*November 2016
Edition 1.0*

Data for the graphs and tables on the following pages are provisional and may be updated as additional information becomes available.

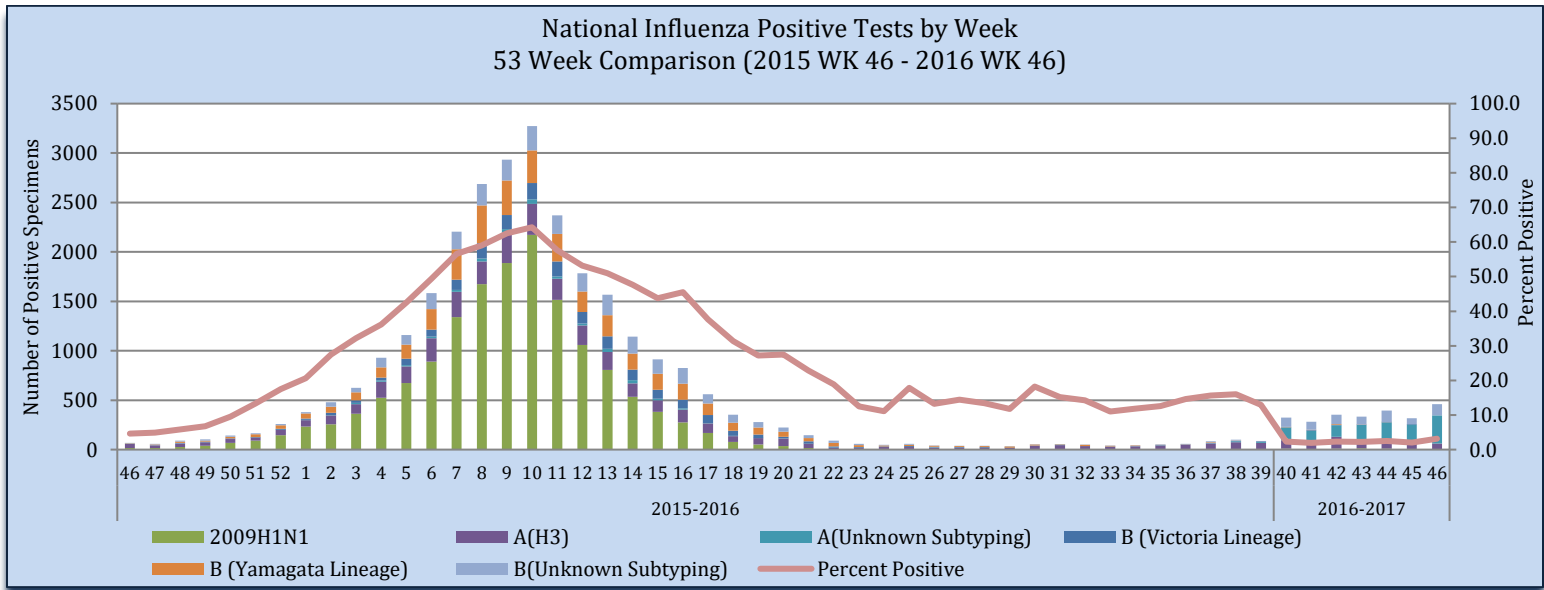

Purpose

The purpose of this report is to provide an overview of and statistics for the influenza season in Nevada for the local public health authorities, sentinel providers and the public.

Influenza-Like Illness Network Surveillance (ILINet)

Respiratory specimens are tested for influenza by the World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NRVESS) collaborating laboratories by sub-type. During week 46, there were 14,681 specimens collected and tested for influenza, of those 460 were positive (3.1%).

