Introduction

The Behavioral Risk Factor Surveillance System (BRFSS) is an annual telephone survey conducted independently in the U.S. within each of the 50 states along with the District of Columbia, Puerto Rico, Guam, and the Virgin Islands. The survey is conducted continuously throughout the year, and is a collaborative effort between the Centers for Disease Control and Prevention (CDC) and each state's Department of Health. Participation in the survey is voluntary, and all data collected are confidential. The state of Nevada compiled 2,895 respondents during the 2004 BRFSS comprising 1,402 adult males and 1,493 adult females.

The following report summarizes results from the 1992-2004 Nevada BRFSS survey. Since sample data was used in this report, all data in this report have been weighted to reflect the statewide population. The weighting process was done to adjust for the under-representation of certain population sub-groups in the sample.

The data is presented by various core question topics, providing the original question asked related to the specific topic. A time series graph was included (when available) to compare trends across even/odd time periods (1992-2004) among Nevadans compared to the National median (included when available). A series of charts are provided displaying the distribution of prevalence among selected demographic variables followed by key points of interest.

For each topic, a table of common demographic items and risk factors (age, gender, weight status, etc.) were selected to be cross-tabulated with the main questions of interest. The tables within the report include the number of respondents (N), the weighted percentage, and the 95% confidence interval (C.I.) for the behavior rates within each item. Confidence intervals provide a basis for quality analysis and comparability. Percentages for two different sub-groups can be determined as statistically significant if the confidence intervals do not overlap.

Due to sampling and weighting procedures, the Center for Disease Control and Prevention (CDC) recommends caution be taken when interpreting prevalence rates if the unweighted sample size for the denominator was less than 50. Small sample sizes (less than 50) are considered to be very unreliable. The tables within this report include certain subgroups with denominator less than 50 and therefore cannot be interpreted with confidence.

NOTES ABOUT TABLES IN THIS REPORT

- Use caution in interpreting if sample size for the denominator is less than 50.
- N = Number of Respondents, % = Percentage, C.I. = Confidence Intervals (at 95 percent probability level).
- Percentages are weighted to population characteristics.
- U.S. median value of prevalence estimates are compiled from the 50 U.S. states and outlying territories, or the number of participating states when not all entities used the question.
- Missing values for demographic variables:

For 2004: Of the 2,895 survey participants, 352 did not provide income information, 29 did not provide their race, 10 did not provide their education level, 11 did not provide marital status, and 13 did not provide their employment information.

Summary of Statistics

The following section presents overall prevalence among the total population and by gender for the 2004 Nevada Behavioral Risk Factor Surveillance Survey (BRFSS). The various sections include state-specific, population-based prevalence estimates of various behaviors, health trends, medical conditions, and preventive health care practices among Nevada adults. All results from the 2004 Nevada BRFSS presented in this report are weighted.

2004 Overall Estimates:

Selected Risk Factors	2004 Nevada Estimates (%)	2004 US Median (%)
Health Status (Fair/Poor)	18.10%	15.10%
No Health Care Coverage	21.60%	14.80%
No leisure time physical activity	24.20%	22.80%
Obese (BMI \geq 30.0)	21.10%	23.10%
Overweight (25.0 \leq BMI $<$ 30.0)	38.90%	36.80%
Binge Drinking	18.00%	14.90%
Heavy Drinking	6.90%	4.80%
Current Smoking Status	23.20%	20.80%
Ever Asthma	12.60%	13.20%
Current Asthma	7.10%	8.20%
Diabetes	6.40%	7.00%
Disability (limited in any way)	16.50%	NA
No Flu Shot within the past 12 months (age 65+)	41.00%	32.40%
No Pneumonia vaccine ever (age 65+)	33.30%	33.80%

