Subject: Emergency meeting comments- SBOH Aug. 20 agenda
Date: Monday, August 16, 2021 4:30:45 PM

Dear State Board of Health and community,

I am writing today in OPPOSITON to mandated vaccines to engage in education or for any reason.

Besides that we have a constitutional right to refuse putting chemicals in our body that we may not need or want, the majority of the students that I know that will attend UNR this fall, have already had Covid-19 and therefore do not need to put unneeded chemicals into their body to get an education. Yes, there can be variants just like there is with the flu but, there is still close to a 99.8 percent survival rate with this virus. Encourage those who want to take the Trump shot to get it, and let the rest of us manage our own bodies. "My body, my choice"! Instead, maintaining good healthy practices (not going to school when one is sick, washing hands, coughing and sneezing in arm, building up one's immune system) is truly the best medicine as virus' never go away.

Second, these experimental injections are not safe for all people. As reported in the CDC's VAERS "Vaccine Adverse Event Reporting System" there have been thousands of horrible side-effects including but not limited to: anaphylaxis, thrombosis/TTS syndrome, GBS which can become permanent, myocarditis, pericarditis, and thousands of DEATHS! As I speak, there are more deaths and life-altering side-effects we are still learning about. In addition, youger people such as the young adults attending the university tend to experience these side- effects at a higher rate. Living in a gambling state, these are odds people should have a CHOICE to make.

Finally, I am surprised that the institutions and State Board of Health would want to take on litigation from the parents of these young adults should a terrible adverse reaction or death occur due to your mandates. The pharmaceutical companies that made these shots cannot be sued, which is troubling in and of itself, but there is no protection for the colleges, or a business. Let's be the smart state in the U.S. that practices good leadership, uses common sense, and a more holistic approach seeing how we really do not know the long term effects of forcing injections on our community.

In health,

Gina G.