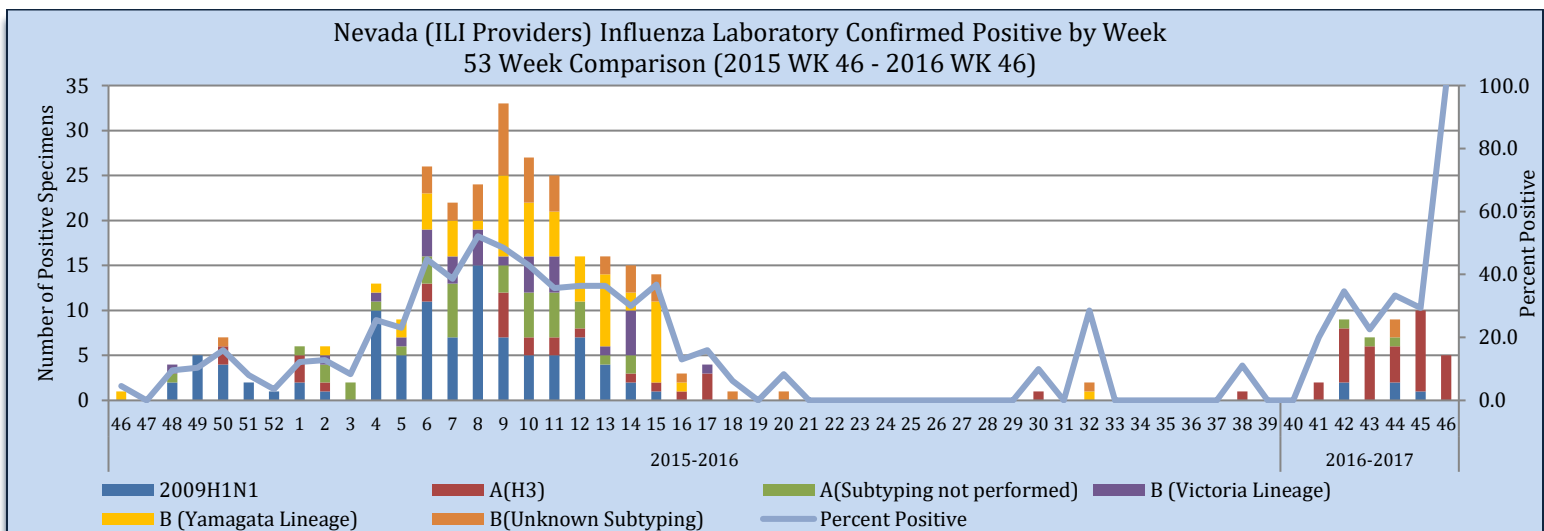

Figure 1

Source of Data: CDC: FluView Weekly Report.

The Nevada total includes laboratory tests for all Nevada residents including out of state laboratories. During week 46, there were 5 specimens collected and all were positive (100%).

Figure 2

Source of Data: CDC: ILINet.

Nevada State Public Health Laboratory (NSPHL) has tested 51 specimens for influenza from sentinel providers, of which there have been 35 were positive (68.6%). Southern Nevada Public Health Laboratory (SNPHL) has tested 20 specimens this season of which there have been 0 positives. Nationally, there have been 104,756 specimens sent to the WHO and NERVSS laboratories of which 2,462 have been positive or 2.4%. The national numbers in Table 1 are reflected in Figure 1. The state of Nevada data in Table 1 is reflected in Figure 2. The Nevada total includes laboratory test for all Nevada residents including out of state laboratories.