2004 Male and Female Estimates:

Selected Risk Factors	Male 2004 Nevada	Male 2004 US	Female 2004 Nevada	Female 2004 US
	Estimates (%)	Median (%)	Estimates (%)	Median (%)
Health Status (Fair/Poor)	17.30%	13.50%	19.00%	16.30%
No Health Care Coverage	22.60%	16.30%	20.70%	13.00%
No leisure time physical activity	22.80%	20.70%	25.70%	25.10%
Obese (BMI \geq 30.0)	22.90%	23.60%	19.10%	22.50%
Overweight (25.0 \leq BMI<30.0)	47.10%	44.30%	29.90%	29.20%
Binge Drinking	26.80%	23.00%	9.10%	7.50%
Heavy Drinking	9.30%	5.70%	4.40%	4.10%
Current Smoking Status	24.70%	23.00%	21.70%	19.00%
Ever Asthma	10.80%	11.60%	14.40 %	14.80%
Current Asthma	4.90%	6.10%	9.40%	9.90%
Diabetes	7.10%	7.10%	5.70%	6.30%
Disability (limited in any way)	16.20%	NA	16.80%	NA
No Flu Shot within the past 12 months (age 65+)	38.80%	29.80%	42.90%	32.40%
No Pneumonia vaccine ever (age 65+)	32.80%	35.90%	33.80%	33.80%

Highlights from 2004 Nevada BRFSS Data

- ◆ Eighteen percent (18.1%) of Nevada adults considered their self-perceived health status as 'fair or poor' in 2004
- ◆ Twenty percent (21.6%) of Nevada residents reported they did not have health care coverage during part or all of 2004. Nevada ranks fourth in the nation as having the most amount of residents without health care coverage, 2004
- ◆ Almost one quarter or 24.2% of Nevada's adult population reported no leisure time physical activity in 2004
- ◆ Over one-third (38.9%) of Nevada residents were considered overweight
- ◆ Males were significantly more likely than females to be at risk of being overweight, 47.1% vs. 29.9% respectively
- ◆ Non-smokers were significantly more likely than smokers to be at risk of being overweight or obese, 62.2% vs. 52.7% respectively
- ◆ Nevada adults ranked 4th highest in the nation for prevalence of heavy drinking (6.9%) and 6th in the nation for binge drinking (18.0%)
- ◆ The prevalence of current smokers among Nevada adults was twenty-three percent (23.2%); nearly half (49.3%) of those who currently or formerly smoke tobacco have tried to quit smoking for one day or longer during the past twelve months
- ◆ Nevada reports the fourth lowest prevalence of asthma in the nation, 2004; Seven percent (7.1%) of Nevada adults reported current asthma status
- ◆ The prevalence of diabetes in Nevada adults was reported to be a little over six percent (6.4%)
- ◆ Fifty-three percent (53.5%) of adults in Nevada have never been tested for HIV, 2004
- ◆ Women age 40-49 were less likely than women age 50 and older to have a mammogram within the past 2 years, 2004 (61.2%).
- ◆ Eighty-four percent (84.8%) of women in Nevada age 18 and older have had a pap smear test within the past three years, 2004

Definitions and Technical Notes

Definitions:

The following definitions listed apply to the terms and standards used within the context of this report. Each of the following definitions was determined according to CDC/BRFSS guidelines.

General Health Status: The Centers for Disease Control and Prevention has defined health-related quality of life as “an individual’s or group’s perceived physical and mental health over time.” This question is considered to be a reliable indicator of a person’s general health and well being. “At risk” includes respondents who report having fair or poor health, “Not at risk”-respondents report having excellent, very good, or good health.

Moderate Physical Activity: Moderate physical activity is defined as engaging in moderate physical activity such as brisk walking, bicycling, vacuuming, gardening, or anything that causes small increases in breathing or heart rate for an average of 30 minutes per occasion on 5 or more days per week. “At risk” includes respondents reporting no physical activity, “Not at risk”- respondents who report any level of physical activity or exercise.

