Good morning:

My son is a graduate student at UNR. As a JD myself, I am proud of his accomplishments. He obtained his undergrad in Physics and already a Masters from UNR. This was his chosen school and he is proud of that. He loves UNR. He is now in a PhD program at UNR. A few classes and Dissertation to go. Starting over now would be totally devastating, emotional, financial and time wise.

He has been immunodeficient since birth. He was born 8-12 weeks premature and an APGAR at birth of 1. He shouldn't be here.

He is truly a miracle child. But he's an adult now. Due to his prior health issues stemming from birth, he was told NEVER to take a Meningitis (SP) Vaccine and he has had to medically opt out every time. I had to pull him out of high school in West Virginia due to their over governmentization of having the State to determine his candidacy for the vaccine. I refuse to allow the State to tell me what is good for my son's health, or mine for that matter. And My son has stood up and decided he is in control of his own autonomy as well. He has chosen NO on the vaccine. WE THE PEOPLE were given Autonomy over our bodies to make our decisions. NOT The state. Not you.

I am opposing the vaccine mandate for Colleges and Universities. First, we are learning that the vaccines from Pfizer and Moderna are showing signs and presenting issues of heart inflammation, stroke assessment issues and muscle/neurological issues on younger adults. What I don't understand is with a 99.7% Survival rate according to CDC itself for this generation. WHY?

Fact: 12 Countries on CDC list of Do not travel due to COVID - Highly vaccinated countries;
Fact: Massachusetts - 74% of Hospitalizations - Vaccinated folks;
Fact: California Cases - at least 40% are Vaccinated;
Fact: Media is covering up what we are seeing on Social media and hearing from others - Vaccines are not working to stop COVID. Piers Morgan - 18 days COVID; Texas Governor Greg Abbott - Vaccinated - COVID; How many are dismayed because they "got the shot" and find they still are getting COVID? Many. So, pushing a vaccine that you can still get COVID, Still transmit COVID and still end up hospitalized over COVID is deaf and falling on deaf ears, which is probably why its being pushed. Mostly because no one is taking it now that they know its not effective. By the way, my one of my niece's in Alabama had to go to her friends funeral. She died at 17 after receiving COVID Vaccine. We have another distant friend right here in Reno that died 3 weeks ago from heart-attack. They say he took the Vaccine just weeks prior to his death. He was retired military. Never had heart issues and was in his 30's. So, while we know it will happen, so far we know of no one dying from COVID, but we have in fact linked two (2) deaths to Vaccines.

As a Juris Doctorate, and former attorney, I can tell you why, but I gather you don't want to hear it. Over-reach of government to fix a problem that the government itself is making worse. These are our young adults, our futures. You locked down gyms, told everyone to stay inside and put kids in front of a computer. When in Fact, they needed gyms, exercise,

socialization and sunshine. I myself have taken vitamins, gone on walks and attempted to live as normal as possible, less the government intrusion.

Mandating a vaccine that my own son cannot take and many others will refuse to take tells me this is political and not scientific. Science tells you this is a virus with 99.7% survival for this age bracket. Making my son, who is already immunocompromised, take a vaccine that is NOT FDA Fully approved and only used under EAU is also illegal, by the way. There are laws forbidding forcing vaccines or any other meds on people that are not approved. Forcing a someone to forgo an education over a vaccine is inhumane and quite Hitleresque. Do this or you don't get an education. That is wrong on every level.

Furthermore, I ask you this: If you force this and kids take it, will you agree and sign a Contract to be responsible for their health should something go wrong? Will you pay Dr. Bills? Will you pay hospitalization should they get COVID? Will you be held liable or responsible if they die from a side affect that is not yet known? Will you pay for long term care should it be necessary? If you answer no, you won't be responsible. Then you have no other answer than "No" on mandatory Vaccines.

We STAND AGAINST this AT ALL COSTS. WE will fight you if it is mandated.

I will also be forwarding our response to Joey Gilbert, Esq., so he knows that Parents are saying NO!

Signed
Mother of UNR Student.
