

NEVADA VITAL STATISTICS 2001-2003

Kenny C. Guinn, Governor

Michael J. Willden, Director
Department of Human Resources

Alex Haartz, MPH, Administrator
Nevada State Health Division

Bradford Lee, MD, Health Officer
Nevada State Health Division

Nevada Vital Statistics, 2001-2003

March 2005

**Emil DeJan, MPH
Bureau Chief
Bureau of Health Planning and Statistics**

**Wei Yang, PhD
State Chief Biostatistician and Director
Center for Health Data and Research
Nevada State Health Division
Nevada State Department of Human Resources**

ACKNOWLEDGEMENTS

Written, Compiled and Edited by:

Joleen Nemeth, BS, Health Resource Analyst
Tim Pollard, BA, Health Resource Analyst
Andrea Rivers, BA, Injury Biostatistician
Wei Yang, PhD, State Biostatistician & Director
Center for Health Data and Research

Special Thanks to:

Emil DeJan, MPH, Bureau Chief
Bureau of Health Planning and Statistics

Jean Gunter, Manager
Office of Vital Records

State Registrar:

Alex Haartz, MPH, Administrator
Nevada State Health Division

THE NEVADA REGISTRATION SYSTEM

The Bureau of Health Planning and Statistics is the official government entity that collects, processes, analyzes, and maintains the State of Nevada's vital records. These responsibilities are delegated to the Office of Vital Records and the Center for Health Data and Research within the Bureau, of which each section's primary responsibilities, as related to the State's vital records, are as follows:

The Office of Vital Records has two distinct components:

- The Vital Records Section where public requests for certified copies and amendments of said copies are processed.
- The Quality Control/Data Entry Section where the records are checked for completeness and accuracy and then entered into databases on the State mainframe computer system.

The Center for Health Data and Research analyzes, prepares and publishes reports based on statistics from the vital statistics databases and also provides technical assistance to users of these data.

Births in all counties are recorded electronically, directly with the State Registrar; except in Clark and Washoe Counties, where they are initially processed and then transmitted to the State Registrar. Responsibility for the filing of the **birth certificate** lies with the hospital medical records or nursing personnel, the physician, midwife, or other attendant.

The vital events of deaths, marriages and divorces are first recorded at the county level before being forwarded to the State Registrar. Funeral Directors, or persons acting as such, are legally charged with filing **death certificates** and **fetal death certificates**. County Recorders are responsible for forwarding the original **marriage certificates**, or computerized tapes containing marriage data, to the Office of Vital Records for maintenance of a data file. The County Clerk of each county is required to submit a **report of decree of divorce/annulment** to the Office of Vital Records within a month of the occurrence.

Abortions are reported directly to the Office of Vital Records for encoding and entering into the State's database. **Induced abortion reports** are completed and sent in directly to the Office of Vital Records by the physician, hospital or clinic.

All records are checked for completeness and accuracy, and then given a State file number before they are encoded and entered into the State's databases. Birth and death records are kept on permanent file for certification use and amendment when necessary by the public and various government agencies. Marriage, divorce, and abortion records are not maintained as separate records after entry into the State's database.

When a certificate is found to be inaccurate or incomplete, personnel follow up with the providing entity in accordance with NRS 440.150 to make the necessary corrections and/or improvements to make the record complete and satisfactory. So, it should be noted that the quality of data presented in this report is directly related to the completeness and accuracy of the information contained on the certificates.

This report summarizes data compiled from original birth, death, stillbirth and induced abortion, marriage and divorce records filed with the Office of Vital Records as discussed in NRS 440. Standard forms recommended by the National Center for Health Statistics are used for all records, with the exception of marriage and divorce.

Users of this publication are welcome to offer their comments and/or suggestions concerning format, content, technical aspects of the publication, or requests for additional data by submitting them to:

For Information Regarding Certificates:

Office of Vital Records
Bureau of Health Planning and Statistics

DEFINITIONS

- ABORTION:*** The termination of a human pregnancy with an intention other than to produce a live birth or to remove a dead fetus. (NRS 442.240)
- DEATH:*** A person who has sustained irreversible cessation of all functioning of the brain, including the brain stem, is considered dead. (National Center for Health Statistics (NCHS))
- DIVORCE:*** Legal termination of a marriage. (NCHS)
- FETAL DEATH:*** A birth that occurs after at least 20 weeks gestation in which the child shows no evidence of life after complete birth. (NRS 440.070)
- INFANT DEATH:*** Deaths occurring to individuals of less than one year of age. (NCHS)
- LIVE BIRTH:*** A birth in which the child shows evidence of life after complete birth. A birth is complete when the child is entirely outside the mother, even if the cord is uncut and the placenta is still attached. Evidence of life includes heart action, breathing, or coordinated movement of voluntary muscles. (NRS 440.030)
- LOW BIRTH WEIGHT:*** A birth wherein the birth weight is less than 2,500 grams (5 lbs 8 oz). (NCHS)
- MARRIAGE:*** A formal mutual relation of husband and wife that is filed with the County Recorder in the county where the license was issued. (NCHS)
- NEONATAL DEATH:*** Death occurring to infants in the first 27 days of life. (NCHS)

OCCURRENCE

(COUNTY OF): Data allocated by the location of where the event actually occurred. (NCHS)

PERINATAL DEATH: Death occurring to a fetus of 20 weeks gestation or more, including infant deaths occurring within 27 days of life. (NCHS)

PRENATAL CARE: The care received by the mother from a health professional or midwife during the length of the pregnancy. (NCHS)

POST-NEONATAL DEATH:

Death occurring to infants less than one year of age, but older than 27 days. (NCHS)

RESIDENCE (COUNTY OF):

The usual residence of the individual. For deaths, this is defined as the usual residence of decedent as indicated on the certificate. For births and fetal deaths, the residence is defined as the usual place of residence of the mother. (NCHS)

S.I.D.S.: Death due to Sudden Infant Death Syndrome. (NCHS)

TEEN PREGNANCY: The number of live births, abortions and fetal deaths to women 19 years old and younger. (NCHS)

UNDERLYING CAUSE OF DEATH:

The disease or condition which gave rise to the chain of morbid events leading to death, including the circumstances of an accident or violent event that produced a fatal injury. (NCHS)

VERY LOW BIRTH WEIGHT:

A birth wherein the birth weight is less than 1,500 grams (3 lbs 4 oz). (NCHS)

