Subject: Mandatory vaccinations for college student
Date: Thursday, August 19, 2021 2:09:40 PM

Either you are ill informed or a sell out to the pharmaceutical industry, because there are plenty of studies and data that now show people under the age of 30 have little or no risk from Covid 19. The risks with the mRNA shot seem to out way the benefits for this age group. If a woman has a right to choose whether or not to have an abortion, certainly college students should have the right to opt out of a shot that has already been shown to have only short-term benefits. Looking forward, are you then going to require them to have a booster shot every 6-8 months? Would it not be better for them to actually contract the virus, recover and then have natural immunity? Maybe you could better serve the citizens of Nevada by looking at the less expensive alternatives and seeing that the elderly with co-morbidity issues get vaccinated.
