How can you require something that is not authorized by the FDA? How can you require something that has a survival rate similar to the flu? How can you require something that has more adverse reactions than all other “vaccines” combined in the last 20 plus years? As a society we do not know what we do not know yet but what we do know tells u it doesn’t make scientific sense to require something for people not in a high risk group. My body my choice not yours.