Vigorous Physical Activity: Vigorous physical activity is defined as engaging in vigorous physical activity such as running, aerobics, heavy yard work, or anything else that causes large increases in breathing or heart rate that promotes the development and maintenance of cardio-respiratory fitness for 20 or more minutes per occasion on 3 or more days per week.

Weight Status: Body Mass Index (BMI) is the measurement of choice many obesity researchers’ and other health professionals use to evaluate weight status. BMI is a calculation based on height and weight. $BMI = \text{weight in pounds} \times 703 / (\text{height in inches} \times \text{height in inches})$. The National Institutes of Health identify overweight as a BMI of 25-29.9, and obesity as a BMI of 30 or greater. “At risk” includes respondents whose BMI is greater than or equal to 25, “Not at risk”- respondents whose BMI is less than 25.

Alcohol Consumption: ‘Binge’ drinking is defined as those who had 5 or more drinks on at least one occasion during the past month (“At risk”). ‘Heavy’ drinking is defined as: men who averaged = 2 drinks per day during the past month and women who averaged = 1 drink per day during the past month (“At risk”). Respondents who did not report heavy or binge drinking in the past 30 days are recognized as “Not at risk.”

Tobacco Use: Current smoker is defined as anybody who reported having smoked at least 100 cigarettes in his/her entire life and smokes everyday or some days now. “At risk” includes respondents that reported having smoked at least 100 cigarettes in a lifetime and currently smoke, “Not at risk”- Current Non-smokers.

Definitions and Technical Notes Cont.

Asthma: 'History of Asthma' is defined as ever having been told they have asthma. 'Current Asthma' is defined as currently living with asthma.

Disability: The World Health Organization's *International Classification of Impairments, Disabilities, and Handicaps*, defines disability as "any restriction (resulting from an impairment) of ability to perform an activity in the manner or within the range considered normal for a human being." Impairment is defined as "any loss or abnormality of psychological, physiological, or anatomical structure or function."

HIV Awareness: HIV awareness questions look at behaviors to avoid and determine if they are HIV positive. "At Risk-Participated in High Risk Behavior" includes: use of intravenous drugs in the past year, treatment for a sexually transmitted or venereal disease in the past year, given or received money or drugs in exchange for sex in the past year, and anal sex without a condom in the past year.

Hypertension: Hypertension is recognized when the mean systolic and diastolic blood pressure is measured to be greater than or equal to 140 and 90, respectively. "At risk" includes respondents who have ever been told they have high blood pressure, "Not at risk" those who have not been told they have high blood pressure.

Cholesterol: High cholesterol is recognized as a total level greater than or equal to 200 milligrams per deciliter (mg/dl). "At risk" includes respondents who have been tested and told they have high cholesterol, "Not at risk" includes respondents who have been tested for cholesterol and have not been told they have high cholesterol.

Immunization: The influenza and pneumonia vaccines are recommended to adult's age 65 years of age and older on a yearly basis as a part of routine health maintenance. The data compiled in this report provides the risk factor for adults age 65 and older. "At risk" for flu shot and pneumonia includes respondents age 65 or older who have reported not having a flu shot in the past 12 months, and not ever having a pneumonia shot, "Not at risk"- those age 65 or older who reported having a flu shot in the past 12 months, and ever having a pneumonia shot.

Technical Notes:

This report is a comprehensive analysis of key questions asked in the 1992-2004 BRFSS survey. Calculations of the prevalence estimates and confidence intervals were performed using SAS statistical computing software program designed for analyzing data.

The calculation used to determine confidence intervals was completed by SAS/STAT survey procedures with respect to primary sample units and stratum.

The percentages represented in the tables are read row-wise: [numerator=Health condition variable, denominator = Demographic variable or Risk factors.]. However, in Table 1 & 15 (i.e. the demographic tables) percentages are read column-wise: [numerator=Demographic variable, denominator = Total, Male, Female.].