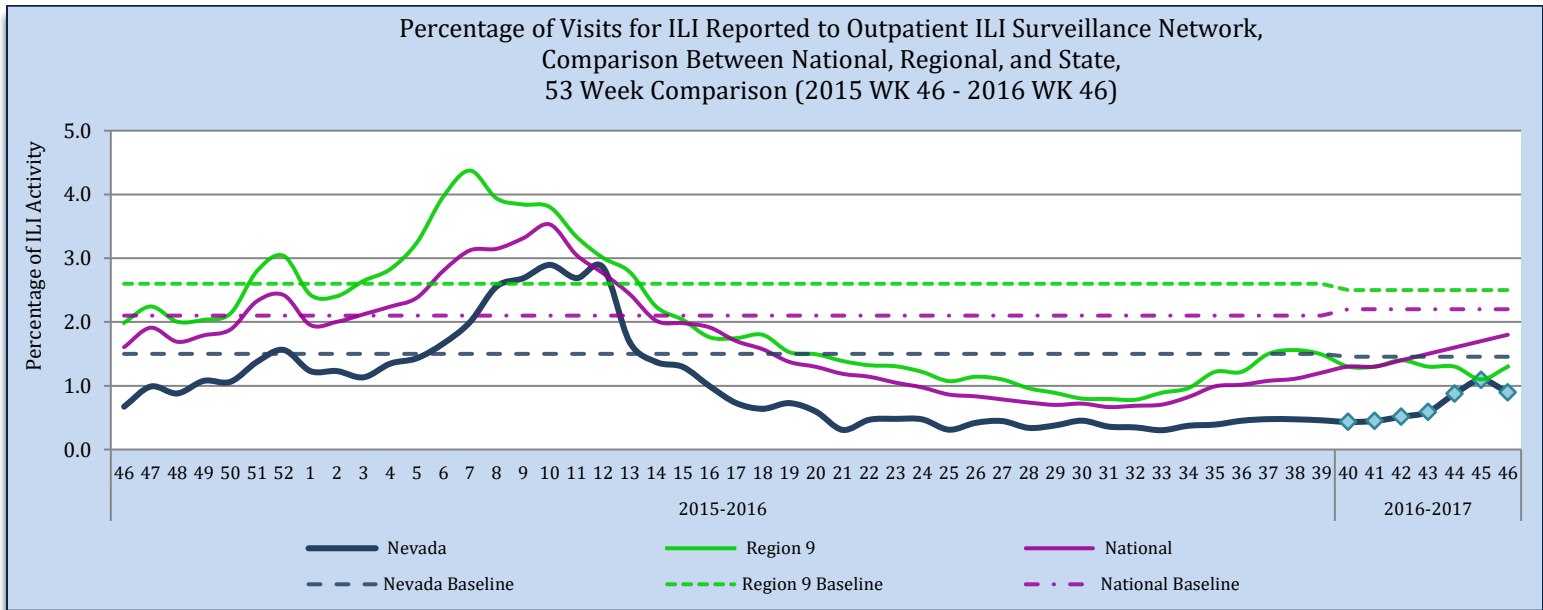

Table 1

ILINet Surveillance: Influenza Specimens Tested State and Nationally										
	NSPHL	SNPHL	State of Nevada (Week 46)		State of Nevada (Season)		National (Week 46)		National (Season)	
			#	%	#	%	#	%	#	%
Specimens Tested	51	20	5		141		14,681		104,756	
Positives to Influenza	35	0	5	100	42	29.8	460	3.1	2,462	2.4
Influenza A:	35	0	5	100	40	35.2	346	75.2	1,782	72.4
A (2009 H1N1)	4	0	0	0.00	5	12.5	3	0.9	59	3.3
A (H3)	31	0	5	100	32	80.0	57	16.5	567	31.9
A (Sub-typing not performed)	0	0	0	0.0	3	7.5	286	82.7	1,154	64.8
Influenza B:	0	0	0	0.0	2	4.8	114	24.8	680	27.6
B (Victoria Lineage)	0	0	0	0.0	0	0.0	0	0.0	26	3.8
B (Yamagata Lineage)	0	0	0	0.0	0	0.0	0	0.0	18	2.6
B (Sub-typing not performed)	0	0	0	100	2	100	114	100	636	93.5

Source of Data: CDC: FluView Report and CDC: ILINet.

Influenza-like illness (ILI) Surveillance Network has each sentinel providers report the number of patients that meet the ILI case definition and number of patients that visit the provider weekly. The “percentage of visits” is the number of ILI patients divided by the total number of patients visit per week. Nevada’s ILI percentage of visits to providers for week 46 is 0.9% and is below the state baseline 1.5%. Region 9 ILI percentage for week 46 is 1.3% and is below the region baseline 2.5%. Region 9 includes the following states/territory: Arizona, California, Guam, Hawaii, and Nevada. The national ILI percentage for week 46 is 1.8% and is below the national baseline 2.2%.

