation, reporting and follow-up procedures set forth in this policy.

5. Requests for Testing or Evaluation

- A. Reasonable Suspicion Testing: If any Medical Staff member, based on a personal review and evaluation of the report, finds a basis for a reasonable suspicion of impairment, the Medical Director may request that the individual provide specimens for the purpose of determining the alcohol or other drug content of the individual's system or submit to other appropriate psychiatric or other medical evaluation.
- B. Post-incident Testing: A provider whose performance either is reasonably believed to have contributed to an accident or incident or cannot be discounted as a contributing factor to an accident or incident, may be tested for the presence of alcohol or other drugs in his or her system upon request of any member. Such testing shall be performed immediately upon request and as soon as possible following the accident or incident, with a goal of collecting the specimen within twenty-four hours of the accident or incident in order to obtain more accurate information regarding the provider's status at the time of the accident or incident.

6. Procedures for Testing or Evaluation

- A. Substance Abuse: Specimen collection shall comply with applicable procedures from time to time established by the Center, which shall be in accordance, to the extent reasonably possible, with guidelines published by the U.S. Department of Health and Human Services. This indicates referring the provider to Apex Medical Center for all specimen collection. All persons involved in the collection, testing and reporting under this procedure shall respect the privacy and confidentiality of the information obtained and report information relating to the collection and testing in a manner to observe such confidentiality.

Specimens for alcohol or other drug testing may include a person's blood or urine. The Medical Director or his or her designee shall collect or monitor the collection of the specimens and shall document in the provider's medical staff file the collection procedures followed, assignment of confidentiality code, and the provider's written acknowledgment of the specimen and assigned code. The specimen shall be labeled using the confidentiality code to avoid identification of the individual involved.

If the individual to be tested refuses to cooperate with the collection process, such refusal shall be communicated to the Medical Director. Such refusal shall be documented in the medical staff file and may be grounds for suspension or revocation of any or all parts of the provider's clinical privileges or medical staff membership.

All specimens will be tested by an independent laboratory that is certified by and in compliance with guidelines from time to time established by the United States Department of Health and Human Services.

Any specimens for which positive results are found shall be preserved and retained for at least 2 years, or until resolution of all legal or administrative challenges involving such specimen, whichever is longer.

Reports of positive test results shall be maintained and securely filed by the Medical Director or his or her designee for a period of at least five years or until all legal and administrative challenges to the test results are resolved. Reports of negative results shall be retained for at least one year or for such longer time period as may be requested by the provider. All such records shall be treated confidentially.

- B. **Psychiatric Disorders:** Psychiatric evaluation must be performed by a psychiatrist approved by the Medical Director. The evaluating psychiatrist will report to the Medical Director the provider's failure to cooperate with the evaluation or refusal to consent to release of reports. Such action may be grounds for suspension or revocation of any or all parts of a provider's clinical privileges or medical staff membership. Based on the evaluation, the psychiatrist must determine the extent of impairment and assist the Medical Director in determining the appropriate level of restrictions on the provider's clinical privileges.
- C. **Physical Disorders:** Evaluation of possible physical disorders must be performed by an appropriate physician or physicians approved by the Medical Director. The evaluating physician will report to the Medical Director of the provider's refusal to consent to evaluation or to release of reports. Such refusal may be grounds for suspension or revocation of any or all parts of a provider's clinical privileges or medical staff membership. The evaluating or treating physician(s) shall assist the Medical Director in determining the appropriate level of restrictions on the provider's clinical privileges.

## 7. Intervention

- A. **Substance Abuse:** Upon receipt of a report of positive test results, the Medical Director shall select a group of physicians or other providers to contact the impaired provider and attempt intervention.

If the intervention is successful, the impaired provider shall enter an approved treatment program for assessment and such treatment or other follow-up as may be recommended by such program. The provider's clinical privileges will be temporarily suspended and he or she will be relieved of any of the Center's responsibilities or duties while receiving assessment and treatment.

The treatment physician(s) at the approved treatment program shall submit a written report of successful completion of treatment to the Medical Director. Such report shall be made available to the Governing Body. Upon receipt of the report, execution of a "Relapse Contract" by the treatment provider and submission of a Limited Reappointment Application, the provider's clinical privileges may be reinstated.

- B. **Psychiatric Disorders:** Following evaluation and diagnosis of a psychiatric disorder resulting in impairment, an approved psychiatrist shall determine the frequency and nature of psychiatric care. The approved psychiatrist shall report to the Medical Director when the provider is sufficiently stable for removal of restrictions on clinical privileges. Such report shall be made available to the Governing Body.

- C. **Physical Disorders:** Following evaluation and diagnosis of a physical disorder resulting in impairment, an approved physician shall provide ongoing evaluation and management of the disorder. The approved physician shall report to the Medical Director when the provider is sufficiently stable for removal of restrictions on clinical privileges. Such report shall be made available to the Governing Body.

## 8. Reinstatement

Upon receipt of the treating physician's report and other documentation required above, the provider's clinical privileges may be reinstated.

- A. **Substance Abuse:** Following reinstatement of clinical privileges, the provider must receive follow-up assessment at an approved treatment program. Such assessment must include random monitored urine drug screens. A written, non-restricted report of assessment must be submitted by the treatment program at least every four months to the Medical Director. Such report shall be available to the Governing Body. The provider must complete and submit to the Medical Director a Limited Reappointment Application every 6 months for 2 years following reinstatement and annually for an additional three years. The assessments, reports, and applications required by this paragraph may be discontinued after a minimum of 2 years of recovery and with the written release of the approved physician.
  - B. **Psychiatric or Other Medical Disorders:** The treating psychiatric or other physician shall determine the frequency of follow-up care or assessments following reinstatement of clinical privileges. The psychiatric or other physician shall send a written, non-restricted report regarding the individual's status to the Medical Director at least every four months while follow-up care continues. Such reports will be available for review by the Governing Body. If the individual's condition remains stable for 2 years, the report's frequency may be changed to yearly or at the discretion of the psychiatric or other physician.
- 9. **Relapse:** Upon receipt of evidence of relapse of a substance abuse problem or recurrence of a psychiatric or other medical condition resulting in impairment, or a physician's statement of pending relapse or recurrence, the provider must re-enter an approved treatment program or resume psychiatric or other medical treatment. Refusal to re-enter a treatment program or to resume psychiatric or other medical treatment shall result in automatic removal from the Medical Staff.
  - 10. **Refusal:** A provider's refusal to cooperate with substance abuse testing or psychiatric or other medical evaluations, refusal to consent to release of non-restricted reports of treatment or follow-up, or refusal to cooperate with treatment shall constitute grounds for suspension or revocation of all or any part of the provider's clinical privileges or medical staff membership.
  - 11. **Hearing Rights:** Action taken with respect to a physician's Medical Staff membership or clinical privileges or application for membership or clinical privileges as a result of refusal to cooperate with testing, treatment or follow-up shall give the affected physician the right to a hearing and appellate review as provided in Medical Staff Bylaws.
  - 12. **Medical Review:** The Quality Improvement Coordinator and, ultimately, the Governing Body is responsible for evaluating and improving the quality of care rendered at the Center and for determining that health services rendered were performed in compliance with applicable standards of care. All actions, reports, and proceedings of the Governing Body in connection with this

procedure shall be made and conducted in furtherance of those responsibilities, and all information given in that context and shall be entitled to the maximum confidentiality and protection afforded by law.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **3. Staff Management Policies**

#### **C. Patient Management**

##### **I. ADMISSION AND DISCHARGE OF PATIENTS**

1. A patient may be admitted only by a practitioner with clinical privileges.
2. The physician's responsibilities include:
  - A. Care and treatment of the patient;
  - B. Prompt completeness and accuracy of the patient's care;
  - C. Instructions to Center personnel regarding the patient's care;
  - D. Providing reports of the condition of the patient for the patient's relatives.
3. The admitting practitioner is responsible for providing information necessary to ensure the protection of other patients and the Center staff (Example: communicable diseases) and to provide such information as may be necessary to ensure the protection of the patient from self harm.
4. All practitioners cooperate with the utilization review function by being sure that the patient record includes at least: "Reason for admission."
5. Patients are discharged only on the order of the attending practitioner, unless the patient does so "against medical advice."

##### **II. INFORMED CONSENT**

It is the attending physician's responsibility to obtain the signature of the patient, or his/her authorized representative, on a consent form, after the patient's condition, planned procedure/surgery and other treatment options and risks and benefits of the selected treatment have been explained. The patient will always have the opportunity to ask questions prior to signing the consent form.

##### **III. ORDERS AND PRESCRIPTIONS**

All orders for treatment shall be in writing, signed and dated.

Orders which are illegible or improperly written will not be carried out by the nursing staff until rewritten or explained.

A "verbal order" is appropriate if the verbal order is:

1. Dictated to a duly licensed person functioning within his/her sphere of competence;
2. Signed by the responsible practitioner within forty-eight (48) hours.

## **V. PATIENT'S MEDICAL RECORD**

1. The patient's medical record, like the patient, is the responsibility of the attending practitioner. The record's contents must be legible and include at least:
  - A. Identification data;
  - B. Complaint or condition; admitting diagnosis
  - C. History;
  - D. Results of physical examination;
  - E. Provisional diagnosis;
  - F. Planned medical and/or surgical treatment;
  - G. Reports, such as laboratory and radiology reports, consultations, ect.
  - H. Informed consent form;
  - I. Final diagnosis.
2. Symbols and abbreviations may be used in the patient's record only when they have been approved by the Center.
3. Written consent of the patient or the patient's legally qualified representative is required for release of medical information to persons not otherwise authorized to receive this information.
4. Medical records not completed within fourteen (14) days following the patient's discharge are classified as delinquent.
5. Medical record forms may be modified or substituted only with the approval of the Quality Improvement Coordinator and/or Medical Director.

## **V. CONSULTATIONS**

Except in emergency, consultation is recommended in the following situations:

1. When the patient or his/her family requests a consultation.
2. If a nurse has any reason to doubt or question the care provided to any patient or feels that appropriate consultation is needed and has not been obtained, he/she shall first consult with the attending physician, then call this to the attention of his/her supervisor who in turn may refer the matter to the Medical Director. Where circumstances are such to justify such action, the Medical Director may request a consultation.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **3. Staff Management Policies**

#### **D. Medical Director**

##### **I. BASIC FUNCTION**

Responsible for the management of all activities of the Center that directly or indirectly affect patient care and administration.

##### **II. QUALIFICATIONS**

1. Licensed to practice medicine in the State of Nevada. Board Certification in the practice of Physical Medicine and Rehabilitation, or an ABMS specialty with sub-specialty certification in interventional pain management.
2. Knowledge of and previous experience in developing clinical pathways, clinical protocols; disease management paths is preferred.
3. Documented training, education, and/or experience in management of patients receiving services within the ambulatory surgery, including pain management, physical therapy and rehabilitation.
4. Member of the medical staff with clinical privileges and/or experience in the ambulatory surgery, pain management, and physical therapy.
5. Excellent verbal and written communication skills; a comprehensive range of medical knowledge; the ability to educate, influence, and deal with difficult issues; and the ability to analyze/interpret data, communicate results to providers, and implement corrective action with peers are all required.
6. Ability to function in a leadership role and take initiative when necessary. Ability to work within a total quality management environment is essential.

##### **III. DUTIES AND RESPONSIBILITIES**

1. The Medical Director provides strong medical leadership in the development and ongoing monitoring of all clinically-based activities. These activities are focused in the areas of practice management analysis and improvement, case management, traditional utilization review, and continuous quality improvement.
2. Strong interpersonal skills, systems thinking, financial and management experience, and comprehensive clinical and medical skills to engender confidence in the Center by customers and physicians.
3. Innovation, creativity, and the ability to effect change are prominent characteristics of the position.
4. The Medical Director is highly visible with the medical community, as well as the community at large.
5. The Medical Director will work in partnership with the staff in utilization of review functions.

6. Provide consultation in the Center as requested by medical staff.
- 7.. Oversee and actively participate in performance improvement activities.
8. Participate in the development and approval of policies and procedures associated with patient care.
9. Participate in the continuing education program for medical and Center's staff.
10. Participate in the identification and resolution of issues associated with the provision of ambulatory care.
11. Make recommendations regarding the numbers, qualifications, and competencies of staff providing the ambulatory care services.
12. Make recommendations regarding resources needed to provide ambulatory care.
13. Works collaboratively with the medical staff in the credentialing and recruitment of physicians. Develops and implements physician orientation.
14. Supervises and evaluates the Clinical Director.
15. Provides oversight and direction to Medical Staff and Administrative Staff.
16. Works collaboratively with non-physician administrative staff on operational issues.
17. Ensures compliance with vision statement, corporate policies, and Bylaws.

#### **IV. AUTHORITY**

1. The Medical Director reports to the Governing Body.
2. The authority of the Medical Director is substantially and sufficiently pervasive to permit the physician in this role to adequately undertake the responsibility expectations by the Board of Directors. This authority includes, but may not be limited to the following:
  - A. Responsible for policies affecting medical practice and judgment.
  - B. Responsible for providing medical input into planning.
  - C. Maintains the right to review and recommend changes affecting clinical practice.

#### **V. MARKETING/CUSTOMER SERVICE**

1. Collaborates with the Board of Directors and the staff in developing and implementing a customer quality service plan.
2. Participates in marketing efforts and contract negotiations.

#### **VI. QUALITY ASSURANCE/UTILIZATION MANAGEMENT**

1. Leads the development of practice guidelines and other methods for improvement, implementing changes and corrective actions as needed.
2. Works collaboratively with the medical staff in the areas of case management and utilization management, as limited to our patient care.
3. Supports the requirements of the QAPI Work Plan. Analyzes and evaluates outcomes and other data.
4. Responsible for the investigation of patient complaints and handles unresolved issues.
5. Implements physician discipline process and documents physician personnel problems. Makes disciplinary recommendations to the Board.

#### **VII. COMMUNITY RELATIONS**

1. Acts as the internal and external medical spokesperson.
2. Provides the interface between the medical organization and the public and represents the Center in media contacts.
3. Participates in meeting the community's local needs for health education.

### **VIII. STRATEGIC PLANNING**

1. Develops organization growth plans.
2. Provides effective interface between the Center, the physicians, and the community.

### **IX. FISCAL**

1. Performs ongoing analysis of practice patterns, costs, and other information.
2. Works with physicians and other staff in meeting financial parameters.
3. Approves capital expenses.

### **X. OVERALL MANAGEMENT**

1. Attends all meetings of the Governing Body. (Board of Directors)
2. Attends educational activities to maintain knowledge on current state of the art treatment protocols, break-through technology, alternative site care, etc.
3. Maintains knowledge in a broad range of medical practice.
4. Participates in professional organizations at state, regional, and national levels.
5. Assumes additional responsibilities as directed by the Governing Body.

# **PRECISION SURGERY CENTER**

## **VI. MEDICAL STAFF**

### **3. Staff Management Policies**

#### **E. Physician Policies**

##### **I. BASIC FUNCTION**

Responsible for conducting and management of clinical activities of the Center that directly or indirectly affect patient care.

##### **II. RESPONSIBILITIES**

1. Adheres to mission, vision, values, goals, philosophy, objectives, policies and procedures of the Center.
2. Actively participates in the long-range planning of the center regarding financial, personnel, patient care and marketing.
  - A. Assists in development and/or revision of standard operating procedures for gathering, processing, and evaluating information important to the Center.
  - B. Assists in determination of the need to replace existing or purchase of additional medical and non-medical equipment.
- C. Assists in developing capital budget.
- D. Interprets policy and clarifies procedures for staff.
- E. Assists in recruiting and hiring physician members, nurses, and medical assistants to fill openings in the Center.
- F. Assists in orientation of new employees (physician and non-physician).
- G. Disciplines non-physician staff when necessary.
- H. Assists conducting job performance evaluations for non-physician staff.
- I. Assists in the formulation of the Center's position on issues related to the practice of medicine at the Center (peer review, accountability, and licensure).
- J. Assists in approving criteria for quality care; participates in QAPI to improve quality of care and appropriate utilization of services.
- K. Assists approved standard operation procedures for delivering patient care.
- N. Provides medical support services and consultations for those persons admitted to the Center's for surgical care or procedures.
- O. Participates as a member of the disciplinary health care team.

### **III. QUALIFICATIONS**

1. Licensed to practice medicine in the State of (Nevada).
2. Board certified or qualified eligible in medical specialty of individual training.
3. Evidence of education, training, professional ethics, references, and health status sufficient to meet requirements of position.

### **IV. REQUIREMENTS**

1. Participates in active education at a local or national level in primary specialty.

# **PRECISION SURGERY CENTER**

## **SECTION VII**

### **HUMAN RESOURCES**

# **PRECISION SURGERY CENTER**

## **SECTION VII**

### **HUMAN RESOURCES**

#### **1. General Principles**

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **A. General Policies**

#### **I. POLICIES**

1. The Center is an equal opportunity employer to all qualified persons and applicants based on their qualifications and ability to perform job tasks without regard to race, color, sex, religion, national origin, physical disabilities, age, or veteran status.
2. The Center recognizes that it needs an appropriate number of qualified personnel to fulfill its mission and meet the needs of the patients it serves. This is achieved by human resources planning, appropriate orientation and education of the staff, assessment of competency and credentialing and privileging of licensed independent practitioners and by information management.
3. All professional licensed members of Precision Surgery Center have their credentials primary or secondary source verified, as applicable. This includes members of the medical staff and nursing staff as required.

#### **II. PLANNING**

1. The Center has defined qualifications and job expectations for their staff, and established a system for evaluating job performance by considering the following factors:
  - A. The Center's mission, vision, values, goals and objectives.
  - B. The case mix of patients served and the degree and complexity of care they require.
  - C. The scope of services provided by the Center.
  - D. Assessment of technology used in patient care.
  - E. Expectations of the Center, staff, patients and community.
2. To achieve the above needs an adequate number of qualified staff are provided. This is determined by:
  - A. Evaluating the needs of each department by evaluating, education, and training required by applicable law, regulation, and the policies of the Center.
  - B. By qualifications of personnel with current licensure, certification, registration, and experience.
  - C. Knowledge and expertise necessary to carry out the responsibilities assigned.
  - D. By credentialing process and
  - E. By appropriate evaluation of personnel in training, in usage of emergency equipment and in CPR, BLS and ACLS, specifically in the surgery area.
3. To achieve the Center's mission, vision, goals, objectives and provide ongoing competent services the Center has established policies to evaluate the competence of all staff members on a continual basis to maintain, demonstrate and improve their skills. These are achieved by:

- A. Initial orientation.
  - B. Ongoing in-services, arranged by the Clinical Director as needed.
  - C. Empowering the employees to develop a sense of ownership and accountability for their work.
  - D. Requesting the employees to participate in internal and external continuing education activities.
  - E. Participating in professional associations and by continually enhancing their performance within the Center by periodic measurement of job performance, clinical competencies, and skills which are objective.
4. Recognizing human resources planning, the Center encourages staff self development and learning. The Center preaches that staff performance results from a combination of components and nature of the work environment. Hence, the Center has created an environment and culture that helps staff members discover what they need to learn and assist them, as appropriate, in acquiring the new knowledge and skills. The Center requests feedback from its staff to manage its efforts to create a competent and enhanced work environment.

### **III. ORIENTATION, EVALUATION AND EDUCATION OF STAFF**

1. Recognizing the importance of staff performance in the success of the Center, the Governing Body has established standards for:
- A. New staff orientation which provides initial job training and information, at the same time it provides to the Center the capability to assess the abilities of the individual in fulfilling the job responsibilities.
  - B. Ongoing inservice or other education and training to maintain and improve staff competence.
  - C. Competence assessment is evaluated by ongoing data collection about staff. Competence patterns, and trends are used to respond to staff learning needs by continual ongoing evaluation of the staff which is collected from competency inventories in which deficiencies are noted for specific categories.
  - D. The Center has developed its philosophy noting each individual's responsibilities and their comfort level in providing patient care. In rare circumstances the Center through the Medical Director, will excuse an employee from performing certain aspects of patient care based on that staff member's values, ethics, or religious beliefs. Such policies are:
    - ◆ Any other reasonable values, ethics, or religious beliefs that will make the staff member uncomfortable.

In all cases appropriate substitution of staff members will be provided so that patient care is not compromised when such requests are granted.

#### **IV. MANAGEMENT OF INFORMATION**

The Center relies on information about the scientific aspects of care, individual patients, quality of care provided, results of care, as well as its performance to provide, coordinate, and integrate services.

It is the Center's goal to obtain, manage and use information to improve patient outcomes and individual and Center performance in patient care, governance, management, and support processes. To achieve this goal, the Center has established policies to:

1. Identify information needs
2. Design the structure of the information management system
3. Define and capture data and information
4. Analyze data and transform the information
5. Integrate, transmit, and report the data

To achieve these goals and objectives the Center:

1. Ensures timely and easy access to complete information throughout the Center
2. Improves data accuracy
3. Balances requirements of security and ease of access
4. Uses aggregated and comparative data to pursue opportunities for improvement
5. Redesigns information-related processes to improve efficacy and
6. Increases collaboration and information sharing to enhance patient care whenever feasible.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **B. Employment**

#### **I. PREAMBLE**

Philosophy of the Center is to provide all qualified individuals with the opportunity to seek employment.

#### **II. APPLICATIONS FOR EMPLOYMENT**

1. Applications for employment are obtained from the Administrator or Clinical Director. No individual will be considered for employment without first submitting the Application for Employment to the Administrator or Clinical Director.
2. Although it is the Center's policy to accept these Applications for Employment, there may be those times when no employment opportunities exist. In this case, the right is reserved not to accept applications until position vacancies occur.
3. Completed applications for employment will be maintained by the Administrator and are considered to be the sole property of the Center and its authorized agents. Applications for Employment are considered to be "active" for a period of 30 days, in which the document may be sent to one or more interviewers. After this period, the application is filed according to the area of employment desired and kept in storage areas for a period of one year.

#### **III. NOTIFICATION OF JOB VACANCIES (INTERNAL & EXTERNAL)**

1. It is the policy of this Center to utilize internal resources whenever possible for job openings. For this reason, a list of existing job openings may be obtained by employees at any time upon request from the Administrator or Clinical Director.
2. Any outside advertising or other recruitment attempts will be conducted by the Administrator.

#### **IV. EMPLOYEE RECRUITMENT**

1. It is the policy of this Center to conduct internal and external recruiting programs when necessary and in accordance with all Federal, State and local regulations governing such activities.
2. In keeping with our status as an Equal Opportunity Employer, we will authorize recruitment efforts by outside parties only when they demonstrate their ability to recruit and refer applicants in a manner acceptable to this Center.
3. Individuals who are recruited by this Center or any outside agency will be subject to the same employment criteria as those who seek employment individually.

#### **V. PROCEDURE**

1. External
  - A. When the need for recruitment is approved by the Governing Body, the Administrator will begin the procedure.
  - B. The Administrator will initiate local external recruiting efforts, such as advertising in local newspapers and/or internet resources, as necessary.
  - C. Outside agencies will be contacted only with the approval of the Medical Director and all such agreements will be outlined in the form of a contract prior to recruitment efforts.
  - E. Normal recruitment efforts will be coordinated between the Administrator and the State Employment Department (or other appropriate state agencies) as necessary.
2. Internal
  - A. In most instances, internal recruitment will be conducted as directed by the policy governing internal employee requests for transfers.
  - B. In those instances where an individual is known by the Administrator or other employees to have special qualifications for a job opening, that individual may be contacted by the Administrator to discuss a possible job transfer.
  - C. All internal recruitment efforts are to be conducted in accordance with our internal employee transfer policies and procedures.

## **VI. EMPLOYMENT OF FOREIGN APPLICANTS**

1. It is the policy of this Center to follow requirements listed below in regards to foreign applicants for employment. In order to be considered for employment, a foreign applicant must first submit the following:
  - A. Application for Employment provided by the Center.
  - B. Certified copy of applicant's I-9 form (back and front).
  - C. Copy of passport, if no passport is available a copy of immigration documents or work VISA and social security card. (per federal I-9 instructions)
  - D. Copy of educational records from the country where training or education was received.
  - E. Current License, Registration or Certification, if applicable.
2. In addition, the following requirements are made:
  - A. Working visa (H-1) must be valid for at least six (6) months from date of employment.
  - B. A contract must be signed for the time which each visa or extension is requested.
3. In the event a foreign employee with a working visa should submit his or her resignation,

the Immigration Department will be notified unless prior arrangements have been made for release of sponsorship of the H-1 visa.

4. It is the responsibility of the employee to maintain current H-1 visa status and notification of the Administrator. It is imperative in order to conduct prior and timely renewal.

## **VII. EMPLOYMENT OF THE HANDICAPPED**

1. This Center will make every attempt to employ physically and/or mentally handicapped individuals in jobs which they are capable of performing. In employing the handicapped, the Center will provide these workers with training as needed, making every effort to comply with requirements as spelled out in the statutes and regulations for "reasonable accommodation."
2. Those employees with documented histories of substance abuse will be considered individually with appropriate medical recommendation.

## **VIII. BECOMING RELATED AFTER EMPLOYMENT**

1. It is the policy of the Center to consider relatives of current employees for employment only when a specific need arises, with approval from the Medical Director and Administrator. When employees become related by marriage after they have been employed, they may continue their employment except as restricted in the provisions above. If both employees are in the same department or unit of a department, the employee with the least seniority will be transferred from the department at the earliest possible date. If this is not feasible or possible, the matter will be resolved by Administration.

## **IX. REFERENCE CHECKING**

1. It is the policy of this Center to verify and validate background factors on applicants for employment. These factors may include, but are not limited to the following:
  - A. Education pertinent to the job applied for.
  - B. Formal or informal training received related to the job applied for.
  - C. Past work record, including dates of previous employment in a similar position.
  - D. Past work record indicating patterns of attendance and/or reliability from previous employment.
  - E. Verification of licensure and/or registration.
  - F. Criminal background check, as indicated by history on application, and as required by position applied for per Nevada state regulations.
2. Reference Release: It is the policy of this Center to release past employment information as requested and only upon written authorization of the employee concerned. Only that information which has been duly verified and documented in the personnel file will be released to outside parties, upon receipt of proper authorization.
3. Without written authorization, the only information which will be released are the dates of employment and job title or position held during employment.

4. Employment information will be released by this Center only through the Administrator.
5. Reference Checking – External
  - A. Once an applicant has been deemed acceptable for employment by the Administrator, Clinical Director or Medical Director, the reference request will be initiated.
  - B. During the interview, the interviewer will have the applicant sign the Reference Request to authorize release of the desired information from the proper source.
  - C. References will be checked at the discretion of the Administrator or Medical Director based on the position applied for and state regulations.
  - D. A telephone request will be made only at the discretion of the Administrator in order to verify dates of employment, position, etc.
  - E. When the information is received, the interviewer may review the completed form upon request. The form will be filed with the application, or in the personnel file if that person is employed.

## **XI. SELECTION AND HIRING**

1. Upon completion of the recruitment and screening process, the applicants, along with all pertinent information, will be referred to the appropriate department supervisor for final selection and hiring. The selection and hiring process will be documented with the use of an appropriate notation on the bottom of the employment application. On meeting the candidate, the department manager/supervisor will:
  - A. Interview the candidate.
  - B. Complete the application form.
  - C. Refer the candidate, application and referral form back to the Administrator.
  - D. Upon final decision, it will be the responsibility of the Administrator to notify the interviewed applicants.

## **XII. REEMPLOYMENT**

1. Consideration will be given to the application of former employees who left employment of the Center in good standing after having completed the probationary period.
2. Reemployment is based on the same needs and qualifications as are needed in the employment of any other applicant.
3. For the purpose of establishing beginning wage or salary, a rehired employee is one who returns within one (1) year of termination. All rehired employees are regarded as new employees and must serve a new probationary period of 90 days.

- A. Any rehire of an employee must first receive the required authorization in the same manner as a new employee.
  - B. Any employee rehired in the same or related position and assigned to the same pay grade will have the salary determined in the same manner as the new employee.
  - C. An employee rehired into a position unrelated to any position formerly held, even though in the same pay grade, will have the salary determined in the same amount as a new employee.
4. Those reemployed will qualify for employee benefits in the same way that other new employees qualify except:
- A. Employees who leave their jobs to perform training or service in the Armed Forces will be reemployed in accordance with the Reemployment Rights Act according to federal guidelines.
  - B. Employees rehired as a non-benefited employee; i.e. staffing pool/per diem.

### **XIII. TRANSFER/PROMOTION OF EMPLOYEES**

1. It is the policy of this Center that our employees will be entitled to the privilege of requesting transfer to another job within their department or a job within another department.
2. Transfer requests will be considered on the basis of qualifications and experience of the employee in relation to those requirements of the specific job sought, based on the job description.
3. Promotion of employees will be recommended by the supervisor and considerations given under the same measures as stated in "2" above.
4. Employee Promotions
  - A. An employee promotion is considered to be that activity which places an employee in a position upwards from the present job being performed. This action may result in an increase in salary, upon the approval of the Administrator.
  - B. Promotions are recommended by the Clinical Director and are approved by the Administrator.

### **XIV. USE OF TEMPORARY EMPLOYEES**

1. Policy

- A. From time to time it may be necessary to employ temporary personnel to meet manpower requirements to resolve special workload demands. Such needs will be reviewed and considered on an individual basis by the Administrator.

2. Procedure

- A. When the Clinical Director sees a need for temporary personnel, it will be discussed with the Administrator and Medical Director directly. Approval is needed for all temporary personnel hiring/use.
- B. It should be explained the personnel needed and the amount of hours per week the help is being requested and the reasons why. (i.e. vacation coverage, ect)
- C. Payment of temporary personnel will be determined by what source is used.
- D. It is the responsibility of the Administrator to request temporary help through the use of a temporary agency.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **C. Personnel Records**

#### **I. PERMANENT RECORD:**

A permanent record is maintained on each employee in the administration office. Since it is important to the employee and to the Center that records be kept accurate and up to date, employees are required to be sure that all records are kept current. The employee should report the following changes to administration, including but not limited to the following;

1. Change of marital status – i.e. marriage, divorce, etc.
2. Change of home address
3. Change of telephone number
4. Change of person to be notified in an emergency
5. Change in number of dependents for income tax deductions
6. Change of beneficiary(s)
7. Military or draft status
8. Legal change of name
9. Exemptions on W-4 Tax Form
10. Notice of any regular, special training or education courses completed since completion of original application.

#### **II. PERSONNEL FILES: CONTENTS AND ORIGINATION**

1. Policy
  - A. It is the policy of this Center to initiate a personnel file on all individuals employed. The origination of the file will be made by the Administrator at such time when employment commences. Accurate maintenance of the contents of this file will be carried out.
  - B. It is appropriate for the Administrator to originate and maintain personnel files according to that information which is required by Federal, state or local regulations or that information otherwise required by this Center to commence employment.
  - C. Three employee files will be kept in the administration office per regulations One for general documents, (application, diploma, ect.), a separate file for I-9 identification documents (copies of passport, social security card, ect.) and another separate file for all documents pertaining to employee health/medical records (vaccinations, physicals, health forms ect).

2. Procedure

- A. The personnel files will be originated by the Administrator and will contain the documents listed below, but not limited to those documents solely. The documents will be separated into the 3 employee files as described above. Other information placed in the personnel file will be included at the discretion of the Administrator and in accordance with other related policies.
- B. Application for Employment, previously completed by the employee, including:
  - ◆ Employee's full name and address
  - ◆ Employment classification
  - ◆ Hire date and, if applicable, termination date
- C. Documentation of reference requests made or the documents themselves.
- D. Photocopy of license/registration as required, also identification documents necessary for the federal I-9 form completion.
- E. Documents required for setup on payroll with pertinent information as contained on the form itself, with required signatures.
- F. Employee's Withholding Allowance Certificate" (W-4) completed with Social Security number and signed by employee.
- G. Enrollment form for benefit plans as required.
- H. Authorization of the employee, in writing, for any payroll deductions to be made which are extraneous to those required by law.
- I. Other documents, or photocopies thereof, as deemed useful and necessary by the Administrator (may include resume, special awards or certificates, etc.)
- J. Employee medical records shall be considered confidential and will be maintained in a file separate from the employee's personnel records. Employee medical files are maintained and kept by the Nursing Administrator.