Demographics

GENDER

The following charts compare the age and sex composition of the sample to that of the state providing an indication of how representative the sample is to the Nevada states' population data (from the NV State Demographer's Office). The weighting procedure (with respect to CDC calculations) is designed to compensate for minor discrepancies between the two. However, if there are large differences between the sample and the population, the results may not be representative. The sample population in 2004 had similar proportions of men (50%) and women (49%) as was found in the population. The 2004 Nevada sample was made up of 1,493 women and 1,402 men. The differences between the sample and the population were minimal enough for the 2004 sample that the weight procedure should have compensated for any bias resulting from them.

Figure 1A 2004 NV BRFSS Sample by Sex and Age

Figure 1B 2004 Nevada Population

*The 18-19 year age group has an interval of only two years because the BRFSS sample is specific to adults 18 and older.

Demographics

Table 1 -Demographics

Groups		Total			Male			Female		
		N	%	C.I. (95%)	N	%	C.I. (95%)	N	%	C.I. (95%)

General Health

How would you say your general health is? Excellent, Very Good, Good, Fair, or Poor

- ◆ Eighteen percent (18.1%) of Nevada adults responded as “fair” or “poor” health in 2004
- ◆ A higher percentage of adults of Hispanic race/background (31.4%) report “fair” or “poor” health status compared to other race groups
- ◆ Adults with less than a high school education were significantly more likely than adults with a high school diploma and higher education to report “fair” or “poor” health status
- ◆ Percentages of “fair” or “poor” health status were significantly higher among adults whose household income is less than \$35,000 per year compared to those who make more than \$35,000 per year
- ◆ Nevada adults without health care coverage were significantly more likely than those with health care coverage to report “fair” or “poor” health status, 29.2% vs. 15.3% respectively

- Denominator includes all survey respondents excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 2,895 across some categories for some variables.
- 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval.
- "N"= response numbers and "% "= Weighted prevalence rates

Health Care Coverage

Do you have any kind of health care coverage including health insurance, prepaid plans such as HMO's or government plans such as Medicare?

- ◆ Slightly over twenty one percent (21.6%) of Nevada adults reported having no health insurance
- ◆ A significantly higher percentage of adults 18 to 34, compared to adults 35 and older, were without any kind of health care coverage in 2004
- ◆ Adults with less than a high school education were significantly more likely than those with a high school education or higher educational level to report "no" health care coverage (55.9%)
- ◆ Nevada adults at risk of smoking (30%) were significantly more likely than non-smokers (19.2%) to report no health care coverage

Exercise and Physical Activity

In the past 30 days, other than your regular job, did you participate in any physical activities or exercise such as running, calisthenics, golf, gardening, or walking for exercise?

- ◆ Almost one quarter of Nevada adults (24.2%) reported “no” participation in leisure time physical activity in 2004
- ◆ Nevada adults with a college degree were significantly more likely than adults with less than a college degree to participate in leisure time physical activity (87.3%)
- ◆ The prevalence of not having leisure time physical activity was similar among adults who were and were not at risk of overweight and obesity, 24.9% and 22.8% respectively

- Denominator includes all survey respondents excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 2,895 across some categories for some variables.
- 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval.
- "N"= response numbers and "% "= Weighted prevalence rates

Weight Status

About how much do you weigh without shoes? About how tall are you without shoes? (Overweight and obesity are composed variables from the previous questions. See definitions section in appendix for further explanation.)

- ◆ Over half of Nevada adults (60.0%) were at risk of overweight or obesity in the year 2004
- ◆ Male adults were significantly more likely than females to be at risk of overweight or obesity (70.0% vs. 49.1%)

Alcohol Consumption

'Binge' drinking is defined as: those who had 5 or more drinks on at least one occasion during the past month ("At risk"). 'Heavy' drinking is defined as: men who averaged two (2) or more drinks per day during the past month and women who averaged one (1) or more drinks per day during the past month ("At risk").