FORMULAS FOR RATES

$$\textit{Abortion Rate} = \frac{\text{Number of Abortions X 1,000}}{\text{Total Live Births}}$$

$$\textit{Age-Adjusted Mortality Rate} = \frac{E_T}{S_T} \times 100,000$$

$$E_T = \text{Total Expected Number of Deaths} = \sum_{i=1}^k E_i$$

$$S_T = \text{Total Standard Population} = \sum_{i=1}^k S_i$$

$$CR = \text{Crude Mortality Rate} = \frac{N_T}{P_T} \times 100,000$$

$$P_T = \text{Total State Population} = \sum_{i=1}^k P_i$$

$$N_T = \text{Total Number of Deaths} = \sum_{i=1}^k N_i$$

$$E_i = \text{Age-Specific Expected Number of Deaths} = \frac{N_i}{P_i} \times S_i$$

S_i = Standard Age-Specific Population

k = Number of Age Groups

$$\textit{Cause-Specific Rate} = \frac{\text{Number of Deaths from a Specific Cause X 1,000 or 100,000}}{\text{Population}}$$

$$\textit{Crude Birth Rate} = \frac{\text{Number of Births X 1,000}}{\text{Population}}$$

$$\textit{Crude Death Rate} = \frac{\text{Number of Deaths X 1,000 or 100,000}}{\text{Population}}$$

<i>Divorce Rate</i>	=	$\frac{\text{Number of Divorces and Annulments X 1,000}}{\text{Population}}$
<i>Fertility Rate</i>	=	$\frac{\text{Number of Live Births X 1,000}}{\text{Female Population (15-44)}}$
<i>Fetal Mortality Rate</i>	=	$\frac{\text{Number of Fetal Deaths X 1,000}}{\text{Total Number of Live Births and Fetal Deaths}}$
<i>Infant Mortality Rate</i>	=	$\frac{\text{Number of Infant Deaths X 1,000}}{\text{Total Number of Live Births}}$
<i>Low Birth weight Rate</i>	=	$\frac{\text{Number of Low Birth weight Births X 1,000}}{\text{Total Number of Live Births}}$
<i>Marriage Rate</i>	=	$\frac{\text{Number of Marriages X 1,000}}{\text{Population}}$
<i>Neonatal Mortality Rate</i>	=	$\frac{\text{Number of Neonatal Deaths X 1,000}}{\text{Total Number of Live Births}}$
<i>Perinatal Mortality Rate</i>	=	$\frac{\text{Number of Perinatal Deaths X 1,000}}{\text{Total Number of Live Birth and Fetal Deaths}}$
<i>Post-Neonatal Mortality</i>	=	$\frac{\text{Number of Infant Deaths - Neonatal Deaths X 1,000}}{\text{Total Number of Live Births}}$
<i>Teen Pregnancy Rate</i>	=	$\frac{(\text{Age Specific number of Live Births} + \text{Abortions} + \text{Fetal Deaths}) \text{ X 1,000}}{\text{Female Age-Specific Population}}$

TECHNICAL NOTES

POPULATION DATA:

The Nevada population data used in this report are based on the database established by the Nevada State Demographer's Office and the Nevada Department of Taxation, as well as 2000 Census data from the US Bureau of the Census. Due to these changes in methodology, rates for subgroups published in this edition may not match or be directly comparable to past years, and should be used with caution when compared to other published rates.

MARRIAGE AND DIVORCE DATA:

Marriage and Divorce data for the year 2001 were not available for this report due to incomplete reporting.

ABORTION DATA:

This report contains a special section on year 2000 abortion data, which were not available for the 2000 edition of the Nevada Vital Statistics Report.

RACE AND ETHNICITY:

In conjunction with the US Bureau of the Census and the National Center for Health Statistics definition, Hispanics are an ethnic group, not a race, and may include all races within their ethnic classification. In this report, Asian-Pacific Islander, Black, Native-American, and White exclude Hispanics; therefore, no duplicate counting exists. However, when National data are used for comparison, methodologies may differ by including Hispanic and Non-Hispanic populations within separate racial groups, as well as including different racial groups within the Hispanic ethnic group.

COUNTY COMPARISONS:

The population size of the counties in Nevada is widely varied, from one thousand to over one million. Because of these differences, caution should be used when interpreting rate comparisons for counties in Nevada.

REGIONAL COMPARISONS:

Approximately eighty-six percent (86%) of Nevada's population resides in the urban areas of Clark (Greater Las Vegas area) and Washoe (Greater Reno/Sparks area) Counties. In this report, data are frequently stratified into three regions within the State as follows: Clark County, Washoe County, and All Other Counties (all remaining 15 counties).

AGE ADJUSTMENT METHODS AND STATISTICAL ANALYSIS OF MORTALITY RATES:

In order to make meaningful comparisons between mortality rates for residents from different regions or different racial/ethnic groups, differences in the age characteristics of each population should be taken into account. For example, one would expect that the mortality rate for heart disease would be high in a population that has a high proportion of older individuals.

Age-adjustment is the application of the age-specific rates in a population of interest to a standardized age distribution in order to eliminate the differences in observed rates that result from age differences in the populations being compared. This adjustment is usually done when comparing two or more populations at one point in time or one population at two or more points in time.

In this report, the death rates are age-adjusted to the 2000 US Standard distribution population (relative age distribution of the 2000 enumerated population of the United States totaling 1,000,000). This method produces the rate that would be expected if the population of interest had the same population age distribution as the standard population.

Adjusted rates were calculated in the following manner:

