Subject: Comments on proposed NSHE covid vaccine mandate
Date: Saturday, August 14, 2021 6:20:29 PM

The current covid vaccines should not be mandated for Nevada college and university students under any circumstance. The risk of serious covid outcomes for college age individuals is very, very low, whereas the risk of adverse effects and death from the vaccines is high.

The vaccines all cause the human body to release the spike protein that is well known to be toxic and pathogenic. This is not a usual inactivated virus or attenuated live virus vaccine such as for chickenpox, measles, small pox, etc. The spike protein is the covid component responsible for pathogenic symptoms and as such the vaccine causes clotting, vascular disorders, myocarditis, immune system dis-regulation, inflammatory disorders, reproductive damage, and neurological issues. Furthermore, all previous attempts to vaccinate against coronavirus' have all failed with disastrous consequences in terms of viral evasion and enhancement. The current covid vaccines do not provide sterilizing immunity.

Normal vaccines induce an immune response without pathogenicity. Covid vaccines do not... they induce an antibody response to the spike protein. However, they do so while exposing the individual to the pathogenic toxin which circulates throughout the body affecting and damaging every organ. They do not use an inactive or otherwise harmless disease particle such as with the other vaccines mentioned above.

Please see the linked paper from the Journal of Infection by Yahi, Chihinian, and Fantini regarding evasion, enhancement, and ADE associated with the covid vaccines:

[Infection-enhancing anti-SARS-CoV-2 antibodies recognize both the original Wuhan/D614G strain and Delta variants. A potential risk for mass vaccination ? - Journal of Infection](#)

Quoting:

"Antibody dependent enhancement (ADE) of infection is a safety concern for vaccine strategies. In a recent publication, Li et al. (Cell 184 :1-17, 2021) have reported that infection-enhancing antibodies directed against the N-terminal domain (NTD) of the SARS-CoV-2 spike protein facilitate virus infection in vitro, but not in vivo. However, this study was performed with the original Wuhan/D614G strain. Since the Covid-19 pandemic is now dominated with Delta variants, we analyzed the interaction of facilitating antibodies with the NTD of these variants. Using molecular modelling approaches, we show that enhancing antibodies have a higher affinity for Delta variants than for Wuhan/D614G NTDs. We show that enhancing antibodies reinforce the binding of the spike trimer to the host cell membrane by clamping the NTD to lipid raft microdomains. This stabilizing mechanism may facilitate

the conformational change that induces the demasking of the receptor binding domain. As the NTD is also targeted by neutralizing antibodies, **our data suggest that the balance between neutralizing and facilitating antibodies in vaccinated individuals is in favor of neutralization for the original Wuhan/D614G strain. However, in the case of the Delta variant, neutralizing antibodies have a decreased affinity for the spike protein, whereas facilitating antibodies display a strikingly increased affinity. Thus, ADE may be a concern for people receiving vaccines based on the original Wuhan strain spike sequence (either mRNA or viral vectors).**"

The vaccines are causing antibody-mediated viral enhancement. Covid mutation affects the balance of neutralizing and non-neutralizing antibodies. The enhancing antibodies are now dominant with the delta mutation. The disease is now infecting and being spread by vaccinated individuals.

Note the evidence from Israel and Palestine, which are next door to each other.

Israel has a nearly 100% vaccination rate whereas Palestine has a vaccination rate of about 10%. The plots below show the number of new cases in Israel exploding while the number of new cases in Palestine remains low. If the vaccines work, how can the data below be explained. The vaccines do not work, and they are very dangerous, especially for young people who are not at risk from covid. Furthermore, requiring vaccines for people who have already been infected with covid and have recovered is utterly insane. People who have recovered from covid have robust and durable lifelong immunity.

The CDC and NIH have ignored effective early treatment options using medications such as ivermectin, hydroxychloroquine, and budesonide, all while promoting dangerous untested vaccines. Subsequently, hundreds of thousands of people have died when it could have been prevented.

There is no long term testing of any of the current vaccines, and long term effects are completely unknown. It requires at least 5 years of testing to determine safety levels of new vaccines and medications.

I will not allow my children to get any of these vaccines. I will send them to an out-of-state university that does not engage in these types of authoritarian and immoral mandates. They are dangerous drugs, they have killed tens of thousands of people in this country, and they have seriously injured hundreds of thousands-to-millions of people. Furthermore, they are not effective as the covid virus mutates from the initial

Wuhan version.

Please stop trying to force people to take dangerous drugs in order to engage in normal life activities.

Regards,
Jeff Strait