### **III. PERSONNEL FILES: RETENTION, ACCESS, CONFIDENTIALITY, OWNERSHIP**

#### **1. Policy**

- A. Retention of Personnel Files. It is the policy of this Center to retain current personnel files for the duration of employment. When the employment status is terminated, the file will be retained in the "terminated" files on the premises for a period of time no less than three (3) years. When removed from the "terminated" file, they will be removed to the storage area where they will remain for a period of seven (7) years. The Administrator will authorize appropriate destruction of employee records still in storage after seven years. A log will be maintained in the

administration office of any records destroyed.

B. Access to Personnel Files

- ◆ Employee: Employees will be allowed to review the contents of their personnel file at a time convenient to the Administrator. No document will be removed from the file without the approval of the Administrator. The employee may request, in writing, photocopies of documents contained in the personnel file. Such a written request must contain the reason for the request, specific documents requested, date of the request and employee's signature. If the request is granted by the Administrator or CEO, the photocopied documents will be mailed to the employee's home address within ten (10) working days of the date the request was received.
- ◆ Supervisor: When it becomes necessary for review of certain documents in the personnel file, these individuals will be allowed limited access to the employee's personnel file. Such access will be limited to that information necessary to the reason for the request; such review will be done in the Administrator's offices.
- ◆ Outside Parties: No information or document from any personnel file will be released to any outside party without the written authorization and consent of the employee, unless required by law and requested in a lawful manner. In such cases, the employee will be notified.

C. Confidentiality of Personnel Files. This Center ensures the total confidentiality of personnel files maintained. Strict adherence to rules of access as outlined in Section B of this policy is required. Deviations or alterations of these rules will occur only at the direction of the Administrator.

D. Ownership of Personnel Files. Ownership of all personnel files maintained by the Administrator is that of the Center. No personnel file will be removed from the premises unless approved by the Medical Director.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **D. Classification of Employees**

##### **I. POLICY**

1. It is the policy of the Center to abide by all regulations and interpretations of requirements for qualifying an employee as an exempt or non-exempt from Wage and Hour overtime regulations and for the administration of payroll procedures for hourly paid employees, in accordance with the Fair Labor Standards Act as amended and in conformance to the Code of Federal Regulations. Furthermore, it is the policy of this Center to maintain an internal classification of employees for the purposes of benefits administration and payroll record keeping.
2. All employees will be informed of their classification status at the time of employment and/or at the time of change of status when he or she changes from non-exempt to exempt status, or from exempt to non-exempt status, or change from internal classification status.
3. Classification definitions and current regulations are maintained in the office of the Administrator and are further outlined in the procedure corresponding to this policy.

##### **II. DEFINITIONS – INTERNAL CLASSIFICATION OF EMPLOYEES**

1. Regular Full-Time Employees: A regular full-time employee is one who is regularly scheduled to work a minimum of 32 hours per week on a routine basis. This employee is entitled to all non-legislated employee benefits.
2. Regular Part-Time Employee: All employees who work part-time (less than 32 hours per week but at least 20 hours per week) will receive some non-legislated employee benefits. At the Center's convenience, an employee may be asked to adjust their hours, but this will not affect their non-legislated employee benefits.
3. Temporary Employees: Any employee who is hired for a limited period of time to fill a temporary position. This employee is not entitled to any non-legislated benefits, regardless of the number of hours worked each pay period.
4. "On Call," Per Diem or Relief Employee: Any employee who is hired on an on-call, per diem or relief basis works only at the discretion of the Center and is not entitled to non-legislated employee benefits. When hired under this agreement, no work is guaranteed and the employee reports to duty at the direction of the supervisory staff.
5. Probationary Employee: Any employee who is within the first three months (90 calendar days) of employment. An employee in this status is not entitled to vacation, sick time, or bereavement leave and will not receive health insurance benefits until the "effective date" has been met and an acceptable probationary review has been submitted by the Supervisor.

##### **III. PROCEDURE FOR TRANSFER OR CHANGE IN CLASSIFICATION**

1. A transfer in the classification of employment may be available, depending upon needs. Recommendations for change in status are made by the supervisor and must be approved in all cases by the Administrator/Medical Director.
2. The employee whose status change results in downward or reduced classification will be notified by the appropriate persons of any change in benefits or pay status.

#### **IV. DEFINITIONS – FEDERAL CLASSIFICATION OF EMPLOYEES**

##### 1. Definitions

- A. **Non-exempt employees:** Non exempt employees are those who do not meet the requirements for exempt status as outlined by the Federal Wage and Hour requirements, or those who are not considered to be exempt employees by mutual agreement with the Center.
- B. **Exempt Employees:** An exempt employee is considered to be "salaried" and qualifies for exempt status as an executive, professional or administrative employee. Employees are placed in this classification by mutual agreement with the Center.

##### 2. Benefits and Compensation – Exempt Employees and Non Exempt full time Employees

- A. **Overtime:** No compensation for overtime will be paid to administrative or executive employees. Compensation for overtime will be paid to professional exempt employees only if it is necessary due to the request of the Center and approved by the Governing Body.
- B. **Sick Leave:** It is our policy to allow every full-time employee to accumulate a reserve of sick leave which can be used for time off with pay when necessitated. Falsification of sick leave may be grounds for dismissal. Time off reimbursed by Workers' Compensation is not considered sick leave.

Payment for sick leave will commence on the first day of an excused absence due to illness. Sick days are accumulated at a rate of 5 days per year or 40 hours per year up to a maximum of 30 days or 240 hours. Probationary employees are not eligible for sick leave pay, however, hours will be accrued.

- C. **Educational Leave:** Paid educational leave may be granted upon the approval of the Administrator and Medical Director for attending approved seminars. These days will be noted on the employee's time record and paid at the regular rate of pay and, under no circumstances, may not create overtime.
- D. **Personal Leave of Absence:** Personal leaves of absence are discouraged. However, if the Administrator determines there are justifiable reasons, a personal leave of up to 30 days may be granted.
- E. **Vacation Benefits and Paid Holidays**

-The official Precision Surgery Center Employee Handbook has detailed information regarding vacation benefits, paid holidays, personal leave and other matters. Employees are given a copy upon hire and it is available at all times in the administrative office.

- Health Insurance: Comprehensive health insurance is available to all employees as well as their family, who are working full time both as exempt or non-exempt. This is effective following completion of 90-day introductory period. At that time, employee may choose to accept the insurance coverage, or not. Additional compensation will not be made to those employees choosing not to accept the insurance in whole or in part. The Center will pay a portion of the premiums for the employee's insurance coverage. The Center reserves the right to change the terms and conditions of this policy at any time.
- ◆ 401K: This is a voluntary benefit offered by the Center to qualified employees. The plan meets all the federal regulations governing retirement plans.
- ◆ Workers' Compensation: The Center maintains workers compensation insurance for all employees.
- ◆ Liability Insurance – The Center provides professional liability insurance to all regular full-time and regular part-time employees.
- ◆ Maternity Leave: Available up to twelve weeks without pay.

### 3. Compensation – Non-exempt Employees (40 hour work week)

- A. Overtime: All employees who are considered to be hourly paid employees will be paid at the rate of one and one-half times their regular rate of pay for hours worked over 40 hours in work week following prior approval for overtime. It is the policy of this Center to incur "no overtime"
  - ◆ Overtime must have the approval in advance from the Human Resources Director or Administrator. Documentation of overtime justification must be provided to the Administrator when requested.

- Record of Time: Non-exempt employees must record their time worked each day by use of the time clock. The time clock shall reflect an accurate account of time in and time out each day, with an entry made for lunch or meal time. Incorrect recordings of hours worked on a time card may be grounds for termination.

For the purposes of clarification, the following are interpretations of this Center in regards to meal time, and leaving the Center.

- ◆ Meal Time: The Center provides sixty (60) minutes to each employee for each workday to be considered "meal time" without pay.
- Breaks: Two ten (10) minute breaks with pay, one in the morning and one in the afternoon, are provided to each employee.
- Leaving the building for personal reasons: An employee is considered to have "left the building" if he or she has exited the building property, and would not readily be available for work if needed. For this reason, an employee who takes a meal break or otherwise leaves the building during normal work hours must clock out on the time clock. The parking garage, although it is Center property, is not considered to be part of the building and an employee spending work time in the parking lot (when not engaged in services directed or required by the Center) is considered to have "left the building."
- Employees must notify their supervisor in all cases requiring them to leave the building (other than the routine and approved lunch period) and appropriate approval is required.

#### 4. Part-Time Regular Employees

All employees who work less than 32 hours, however, work more than 20 hours, are considered to be in this category and these employees are qualified for some of the benefits provided to employees in other categories: The official Precision Surgery Center Employee Handbook has details regarding all benefits for Part-time employees, including vacation, leave and other matters.

#### 5. Part time, Temporary, Relief Employee Classifications

All employees whose internal classification places them in one of the above categories are considered to be non-exempt employees, and are subject to benefits and compensation related to their status. Details of this information are found in the Precision Surgery Center Employee Handbook.

## **V. JOB DESCRIPTION**

A job description is a detailed written presentation of the duties and responsibility of an employee's job. Each job description defines and delineates functional responsibilities and authority of a position within the organization. These are given to each employee prior to the orientation period and signed upon acceptance of the position applied for.

1. All jobs have been classified into categories or job grades having similar or equal performance requirements.
2. Specific job descriptions are listed in the policy and procedure manual.
3. Each employee's job will be reviewed and a job description is issued and signed at the time of hiring.
4. Departmental supervisor may request an employee to perform duties that are not covered in the job description or the position.
5. It is the philosophy of the Center that all jobs and everything an employee does is important.
6. When an employee repeatedly performs responsibilities that are not assigned to the job description, it shall be reviewed and re-evaluated.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **E. Performance Assessment**

#### **I. POLICY**

The Center assesses the competency and ability of each staff member to fulfill expectations of their job descriptions. Competence or performance assessment is conducted and documented for each staff member. In addition, periodic review of employee compensation will also take place.

#### **II. PROCEDURE**

1. Performance assessments are conducted and documented for each staff member, along with reviews of employee compensation.
2. Performance assessment focuses on special needs and behaviors of specific age groups in defining the qualifications, duties, and responsibilities of the staff members with regular clinical contact with patients, but not clinical privileges. During the assessment, an individual is assessed with regards to his or her abilities to meet the specific needs of their patients and produce expected results of clinical interventions.
3. Evaluation of job performance is given initially after the first three months of employment. The first three months of employment is considered as a probationary period. Each employee is then evaluated on an annual basis.
4. Intermittent or progressive evaluations may be performed as deemed necessary by the supervisor, administrator, or Medical Director.
5. Proper documentation of each employee's job performance and compensation review will be maintained and recorded on the appropriate form. This document will become a permanent portion of each employee's personnel file.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **F. Verification and Control Systems**

##### **I. PREAMBLE**

The Administrator shall have full responsibility for developing procedures to record and verify all required personnel licenses, certifications, and credentials, as well as procedures for identifying expiration dates, obtaining and verifying license or certification renewals, and for suspension of employees from work functions prohibited by policy or law without current licenses, certifications or credentials.

##### **II. PURPOSE**

1. To maintain current status of all personnel employed by this Center in jobs requiring licensure, certification or registration, as called for by regulation.

##### **III. POLICY**

1. It is the policy of this Center to employ only those individuals who have proper licensure, certification or registration by the appropriate agency in those jobs requiring such status.
  - A. Furthermore, it is the policy of this Center that this status be maintained current by those employees. The employee will furnish proof of this status before employment begins and will provide a photocopy of the document which will be placed on permanent record in the personnel file. At each time the status requires updating and/or renewal, the employee will provide further photocopies to the Human Resources Director as proof of update and/or renewal.
  - B. Prior and current licensure, certification or registration will also be maintained by administrative staff. Evidence of current status will be posted as required in each department for those employees who are considered to be "certified" or "registered." Licensure documents will not be posted unless required by regulation or statute.
  - C. Failure on the part of the employee to provide such documentation or proof of current status will result in one or more of the following actions:
    - ◆ Demotion to an available position closest to that normally held which does not require licensure, certification or registration.
    - ◆ Suspension without pay until such documentation is received.
    - ◆ Disciplinary action as deemed appropriate by the Supervisor.

#### IV. PROCEDURE

1. At time of employment: All new employees whose job requires licensure by the State or other proof of registry or certification, will provide a photocopy of such document to the Administration. The proof is due upon demand before the employee may assume duties associated with such a license. Failure on the part of the employee to provide this document will relieve the Center of any obligations. The employee will be considered unable to perform duties of the job requiring the document, or the date of hire will be adjusted to reflect the date the document is received.
2. Periodic renewal: It is again the responsibility of the employee to provide a photocopy of the required document at each date or time of renewal.
  - A. The following procedure will be followed to ensure current status:
    - ◆ At the date of hire, a photocopy of the document is received by the Administrator and secured in the employee's file.
    - ◆ License monitoring will be done within the department where the employee works.
    - ◆ The employee will be notified by the Administrator of impending expiration before the first day of the month in which the expiration will occur.
    - ◆ If a photocopy of the document is not received by the last day of the month of expiration, the employee's status is considered to have changed. At this time, one or more of the following actions may be implemented.
      - ◆ Demotion to an available position closest to that normally held which does not require licensure; termination if no position is available.
      - Suspension without pay until such documentation is received.
      - Disciplinary action as deemed appropriate by the Supervisor and/or Medical Director.
      - A telephone call from the Administrator to the state licensing agency may confirm the renewal of said license. The hard copy of the license will be presented to the personnel office within a reasonable period of time.
      - In case of clerical or procedural error on the part of the licensing agency, documentation from that agency must be provided in lieu of the actual license.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **G. Confidentiality**

1. It is the policy of the Precision Surgery Center to ensure that the patient's personal and informational data be kept confidential. This will include visual and auditory privacy during examination or treatments, interviews, consultation or discussion involving his/her case, and all communications, reports, and the medical record. There can be no exceptions to this policy.
2. Therefore, employees should, when talking with a patient about any matter, try to do it in such a way that other patients cannot overhear conversations. Employees shall not give advice to patients on personal matters, even if they ask for it. If patients have questions about their own case, employees shall refer them to their physician.
3. Employees shall be kind, sympathetic, and understanding to all patients, no matter how adverse the circumstances may be. Employees shall always keep in mind that our patients have come here to have their health problems treated, not to listen to the problems of the employees.
4. Information about patients, their illnesses, or their personal lives will be kept completely confidential. There are no exceptions to this policy.
5. Since medical information obtained by a physician is confidential, it cannot be released to an insurance company or attorney without written permission of the patient. The only exception to this rule is provision of information to the Bureau of Workers' Compensation. The Center has the right to release information concerning a specific patient who has filed a claim with the Bureau.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

### **H. Dress Regulations**

#### **I. PURPOSE**

1. To ensure standards of dress regulations by employees that present a professional appearance to our visitors, coworkers and others who may enter our Center.

#### **II. POLICY STATEMENT**

1. Uniforms: Those departments which require specific types of uniforms to be worn by employees will be notified by the Administrator. Each employee will be notified upon hire regarding uniform requirements.
  - A. Uniforms must be appropriate as determined by the Administrator, must be neat, clean and appropriate for professional work and the image that the Center must project to others.
2. General Dress code: All clothing worn by employees must be neat, clean and appropriate for professional work. Additional details regarding employee dress code are in the Precision Surgery Center Employee Handbook.
3. Name Tags: The Center will provide a name tag for each employee upon employment. When received, the name tag is considered as part of the uniform and is to be worn at all times by the employee when on duty. The name tag is to be worn on the outside of the clothing and in plain and obvious view.
4. Penalty for Improper Attire: Due to our contact with patients and the public, it is imperative that the work attire of all employees be appropriate and identify them as our employees. For this reason, the employee may be sent home by the Supervisor or Administrator for reporting to duty in a substandard uniform, or otherwise subject to disciplinary action.
5. Reasonable Period of Time for Obtaining Proper Uniform: It is expected of each employee that they will obtain a proper uniform before beginning employment. The employee will be informed of uniform requirements before beginning work and will be allowed ample time in which to acquire the proper attire, which is considered to be a part of the requirements for employment.
6. Personal Hygiene and Perfume: Good personal hygiene must be maintained and perfume/makeup, if worn, should be done in moderation avoiding a strong and/or powerful smell.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **I. Attendance**

##### **I. POLICY**

1. Prompt attendance at scheduled work is expected and is essential for providing timely service to patients. Excessive absenteeism and/or tardiness may result in disciplinary action up to and including termination and may have an adverse effect on a staff member's future salary increase, transfer request, promotion or continued employment.

##### **II. PROCEDURE**

1. Each staff member is responsible for reporting any absence or tardiness to his/her immediate supervisor in a timely manner to allow the supervisor to plan for staff coverage.
2. At the time of notification of absence or tardiness, the Supervisor shall determine and discuss with the employee the appropriate use of or denial of paid leave or extended illness time.
3. Administration may at its discretion request an employee to submit proof of illness, to include the request of the employee to obtain a physician's statement. Administration may also request the attending physician to examine an employee who has been ill for more than three (3) days.
4. If an employee is absent one (1) day without notification of the Supervisor, he/she is considered to have "quit without notice" and termination measures may be undertaken.
5. Absences or tardiness records are available to each Supervisor and shall be properly maintained and placed in the personnel file upon termination of employment.
6. Accurate documentation of all absences and tardiness on the employee's time records shall also be maintained by the Administrator.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **J. Employee Communications**

##### **I. PURPOSE**

To provide an atmosphere of open communication between employees and Administration.

##### **II. POLICY**

1. It is the policy of this Center to provide a method by which our employees may offer constructive suggestions and ideas, convey information of interest, and express their opinions to Administration.
2. Employees are invited to attend periodic informal meetings held by Administration.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **K. Work/Salary**

##### **I. DAYS OF OPERATION:**

1. Regular Days of Operations: Monday – Friday

##### **II. HOURS OF OPERATION:**

Employees are expected to be at their station and at work by each department's schedule. They are allowed 1 (one) hour for lunch and the time allocated will be determined by supervisor. There should be one-third of employees in the office at lunch on any given day to cover phones, walk-ins, etc.

Employees are allowed two (2), ten (10) minute breaks – one in the morning and one in the afternoon. Employees must clock in and out for their breaks. The Center recommends that employees take care of personal matters and all phone calls during their break periods.

Overtime is permitted only under unusual circumstances, with prior approval by the Administrator.

##### **III. PAYROLL INFORMATION**

The payroll is twice a month. Employees are responsible for clocking in and out. All compensation paid will be subject to withholding, Social Security, federal, city and state taxes, based on exemption information supplied by the employee.

##### **IV. SALARY AND WAGES**

Individual information concerning each employee's salary and performance will be provided to the employee by the Administrator. Changes in salary will be based upon merit and market conditions. Most of the full and part-time employees are reviewed for merit increases at established intervals. Employee benefits are considered extra and apart from these schedules of pay and these benefits apply in most instances to all employees regardless of employment skills or category.

## **V. GARNISHMENT OF WAGES**

### **1. Policy**

- A. It is the policy of this Center to comply with the requests for garnishment of wages when properly executed and delivered by a lawful federal, state, or local government or their authorized agents upon presentation of valid identification.
- B. Compliance with such lawful garnishment requests will be carried out by the Administrator, and proper notification will be given to the employee involved in the advance of the action in all cases.

## **VI. PROCEDURE**

- 1. Upon receipt of the Summons of Garnishment (or other lawfully executed document), the Administrator will note on the document the following information:
  - A. Date received
  - B. Amount or estimate of garnishment
  - C. Signature
- 2. The employee's personnel file is retrieved with the request for garnishment noted, and the employee is immediately contacted.
- 3. In such cases which may require consultation with the legal counsel, the Administrator is notified immediately.
- 4. If the employee is unable to obtain a proper release from garnishment in written form, instructions will be given to the Payroll Department for execution. Withdrawal of those instructions will be made upon receipt of proper release.
- 5. In such cases requiring consultation of legal counsel, such advice received will be considered to supersede this policy.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **L. New Employee Orientation**

#### **I. POLICY**

1. It is the policy of this Center that each new employee will be employed on an initial three months (90 day calendar days) "probationary period." During this period of time, the employee is not considered to be on permanent status.
2. In order to ensure successful completion of the probationary period, each employee will be oriented to all facets of his or her job, as well as working conditions, policies and procedures and all employee benefits. This will be completed within 30 days of commencement of employment, and provided annually thereafter and when there is an identified need.
3. Initial orientation to employee benefits and orientation to policies and specific aspects of the job will be conducted by the Human Resources Department. Orientation to the employee's department will be conducted by the Department Supervisor. All privileges and responsibilities will be explained during the initial orientation period, including compliance with an adverse incident reporting system.
4. Orientation to working conditions and specific aspects of the job will be conducted by that individual appointed by the Department Supervisor on an "on-the-job" basis.
5. Orientation to other related areas will be determined and conducted by the administrative staff or Clinical Director involved.

#### **II. PROCEDURE FOR ORIENTATION OF NEW EMPLOYEES**

1. Orientation will begin for the employee when all pre-employment requirements have been satisfied; i.e., references checks, verification of job qualifications, etc.
  - Verification of eligibility for employment will also be completed prior to the orientation period, in compliance with federal and state laws and regulations. (I-9 documentation)
2. The employee will meet with the Administrator for initial orientation paperwork and enrollment in the employee benefit programs, if desired.
3. During this orientation phase, the employee will be given a copy of the most recent Employee Handbook and sign acknowledging its receipt. This handbook describes all personnel policies and describes all benefits and incentives for employment

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **M. Employee Requests for Time Off**

##### **I. POLICY**

1. It is the policy of the Center to consider all properly submitted requests for time off, with or without pay, from all employees.
2. When such requests are made in connection with earned or accrued benefit time, proper considerations will be given to the employee, with the welfare of our patients foremost in mind. Initial approval of all such requests is required by supervisory personnel in the employee's department, but are always subject to Administrative approval.
3. When requests for time off are made by the employee who has not earned or accrued proper benefit time off, such requests, when granted, will be without pay and subject to Supervisory and Administrative approval.

##### **II. PROPERLY SUBMITTED REQUESTS FOR TIME OFF**

1. For all purposes and uses of this policy, a request for time off will only be considered when it meets the following conditions:
  - A. The request is made in writing by use of the proper form provided by the Administration and contains an accurate account of all regularly scheduled working days off desired by the employee.
  - B. In cases of extreme and expected emergency, the request is made in writing on a sheet of paper other than forms provided, containing accurate information as to the reason for the request, as well as the regularly scheduled working days off desired.
  - C. In case of an unexpected situation and/or semi-emergency, the request is made verbally to the supervisor and/or Administrator and is made at least 24 hours before the regularly scheduled working day off desired.
  - D. In cases of extreme and unexpected emergency, the request is made via telephone (only when the employee is unable to appear in person) to the supervisor and/or Administrator and is made sufficiently early so that adequate staffing may be arranged for.
2. Requests for time off which do not meet one or more of the following conditions will be considered improper and may lead to disciplinary action.

### **III. PROCEDURE: REQUEST FOR EARNED BENEFIT TIME OFF**

1. Vacation Time
  - A. The employee shall obtain a "Vacation/Time Off Form" from his/her supervisor or Administrator. The form shall be completely filled out by the employee and returned to the supervisor or administrator as soon as possible.
  - B. Administrator will consult the employee file in regards to earned time off to make sure the employee has the proper amount accrued and has fulfilled length of service requirements and then either approve or deny the request.
  - C. If approved, a request is sent to Human Resources/Payroll for processing. The original is placed in the employee's personnel file.
  - D. If the request is denied, further discussion with the employee will occur to agree on a more suitable time off.
  - E. Employees must take all vacation in the calendar year which it accrued. Employees may carry out 3 months of the accrued time. Vacations are not accrued unless a written approval is obtained by the Administrator.
2. Sick Leave: Proper notification to the supervisor and/or department manager must be made according to the following conditions:
  - A. If the employee has advance knowledge of physical incapacity to perform work, written request may be made for "Request for Leave of Absence" or by another written method chosen by the employee. Written documentation from a physician may be required before approval is given for time off.
  - B. If injury or illness occurs without advance knowledge or warning, verbal notification is sufficient, if made directly to the supervisor and/or Administrator and with notification made as soon as possible. Only in severe intractable illness will notification made by someone other than the employee be sufficient.
  - C. In all cases, employees are expected to provide notification with a proper period of time allowed to arrange for adequate staffing in their absence. Only in extreme instances will notification later than two (2) hours before the regularly scheduled working shift be acceptable.
  - D. Written documentation from a physician may be necessary before time off is approved due to illness. In all absences of more than 72 hours (beginning with employee's regularly scheduled time for reporting to duty) a written release from a physician may be required before the employee will be allowed to return to duty.
  - E. Sick leave is available for legitimate, documented employee sickness only.
3. Leave of Absence Without Pay: Requests for leave of absence must be made in accordance

with categories outlined and are subject to benefit rules and regulations as stated.

- A. The employee desiring a leave of absence shall obtain a "Request for Leave of Absence" from the Administrator as far in advance as possible.
  - B. All requests for leave of absence are subject to Administrative approval.
  - C. If the employee will experience any change in employment status or benefit levels as a result of the leave of absence, an appointment with the Administrator and/or Human Resources Coordinator shall be made to discuss these changes as well as eligibility for reassignment at the end of approved leave.
  - D. Any leave of absence over 30 days will require an appropriate adjustment in the anniversary date, and benefits due on this date.
4. Family Care Leave
- A. Employees with at least one year of continuous service are entitled to family care leave in connection with the birth or adoption of a child or the serious illness of a child, parent, spouse, brother, sister, or grandparent.
  - B. The employee must exhaust any other leave (other than sick leave) to which the employee is entitled before receiving additional family care leave upon approval from the Administrator.
  - C. During an employee's family care or medical leave, the company shall continue to pay for the participation on the company's group health plans and employee is responsible for their portion of premium. The Center follows all Federal standards of the Family Medical Leave Act.
5. Jury Duty, Bereavement Leave, Time off to Vote: The current employee handbook details all additional time off and leaves of absence for Precision Surgery Center.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **N. In-service Education Program**

##### **I. POLICY**

It is the policy of the Center to provide ongoing programs that will educate or enhance our employees in the day-to-day performance of their job duties.

##### **II. IN-SERVICE RESPONSIBILITIES**

1. The Administrator is responsible for providing current and factual information to his or her employees regarding performance of their job duties. New methods, procedures, or policies governing such duties shall be conveyed to the employees in a manner that is understandable and reasonable to all involved. Proper documentation is required of all such programs.
2. The Administrator will provide up-to-date and factual information to all employees regarding policies, procedures, and benefits. Information regarding benefits will be distributed to the employees as deemed proper and reasonable by the Administrator.
3. In-service information shall be posted to inform employees of upcoming in-services at the Center and in the community.

##### **III. PROCEDURE – IN-SERVICE ATTENDANCE WITHIN THE CENTER**

1. Mandatory In-service Meetings: Those meetings which have been determined necessary for employees within a particular department or group of common interest are considered to be mandatory. Mandatory attendance is at the discretion of the Administrator.
  - A. Mandatory meetings are generally those which will provide vital and necessary information to the employees involved, and attendance will be requested with prior notice to all those required to attend. Employees will receive their regular rate of pay for attendance at mandatory meetings, unless their attendance is not specifically requested. If attendance at a mandatory meeting will involve overtime for an employee during that work week, specific approval from the Administrator is required if an alternate attendance time cannot be arranged.
2. Voluntary Service Meetings: Those meetings for which attendance is not deemed necessary and vital to a particular department or group of common interest are considered to be voluntary. Attendance at voluntary meetings is at the discretion of the employee, based on his or her interest in the subject being presented.
3. Credit for Attendance at In-service Programs
  - A. In order to receive proper credit for attendance, the employee shall sign his or her

name on the sign-in sheet provided at each meeting.

- B. The employee must attend at least three-fourths (3/4) of the program in order to receive credit for attendance.

4. Internal Scheduling of In-service Programs

- A. Equipment and Supplies – All audiovisual and other in-service equipment is maintained by the Administrator. Those who desire use of this equipment shall request the item needed as early in advance as possible for purposes of reservation.

- ◆ Supplies necessary for in-service programs are the responsibility of the individual conducting the program. Prior Administrative approval is required for expenditures made for in-service program supplies.

5. Record keeping for In-service Programs

- A. Record keeping for in-service programs is to be maintained by each department supervisor. Proper record keeping will contain the following information:

- ◆ Signature list of all employees who attended the program.
- ◆ Title of the program, name of the individual conducting the program, dates and times the program was conducted, location of the program.
- ◆ A description of the content of the program, its relation to the department and/or employees, voluntary/mandatory status of the program.
- ◆ The reason the program was conducted; i.e., documentation of statement of events or situation leading to the program.

- B. In-service records for the individual employees will be considered valid on either on a form showing dates and subjects of programs attended placed in the employee's personnel file.

- C. Copies of sign-in sheets from in-services should be turned in to Administrator.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

### **O. Sexual Harassment**

#### **I. POLICY**

The Center will not tolerate any form of sexual harassment. It is the responsibility of all employees to report such occurrences according to procedure. This includes inappropriate remarks, gestures, innuendos, and uninvited touching. Documented occurrences will result in actions being taken by the Administrator.

#### **II. PROCEDURE**

1. Any employee who feels this has happened to them or is made to feel uncomfortable will immediately notify their supervisor. Confidentiality must be maintained.
2. Once notified, the department head will notify the Administrator.
3. If it is impossible to notify that individual, the Administrator will be notified directly by the employee.
4. Further investigation will be conducted under the direction of the Administrator.
5. The offended employee will be notified of any actions taken and will not be persecuted for reporting such occurrences.
6. Administration retains final responsibility for the resolution of all sexual harassment complaints.
7. Employees making such charges without just cause will be disciplined and may be responsible for any legal fees incurred.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **P. Personal Telephone Calls**

1. It is the policy of the Center to strongly discourage personal calls made or received by our employees, except in true emergency situations.
2. Employees are not to receive or make personal telephone calls at their work area. Employees may use their personal cellular phones or public telephones if it is necessary to make an emergency call.
3. Use of telephones in the work area may disrupt incoming calls pertaining to patient care. Only with the authorization of the supervisor may an employee use these telephones for personal reasons which are not considered immediate emergency situations.
4. When incoming personal telephone calls are received by the receptionist, the following guidelines will apply:
  - A. The receptionist will determine from the caller the Department in which the employee works and if the call is an emergency.
  - B. If the caller indicates an emergency situation, the receptionist will connect the call to the supervisor of the employee.
5. Excessive amounts of employee telephone calls for personal, non-emergency reasons will subject the employee to disciplinary action, possibly including termination.
6. It is understood that employees may have bona fide reasons for making personal telephone calls, such as obtaining transportation to and from work, checking on the status of unattended children at home, receiving calls from public schools or child care services, etc. Although calls of this type are normally acceptable, the employee shall not tie up business telephones for these calls and make sure that the calls are not excessive in length or frequency.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

### **Q. Disciplinary Procedure**

#### **I. POLICY**

1. It is the policy of the Center to administer fair and reasonable methods of disciplinary action for those employees whose job performance or behavior does not meet the standards of the Center as outlined elsewhere in this policy.

When (based on the judgment of the Supervisor and/or Administrator) the employee's job performance or work behavior does not meet those standards for continued employment, it is the policy of this Center to initiate disciplinary action for corrective purposes in the following manner:

- A. Verbal reprimand: Considered to be a notice to the employee that the job performance or work behavior does not meet standards of employment. This will be documented by the supervisor or Administrator on the appropriate form and placed in the employee file.
  - B. Written reprimand: Considered to be further notice to the employee of undesirable work behavior or unacceptable job performance, submitted in writing, and placed in the personnel file for permanent record.
  - C. Final Reprimand: Suspension without pay, considered to be the final notice to the employee that undesirable work behavior or unacceptable job performance must be corrected at once or termination will result.
  - D. Discharge: Considered to be the most extreme form of disciplinary action and final step in this process. This will occur when all previous steps have been followed or in the event that immediate discharge is considered to be justifiable by the Supervisor and Administrator.
2. Furthermore, it is the policy of the Center that all employees shall have the right to initiate our internal grievance procedure in connection with any aspect of this policy.

#### **II. STANDARDS OF CONDUCT**

1. The following standards of conduct are prescribed to ensure continuation of employment. Employees as at all times are expected to:
  - A. Give primary consideration to the welfare of patients, employees, and visitors.
  - B. Respect established authority.
  - C. Use equipment and supplies judiciously and with extreme care.
  - D. Perform all duties and responsibilities in an acceptable manner.
  - E. Be honest; seek help in resolving problems.
  - F. Use care in their personal appearance and confidence in their ability.

- G. Comply with departmental rules/regulations.
- H. Conduct themselves as responsible members of the staff and as good citizens.