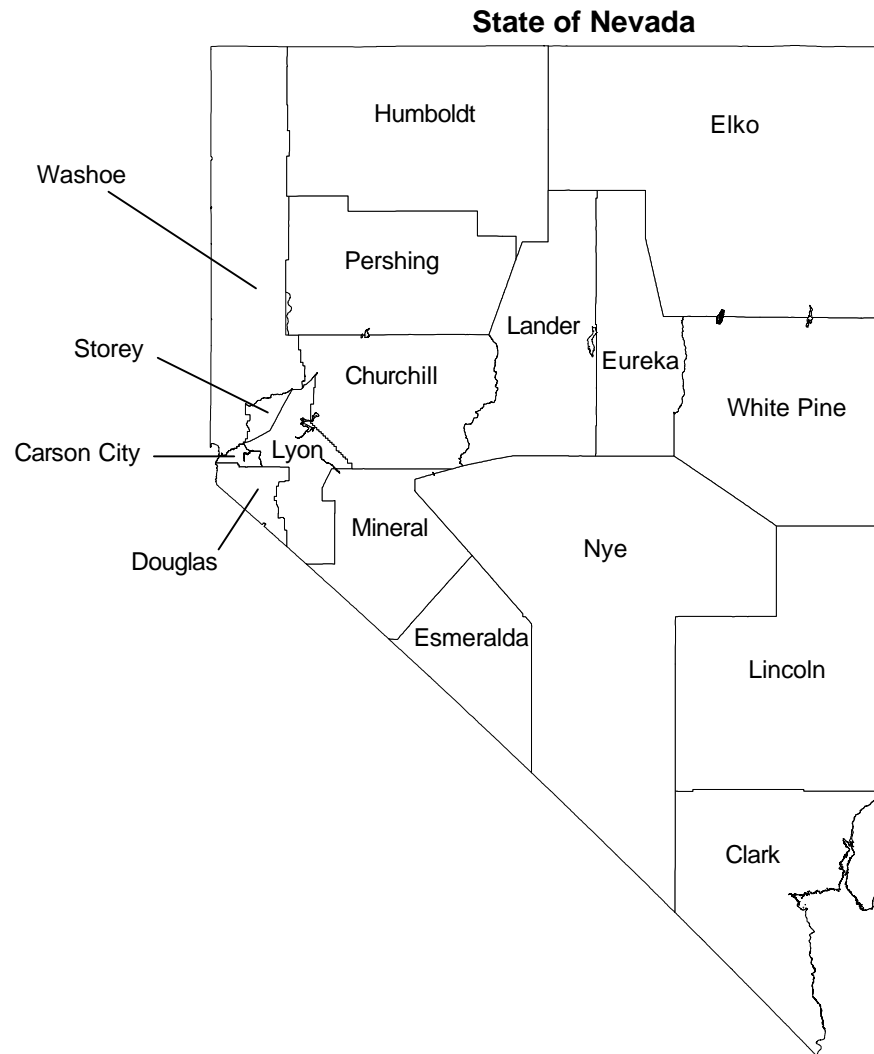

- The expected number of deaths in each age group was determined by multiplying the age-specific rates (N_i/P_i) by the corresponding age-specific standard population total (S_i).
- Age adjusted rates (AAR) per 100,000 population were calculated by dividing the expected total number of deaths (E_i) by the total standard population and multiplying by 100,000.

Nevada continues to see an increase in the total number of Births, Deaths and Divorces that occur each year. However, Nevada's Birth Rate (per 1,000 population) decreased slightly (0.34%) from 14.72 in 2001 to 14.67 in 2002, and remained constant in 2003. Nevada's Crude Death Rate (per 100,000 population) dropped from 763.7 in 2001 to 753.8 in 2002, a 1.3% decrease. The rate then increased 2.3% to 771.3 in 2003. Once age-adjusted comparisons were made, the Mortality Rate (per 100,000 – 2000 US Standard population) for Nevada decreased 1.7% from 2001 (910.9) to 2002 (895.3), then increased 1.9% in 2003 (912.3). Although Divorce data for the year 2001 are not available, the Divorce Rate (per 1,000 population) did experience a decline from 2000 (7.4) to 2002 (7.0). Then, in 2003, that rate increased to 7.2. Nevada still remains among the highest in the nation for Divorce Rates. This standing may reflect Nevada's relatively lenient state laws, combined with the state's small population base, resulting in disproportionately high rates.

Anthony and Emily remained on top as the most popular male and female names, respectively, for 2001, 2002 and 2003. Anthony was then followed by Jacob, Christopher, Michael and Daniel in 2001; 2002 put Daniel in front of Jacob with Christopher coming in after Michael. 2003 had Jacob back in the number two spot followed by Michael, Joshua and Jose. Emily was followed by Ashley, Madison, Hannah and Alexis in 2001; for 2002, Ashley and Madison switched as did Hannah and Alexis. Ashley reclaimed the number two spot, for 2003, then came Emma, Alexis and Madison, respectively.

GENERAL HIGHLIGHTS

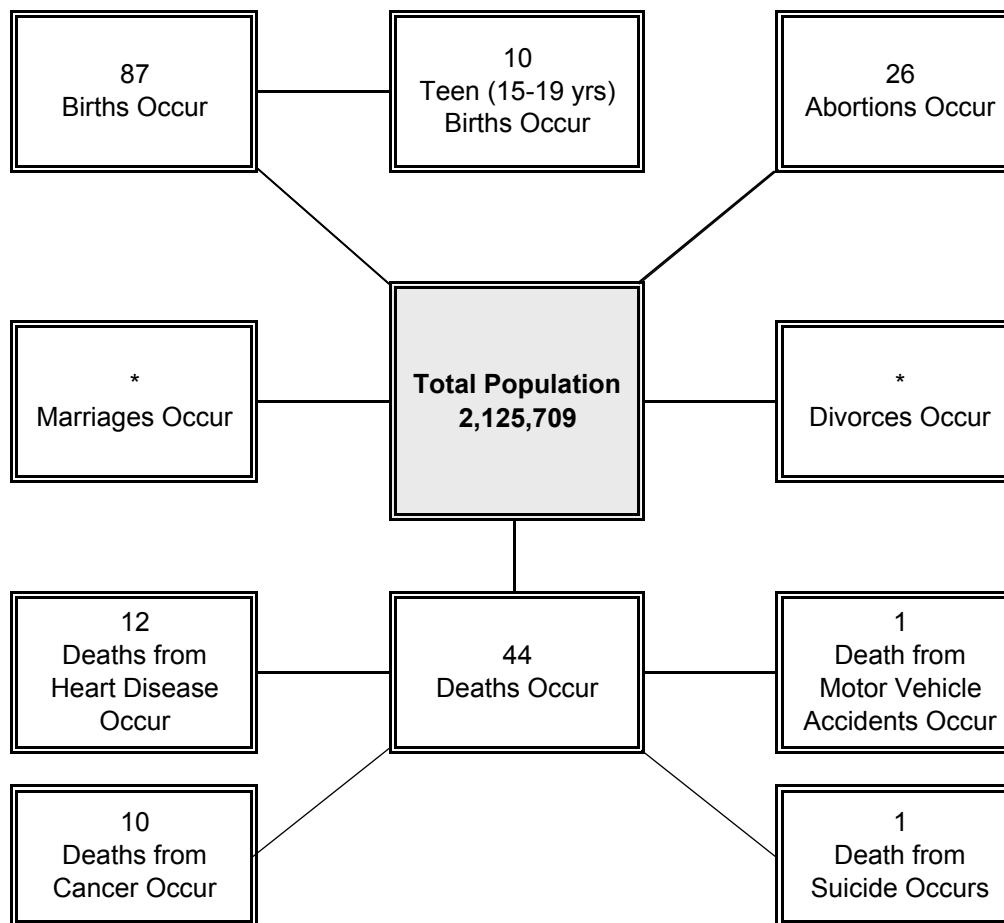

Figure 1. Nevada Counties

Population by Counties and Years

County	2001	2002	2003
Clark	1,485,855	1,560,653	1,620,748
Washoe	353,271	357,776	372,813

