Type of feedback:

Concern/Solution

If selected, would you like your idea/comment posted on the website?

>> **Yes** (Selected)

No

Does your idea require resources (time, money, employees, tools, other)?

>> **No** (Selected)

Yes

If this relates to a specific topic, please specify:

Covid-19 Vaccine

Title of idea/comment:

Covid-19 Vaccine

Description of idea/comment:

From the CDC website, COVID-19 vaccines are effective at protecting the individual from COVID-19, especially severe illness and death. COVID-19 vaccines reduce the risk of people spreading the virus that causes COVID-19. Also, US Centers for Disease Control and Prevention Director Dr. Rochelle Walensky has stated fully vaccinated people who get a Covid-19

breakthrough infection can transmit the virus. With this information, shouldn't it be up to the individual whether or not they want the vaccine? Why would there be a need to mandate the vaccine for college students or anyone for that matter? Please explain. By not getting the vaccine, a person assumes the risk that it could be fatal. However, getting the vaccine doesn't prevent a person from spreading the virus; it only protects the individual from having a serious case. I would really like to know why this vaccine is being pushed so hard to the point that employers are telling their employees to get it or lose their jobs when it is still not fully approved by the FDA. I personally know more people who have died or developed severe side effects from the vaccine than from the virus itself. And, I have personally heard the same from others. Please explain this to me.

=====END REPORT=====

Tired of too many email, you can update your form's setting to only receive a daily email.