### **III. GENERAL GROUNDS FOR DISCIPLINARY ACTION**

The understanding of the Standards of Conduct and rules and regulations of the Center must be considered an important issue. Although not intended to limit the rights of the staff, it is a clarification of these rules and regulations which is meant to assist the employee. When an employee violates any one (1) or more of the following categories, it will be considered sufficient grounds for disciplinary action.

1. Falsification of personnel records
2. Falsification of any portion of a patient's medical record or test.
3. Absence without justifiable cause.
4. Reporting late for scheduled work.
5. Leaving the office premises without prior approval.
6. Creating or contributing to unsanitary conditions.
7. Refusal to obey directives of the Center.
8. Refusal or failure to perform assignments.
9. Threatening, intimidating, coercing, or interfering with fellow employees, Department supervisors, Administrator, and Physician(s).
10. Unauthorized soliciting or collecting of contributions.
11. Unauthorized distribution of literature.
12. Intentional misuse or removal of property, patient records, equipment, supplies, or confidential material of the Center.
13. Gambling, lottery, or other games of chance on the premises.
14. Substance abuse of any nature or scope.
15. Acceptance of gratuities from past, current or potential suppliers.
16. Non-compliance with the regulations of The Occupational Health, and Safety Administration (OSHA)

### **IV. PROCEDURE**

1. Initiation of disciplinary action: When an employee's job performance or work behavior ceases to meet acceptable standards for continued employment, disciplinary action procedures are initiated by persons in authority. Those persons having this authority are as follows:
  - A. The Clinical Director.
  - B. The Administrator.
  - C. Administrative Assistants, as appropriate
  - D. Medical Director/CEO
2. Verbal reprimand: The first step in the process is the verbal reprimand issued to the employee as an initial warning. It is documented and maintained by the Supervisor, or Administrator for future reference and placed in the employee file.
3. Written reprimand: The next step in the process is the written reprimand issued to the employee as the second warning. This reprimand is presented to the employee in writing

and is documented on a "Disciplinary Action Form" requiring the signature of the counselor and the employee.

- A. The employee is asked to sign this document not as an admission of guilt, but to acknowledge that the counseling did occur.
  - B. The document is placed in the employee's personnel file as a part of the permanent employment record regardless of signature. Failure to sign the form must be documented on the Disciplinary Action form.
4. Final Reprimand: Suspension without pay. The next step in the process is suspension without pay issued to the employee as the third and final warning. This action is presented to the employee in writing and is documented on a "Disciplinary Action Form" requiring the signature of the counselor and the employee.
- A. The employee is asked to sign this document not as an admission of guilt, but to acknowledge that the event did occur.
  - B. This document is placed in the employee's personnel file as a part of the permanent employment record.
  - C. The employee will not be allowed to return to work until the suspension period has expired.
5. Discharge: The final step in the process is discharge. At this time, the employment status is terminated and termination documents are processed.
- A. When the decision is made to enter into this step of the process, it has been fully determined through previous steps that the employee does not intend to correct the undesirable work behavior or unacceptable job performance and thus fails to meet those standards required for continued employment.
  - B. This action is documented on the "Disciplinary Action Form" requiring the signature of the Administrator and the employee.
  - C. The employee is asked to sign the document not as a direct admission of guilt, but to acknowledge that the event did occur.
6. Immediate Suspension: Automatic suspension occurs when it is determined by those persons having authority that the employee has:
- A. Violated Center and/or department policy to the extent that damage done, or the results and consequences of the action will be severely detrimental to the Center and/or department.
  - B. Exhibited extremely undesirable work behavior and/or job performance or neglect of job performance.
  - C. Substantially violated those standards of conduct set forth in the Disciplinary

Action policy to the extent that damage done, or the results and consequences of the violation will be severely detrimental to the Center and/or the department.

D. Other undesirable actions as deemed sufficient to justify automatic and immediate discharge.

7. Those persons having the authority to execute immediate suspension are as follows:

A. The employee's immediate Supervisor, upon the direction and approval of the Administrator and/or Medical Director.

B. The Administrator.

C. The Medical Director/CEO.

## **V. GENERAL PROCEDURES INVOLVING DISCIPLINARY ACTION**

1. The employee, at all times, shall have the right to initiate the internal grievance procedure for matters related to the disciplinary action process. The employee may obtain information regarding the grievance from the Administrator.

2. The disciplinary action process is to be administered fairly and consistently to all employees at all times and in a manner consistent with policy, rules and regulations to ensure equal treatment to all employees.

3. Employees shall be informed of their status throughout the disciplinary action process of the following items:

A. What he/she can expect to occur next if the problem is not corrected.

B. What actions he/she can take to correct the problem.

C. What specifically lead to the disciplinary action.

D. Specifically, what is necessary for the employee to meet standards for continued employment.

E. What is a reasonable period of time in which corrective action is to occur.

## **VI. PROCEDURE – EMPLOYEE GRIEVANCE REPORTING METHODS**

1. Problems arise in any group of people working together. It is important to all of us that these problems be solved as quickly and as fairly as possible so that small problems do not grow out of proportion. Occasionally, however, it may be necessary to investigate certain problems in greater detail. The grievance procedure enables employees to have a fair review of any work-related controversy, dispute or misunderstanding.

2. If any employee feels that they have a valid grievance, the following procedure used:

A. Step One: An employee may submit, in writing or orally, the problem to his/her immediate supervisor/department head within three (3) days after the problem becomes known to the employee. The supervisor/department head will attempt to resolve the employee's grievance during the initial meeting. If unable to reach a

mutually agreed upon settlement, the supervisor/department head will investigate the situation further and within three (3) working days, meet with the employee with a proposed solution to the grievance. If the employee is still not satisfied, then he/she may request a Step Two meeting.

- B. Step Two: If the employee is not satisfied in Step One, he/she must submit in writing within five (5) working days the problem or grievance. The Administrator will investigate the problem with all involved parties and schedule a meeting with the employee and the supervisor/department head. The employee may elect to have a fellow employee accompany him/her to this meeting to assist in the presentation of the problem. A concerted effort will be made at this meeting to resolve the problem. The Administrator will be responsible for preparing a written report of this meeting. If the employee does not believe the solution presented is satisfactory, a Step Three procedure may be requested.
  - C. Step Three: The employee may request, within thirty (30) working days, a review of the proceedings by the Medical Director. The Medical Director will within five (5) working days after receipt of the grievance thoroughly investigate the problem and considering every aspect of the employee's and the supervisor/department head's position, as well as information described in Steps One and Two, make a final and binding determination on the grievance.
  - D. Grievance against Supervisors: The employee may request within thirty (30) working days, a hearing by the Medical Director. The Medical Director will within five (5) working days after receipt of the grievance thoroughly investigate the problem and considering every aspect of the employee's and the supervisor/department head's position, make a final and binding determination on the grievance.
3. Employees who are discharged for cause may appeal that decision by using the grievance procedure. However, the discharged employees shall appeal the Human Resources Department as Step One and the appeal must be in writing. Any discharge appeal must be received by the Administrator within seven (7) working days of the discharge to be considered.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **1. General Principles**

#### **R. Termination of Employment**

#### **I. POLICY**

1. It is the policy of the Center to provide all employees with the means of terminating their employment relationships, at their discretion. Upon receipt of the documents explained in the policy governing employment status, the Center will recognize that employee's intent to cease employment, and proper procedures will be initiated by the Administrator or Medical Director.
2. Furthermore, it is the policy of the Center to initiate termination of the employer/employee relationship, at its discretion, and when justified. Methods utilized by the Center for this purpose will be executed in a manner which is deemed fair and equitable to all parties involved. Proper termination procedures will be carried out by the Administrator or Medical Director.

#### **II. PROCEDURE FOR TERMINATION OF EMPLOYMENT**

1. The employee will submit, in writing, a letter of resignation to his or her immediate supervisor. The letter will contain the following information.
  - A. Name, department and position of the departing employee.
  - B. Date the letter of resignation is written.
  - C. Effective date of the resignation (the employee's last day of work).
  - D. Specific reasons for the resignation, forwarding address information.
2. The letter of resignation will be forwarded to the Administrator, immediately upon receipt.
3. The Administrator will begin closure of the employee's personnel file in the following manner:
  - A. The personnel file and is removed from the current employee files, and the termination date is noted appropriately and included in the file.
  - B. The employee's insurance records are removed from the files, and the termination date is noted appropriately.

- C. The Administrator will indicate termination pay or benefits in the Personnel/Payroll Action form, and distribute parts of the form to the payroll department, and maintain the original in the personnel file.
- D. All other activities associated with termination (withdrawal from other benefit plans, etc.) will be carried out by the Human Resources Director.

### **III. PROCEDURE FOR TERMINATION OF EMPLOYEE – CENTER REQUEST**

- 1. When deemed necessary, and after completion of the Center's disciplinary action policy and procedure, termination information will be forwarded to the Administrator.
- 2. When all documentation is deemed adequate for termination activities by the Administrator, the procedure outlined in "PROCEDURE FOR TERMINATION OF EMPLOYMENT – EMPLOYEE REQUEST" will be initiated by the Administrator.
- 3. When termination is by the Center's request and if termination becomes effective immediately, the employee's final paycheck will be available to the employee at the time of dismissal, if possible.

### **IV. EXIT INTERVIEWS**

- 1. It is the policy of this Center to encourage terminated staff members to make an appointment with the Administrator for an exit interview.
- 2. The interview will be summarized, and if appropriate, information will be shared with the employee's supervisor.
- 3. Information gathered at exit interviews, if applicable, will be considered in revising policies, procedures or working conditions.

# **PRECISION SURGERY CENTER**

## **SECTION VII**

### **HUMAN RESOURCES**

#### **2. Employee Health**

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **A. Objectives**

#### **I. PURPOSE**

To promote health and protect patients and personnel from infectious diseases, injuries, and exposure to hazardous and bio-hazardous materials. The Employee Infection Control Program is maintained in conjunction with Compliance Alliance, LLC (also known as Infection Control Solutions, LLC). Details of the program are inside the employee Infection Control Program Manual, and also in the employee Injury and Illness Prevention Program Manual.

#### **II. GOALS**

1. To hire employees physically able to work in the positions for which they were hired, free of active communicable diseases.
2. To provide a safe and healthy environment for the employee.
3. To annually review the health and physical status of all employees.
4. To have medical-administrative control and follow-up of injuries and illnesses of employees that occur both on the job and off the job.
5. To prevent transmission of infection between patients and employees.
6. To reduce the incidence of illness among personnel and thereby reduce absence.

#### **III. RESPONSIBILITIES**

1. Administrator
  - A. Ensure adequacy of policy through regular review and revision of the Employee Health Program. Incorporate state and local health regulations into the Program.
  - B. Maintain current health records of all employees, including health examinations, disease exposure, industrial injuries, immunizations, as required.
  - C. Maintain list of related infection: Purified protein derivative (PPD) converters, communicable disease contacts, and needle puncture wounds.
2. Physician
  - A. Evaluate and treat personnel involved in on the job injury, accidental exposure to communicable diseases, etc.
3. Infection Control Program Coordinator – will work in conjunction with Compliance Alliance, LLC, (also known as Infection Control Solutions, LLC), to update and revise the Employee Infection Control Program and the Injury and Illness Prevention Program.
  - A. Review and approve infection Prevention and control policies for employee health.
  - B. Review summary of job-related infections and recommend follow-up action as appropriate.
  - C. Provide input into Employee Health Program.

#### IV. HEALTH MAINTENANCE PRACTICES

##### 1. Personnel Health Management

###### A. Physical Examinations

- ◆ All employees shall have a pre-employment tubercular skin test at Precision Surgery Center.
- ◆ In requirement with OSHA updated guidelines, a 2 step PPD testing is required for all new employees. The compliance directive applies to any facility where an employee has had or is expected to have possible occupational exposure to tuberculosis. Under this directive, coverage of "non-hospital health care facilities such as doctors offices and clinics includes only personnel present during performance of high hazard procedures on suspect or active tuberculosis patients". CDC guidelines include that physicians, as well as other health care workers, undergo routine, periodic PPD testing for latent tuberculosis infection.
- ◆ Skin tests should be given to employees at initial hire unless they have documentation of a negative PPD test within the past three months. The initial tests should consist of the two-step test unless employees have had negative skin tests within the past 12 months. Following the initial test, employees who test negative are to be tested periodically under the following circumstances:
  - ◆ At least every 12 months for all exposed employees,
  - Immediately following an exposure incident and three months later a forced exposure skin test is negative
  - Students from affiliated education programs shall comply with employee health policies. In the event of accidental exposure to disease, the Infection Prevention Control Program Director shall notify the educational institution.

###### B. Disease Exposure

- ◆ Defined as having significant contact with blood or body secretions during direct patient care, by accidental skin puncture by a contaminated needle, or by significant exposure to a patient with a communicable disease without appropriate barrier precautions.
  - ◆ Exposure procedure:
    - Report incident to Infection Prevention and Control Program Director
  - ◆ Document the incident by filling out appropriate forms in the packet inside the Illness and Injury Prevention Program Manual. Reports should be documented within twenty-four (24) hours of incident if possible. Concentra Medical Center (address and directions in employee injury packet) may be consulted for testing and prophylactic treatment if indicated

## 2. Protection of the Patient/Employee

- A. The Infection Control Program Coordinator sets guidelines to limit or prohibit personnel contact with patients when certain conditions exist as follows:
- Skin infections, (open lesions or draining wounds of any kind).
  - ◆ Respiratory tract infections including group A streptococci, pneumonia, active pulmonary tuberculosis, influenza, mumps, fever, sore throat and/or rhinitis.
  - ◆ Active exanthemas (rubella, measles, chicken pox, herpes zoster) in exposed areas during communicable phase.
  - ◆ Enteric infections (hepatitis, salmonellosis, shigellosis, amebiasis, giardiasis), vomiting or diarrhea.
  - ◆ Personnel with herpes simplex (fever blister/cold sore) must not care for immunosuppressed patients, pregnant patients or infants.
  - ◆ The Infection Control Program Coordinator guidelines to protect employees from patients with certain conditions are as follows.
    - ◆ Pregnant employees shall not care for patients with known or suspected rubella, cytomegalovirus infections, and/or radiation therapy patients.
    - Personnel with known immunity, active or passive, to infectious diseases such as measles, mumps, chicken pox or influenza shall be assigned to care for patients who may be infected.

## V. **PROPHYLAXIS FOR EXPOSURE TO COMMUNICABLE DISEASE**

1. Prophylaxis for exposure to communicable disease shall be provided under the direction of the physician, and/or using the CDC GUIDELINES, and when appropriate telephone consultation and recommendations from the Department of Health Services.
2. The decision for prophylaxes shall be made on the basis of the following:
  - A. The potential infectiousness of the patient.
  - B. The type and duration of the contact.
  - C. Results of laboratory examinations.
  - D. Employee susceptibility.
3. In-service Education
  - A. In-service Education relative to infection prevention and control is a requirement for all newly hired employees. Compliance Alliance, LLC assists with all new employee education via on site training or webinar. In addition, all departments supervisors are to inform new employees about the Infection Control Program Coordinator, Exposure Control Plan, the Infection Prevention and Control Program, and the employees' responsibility to the program. This includes personal hygiene, hand washing, reporting of infectious conditions, or infectious hazards to the Infection Control Program Coordinator, and the Employee Health Program. This program is presented as part of the General Orientation program, and is

documented.

- B. Education relating to infection prevention and control is provided by the department managers, in conjunction with Compliance Alliance, LLC (also known as Infection Control Solutions, LLC) and /or may be coordinated through the Infection Control Program Coordinator.

4. Controls of the System

- A. Records of employee infections/sick calls shall be reviewed monthly to detect trends or outbreaks, and shall be reported to the Infection Control Officer.
- B. All personnel shall be required to attend an annual update in-service which consists of the following: Infection Prevention and Control, Exposure Control Plan, and Fire/Safety/Emergency Preparedness.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **B. Employee Health Program**

##### **I. PURPOSE**

To promote and safeguard the health of all employees and to ensure that all employees are physically able to perform their jobs, as well as to ensure the well-being of our patients.

##### **II. POLICY**

It is the policy of the Center to assess the physical ability of each and every employee to perform his/her job.

##### **III. PROCEDURES**

1. Employees Returning to Work after Illness
  - A. All employees who are absent from work for more than three (3) scheduled working days due to illness will be required to submit evidence of physical ability to return to duty, from a physician.
  - B. An employee will not be allowed to return to duty until satisfactory evidence of physical ability is provided to the supervisor or Administrator.
2. Ongoing Employee Health Services
  - A. Employees with upper respiratory infections, diarrhea, or skin lesions shall report their condition to their supervisor.
  - B. Flu vaccine may be offered to employees periodically and upon the order of the staff physician.
3. Exposure to Communicable Diseases
  - A. The employee shall report to their supervisor for completion of an incident report immediately or as soon as possible after having learned of possible exposure to a communicable disease. The Medical Director will be contacted in regards to prophylaxis, as well as the Infection Prevention Control Program Director.
  - B. The employee is to contact their supervisor for completion of an employee injury packet immediately in case of needle puncture or other exposure to blood or body fluids and report to the physician in charge. Concentra Medical Center is available for post exposure testing and treatment.
  - C. A written report of the post-exposure medical examination shall be available to the employee within 15 days.
  - D. Exposure to HIV/HBV policies shall be followed. (section G)
4. Accidents or Injuries While on the Job
  - A. Employees shall report to their supervisor immediately in such cases, and adhere to policy regulating incident reporting and on-the-job injuries. Details of these policies are also located in the Employee Injury and Illness Prevention Program Manual.

5. Prevention of Injuries and Illnesses

- A. All safety and infection control policies and procedures including both employee manuals from Infection Control Solutions, LLC, will be reviewed with each employee during orientation and annually.
- B. Ergonomic training will be provided for each employee during orientation to prevent work injuries associated with improper body alignment during normal work activities.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **C. Exposure Control Plan**

##### **I. POLICY**

The purpose of the Exposure Control Plan is to identify workers who are at risk or are potentially at risk for occupational exposure to blood or other potentially infectious materials and therefore are at risk for exposure to HIV and other communicable diseases.

##### **II. EXPOSURE DETERMINATION**

1. Job Classifications in which all employees have occupational exposure.
  - A. Nursing Personnel
  - B. Physicians
  - C. Radiology Personnel
  - F. Certified Surgical Technician
  - G. Operating Room Technician
  - H. Medical Assistant
  
2. Job Classifications in which there is little chance of exposure.
  - A. Admitting Personnel
  - B. Medical Records Personnel
  - C. Administrative Personnel
  
3. Tasks and Procedures in which occupational exposure may occur
  - A. Handling of blood, blood products or body fluids or objects contaminated thereof
  - B. Pre/Post pain management procedures
  - C. Phlebotomy or vascular access procedures and the care thereof
  - D. Contact with laboratory or pathological specimens
  - E. Wound care, suctioning/sputum induction
  - F. Contact with mucous membranes or non-intact skin
  - G. Handling/disposal of medical waste
  - H. Cleaning/processing of contaminated equipment
  - I. Handling of soiled linen
  - J. Cleaning/decontamination of environmental surfaces.
  - K. Emergency procedures, CPR and intubation
  - L. Injections

### **III. METHOD OF COMPLIANCE**

1. Methods of compliance include but are not limited to:
  - A. Universal Precautions
  - B. Environmental and Work Practice Control (including personal protective equipment)
  - C. Isolation Practices
  - D. Medical Waste Policies and Procedures

### **IV. POST EXPOSURE FOLLOW-UP**

1. Following an exposure incident, all employees shall receive a confidential medical evaluation and follow-up with the following elements: This is performed at Concentra Medical Center (address and directions in the Employee Injury Packet)
  - A. Documentation of the route(s) of exposure and the circumstances under which the exposure occurred.
  - B. A description of the employee's duties as they relate to the incident.
  - C. Identification and documentation of the source individual when known.
  - D. The employee's relevant medical records and vaccination dates shall be made available to the health care professional evaluating the employee.
2. Results of the source individual's testing shall be made available to the exposed employee and the employee shall be informed of applicable laws and regulations concerning disclosure of the identity and infectious status of the source individual.
3. A written report of this medical evaluation shall be available to the employee within 15 days of exposure. This report shall be limited to:
  - A. That the employee has been informed of the results of the evaluation;
  - B. That the employee has been told of any medical conditions resulting from exposure to blood or other potentially infectious materials which require further evaluation or treatment;
  - C. All other findings or diagnoses shall remain confidential and shall not be included in the written report.
4. If the employee consents to a baseline blood draw but not to HIV testing, the specimen shall be stored for 90 days. Should the employee change his/her mind, testing will be done as soon as feasible.

### **V. COMMUNICATION OF HAZARDS**

1. All blood or potentially infectious materials shall have a bio-hazard label affixed to the container (blood and blood products for clinical use are exempt) or shall be stored in red bags or red containers.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **D. Tuberculosis Screening**

##### **I. POLICY**

It is the policy of the Center to properly screen all employees for the presence of inactive or active Tuberculosis at the time of employment and at least annually thereafter.

##### **II. PROCEDURE**

###### **1. Pre-employment Screening**

- A. Skin tests should be given at the employee's initial hire unless they have documentation of a negative PPD test within the past 3 months.
- B. One step tuberculin testing – Applicant with a negative tuberculin skin test within the past 12 months, no known history of Tuberculosis and no previous significant Mantoux (PPD) Tuberculin skin test. Testing method will include:
- C. Two step skin test – The initial test should consist of a two-step test unless employees have had:
  - Negative skin tests within the past 12 months.
- D. A tuberculin reaction of 5 mm or more is classified as positive in the following groups:
  - ◆ People who have had close recent contact with a patient within infectious tuberculosis,
  - ◆ People who have chest radiographs with fibrotic lesions likely to represent old healed tuberculosis,
  - ◆ People with known or suspected HIV infection.

###### **2. A tuberculin reaction of 10 mm or more is classified as positive in people who do not meet the above criteria but who have other risk factors for tuberculosis. This would include:**

- A. People with other medical risk factors known to substantially increase the risk of tuberculosis once infection has occurred,
- B. Foreign-born people from high-prevalence countries (example those from Asia, Africa, and Latin America),
- C. Medically underserved, low income populations, including high risk minorities,
- D. Intravenous drug users,

3. A reaction of 15 mm or more is classified as positive in all other people.
4. An absence of a reaction to the tuberculin test does not exclude the diagnosis of tuberculosis or tuberculosis infection. Self-medicated responses such as tuberculin reactions may decrease or disappear during any severe or febrile illness, measles or other exanthemas, HIV infection, live virus vaccination, Hodgkin's disease, sarcoidosis, overwhelming miliary or pulmonary tuberculosis, and after administration of corticosteroids or immunosuppressive drugs. Up to 30% of patients with HIV infection and 60% of patients with AIDS may have skin test reactions less than 5 mm even though they are infected with tubercle bacilli. In addition, people who have been very recently infected may not have a reaction to the tuberculin skin test.
5. Tuberculin Testing
  - A. Annual Tuberculin Testing
    - ◆ All employees in clinical departments who have exposure to patients potentially suffering with tuberculosis should have the tuberculin tests repeated at least every 12 months.
    - ◆ All personnel immediately following an exposure incident and three months later if post exposure skin test is negative.
  - B. Positive Tuberculin Test
    - ◆ If a person is tested positive, which is determined by measuring the amount of induration or swelling (not redness):
    - ◆ A chest x-ray is obtained to determine if this person has passive or active tuberculosis infection.
    - ◆ If a chest x-ray is negative and the physician determines this person has passive tuberculosis, this person is evaluated as a candidate for drugs that will prevent the tuberculosis from becoming active.
      - ◆ This person either will be referred to their personal physician or to the health department.
6. Active Tuberculosis
  - A. No new employee will be hired with active tuberculosis.
  - B. If an employee who has been working at the Center becomes exposed and presents with active tuberculosis, further testing will be done including a sample of sputum followed by referral to a personal physician or health department along with multi-drug treatment.
  - C. Active tuberculosis is contagious; hence an employee who is suffering with active

tuberculosis is taken off duty to prevent transmission to patients and to other workers. The Center will also look at various other employees potentially who could have active tuberculosis.

- D. Passive tuberculosis is not contagious, however it is important that this employee monitor oneself for signs and symptoms of active tuberculosis, especially if this employee cannot or chooses not to take prophylactic drug therapy
  - E. A person who is suffering with active tuberculosis can only return to work after three consecutive negative sputum smears and shows improvement in symptoms as determined by the health department or private physician.
7. Response to screening:
- A. If chest x-ray shows no activity, applicant will be hired.
  - B. Yearly Tuberculosis counseling will be done, following education concerning signs and symptoms of active Tuberculosis infection.
  - C. If chest films suggest recent activity, the applicant will be referred to their personal physician and will not be allowed to work until after 4 weeks of treatment on appropriate anti-tuberculin medication has passed.
8. If an applicant has had a significant Mantoux (PPD) in the past and has been adequately treated with anti-tuberculin medication:
- A. He/she will require a pre-employment chest x-ray.
  - B. He/she will be required to answer a Tuberculosis questionnaire annually.
9. If an applicant has had active tuberculosis in the past:
- A. Documented proof of adequate treatment with anti-tuberculin medication from employee's personal physician will be required before the employee begins work.
  - B. A pre-employment chest-ray will be necessary.
  - C. Yearly tuberculosis counseling will be required.

### **III. SUBSEQUENT ANNUAL SCREENING**

- 1. Those employees who have a previous negative PPD skin test will be retested on an annual basis. All employees who previously had a significant PPD reaction will have one chest x-ray done and fill out an annual tuberculosis questionnaire.
  - A. If an employee's PPD. becomes significant or if any questions on the questionnaire are answered affirmatively, the employee will be referred to a physician for follow-up whether or not a documented situation of exposure to an infected patient or fellow employee occurred during the last year interval.

## 2. Unprotected Employee Exposure

- A. Screening: An employee who is exposed to a patient with a bacteriologically positive case of Tuberculosis, and who has:
- Never had a significant PPD or who received a Bacille Calmette Guérin (BCG) vaccination longer than three years ago will receive a PPD skin test approximately three months after the exposure.
  - ◆ A previously significant PPD will not be screened. If the employee becomes symptomatic, a chest x-ray will be done.
- B. Response to Screening: The employee who converts to significant PPD will receive:
- ◆ Chest x-ray
  - ◆ Treatment under Workman's Compensation as recommended by the Medical Director

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **E. Immunization**

##### **I. POLICY**

The Center recommends that all health care workers who perform invasive procedures should know their HIV and Hepatitis B antigen (HBAg) status. It is recommended that all health care professionals in these areas be immunized against Hepatitis B.

##### **II. PROCEDURE**

1. Hepatitis B Vaccine – Available at no cost to all personnel who handle patient blood and body secretions. This includes, but is not limited to: Physician staff, nursing staff and laboratory staff.

A. Before receiving vaccine, employee will:

- ◆ Be instructed of risks and benefits of vaccine either by the Infection Control Program Coordinator, or the physician.
- ◆ Be instructed that there is a series of three doses: the initial dose, a second dose in one month, and a third dose six (6) months following the initial dose.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **F. Post-Exposure Prophylaxis of Hepatitis**

##### **I. POLICY**

All employees in cases of exposure to Hepatitis will be referred for evaluation to receive prophylactic therapy.

##### **II. DEFINITION**

An important exposure is defined as follows:

1. Hepatitis A – Person to Person contact, generally through fecal contamination or sexual contact.
2. Hepatitis B and C – Accidental percutaneous, ocular, or mucous membrane exposure to blood known to be HBAg positive and/or human bite that penetrates the skin from HBAg carriers.

##### **III. LABORATORY STUDIES**

1. Employee – hepatitis diagnostic panel will be performed with consent. If not, blood will be stored for 90 days.
2. Patient – hepatitis diagnostic panel will be performed with written consent which is obtained with all invasive procedures.

##### **IV. PROPHYLAXIS**

1. Hepatitis A – Routine IG prophylaxis for Center personnel is not indicated.
2. Hepatitis B – In the event of important exposure to known HBAg positive blood, vaccine can be administered.
3. Hepatitis C – In the event of an important exposure, a single dose of IM of IG 0.02 ml/kg may be recommended.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **G. Exposure to HIV**

##### **I. POLICY**

Employee cases of important exposure to a patient with possible or confirmed HIV positive will be referred for evaluation and follow-up. Employees are referred to Concentra Medical Center for testing and treatment, as per the Employee Injury and Illness Prevention Program.

##### **II. DEFINITION**

An important exposure is defined as exposure to blood and/or other body fluids via parenteral (e.g., needle stick, cut or bite) or mucous membrane exposure (e.g., splash to the eye or mouth).

##### **III. LABORATORY STUDIES**

###### **1. Employee**

- A. A baseline study for HIV antibody shall be performed as soon as possible after exposure, if status is unknown or negative in the past. Written consent is needed for testing. If the employee consents to blood drawing but not to HIV testing, the blood will be held for 90 days should the employee change their mind and request HIV testing.
- B. If baseline HIV antibody study is negative, employee is to be retested after 6 weeks, then 3, 6, and 12 months following exposure.
- C. If employee is seropositive for HIV antibody, no further testing is necessary.

###### **2. Patient**

- A. HIV antibody shall also be performed, if status unknown, with the patient's written consent which is obtained for all invasive procedures.

##### **IV. REFERRALS**

- 1. Refer employee to Infection Control Program Coordinator for follow-up and appropriate counseling as necessary.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **H. Exposure to Meningococcal Meningitis**

##### **I. POLICY**

Employee cases of important exposure to Meningococcal Meningitis will be referred for evaluation to receive prophylactic therapy. Employees are referred to Concentra Medical Center for testing and treatment, as per the Employee Injury and Illness Prevention Program.

##### **II. DEFINITION**

An important exposure in this case is defined as intimate contact (mouth to mouth resuscitation) to a patient highly suspected of or diagnosed as having meningococcal meningitis before definitive treatment of the patient was established.

##### **III. EMPLOYEE INSTRUCTIONS**

1. Instruct the employee in the following:
  - A. Incubation period varies from 2-10 days, commonly 3-4.
  - B. If any of the following symptoms occur report to the on-duty physician immediately for further evaluation.
    - ◆ SYMPTOMS: sudden onset of fever, intense headache, nausea, often vomiting, stiff neck, petechial rash.

##### **IV. RECOMMENDED PROPHYLACTIC THERAPY (to be used as a guideline only)**

1. Rifampin BID for 2 days (600 mg/adults).

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **I. General Safety for All Employees**

1. Be physically fit for your work through good health habits, proper diet, sufficient rest, and cleanliness.
2. Prevent the spread of infectious or contagious diseases; when you are ill, call in, but remain at home.
3. Personal hygiene is paramount: wash your hands often, in particular after arriving at and before leaving work, before meals, after use of the restroom, and after patient contact.
4. Wear proper clothing for your particular job with appropriate uniforms as required.
5. Heed all warning signs cautioning you about a hazard or a condition detrimental to your safety.
6. Use caution with swinging doors. If there is a window panel, check clearance before opening the door.
7. Always use a suitable ladder; do not climb on chairs or boxes to reach overhead items.
8. Pick up any foreign matter found on floors and put them into the proper receptacles.
9. Assist new or inexperienced personnel in your department to become familiar with proper safe practices.
10. Know the location of fire extinguishers in your area.
11. Look for tripping and slipping hazards and have such hazards removed immediately.
12. Keep traffic areas clear of obstructions such as chairs, supplies, etc.
13. Use handrails when descending stairs and watch your step.

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **J. Reporting Injury on the Job**

##### **I. POLICY**

The intent of this policy is to ensure a safe environment for our employees at all times and provide a method by which reporting, investigation, and review are conducted on an on-going basis for all incidents as defined below.

##### **II. DEFINITION**

Definition of an "incident": An incident is broadly defined as any happening (occurrence) which is not consistent with the routine operation of the Center. Included in this broad spectrum are accidents (with or without injury) involving employees.

##### **III. PROCEDURE**

1. After injury, the employee shall:
  - A. Be given first aid on location if indicated;
  - B. Be taken to the emergency room, Concentra Medical Center, or
  - C. See physician at the Center for evaluation and treatment as soon as possible.
2. The Nurse will:
  - A. Have the physician evaluate and treat employee.
  - B. Submit related doctor's notes, test results etc to the employee
  - C. Notify the Medical Director and Administrator of the injury as soon as possible.
3. Follow-up will be coordinated by the Clinical Director or Administrator based on the recommendations of the physician.
4. The Infection Control Program Coordinator will be notified by the Administrator, if the injury is a result of a communicable disease exposure.