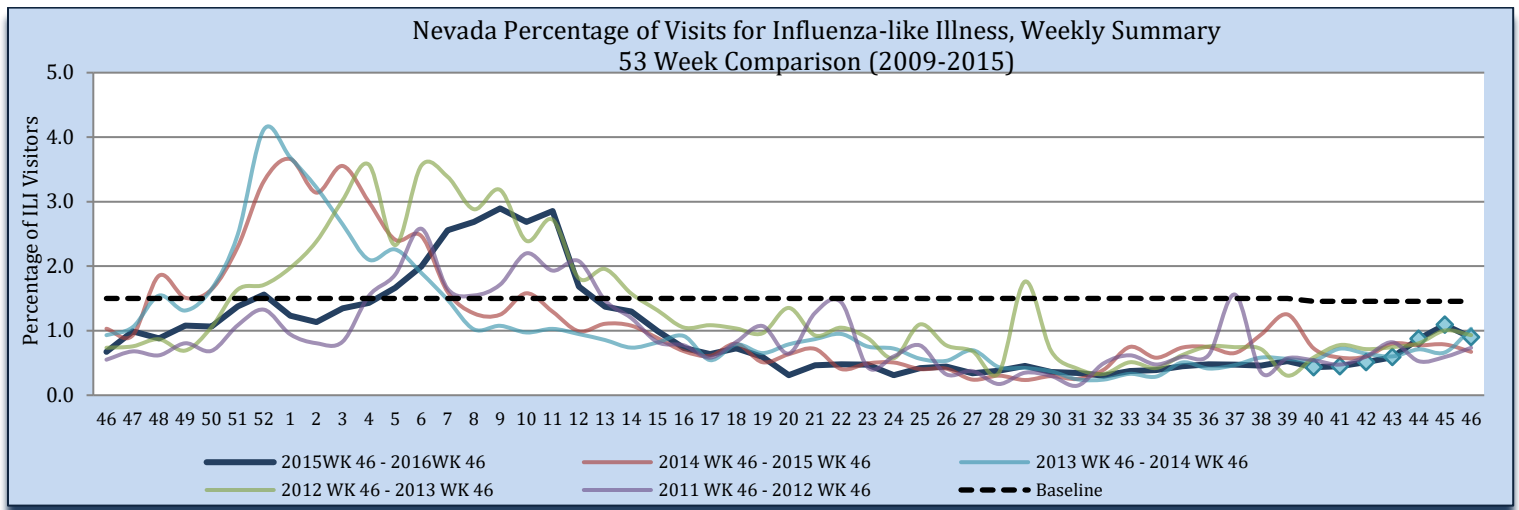

Figure 3

Source of Data: CDC: Flu View Report and CDC: ILINet.

During week 46, 0.9% of visits to sentinel providers were due to ILI; this is lower than the 2015-2016 influenza season (0.7%). There were 17,159 patients seen by ILI providers during week 46, of which 154 patients presented with ILI; week 46 of 2015, there were 118 patients seen with ILI (17,564 total patients seen).

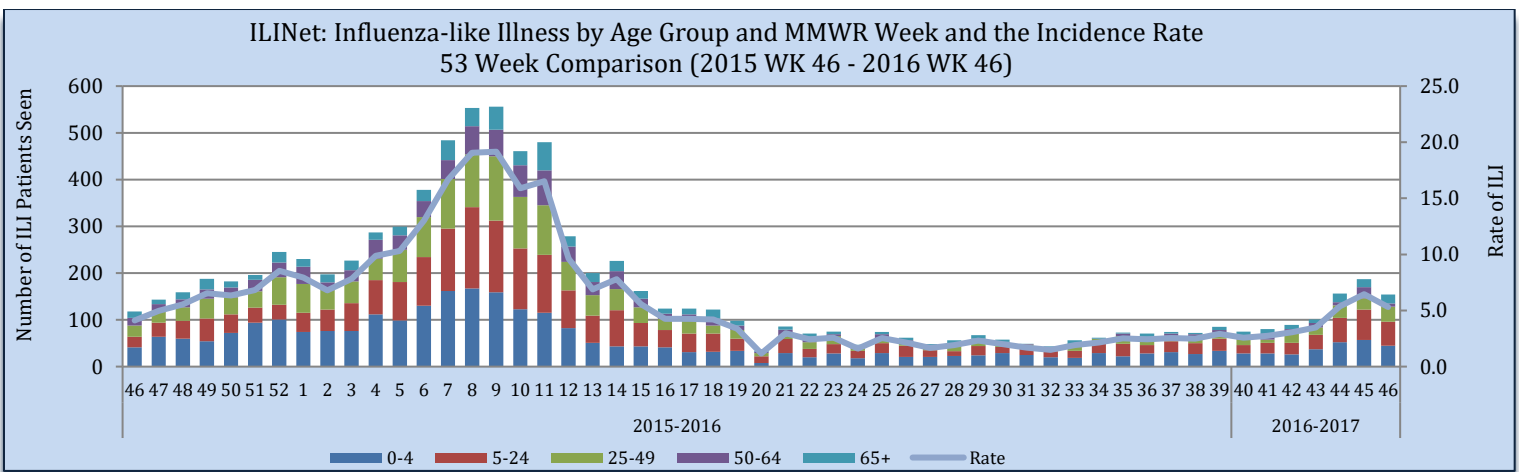

Figure 4

Source of Data: CDC: ILINet.

