Subject: No to mandatory covid vaccinations
Date: Thursday, August 19, 2021 7:28:37 PM

Right now the country is in an unethical medical experiment with a vaccine !

-No liability to big pharma

-No liability to the government, due to it not being approved by the FDA (10-15 years =3 trails)

Our bodies are sovereign territory and subject to our exclusive self-determination. Any attempted violation of this trust must be construed as a breach of said basic right. We are thus holding our elected Governments accountable in this defense with an issuance of notice: a preemptive Class Action Lawsuit to be served in the event our inalienable rights to choose are forsaken.

Doctors are coming forward and sounding the alarm against covid vaccines. Experts argue that when the current evidence shows that people recovered naturally from Covid-19 are well-protected from future infection or severity of the disease, there is no point including them in the current vaccination drive.

-“The typical unprecedented vaccine takes 12 years to develop, and of all the unprecedented vaccines in development, only 2% are projected to ever make it through all Phase 2 and 3 clinical phases of testing

-The COVID-19 vaccine was developed with Operation Warp Speed in less than one year, which makes it virtually impossible to assess safety and efficacy, as the vaccine has not been adequately tested

-Five months into the vaccination campaign, statistics tell a frightening story. Research shows deaths are 15 times higher during the first 14 days after the first COVID injection among people over the age of 60, compared to those who aren't vaccinated

-Another study shows that after COVID-19 vaccines were implemented, overall death rates have increased, with the exception of a few areas. It appears countries in which COVID-19 vaccines have not raised mortality rates are also not using glyphosate

-In the next 10 to 15 years, we are likely to see spikes in prion diseases, autoimmune diseases, neurodegenerative diseases at younger ages, and blood disorders such as blood clots, hemorrhaging, stroke and heart failure”

Stephanie Seneff, Ph.D., a senior research scientist at MIT

These people receiving the vaccine do not have the safety net of a trail! Also, their primary doctors are not tracking their patients with adverse reactions. If there was an actual trial and people started presenting an adverse reaction, the trail would immediately be stopped.

NUREMBERG CODE:

10.”During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.”

The FDA violated their own rule with the emergency approval of the experimental vaccine due to the fact there was an alternative!
