We have seen the precedence set for requiring immunization from certain viruses of anyone participating in education. In NSHE, these include measles, mumps, rubella, tetanus, and diphtheria. COVID-19 will continue to be a problem so long as vaccinations are not widespread. Unfortunately, due to the politicization of this pandemic, misinformation regarding these vaccines continues to be spread widely. If we are ever to return to semi-normal operations, we must mandate vaccinations for all who are able. We are still operating in the middle of a public health emergency and without this mandate, we will only see our situation continue to deteriorate.

Adi Cabral