- ◆ The prevalence of binge and heavy drinking was significantly higher among males than females; (male vs. female- binge: 26.8% vs 9.1% and heavy: 9.3% vs. 4.4% respectively)
- ◆ According to the 2004 survey, as age increased the prevalence of binge drinking decreased

Tobacco Use

Do you now smoke every day, some days, or not at all? During the past 12 months, have you stopped smoking for one day or longer because you were trying to quit smoking?

- ◆ Almost one-quarter of Nevada adults (23.2%) said they were current smokers, and almost half of those who are current smokers said they have tried to quit smoking for one day or longer in the past year (49.3%)
- ◆ The prevalence of smoking shows decreases as education level increases

- Denominator includes all survey respondents excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 2,895 across some categories for some variables.* Denominator only includes those who said yes to currently smoking.
- 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval.
- *N= response numbers and %= Weighted prevalence rates

Asthma

Have you ever been told by a doctor, nurse or health professional that you have asthma? Do you still have asthma?

- ◆ The estimated proportion of Nevada adults who currently have asthma was 7.1% in 2004
- ◆ A higher proportion of women than men reported currently having asthma (9.4% vs. 4.9% respectively)

Disability

Are you limited in any way in any activities because of physical, mental, or emotional problems? Do you now have any health problem that requires you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone?

- ◆ Sixteen percent (16.5%) of adults in Nevada have some type of limitation, and five percent (5.4%) of adults in Nevada use some type of aid equipment
- ◆ The proportion of adults with a disability increases as education level increases
- ◆ Adults with an annual household income of less than \$15,000 per year have an increased likelihood of having a disability, compared to those who have an income greater than \$15,000 per year

Consequently, the sample sizes may not total 2,895 across some categories for some variables. 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval. N= response numbers and %= Weighted prevalence rates

Immunization

During the past 12 months, have you had the flu shot? Have you ever had the pneumonia shot? (Only includes adults age 65 and older)

- ◆ Forty-one percent (41.0%) of Nevada adults age 65 and older reported in 2004 that they had not had a flu shot within the past year
- ◆ Thirty-three percent (33.3%) of Nevadans age 65 and older answered “no” to having ever had a pneumonia vaccination
- ◆ There were no significant differences between sex, income or education level and not having had the flu shot or pneumonia vaccination

Figure 12A No Flu Shot During the past 12 months (Adults 65+), US vs. NV 1993-2004

Oral Health

Adults who have not visited the dentist within the past 12 months and reported having lost six or more permanent teeth (removed because of tooth decay or gum disease)

- ◆ 3.5 out of every ten adults in Nevada did not visit the dentist within the past year (35.5%)
- ◆ Adults 18 to 24 were least likely to visit the dentist in the past year; as age increases likelihood of dental visits increase
- ◆ Prevalence of visiting the dentist within the past year increases with education level
- ◆ The most common reason for adults not visiting the dentist was due to cost, followed by no reason to go

- Denominator includes all survey respondents (*except for those who lost 6 or more teeth, denominator includes adults age 65+) excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 2,895 across some categories for some variables.
- 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval.
- "N"= response numbers and "%"= Weighted prevalence rates

Women's Health

Women age 40 and older that have had a mammogram in the past two years

Women aged 18 and older that have had a Pap smear test within the past three years

- ◆ Almost seventy percent (69.3%) of women age 40 and older have had a mammogram within the past 2 years; The national health objective for 2010 is at least 70% of women age 40 or older to have had a mammogram within the preceding two years
- ◆ Significantly lower proportions of women have had a mammogram if they: report fair/poor health (57.6%) (versus good/excellent health (72.8%)); have no health care coverage (51.0%) (versus have coverage (72.2%)); smoke tobacco (58.1%)(versus non-smokers (72.9%))
- ◆ 84.8% of adult females age 18 and older have had a Pap smear test in the past three years

- *Denominator includes all female survey respondents age 40 and older and **Denominator includes all female survey respondents age 18 and older: excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 1,493 across some categories for variables.
- 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval.
- "N"= response numbers and "%"= Weighted prevalence rates