1999	1,941,238	28,911	14.89	14,841	764.51	937.60	147,530	---	14,152	7.29
2000	1,996,754	30,130	15.09	14,864	744.41	956.38	134,908	---	14,804	7.41
2001***	2,125,709	31,297	14.72	16,233	763.65	910.88	---	---	---	---
2002	2,210,648	32,423	14.67	16,664	753.81	895.28	143,067	---	15,478	7.00
2003	2,290,436	33,605	14.67	17,666	771.29	912.34	143,618	---	16,379	7.15

*The Age-adjusted Mortality rate is age-adjusted to the 2000 US Standard population and is per 100,000 population.

**Nevada's marriage rate cannot be reasonably computed because of the large number of out of state and unknown state residents who are married in Nevada each year; "Marriages" represents all marriages performed in Nevada.

*** 2001 Marriage and Divorce data not available due to reporting errors.

Note: Historically, Nevada's Divorce Rates have consistently been the highest in the nation, which may reflect relatively lenient state laws, combined with Nevada's small population base, resulting in disproportionately high rates.

**Table 2. Top 25 Baby Names by Gender,
Nevada Residents, 2001**

Rank	Male			Female		
	Name	Number	Percent of Male Births	Name	Number	Percent of Female Births

In 2003, Nevada was again the fastest growing state in the nation for the 17th consecutive year (US Census Bureau News). In 2001, Nevada's population was estimated at 2,125,709. The population grew to 2,210,648 in 2002 and increased again to 2,290,436 in 2003. The state's population is projected to surpass 2,797,000 by 2010. Clark and Washoe Counties accounted for more than 86% of the state's residents in 2001, 2002 and 2003.

The top three age groups of Nevada's population were 35-44, 25-34 and 5-14 for both 2001 and 2002. In 2003, the top three were 35-44, 25-34 and 15-24. The population was almost evenly split between males and females; however, there was a slight increase in the male population during those three years.

The White-Non Hispanic population continues to be the majority in Nevada with 65.4% (2001), 64.6% (2002) and 63.7% (2003). The Hispanic population continued to grow throughout 2001 to 2003 and went from 20.7% in 2001 to 22.0% in 2003. The Asian-Non Hispanic population grew steadily from 5.7% (2001) to 6.0% (2003). Both Black-Non Hispanic and Native American-Non Hispanic remained constant at 6.9% and 1.4%, respectively, during 2001 to 2003.

In 2002, 143,067 marriages were filed in Nevada; 2003 showed a slight increase with 143,618 marriages. For those brides and grooms who reported their residency, the leading places in 2002 were California (59% Brides and 59% Grooms), Nevada (22% Brides and 22% Grooms) and International Countries (12% Brides and 13% Grooms), followed by border states Oregon, Washington, and Idaho. In 2003, the leading places of residency remained the same; however, there were percentage changes. California had 58% Brides and 57% Grooms, Nevada comprised 23% Brides and 23% Grooms and International Countries represented 13% Brides and 14% Grooms, followed by the above mentioned border states. Interestingly, more than 98% of marriages occurred in one of the three largest tourism based counties in Nevada during both 2002 and 2003: Clark (82% and 83%, respectively), Washoe (14% and 13%, respectively), and Douglas (3%, both years).

Divorces are only granted to Nevada residents who have resided in the state at least 6 weeks. There were 15,478 divorces filed in 2002 and the divorce rate was 7.0 (per 1,000 population). In 2003, the number of divorces filed increased to 16,379 with a rate of 7.2 (per 1,000 population). The national average for 2002 and 2003 was 4.0 and 3.8, respectively (US Provisional Data, 2003). Historically, Nevada's divorce rates have consistently been the highest in the nation, which may reflect relatively lenient state laws, combined with Nevada's small population base, resulting in disproportionately high rates. Nye County had the highest divorce rate in both 2002 (13.8) and 2003 (14.5), followed by Churchill in 2002 (12.2) as well as 2003 (14.5).

Note: 2001 Marriage and Divorce data were not available due to incomplete reporting.

** Some counties' registry systems do not require the residency of the bride and/or groom to be listed on the marriage certificate, resulting in a large number of marriages with unknown residency.

Figure 9. Percentage of Nevada Marriages by Groom's State of Residence*, Nevada 2002