##### **IV. REPORTING RESPONSIBILITIES**

1. Employees: It is the responsibility of each and every employee to report any and all employee incidents/injuries which may occur at this Center. Initial reporting by the employee shall be made verbally and in writing via the employee injury report packet and given to the supervisor or Administrator. All reports shall be reported promptly, legibly, and accurately.
2. Department Supervisor: It is the responsibility of these individuals to assist the employee with the incident reporting process.
3. Compensation Injuries – If required, an "Employees First Report of Injury" (WC Claim

Form) shall be completed by the Administrator.

4. An accurate and current file of all employee incident/injury reports is maintained by the Administrator.
5. The log and summary of occupational injuries and illnesses (OSHA No. 200) and any supplementary record of occupational injuries and illnesses (OSHA No. 101) are kept in the Employee Injury and Illness Prevention Manual.

#### **V. INTERNAL REVIEW**

1. Ongoing internal review is conducted of all incident reports which have been filed with the Administrator by the Safety and Maintenance Coordinator.

#### **VI. EDUCATIONAL RESPONSIBILITIES**

1. It is the responsibility of each employee to seek assistance and advice about matters of concern regarding safety. Any unsafe or possibly hazardous condition must be promptly reported to the supervisor.
2. It is the responsibility of the Safety and Maintenance Coordinator to advise and assist their employees in matters of concern regarding safety. Prompt attention to unsafe conditions, education of employees regarding proper use of equipment and safety devices provided by the Center are considered to be ongoing responsibilities of our supervisory and managerial personnel.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **2. Employee Health**

#### **K. Workers Compensation**

##### **I. REPORTING PROCEDURES**

1. First Aid Cases: Those injuries requiring minor medical attention or only first aid, generally are not "recordable" under OSHA. However, a location record of all injuries must be kept in the administration office.
2. Physicians' Cases: If the employee sees a physician and the injury is considered reportable, an Employee Claim Form for Workers' Compensation Injury must be prepared and copies forwarded immediately to the Administrator. This report must be submitted immediately. Benefits cannot be paid until paperwork has been completed.
3. Serious Medical Claims: In serious injuries or fatalities, the Administrator and Medical Director shall be notified immediately. OSHA notification shall be the responsibility of the Administrator in conjunction with the Safety Coordinator.
4. Investigations and Questionable Claims: Every claim involving lost time shall be investigated immediately; to include interviewing witnesses, the injured employee (as soon as health permits), examination of the injury scene and photographs, if appropriate. Any physical evidence (broken machine parts) shall be retained. Should there be any information uncovered that would cause a question as to the validity of the claim, this information shall be communicated immediately and fully to the Administrator. This shall be by phone call initially and then followed by a letter, either attached to the Injury Report, or sent later.
5. Medical Care: For any injury, the employee is to receive prompt and appropriate medical treatment. Concentra Medical Center is authorized to provide medical care per for employees per the Injury and Illness Prevention Program Manual. If referred to a doctor, the employee shall take with him/her a "doctor's referral slip" which authorizes the doctor to treat the person as a work-related injury.
6. Treatment of Pre-existing Conditions:
  - A. Departments shall direct their personnel accordingly and consideration given when assigning a prospective or current employee with a known preexisting injury which could be aggravated while doing the work assigned.
  - B. Documentation of prior injuries shall be placed in the employee's medical files. Documentation may be in the form of group insurance information, pre-employment physical, or as a result of a claim examination or prior W/C claim. The claim service can better direct the investigation and administration of an injury when documented information is available

- C. Contact with Injured Employees: It is very important to maintain close contact and open communications with an injured employee, but particularly if he/she is away from work more than a week. This shall include phone calls and home visits by the employee's immediate supervisor and other members of management as deemed necessary.
- D. Rehabilitative Work: It is recommended that every effort be made to accommodate an employee who may return to work on a restricted activity basis. This can be accomplished by discussion with the Unit Manager, the treating physician and the employee. Rehabilitation is most effective when initiated as soon as medical conditions stabilize (usually within six weeks).

7. Return to Work

- A. Authorization for the employee to return to work must be in writing by the attending physician.
- B. Even though the physician returns the employee to "full work" status, caution shall be exercised for all employees returning after a prolonged disability period.
- C. If an employee does not report to work on the day he/she is designated, the supervisor shall attempt to reach the employee to see if the disability period was extended. If the disability period has not been extended, disciplinary action shall be taken in accordance with standard procedures for non-reporting to work.
- D. If there are any restrictions noted by the physician on the return to work authorization, advise the supervisor of such and determine if the employee can return to work with the restrictions noted.

8. OSHA Reporting Responsibilities

- A. Reports of fatalities or hospitalization of five or more employees from a single cause must be made to the local OSHA office within 24-hours of the injury; contact Personnel and Administration for specific instructions.
- B. Maintenance of the OSHA Log and supplemental report is the responsibility of the Administrator with the assistance of the Human Resources Coordinator.

# **PRECISION SURGERY CENTER**

## **SECTION VII**

### **HUMAN RESOURCES**

#### **3. Nursing Services**

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **3. Nursing Services**

#### **A. General Policies**

#### **I. POLICY**

The nursing services of the Center are directed and staffed to ensure that the nursing needs of all patients are met. The nursing service is directed under the leadership of a nurse who is designated as Clinical Director.

#### **II. PROCESS**

1. Sufficient nursing staff is provided at the Center with the appropriate qualifications to ensure the nursing needs of all Center patients are met, with ongoing assessment of patients' needs for nursing care and addressing the identified needs based on the volume and types of surgery.
2. Patient care responsibilities are delineated for all nursing service personnel. Nursing services are provided in accordance with recognized standards of practice. There is always a registered nurse available for emergency treatment whenever there is a patient in the Center.
3. The Center's nursing services are consistent with recognized standards of practice. Every nurse in the Center has clearly delineated assigned responsibilities for providing nursing care to patients.

#### **III. NURSES**

All nurses must have a degree and be a Registered Nurse or Licensed Practical Nurse and licensed in the State of Nevada. All professional licensed staff members will have primary source verification of their credentials by the Administrator.

#### **IV. SURGICAL TECHNOLOGISTS**

All surgical technologists employed by the Center must be a graduate of a certified technologist program.

#### **VI. STAFFING POLICY**

1. Members of the staff will be assigned for daily patient care responsibilities and auxiliary tasks by the Clinical Director or Administrator.
2. This is to provide adequate nursing personnel necessary to meet the individual needs of the patient undergoing procedures. The number of nurses staffed each day will correspond with the number of procedures scheduled and the number of patients expected to be admitted.
3. The Clinical Director shall assign personnel to nursing care in the Center, as needed, keeping in mind the number of personnel available, as well as ancillary tasks to be performed, to allow for smooth and safe functioning of the Center.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **3. Nursing Services**

#### **B. Clinical Director**

### **JOB DESCRIPTIONS**

#### **I. BASIC FUNCTION**

Responsible for the supervision of all clinical operations of the Center, as well as directing, staffing, planning, organizing, delegating, controlling, and marketing of all services provided in the Center.

#### **II. RESPONSIBILITIES**

1. Adheres to mission, vision, values, goals, philosophy, objectives, policies and procedures of the Center.
2. Communicates effectively to promote relationships, within the department, the Center and community.
3. Participates in overall long-range planning for the Center regarding financial, personnel, human relations, external relations and quality control.

#### **III. ORGANIZATIONAL PERFORMANCE**

1. Develop, review and/or revise policies and procedures in all aspects of the Center's operation.
2. Inform staff regarding important issues pertaining to the Center's regulatory performance standards.

#### **IV. FINANCIAL MANAGEMENT**

1. Direct day to day operations of the Center, including staffing
2. Develop procedures to maximize productivity
3. Establish need to replace existing or purchase of additional medical equipment

#### **V. PERSONNEL/HUMAN RELATIONS**

1. Recruit nurses, medical assistants and technicians to fill vacancies and/or meet demand
2. Orient and train new employees, assist with annual competencies review/training
3. Direct and monitor workloads according to schedule
4. Assist in evaluation of staff job performance
5. Mediate interpersonal conflict resolution among staff
6. Ensures stock inventories are maintained
7. Resolves patient complaints or direct to appropriate authority
8. Performs as staff nurse when necessary

## **VI. QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT**

1. Develop, review, and revise standard operating policies and procedures for delivering patient care.
2. Collect information, process, and evaluate information and/or make recommendations relative to factors that affect patient demand.
3. Conduct monthly staff meetings, ensuring that minutes of meetings are recorded and made available to those staff members not in attendance.
4. Assist in development and maintenance of quality assurance studies and data collection for clinical/non-clinical activities.
5. Assist in development of infection prevention and control system for clinical operations.
6. Ensure material safety data sheet (MSDS) book/CD is up to date and available to all employees.
7. Ensures adequate in-servicing on new equipment/procedures to staff.
8. Enforces adherence to standard operating procedures by all employees.
9. Maintains education record for continuing education and required in-services.

## **VII. QUALIFICATIONS**

1. Registered Nurse with management experience preferred.

## **V. WORK RELATIONSHIPS**

1. Reports to Administrator and Medical Director.
2. Communicates with admission staff, medical records staff, and billing staff.
3. Coordinates care with admissions, nursing and administrative staff.
4. Maintains skills to monitor patient scheduling, evaluation and progress.

# PRECISION SURGERY CENTER

## VII. HUMAN RESOURCES

### 3. Nursing Services

#### C. Staff Nurse

#### I. BASIC FUNCTION

To provide and coordinate patient care in the preoperative, intraoperative and postoperative setting. Specific nursing assignments will be assigned by the Clinical Director, but nurses are trained in all areas of patient care for versatility throughout the Center with nursing staff.

#### II. RESPONSIBILITIES

1. Prepares the all patient care areas including preoperative, postoperative and the operating room for the patient
  - A. Assembles supplies, instruments, and equipment
  - B. Checks all equipment for proper functioning
  - C. Monitors cleanliness of all areas including operating room
2. Provides individualized care to patients
  - A. Assesses patient condition upon arrival/admission and provides physical or emotional support as needed.
  - B. Checks patient's chart while admitting noting accuracy of consents, allergies, history and physical present, verifying lab work, and medication ordered and given.
  - C. Starts IV per policy and procedures and assists through patient anesthetic changes
  - D. Provides for constant evaluation, observation, and treatment of patients under local anesthesia
  - E. Administers IV conscious sedation per policy and physician orders
  - F. Assists in safe transportation and positioning of patient
  - G. Provides for preparation of the operative site when necessary
  - H. Oversees maintenance of sterile technique according to policy
  - I. Anticipates surgeon's needs during the operation or procedure, maintains constant awareness of the operative situation and provides extra supplies as needed
  - J. Maintains a constant awareness of a safe environment during surgery for the patient and for the personnel regarding electrical or anesthetic hazards
  - K. Has knowledge of cardiac monitors and cardiac arrhythmias.
  - L. Responsible for proper documentation of information prior to discharge
  - M. Ensures discharged patients and their responsible party understand all post-operative instructions
  - N. Counts and records controlled substances at beginning and end of shift
  - O. Restocks medications and supplies as needed
  - P. Is knowledgeable of MSDS sheets and the location of the MSDS manual

3. Formulates and maintains a positive working relationship with patients, families, peers, and other medical personnel.
  - A. Interacts with patients, families, and/or significant others in a supportive manner
  - B. Communicates effectively and professionally with co-workers, medical staff, and ancillary departments for continuity of patient care.
  - C. Acts as a liaison between departments, co-workers, supervisors, and physicians
  - D. Promotes positive public relations for the nursing division and the Center
  - E. Investigates and attempts to resolve complaints of patients, visitors and physicians through personal actions or referral to higher authority, serves as patient advocate
  - F. Understands chain of command and follows proper lines of communications promoting positive working relationships
  - G. Respects at all times the confidentiality of patient, Center, and physician related information
  - H. Discourages gossip and professionally approaches co-workers to resolve issues of concern
  - I. Adapts to change in a positive, professional manner.
4. Monitors the operative schedule and ensures patients will have a timely and safe course of treatment.
  - A. Communicates with patient's families as necessary relating status cooperatively and post-operatively
  - B. Documents and cares for any surgical specimens as needed
  - C. Maintains accurate and complete records of patient's surgical course
  - D. Assists with providing an expedient, smooth turnover between cases
  - E. Assists with emergencies in all patient care areas per policy
  - F. Submits accurate records of occurrences/incidents
5. Assumes responsibility for continuing education through formal and informal education programs and/or workshops or conferences.
  - A. Attends required in-services yearly
  - B. Attends at least one educational seminar or workshop yearly pertaining to relevant areas of clinical skill development
  - C. Attends 75% of staff meetings. Reads and signs minutes of meetings not attended.
  - D. Maintains education record for continuing education and required in-services
6. Demonstrates an awareness and participation in the Quality Assurance and Improvement Program
  - A. Is alert of potential Quality Assurance problems and actively participates in the resolution of problems.
  - B. Responds with improved performances to results obtained from QA studies
  - C. Assists with QA studies and data collection when necessary.
  - C. Is knowledgeable of and follows the nursing and Center standards, policies, and procedures.

**III. PHYSICAL DEMANDS AND WORKING CONDITIONS:**

1. Visual acuity for chart review and equipment operation.
2. Heavy lifting of up to 100 pounds with assistance and 50 pounds without assistance.
3. Considerable stooping, pushing, and pulling

**IV. QUALIFICATIONS**

1. Registered Nurse with current license to practice in Nevada
2. Current BLS Certification (Basic Life Support)

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **3. Nursing Services**

#### **D. Surgical Technologist**

##### **I. BASIC FUNCTION:**

Provides surgical assistance and participates during procedures of surgical intervention.

1. Is knowledgeable of equipment and instrumentation and supplies required to perform specific procedures.
2. Is knowledgeable of asepsis and maintaining sterile technique during each procedure.
3. Assists the surgeon as necessary by position of the surgical team.

##### **II. RESPONSIBILITIES**

1. Adheres to and supports the mission and goals, philosophy, objectives, policies and procedures of the Center.
2. Cleans and maintains care of equipment in operating order according to departmental procedures and infection prevention and control policies.
  - A. Transports used instrument sets for reprocessing and sterilization daily.
  - B. Ensures that instrument sets are properly identified and contain accurate count of each instrument..
  - C. Wraps and labels instruments as needed.
  - D. Changes sterilizer graphs and files appropriately daily.
  - E. Fills instrument orders in a timely manner as requested.
  - F. Pulls and rewraps out-dated supplies as needed biweekly.
  - G. Initiates requisitions for repair of equipment and transports to appropriate department.
  - H. Assists maintaining cleanliness of the clean and soiled workrooms.
  - I. Assists with maintenance of sterilizers and updates logs
3. Expedites room turnover
  - A. Removes linen and trash to appropriate disposal area.
  - B. Cleans bed, tables, soiled areas, and mops floor between cases.
  - C. Prepares room for next scheduled case (opens supplies, replaces suction equipment, process instruments).
  - D. Anticipates needs of team members in OR.
4. Assists in care and handling of supplies, equipment and instruments.
  - A. Helps prepare OR suites by gathering supplies, equipment and instruments as needed.
  - B. Places sterile supplies in proper places, uses sterile technique to open supplies.
5. Promotes cooperation and communication utilizing proper channels with OR staff, the entire health care team and patients.

- A. Relays appropriate information to co-workers within promptly
  - B. Maintains close communication with the registered nurses daily.
  - C. Facilitates and promotes effective interdepartmental and medical staff relationships on a daily basis.
  - D. Always ensures a supportive and caring attitude in delivery of patient care.
  - E. Always provides reassurance and support to patients.
  - F. Respects at all times the confidentiality of patient, Center and physician related information.
  - G. Assists with orientation of new personnel to the department as assigned.
  - H. Understands chain of command; always follows proper line of communication.
  - J. Handles personal and professional frustrations without disrupting the department.
  - K. Always promotes good public relations for the department, nursing division and the Center.
  - L. Demonstrates flexibility in responding to changes in patient assignments.
6. Inspects, cleans, and lubricates surgical instruments as per individual instrument and equipment instruction.
- A. Uses supplies and equipment economically on every procedure.
  - B. Assists in transporting patients to and from the operating room.
  - C. Ensures surgical room set-up with proper equipment and linens.
  - D. Assists in maintaining file of procedural information of physician's preference cards and appropriate instrumentation daily.
  - E. Performs other tasks as assigned.
7. Is knowledgeable of the Center's policies and procedures
- A. Demonstrates awareness of infection prevention and control by always following established procedures.
  - B. Attends required in-services annually and assumes personal responsibility for professional development.
  - C. Demonstrates understanding of the Center's fire and safety procedures outlined in the safety manual.
  - E. Attends staff meetings; reads and signs minutes of meetings not attended.
  - F. Attends in-service classes pertinent to clinical area, remains informed of clinic communications.
  - H. Sets goals with Clinical Director for own performance based on self-evaluation.

### **III. PHYSICAL DEMANDS AND WORKING CONDITIONS**

- 1. Visual acuity for chart review and equipment operation.
- 2. Heavy lifting of up to 100 pounds with assistance and 50 pounds without assistance.
- 3. Considerable stooping, pushing and pulling.

### **IV. QUALIFICATIONS**

- 1. Graduate of a certified surgical technology program.
- 2. Current CPR Certification

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **3. Nursing Services**

#### **E. Licensed Practical Nurse**

##### **I. BASIC FUNCTION**

Assists in performing nursing tasks in all areas of patient care.

##### **II. RESPONSIBILITIES**

1. Adheres to mission, vision, values, goals, philosophy, objectives, policies, and procedures of the Center.
2. Exhibits interpersonal and interdepartmental relationships.
  - A. Demonstrates reassurance and support to patient and family; explains actions, provides information regarding waiting areas and communication of patient status to family members.
  - B. Is courteous and respectful of interdepartmental staffs; avoids conflicts and communicates effectively utilizing the proper channels.
  - C. Is cognizant of proper lines of communication.
3. Is skillful, accurate and organized in performing assignments
  - A. Initiates pre-op nursing assessment and administers ordered medication.
  - B. Prepares surgical shave preps as assigned (patient room, holding area, operating room).
  - C. Transports and positions patients utilizing techniques of proper body mechanics and patient safety.
  - D. Assists nurse with surgical skin prep as needed.
  - E. Acts as runner between OR and other departments as needed.
  - F. Starts IVs as needed.
  - G. Assesses patient in post-op stage making note of operative site, and discharge per physician's orders.
4. Is knowledgeable of checking, ordering, and restocking supplies in all areas of the Center.
5. Cooperates willingly and communicates effectively utilizing proper channels with team members.
  - A. Demonstrates awareness and is committed to patient, physician, and Center confidentially.
6. Attends in-service classes and staff meetings regularly.

### **III. PHYSICAL DEMANDS AND WORKING CONDITIONS**

- A. Visual acuity for chart review and equipment operation.
- B. Heavy lifting of up to 100 pounds with assistance and 50 pounds without assistance.

### **3. Nursing Services**

#### **F. Medical Assistant/Nursing Assistant**

##### **I. BASIC FUNCTION**

Assist the physician and nursing staff and clinical coordinator by performing various administrative and clinical functions.

##### **II. RESPONSIBILITIES**

1. Adheres to mission, vision, values, goals, philosophy, objectives, policies, and procedures of the Center.
2. Exhibits interpersonal and interdepartmental relations:
  - A. Demonstrates reassurance and support to patient and family; explains actions, provides information regarding waiting area and communication procedure to family members
  - B. Is courteous and respectful of interdepartmental staffs; avoids conflicts and communicates effectively utilizing the proper channels
  - C. Is cognizant of proper lines of communication
3. Is skillful, accurate and organized in performing assignments
  - A. Phone duties to include but not limited to: appointment scheduling, incoming and outgoing messages, keyboarding and computer operations.
  - B. Medical records management, retrieval and filing of charts, incoming and outgoing records.
  - C. Coordinate care between the physician, nursing staff and patient as needed.
  - E. Acts as runner between OR and other departments as needed.
  - F. Functions as a resource person for staff and patient.
  - G. Attends all required meetings and in-services.
  - H. Performs any and all duties assigned.
4. Expedites room turnover
  - A. Removes linen and trash to appropriate disposal area when necessary.
  - B. Cleans bed, tables, and soiled areas.
  - C. Prepares room for next scheduled case.

5. Is knowledgeable of checking, ordering and restocking supplies in all patient care areas
6. Cooperates willingly and communicates effectively utilizing proper channels with team members
  - A. Reports appropriate information to holding area nurse.
  - B. Demonstrates awareness and is committed to patient and department confidentiality.
7. Remains informed of nursing staff and Center communication
  - A. Reads and initials posted memos
  - B. Attends required staff meetings.
8. Attends in-service classes and staff meetings regularly.

### **III. CLINICAL DUTIES**

1. Assists in checking the vital signs, height, and weight if needed, documents as appropriate in the medical record.
2. Assists with physical examination if needed.
3. Assists with transporting patients to and from the OR when appropriate.
4. Assists with laboratory specimens and CLIA waived testing as ordered.
5. Assists with fluoroscopy positioning before/during and after procedure

### **IV. LABORATORY DUTIES**

1. CLIA compliant in waived laboratory testing: Dip stick urinalysis, hematology including, PT, glucometer operation, and pregnancy testing.
2. Maintains a clean, neat, and safe environment for patients.
3. Performs any and all duties assigned.

### **V. WORKING RELATIONSHIPS**

1. Reports to the physician, clinic coordinator, and Clinical Director.

### **VII. QUALIFICATIONS**

1. High school graduate.
2. Current CPR Certification
3. Medical/Nursing Assistant Certification preferred but not required.
3. Previous Medical/Nursing Assistant experience preferred but not required.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **3. Nursing Services**

#### **G. Departmental Safety: Nursing Department**

1. All work areas and equipment shall be periodically checked and problems noted. Any repairs needed shall be referred to the Safety and Maintenance Coordinator.

2. Position of Beds/Stretchers

All beds/stretchers must be kept in low position except during the time nursing care is being given to the patient.

3. Side Rails

Side rails are to be kept in a raised position at all times except during nursing care for all patients. The nurse should remain immediately at the patients bed side if the rail is down.

4. Wheelchair and Stretchers

Wheelchairs and stretchers shall be kept in a locked position except when a patient is being transported.

5. Electrical Safety

A. Nursing responsibilities for providing a safe electrical environment include:

- ◆ Reading the operating instructions for each piece of electrical equipment prior to use.
- ◆ Keeping fluids away from electrical equipment, e.g. computers, automated external defibrillator (AED), suction equipment, to avoid shock damage of equipment and prevent electrical shock.
- ◆ Keeping electrical cords away from beds, furniture and cabinets.
- ◆ Avoid touching electrical equipment and the patient at the same time to prevent current flowing through to the patient.
- ◆ Extension cords must be approved and obtained from the Safety and Maintenance Coordinator.
- ◆ Only approved three prong plug equipment should be used in the Center.
- ◆ Avoiding the use of fuel burning and electrical space heaters in any location of this Center including office and lounge areas.
- ◆ Remove power plugs from wall outlets by grasping the plug, not by pulling the cord.
- ◆ Keeping mobile equipment cases, e.g., suction machines, from contacting the metal bed frames.

B. Malfunctioning clinical patient care equipment e.g., AED, monitors, or malfunctioning non-clinical equipment, e.g., electrical beds are to be put out of service and reported immediately to the Safety and Maintenance Coordinator.

Report the any of the following immediately to the Safety Coordinator:

- ◆ If electrical equipment has been dropped or otherwise physically abused, or if liquid has been spilled on it.
- ◆ If patient, nurse or visitor has received a tingling sensation or a shock from electrical equipment.
- ◆ If electrical plugs are broken, bent, loose or only have two prongs.
- ◆ If power cords are worn, frayed, or burned or any insulation has been cut.
- ◆ If there is overheating or electrical equipment seems overheated by smell or touch.
- ◆ If cables, cords or knobs are not attached to machinery securely.
- ◆ If alarm systems are not functioning properly.

6. General Safety Principles

A. The following safety principles are to be observed by the nursing staff:

- ◆ Storage of equipment and/or supplies in any corridor or aisle way is prohibited.
- ◆ Blocking fire exit doors is prohibited.
- ◆ Storing or stacking supplies, etc., within 18" of the ceiling is prohibited
- ◆ Storing equipment, supplies, etc. in such a fashion as to block access to fire alarms or extinguishers is prohibited.

B. Employees shall remedy and/or report hazards, such as spills, immediately.

- ◆ Take immediate action to make the environment safe by cleaning up spills and/or call Safety and Maintenance Coordinator. MSDS information on all potentially hazardous chemicals in the Center are on CD inside the Injury and Illness Prevention Program Manual.
- ◆ Report safety hazards to Clinical Director or Clinical Coordinator.
- ◆ Notify Safety and Maintenance Coordinator to correct problems that require immediate attention, e.g., electrical outlet broken.

C. Practice good body mechanics and safety principles associated with turning and positioning of patients.

The admissions clerk is responsible for scheduling of patients and secretarial duties.

##### **II. RESPONSIBILITIES**

1. To adhere to and support the mission, vision, values, goals, philosophy, objectives, policies, and procedures of the Center.
2. Manage secretarial duties assigned by professional staff:
  - A. Receive and report on assignments from professional staff.
  - B. Receive incoming phone calls and direct to appropriate personnel.
  - C. Maintain records of all patients.
  - D. Prepare medical charts for patient treatment days which includes pulling the charts and properly marking the face sheets that should accompany each.
  - E. Document dates attended, cancellations, and no-shows by patients.
  - F. Assist in mailing copies of dictation to referring doctors as supplied by transcriptionist.
  - G. Mail new patient forms to referrals for completion prior to first appointment.
  - H. Retrieve copies of all possible medical records for evaluation of new patient. Make said copies available to physical therapy secretary prior to evaluation appointment.
3. Serve as initial contact point for all patients:
  - A. Direct to appropriate location.
  - B. Notify appropriate staff of client's arrival.
4. Coordinate schedules for services:
  - A. Coordinate patient's scheduled appointments between physicians, physical therapy, and others as necessary.
  - B. Schedule all new and follow-up patients for treatments and/or evaluations.
  - C. Communicate changes in schedule to appropriate staff member(s).
5. Maintain secretarial equipment:
  - A. Assist in inventory of supplies.
  - B. Order secretarial supplies as needed.
6. Attend required meetings and in-services.
7. Perform any and all duties as assigned.

### **III. MACHINES, TOOLS, EQUIPMENT, AND WORK AIDS**

A working knowledge of all office machines including telephone system, intercom system, copy machine, postage machine, calculator, facsimile machine, and word processing software.

### **IV. WORKER TRAITS: APTITUDES, INTERESTS, AND TEMPERAMENTS**

#### 1. Aptitudes

- A. Effective communication skills with patients, staff and physicians.
- B. Good mathematical skills necessary.

#### 2. Interests

- A. An interest in developing continual self development and professional growth.
- B. A preference for seeking time-saving techniques in job performance with relation to the professional staff's needs.

#### 3. Temperament

- A. Ability to perform in situations requiring direction, control, planning, and execution of the daily schedule.
- B. Ability to work with people in a polite and tactful manner.
- C. Exhibit confidentiality and good judgment when aware of such information requiring discretion.

### **V. PHYSICAL DEMANDS AND WORKING CONDITIONS**

Visual acuity for chart review and equipment operation. Heavy lifting of up to 100 pounds with assistance and 50 pounds without assistance. Considerable stooping, pushing, and pulling.

### **VI. WORK RELATIONSHIPS**

- 1. Reports to the Administrator
- 2. Is supervised by the Admissions Coordinator
- 3. Communicates and coordinates with nursing staff and Nursing Administrator

### **VII. QUALIFICATIONS**

- 1. High school graduate
- 2. Medical office training and/or experience is preferred
- 3. Good communications skills and computer skills are preferred.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **4. Policies of Administrative Personnel**

#### **F. Administrative Assistant**

##### **I. BASIC FUNCTION**

Provide assistance to Medical Director, Administrator and physician staff.

##### **II. RESPONSIBILITIES**

1. To adhere to and support the mission, vision, values, goals, philosophy, objectives, policies, and procedures of the Center.
2. Manage secretarial duties assigned by professional staff:
  - A. Check, sort, and distribute all mail.
  - B. Function as a courier between the Center and accounting firm, bank, and other facilities as required.
  - C. Make appropriate deposits, and assist appropriate posting of payment.
  - D. Perform all other duties as assigned.

##### **III. MACHINES, TOOLS, EQUIPMENT, AND WORK AIDS**

A working knowledge of all office machines including telephone system, intercom system, copy machine, postage machine, calculator, facsimile machine, and word processing software.

##### **IV. WORKER TRAITS: APTITUDES, INTERESTS, AND TEMPERAMENTS**

1. Aptitudes
  - A. Effective communication skills with patients, staff, and physicians.
  - B. Good working attitude
2. Interests
  - A. An interest in developing continual self development and professional growth.
  - B. A preference for seeking time-saving techniques in job performance with relation to the professional staff's needs.
3. Temperament
  - A. Ability to perform in situations requiring direction, control, planning, and execution of the daily schedule.
  - B. Ability to work with people in polite and tactful manner.
  - C. Exhibit confidentiality and good judgment when aware of such information requiring discretion.

##### **V. PHYSICAL DEMANDS AND WORKING CONDITIONS**

Visual acuity for equipment operation. Heavy lifting of up to 50 pounds with assistance and 25 pounds without assistance. Considerable stooping, pushing, and pulling.

##### **VI. WORK RELATIONSHIPS**

1. Reports to Medical Director and Administrator

# **PRECISION SURGERY CENTER**

## **SECTION VII**

### **HUMAN RESOURCES**

#### **6. Education and Training**

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **6. Education and Training**

#### **A. General Policies**

##### **I. POLICY**

Personnel will be prepared for their responsibilities in the provision of care through appropriate education, training programs and in-services.

##### **II. PROCEDURE**

1. Personnel participate in relevant in-service programs.
2. The administration encourages participation in relevant education programs outside of the Center.
3. Education will be based in part on findings which result from the monitoring and evaluation of the quality of care provided and address safety and infection prevention and control.
4. The extent of participation in education and training will be documented.
5. CPR or BLS and ACLS certification will be kept up-to-date by all appropriate professional personnel who work in the patient care departments. Personnel are required to attend annual updates in electrical safety, emergency preparedness, fire safety, and infection prevention and control, etc.
6. Annual evaluations will be done to determine that individuals who provide patient care services are, and continue to be, competent to do so.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **6. Education and Training**

#### **B. Educational Profiles**

All educational records are maintained by the Administrator, who advises employees to make copies of attendance, certificates and/or licenses for verification, and places them in his/her file. The educational activities can include, but are not limited to:

1. Attendance at Center in-services, seminars, and/or mandatory classes.
2. Participation and attendance of an external seminar and/or educational program relevant to work and/or professional activities and career.
3. Continuing education classes for maintaining licensure.
4. Participation and attendance of a recertification program for maintaining certificate status according to professional standards.

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **6. Education and Training**

#### **C. CPR, BLS and ACLS Certification**

##### **I. POLICY**

All personnel who have direct patient contact will maintain current CPR (Cardiopulmonary Resuscitation) or BLS (Basic Life Support) with or without ACLS (Advanced Cardiac Life Support) certification as evidenced by an annual update review or recertification class. All new health care personnel who have direct patient care are required to present current certification upon hire.

##### **II. NEW PERSONNEL**

1. Will present a current CPR, BLS or ACLS card for photocopying.
2. A copy of the card will be kept in the employee's file and will be updated according to policy and procedure.

##### **III. EMPLOYEES**

1. It is the responsibility of the employee to maintain a current certification card and provide evidence of recertification according to policy and procedure.
2. A copy of the card will be kept in each employee's current file and updated according to policy and procedure.

##### **IV. PROCEDURE**

1. Initial Certification – obtained prior to employee's start date. The following are required certifications for each position;

Front Office/Clerk – CPR Certifications  
Administrative Personnel – CPR Certification  
Medical Assistants – CPR Certification  
Surgical Technician – CPR Certification  
Licensed Practical Nurses – BLS Certification  
Registered Nurse – BLS Certification  
Certified Registered Nurse Anesthetist – ACLS Certification  
Nurse Practitioners/Physicians Assistants – ACLS Certification  
Physician Staff – ACLS Certification

Any employee having direct patient contact is required to be certified as indicated above.

2. Recertification

Each employee will recertify his/her certification card annually prior to the expiration date printed on the card..