2003 Nevada BRFSS Highlights and Data Tables

- ◆ The 2003 BRFSS survey was made up of 2,973 respondents, comprised of 1,535 females and 1,438 males
- ◆ The survey sample showed proportionate representation of the population across race/ethnic groups
- ◆ Seventeen percent (17.5%) of Nevadans reported “fair or poor” as their self perceived health status; the proportion of adults with “fair or poor health status” increases to significant differences as income decreases
- ◆ Twenty percent (20.5%) of Nevadans reported they did not have health care coverage during part or all of 2003; the proportion of adults with health insurance increases as education levels increase
- ◆ Nearly one in four Nevadans or 24.7% reported no leisure time physical activity in 2003
- ◆ Nearly three in five Nevadans or 58.5% were at-risk of overweight and obesity according to the 2003 survey
- ◆ Over one-third (37.3%) of Nevada adults reported overweight status in 2003
- ◆ Males in Nevada were significantly more likely than females to engage in binge drinking, 27.3% vs. 8.3% respectively
- ◆ In 2003 one in four Nevadans or 25.2% said they were current smokers, the national median showed 22% of adults smoked in 2003
- ◆ The prevalence of current asthma among Nevada adults was 6.6%, slightly lower than the national median, 7.5% in 2003
- ◆ Males in Nevada were less likely than females to have been tested for HIV/AIDS (44.4% vs. 51.5%)
- ◆ In 2003, the prevalence of Nevadans with high blood pressure was slightly lower than the national median overall, for males, and for females
- ◆ Over one-third or 36.8% of Nevadans reported high cholesterol in 2003

Denominator includes those people who have ever visited a dentist or dental clinic and who have teeth excluding those who responded "do not know/not sure" or who refused to respond. Consequently, the sample sizes may not total 2,973 across some categories for some variables. 95% of the time, the "true point estimate" will fall between the lower and upper bounds of the 95% Confidence Interval. "N"= response numbers, and "% "=Weighted prevalence rates

Consolidated Tables for Each Year 1992-2004

The following section includes tables for the years of 1992 through 2004 presenting information on prevalence (%) of selected variables cross matched with demographic variables and risk factors.

For the following tables:

N= Cell size (Numerator)

%= Weighted Percentage

Denominator includes all survey respondents except those with missing, don't know, and refused answers.

Use caution in interpreting results if the unweighted sample size for the denominator was <50.

Data Tables by County 2002-2004 (or the most current available three years)

The following section reflects aggregated survey responses from the ***last available three years*** of the Nevada BRFSS 1992-2004 data. County rates were calculated from aggregated state data where possible. Aggregated sample sizes were large enough to allow the calculation of counties prevalence rates. Among those counties with sample sizes still too small to calculate individual (county-level) prevalences, samples were combined to provide multicounty prevalence rates. That rate will be used as the prevalence for each county within that multicounty region.

1. Clark
2. Washoe
3. *Other Counties (multicounty)*

Other Counties:

Carson City Government, Churchill County, Douglas County, Elko County, Esmeralda County, Eureka County, Humboldt County, Lander County, Lincoln County, Lyon County, Mineral County, Nye County, Pershing County, Storey County, and White Pine County.

For the following tables:
N= Cell size (Numerator)
%= Weighted Percentage

Denominator includes all survey respondents except those with missing, don't know, and refused answers.

Use caution in interpreting results if the unweighted sample size for the denominator was <50.

Consolidated Tables by County for Each Available Year 1992-2004

The following section includes tables for the years of 1992 through 2004 presenting information on prevalence (%) of selected variables cross matched with the State of Nevada and its counties.

For the following tables:

N= Cell size (Numerator)

%= Weighted Percentage

Denominator includes all survey respondents except those with missing, don't know, and refused answers.

Use caution in interpreting results if the unweighted sample size for the denominator was <50.
