INTRODUCTION

The *Nevada HMO Industry Profile* is published quarterly and contains valuable information regarding Nevada's licensed health maintenance organizations (HMOs). This profile is useful to healthcare providers and others interested in managed care services available within the state.

Each quarterly report presents company specific organizational data, as well as, quarterly enrollment data arranged by county. Enrollment data are categorized by enrollee population and product (i.e. Commercial Plan, Medicare, Medicaid, Nevada Check Up). Market penetration information is also provided.

Second Quarter 2002 HMO Activity Highlights

- This first quarter report of 2002 (as well as previous quarterly reports from 2000 and 2001) can be accessed online at, as well as downloaded from, the following web address: <http://health2k.state.nv.us/vs>

TABLE NOTES

General Notes on the Tables:

- Distinctions between Zeros, Dashes, & DNR

To increase readability, the following data presentation conventions have been used:

1. Zero: no enrollees within a county for which a Certificate of Authority (COA) has been issued to the HMO.
2. Dash (-): the HMO does not have a COA to operate in the county.

When used in “Total”, “Difference”, or “Percent Change” columns, this convention represents invalid mathematical calculations due to an HMO not having a COA in the county or counties, and therefore not having a valid total number of enrollees for the calculation of interest.

(e.g., in Table III, no HMO has a COA to operate in Eureka county. Therefore the “County Total” column is represented with a dash (-) to indicate an invalid mathematical total.)

In Table I, convention indicates HMO does not provide service to that population category.

3. DNR: Did not report.

- Enrollment Data Reporting and Sources

All enrollment data presented within the *Nevada HMO Industry Profile* are derived from quarterly enrollment reports submitted by each HMO. Geographical allocation of enrollment data is based upon the following guidelines:

- a. Commercial plan enrollment data are reported according to the location of the employer.
- b. Medicare, Medicaid, and Nevada Check Up enrollment data are allocated according to the residence of the enrollee.

- Market Penetration Calculations and Data Sources

In general, market penetration is determined by dividing the number of enrollees by the potential enrollment population of the geographic area. The *HMO Industry Profile* uses the following conventions:

1. *Commercial category:* population (county or statewide) is comprised of age group zero to 64.
2. *Medicare category:* population (count or statewide) is comprised of age group 65 and greater.
3. *Medicaid category:* population is comprised of estimated Medicaid eligible for Clark & Washoe Counties and statewide.

The Nevada State Demographer, University of Nevada, Reno, provides data for the commercial and Medicare category 2000 population projections.

The Nevada State Welfare Division provides data for Medicaid eligible participants.

- Market Penetration Calculations and Data Sources (continued):

The population estimates for medicaid eligibles were derived from monthly reports whose source is NSWDC Report WL-00427. The statewide totals were compiled by NSWDC from case-load reports for October, November, and December, 2001 and the total medicaid eligible statewide figure was an average of the totals for each month involved.

- Preferred Provider Organization (PPO) Data

Important note: PPOs and HMOs are two distinctively different approaches to healthcare coverage. Because of the differing approaches, service delivery of the two health care plans may also be dissimilar. Additionally, an HMO and a PPO may both be part of the total healthcare product line from the same insurance company.

The PPO information presented within the *Nevada HMO Industry Profile* is not an exhaustive listing of all PPOs that are operating within Nevada. The data presented herein are solely to provide an

- Preferred Provider Organization (PPO) Data (continued):

indication of other managed care activities with which the organization may be involved. The data are presented as reported by the HMO.

Specific Notes on the Tables:

- Table VIII

Rural Column – represents the other 15 counties within the state. Currently, Medicaid rural enrollment is too low to justify development of a separate reporting table.

Market Penetration Statistics - only valid for statewide total. County totals were not available at time of printing due to new recording systems being used by the NSW. The statewide total Medicaid eligible data were an average of Medicaid eligibles for April, May, and June 2002.

- Table XI

Important note: The underlying data for this table were derived from Tables I-IX. Previous notes contained under ***“General Notes on the Tables”*** should be considered in interpreting this data.

Rural Medicaid enrollment is too low to justify reporting the rural eligibility data necessary to develop market penetration information.

- Table XIII

Important note: HMO of Nevada did not report PPO enrollment by region, rather by statewide total. For the Table’s totals to mathematically agree by row and column summation, Clark County was arbitrarily designated as the county to place total enrollment figures.
