---

DO NOT - mandate any person be required to take an experimental vaccine that has not been approved. You have no idea what the impacts to recipients will be.

Will you stand behind this proposal should students become ill and even die as a result of this action? Are you prepared to be hooked for the potential carnage of massive adverse affects of this faux vaccine?

Your proposals are acts against the US Constitution and should not be done.  
Science is supposed to be science and not just when it is convenient.

Why would you even be a part of this when this administration is allowing thousands of wuhan positive illegal aliens into the US, with no intent to slow let alone stop this.  
Until this issue is dealt with, how can anyone with an honest face support massive vaccination.