# **PRECISION SURGERY CENTER**

## **VII. HUMAN RESOURCES**

### **6. Education and Training**

#### **D. Continuing Education**

##### **I. PURPOSE**

To establish a mechanism for ensuring continuing education of personnel.

##### **II. POLICY**

1. Continuing education and in-service programs shall be provided to personnel.
2. Attendance at in-services and education programs shall be documented and a copy of the activity shall be kept in the employee's records in the administration office.
3. Educational programs shall be based on the needs of personnel, findings from monitoring of care and quality assurance studies, new technology, safety, new equipment, and/or infection prevention and control.

# **PRECISION SURGERY CENTER**

## **SECTION VIII**

### **MEDICAL RECORDS**

# **PRECISION SURGERY CENTER**

## **SECTION VIII**

### **MEDICAL RECORDS**

#### **1. Purposes**

# **PRECISION SURGERY CENTER**

## **VIII. MEDICAL RECORDS**

### **1. Purposes**

#### **A. Functions**

#### **I. PREAMBLE**

Precision Surgery Center maintains complete, comprehensive, and accurate medical records to ensure adequate patient care. The Center has developed and maintains a system for the proper collection, processing, storage, use and distribution of patient records. Each record is completed accurately, legibly, promptly, and is readily accessible to health care practitioners. The Center currently uses an Electronic Medical Record for all charting and scheduling purposes. Paper charting is only done when necessary (i.e., in case of EMR system down, internet outage, ect). The following guidelines may apply to paper charts, electronic medical records, or both.

#### **II. FUNCTIONS**

1. The Center maintains a comprehensive system for medical record management which includes collection of records, processing, maintenance, storage, retrieval, and distribution.
2. The Center provides adequate storage space. The Center's medical record filing system includes safety, security, accountability, and retrievability. There is a medical record room available for paper charts which are locked behind a door and protected from fire. The majority of medical records are completed using an Electronic Medical Record and are stored securely within the systems' database.
3. Each medical record is maintained in such a way that clinical information relevant to a patient is readily available to health care practitioners and staff.
4. Patient records are separately identified as ambulatory surgery records. An existence of departmental records from another department or entity is clearly documented on the chart.
5. The Center maintains strict confidentiality and privacy of medical information and records that contain clinical, social, financial or other data on a particular patient except as required by the law. These records are reasonably protected from loss, tampering, alteration, destruction, and unauthorized or inadvertent disclosure of the information.
6. The Center has appointed medical records coordinators who are in charge of the medical records of the Center. The functions and responsibilities of these individuals include maintaining the confidentiality, security, and physical safety of the patient's medical records. In addition, the medical records coordinators are responsible for maintaining the unique identification of each patient's medical record, supervising the collection processing, maintenance, storage, timely retrieval, appropriate access, usage and distribution of medical records and maintaining a predetermined organized medical record format. Security of medical records is achieved by a method of tracking who accesses the records and a method of identifying designated locations of paper records throughout the center in order to avoid unauthorized access.
7. It is the policy of the Center to retain all active medical records indefinitely either on a hard copy or in electronic format. It is also the policy of the Center to store inactive medical records for at least ten years in a safe environment. In case of a death, records will be stored two more years from date of death or ten years, whichever comes first.

# **PRECISION SURGERY CENTER**

## **VIII. MEDICAL RECORDS**

### **1. Purposes**

#### **B. Protection, Availability & Destruction**

#### **I. PROTECTION & AVAILABILITY**

1. Records shall be kept on all patients accepted for treatment.
2. The medical record is the property of the Center, and is maintained for the benefit of the patient, the medical staff, and other health care workers.
3. All required records, either as originals or accurate reproductions of the contents of such originals, shall be maintained in such form as to be legible and readily available upon request of: the attending physician; a facility or its medical staff, or any authorized officer, agent, or employee of either; authorized representatives of the Department of Health, or any other person authorized by law to make such a request.
4. Access to medical records is restricted to authorized personnel and medical staff. All entries to medical records will be dated, verified and authenticated by the health care provider making the entry to ensure accountability for editing, deleting and access of clinical record content.
5. The Center shall safeguard the information in the medical record against loss, defacement, tampering, or use by unauthorized persons.
6. Controlled locked access to the inactive medical record storage files is maintained.
7. The Medical Records Storage area shall remain locked at all times when Medical Records personnel are not present. During such times, the Administrator shall control access.
8. The Center shall provide adequate measures and maintenance to physically safeguard the medical record from loss by fire, water, and foreseeable sources of potential damage.
9. Medical records shall be filed in an easily accessible manner in the Center.
10. Records will be removed from the Center's premises only by court order, statute, or subpoena.
11. Written consent of the patient or his legal qualified representative is required for release of information from the medical record, except when release is required by law. These records will be released by hard copy and/or by CD-ROM upon request. At a minimum, a photo ID and signature needs to be provided for identification. If a designated person is assigned to pick up records, it is required that the patient write a letter stating this person is allowed to pick up the records. Before records are released, a photo ID and signature are required to confirm the identity of the designated person along with the patient's signature and date and the designated person's signature.

12. Records needed for reasons other than patient care (i.e., case studies, peer review) must be returned to the Medical Records Storage area if charts are in paper format..
13. Records shall be readily accessible at all times in the Electronic Medical Record database or in the Medical Records Storage area in the case of paper charts.  
Exception: Designated legal cases will be maintained in a locked file cabinet.
14. Health care information may be restricted upon request from the patient to withhold information from their health plan concerning a healthcare item or service for which they have paid out of pocket in full as long as that disclosure is not needed for treatment.
15. The Center ensures the continuity of care for its patients by requesting medical records from outside practitioners in a timely manner and incorporating them into the clinical record. Medical records that are properly requested and consented for release by the patient are sent to outside health care professionals in a timely manner as appropriate so future care can be provided.

## **II. DESTRUCTION OF RECORDS**

1. All documents may be destroyed only if the exact reproduction of the document is visually screened and confirmed in the electronic medical record (EMR) system. All documents may be destroyed after 10 years of retention as stated in policy and procedure.
2. All documents that are destroyed after the 10 year retention will be recorded as follows:
  - A. Date of destruction
  - B. Type of charts
  - C. Destruction method
  - D. Title of records (Department)
  - E. Date span (oldest to most recent) dates of records destroyed
3. Documents that have been confirmed in the EMR system can be destroyed by the Center's industrial shredder and destroyed by designated staff members who will provide a signature for the testimonial documenting the date the materials were destroyed. The designated employee will abide by HIPAA standards and confidentiality agreement.

# **PRECISION SURGERY CENTER**

## **SECTION VIII**

### **MEDICAL RECORDS**

#### **2. Medical Record Management**

# **PRECISION SURGERY CENTER**

## **VIII. MEDICAL RECORDS**

### **2. Medical Record Management**

#### **A. Authentication**

##### **I. POLICY**

All entries in medical records are dated and authenticated, and the Center has established a method to identify the authors of entries.

##### **II. PROCEDURE**

1. Authentication may be written signatures or initials, or electronic signatures in the electronic medical record.
2. The appropriate practitioner or assigned individual whose name is listed on the authentication form, authenticates the parts of the medical record for which he or she is responsible.
3. Orders given orally for drugs and biologicals must be followed by a written order, signed by the prescribing physician or practitioner.
4. Entries made in a chart by personnel other than the physician or nurse is restricted to the lined sheet for appointment changes or other pertinent information; the physician order sheet contains documentation for prescriptions per a nurse; the sheet labeled chart notes is for entries which all are dated and signed.
5. The medical records coordinator may make entries on letters requesting for medical records, which include date sent, data sent and their initials. All medical records sent out will be recorded in a log book, with the request and date sent legibly documented.
6. The administrator keeps all official authentication forms including employee names and initials to identify the authors of entries for reference.

# **PRECISION SURGERY CENTER**

## **VIII. MEDICAL RECORDS**

### **2. Medical Record Management**

#### **B. Form and Content**

1. The Center follows uniform content and format for medical records with departmental variations. These medical records contain reports of history and physical (H&P) examination, progress notes, and other materials such as laboratory reports, radiology reports, and consultations which are incorporated into each patient's medical record in a timely manner. The date of all entries in the clinical record are documented.
2. The Center maintains on a patient's record two front sheets as appropriate (for paper charts):
  - A. One with demographic information, emergency telephone number, information of referral physician, and insurance information.
  - B. If a patient has had three or more admissions, or the clinical record is complex and lengthy, the second sheet (Summary Sheet) includes identifying information, a summary of past and current diagnoses or problems, including past procedures, is documented in the patients record to facilitate the continuity of care. Also documented are known allergic reactions to drugs, medications known to be prescribed and/or used by the patient and previous illnesses. This summary is updated on subsequent visits with additional information pertaining to the above items.
  - C. No summary sheets are maintained for charts with a single visit.
3. It is the express policy of the Center to enter into the medical record:
  - A. Precision Surgery Center maintains a medical record for each patient with each record which is accurate, legible, and promptly completed.
  - B. Medical records of Precision Surgery Center must include at least the following:
    - ◆ Patient identification including name, date of birth, gender, identification number (if appropriate) demographic information and responsible party (if applicable).
    - ◆ Significant medical history and results of physical examination including chief complaint or purpose of the visit. A surgical History and Physical will be completed by the physician within 30 days of the patient's scheduled surgery or procedure.
  - C. Date of visit/procedure, care rendered and therapies administered.
  - E. Preoperative diagnostic study results entered before surgery, if performed, such as laboratory or radiology reports.
  - F. Any changes in prescription and non-prescription medication with name and dosage, when available.
  - G. An operative report or dictation which details findings and techniques of the operation or procedure.

- H. The presence or absence of allergies and untoward reaction to medication and materials is recorded in prominent and consistently defined location in all clinical records. This is verified at each patient encounter and updated whenever new allergies or sensitivities are identified.
  - I. Entries, including incidents and abnormal reactions related to anesthesia administration.
  - J. Documentation of properly executed informed patient consent. Discussions with the patient concerning the necessity, appropriateness, and risks of the proposed care, surgery or procedure, as well as discussions of treatment alternatives are incorporated into the patient's clinical record.
  - L. Discharge diagnosis or impression.
  - M. Disposition, follow up recommendations and instructions given to the patient.
  - N. Verification of all contents by health care professionals.
  - O. Signature of, or authentication by the health care professional(s) of all clinical record entries.
  - P. Significant medical advice given by text, email or telephone, including medical advice provided after hours is entered in the clinical record and signed appropriately.
  - Q. Any notation in a patient's clinical record indicating diagnostic or therapeutic intervention as part of clinical research is clearly defined in contrast to other care provided.
4. History and Physical
- A. A comprehensive medical H&P assessment is completed and entered into the medical record, along with the results of pre-surgical assessments.
  - B. All the preoperative diagnostic studies performed are also reviewed and entered into the medical record prior to the start of surgery.
  - C. The patient's history of allergies or abnormal drug reactions is always entered into the record.
5. Operative Report
- An operative report describes the surgical techniques and findings. It also includes a pathologist's report on all tissues removed during surgery except when it is exempted by the Governing Body by adopting a written policy for certain types of tissues removed. The medical record of the Precision Surgery Center describes the following for all procedures and operations.
- A. Preoperative
    - ◆ Informed Consent, including discussion and plan
    - ◆ Preoperative preparation and orders
  - B. Intraoperative
    - ◆ Monitoring

- ◆ Preparation
  - ◆ Sedation
  - ◆ Position
  - ◆ Description
- C. Postoperative
- ◆ Monitoring
  - ◆ Complications
  - Postoperative orders
- D. Discharge/Disposition
- ◆ Status
  - ◆ Instructions
  - ◆ Return appointment
- E. Any allergies or abnormal drug reactions are documented. Information about anesthesia pre-assessment, administration, and adverse medication reactions also will be documented.
6. Informed Consent
- The Precision Surgery Center provides a well designed informed consent which includes discussion of all aspects and elements.
- A. A description of the proposed surgery, including anesthesia to be used.
- B. The indications for the proposed surgery.
- C. Material risks and benefits for the patient related to the surgery and anesthesia, including the likelihood of each, based on the available clinical evidence, as informed by the responsible practitioner's clinical judgment. The consent includes material risks including risks with a high degree of likelihood, but a low degree of severity, as well as those with a very low degree of likelihood, but a high degree of severity.
- D. Treatment alternatives, including the attendant material risks and benefits, and the name of the individuals conducting the surgical intervention. The names of the other practitioners performing important tasks related to the surgery such as opening and closing, dissecting and/or removing tissue (if applicable).
- E. Consent for anesthesia services are included on the surgical consent form. The anesthesia is administered by an anesthesiologist or certified registered nurse anesthetists (CRNAs). Certified Nurse Anesthetists work independently without supervision in Precision Surgery Center, in accordance with Nevada State Regulations.
8. Documentation of the Patient's Discharge Diagnosis
- The record also includes the patient's disposition whether the patient was discharged home or transferred to another healthcare facility, including emergent transfers to a hospital.
9. The Center's designee physically secures all the documents within a patient's record.
10. Patient's record includes missed and canceled appointments along with follow-up documentation.

11. Personnel

- A Multiple personnel are involved in managing the medical records. These include receptionists, administrative assistants, nurses, and physicians. The major functions are carried out by physicians and nurses in an Electronic Medical Record format.
- B. Management of the records is carried out by the administrative assistant(s) for the surgery center, and overseen by the Clinical Director, Administrator and/or Medical Director.

## **SECTION IX**

### **ANCILLARY SERVICES**

# **PRECISION SURGERY CENTER**

## **SECTION IX**

### **ANCILLARY SERVICES**

#### **1. Pharmaceutical Services**

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **1. Pharmaceutical Services**

#### **A. Principles**

#### **I. PREAMBLE**

1. Precision Surgery Center provides drugs and biologicals in a safe and effective manner, in accordance with the accepted professional practice, and under the direction of the Medical Director, designated responsible for pharmaceutical services, with assistance of a consultant pharmacist.
2. Pharmaceutical services are provide in accordance with ethical and professional practice and applicable federal and state laws. Drugs are prepared and administered according to established policies and acceptable standards of practice. Records and security are maintained to ensure the control and safe dispensing of all medication.
3. Adverse reactions are reported to the physician responsible for the patient and are documented in the record. Staff informs patients concerning safe and effective use of medication, when applicable and consistent with legal requirements.
4. Precision Surgery Center's policy is that blood and blood products are not administered in the Surgical Center.
5. Precision Surgery Center policy is that orders given orally for drugs and biologicals must be followed by a written order and signed by the prescribing physician.

#### **II. FUNCTIONS**

1. The Center maintains written policies and procedures with regards to how drugs and biologicals are stored, secured, prepared, dispensed, administered, and discarded.
  - A. Policies and procedures address maintenance of all staff medications, sample medications, and emergency drugs supplied.
  - B. Policies and procedures also address issues involving storage, security, disposal and sample medications.
  - C. All policies and procedures are implemented appropriately.
2. The Center also provides a written policy specifying the method for maintaining the integrity of emergency drug supplies and policies showing that the Center dispenses drugs safely and complies with applicable federal, state, and local laws.
  - A. Pharmaceutical services of the Center are available through a contractual agreement in accordance with the same professional practices and legal requirements that would be required if such a service were provided directly by the Center.
  - B. The Pharmacy is supervised by a licensed pharmacist on a part-time/consulting basis. The Medical Director assumes all professional and administrative responsibility for the quality of pharmaceutical services rendered.
  - C. A current pharmacy license with Nevada State Board of Pharmacy will be maintained by the Center.

# PRECISION SURGERY CENTER

## IX. ANCILLARY SERVICES

### 1. Pharmaceutical Services

#### B. Expired Medication Policy

**I. PURPOSE:** To provide guidelines for outdated or expired medications

**II. POLICY:**

It is the policy of the surgery center to remove all outdated drugs on a monthly basis. Medications are considered outdated when they have reached their manufacture's listed outdate on the package or have been opened and have reached the maximum period of use allowed in the guidelines listed below. The medications will be pulled from stock in the month that they outdate and segregated for appropriate pharmacy disposal. All drugs and supplies in emergency carts will be checked monthly or checked and replaced if a cart is used. The Clinical Director is ultimately responsible but may delegate other staff to check the medication expirations.

**III. PROCEDURE:**

1. The following guidelines will be used for determining the date at which a medication is considered outdated and/or unusable when a vial is opened and has not reached its manufacturer's outdate on the package; if a container is multi-dose and available for use by more than one patient. All vials marked "single dose" or preservative free vials shall be discarded at the end of the procedure and used on a single patient only.
  - Opened vials which contain a preservative will be considered out of date 28 days from the date of opening. The physician or nurse opening the vial will mark it with the date of opening. Appropriate storage conditions will be maintained (i.e:refrigeration)
  - Opened insulin will be considered out of date for medication use in 28 days from the date of opening. The physician or nurse opening the vial will mark it with the date of opening.
  - Opened ophthalmic drops will be considered out of date in 90 days from the date of opening. The physician or nurse opening the container will mark it with the date of opening.
  - Opened tuberculin test vials will be considered out of date for use in 28 days from the date of opening. The physician or nurse opening the vial will mark it with the date of opening.
  - Single dose and unpreserved vials will be discarded at the end of the day or within 24 hours of opening.
  - Reconstituted vials of antibiotics will expire according to the manufacturer's guidelines found in the package insert.

- Unopened medications dated with a month and year will be considered out of date on the last day of the month as stated on the package (i.e.: 01/13 will expire on the 31st of January, 2013.) Unopened medications dated with any specific date will be considered outdated at the end of that day. (i.e.: 01/01/2013 will expire on 1st of January, 2013.)
2. Medications expiring in a given month will be identified and segregated in an area for the pharmacist consultant to dispose of on their next scheduled visit.
    - A bin labeled “expired medications” will be placed in the medication room and outdated medications will be placed there for pharmacist consultant pick-up.
    - The pharmacist will determine medication is to be wasted at the center.
    - All controlled substances that have passed their expiration date will be removed from stock and from the perpetual inventory by licensed personnel. Expired medications should be stored in a designated marked area secured and separate from medications available for administration. Wasted at the center and the narcotic waste will be recorded on the controlled substance sign out record by 2 licensed persons, one of whom should be the pharmacist consultant. In the case that the medication is a schedule II drug, the pharmacist will complete the appropriate paper work leaving copy in the facility narcotic records and mailing the original copy to the DEA. Waste of a scheduled drug will be witnessed by the pharmacist consultant and a member of the nursing staff. Both will sign out on the controlled substance record. The outdated medication may also be saved for processing by a DEA approved reverse distributor if a contract for services has been signed and agreed upon by the surgery center and an approved independent company.
  3. A log of expired medications will be kept including the name of the drug, strength, dosage form, amount or number of expired units, expiration date, NDC number and lot number from the vial. Records will be maintained for 6 years in accordance with the Drug Supply Chain Security Act.
  4. Medications that are outdated, contaminated, deteriorated and those with the contents of containers without intact labels shall be disposed of according to state and federal regulations. – refer to Medication Destruction/Disposition Policy.

**PRECISION SURGERY CENTER**  
**IX. ANCILLARY SERVICES**  
**1. Pharmaceutical Services**  
**C. Medication Destruction/Disposition Policy**

**I: PURPOSE:** To provide guidelines for the appropriate and safe destruction and disposal of medications in the center.

**II: POLICY:**

To ensure safe handling and destruction/disposition of medications and hazardous materials that are expired, contaminated, deteriorated or that do not have intact/clear labels, in compliance with state and federal regulations.

**III: PROCEDURE:**

1. With state authorities, the consultant pharmacist shall verify the appropriate method of medication disposition as well as which titled professionals need to be present to witness destruction. Destruction methods that render tablets/capsules, injectables and controlled substances unusable may include the following:
  - Transfer to a container for release to a pharmaceutical waste contractor or reverse distributor
  - Transfer to a sharps container after emptying vial or dissolving a solid dosage form
  - Transfer to a hazardous waste container
2. The Clinical Director and the consultant pharmacist shall be responsible for the center's compliance with laws and regulations in the handling and disposal of medications and hazardous materials.
3. Medications and hazardous materials shall be segregated for special waste management and shall not be put into the sewer or landfill.
4. Controlled substances are subject to special handling, storage, disposal, and recordkeeping in the center. Controlled substances listed in Schedules II, III, IV and V shall be retained in the center in a securely double-locked area with restricted access until destroyed or properly disposed.
5. A Medication Disposition Log shall be used for documentation. The log shall contain the following information:
  - Medication name and strength
  - Quantity / amount
  - Date of disposition
  - Method of disposition
  - Lot number and expiration date
  - Signatures of the witnesses

## **PRECISION SURGERY CENTER**

### **IX. ANCILLARY SERVICES**

#### **1. Pharmaceutical Services**

##### **D. Controlled Substance Policy**

- I. PURPOSE:** To maintain accurate records regarding controlled substances and ensure all controlled substances in the facility are kept secure and accounted for.

#### **INFORMATIONAL NOTES:**

- The Federal Comprehensive Drug Abuse Prevention and Control Act of 1970, commonly referred to as the Controlled Drug Act, created the following five medication schedules (or classes) based upon potential for abuse :
  - I. Schedule I (CI) contains medications with no accepted medical purpose (e.g., heroin).
  - II. Schedule II (CII) contains medications with an extremely high abuse potential such as amphetamines, cocaine, fentanyl, hydromorphone, meperidine, methadone, and morphine.
  - III. Schedule III (CIII) contains medications with a very high abuse potential, such as acetaminophen with codeine, acetaminophen with hydrocodone, ketamine, and paregoric.
  - IV. Schedule IV (CIV) contains medications with less abuse potential than Schedule III and includes chloral hydrate, diazepam, midazolam, and thiopental sodium.
  - V. Schedule V (CV) contains seldom abused medications, such as codeine-containing cough syrups and diphenoxylate.
- Note that there may be medications not federally deemed controlled substances that may be considered controlled substances per state Board of Pharmacy statute or code. With governmental regulations, the stricter law always prevails. In some situation, state regulations may dictate that a particular medication is scheduled higher than the federal regulation. Such medications may include muscle relaxants, ephedrine and others. Ensure that these items are properly accounted for and secured.

#### **II: POLICY:**

- Medications listed in Schedules II, III, IV and V of the Federal Comprehensive Drug Abuse Prevention and Control Act of 1970 are subject to special handling, storage, disposal, and record keeping. Controlled substances shall be accessible only to authorized nursing and pharmacy personnel. Medications listed in Schedules II, III, IV and V of the Act shall be stored in a designated double-locked cabinet.

- Separate and detailed records of receipt and use shall be maintained for all controlled substances. Records of use shall be reconciled at the beginning and end of each day by two (2) licensed nurses authorized to administer controlled substances and shall be retained on file in the center for three (3) years. The center does not have change of shifts in their scheduling.
- Schedule II, III, IV and V medications shall be destroyed or disposed of in accordance with state and federal regulations.

### **III: PROCEDURE:**

1. Controlled substances shall be accessible to authorized licensed nursing and pharmacy personnel. The Clinical Director, the Drug Enforcement Agency (DEA) registrant, and/or the consultant pharmacist shall be responsible for the control of these medications.
2. Medications listed in Schedules II-V shall be stored separate from all other medications. The key to the controlled substance cabinet shall remain under the supervision of a registered nurse during hours of operation. After hours the key shall be secured in a locked key box available only to authorized nursing personnel.
3. Medications listed in Schedules II, III, IV and V shall be provided in easily accountable quantities and containers designed for easy counting of contents. Controlled substances, when ordered for injection, shall be provided in ampules or in the smallest available dosage unit.
4. The registered nurse (RN) ordering the medication(s) listed in schedules II, III, IV and V shall prepare a controlled substance audit record for the medications. The RN responsible for placing medications in controlled substance cabinets and inserting appropriate sheets in the controlled substance log shall receive the controlled medication(s). The RN shall sign for the medication(s) with the delivery personnel. The RN shall complete a physical inventory of that medication at the time of delivery against the packing slip. If there is no packing slip present, the RN shall contact the distributor to have a packing slip faxed immediately. Controlled substances shall NOT be added to inventory until they have been verified against the packing slip.
5. The RN shall be responsible for adding the controlled substances to inventory by co-signing with a second RN and documenting on the controlled substance log. If only one RN is available for adding the medication(s), the items shall be locked in the cabinet in original packing until a second RN is available.
6. Controlled Substances Security Measures/Narcotic Key Security:
  - Controlled substances shall be housed in a double locked controlled substance cabinet/door at all times.
  - The controlled substance cabinet key shall be kept “on the person” of an RN at all times during hours of operation

- The controlled substance cabinet key shall be locked in a separate lockbox that is located in another location after the controlled substance count is verified at the end of each day.

7. Controlled Substance Counting:

- For PACU/Pre-op/OR: two licensed staff shall conduct counting at the beginning and end of each day when patients are present in the center.
- The two licensed nurses counting must sign the controlled substance count log and initial the perpetual inventory sheet.
- Licensed Nurses shall be required to report any discrepancies as outlined in the policy.

8. An RN designee shall review the controlled substance log on a regular basis to ensure the record is accurate and complete.

9. Any discrepancy in the count of a controlled substance shall be reported to the clinical director, administrator and medical director as soon as possible. The Clinical Director and/or administrator shall be responsible for investigating and making a reasonable effort to reconcile all reported discrepancies.

10. If a discrepancy is irreconcilable, an incident report is required to document the details including: a copy of the controlled substance log, the possible persons responsible for the discrepancy, and the efforts made to reconcile it. If any discrepancy cannot be reconciled or a pattern of discrepancies occurs, or there is obvious criminal activity, the clinical director shall notify the administrator, medical director and the consultant pharmacist immediately.

11. Should any person(s) enter the center for the purpose of stealing controlled substances, the staffs' first concern shall be for his/her own safety and the safety of the patients and other staff members. Under no circumstances shall staff refuse to provide the controlled substances, for which they are responsible, to persons who are threatening to do bodily harm. After the person(s) leave the center, the nurse shall immediately notify the following persons and inform of the incident: immediate supervisor, clinical director, and administrator. The clinical director or administrator shall notify the police department, medical director and consultant pharmacist.

12. Upon a discrepancy or theft, a controlled substance inventory shall be conducted immediately by any two licensed personnel available, signed by both and least one additional staff member as witness, with time and date notations. This list shall be made available only by bona fide request to:

- Local police unit or sheriff
- DEA
- State Board of Pharmacy
- State Board of Nursing

- State Department of Investigations
13. The consultant pharmacist shall review the controlled substances logs monthly. The following items shall be inspected and verified: ordering, invoicing, security, dispensing, labeling, administration, disposal and documentation.
14. Biennial Inventory
- a. Inventory count of all controlled substances on hand shall be completed at least every two years.
  - b. Biennial Inventory may be taken on any date that is within two years of the previous biennial inventory date on or around the 1<sup>st</sup> of May of the odd year.
  - c. The clinical director, consultant pharmacist or licensee nurse designated by the clinical director shall complete the biennial inventory.
  - d. Biennial Inventory shall include:
    - Name of controlled substance
    - Each finished form or medication strength (e.g., 10mg tablet, 50mg/1mL vial)
    - Number of units or volume of each finished form in each commercial container or package size (e.g., 5mL vial)
    - Number of commercial containers of each finished form (e.g., ten 5mL vials)
    - Center name and address
    - Date and time of inventory
    - Signatures of individuals completing the inventory
15. Recalled controlled substances shall be collected for disposal or return by the clinical director. Instructions shall be followed as directed by the recall notice.
16. Expired controlled substances shall be removed from stock and the perpetual inventory log. Expired items shall be stored in a designated / marked locked cabinet separate from medications available for administration.
17. Destruction and disposition of unused and/or expired controlled substances may occur in either of these methods, depending on state regulations:
- The center may return the controlled substance to the pharmaceutical manufacturer who, as a service to its customers, accepts returns of expired and/or damaged controlled substances.
  - The center DEA registrant may dispose of controlled substances without the benefit of a DEA or state witness. The DEA Form 41 must be completed and filed with the DEA completed 222 forms. DEA requires that the registrant provide two designated responsible individuals to destroy and witness the controlled substance the destruction so they are non-recoverable.
  - The center may distribute the controlled substances to a reverse distributor vendor to take control of the controlled substances for the purpose of returning them to the manufacturer or, if necessary, disposing of them. This transfers ownership of the controlled substance to a DEA-approved pharmaceutical returns processor for re-use, re-sale, or destruction. This process involves the completion of various forms which

may include the DEA Form 222 (for Schedule II items) or DEA Form 41 (for Schedule III-V items). These forms should be maintained by the center for six years. Information necessary for documentation includes:

- Controlled substance medication name and form
- Manufacturer
- Actual amount
- Container size
- Lot number
- NDC number

### 1. Pharmaceutical Services

#### E. Single and Multi-Dose Medication Vial Use

##### I: PURPOSE/INFORMATIONAL NOTES:

- Aseptic technique is a method of clinical practice with the goal of protecting patients from infection and preventing the spread of pathogenic organisms.
- United States Pharmacopeia (USP) Chapter <797> (“USP<797>”) provides guidelines, recognized as national practice standards, regarding sterile product compounding. Nurses, operating room technicians, and physicians who may be compounding sterile products and preparing injectable medications, shall have a working knowledge of the principles of aseptic technique as well as the USP<797> guidelines available for reference. Due to an absence of a clean room with a laminar flow hood, the center’s USP risk category is considered for “immediate use” (or emergency use) for the compounding of sterile preparations.

**II: POLICY:** To provide injectable medications in a safe manner that shall prevent contamination and risk to patients. Clinical staff shall use aseptic technique whenever handling single- and multi-dose medication vials. At all times staff will perform their duties with a safety of culture in mind and practice.

##### III: PROCEDURE:

1. All clinical staff shall complete an annual educational inservice in aseptic technique provided by the center or by a program approved by the Quality Assurance / Performance Improvement (QA/PI) Committee.
2. Newly hired clinical staff shall complete a written educational inservice in aseptic technique approved by the QA/PI Committee.
3. Each clinical staff member shall complete an annual competency evaluation regarding parenteral medication preparation assessment. A copy of the assessment shall be retained in the employee’s file.
4. Medications for injection shall be stored according to manufacturer guidelines and appropriate temperatures to preserve product integrity.
5. Medications for injection shall be inspected for particles or discoloration before entering or removing medication.
6. Aseptic technique including proper hand washing before drawing up single and multi-dose vials shall be used to avoid contamination of sterile injection equipment and medications in accordance with the guidelines of USP<797>.

7. A sterile, single-use, disposable needle and syringe (or needleless system) shall be used for each injection and discarded intact in an appropriate sharps container after use.
8. Single-dose medication containers are meant for single patient use only. Single-dose vials (SDV), pre-filled syringes or ampules shall be used when possible.
  - When dividing doses from a SDV, a sterile unused needle and syringe shall be used for each divided dose withdrawn.
  - The syringe shall be used within one hour of opening and shall be appropriately labeled with medication name, strength, beyond use date and time and nurse's initials according to USP<797> guidelines for aseptic technique if not immediately used.
  - All partially used syringes and SDVs shall be discarded at the end of the procedure and shall be used on only one patient.
9. Multi-dose vials (MDV) shall be restricted to a centralized medication preparation area that has been appropriately cleaned and prepared prior to the manipulation of the MDV.
  - Each time the vial is to be entered; the opening shall be inspected, swabbed with 70% isopropyl alcohol and allowed to dry before entering.
  - A single use disposable needle and syringe shall be used to withdraw each dose.
  - Opened vials shall be dated and initialed upon first entry, also labeled with the 28 day expiration date and disposed of within 28 days unless manufacturing guidelines recommend a shorter storage.
  - No spikes or needles shall be left in a MDV.
  - A multi-dose vial used at the patient bedside will be considered for single patient use only.
10. When removing medication from an ampule, a filter needle shall be used for removal and new needle attached for injection.
11. Bags or bottles of intravenous solutions shall not be utilized as a common source of supply for multiple patients.
12. Policy and procedure for aseptic technique shall be reviewed on an annual basis with the consultant pharmacist to ensure compliance with any newly instituted state and/or federal regulations.

## IX. ANCILLARY SERVICES

### 1. Pharmaceutical Services

#### F. Temperatures for Medication Storage

**I: PURPOSE:** To properly store and document appropriate storage temperatures for medications to maintain patient safety.

