Subject: Agenda Item #2 for meeting scheduled 2021 - AGAINST ammendment to NAC 441A.755
Date: Thursday, August 19, 2021 3:05:53 PM

Joseph,

Please include my written statement below as public comment for the upcoming 9AM meeting on 20 Aug 2021 regarding action item #2 - discussing vaccine mandates for universities.

Thank you,

Rosa White

"First of all, I want you to know that I vehemently oppose any institution making a blanket mandate requiring individuals to vaccinate in order to attend school. Not only is it against my civil liberties, but it is also such an invasion of medical privacy it boggles the mind.

Secondly, I have a few questions that you need to answer prior to voting on this issue:

- What happen to the flu?
- If the flu disappeared due to masking, why didn't it work for Covid?
- Can you give links to studies that prove masks work?
- What are your thoughts on the fact that all the countries with the highest vaccination rates are going into lockdowns again due to huge increases in cases, a large percentage of whom are vaccinated?
- How do we properly address the connection between pro-vaccine extremists and their unhealthy desire to force people through coercion?
- Can you tell us the rate of positive cases amongst vaccinated?
- Why can we take masks off sitting down in restaurants but our kids can't while in school?
- Since the CDC came out and said the vaccine efficacy is waning, why should people still get it?
- Is there graphene oxide in the vaccines?
- If 75% of deaths "with" covid are among the obese, wouldn't our efforts be better spent creating health passes instead of vaccine passes?
- Can you address the fact that suicide rates, deaths from drug overdoses and hospitalization for mental health issues have seen astronomical increases amongst teens and adults but no one is addressing that with the same focus as a virus that has such a high survival rate?
- Why are positive cases continuing to rise at the same rate even though vaccination rates are increasing at the same time?

In case you were wondering, earlier this year I had Covid. I died. My outstanding team of medical professionals brought me back. I still have antibodies. I'm still recovering. And still WOULD NOT support mandating the vaccine for everyone. Suggestions, sure. Mandating? Unequivocally NO. Unless you want to field a myriad of lawsuits and lose a lot of students.

Please think this through. Do your own research. Stop this madness."
