

Resources for Survivors of Sexual Assault

Nevada law¹ requires hospitals and independent centers for emergency care to provide survivors of sexual assault or attempted sexual assault with the following:

- Information about emergency contraception and prophylactic antibiotics, including possible side-effects and the location of facilities or pharmacies where those medications are available;
- Contact information for law enforcement agencies in Nevada;
- Other pertinent services including counseling, a list of clinics and other facilities that specialize in serving victims of sexual assault; and
- A list of locations that provide testing for sexually transmitted diseases.

The Nevada Sexual Assault Survivors' Bill of Rights² was created in 2019 to ensure that every survivor of sexual assault is supported and understands his or her rights. Visit the website of the Office of the Attorney General (ag.nv.gov) to view the Bill of Rights document and information about accessing a victim advocate.

Emergency Contraception (EC)

Ella – oral emergency contraception (available by prescription only). <https://ellanow.com/>

- Possible side-effects include headache, abnormal period, dizziness, breast tenderness, vomiting, nausea, cramps, tiredness. Nausea is the most common side-effect. **Call your doctor** if you throw up within 24 hours.

Paragard IUD – intrauterine emergency contraception if inserted within 5 days of unprotected sex.

<https://www.paragard.com/>

- Possible side-effects include heavier/longer periods, spotting between periods, increased cramping during periods. NOTE: This is considered a form of birth control but can also be used as emergency contraception if implanted within 5 days of unprotected sex.

Plan B – over the counter/non-prescription oral emergency contraception. <https://www.planbonestep.com/>

- Possible side-effects include headache, abnormal period, dizziness, breast tenderness, vomiting, nausea, cramps, tiredness. Nausea is the most common side-effect. **Call your doctor** if you throw up within 24 hours.

Prophylactic Antiretrovirals and Antibiotics

Azithromycin (Zithromax, or Z-Pak) – to treat Chlamydia and part of the treatment for Gonorrhea.

- Possible side-effects: upset stomach, diarrhea, vomiting, stomach pain, mild skin rash. **Go to the emergency room or call 9-1-1** if you experience severe skin rash, hives or itching; difficulty breathing or swallowing; swelling of the face, hands, feet, ankles or lower legs; hoarseness; yellowing of the skin or eyes; or rapid pounding or irregular heartbeat. **Do not drink alcohol during treatment and for 24 hours after** completing treatment. **Do not have sexual contact with another person** for 7 days, with or without a condom.

Bicillin L-A – injection medication used to treat Syphilis.

- Possible side-effects: fever, chills, body aches, nausea, vomiting, swelling of the lymph nodes, mild skin rash or flushing sensations. These symptoms usually begin within 4 hours after the injection and may last up to 8 hours;

¹ [Nevada Revised Statutes Chapter 449.1885](#)

² http://ag.nv.gov/uploadedFiles/agnv.gov/Content/Issues/2020-02-21_SA%20BILL%20OF%20RIGHTS.pdf

symptoms usually disappear within 24 hours. **Do not drink alcohol during treatment and for 7 days after treatment completion.**

Ceftriaxone (brand name: Rocephin) – injection antibiotic used to treat many kinds of bacterial infections, including Gonorrhea.

- Possible side-effects: fever, chills, body aches, nausea, vomiting, swelling of the lymph nodes, mild skin rash, flushing sensations. **Do not have sexual contact with another person for 7 days with or without a condom after last injection. Do not drink alcohol during treatment and for 24 hours after completing treatment.**

Dolutegravir (brand name: Tivicay) – oral medication used in conjunction with other HIV medications (e.g., Truvada) to help control infection by decreasing the amount of the virus in the body so the immune system can work better. Lowers your chance of getting HIV complications (such as new infections, cancer) and improves quality of life.

- Possible side-effects: headache and trouble sleeping.

Doxycycline – oral medication used to treat Syphilis and Chlamydia.

- Possible side-effects: Upset stomach, diarrhea, vomiting, stomach pain, mild skin rash (tell your doctor if any of these symptoms are severe or do not go away). Makes your skin sensitive to the sun; avoid exposure to the sun if possible, cover your skin with a hat, long-sleeved shirt, etc. **Do not drink alcohol during treatment and for 7 days after completion.** Doxycycline works best if you avoid taking antacids, such as Tums or Rolaids, as well as bismuth, calcium, iron supplements and multivitamins. **Do not have sexual contact with another person with or without a condom during treatment. Do not take if you are pregnant.**

Metronidazole (“Flagyl”) – oral antibiotic used to treat a variety of infections, including Bacterial Vaginosis or Trichomoniasis)

- Possible side-effects: upset stomach, diarrhea, vomiting, stomach pain, mild skin rash, possible metallic taste in the mouth and dark or red/brown urine. **Do not have sexual contact with another person with or without a condom for 7 days after last injection. Do not drink alcohol for 7 days before or after taking this medication.**

Post-Exposure Prophylaxis (PEP) for HIV – short course of medication that must be taken within 72 hours after suspected HIV exposure.

- Possible side-effects: nausea. Side-effects can be treated and aren’t life-threatening.

Truvada – oral medication used in conjunction with other HIV medications (e.g., Tivicay) to help control infection by decreasing the amount of the virus in the body so the immune system can work better.

- Possible side-effects: Diarrhea, headache, dizziness, trouble sleeping, back pain, or change in the color of skin on the palms or soles of the feet.