**INFORMATIONAL NOTES:** Common temperature ranges include:

- Room 68°F to 77°F (20°C to 25°C)
- Refrigerator 36°F to 46°F (2°C to 8°C)
- Freezer -13°F to 14°F (-25°C to -10°C)

**II: POLICY:** To maintain appropriate temperature ranges and documentation for the proper storage for medications.

#### **III: PROCEDURE:**

1. Temperatures will be within the appropriate range in all medication areas, including rooms, refrigerators and freezers.
2. Medication refrigerators and freezers will be plugged into a generator-backed electrical outlet when possible.
3. An alarmed memory-equipped thermometer will be in place for monitoring both minimum and maximum temperatures for all medication storage areas and to aid in determining any period of power outage and subsequent temperature fluctuation. The thermometer will be certified if vaccines are stored in the refrigerator.
4. Each working day nursing personnel will inspect the medication storage areas, documenting on a Temperature Log for Medication Storage Areas the observed temperatures registered on the thermometers. This will include readings from the memory for days the center is not open, including weekends and holidays. Each daily line entry, including noting of “in range” temperature will be initialed by the recording nurse. (Refer to sample Appendices and Forms – Temperature Log for Medication Storage Areas.)
5. If a medication storage area temperature falls outside of the acceptable range, the observing nurse will document the steps taken to review and ensure the medications are considered safe to use or whether they should be segregated for return or disposal. Stability of medications will be determined by the consultant pharmacist and/or the medication manufacturer instructions. Actions to correct the out of range reading will be documented. When adjusted to the acceptable range, the alarm will be reset to “on”.
6. The center’s maintenance or engineering manager will be notified to promptly correct any temperature issues.
7. Refrigerators and freezers will be cleaned on a regular basis with freezers free of frost.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **1. Pharmaceutical Services**

#### **G. Formulary Management**

**I: PURPOSE:** To maintain a designated formulary of all medications available for immediate use within the center.

**II: POLICY:** The center will create and maintain a designated formulary of medications available for immediate use within the center. It shall be reviewed on at least an annual basis by the consultant pharmacist and approved by the Governing Body.

#### **III: PROCEDURE:**

1. A designated medication formulary shall be developed from criteria specific to indications for use, effectiveness, and safety and risks. The formulary shall be available for all individuals involved in medication management.
2. All medications on the formulary shall be reviewed at least annually and submitted for approval to the Governing Body.
3. The formulary shall include the brand and generic medication name, dosage forms and strengths to be kept in inventory in the center. Package (or vial) size may or may not be included due to manufacturer availability of a certain vial, bottle or package size.
4. The formulary process shall include limiting the number of medication concentrations available so as to reduce possibilities of medication errors.
5. The formulary shall be posted in the medication storage areas and accessible to all staff.
6. The medications should be available at all times unless slated for removal from the formulary and awaiting approval.
7. Any new medication made available before the approval process has been completed shall be monitored for patient response to the medication.
8. A formulary request or deletion form shall be completed for each request and presented to the Governing Body for approval.
  - Generic and brand name of medication
  - Dosage form and strength
  - Indications for use and therapeutic classification
  - Pharmacokinetics including absorption, distribution, metabolism (including duration of action), and excretion methods
  - Risks, side effects, black box warnings, interactions and potential for errors

- Any known incidence of medication-associated error or sentinel event
- Requirements necessary to reduce risk of potential error
- Similar products already on the formulary
- Reasons for formulary inclusion
- Cost effectiveness evaluation
- References
- Name of requesting physician or staff member

9. Formulary items designated as look alike/sound alike, high alert medications or those carrying a black box warning will be designated on the formulary.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **1. Pharmaceutical Services**

#### **H. Medication Recalls**

**I: POLICY:** To take immediate action upon notice of a medication recall issued by the Food and Drug Administration (FDA), any manufacturer, vendor or other source.

**II: PROCEDURE:**

1. Receipt of all recall notices by the FDA, manufacturers, distributors, or other vendors shall be handled by the clinical director or administrator.
2. Upon receipt, all areas where the recalled medication might be stored shall be searched and any matching products immediately removed and segregated. Recall notices received that provide direction for return or destruction shall be followed.
3. A record of all medication recalls shall be kept in a designated file and action on each recall noted (including note that the product was not in the inventory), dated and initialed by the staff involved. Records will be maintained for 6 years in accordance with FD & C Act.
4. Appropriate replacement medication shall be sought by the appointed purchasing staff with the input of the consultant pharmacist or clinical staff if an equivalent product is not available.
5. Any changes in medication shall be presented as a formulary addition and the appropriate procedure for addition/deletion followed.
6. When possible, the disposition of potential stock that may have been used under recall shall be traced and physician notification shall be made to address patient safety concerns. Patients will be notified if patient safety has been compromised.
7. The Governing Body shall be notified of recalled products for their review and any needed follow-up.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **1. Pharmaceutical Services**

#### **I. Medications Brought into the Center (Patient's Own Medications)**

**I: POLICY:** To establish guidelines for the proper storage, control and distribution of medications brought into the center with the patient.

**II: PROCEDURE:**

1. At the request of the surgeon or anesthesia provider, a patient may bring personal medications for use at the center.
2. Personal medications are generally limited to respiratory inhalers and insulin and shall not include controlled substances.
3. All medications brought into the center and that were not provided by the center are subject to proper procedures regarding storage, distribution, control, safety and verification.
4. Identification or verification of the patient's own medication shall be performed by utilizing current medication references and resources. The local poison control center shall be contacted for any variances or medications not easily identifiable. Verification of the medication as labeled shall be documented in the patient's record.
5. If the medication is not properly labeled or in the appropriate container, it shall not be used at the center and shall be returned to the patient's responsible party.
6. The medication shall be within the expiration date as labeled.
7. Upon the physician's order, the nurse shall administer the medication to the patient.
8. The physician shall enter the order for appropriate documentation.
9. The nurse administering the medication shall document the medication given and that it belongs to the patient.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **1. Pharmaceutical Services**

#### **J. Departmental Safety: Pharmacy**

#### **I. GENERAL**

1. All personnel handling drugs are trained in safety procedures. Personnel shall be trained in the handling, care and use of supplies and materials both during orientation and annually. Where mechanical, chemicals and other hazards are potential, personnel shall be warned of the dangers, instructed in how to prevent and avoid accidents, and emergency measures to take should an accident occur. Further details of these policies are in the Injury and Illness Prevention Program Manual.
2. All incidents must be reported in writing to the Administrator and Medical Director. Employee Injury forms are located in the Injury and Illness Prevention Program Manual. Treatment is provided or referred as needed.

#### **II. MEDICATION ADMINISTRATION SAFETY**

1. All injectable medications drawn into syringes and any oral medications removed from the packaging identified by the original manufacturer must be appropriately labeled with the date, time and dose/strength of the medication, if not administered immediately.
2. ALL needles and syringes used in Precision Surgery Center are considered single use devices and will be used for one patient and one administration only. Safe injection practices further described in the employee Injury and Illness Prevention Manual and Infection Control Manual will be followed by all employees.
3. All health care professionals who prescribe, administer or provide patient education on medications have access to current drug information via multiple online resources and drug handbooks as needed for decision support.
4. All look-alike, sound-alike medications are kept separate from each other and clearly labeled with appropriate warning signs posted on the cabinets they are stored in. The Clinical Director maintains a current list of all look-alike, sound-alike medications in stock.

#### **III. FLAMMABLE LIQUIDS**

1. Flammable liquids are not stored in the refrigerator.
2. Disposal of residual contents of flammable liquid containers may not be open to avoid evaporation in the Center.
3. Flammable liquids may not be used or positioned near an open flame. Flammable liquids are kept in suitable containers.

#### **IV. STORAGE PROCEDURES**

1. Large bulk items shall be stored on lower shelves in storage areas. Acids or alkali solutions must be stored on lower shelves and in separate designated identified areas. Poisonous substances must be stored separately from non-poisonous substances.
2. All containers in storage or in a work area must be clearly labeled as to contents and manufacturer's instructions for use and disposal, if applicable. Containers without labels shall be disposed of with contents.

## **V. PERSONAL AND ENVIRONMENTAL**

1. Any working condition or equipment that is hazardous or potentially unsafe are reported to the Administrator and/or Safety Coordinator. Examples include inadequacies in ventilation, lighting, temperature, plumbing, heating, cooling, communications and other service items.
2. Employees are instructed to always keep to the right in corridors and approach intersections carefully, making sure traffic on the other side is clear when opening swinging doors. Doors are not to be opened with equipment, only push panels or door knobs. The door on the right is to be used if there are two.
3. Proper procedures for lifting materials and equipment should be used at all times. Examples: Knees bent, back straight, with good hold on the object to be lifted. Feet should be on firm surface. Lift with the legs and thigh muscles and the lifted object can be held against the body for additional support.
4. Glass ampules should be broken away from the body and fingertips covered with gauze for protection.
5. Dispose of all metal or items with sharp edges in puncture-proof containers.
6. Only approved step stools or stepladders for climbing should be used.
7. Drawers and doors should be kept closed on cupboards, desks, closets, etc. Use handles and knobs to close.
8. Floors are kept clean and clear of any foreign material. Pick up broken glass immediately with damp paper towel or broom and dustpan and dispose them in a metal container.
9. Spills are cleaned up immediately. Floors are kept dry at all times. Chemical spills are cleaned with caution according to MSDS guidelines and manufacturer's instructions. MSDS documentation is kept on CD located in the Injury and Illness Prevention Manual.

# **PRECISION SURGERY CENTER**

## **SECTION IX**

### **ANCILLARY SERVICES**

#### **2. Pathology and Clinical Laboratory Services**

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **2. Pathology and Clinical Laboratory Services**

#### **A. Principles**

1. The Center has made provisions to provide routine and emergency laboratory services which are performed promptly with adequate examinations in the areas of anatomic pathology, hematology, chemistry, microbiology, clinical microscopy, and urology, as it relates to pathology and clinical laboratory services.
2. All services are subcontracted except for Clinical Laboratory Improvement Amendment (CLIA) waived testing which is performed on the premises. Waived testing performed includes urine toxicology, pregnancy (HCG) testing, and finger stick blood glucose testing.
2. Testing methods utilized for all waived tests performed meet all regulations and requirements under federal law. The Center will maintain a current CLIA certificate for waived testing and a current Laboratory license from the State of Nevada, Department of Public and Behavioral Health. The Medical Director of the facility will function as the laboratory director and will oversee all testing performed in the lab.
3. The Center has written policies and procedures which are readily available to address specimen collection, specimen preservation, quality care and remedial action, equipment performance and evaluation and test performance.

**PRECISION SURGERY CENTER**  
**IX. ANCILLARY SERVICES**  
**2. Clinical Laboratory Services**  
**B. Blood and Urine Specimen Collection**

**I. POLICY:**

For the waived laboratory testing performed at Precision Surgery Center, small blood samples and urine samples will need proper collection.

Blood samples will be taken pre-operatively at the Center for blood glucose testing for all diabetic patients, and as deemed necessary per physician order.

Urine samples will be collected to test for pregnancy (HCG) in all women of child bearing age. Child bearing age is defined as any woman prior to menopause who has not had a hysterectomy. Women unable or refusing to take a pregnancy test will sign a waiver of pregnancy form.

Urine toxicology testing will be performed on patients as deemed necessary per physician order.

All test results are documented in the patient's medical record and any abnormal results are reported to the physician immediately.

**II. PROCEDURE:**

1. Urine specimens will be collected in a specimen container with correct patient identification, the patient's name, date and time collected.
2. HCG testing will be performed according to the test manufacturer's instructions and a log will be maintained of all tests completed with the patient's name and test result.
3. Blood glucose testing will be performed aseptically with single use disposable lancets for finger stick blood glucose testing and the according to the glucometer and test strip manufacturer's instructions.
4. A laboratory log will be maintained by qualified staff members that records the date, patient's name, type of test performed and the test result.
6. All staff will receive training upon initial orientation and annually on all laboratory testing performed and equipment use and maintenance.
7. All specimens and supplies will be discarded in the appropriate trash receptacle or sharps bin after the test has been completed and recorded.
8. Quality controls will be performed and documented in a log for all testing equipment per manufacturer's instructions.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **2. Pathology and Clinical Laboratory Services**

#### **C. Departmental Safety: Laboratory**

##### **I. GENERAL**

1. Laboratory equipment must be checked daily prior to use for electrical, electronic, and mechanical safety. Any equipment found defective must be removed from service, repaired, and rechecked. Equipment shall be calibrated as often as required to maintain quality control per manufacturer's instructions.
2. All laboratory personnel must be well trained in the handling, care and operation of the equipment and use of supplies and materials. Manufacturers' safety instructions must be on the equipment in view of the operator. Manuals and texts and other instructional literature are on file and accessible to personnel. Where electronic, electrical, mechanical, chemical and other hazards are present, personnel must be warned of all dangers and possible consequences; must be instructed in how to prevent and avoid accidents, and emergency measures to take should an accident occur.
3. In case of an accident, the incident must be reported in writing using the forms provided in the employee Injury and Illness Prevention Program Manual. The injured person must be sent or taken to the appropriate facility for treatment as directed by the Medical Director.

##### **II. PERSONAL AND ENVIRONMENTAL SAFETY**

1. Be sure that safety devices on equipment are functioning.
2. Use only approved step ladders or step stools for climbing.
3. Never lift anything that cannot be carried safely alone and use proper lifting techniques.
4. Wipe spills immediately according to appropriate procedure.
5. Pick up foreign objects, broken glass, etc. immediately from floor, using disposable paper towels or broom and dust pan, and discard in appropriate container.
8. Eating is not permitted in the laboratory area.
9. All hazardous areas shall have appropriate signage.
11. Report any unsafe or unsanitary conditions to the Clinical Director or Administrator.
12. Environment shall be well-ventilated, well-lighted and temperature and humidity shall be kept within normal range.

##### **III. EQUIPMENT-ELECTRICAL AND MECHANICAL SAFETY**

1. All electrical equipment must be properly grounded and have a facility grade plug. Cheater plugs are prohibited. Equipment must be inspected at least weekly to be sure there is proper grounding of equipment, and that there are no defects in cords, switches, sockets, receptacles, and other electrical equipment. If defects are found, equipment must be removed from use until repaired or adjusted. Only approved extension cords of the 3-wire type may be used.
2. Do not make yourself a link between two power sources.

3. Never operate electrical equipment with wet hands or while standing in water.
4. Always have equipment in "off" position before plugging it in.

#### **IV. CHEMICAL SPILLS**

1. Chemical spills must be wiped up immediately. Spillage over a large area of floor or equipment must be reported to the Administrator or Safety Coordinator and the chemical must be properly neutralized and disposed of per MSDS guidelines. MSDS information is located on CD in the Injury and Illness Prevention Program Binder.

#### **V. GLASSWARE**

1. Glassware with cracks, chips, or sharp edges, or broken glass, shall be discarded in puncture-proof containers. Glass ampules shall be broken at the neck, wrapped in gauze, and snapped apart in a direction away from others.

#### **VI. GLUCOMETER CARE AND MAINTENANCE**

1. Use of the Glucometer in a safe and efficient way will be according to the manufacturer's written instructions, with calibrations and logging of usage.
2. The Glucometer(s) will undergo quality control daily to ensure proper functions. This must also be done when the instrument is new, after each battery change, when a control test result is out of range, and each time a new or different bottle of reagent strips is used.
3. Glucose test:
  - a. Switch on the Glucometer
  - b. When indicated, apply a drop of blood to the test strip pad. Entire test strip must be covered. Too little blood on the reagent pad may give inaccurate results.
  - c. Wait for the equipment to display results. Read promptly, dispose supplies appropriately, and perform proper hand washing techniques.
  - d. Document results in the medical record and in the glucose test log.
4. The equipment is cleaned and wiped in between patient use and on a daily basis using water and soap or mild detergent as appropriate based on manufacturer's recommendations.
5. Preserve batteries- turn Glucometer off when not in use.

# **PRECISION SURGERY CENTER**

## **SECTION IX**

### **ANCILLARY SERVICES**

#### **3. Radiologic Services**

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **3. Radiologic Services**

#### **A. Principles**

#### **I. PREAMBLE**

1. Precision Surgery Center provides fluoroscopy for needle guidance during interventional pain procedures at the Center under the direction of a physician.
  - A. Precision Surgery Center has subcontracted any additional orders for radiological testing performed for patient diagnosis and treatment will be obtained from Apex Medical Center.
  - B. If a patient has had radiological testing done at another facility, those reports will be obtained by having the patient sign a medical records release form, which will be sent to the facility to obtain copies of the official reports.
  - C. The only radiologic equipment used in Precision Surgery Center are mobile C-arm units, which are handled only by staff trained in how to properly and safely operate the equipment, under direction of a physician.

#### **II. SERVICES**

1. The Center provides radiology services in the form of fluoroscopic needle guidance for interventional pain management procedures, which are provided by a C-arm.
2. The Center assigns the responsibility of interpretation and subsequent action of fluoroscopic examinations to the physician, who is granted privileges to do so by the Governing Body.
3. Radiological services provided at the Center are directed by the Medical Director who ensures professional, organizational, and administrative responsibilities of the quality of services rendered.
4. Competent and appropriately trained and educated personnel are available to conduct the radiology services at the Center.
5. It is the policy of the Center to perform radiological services only by the order of a physician. Appropriate records or reports of radiological services are maintained in the electronic medical record at the request of the physician.
6. The Center has designated adequate space and equipment for performing the volume of work with optimal accuracy, precision, efficiency, and safety. These include an appropriate space meeting state and federal requirements, precaution against electrical, mechanical, and radiation hazards. Proper shielding where radiation sources are used, monitoring devices are to be worn by all personnel in any area with a potential radiation hazard. Appropriate records will be maintained on personnel exposed to radiation, in addition to instructions to personnel concerning safety precautions and handling of emergency radiation hazards, periodic evaluation by qualified personnel of the radiation sources and of all safety measures followed, including calibration of equipment, in compliance with federal, state, and local laws and regulations.

**PRECISION SURGERY CENTER**  
**IX. ANCILLARY SERVICES**  
**3. Radiologic Services**  
**B. Radiation Exposure Monitoring**

**I. PURPOSE**

To monitor radiation exposure of the Center's personnel on a monthly basis through participation in the Dosimetry program. To provide protective guidelines for Precision Surgery Center personnel during any procedure that requires the use of x-ray.

**II. POLICY**

1. The Center's nursing and surgical staff will participate in the dosimetry (film badge) program.
2. The Center will verify at a minimum yearly all protective gear for any damages that might expose employees unnecessarily to radiation exposure.
3. All personnel are to follow procedural guidelines for radiation safety in the operating room.
4. Any employee who becomes pregnant will follow procedural guidelines to limit the total radiation dose to the fetus with an exposure limited to 500 MREM during the period of that pregnancy.

**III. PROCEDURE**

1. All personnel will wear protective lead and a film badge whenever x-ray/fluoroscopy is used for patient procedures.
  - A. Provide the supervisor with the information necessary to participate in the dosimetry program with date of birth and social security number.
  - B. On a monthly basis, obtain new film badge and return exposed film badge to supervisor.
  - C. Film badges are to be worn outside of any protective wear.
  - D. Badges are to be kept in a safe, non-radiation area when not in use.
  - E. Badges will be read monthly by a radiation detection company and reviewed by a designee of the Center's radiation detection company. Reports of exposure to all employees are reviewed monthly by the Clinical Director or Administrator and kept in the Administrative office.
  - F. Individuals who receive a radiation dose in excess of the program limits will be

contacted by the Safety and Maintenance Coordinator. Established dose levels are:

1,250 MREM to the whole body in any calendar quarter or

5,000 MREM to the whole body in any year.

- H. If an employee terminates employment at the Center they may request in writing documentation of exposure and must sign a release.
- 2. Procedure for the use of C-arm in the operating room.
    - A. All the Precision Surgery Center personnel will wear lead aprons for any planned x-ray exposure done during the surgical procedure.
    - B. Personnel shall stand at least six (6) feet away from x-ray source when possible.
  - 3. The following guidelines are for use by pregnant personnel working in the Precision Surgery Center.
    - A. Female employees shall report their confirmed pregnancy in writing as soon as possible to the Administrator.
    - B. If possible, the supervisor will adjust or revise the workload of the employee so as to reduce the expected radiation dose to her abdomen to below 500 MREM during the entire term of pregnancy. If this is not possible, the employee will be placed on leave.
    - C. An additional badge will be ordered by the supervisor and will be worn at the waist and under any protective apparel.
    - D. The pregnant employee will be directed to the Administrator to receive a copy of the appendix of United States Nuclear Regulatory Commission Guide, Number 8.13 "Possible Health Risk to Children of Women Who are Exposed to Radiation During Pregnancy" (Form 307) and to ask any questions they might have.
    - F. A review of the monthly film badge readings for the fetus will be reviewed by the Administrator and given in writing to the employee if requested to verify that the 500 MREM limit will not be exceeded during the pregnancy.

# PRECISION SURGERY CENTER

## IX. ANCILLARY SERVICES

### 3. Radiologic Services

#### C. Contrast Reactions

#### **I. High Allergic/Idiosyncratic Risk:**

1. Previous Reactions to Contrast Media
  - A. Diffuse urticaria
  - B. Clinically apparent bronchospasm
  - C. Upper airway reaction: stridor, hoarseness
  - D. Hypotension requiring intervention
2. Significant Allergic History
  - A. Perennial allergic rhinitis ("hay fever")
  - B. Atopic asthma
  - C. Drug allergies, ASA or penicillin sensitivity
  - D. History of severe allergic reaction to foods.
3. Any type of asthma history

#### **II. Cardiac Risk Factors:**

1. Hypotension present or anticipated at time of exam
2. Poor left ventricular function
3. Congestive heart failure
4. Three vessel coronary disease
5. Severe valvular heart disease
6. Patients on calcium entry blockers

#### **III. Severe Renal Disease**

1. Renal Failure
2. Patients on Dialysis

All patient allergies are documented on the patients chart and communicated effectively to the physician and all staff members involved in the patient's care. Any of the above listed conditions or possible allergies to contrast media will be discussed with the physician prior to the procedure, and further orders are written by the physician if necessary.

# **PRECISION SURGERY CENTER**

## **IX. ANCILLARY SERVICES**

### **3. Radiologic Services**

#### **D. Departmental Safety: Radiology**

##### **I. GENERAL**

1. There shall be radiation monitoring of personnel with appropriate radiation dosimeters, and the Administrator shall be responsible for maintenance of personnel monitoring records. Cumulative radiation exposure of each individual shall also be kept in the administrative office as reported by the dosimetry company.
2. There shall be annual inspection for safety defects of all leaded gloves and aprons. Any cracks or damage in the lead will be reported to the Administrator or Safety Coordinator who will remove the lead from use and order new aprons for staff use.
3. The C-arm equipment will be visually inspected each day prior to use and the Administrator or Safety Coordinator notified if any equipment appears to be damaged or not working properly.

##### **II. RADIATION SAFETY REGULATIONS – PATIENTS**

1. Pregnant women shall not be subjected to abdominal radiation unless clinically necessary and in emergency situations. A sign instructing the patient to inform the technician if she may be pregnant is posted in each exam room.

##### **III. ELECTRICAL SAFETY**

1. Check daily: wall receptacles, cords, plugs, switches, knobs for frays, breaks, weak areas, burned spots and obvious damage. Report defects and request repairs to the Administrator or Safety Coordinator.
3. All power cords must be of facility grade.
4. Extension cords are not to be used in the facility unless approved by the Safety Coordinator.
5. Do not drape power cords over any metal or across traffic lanes.
6. Do not make yourself a link between two power sources. Do not turn on equipment with one hand while the other hand is on equipment housing or other metal, or in contact with patient.
7. Be sure hands and floor are dry when operating electrical equipment.
8. Do not overload circuits.
10. Equipment shall be checked for electrical, electronic, mechanical and radiation safety prior to use on a routine basis. Any equipment found to be defective must be removed

from use, and the Administrator or Safety Coordinator notified to schedule repair. Defective equipment shall be tagged prior to repair to prevent usage until repaired.

#### **IV. PERSONAL AND ENVIRONMENTAL SAFETY**

1. Any working conditions or equipment that are hazardous or potentially unsafe should be reported to the Administrator or Safety Coordinator.
2. Proper lifting technique should be followed at all times to prevent injury. Example: Knees bent, with good hold on object, back straight, lift using leg and thigh muscles. The object may be held against the body for additional support. Feet should be firmly on the floor.
3. Know where fire extinguishing equipment and alarms are located and know how to use the equipment as well as evacuation routes and procedures for removing patients.
4. Observe all electrical safety regulations as instructed, additional safety tips are listed in the employee Injury and Illness Prevention Program manual.

#### **V. RADIATION SAFETY – PERSONNEL**

1. Personnel shall wear lead aprons and dosimeter badges at all times when working in fluoroscopic rooms.
2. Disposable gloves shall be worn when handling potentially contaminated items.
3. Dosimeter badges may not be taken out of the Center or left on a uniform to be laundered. They shall be stored in a designated area near the lead aprons.

#### **VI. RADIATION SAFETY – EQUIPMENT**

1. Radiation Safety services are provided by in-house and outside contractors. All C-arms will be calibrated annually by a physicist and the reports are kept in the Administrative office. Each C-arm will maintain a current certificate for the radiation producing machine obtained by the Nevada State
2. All diagnostic equipment in the Center shall be calibrated according to federal, state, and local requirements. When radiological equipment is initially installed, altered significantly or relocated, a radiation protection survey shall be made, including calibration. All diagnostic radiologic equipment in surgical departments shall be calibrated annually or at not less than one year intervals.

# **PRECISION SURGERY CENTER**

## **SECTION X**

### **INFECTION PREVENTION AND CONTROL PROGRAM**

# **PRECISION SURGERY CENTER**

## **SECTION X**

### **INFECTION PREVENTION AND CONTROL PROGRAM**

#### **1. General Principles**

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL PROGRAM**  
**1. General Principles**  
**A. Principles and Overview**

**I. GOALS**

The goals of the Infection Prevention and Control Program are to:

1. Decrease the risk of infection by maintaining a functional, sanitary environment for the provision of surgical services for patients and personnel.
2. Monitor for occurrence of infection and implement appropriate control measures to prevent infections.
3. Identify and correct problems relating to infection control practices, including direct intervention to prevent infection, as needed.
4. Maintain compliance with state and federal regulations, including infection control reporting requirements.

**II. SCOPE OF THE INFECTION PREVENTION AND CONTROL PROGRAM**

The Infection Control Program is comprehensive and ongoing in that it addresses detection, prevention and control of infections among patients and personnel, throughout the Center including waiting rooms, patient rooms, pre and post-operative areas. It provides a plan of action for immediate implementation of corrective and preventive measures for managing infections and communicable diseases that result in improvement. The program is developed by Infection Control Solutions, LLC, approved by the Governing Body and implemented and maintained by the Infection Control Program Coordinator.

**III. ACTIVITIES OF THE INFECTION PREVENTION AND CONTROL PROGRAM**

1. Surveillance of infections with implementation of control measures and prevention of infections. The following activities are overseen by the Infection Control Program Coordinator in conjunction with Infection Control Solutions, LLC. Documentation is found in the Infection Control Program Binder, kept in the administrative office.
  - A. There is an on-going monitoring for infections among patients and personnel and subsequent documentation of infections that occur.
  - B. Prevention of the spread of infections is accomplished by use of Standard Precautions and other barriers, appropriate treatment and follow-up, and employee work restrictions for illness.
  - C. Staff and patient education focuses on risk of infection and practices to decrease risk. Policies, procedures, and aseptic practices are followed by personnel in performing procedures and in disinfection of equipment. Immunizations are offered as appropriate to personnel to decrease the incidence of preventable infectious diseases.

2. Outbreak Investigation
  - A. Systems are in place to facilitate recognition of increases in infections as well as clusters and outbreaks.
3. Policy and Procedure Review and Revision

Policies and procedures for infection prevention and control are reviewed and updated on an annual basis by the Governing Body. Program implementation and maintenance is overseen by the Infection Control Program Coordinator in conjunction with Infection Control Solutions, LLC.
4. Staff Education
  - A. Training of staff in infection prevention begins with orientation of new hires and occurs at least annually.
  - B. Infection Control Solutions, LLC provides on-site and webinar training to all new staff members and meets or exceeds current OSHA and CDC requirements.
5. Quality Assessment and Performance Improvement (QAPI)
  - A. Infection prevention and control is a component of the Center's QAPI program and infection prevention and control reports are made to the Governing Body. In addition, infection prevention and control rounds are made to assess the level of quality provided and actions for improvement are taken as needed.
6. Consultation
  - A. The Infection Control Program Coordinator serves as a resource for all staff and all departments relating to prevention and control of infections.

#### **IV. DIVISION OF RESPONSIBILITIES FOR INFECTION PREVENTION AND CONTROL ACTIVITIES**

The Governing Body is ultimately responsible for the Infection Prevention and Control Program.

1. Infection Control Program Coordinator – Michelle Edwards, CRNA

The Infection Control Program Coordinator will assist in carrying out the daily functions of the Infection Prevention and Control Program. The Infection Control Program Coordinator has knowledge and interest in Infection Prevention and Control and has completed required additional training specific to Infection Control in the ambulatory healthcare setting.
2. Role of the Governing Body

The Governing Body meets quarterly to manage aspects of the Infection Prevention and Control Program and provides input, direction and evaluation of the Program. Policies and procedures relating to Infection Prevention and Control are approved by the Governing Body, and reports of infections are presented meetings where recommended actions and control measures are initiated when necessary.

## **V. REPORTING MECHANISMS FOR INFECTION PREVENTION AND CONTROL**

1. Patient infection cases are monitored by the Infection Control Program Coordinator and nursing staff. The ICPC completes the line listing of infections and the monthly report forms and:
  - A. Reports to the Governing Body at quarterly meetings
  - B. Provides feedback to staff as needed.
  
2. Employee infections are reported by the employee to the employee's supervisor, then to the Infection Control Program Coordinator. The ICPC completes the employee infection report form and reports:
  - A. To the Administrator and/or Medical Director
  - B. The Governing Body at quarterly meetings
  
3. Compliance with infection prevention and control practices is monitored and documented by:
  - A. Staff evaluation
  - B. Observation of Practices

The Infection Control Program Coordinator, in conjunction with representatives from Infection Control Solutions, LLC perform and review the compliance monitoring and initiate appropriate actions as deemed necessary by the Governing Body.

## **VI. UPDATING THE INFECTION PREVENTION PLAN**

The Infection Prevention and Control Program will be reviewed and updated annually by the Governing Body.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL PROGRAM**  
**1. General Principles**  
**B. Infection Prevention and Control Plan**

**I. PURPOSE:**

To develop and maintain a written plan for infection prevention and control including an assessment of risk, services provided, the population served, strategies to decrease risk, and an active surveillance plan, in order to reduce the risk of health care associated infections.

**II. POLICY:**

1. A current written infection prevention and control plan will be implemented, this will be developed and approved by the Governing Body in conjunction with Infection Control Solutions, LLC. The plan will follow CDC nationally recognized guidelines for hand hygiene and safe injection practices.

2. The written plan will include:

- A. Assessment of risk
- B. Assessment of services provided
- C. Assessment of the population served
- D. Prioritized strategies to decrease risk
- E. Evaluation of effectiveness of strategies
- F. Surveillance plan based on analysis of previous data.

3. The written infection prevention plan will guide the activities of the Infection Control Program Coordinator.

4. The plan will be updated at least annually and more often as needed (e.g., changes in services provided, risks, etc.).

5. The written plan with the evaluation of effectiveness of the strategies may facilitate development of an annual summary of the infection prevention and control program.

6. All medical staff members, allied health practitioners and employees of the Center will receive infection prevention education and training and comply with all requirements of the program.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL PROGRAM**

**1. General Principles**

**C. Infection Control Program Coordinator (ICPC)**

**I. BASIC FUNCTION**

Evaluates quality of patient care and patient outcomes as they relate to healthcare-associated infections; collects, prepares and analyzes healthcare-associated infection data; presents infection data and makes recommendations for actions; monitors employee compliance in use of barriers and infection prevention measures; prepares and presents educational opportunities for the staff; serves as a resource to all departments and personnel.

**II. RESPONSIBILITIES:**

1. Does on-going monitoring of healthcare-associated infections.
2. Identifies infection prevention problems and makes recommendations for corrective action, in conjunction with representatives from Infection Control Solutions, LLC.
3. Prepares reports and discussion as needed for the Infection Control section of the Governing Body quarterly meetings..
4. Monitors infection prevention practices and employee compliance with the Infection Prevention and Control Program.
5. Serves as a resource for all departments and personnel.
6. Initiates, reviews, and revises infection prevention and control policies and procedures.
7. Conducts outbreak investigation and initiates control measures.
8. Reports communicable diseases to the local health department as required by law.
9. Provides educational offerings for orientation and on-going in-services.
10. Consults with department heads and physicians as needed to improve care.
11. Initiates follow-up on employee/patient exposures to communicable diseases.
12. Participates in quality improvement activities.
13. Performs other duties as directed.

