BEHAVIORAL HEALTH

Nevada Action Network Information Guide

Thank you all for choosing to participate in our statewide initiative to deliver oral health care to the children of NV in their homes! LIBERTY has started a massive outreach campaign leading member to NevadaOralHealth.org. At this website members will opt into the program and be able to view informational videos– how to place fluoride on a child at home.

Nest Steps

1. You should have the Denteractive software downloaded, tested, and ready to go.
2. LIBERTY will provide you a list of members who have opted into the program. This list will be titled LIBERTY TDOP Roster and provided to you in your provider portal.
 - a. You will receive a list periodically as members sign up. Please check the portal weekly.
 - b. If you are unable to connect with the member after 3 attempts, please route these members back to LIBERTY via NVACTIONNetwork@libertydentalplan.com
3. Once you call to schedule the member – if they have chosen, you will mail them a fluoride varnish kit. If you are mailing varnish, make sure you schedule their teledental visit 3-5 days after you mail the kit. You may use any type of fluoride varnish. We recommend Embrace Varnish from Pulpdent for easy of mailing. This package fits in a standard envelope with standard postage.

4. Best practices show that calling and texting member reminders for their appointments is key to success for visits.
5. During the visit make sure you do a caries risk assessment with additional questions and give oral hygiene instructions. You must submit a Teledental Caries Risk Assessment on our provider portal. The claim form must be submitted under Place of Service 49.

These are the instructions from our information video for fluoride varnish.

1. Open packaging and remove brush.
2. With the brush mix fluoride for 10 to 15 seconds till fluoride reaches an even consistency.
3. Use a piece of gauze or tissue to dry your child's teeth.
4. Using brush apply a thin coat of fluoride evenly to top and side of your child's teeth.
5. Ask your child to close their mouths to allow for fluoride to dry. The fluoride will take about 10 seconds to dry.
6. If the fluoride bothers your child for any reason it can be removed using a toothbrush
7. Your child will be able to eat and drink right away after applying fluoride
8. If any extra fluoride falls off that is okay
9. The kit can be thrown away in a normal trash can.

If you have any questions, please reach out to NVActionNetwork@libertydentalplan.com

If you have any questions with the Denteractive Software please contact support@denteractive.com