Influenza-like Illness is reported by age groups, during week 46, patients age 5-24 were the greatest number of patients seen with ILI, at 51 patients seen. The rate for week 46 is 5.3 per 100,000 population. The rate is calculated by the number of patients presented with ILI, divided by the state population, multiplied by 100,000. The estimated state population for 2016 is 2,902,853.

Figure 5

Source of Data: CDC: ILINet.

Influenza Positive Surveillance (NBS and NETSS)

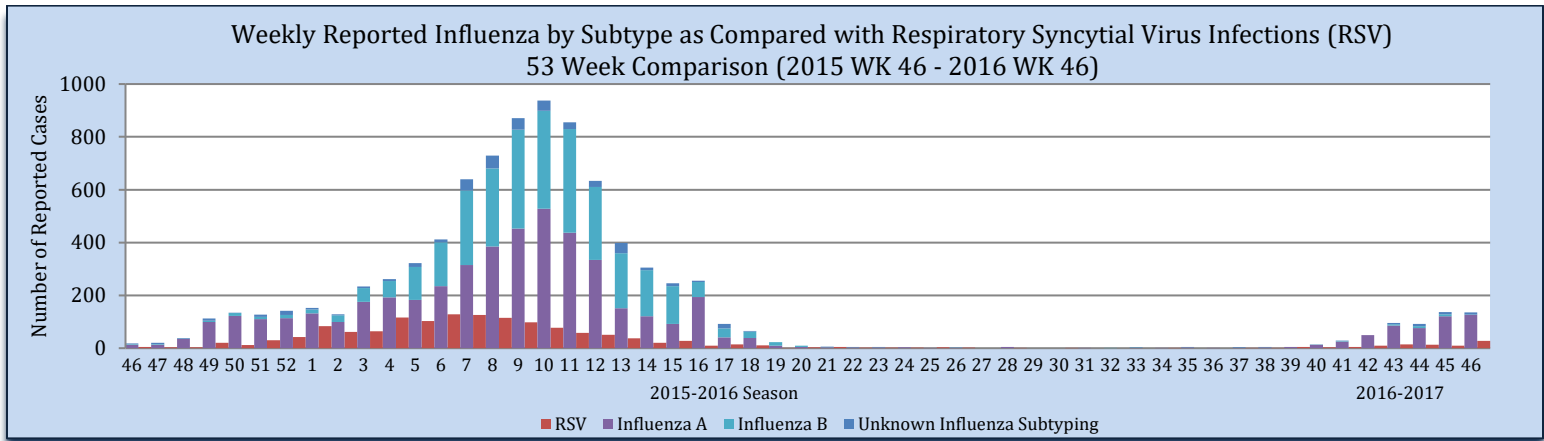

Positive cases of influenza are reported to the state health authority for surveillance purposes. Table 2 and Figure 6 reflect all positive influenza cases reported to the state. Types of influenza testing include commercial rapid diagnostic test (rapid), viral culture, fluorescent antibody, enzyme immunoassay, RT-PCR (PCR), and Immunohistochemistry. The two most common test types in Nevada are Rapid and PCR tests. During week 46, there were 135 influenza cases reported to the state, 126 influenza A and 1 influenza B.

Table 2

Reporting Jurisdiction	Reported Influenza Cases by County Jurisdiction and Influenza Type							
	Current Week (Week 46)				Cumulative Influenza Season			
	A	B	Unknown	Total	A	B	Unknown	Total
Carson City Health and Human Services	26	0	0	26	53	0	0	53
Rural Community Health Services	15	1	0	16	90	5	0	95
Southern Nevada Health District	8	0	0	8	80	8	7	95

Hospitalizations

There were 13 hospitalization associated with influenza reported to the state health authority for week 46.