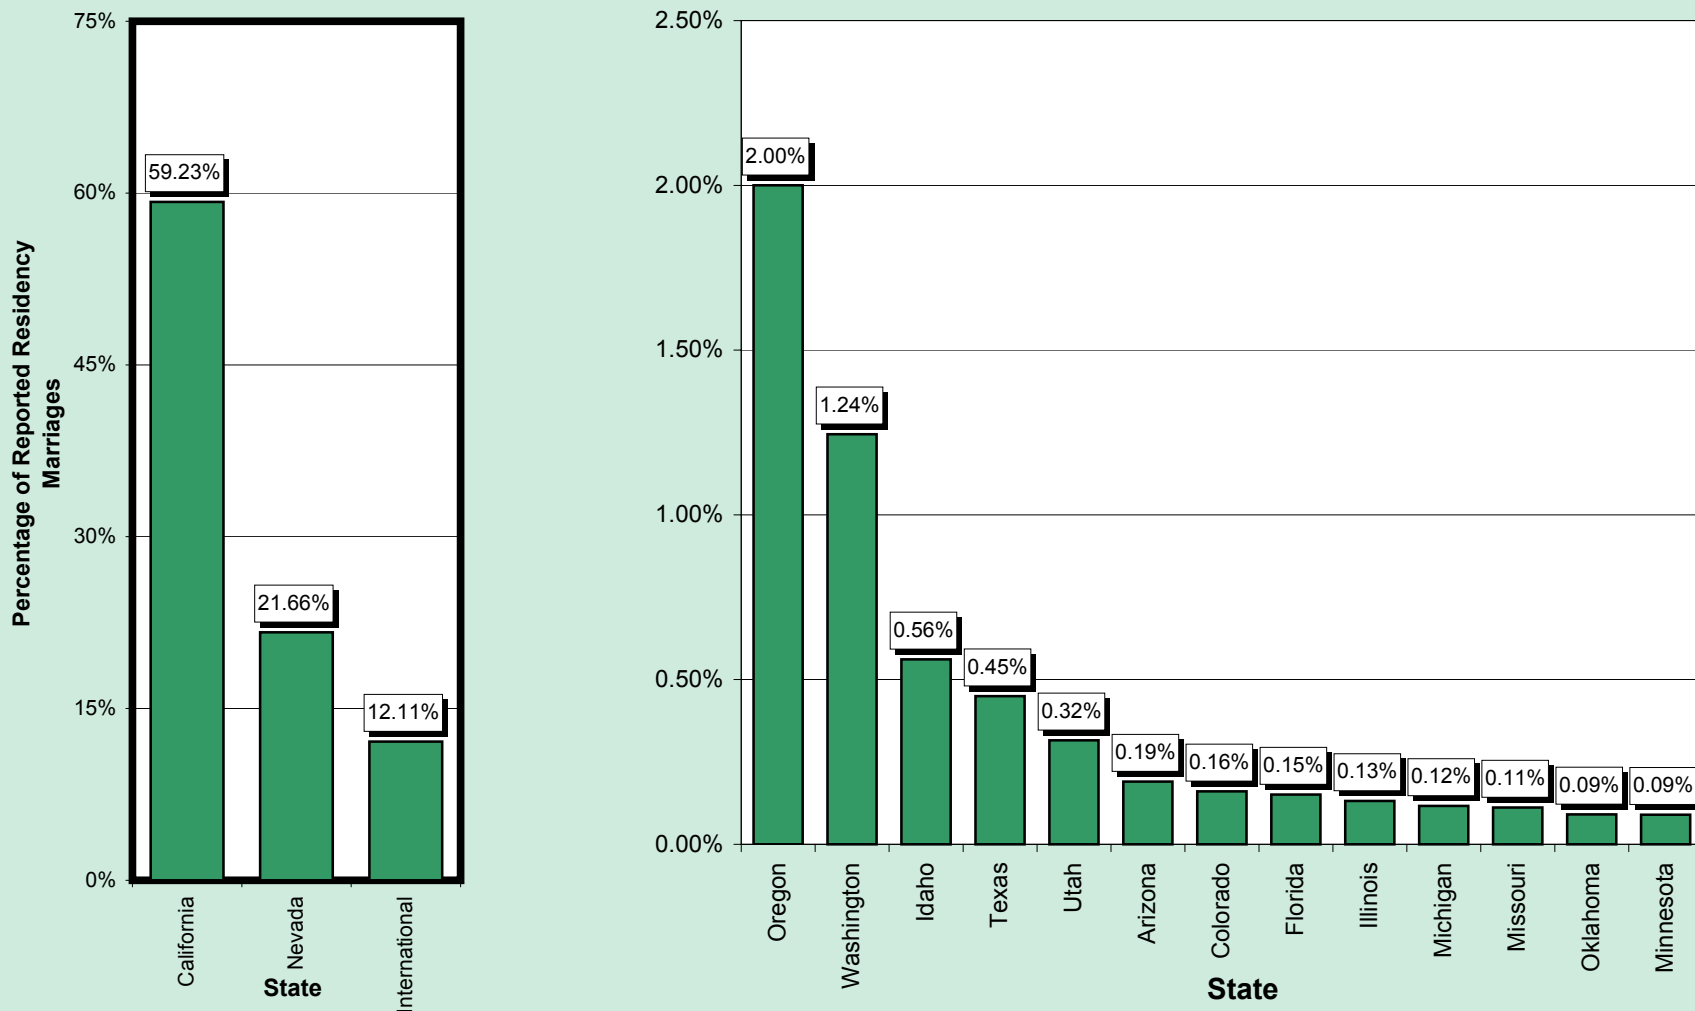

* Percentages listed are ranked according to the states' frequency of reported residency for the groom, and exclude unknown residency marriages.

Figure 10. Percentage of Nevada Marriages by Groom's State of Residence*, Nevada 2003