**III. PHYSICAL DEMANDS AND WORKING CONDITIONS**

(With or without the aid of mechanical devices)

1. Must be able to move intermittently throughout the work day.
2. Must be able to speak and write the English language in an understandable manner.
3. Must be able to cope with the mental and emotional stress of the position.
4. Must possess sight/hearing senses or use prosthetics that will enable these senses to function adequately so that the requirements of the position can be fully met.
5. Must function independently, have flexibility, personal integrity, and the ability to work effectively with patients, personnel, and support agencies.
6. Must meet the general health requirements set by the policies of this Center, which may include a physical assessment.
7. Must be able to push, pull, move and/or lift a minimum of 25 pounds to a minimum height of 6 feet and able to push, pull, move, and/or carry such weight a minimum

distance of 10 feet.

8. Must be able to assist in the evacuation of patients during emergency situations.

#### **IV. QUALIFICATIONS:**

1. Holds a current state license as a registered nurse or physician.
2. Ability to develop policies and procedures.
3. Ability to teach and evaluate clinical performance.

#### **V. WORK RELATIONSHIPS**

1. Supervised by the Medical Director.
2. Communication with the Clinical Director, Nursing Staff, Medical Director, and Governing Body.
3. Maintains skills and education to manage the position of Infection Control Program Coordinator..
4. Reports to the Medical Director and Administrator.

# **PRECISION SURGERY CENTER**

## **SECTION X**

### **INFECTION PREVENTION AND CONTROL PROGRAM**

#### **3. Surveillance**

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL PROGRAM**  
**3. Surveillance**  
**A. Infection Prevention and Control Surveillance**

**I. PURPOSE:**

To have knowledge of patient and employee infections to guide prevention activities so appropriate actions/follow-up may be done.

**II. POLICY:**

1. The Infection Control Program Coordinator does surveillance of infections among patients and employees, in conjunction with representatives from Infection Control Solutions, LLC.
2. Healthcare-associated infections in ambulatory care are those associated temporally with an ambulatory care visit or with the care provided during the visit.
3. Targeted surveillance may be done in the ambulatory setting with a focus on high-risk areas and those with a potential to reduce risks (i.e., catheter-related bloodstream infection or surgical procedure-related infections).
4. Precision Surgery Center shall develop a system for post-discharge surveillance. This system shall consist of both a follow up phone call to the patient where signs and symptoms of infection are discussed and documented in a log. The patient will be contacted within 24-48 hours of their procedure by a qualified employee of the Center. A follow up appointment is also made for the patient with the surgeon and any evidence of infection will be reported to the Center.
  - A. Surveillance of healthcare-associated infections is performed by Infection Control Program Coordinator or his/her designee as follows:
    - ◆ Review of culture reports and other pertinent lab data
    - ◆ Nurse consultation and referral
    - ◆ Medical record review
    - ◆ Patient examination
    - ◆ Personal consultation by employees
    - ◆ Follow-up on communicable disease exposure
    - ◆ Review of employee's physical assessments
    - ◆ Maintenance of the employee infection record
    - ◆ Physician consultation
  - B. Specific definitions of healthcare-associated infections are used consistently. (See Infection Control Manual) Healthcare-associated infections are reported quarterly to the Governing Body.

- C. Surveillance documentation is maintained on the:
- ◆ Line listing of patient infections
  - ◆ Log of employee infections
- D. Outcome measures shall be monitored:
- ◆ Focus on the results of an activity, e.g., surgical procedure.
  - ◆ Healthcare-associated infections are outcome measures.
- E. Process measures shall be monitored:
- ◆ Involves monitoring of practices that directly or indirectly contribute to a health outcome.
  - ◆ Focuses on observations and analysis of practices and environmental conditions.
  - ◆ May include:
    - ◆ Immunization rates
    - Use of surgical antibiotic prophylaxis
    - Antibiotic timing
- F. Reporting of infections to the public health department authorities is done as required by law.
- A list of these diseases and the report forms from the health department are maintained in the Infection Control Manual and reporting is done as required. An exception to reporting is if there is knowledge that the disease has already been reported by the laboratory or other provider.
- G. An outbreak is defined as two (2) or more cases over the usual (endemic) number of cases of healthcare-associated infections, usually produced by the same organism. The time period will vary according to the infection.

A final written report of the investigation, outlining findings and recommendations, is prepared by the Infection Control Program Coordinator and issued to the Governing Body, others participating in the investigation, attending physician(s), Clinical Director, and others as needed.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL PROGRAM**  
**3. Surveillance**  
**C. Healthcare-Associated Infections and Sentinel Events**

**I. PURPOSE:**

To manage as sentinel events all identified cases of death and major permanent loss of function attributed to a healthcare-associated infection (i.e., except for the infection, the patient would not have died or suffered loss of function).

**II. PROCEDURAL GUIDELINE:**

1. Identification of cases to be reviewed:

- A. During infection surveillance activities and following identification of healthcare-associated infections, the Infection Control Program Coordinator will be alert to cases of death and/or major permanent loss of function among patients having been identified as having a healthcare-associated infection.
- B. The Infection Control Program Coordinator, in reviewing for sentinel events, will be alert to cases of death and/or major permanent loss of function among patients that may also have a healthcare-associated infection.
- C. All unexpected deaths occurring in a hospital following transfer from the Center will be reviewed by the Infection Control Program Coordinator for the presence of healthcare-associated infection and the potential for a sentinel event.

2. Review and follow-up of potential cases

- A. Once alerted to the potential of a healthcare-associated infection as a sentinel event, the Infection Control Program Coordinator will conduct a review of the patient's records to determine if the case meets the definition of a healthcare-associated infection related sentinel event. If the case clearly is not a sentinel event (e.g. the patient was terminally ill prior to the infection, other life threatening events/illnesses were present, etc.), no further review will be needed. If the ICPC cannot make the determination, the case will be reviewed with the Governing Body and with the attending physician if needed to make a determination.

If it is determined to be a sentinel event, the Center's procedural guideline for sentinel events will be followed, including completion of a root cause analysis.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**D. Infection Prevention and Control Education**

**I. PREVENTION AND CONTROL ORIENTATION AND IN-SERVICES**

1. Orientation and in-services are provided to ensure instruction of personnel regarding the importance of infection prevention and the use of infection prevention policies and procedures.
2. All new personnel will attend an orientation program that addresses infection prevention and control including basic principles and the infection control policies and procedures of the Center. OSHA bloodborne pathogens regulations and tuberculosis education will be included. This will be done either in person or via webinar by representatives from the contracted organization Infection Control Solutions, LLC.
3. All personnel will attend at least one mandatory infection prevention and control update per year. OSHA bloodborne pathogens regulations and tuberculosis education will be included as well as other infection prevention issues of importance to the Center.
4. The Infection Control Program Coordinator will conduct one-on-one training with personnel as practices are observed and corrections or changes in practice are needed.
5. Records will be maintained documenting:
  - A. Date and time of training
  - B. Instructor and qualifications
  - C. Content outline
  - D. Participants and department

**II. INFECTION PREVENTION AND CONTROL ORIENTATION OUTLINE**

1. General Infection Prevention Principles
  - A. Hand washing and Hand Hygiene
    - ◆ Washing with soap and water
    - ◆ Avagard D Instant Hand Antiseptic (Ethyl Alcohol 61%) or substitute
    - ◆ Use of alcohol hand rubs
  - B. Employee Health
    - ◆ Work restrictions for communicable diseases
    - ◆ Reporting of exposures to infectious diseases
    - ◆ Vaccines
    - ◆ TB skin tests
  - C. Patient Infections
    - ◆ Prevention of infections
    - ◆ Recognition and reporting
      - ◆ Definitions of infection
      - Infection communication form
      - Verbal reports to Infection Control Program Coordinator

- Documentation of signs and symptoms of infection

## 2. Standard Precautions and other barrier precautions

### A. Reasons for Standard Precautions

- Employee protection against bloodborne diseases
- ◆ OSHA regulations
- ◆ CDC guidelines

### B. Standard Precautions Policy

### C. Components of Standard Precautions

- ◆ Barriers for protection
  - ◆ Gowns
  - Gloves
  - Masks
  - Eye protection
  - Ambu bags or CPR devices
- Safer sharps devices
- ◆ Biomedical waste
- ◆ Linen handling

### D. Transmission-Based Precautions

- ◆ Airborne
- ◆ Droplet
- ◆ Contact

### E. Additional Infection Concepts:

- ◆ Standard precautions/transmission-based precautions protect employees from acquiring transmissible diseases from the patient.
- ◆ Principles of asepsis are designed to protect the patient from microorganisms from the equipment/environment/caregiver.
  - ◆ Clean technique – refers to practices that reduce the numbers of microorganisms to prevent or reduce transmission.
  - Sterile technique – refers to practices designed to render and maintain areas and equipment maximally free from microorganisms.
- Patients who are immunocompromised require diligent protection from microorganisms due to increased risk and susceptibility.
- ◆ Separation of clean and dirty procedures is paramount to the prevention and spread of microorganisms.

### F. Compliance Monitoring – will be documented monthly via Infection Control Rounds Form completed by Infection Control Program Coordinator or delegated staff member.

- ◆ Staff self-evaluations
- ◆ Observation of practices

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**E. Isolation**

**I. STANDARD PRECAUTIONS**

It is the intent of the Center that: 1) all patient blood, body fluids, excretions and secretions will be considered potentially infectious; 2) standard precautions will be used for all patients.

1. Gloves – gloves should be worn whenever exposure to the following is planned or anticipated:
  - A. Blood/blood products/body fluids with visible blood, excretions, and secretions
  - B. Urine
  - C. Feces
  - D. Saliva
  - E. Mucous membranes
  - F. Wound drainage
  - G. Drainage tubes
  - H. Non-intact skin
  - I. Amniotic, cerebral spinal, pericardial, pleural, peritoneal, synovial fluids
  - J. Performing venipuncture or invasive procedures
2. Masks and eyewear (or face shields) - should be worn during procedures that are likely to generate droplets/splashing of blood/body fluids.
3. Gowns/Aprons (fluid resistant) - should be worn when there is potential for soiling clothing with blood/body fluids.
4. Private Exam or Treatment Room – consider when patient hygiene is poor or in cases where blood/body fluids cannot be contained.
5. Hand washing/hand hygiene – refer to procedure on hand washing/hand hygiene.
6. Resuscitation Equipment – disposable mouthpieces or other ventilation devices should be available as alternatives for mouth-to-mouth resuscitation.
7. Sharps Precautions – safety engineered sharps should be used and used sharps should be placed in an appropriately labeled puncture resistant container.
8. Lab Specimens – should be placed in a container which prevents leakage during collection, handling, processing, storage, transport, or shipping. If outside contamination of the primary container occurs, it should be placed within a second container.
9. Blood Spills – spills of blood or other body fluids should be removed and the area decontaminated using the Center-approved blood spill kit. Gloves should be worn during cleaning and decontamination. The manufacturer’s directions will be followed for use of the product in cleaning and decontaminating spills. The disinfectant should be EPA registered and have kill data against Hepatitis B and human immunodeficiency virus (HIV) or should be tuberculocidal.
10. Linen – soiled linen should be handled as little as possible. Gloves should be worn to handle linen wet with blood or body fluids. Linen will be bagged in an impervious bag or placed

in a container lined with an impervious lining.

11. Waste – waste should be bagged in impervious bags.

## **II. PERSONAL PROTECTIVE EQUIPMENT (PPE)**

1. PPE is provided to all employees. Each employee is responsible for knowing where the equipment is kept in the department.
2. The type of protective barrier(s) should be appropriate for the procedure being performed and the type of exposure anticipated.
3. PPE available includes gloves, gowns or aprons, masks and eye protection (or face shields), and resuscitation devices.

## **III. RESPIRATORY HYGIENE/COUGH ETIQUETTE**

1. Purpose

To prevent the transmission of all respiratory infections, including influenza, the following infection prevention measures should be implemented at the first point of contact with a potentially infected person. They are incorporated into infection prevention practices as one component of Standard Precautions.

### **A. Visual Alerts**

Visual alerts are posted at the entrance to the Center instructing patients and persons who accompany them (e.g., family, friends) how to practice respiratory hygiene and cough etiquette. Patients should also inform health care personnel of symptoms of a respiratory infection when they enter the building or first register for care.

- ◆ Notice to Patients to Report Flu Symptoms  
Emphasizes covering coughs and sneezes and the cleaning of hands
- ◆ Cover Your Cough  
Tips to prevent the spread of germs from coughing: Posted in waiting areas and patient rooms
- ◆ Information about Personal Protective Equipment  
Demonstrates the sequences for donning and removing personal protective equipment

### **B. Respiratory Hygiene/Cough Etiquette**

The following measures to contain respiratory secretions are recommended for all individuals with signs and symptoms of a respiratory infection.

- ◆ Cover the nose/mouth when coughing or sneezing;
- ◆ Use tissues to contain respiratory secretions and dispose of them in the nearest waste receptacle after use;
- ◆ Perform hand hygiene (e.g., hand washing with non-antimicrobial soap and water, alcohol-based hand rub, or antiseptic hand wash) after having contact with respiratory secretions and contaminated objects/materials.

- ◆ Healthcare facilities should ensure the availability of materials for adhering to Respiratory Hygiene/Cough Etiquette in waiting areas for patients and visitors.
  - ◆ Provide tissues and no-touch receptacles for used tissue disposal.
  - Provide conveniently located dispensers of alcohol-based hand rub; where sinks are available, ensure that supplies for hand washing (i.e., soap, disposable towels) are consistently available.

### **III. MASKING AND SEPARATION OF PERSONS WITH RESPIRATORY SYMPTOMS**

During any periods of respiratory infection in the community (e.g., when there is increased absenteeism in schools and work settings and increased medical office visits by persons complaining of respiratory illness), the Center offers masks to persons who are coughing. Either procedure masks (i.e., with ear loops) or surgical masks (i.e., with ties) may be used to contain respiratory secretions (respirators such as N-95 or above are not necessary for this purpose). When space and chair availability permit, the Center encourages coughing persons to sit at least three feet away from others in common waiting areas. This recommendation is instituted year-round.

### **IV. DROPLET PRECAUTIONS**

Advise healthcare personnel to observe Droplet Precautions (i.e., wearing a surgical or procedure mask for close contact), in addition to Standard Precautions, when examining a patient with symptoms of a respiratory infection, particularly if fever is present. These precautions should be maintained until it is determined that the cause of symptoms is not an infectious agent that requires Droplet Precautions [http://www.cdc.gov/ncidod/dhqp/gl\\_isolation.html](http://www.cdc.gov/ncidod/dhqp/gl_isolation.html).

### **V. ISOLATION PRECAUTIONS**

#### **1. Purpose**

To address isolation precautions in areas specific to an ambulatory surgery setting.

#### **2. Policy**

To implement practices to minimize the risk of transmission of infections.

##### **A. Waiting rooms**

- Efforts will be taken to minimize crowding in waiting rooms.
- ◆ Efforts will be taken to assess patients as quickly as possible and place them into an exam room.

##### **B. Patient Scheduling**

- ◆ Patients known to have fever over 101° or rash will be rescheduled for procedures when symptoms resolve.

##### **C. Triage of patients**

- ◆ Reception staff will be educated to triage as well as possible by telephone

and to be alert to patients presenting with symptoms of infection.

- ◆ Reception staff will notify clinical staff of their observations to enable rapid placement into an exam room and determination of rescheduling a patient.
- ◆ Patients with known diseases or suspected of having any of the following diseases will not be seen until symptoms resolve, and the disease is no longer transmittable.
  - ◆ Tuberculosis
  - Chickenpox
  - Measles
  - Mumps
  - Rubella
  - Meningitis
  - Influenza
  - Pneumonia

## **I. DROPLET PRECAUTIONS**

### **1. Purpose**

The purpose of droplet precautions is to use them in addition to Standard Precautions for patients with infections that can be transmitted by droplets. Droplet transmission involves contact of the conjunctiva or mucous membranes of the nose or mouth of a susceptible person with large-particle droplets containing microorganisms generated from a person who has a clinical disease or who is a carrier of the microorganism. Droplets may be generated by the patient's coughing, sneezing, talking, or during the performance of procedures, e.g. suctioning. These precautions may be considered for influenza and pneumonia infections.

1. Patient's requiring droplet precautions will not be admitted to the surgical center. The procedure will be rescheduled until symptoms have resolved and the disease is no longer transmissible.
3. In the rare case a patient is admitted the Center who has an infection necessitating droplet precautions the patient is required to wear a mask while in the center. The procedure will be rescheduled and transportation arranged if needed to a hospital setting for acute care.

## **VII. MULTIDRUG-RESISTANT ORGANISMS (MDROS)**

Patients with multidrug-resistant organisms (MDROs) will not undergo any surgical procedures.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**

**3. Surveillance**

**F. Compliance Monitoring**

**I. PURPOSE:**

To provide a system of monitoring to ensure that employees are following established policies regarding infection control practices.

**II. POLICY:**

To establish the methods for compliance monitoring for infection control. The following is used to evaluate compliance.

**III. STAFF SELF-EVALUATION:**

Each employee providing direct patient care may be given self-evaluation forms to complete. The forms will be reviewed by the Infection Control Program Coordinator and any problems will be discussed with the individual employee.

**IV. OBSERVATION:**

Each employee providing direct patient care will be observed during orientation, and periodically during Infection Control Rounds, documented each month by the Infection Control Program Coordinator or delegated staff member. Specific items related to compliance with infection prevention policies will be included on the evaluation form. Specific compliance issues will be discussed with the employee involved. Any problems will be evaluated by the ICPC and reported to the Governing Body during the quarterly meeting.

**V. HANDLING AND/OR DISPOSING OF USED NEEDLES**

1. The purpose is to provide guidelines for the safe handling and disposal of used needles.

A. Equipment and Supplies

- ◆ Safer sharps devices;
- ◆ Sharps container;
- ◆ Gloves;
- ◆ Other as necessary or appropriate supplies

B. SAFETY PRECAUTIONS

- ◆ After use, discard the needle after activating the safety feature and without recapping by hand, into the sharps container.
- ◆ Used needles and syringes must be placed in the sharps container. Do not bend,

break, or cut needles. When the sharps container is  $\frac{3}{4}$  filled, the container must be closed, locked and stored until picked up by a licensed vendor for proper disposal.

- ◆ Recapping of needles is acceptable only for sterile needles.
- ◆ Needles, used or unused, may not be discarded into trash receptacles.
- ◆ In the event of a needle stick injury, the employee should:
  - Immediately wash the wound with soap and running water;
  - If desired, apply alcohol or hydrogen peroxide to the wound; and
  - Notify the Infection Control Program Coordinator of the incident as soon as possible and fill out appropriate Employee Injury documents inside the Employee Injury and Illness Prevention Manual.

## 2. Using Gloves

- A. Guidelines are provided for the use of gloves for patient and employee protection.
- B. When gloves are indicated, disposable single-use gloves should be worn.
- C. Used gloves should be discarded into the nearest waste receptacle.
- D. Sterile gloves are indicated only in performing sterile procedures.
- E. Non-sterile gloves should be used primarily to prevent the contamination of the employee's hands when providing treatment or services to the patient and when cleaning contaminated surfaces.
- F. Perform hand hygiene before donning gloves and after removing gloves.
- G. Disposable (single-use) gloves must be replaced as soon as practical when contaminated, torn, punctured, they exhibit signs of deterioration, or when their ability to function as a barrier is compromised.
- H. Indications for glove use and procedural guidelines are described in the Infection Control Program Manual.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**G. Employee Health**

**I. HEALTH ASSESSMENT**

1. Health assessments are required for all patient care staff to ensure that staff are physically fit to perform the essential functions of the job and to determine that they are free of communicable diseases. Ergonomic training will be provided for each employee during orientation to prevent work injuries associated with improper body alignment during normal work activities.
2. New employees are required to complete a health assessment prior to beginning work. As part of the assessment, the infectious disease and immunization history form will be completed.
  - A. Employees with positive tuberculin skin tests (TSTs) will have an annual assessment for symptoms of tuberculosis (TB). Employees with negative TSTs will be retested annually based on the Center's TB risk assessment.
  - B. If at any time during employment a physician indicates that an employee is unable to perform the essential functions of the job, or if there is reason to suspect the employee is putting others at risk due to a communicable disease, the employee will not be permitted to work in that position until further evaluation and determination has been made.

**II. TUBERCULOSIS SCREENING FOR EMPLOYEES**

1. Purpose  
To promote patient and employee safety and well-being by screening employees for tuberculosis and initiating appropriate follow-up.
  - A. Tuberculin skin testing
    - New employees
      - ◆ New employees who have been made a conditional offer of employment shall be screened for the presence of infection with *M. tuberculosis* using the Mantoux TST. Skin testing will employ the two-step procedure. (If the reaction to the first test is less than 10 mm induration, a second test will be given 1-3 weeks later). A positive second test is indicative of a boosted reaction and NOT a new infection. If the second test remains negative, the person is classified as uninfected.

- Individuals with a documented history of a positive TST will not undergo skin testing. They will, however, be asked to bring documentation from their private physician or the local health department of their work-up following conversion. If documentation is unavailable, the employee will have a chest x-ray to determine TB status. In addition, an assessment for signs and symptoms of TB will be completed by the Center.
- Individuals who are found to be TST positive upon initial screening will be referred as in "2" above.
- Individuals with documented history of a negative TST performed within the last 12 months need to receive only one (1) intradermal injection of TST tuberculin. (Note: In this instance, the prior skin test serves as the 1st step of a two-step procedure). If the 2nd test remains negative, the person is classified as uninfected and no further action is necessary. If the second test is positive, the individual will be referred as in "2" above.
- Individuals with no documented history of a TST within the last 12 months will undergo the two-step procedure. If the 2nd test remains negative, no further action is necessary.

B. Annual employee screening

- Employees with a negative skin test history will have, at a minimum, an annual TST and, depending on the test results, will be followed as above. The two-step procedure need not be used. The frequency of repeat skin testing will depend on the Center's annual TB risk assessment.
- ◆ Skin test converters will be sent to their private physician or to the local health department for follow-up. If the employee is symptomatic, return to work will be contingent upon the receipt of documentation attesting to lack of infectivity.
- ◆ Positive reactors who are unable or unwilling to take preventive treatment do not require periodic chest x-rays. Such individuals shall be informed of symptoms suggestive of tuberculosis and to report the occurrence of such symptoms to the Administrator.

C. Exposure incidents

- ◆ Exposure may result from contact with a patient, caregiver, family member or co-workers. In the event of documented occupational exposure to a diagnosed case of infectious pulmonary tuberculosis, all employees having occupational exposure will undergo the following:

- ◆ TST, if previously TST negative
- Follow-up TST in 10-12 weeks. If employee develops a positive skin test, a chest x-ray will be obtained.
- All TST converters, regardless of chest x-ray results, will be referred to a physician or the local health department for follow-up.
- If symptomatic, employment may be resumed contingent upon the receipt of documentation attesting to the lack of infectivity.

## 2. Administration of the Tuberculin Test

- A. Tuberculin skin testing is the standard method of identifying persons infected with *M. tuberculosis*. The intradermal Mantoux test, not a multiple puncture test, should be used to determine if tuberculosis infection has occurred. As an alternative, a blood assay for *M. tuberculosis* (BAMT) may be used.
  - B. The Mantoux test is performed by the intradermal injection of 0.1 ml of TST tuberculin containing 5 TU (tuberculin units) into either the volar or dorsal surface of the forearm. The injection should be made with a disposable tuberculin syringe. The injection should be made just beneath the surface of the skin, with the needle bevel facing upward to produce a discrete, pale elevation of the skin (a wheal) 6mm to 10mm in diameter.
  - C. To prevent needle stick injuries, safety engineered sharps should be used or needles should not be recapped, purposely bent or broken by hand, removed from disposable syringes, or otherwise manipulated by hand. After they are used, disposable needles and syringes should be placed in puncture-resistant containers for disposal.
  - D. The Mantoux test should be read 48 to 72 hours after the injection. If the employee fails to show up for the scheduled reading, a positive reaction may still be measurable up to one week after testing. However, if an employee who fails to return after 72 hours has a negative test, skin testing should be repeated. The reading should be based on measurement of induration, not erythema. The diameter of induration should be measured transversely to the long axis of the forearm and recorded in millimeters.
2. Classification of the Tuberculin Reactions are detailed in the Infection Control Program Manual.
  4. Interpretation of the Tuberculin Test in Persons with a History of Bacillus Calmette-Guérin (BCG) Vaccination
    - A. Many foreign countries still use BCG as part of their tuberculosis control programs, especially for infants. TST sensitivity and immunity to tuberculosis infection after BCG vaccination is highly variable, depending upon the strain of BCG used and the population vaccinated. Thus, the size of a tuberculin skin test reaction in a BCG vaccinated person is not a factor in determining whether a reaction is caused by *M. tuberculosis* infection or the prior BCG vaccination.
    - B. Tuberculin skin testing will be performed on new employees who have been vaccinated with BCG. If previous positive results already documented a chest x-ray will be obtained (if not already done) and annual signs and symptoms evaluation will occur.

### **III. INFLUENZA VACCINE TO PATIENTS OR HEALTHCARE PERSONNEL**

Influenza vaccines will be offered at the discretion of the Medical Director and/or the availability of the vaccine itself.

### **IV. BLOOD AND BODY FLUID EXPOSURE REPORT**

1. Purpose: To document the type and circumstances of a blood and body fluid exposure.

2. Policy:

To define that the employee will provide detailed information to the Clinical Director or other designee on the blood and body fluid exposure.

A. As soon as possible following an exposure, the employee shall report the exposure to the supervisor.

B. The employee will see the Clinical Director or other designee to complete the appropriate forms in the employee injury packet located in the Infection Control Program Manual.

C. The form will be used to assist in evaluating the cause of the injury and for prevention of future similar injuries.

### **V. POST-EXPOSURE EVALUATION AND FOLLOW-UP OF BLOODBORNE PATHOGENS**

1. First aid:

At the time of a suspected exposure, the following basic first aid measures should be taken to thoroughly irrigate and disinfect the affected body part to prevent infection/illness:

A. For skin exposure, puncture, or laceration: Wash with bactericidal soap and water.

B. For exposure of eyes, mouth, or other mucous membranes: Rinse with running water, normal saline, or other suitable sterile eye wash for at least 10 minutes.

2. Healthcare workers exposed to HIV, hepatitis B virus (HBV), or hepatitis C virus (HCV) being evaluated for exposure or needle stick should be evaluated within hours (rather than days) of their exposure, as HIV post-exposure prophylaxis (PEP), Hepatitis B vaccine, and hepatitis B immune globulin (HBIG) are most effective administered as soon as possible after exposure.

A. Rapid screening tests are now available to allow for HIV testing results within hours. This screening test may be followed up with an HIV antibody test as confirmation.

B. Post-exposure prophylaxis (PEP) is now available and recommended for use after different types of exposures, based on risk of HIV infection.

- Risk of type of exposure should be weighed against potential toxicity of PEP.

- ◆ The Center has access to Concentra Medical Center (address with directions located in the Injury and Illness Prevention Binder) which as laboratory

capabilities for post exposure testing and access to medication for the initial PEP treatment for immediate use.

- ◆ Employee should be evaluated as soon as possible by a practitioner skilled in use of anti-retro viral drugs as well as HIV.
- ◆ Healthcare worker should receive post-exposure counseling, testing and evaluation whether or not PEP is given.
  - ◆ Exposed healthcare personnel (HCP) should be advised to use precautions (e.g., avoid blood or tissue donations, breastfeeding, or pregnancy) to prevent secondary transmission, especially during the first 6-12 weeks post-exposure.
  - For exposures for which PEP is prescribed, HCP should be informed regarding:
    - Possible drug toxicities and the need for monitoring
    - Possible drug interactions
    - The need for adherence to PEP regimens
  - Consider reevaluation of exposed HCP 72 hours post-exposure, especially after additional information about the exposure or source becomes available.

3. Hepatitis B management:

- A. Source patient testing for Hepatitis B, PEP if indicated.

4. Hepatitis C management:

- A. Source patient testing for anti-HCV.
- B. Exposed person must do the following:
  - Have baseline testing for anti-HCV and alanine aminotransferase (ALT) activity.
  - ◆ Have follow-up testing (e.g., four to six months) for anti-HCV and ALT activity. Testing for HCV RNA may be substituted for earlier diagnosis.
  - ◆ Confirm all anti-HCV results reported positive by enzyme immunoassay using supplemental anti-HCV testing.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**H. Cleaning, Disinfection and Sterilization**

**I. PURPOSE:**

To provide instruments, supplies and equipment that are adequately cleaned, disinfected or sterilized, in accordance with manufacturer's recommendations and state and federal guidelines. This policy is related to reprocessing of supplies and equipment approved for multiple uses only. Single use items are disposed of immediately after one use and not reprocessed in Precision Surgery Center.

**II. POLICY:**

The policy is as follows:

1. Cleaning

A. Definition: The removal of all soil from surfaces. This can be accomplished by using water with detergents. Thorough cleaning is necessary before proceeding to high-level disinfection and sterilization.

B. Guidelines

- ◆ Cleaning of patient care items must occur prior to beginning high level disinfection or sterilization, should remove all visible soil and should occur as soon as practical after use.
- ◆ Proper protective equipment must be used when cleaning an item if a risk of aerosolization exists (spraying of particles into air) and for protection against exposure to the chemicals used (as directed by the material data safety sheet (MSDS)).

2. Disinfection/Sterilization

A. Definitions:

- ◆ Disinfection: A process that kills or destroys many or all disease-producing microorganisms on the inanimate object. It usually does not kill spores.
- ◆ Sterilization: The complete elimination/destruction of all forms of microbial life.

3. General Guidelines:

- A. The Food and Drug Administration (FDA) label claim for high-level disinfection should be used unless scientific studies can show an alternate effective exposure time.

- B. Routine testing of liquid sterilants and high-level disinfectants should be performed to ensure effective concentration of the active ingredient.
- C. Personnel must have proper training on processing instruments with competency testing.
- D. Semi-critical devices such as probes and can be cleaned with high-level disinfection with a non-toxic product. Use of probe covers over the instrument is encouraged but still requires the above cleaning procedures.
  - ◆ Steam is the preferred method for sterilization for critical instruments not damaged by heat.
  - ◆ Low-level sterilization methods may be used (ethylene oxide, hydrogen peroxide, gas plasma) for heat or moisture-sensitive equipment.
  - ◆ Mechanical, chemical, and biological monitors must be used to ensure that the sterilization process has been effective.
  - ◆ A quality control program is important to ensure appropriate disinfection and sterilization, this is documented in the Infection Control Program Manual.
  - ◆ Training of staff is comprehensive and complete and performed during new hire orientation and annually by Infection Control Solutions, LLC.

### III. CLASSIFICATION OF DEVICES, PROCESSES, AND GERMICIDAL PRODUCTS

| Device classification                                           | Devices (examples)                                                                    | Spaulding process classification                             | EPA product classification                                            |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------|--------------------------------------------------------------|-----------------------------------------------------------------------|
| <i>Critical</i> (enters sterile tissue or vascular system)      | Implants, scalpels, needles, other surgical instruments, etc.                         | Sterilization – sporicidal chemical; prolonged contact       | Sterilant/disinfectant                                                |
| <i>Semi-critical</i> (touches mucous membranes - except dental) | Flexible endoscopes, laryngoscopes, endotracheal tubes, and other similar instruments | High-level disinfection – sporicidal chemical; short contact | Sterilant/disinfectant                                                |
|                                                                 | Thermometers, hydrotherapy tanks                                                      | Intermediate-level disinfection                              | Hospital disinfectant with label claim for tuberculocidal activity    |
| <i>Noncritical</i> (touches intact skin)                        | Stethoscopes, tabletops, bedpans, etc.                                                | Low-level disinfection                                       | Hospital disinfectant without label claim for tuberculocidal activity |

Modified from Favero MS, Bond WW. Chemical disinfection of medical and surgical materials. In: Block SS. Ed. Disinfection, sterilization and preservation. 4<sup>th</sup> ed. Philadelphia: Lea & Febiger 1991:627

**NOTE:** The Center purchases pre-packaged sterile items for single use and does high-level disinfection in the facility for multiple use items. Many reusable patient care objects can be disinfected or sterilized by the methods found in the above table.

