

**National Data**

The 2019/20 [National Survey of Children's Health](#) identified the following:

- Over 14.1 million children, representing 19.4% of all children in the United States, have special health care needs based on the HRSA definition.
- Over 12 million children, representing 85.6% of all children and youth with special health care needs (CYSHCN) in the United States, do not receive care in a well-functioning system.

**State Data**

As of 2019/20, the National Survey of Children's Health estimated 106,445 children live with special health care needs in Nevada, representing 15.4% of all children statewide.