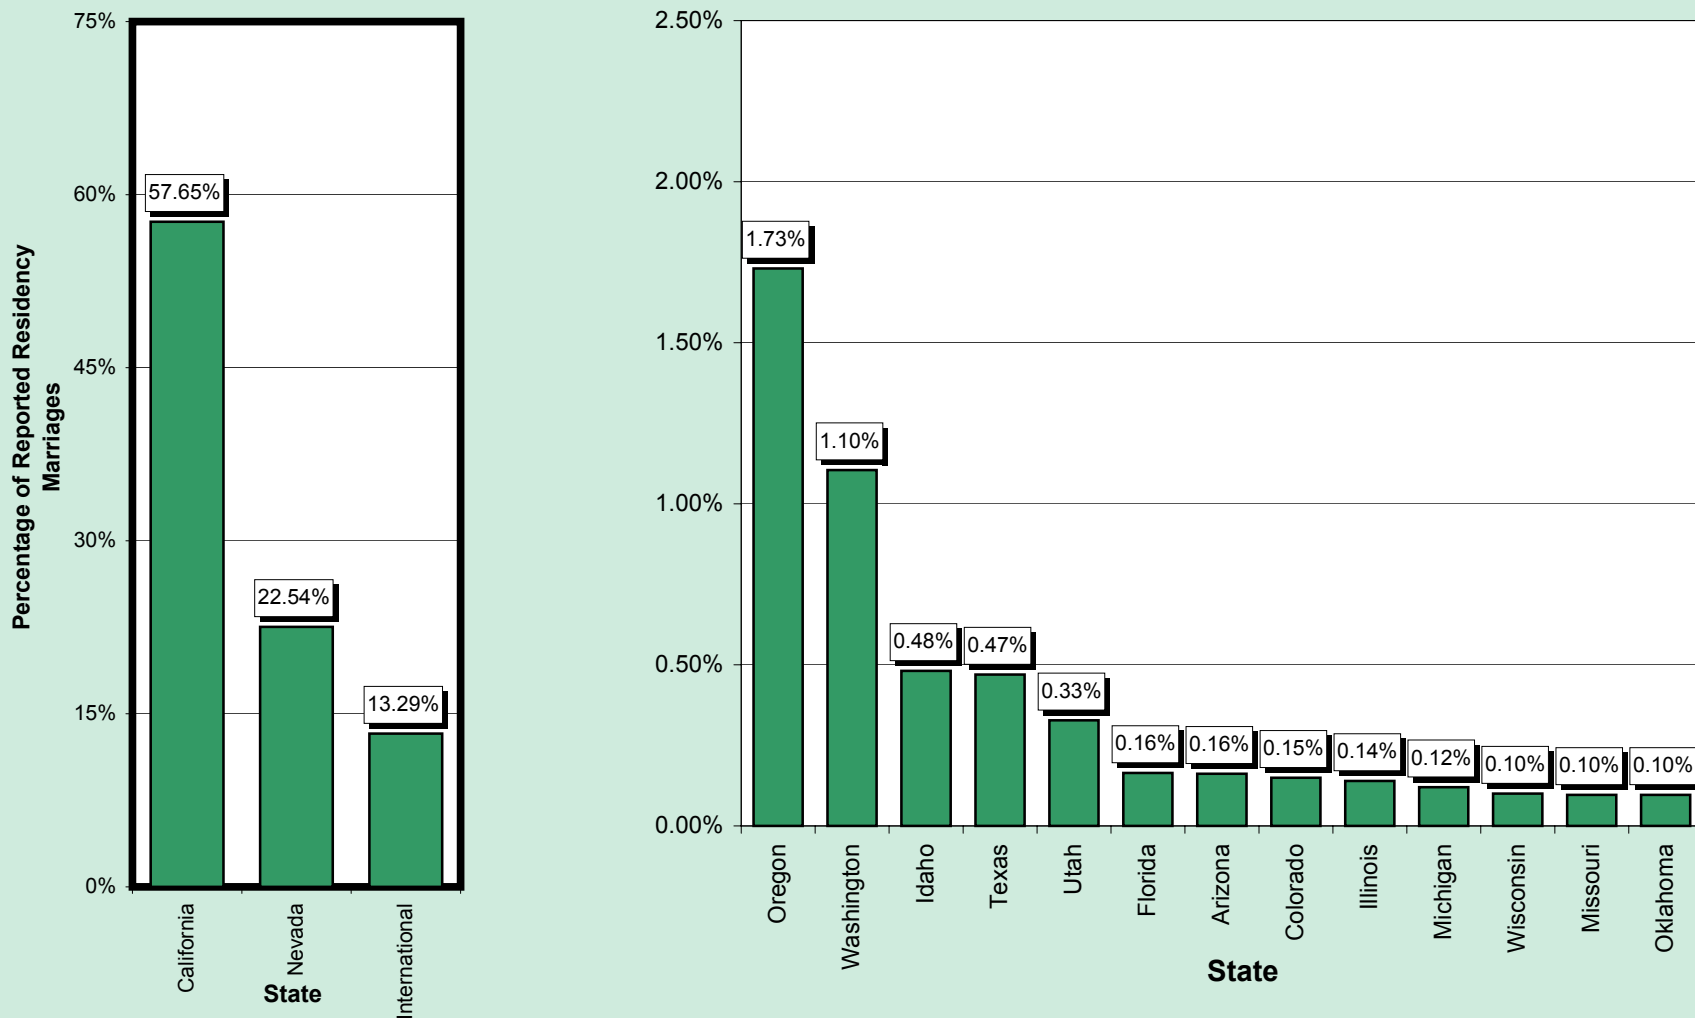

* Percentages listed are ranked according to the states' frequency of reported residency for the groom, and exclude unknown residency marriages.

Figure 11. Percentage of Nevada Marriages by Bride's State of Residence*, Nevada 2002