#### **IV. SUPPLY AND EQUIPMENT MANAGEMENT**

1. The integrity of clean and sterile equipment and supplies is assessed prior to use.
2. All non-disposable patient care equipment shall be cleaned the same regardless of the patient's infectious status. It will be cleaned after each use and at the end of the day with an appropriate disinfectant.

#### **V. MONITORING OF STERILIZING EQUIPMENT**

To enhance patient safety, policy has been established for monitoring of sterilizers. The policy and various steps to be taken when biological indicators are positive is described in detail in Infection Prevention and Control Manual.

#### **VI. HAND HYGIENE**

The purpose of hand hygiene is to decrease the risk of transmission of infection by appropriate hand hygiene. Listed below are guidelines followed in the facility regarding hand hygiene. Complete and detailed hand hygiene policy is located in the Infection Control Program Manual.

1. Hand washing/hand hygiene is generally considered the most important single procedure for preventing healthcare-associated infections. Antiseptics control or kill microorganisms contaminating skin and other superficial tissues and are sometimes composed of the same chemicals that are used for disinfection of inanimate objects. Although antiseptics and other hand washing/hand hygiene agents do not sterilize the skin, they can reduce microbial contamination depending on the type and the amount of contamination, the agent used, the presence of residual activity and the hand washing/hand hygiene technique followed.
  - A. Hand washing

When hands are visibly soiled or contaminated with with blood or other body fluids, and in case of a patient with a spore-forming organism (e.g., *C. difficile*), after going to the restroom, and before eating, perform hand hygiene with either a non-antimicrobial soap and water or an antimicrobial soap and water.
2. Waterless Hand washing Products
  - A. If hands are not visibly soiled, use an alcohol-based hand rub for routinely decontaminating hands in all clinical situations other than those listed under "Hand washing" above.
    - ◆ When decontaminating hands with an alcohol-based hand rub, apply product to palm of one hand and rub hands together, covering all surfaces of hands and fingers, until hands are dry.
    - ◆ Follow the manufacturer's recommendations regarding the volume of product to use.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**I. Infectious Waste Management**

**I. PURPOSE:**

To decrease the potential of exposure to hazardous waste by appropriate management and disposal.

**II. POLICY:**

1. Definition of Infectious (Biomedical/Regulated) Waste

- ◆ OSHA has defined regulated waste to include:
  - ◆ Blood and blood products
  - Pathological waste
  - Microbiological waste
  - Contaminated sharps (e.g. needles, lancets, scalpel blades)

2. Needles and Sharps – all new employees will be educated during initial orientation regarding sharp safety and applicable policies and procedures. Regular staff training and education will occur annually or more often as needed. All training is documented in the Infection Control and/or Injury and Illness Prevention Program Manual.

- A. Sharps will be placed directly into impervious, rigid, leak-proof and puncture-resistant containers to eliminate the hazard of physical injury. The containers will be appropriately marked with the bio-hazard symbol and secure from tampering, in accordance with current state and federal guidelines. Sharps receptacles should be placed at eye-level to personnel or at a locale allowing for easy access and visualization near all patient care areas.
- B. Sharps containers will not be overfilled. They should be replaced when  $\frac{3}{4}$  full. When full, the Clinical Director or designated staff member will be responsible to see that the  $\frac{3}{4}$  full containers are locked, removed from the use area and placed in the bio-hazard waste (soiled utility) room. The containers will be picked up for proper disposal weekly by the contracted bio-hazard waste disposal company.
- C. Used needles will not be recapped, purposely bent or broken by hand, removed from disposable syringes or otherwise manipulated by hand. Safer sharps devices will be used whenever commercially available as a substitute for a specific non-safety-engineered device.

3. Blood and Blood Products

- A. If blood is collected in a tube and then needs to be discarded, it may be placed in the tube in the needle disposal container to be disposed of with infectious waste.
- B. Bloody fluids, e.g. bloody urine, may be discarded by carefully pouring it into the

sanitary sewer. Appropriate personal protective equipment must be worn to prevent exposure to splashing/aerosolized liquids. When possible it is preferable to close the container and place in an appropriate area for pick-up, decontamination and disposal. Solidifying products may be another way to decrease risk of contamination and exposure of employees.

4. Labeling (Biomedical/Regulated) Waste

- A. All containers must have a fixed a universal bio-hazard label. The outside contractor must also affix the address and registration number to the outside of containers.

5. Storage Of Infectious (Biomedical/Regulated) Waste

- A. Biomedical waste will be stored in the labeled soiled utility room. This location affords protection from animals, insects, and weather conditions; and minimizes exposure to patients, staff and the public.

6. Other Wastes (Non-Regulated)

- A. Fluid filled containers, e.g. Foley bags, will be emptied into the sewer prior to disposal of the container in the trash in the soiled utility room.
- B. Dressings will be bagged at the bedside and discarded in the soiled utility room trash can. Dressings are not considered infectious waste unless they are soaked and dripping wet with blood. Otherwise they can be contained in a regular, impervious trash bag and discarded with regular trash.
- C. Final disposal of waste will be in accordance with local, state, and federal regulations. The contracted waste disposal company will pick up Biomedical hazardous waste every week or more often as needed.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**J. Safe Injection Practices**

**I. PURPOSE:**

The purpose is to provide safety in administering medications by injection.

**II. GENERAL GUIDELINES**

The following recommendations will apply in the Center to the use of needles, cannula that replace needles, and, where applicable, intravenous delivery systems. This policy is intended as a general guideline and the complete and detailed policy is located in the Infection Control Program Manual.

1. Aseptic technique will be used to avoid contamination of sterile injection equipment.
2. Medications will not be administered from a syringe to multiple patients, even if the needle or cannula on the syringe is changed.
  - A. Needles, cannulas and syringes are sterile, single-use items; they will not be reused for another patient nor to access a medication or solution that might be used for a subsequent patient.
3. Fluid infusion and administration sets (i.e., intravenous bags, tubing and connectors) will be used for one patient only and disposed appropriately after use.
  - A. The Center will consider a syringe or needle/cannula contaminated once it has been used to enter or connect to a patient's intravenous infusion bag or administration set.
4. Single-dose vials for parenteral medications will be used whenever possible.
5. Medications will not be administered from single-dose vials or ampules to multiple patients or combine leftover contents for later use.
  - A. If multi-dose vials must be used, both the needle or cannula and syringe used to access the multi-dose vial will be sterile.
6. Multi-dose vials will not be kept in the immediate patient treatment area and will be stored in accordance with the manufacturer's recommendations; they will be discarded if sterility is compromised or questionable. Multi-dose vials will be used for a single patient whenever possible.
7. Bags or bottles of intravenous solution will not be used as a common source of supply for multiple patients.

**II. INTRAVENOUS THERAPY**

1. Purpose:

The purpose of this policy is to provide guidelines for intravenous therapy

2. Policy:

A. Intravenous catheters less than 3 inches may be inserted by physician, certified registered nurse anesthetist (CRNA), certified registered nurse (RN), licensed practical nurse LPN. Medical Assistants may insert an intravenous saline lock after appropriate competency testing has been completed and signed off by the Clinical Director.

- Use of intravenous catheters of 3 inches or less is for peripheral vein administration of intravenous fluids and medications.

### **III. MANAGEMENT OF CLEAN EQUIPMENT**

1. Purpose

The purpose is to ensure appropriate technique in maintaining clean equipment.

2. Policy

This policy below is a general guideline as complete detailed policies are located in the Infection Control Program Manual.

- A. Clean equipment and supplies are stored in the labeled clean utility room. Items stored off the floor. Clean equipment is always separated from soiled equipment.
- B. Items marked disposable should not be re-used. If covers are used over equipment, the soiled cover should be discarded and the item disinfected before a new cover is placed.
- C. Ideally, individual equipment should be provided for each patient. When equipment is shared, disinfection of equipment should take place prior to the next patient use.
- D. Non-critical equipment such as beds, stethoscopes, and bedside tables should be wiped down in between patients with approved disinfectant.
- E. Semi-critical equipment, those touching mucous membranes, such as laryngoscopes, endoscopes, respiratory care and anesthesia equipment require high level disinfection, with exposure time of  $\geq 20$  minutes.
- F. Use of disposable or one time patient-use products are preferred whenever possible.

### **IV. PREVENTION OF SURGICAL SITE INFECTION**

1. Purpose:

The purpose is to promote best practices for Surgical Site Infection (SSI) prevention. A complete and detailed policy is located in the Infection Control Program Manual.

A. Precision Surgery Center will work toward preventing SSIs by implementing the following components of care:

- ◆ Appropriate Use of Prophylactic Antibiotics
  - ◆ The antibiotic process measures for prevention of SSIs are these:
    - Prophylactic antibiotic received within 1 hour prior to surgical incision when indicated and required.
    - Prophylactic antibiotic selection for surgical patients consistent with national guidelines.
- Appropriate Hair Removal
  - ◆ The use of razors prior to surgery increases the incidence of wound infection when compared to clipping, depilatory use, or no hair removal at all. When hair must be removed to safely perform the procedure, it should never occur with a razor. Clippers are used to remove hair.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**3. Surveillance**  
**K. Central Sterile Processing**

**I. PURPOSE**

The policy is to promote best practices in the sterile processing work room. The Infection Control Program Manual has additional policies detailed.

**II. POLICY**

1. Personnel Apparel

Personnel shall wear proper clean OR scrub attire, hair cover, shoe covers, and masks when necessary, and use frequent hand washing. Occupational health department policies for work restrictions will be followed.

2. Housekeeping

Daily cleaning and disinfecting of floors, walls, overhead lighting, and trash removal is performed by a qualified contracted cleaning company.

3. Processing of Items

A. Disposable items should be discarded immediately after use in the nearest appropriate waste receptacle.

B. Reusable items

1. Prior to use items are checked on receipt and sterilized according to manufacturer's instructions..

2. Contaminated instruments are presoaked for decontamination and the sterilized according to manufacturer's instructions. All employees receive training on how to properly sterilize equipment and reusable supplies. Details of this training are in the Infection Control Program Manual.

**IV. CONTAINERS AND WRAPPERS**

1. The outside wrapper/container constitutes a bacterial barrier which ensures sterility of the contents.

A. Acceptable containers/wrappers for sterilization are:

- Commercially prepared sterilizer bags, not reusable.
- ◆ Commercially made disposable paper wrap.

## V. PACKAGING AND STORAGE OF SUPPLIES

1. Glass, delicate instruments and sharp points must be adequately protected with padding before final wrap.
2. A wrap within a wrap of some items is recommended for ease in dispensing onto a sterile field.
3. Placement of equipment on trays should be in order of use.
4. Articles which have surfaces in close contact must be separated for steam penetration.
5. Indicator tape must be used on all items to be sterilized. Tapes are checked after sterilization; white to black indicates sterilization, or read manufacturer's instructions.
6. Commercially sterilized products may be stored indefinitely unless otherwise stated by the manufacturer. The wrapper must be clean, intact, sealed and dust free.
7. Sterilized items and equipment are stored in the labeled clean utility/storage room on appropriate shelving. Shelf life of a packaged item is event related. Items sterilized in the central sterile department are considered sterile when the packaging is not compromised.
  - A. Sterile items are to be CAREFULLY INSPECTED for integrity of packaging prior to use. If intact, they are considered sterile.
  - B. Packaging will be considered non-sterile (compromised) when certain events occur:
    - ◆ Holes/tears
    - ◆ Broken or no seal
    - ◆ Dropped
    - ◆ Moisture
    - ◆ Unsealed dust cover
    - ◆ Broken tape
    - ◆ Lids improperly applied
    - ◆ Absence of external or internal indicators
  - C. If inspection of items reveals compromised packaging or there is any question of sterility or possible contamination, the item is reprocessed prior to use.

## VI. LOADING OF STERILIZER

1. Arrange on rack or carriage so as to present least possible resistance to the passage of steam.
2. Do not overload sterilizer.
3. When possible, sterilize like materials together. Example: Linen packs with soft goods, all hard goods with other hard goods.

4. Basins, trays, test tubes, etc., must be set on edge or upside down so air will flow out freely as steam flows in.

## **VII. STERILIZATION CYCLE**

1. For safety reasons, only an adequately instructed person may operate sterilizer.
2. Instructions must be available at all times for reference.
3. Proper temperature and exposure time must be known. Chart and temperature gauge must be checked to see that these are achieved.
4. Appropriate log will be maintained.

## **VIII. REMOVING LOAD FROM STERILIZER**

1. Load should be dry and cool when removed.
2. Care must be taken to keep sterile items separated from non-sterile items.

## **IX. MONITORING OF STERILIZERS**

1. The following CDC recommendations will be followed for monitoring sterilizers:
  - A. Use mechanical, chemical, and biologic monitors to ensure the effectiveness of the sterilization process.
  - B. Monitor each load with mechanical (e.g., time, temperature, pressure) and chemical (internal and external) indicators. If the internal chemical indicator is visible, then the external indicator is not needed.
  - C. Processed items are not used if the mechanical (e.g., time, temperature, pressure) or chemical (internal and/or external) indicators suggest inadequate processing.
  - D. Use biologic indicators to monitor the effectiveness of sterilizers at least weekly with an FDA-cleared commercial preparation of spores intended specifically for the type and cycle parameters of the sterilizer.
  - E. Detailed policies regarding positive biological indicators are in the Infection Control Program Manual.
  - G. Use biologic indicators for every load containing implantable items and quarantine items, whenever possible, until the biologic indicator is negative.

# **PRECISION SURGERY CENTER**

## **SECTION X**

### **INFECTION PREVENTION AND CONTROL PROGRAM**

#### **4. Environmental Services**

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**4. Environmental Services**  
**A. Physical Plant**

**I. PURPOSE:**

The purpose is to promote a sanitary environment for patients and staff members.

**II. POLICY:**

These policies reflect general guidelines, additional detailed policies are in the Infection Control Program Manual.

1. Frictional Cleaning

A. Thorough scrubbing will be used for all environmental surfaces that are being cleaned in patient care areas.

- ◆ Mop heads, cleaning cloths and cleaning solutions will be changed when obviously soiled.
- ◆ Cleaning methods and machines that resuspend dust from surfaces will be avoided, especially in patient care areas. Damp mopping or use of a chemically treated mop for reduction of airborne dust is generally recommended in patient care areas. **NOTE:** The microfiber mop system has demonstrated superior microbial removal compared with cotton string mops when used with a detergent cleaner.
- ◆ Hooding of floor buffers and other machinery is recommended to prevent aerosolization of dust in patient care areas.
- ◆ HEPA-filtered vacuums shall be used in patient care areas.

2. Disinfectant Fogging

Disinfectant fogging is ineffective, time consuming and potentially toxic. It is not used.

3. Routine Cleaning of Horizontal Surfaces

In patient care areas, cleaning of non-carpeted floors and other horizontal surfaces will be done daily and more frequently if spillage or visible soiling occurs.

4. Choice of Cleaning Agents for Use in Patient Care Areas
  - A. A hospital-grade disinfectant/detergent registered by the federal EPA will be used.
    - ◆ Except for alcohol (70 to 90%), antiseptic agents intended for use on skin will not be used for surface cleaning.
5. Cleaning Blood Spills
  - A. Blood spills will be cleaned using an approved blood spill kit. This kit has an EPA registered disinfectant effective against Hepatitis and HIV. The spill kit manufacturer's recommendations for cleaning and decontaminating the spill will be followed. As an alternative, a fresh 1:10 dilution of bleach may be used. Gloves and other appropriate personal protective equipment (based on the specific situation) will be worn.

### **III. INFECTION PREVENTION**

1. The Center staff play a large role in maintaining a clean healthcare environment as well as working in partnership with the infection prevention program of the Center.
  - A. Personnel will be oriented and trained in proper technique. This training takes place during new employee orientation, annually and more often if needed. It is performed by a representative from Infection Control Solutions, LLC. Documentation of all training is kept in the Infection Control Program Manual.
    - ◆ Employees will be encouraged to report infectious diseases to the Clinical Director or Administrator.
    - ◆ If disease is thought to be communicable, employee will not return to work until cleared by medical doctor and have documentation of treatment.
  - B. Routine environmental cultures are not recommended.
  - C. Disinfectants and cleaners used by Center staff and Janitorial Services will be reviewed by the Infection Control Program Coordinator.

### **IV. CARPETING IN PATIENT CARE AREAS**

1. Carpeting will be vacuumed regularly, cleaned promptly if spills occur and shampooed every 3 to 6 months or when indicated by appearance. Deep soil extraction will be provided on an as-scheduled basis.
  - A. Carpeting will not be used in heavy soiling and spillage areas.
  - B. Vacuum cleaners should be designed to filter discharged air and not resuspend dust from the floor.

### **V. TRASH**

1. Trash will be removed from all areas on a specific schedule to prevent spillage and odors.
  - A. Trash cans will be covered in patient care areas.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**4. Environmental Services**  
**B. Maintenance Program**

**I. PURPOSE:**

The purpose of the maintenance program is to ensure proper maintenance of the physical Center and its equipment.

**II. POLICY:**

The policies include:

1. Preventive Maintenance

A. The Safety and Maintenance Coordinator is responsible for maintaining the Center's ventilation systems and temperature control, along with cleaning and/or changing filters on a routine basis. The Center has a contracted company in charge of maintaining the HVAC system per regulations.

2. Contaminated Wastes

A. Contaminated wastes, needles, and blood are disposed of by contracted waste management company.

3. Barrier Precautions

A. If maintenance personnel must enter patient care areas or operating suites, they must observe the same precautions observed by nursing personnel. They should avoid direct contact with patients and personal supplies. When at all possible maintenance personnel will be scheduled when the center is not admitting patients. (i.e. before/after business hours or on weekends)

B. Any equipment/tools that become contaminated with body secretions will be cleaned upon removal from the patient care areas. Standard precautions with use of PPE (Personal Protective Equipment) will be emphasized for all outside personnel similar to that of staff members.

4. General Center Maintenance

The department will do on-going monitoring of the Center for areas needing repair and, if needed, will report to the Administrator for approval of the repairs needed.

5. Preventive Maintenance of Filters of Ice machines

A. Filters and maintenance on ice machines will be performed quarterly, or per manufacturer's instructions

6. Miscellaneous

- A. Aerators will be removed from sinks in all high-risk areas to prevent bacterial build-up of organisms.
- B. Patients should stay in their areas with their curtains closed if maintenance is being performed in hallways. Every effort will be made to schedule maintenance work outside of normal business hours.
- C. Whenever possible, this work should be contained using a dust-mist portable unit which isolates work and HEPA-filters air. When this is not possible, a temporary plastic barrier should be used with HEPA-filter inside. This area shall be sealed with masking tape to floor and ceiling. After maintenance work is complete within the enclosure, plastic and areas with dust shall be wiped off with germicide and a HEPA-filter portable vacuum may be used to remove dust. Then the enclosure can be safely dismantled. If work is performed in an operating room, the room shall be unoccupied and the door shall be closed. The room shall be thoroughly cleaned prior to reopening.
- D. Leaks and areas of moisture should be fixed promptly and drywall, ceiling tiles and other materials should be replaced, using guidelines as above. (C.)

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**4. Environmental Services**  
**C. Laundry Services**

**I. PURPOSE:**

The purpose of laundry services is to ensure a clean supply of medical linen and to protect employees who handle and process the laundry.

**II. POLICY:**

1. Routine Handling of Soiled Linen

- A. Soiled linen should be handled as little as possible and with a minimum of agitation to prevent gross microbial contamination of the air and of persons handling the linen. Standard precautions will be used by clinical and laundry staff handling the linen.
- B. All soiled linen should be bagged or put into carts at the location where used; it should NOT be sorted or pre-rinsed in patient-care areas. Linen that is saturated with blood or body fluids should be deposited and transported in impervious bags. All staff use standard precautions in handling linen, therefore all linen is handled in the same manner.
- C. Soiled linen should be removed from patient-care areas at least daily and may need to be removed more frequently depending on the amount of soiled linen that is generated.

2. Transportation of Linen

- A. All clean linens should be stored and transported in carts used exclusively for this purpose or in linen carts that have been decontaminated after being used for soiled laundry. Clean linen is NOT to come in contact with dirty linen.
- B. Laundry hampers are used solely for the transport of soiled linen. Clean linen is delivered separately and they are stored in separate rooms to prevent contamination.
- C. Staff members are only responsible for getting the soiled linen bags from the hampers to the soiled utility room, all transportation of linen is done by an outside contracted company who is responsible for washing and transportation of medical grade linen for the facility.

**PRECISION SURGERY CENTER**  
**X. INFECTION PREVENTION AND CONTROL**  
**4. Environmental Services**  
**D. Surgical Services**

**I. PURPOSE**

To promote effective infection prevention procedures in the surgical suite. Listed below are guidelines and complete detailed policies are in the Infection Control Program Manual.

**III. GENERAL GUIDELINES**

1. Remote infections will be treated prior to elective surgeries and procedures. No patient will be admitted to the center with a known or sign and symptoms of an active infection. Procedures will be postponed until after medical treatment.
2. Antimicrobial prophylaxis, if indicated, will be given with an appropriate antimicrobial agent via IV route. In most instances, a single antibiotic dose should be completed within 30-60 minutes of skin incision.

**IV. PERSONNEL**

1. Personnel will follow all occupational health policies, detailed in the Infection Control Program Manual

**V. ATTIRE FOR RESTRICTED AREAS**

1. Purpose

To decrease the source of bacterial-causing wound infection; to reduce the risk of contamination to the surgical suite, and to promote effective infection prevention.

2. Policy

A. Those entering the restricted area (designated by signage) shall wear scrub clothes. Freshly laundered scrub attire is donned in the designated staff changing area prior to entry into restricted areas. Scrub clothes will be changed when they become visibly soiled, wet with blood, sweat, etc.

B. All personnel entering the restricted area of the surgical suite are to wear closed-toed shoes donned with shoe covers and/or designated surgery shoes.

◆. Designation of Surgical Procedures

◆ The purpose is to decrease the source of bacteria causing wound infections; to reduce the risk of contamination to the surgical suite, and to promote effective infection prevention.

- The policy is that the surgical procedures performed at Precision Surgery Center are either sterile or clean.

- All personnel entering restricted areas of the surgical suite shall be in operating room attire. Operating room attire at minimum consists of scrub uniform, shoe covers, and/or designated surgery shoes. Head cover and mask are required for a majority surgical procedures and for certain pain management procedures without incision. Each has an appropriate purpose to combat external sources of contamination.. Sterile gown and gloves are added to this basic attire for scrubbed team members. Proper attire is one facet of environmental control. It also protects personnel against exposure to communicable diseases and hazardous materials.
- Patient clothing is either removed or covered prior to the patient's entry into a surgical area, as needed and per physician request to minimize contamination of the surgical environment.

## **VI. ATTIRE FOR SEMI-RESTRICTED AREAS**

1. Those entering the semi-restricted areas (outside the operating and procedure rooms) shall wear at a minimum, scrub uniform.

## **VII. PERSONNEL TRAFFIC**

1. Only authorized personnel are allowed within the surgical suites.
  - A. Proper attire is worn by all persons entering the restricted area. Signage on operating room doors indicates restricted areas.
  - B. During a surgical procedure, traffic should be controlled in and out of the room to minimize air turbulence. The door should be kept closed except for passage of necessary personnel, equipment, etc.

## **VI. SURGICAL SCRUB**

1. Surgical scrub is done before gowning and gloving for sterile procedures. Time is from two to five minutes with an appropriate antiseptic. Alternate scrubless products may be employed using the manufacturer's recommendations.
  - A. Adjust mask over mouth and nose.
  - B. Adjust water to a comfortable temperature.
  - C. Wet hands under running water.
  - D. Put several drops of scrub solution into palm of hand. Wash hands.
  - E. Clean fingernails, under running water, with a disposable nail cleaner.
  - F. Open a disposable scrub sponge and wet it thoroughly.
  - G. Scrub each hand for one and one-half minutes. Be sure to scrub between fingers and around nails.
  - H. Scrub each arm, starting at the wrist up to the elbow, for one-half minute.
  - I. Rinse hands and arms. Begin with the hand and rinse back to the elbow.
  - J. Keep the hands higher than the elbows, so that water will not run down the lower

- arms to the hands.
- K. Cut the water off with the knee.
- 2. Masks
  - A. Disposable masks are worn at all times when in the operating room during sterile procedures and should cover nose and mouth completely.
    - Masks are changed between each case and as they become moist.
- 3. Jewelry/Nails
  - ◆ Rings, watches, and bracelets will be removed.
  - ◆ Non-scrubbed personnel may wear a wedding band and watch.

## **VII. PREOPERATIVE PATIENT SKIN PREP**

1. It is the option of the physician to order the patient to shower or bathe with an antiseptic agent the night before surgery.
2. Do not remove hair unless it will interfere with the surgery. If removed, electric clippers will be used.
3. The surgical prep allows for patients' skin and surrounding site to be as free of exogenous microorganisms as possible.
  - A. Antimicrobial agent may be chosen by facilities or physician preference considering a patient's skin requirements/allergies. All gross soil and debris should be removed before prep and pre solutions and devices should be used according to the manufacturer's requirements.
  - B. Use absorbent barrier towels under the prep site to absorb drips. Do not allow solutions to pool.

## **VIII. LATEX ALLERGY (PERSONNEL AND PATIENTS)**

1. Non latex products may be used to reduce exposure to latex and to prevent latex allergy. Products should be evaluated for their effectiveness as barriers for blood borne pathogens. Employees with latex allergy should receive appropriate counseling, education and equipment.
2. Peri-operative assessment for latex should be done on all surgical patients.
3. Latex-free equipment may be gathered together for ease-of-use in a patient with latex allergy.
4. Excellent documentation/communication should be done in surgical services when a patient is identified as having a latex allergy.

## **IX. RESPONSIBILITIES OF NURSES AND OTHER STAFF**

1. Sterile items are examined for expiration date, if applicable, prior to use. Sterilized items have indefinite shelf life, when properly processed, unless the package is damaged or opened.

2. When items are outdated, contents are re-sterilized when required by manufacturer.
3. Exterior of sterile items should be examined for contamination.
  - A. Broken seal
  - B. Moisture
  - C. Discoloration
4. Sterile supply storage
  - A. Cabinet doors are kept closed.
  - B. Items are kept clean and dry.
  - C. Shelves are cleaned monthly.
  - D. Items should be stored off the floor and no higher than 18 inches from ceiling.

## **X. CLEANING RESTRICTED AREA**

1. Prior to case
  - A. Flat surfaces, overhead lights and equipment are wiped with a germicide.
  - B. Damp dust any equipment entering operating room from outside the area.
2. Between case cleaning for restricted areas:
  - A. Prior to leaving the operating room, personnel should place gown and gloves in proper receptacles.
  - B. All linen, whether clean or soiled, is deposited in linen hamper inside room.
  - C. Waste articles and soiled sponges are disposed of in plastic lined containers. Plastic bags are disposed of directly into trash collectors.
  - D. Wet linen and drapes are placed in the center of the laundry in the hamper to avoid contaminating the bag.
  - E. Disposable suction tubing is disposed of with waste articles.
  - F. Suction contents are disposed of in the soiled utility room using appropriate personal protective equipment. The disposable suction canister is disposed of with waste articles. Solidifier may be used to dispose of suction canisters.
  - G. A gloved scrub nurse places all instruments in a contamination bag. Instruments are then carried to the instrument room for reprocessing.
  - H. Lensed or fiber optic instruments are cleaned and chemically disinfected according to the manufacturer's instructions.
  - I. All flat surfaces, OR table and equipment are wiped with a germicide. This includes lights and visibly soiled areas of room.
  - J. Mop with germicide if floor is visibly soiled.

3. Semi-restricted Cleaning:
  - A. All flat surfaces, medical devices and equipment used for multiple patients are wiped with germicidal disinfectant before use, in between patients and if visibly soiled or deemed necessary. All manufacturer's guidelines are followed for appropriate cleaning solutions.
  - B. Mop with germicide if floor is visibly soiled.
4. Terminal cleaning
  - A. Terminal cleaning will be performed daily by qualified contracted cleaning company. These areas include surgical suites, sterilizer rooms, utility rooms, work rooms, scrub sinks.
  - B. Clean areas as above, adding these additional areas:
    - ◆ Clean all furniture, including casters, kick buckets.
    - ◆ Fixed and ceiling-mounted equipment and tracks.
    - ◆ Wall-mounted boxes and equipment.
    - ◆ Cabinet handles, light switches.
    - ◆ Walls and ceilings.
    - ◆ Anesthesia gas lines, etc.
    - ◆ Ventilation air returns (vacuumed and cleaned).
    - ◆ All additional areas, not included above.

## **XI. SAFETY PROCEDURES**

1. Engineering controls such as needleless systems in the surgical environment should be evaluated and a system should be in place to routinely review new safety products and equipment and implement if appropriate.
2. All needles, blades and sharps shall be disposed of in appropriate rigid containers, placed for ease of use to employee (e.g., eye-level). Containers shall not be overfilled and should be changed frequently. Sterile needle counter containers may be used for disposing of sharps during a surgical case. Whenever possible, needleless systems will be used.
3. Needles will never be broken, capped, or resheathed.
4. A “no-touch” or hands-free safety zone technique will be employed as a safe method of transferring sharps from one person to the other. This replaces hand-to-hand passing of sharps from one member of the surgical team to another. Modifications may need to be made in special circumstances with the end result being safety for all involved in the procedure.

## **XII. HOUSEKEEPING IN THE OPERATING ROOM**

1. Environmental cleaning guidelines will be the same for all cases and surgical procedures. All cases are considered contaminated.
2. Standard precautions (mask, gown, gloves, etc.) will be used for technicians cleaning the operating rooms.

3. Housekeeping will provide terminal cleaning and all other cleaning as outlined in the policy per the qualified contracted cleaning company.

### **XIII. BACTERIOLOGICAL MONITORING**

1. Culturing is done as deemed necessary by the Infection Control Program Coordinator. Reports are reviewed by the Governing Body at quarterly meetings when necessary.

### **XIV. PRESSURE DIFFERENTIAL AND AIR EXCHANGE**

1. The operating room maintains:
  - A. Adequate air exchanges per hour to remove microorganisms in the room.
    - ◆ At least 15 inside air changes per hour and
    - ◆ Three outside air changes per hour.
  - B. Temperature range of 68°–73°F (20°–23°C).
  - C. Humidity control of 30%–60%.
  - D. Humidity and temperature should be checked by designated surgical staff each morning prior to surgery. Each operating suite has its own humidifier with a digital read and control.

### **XV. STERILIZERS**

1. Steam
  - A. The preferred method for sterilizing critical surgical instruments, not damaged by heat, moisture, steam, or pressure.
    - ◆ Conventional—250°F or 121°C for 30 minutes.
    - ◆ Pre-vacuum sterilizer—270°–275°F (132°C) for four minutes.
2. “Flash” steam sterilization
  - A. Rapid steam penetration is accomplished by items placed in tray or container. Lack of biological indicators and unwrapped status of instruments raises some concerns for safety. Equipment for flash steam sterilization may be placed at point-of-use for sterilizing clean equipment that cannot be sterilized, packaged, or stored prior to use. Time: Four minutes at 270°F.
  - B. Flash sterilization of implanted surgical devices is performed only when it is unavoidable. Flash sterilization is not utilized for convenience or as an alternative to purchasing additional instruction sets or to save time.
3. ETO (Ethylene Oxide)
  - A. Low-temperature sterilant. Used for moisture-sensitive medical devices. Acceptable for penetrating device lumens.
  - B. 1.5 stages: preconditioning and humidification, gas introduction, evacuation, air washes. Two-and-a-half hours’ aeration—eight to 12 hours at 50°–60°C.
4. Other low temperature sterilization systems

- A. Peracetic acid sterilization
  - B. Monitoring (Mechanical, chemical, and biological indicators)
    - ◆ Mechanical—cycle time and pressure charts to be kept.
    - ◆ Chemical—indicates that temperature has been met. Color change noted.
    - ◆ Biological—spores used to monitor efficacy.
      - ◆ B. stearothermophilus spores (105) are used to monitor steam sterilization, liquid peracetic acid sterilizer.
      - B. subtilis spores (106) are used to monitor ETO, hydrogen peroxide gas plasma and dry heat.
5. Cleaning and maintenance
- A. Sterilizers will be cleaned each morning prior to first load being run by wiping interior surfaces with a mild detergent solution. After cleaning the surfaces will be rinsed thoroughly with water.
  - D. Follow manufacturer's directions for specific cleaning requirements of equipment.
