

# Southern Region Behavioral Health Policy Board

Behavioral Health Planning and Advisory Council –  
Legislative Sub-Committee

April 2024

# Overview of Board Role/Function/Duties

- Advise the State on Needs, Issues, Gaps, and Priorities
- Note Issues with Laws and Regulations → Recommendations
- Information, Resources, and Service Delivery
- Coordination and Improvements in Behavioral Health
- Track-Compile Data and Outcomes / Reporting and Repository
- Reporting to the State and Commission
- Bill Draft Request and Legislation

# Southern Region History and Review (2022)

## *Brief History of Southern Region-Coordination-Board*

- Behavioral Health Workforce
- Knowledge of Statewide Community Programs and Resources
- Access to Care
- Transportation

# Southern Region Overview (2023-2024)

- Local and Regional Strengths and Highlights
- Needs, Gaps, and Barriers
- Additional Opportunities
- Emerging Legislative Options

# Significant Regional Strengths and Highlights

- Creative, Hard Working, and Resourceful Individuals
- Community Coalitions and Agencies Serving the Region
- Deflection & Diversion – MOUD-CCC Statewide Work & Partners
- Specialty Courts, Judicial, Legal, and Probation in the Region
- Multi-Disciplinary Team(s) and Behavioral Health Groups/Committees
- Robust training, collaboration, communication, provision of services.
- Education, schools, family support, senior-youth programs & services

# Behavioral Health Needs – Gaps and Barriers

- Scarcity of behavioral health clinical services and providers
- Difficulty in recruiting and retaining workforce in rural areas
- Lack of BH supportive housing/residential services/treatment
- Long waits for evaluations and intensive residential care access
- Limited community health workers, peer specialists, support staff

# Transportation/ Transport

- Residents travel long distances for work or more specialized care, if they have the resources/vehicle/support.
- Taking off for work and school, if possible, creates issues.
- Agency (law enforcement/EMS) transport residents to access general medical care, specialized services, and mental health crisis or residential/inpatient treatment.
- Traveling long distances (out-of-county/state) requires them to be out-of-service or unavailable, understaffed, paid overtime.
- Two of four counties, smaller communities, and tribes have no hospital, emergency, or shopping/groceries nearby (50 plus miles)

# Additional Opportunities

- Scarcity of dental and primary care and mobile clinics and hospitals
- Community-and-home based services for all ages.
- Local supports for guardianship process and foster care
- Increased parental engagement and family support
- Increased need for licensed childcare and daycare centers.
- Increased education and training around stigma, harm reduction, crisis intervention (CIT), emergency services, and other areas.

# Behavioral Health Issues in Rural Areas (Board)

- Workforce and economic development: CHWs, peers, clinical, certifications, training and continuing education, licensure
- Training and Education
- Data Assessment, collection, and reporting: issues, availability, barriers, and complexity.

# Behavioral Health Emerging Board Priorities

- Transportation and Transport – medical, behavioral, and crisis resources and funding
- Crisis stabilization and response: hospitals, facilities and community
- Access to services and insurance (barriers)

# Transportation-Transport (medical, BH, crisis)

- Shortage and Maintenance of equipment and vehicles.
- Staffing concerns and volunteer workforce decreasing, large geographic regions & interstate barriers with transport and billing.
- Priority levels of care, transport to facilities, access to treatment outside region (long wait times, complexity of needs, evaluation and admission criteria).
- Medical detox, training, safety, and transportation issues.

# Transportation-Transport Continued

- “Medical necessity” and physical-medical-BH needs and other transport and billing/payment variables – different protocols for each county, reimbursement and care levels, fee for service, restrictions to service and transport. Factor of where patient originates from.
- Pay sources and funding: emergency-non-emergency.
- Issue of mental health crisis holds (3-day) – issue of BH care, space, staffing, and support while awaiting decision for transport drives payment for sheriff or ambulance transport.

# Crisis Stabilization and Response

- Hospitals, Facilities, Community Aspects / Transportation and transport overlap
- Addressing reimbursement for services / Complexity of care and high-risk factors
- Improve capacity of local hospitals and Emergency Management Infrastructure
- Intake and assessment - earlier intervention - levels of care determined.
- Discharge and transition planning and services – movement between levels and transition
- Stabilization and Treatment: establishing more outpatient care and community-based (local) options

# Crisis Stabilization and Response Continued

- Scarcity of workforce, hospitals: telehealth, limited onsite services, and regionalization
- Partnerships and creative collaboration are essential: local, regional resources & agencies.
- Local options - community-based options and short-term stabilization including peer respite options.
- Communication - utilization of local resources - meeting individuals where they are
- High System Utilizers/Patients: homelessness, difficulty with data and reporting – transport and relocation

# Barriers to Access / Services and Insurance

- Barriers to Services: increasing regionalization, less local options, transportation and transport, geographic distances, state and local boundaries, payment and billing.
- Barriers to Insurance: providers list - any willing provider, paneling of providers as an access issue, inaccuracy of information, not accepting patients, contributes to scarcity of providers.
- Licensed Clinician Shortage - training and oversight (telehealth/in-person agency - differential/reimbursement).
- Telehealth (virtual): limited or short-term solution vs. value of in-person care. Virtual not always conducive for crisis or complex cases.