Table 3

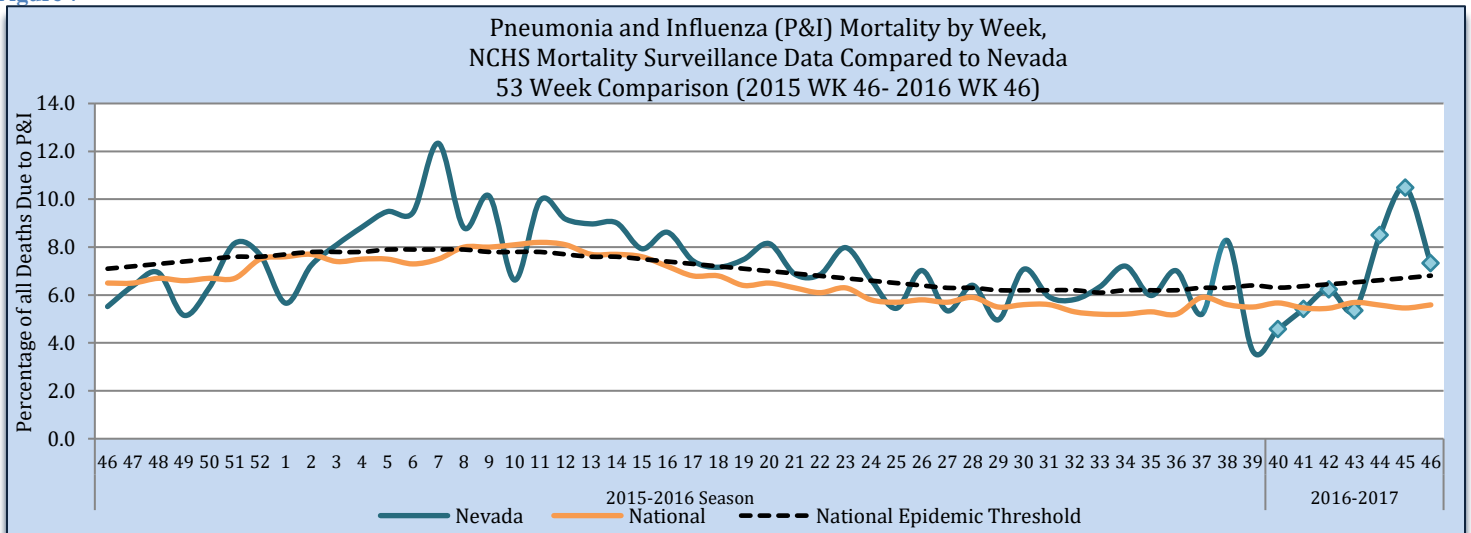

Reporting Jurisdiction	Influenza Hospitalizations			
	Current Week (Week 46)		Cumulative Influenza Season	
	#	%	#	%
Carson City Health and Human Services	0	0.0	0	0.0
Rural Community Health Services	0	0.0	0	0.0
Southern Nevada Health District	6	46.2	18	38.3
Washoe County Health District	7	53.8	29	61.7
State of Nevada	13	100	47	100

Pneumonia and Influenza (P&I) Mortality Surveillance

The Pneumonia and Influenza (P&I) mortality percentage is the deaths, where Pneumonia or Influenza is listed as the underlying or contributing cause of death, divided by the total deaths in Nevada for each week. As of November 29, there were 23 P&I deaths and 314 total deaths for week 46 in Nevada. The P&I mortality percent for Nevada is above the threshold at 7.3% (threshold 6.8%). Nationally, the P&I mortality is below the national epidemic threshold at 5.6% for week 46.

Technical Notes

- Influenza-like illness (ILI): a fever greater than or equal 100°F with cough and/or sore throat
- Percent positive: The number of positive influenza laboratory tests divided by the total number of tests performed.
- Incidence rate is per 100,000 population as estimated by the state demographer.
- Data are subject to changes.

This report contains information from national and state-level data sources. Influenza surveillance data is collected by a various systems, including:

- Influenza-like Illness Network (ILINet): a sentinel surveillance system in collaboration with the Centers for the Disease Control and Prevention (CDC) where outpatient providers report ILI information weekly.
- National Electronic Telecommunication System for Surveillance (NETSS): a system whereby data is transmits to CDC. Influenza data collected through NETSS does not provide influenza sub-typing information.
- National Electronic Disease Surveillance System (NEDSS): a system for collecting data and monitoring disease trends and outbreaks.
- NEDSS Based System (NBS): an implementation of the NEDSS standards. It provides a secure, accurate, and efficient means of collecting, transmitting, and analyzing public health data.
