### Technical Notes:

- Rate is the crude rate based on the incidence of verified TB cases per 100,000 population for that subgroup’s population. Population data are made available from the Nevada State Demographer vintage 2020 population data.
- Relative Standard Error (RSE): The publication contains counts under 12, please use caution when interpreting the data as the RSE is greater than 30.
- N/A (Not Applicable) indicates cases where the data may not meet the criteria for reliability, data quality, or confidentiality due to small counts or inability to calculate rates based on an equivalent population.
- % (Percentage) of the specific demographic out of the total number of verified counted TB cases (N).