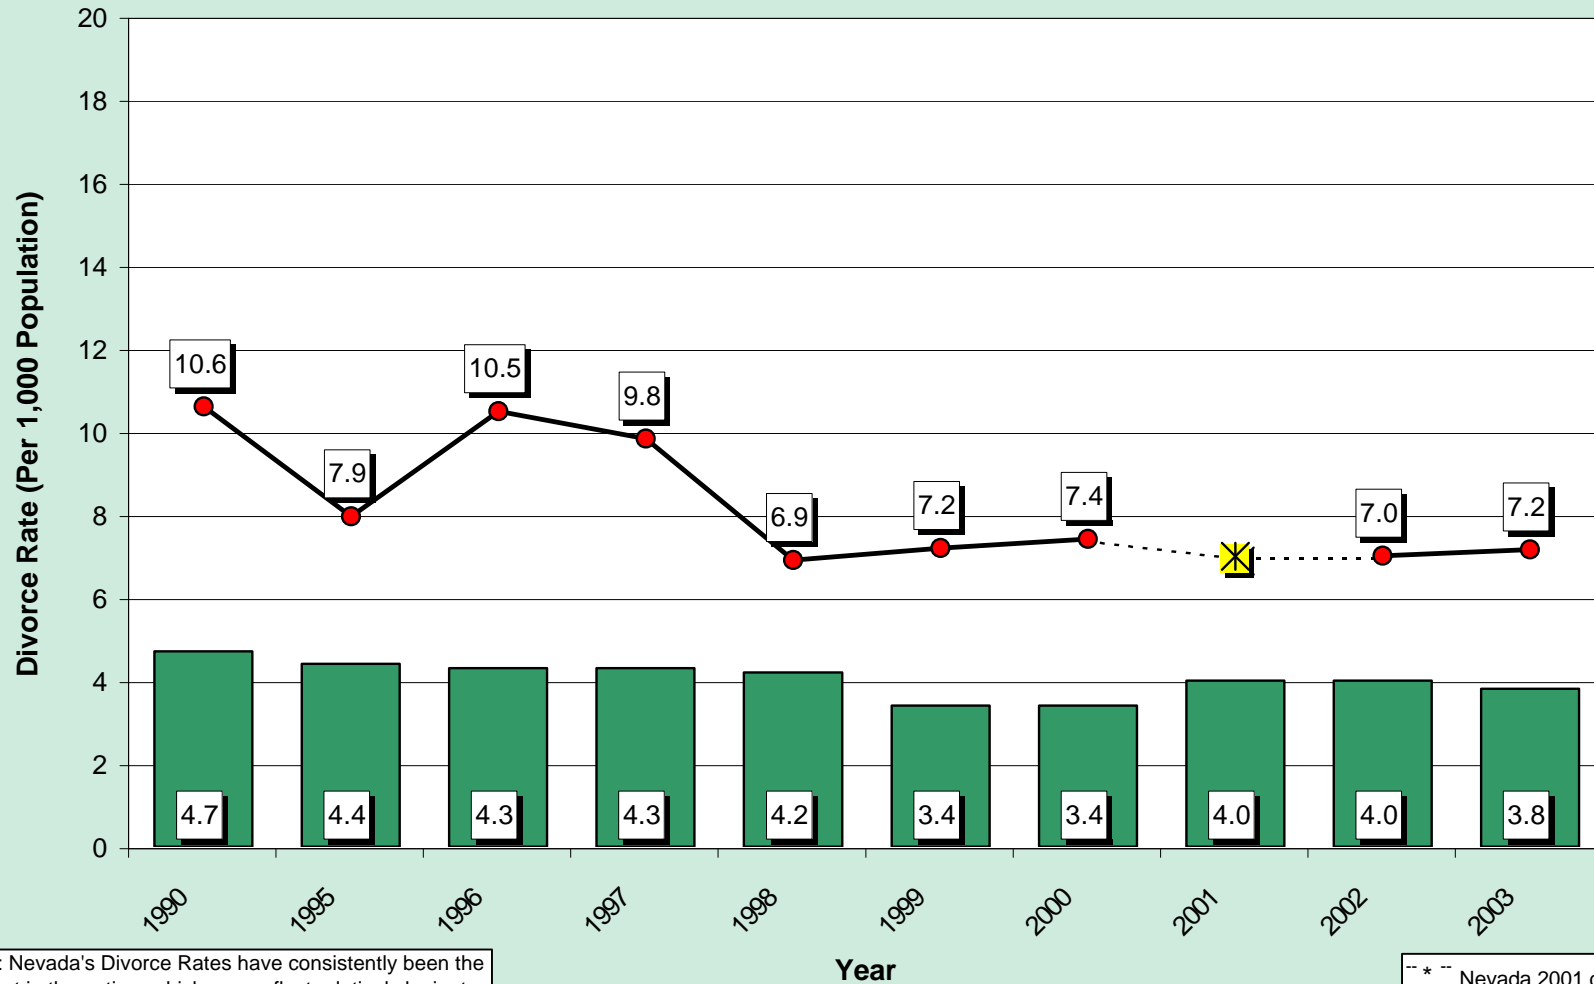

* Percentages listed are ranked according to the states' frequency of reported residency for the bride, and exclude unknown residency marriages.

Figure 12. Percentage of Nevada Marriages by Bride's State of Residence*, Nevada 2003

* Percentages listed are ranked according to the states' frequency of reported residency for the bride, and exclude unknown residency marriages.

Figure 13. Divorce Rates (Per 1,000 Population) for Nevada and the US, Selected Years 1990-2003

Note: Nevada's Divorce Rates have consistently been the highest in the nation, which may reflect relatively lenient state laws, combined with Nevada's small population base, resulting in disproportionately high rates.

2000	134,908	---	8.3	14,804	7.4	3.4
2001*	---	---	8.2	---	---	4.0
2002	143,067	---	7.8	15,478	7.0	4.0
2003	143,618	---	7.5	16,379	7.2	3.8

*2001 Marriage and Divorce data not available due to incomplete reporting.

**The number of Marriages and Divorces in Nevada are rounded to the nearest 100 for 1990.

***Nevada's marriage rate cannot be reasonably computed because of the large number of out of state and unknown state residents who are married in Nevada each year.

Note: Nevada's Divorce Rates have consistently been the highest in the nation, which may reflect relatively lenient state laws, combined with Nevada's small population base, resulting in disproportionately high rates.

Note: National Data is preliminary and is subject to change; National data for 2001-2003 from NCHS website publication Births, Marriages, Divorces, and Deaths: Provisional Data for 2003.

*2001 data not available due to incomplete reporting.

** Divorce Rate is per 1,000 population.

Note: Nevada's Divorce Rates have consistently been the highest in the nation, which may reflect relatively lenient state laws, combined with Nevada's small population base, resulting in disproportionately high rates.

Nevada continues to see a steady increase in the number of births in the state; however, the birth rate continues to decrease. Nevada's birth rate went from 15.09 (per 1,000 population) in 2000, to 14.72 (per 1,000 population) in 2001, and then dropped again to 14.67 (per 1,000 population) in both 2002 and 2003. There were a total of 31,622 live births in Nevada in 2001; of those, 31,297 were with the mother's residency being Nevada. In 2002, the number of live births in Nevada increased to 32,798 with 32,423 of those births being to mother's who were Nevada residents. The number of live births increased again to 33,941 in 2003; 33,605 of those live births were with the mother's residency being Nevada.

There were small changes to the birth rates in Clark, Washoe, and All Other Counties from 2001 through 2003; however, the distribution of births in Nevada remained high for Clark County Residents. In 2001, 72.3% of the total births in Nevada were to Clark County Residents, Washoe County Residents accounted for 16.1% and All Other Counties, as a whole, had 10.6%. Those distribution percentages remained about the same for 2002 and 2003. The highest crude birth rates for individual counties in 2001 were Clark (15.3), Carson City (14.5) and Washoe County (14.4). Then in 2002, the highest crude birth rates were in Clark (15.2), Washoe (14.8) and Carson City (13.8). The ranking was similar in 2003, with Clark (15.3) on top again, followed by Washoe (14.5) and Elko County (14.0), respectively.

The crude birth rate for Whites was the lowest among all other racial/ethnic groups in Nevada for 2001 through 2003. The Hispanic ethnic group had the highest crude birth rate, followed by Asians, Blacks, and Native Americans for 2001 and 2002. In 2003, that ranking remained the same with the exception of Asians and Blacks, which were switched.

Total	23,568	344	5,746	3,787	31	178	287	33,941

Note: Method of Delivery accounts for the primary method. Multiple methods may have been used in a single delivery.

The rate of prenatal care in the first trimester increased 1.2% from 74.3% in 2000 to 75.5% in 2001. That rate increased another 1% to 76.4% in 2002 then fell back down to 75.5% in 2003. Among the racial/ethnic groups, Whites had the highest prenatal care rate throughout 2001 to 2003; followed by Asians, Native Americans, Blacks and Hispanics, respectively. However, in 2002, Native Americans and Blacks switched.

The incidence of low birth weight babies in Nevada increased to 7.6% in 2001 from 7.2% in 2000. That rate then dipped to 7.5% in 2002 and then increased to 8.1% in 2003; which is the highest incidence of low birth weight babies in Nevada in almost 10 years. Although the rate of Blacks improved a small amount from 12.9% in 2000 to 12.8% in 2001, the rate experienced an increase to 14.8% in 2002, then decreased to 13.7% in 2003. This racial/ethnic group was still the highest low birth weight rate in Nevada throughout 2001 to 2003.

