

Introducing Clarity Human Services HMIS

Functionality

Core Product Functionality

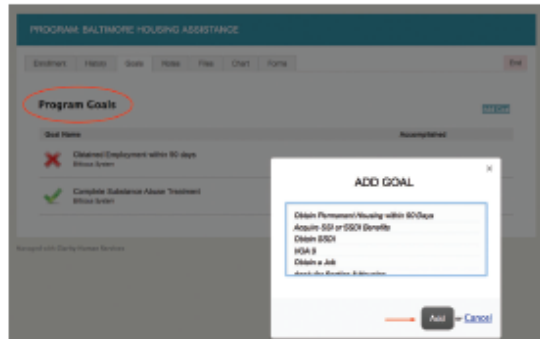

Clarity Human Services is a robust, easy to use system for community wide tracking of individual progress, program performance and community wide performance and trends.

HMIS implementations are entering a new era of needed functionality. To be successful, they can no longer simply be just a repository for data and canned reporting. A truly functional software comes to life when the interface is easy to use by the end users, the Coordinated Entry system is fully integrated into the communities efforts, and the data is easy to analyze and visualize providing real-time insights into the collective impacts of the community. Our goal is to be more than your software vendor, but a true partner, leading and partnering on the technical innovations necessary to ensure your community's success.

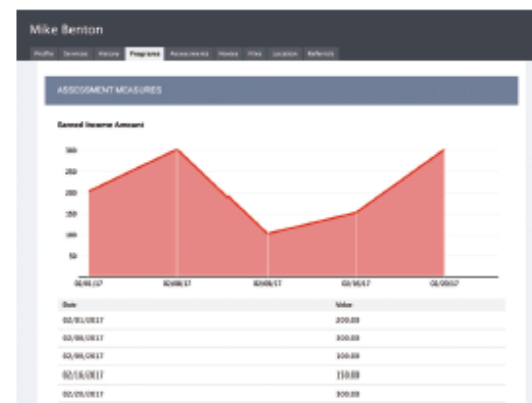

The Clarity Human Services interface is sleek, simple, and easy to master, even for those with only modest computer abilities. Simply stated, Clarity Human Services is unimimidating, which increases end user engagement and confidence, allowing them to focus on client services without the hindrance of software concerns. The user interface is locally configurable. A powerful data field editor and screen designer allow for the creation of custom screens and assessments. Features such as auto-populating screens and display logic enable the system administrator to customize the user interface according to local priorities. Clarity Human Services is a robust system, independent and accessible from any major web browser with 99.99% uptime. It is also optimized for mobile devices such as Apple IOS and Google Android. Biometric capabilities make scanning clients into the system simple and efficient—perfect for both outreach and high-volume services alike.

TRACKING INDIVIDUAL PROGRESS

System administrators have the ability to create and manage Program Goal Templates. Goals can consist of items such as "Complete training within 90 Days," or "Gain employment within 30 Days." The Goals Editor is highly configurable, and allows for pass/fail of goals to be automatically assigned to client-enrolled programs.

These goals can be transformed into charts and graphs to provide a visual tracking system of specified variables over time. This functionality can be adapted to meet the unique needs of your organization, including the ability to track individual progress by housing status, income, connection to services, time lapse between milestones, or service goals.

TRACKING PROGRAM PERFORMANCE

All programs (and services) are stored within Clarity Human Services, and this inventory is easily accessible, and editable, by the System Administrator. The system also stores inactive programs and services, enabling the System Administrator to re-activate an inactive program/service with the click of a button, while also making any necessary configuration changes.

TRACKING COMMUNITY WIDE PERFORMANCE AND TRENDS

HUD System Performance Measures: Clarity Human Services can produce HUD system performance measures to monitor rating and ranking, housing placement, electronic referrals, coordinated access, and coordinated assessment.

Other HUD & USICH Federal Partner Reporting: Clarity Human Services offers all HUD and USICH Federal Partner reports right out of the box (all reports are real-time).

Ad-Hoc Reporting: Ad-hoc reporting is invaluable to measuring the success on both a program- and community-wide level. Our built-in data visualization tool (Looker©) is an excellent tool for understanding your data, and thus understanding the health of your community-wide system. Oftentimes, valuable information will be hidden within data, undetectable by even the most sophisticated reports. Many communities have "hunches" regarding the patterns they believe lie within their data, but these patterns remain stubbornly hidden within the data. The Clarity Human Services Data Visualization Tool will help your community to clearly and efficiently present information using statistical graphics, plots, information graphics, tables, and charts to portray the particular data at hand.

Clarity Human Services includes a robust reporting system (both internal and external) for community performance and systems integration.

Clarity Human Services customers are provided with over 120+ canned reports specifically built for Human Services. The Clarity Human Services Report Library is continuously expanding as we provide new additions based on the needs of our communities. Clarity Human Services comes equipped with a data visualization tool that allows end users to generate reports, dashboards, and other visualizations in a near limitless way, all while remaining extremely

simple and user-friendly. Fields can be dragged-dropped, including built-in calculations that are based on the HUD HMIS universe-based dataset.

Clarity Human Services offers comprehensive data system support for the administration of the Federal, State and local reporting requirements

Clarity Human Services is a robust system capable of supporting the administration (including report capabilities) of the Shelter + Care, HOPWA, CoC, ESG, PATH, RHYMIS, SSVF, VA, SAMSHA, and HRSA funded programs. It can be easily customized to meet State and local requirements as well.

Clarity Human Services can be used to make shelter reservations and process shelter check-ins according to HUD requirements.

This is achieved through the Reservation System. The Clarity Human Services Reservation System offers an interface for service providers to enter vacancies and/or program availability, which is intimately connected to the Assessment and Referral Module. With the real-time reactivity of the Reservation System, service providers can quickly and intuitively indicate when resources and programs become available.

Because Clarity Human Services is developed with HTML5/ AJAX based technology, it is equipped with real-time data intake functionality, which enhances service provision (non-duplication of services, immediate documentation of expense items, etc.), streamlines referral processes, and also allows for accurate resource availability information for precise reservation management. Resources (e.g. bed/unit availability) can be determined before placement and referral using the Reservation System.

Here's how it works: The Reservation System tracks unit availability (e.g. bed, mat, etc.) in real-time, and it is integrated into several key areas of the Clarity Human Services system—the History tab of the client record, the Attendance System, the Eligibility Determination Engine (i.e. assessments), and the Referral Module—allowing for convenient and timely reservation processes. Batch entry processes are also available for this feature, allowing the end user to make reservations for multiple household members simultaneously. Before referral, the end user can view program availability, voucher availability, and/or housing program availability with real-time resource availability numbers plotted and graphed. (Clarity Human Services also provides shelter and community-wide resource utilization data and reports.)
