

# 2018 HIV/AIDS Fast Facts

**Division of Public and Behavioral Health** 

**Office of Public Health Investigations and Epidemiology** 

**HIV Surveillance Program** 

Steve Sisolak, Governor State of Nevada

Richard Whitley, MS, Director Department of Health and Human Services Lisa Sherych, MBA, Administrator Division of Public and Behavioral Health

> Ihsan Azzam, Ph.D., MD Chief Medical Officer

## PURPOSE

The primary purpose of the *Nevada 2018 HIV Fast Facts* report is to provide statistics and trends on HIV and HIV Stage 3 (AIDS) in Nevada. The annual publication is a reference document for policymakers, program managers, health planners, researchers, and anyone in the community who are concerned with the public health implications of the disease. The tables in this edition supersede those in earlier publications of the data.

## **METHODS**

The data used for this profile is between January 1, 2018, to December 31, 2018, obtained from the electronic HIV/AIDS Registry System (eHARS). The eHARS database application is provided by the Centers for Disease and Control and Prevention (CDC) and maintained by the Division of Public and Behavioral Health (DPBH) for the HIV Surveillance Program. The data is collected from medical labs, private and public health providers, clinics, and state and local disease intervention specialists. The HIV case definition for this report utilizes the 2014 CDC Case Definitions. Per the CDC, a patient may be diagnosed concurrently with both HIV and HIV Stage 3 (AIDS) within the same year allowing them to be counted in both the HIV incidence tables as well as the HIV Stage 3 (AIDS) tables.

#### **TECHNICAL NOTES**

Per the Nevada Administrative Code (NAC) 441A.040, HIV is a reportable communicable disease. As prescribed by NRS 441A.150, a diagnosis of HIV is reported to the local health authority by providers, medical facilities, and labs.

**Age Group** is the age of the individual at the time of the HIV and/or HIV stage 3 (AIDS) diagnosis, previously referred to as AIDS. **All other counties** include Carson City, Churchill, Douglas, Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Lyon, Mineral, Nye, Pershing, Storey, and White Pine Counties.

**Annual % Change** is the percent increase or decrease relative to the number of cases in 2017 from 2018. Take caution when interpreting percent changes calculated from small case counts because they can be susceptible to the high variability and are likely to be misleading.

**Rate** is the rate of the population per 100,000 persons and calculated by using the 2017 population projections from the Nevada State Demographer vintage.

N (incidence rate) is the measure of disease in the total population.

**n** (incidence rate) is the measure of disease for a given subpopulation, such as sex, race/ethnicity, age, or full address. The subpopulations may not equal the total incidence rate for the population due to unknown demographics such as sex, race/ethnicity, age, or full address.

**NA (Not Applicable)** is used to represent cases where the data may not meet the criteria for reliability, data quality, or confidentiality due to small counts or inability to calculate rates based on an equivalent population.

**New HIV diagnoses** are counted in the eHARS database and include HIV and stage 3 (AIDS) cases diagnosed in Nevada, both living and deceased. The surveillance data excludes HIV cases diagnosed in other states but who currently live in Nevada. HIV and AIDS diagnoses may duplicate case counts if the person was diagnosed with both HIV and stage 3 (AIDS) in the same year. **New stage 3 (AIDS)** are diagnoses counted in the eHARS surveillance statistics database and include stage 3 (AIDS) and HIV cases diagnosed in Nevada, both living and deceased. The surveillance data excludes HIV cases diagnosed in other states but who currently live in Nevada. Stage 3 (AIDS) diagnoses and HIV diagnoses may duplicate case counts if the person was diagnosed with both stage 3 (AIDS) and HIV in the same year.

**Persons living with HIV** includes data on persons living in Nevada with HIV (not yet stage 3 (AIDS)) and stage 3 (AIDS) based on the current address listed in the HIV Reporting System (eHARS). These persons may or may not have been diagnosed with HIV or stage 3 (AIDS) in Nevada.

Population is based on the 2018 population projections from the Nevada State Demographer vintage 2018 data.

**Rate** is the rate of the population per 100,000 persons and calculated by using the 2018 population projections from the Nevada State Demographer vintage.

**Relative Standard Error (RSE)** the publication contains counts under 12 please use caution when interpreting the data as the RSE is greater than 30%.

<sup>§</sup> Annual % Change is the percentage increase or decrease relative to the number of 2018 cases. Take caution when interpreting percent changes calculated from small case counts due to high variability which could be misleading.

\*\*All other counties include Carson City, Churchill, Douglas, Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Lyon, Mineral, Nye, Pershing, Storey, and White Pine Counties.

"Percent change for small counts is not shown as they are susceptible to high variability and are misleading.