Nevada's teen birth rate continued the general decreasing trend of the past 10 years for all teen age groups. The birth rate for females ages 15-19 decreased from 1994's 68.7 per 1,000 female age-specific population to 48.4 in 2003.

FERTILITY AND NATALITY

2001

DIG1-5 are determinations of the numbers diagnosed with anomalies:

- DIG1 = 603 newborns with at least one anomaly;
- DIG2 = 170 newborns with at least two anomalies;
- DIG3 = 85 newborns with at least three anomalies;
- DIG4 = 41 newborns with at least four anomalies;
- DIG5 = 11 newborns with at least five anomalies;

This reflects 603 individuals diagnosed with anomalies, including 170 individuals with two or more anomalies.

2002

DIG1-5 are determinations of the numbers diagnosed with anomalies:

- DIG1 = 583 newborns with at least one anomaly;
- DIG2 = 165 newborns with at least two anomalies;
- DIG3 = 95 newborns with at least three anomalies;
- DIG4 = 52 newborns with at least four anomalies;
- DIG5 = 8 newborns with at least five anomalies;

This reflects 583 individuals diagnosed with anomalies, including 165 individuals with two or more anomalies.

DIG1-5 are determinations of the numbers diagnosed with anomalies:

- DIG1 = 496 newborns with at least one anomaly;
- DIG2 = 158 newborns with at least two anomalies;
- DIG3 = 104 newborns with at least three anomalies;
- DIG4 = 53 newborns with at least four anomalies;
- DIG5 = 12 newborns with at least five anomalies;

This reflects 496 individuals diagnosed with anomalies, including 158 individuals with two or more anomalies.

This report contains a special section on 2000 abortion data, which were not available for the 2000 Vital Statistics Report.

Nevada has seen an increase in the induced abortion rate since 1998. In 2001, the rate spiked to 298.0 (per 1,000 live births) from 265.4 in 2000. Then, the rate decreased to 283.5 in 2002 and decreased further to 258.7, but is still up from 230.5 in 1998. During 2001 to 2003, the highest percentage of induced abortions occurred in the 20-24 age group. In 2000, Carson City residents had the highest rate in Nevada of 278.2. During 2001, Washoe County residents had the highest rate of induced abortions (351.0). Mineral County residents had the highest rate during 2002 with 589.7, and in 2003 Washoe County residents again had the highest rate with 307.0.

There were a total of 40,836 pregnancies (live births, fetal deaths, and induced abortions) in Nevada during 2001. Of that, 76% were live births, 23% were induced abortions and 1% were fetal deaths. In 2002, the total number of pregnancies rose to 41,862; of those pregnancies, 77% were live births, 22% resulted in induced abortions and the remaining 1% were fetal deaths. There was a slight increase again in 2003, to 42,558 pregnancies. The percentage of induced abortions continued to drop to 20% of pregnancies, with 79% attributed to live births and 1% to fetal deaths.

Nevada's infant mortality rate has continued to decline from a peak in 1998 of 6.9, per 1,000 births, to 5.7 in 2001. That rate rose slightly to 5.9, in 2002, before decreasing to an almost 10 year low of 5.6 in 2003. Washoe County showed a great improvement from 5.5 in 2001 to 3.8 in 2002. However, that rate increased in 2003 to 5.7. The Black population continues to have the highest rate of infant mortality in Nevada with a rate of 16.5, per 1,000 live births, in 2001 and 18.6 in 2002. That rate declined to 12.0 in 2003.

The number of resident deaths continued to increase in Nevada from 16,233 in 2001, to 17,666 in 2003. Age-adjusted death rates in the state were 910.9 (per 100,000 – 2000 US Standard population) in 2001, 895.3 in 2002 and 912.3 in 2003. People ages 65 and older represented 68.0% of all Nevada resident deaths in 2001, 67.8% in 2002 and 67.2% in 2003.

Diseases of the Heart and Malignant Neoplasms (i.e. Cancers) ranked one and two, respectively, for the leading causes of death in Nevada for the years 2001 to 2003. These two diseases were responsible for 8,143 deaths in Nevada in 2001, 8,153 in 2002 and 8,612 in 2003; accounting for 50.2%, 48.9% and 48.7%, respectively, of total deaths in the state. Trachea, Bronchus and Lung Cancer, as a group, continued to be the leading cause of cancer deaths for 2001 to 2003 with age-adjusted death rates (per 100,000 – 2000 US Standard population) of 61.9 (2001), 55.3 (2002) and 61.2 (2003).

After age-adjustment, racial/ethnic group comparisons indicate that Blacks had the highest death rate for Diseases of the Heart and for Cancer in 2001 to 2003.

Note: Data through 1998 has been adjusted from the ICD-9 mortality classification system to match the ICD-10 mortality classification system that was implemented in 1999. So, data through 1998 may not match previous years and/or be directly comparable with 1999 and later data, because of the application of comparability differences between the two classification systems.

Nevada's age-adjusted (2000 US Standard population) Suicide death rate continued to be almost twice the national average in 2001 and 2002 (national rate was not available for 2003). The age-adjusted rates for Nevada residents were 18.1 (per 100,000 – 2000 US Standard population) in 2001, 18.9 in 2002 and 19.0 in 2003; compared to the national age-adjusted rates of 10.7 in 2001 and 10.9 in 2002. Nevada had continually ranked highest in the nation for suicide, but dropped to 3rd in 2001 and 2002, based on age-adjusted rates (National Vital Statistics Reports: Deaths: Final Data for 2001, 2002). State rankings are not yet available for 2003. The highest suicide death rates in Nevada were among “All Other Counties” residents for 2001 to 2003. Native Americans experienced an unusually high rate (age-adjusted) in 2001 of 39.6; that rate then dropped significantly to 8.8 in 2002 and increased again in 2003 to 17.5. The suicide crude rate for the age group 85 and older also experienced an unusual hike in 2003; that rate jumped to 83.7, up from 33.6 in 2001 and 41.5 in 2002.

In 2001, the age-adjusted death rate for motor vehicle crashes for Nevada residents (15.1 per 100,000 – 2000 US Standard population) was just lower than the national average (15.3). However, in 2002, that same rate increased to 16.5, higher than the national average of 15.7. In 2003, the age-adjusted death rate decreased to 15.3 (national rate was not available for 2003). The highest groups for those dying in motor vehicle accidents were, again, All Other Counties as a region and Native Americans for 2001 to 2003. The highest rate for age groups were to 85 and older in 2001, 75-84 in 2002 and 15-24 in 2003.

Males continue to be far higher than females in both suicide and motor vehicle crash deaths for 2001 to 2003.
