Hi,

I'm hearing rumors that the health department is considering mandating covid vaccinations for Nevada students. If this is true, **I strongly oppose this mandate**. These experimental vaccines are still in ongoing trials through 2023. Personally, I have three friends that have been permanently harmed by these vaccines. Two will have life long heart problems. We should NOT be giving these shots to our children. Also, I really hope you don't mandate these jabs for the teachers/admin either.

I understand that Covid is a very scary and potentially deadly virus. There are medicines that do work and preventative measures that can also be taken. I wish the health department would mandate an education on how to improve ones immune system. Most Americans are quite unhealthy and I believe that is the real problem.

If these shots are mandated I will be forced to pull my children out of their schools. My family and I really love CCSD and we are hoping our children can continue their education here in the public school system.

Sincerely,
Laura Erikson
