---

To: Nevada Health Department

I am writing to you in opposition of the mandated vaccination for Covid-19, especially given to our underaged children. It is abhorring enough to think that adults are subjected to this decision making for our own bodies. Please consider the following comments with regards to your intelligence in answering these questions.

- Does the individual who has received the EGT have recourse against the pharmaceutical companies for any adverse reactions, including but not limited to death? If no, then who is liable and how difficult is it to get compensation and what limits are there to this compensation?
- Monsanto was recently in several court cases regarding the fatal chemicals used in the making of such products. There is similarity in this product and the untested and non approval of the FDA of these injections going straight into the human body. Do you want to be one of those named in upcoming lawsuits?
- How would the injury and/or death of one or more individuals who were coerced by an act of your department to take the EGT weigh on your conscience?
- 

Thank you for your time and I certainly hope your consideration.

Sincerely,  
Elaine Cowan  
Reno,NV 89523
