Subject: Opposition to mandatory Covid vaccines
Date: Thursday, August 19, 2021 10:17:26 PM

Hello. My name is Fanny Chan and I am opposed to mandatory Covid vaccines. There are more than enough testimonies and documentations of adverse effects from the vaccines, ranging from anaphylactic/ allergy type reactions to death. Many young people who had received this vaccine has developed myocarditis and will have a weak heart for the rest of their lives. Others have died in their sleep or for no reason. More adverse effects on organ systems would appear in the future. Since no one knows how one is to react to the shot, it seems to be a process of Russian Roulette to find out. I would not want to subject anyone to that, especially my child. It is also still unknown whether or not this vaccine actually protects the vaccinated from the delta variant; some articles say yes others say no.

The vaccine contains graphene oxide which is a vehicle of delivery of the mRNA into the nucleus of the cells. Graphene oxide is a toxic heavy metal substance and it can have long term, deleterious effects on many organs of the body.

Our body has an immune system that can fight off infections including Covid. Unless the person is immunocompromised or has comorbidities, there is no need for vaccinations. Also, everyone has the right to determine what they put into their bodies, especially when something can be harmful or life threatening like this vaccine.

Thank you for your attention to this matter.
