MEMORANDUM

To: Beatty File
From: John Follette, Radiation Control Specialist
Subject: Beatty Inspection Summary 4th Quarter 2014

The 4th quarter inspection for 2014 of the Beatty Low-Level Waste landfill (closed) was conducted on April 30, 2014. The radiological survey was performed by driving the NUCSAFE backpack in a grid across the cap to detect radiological anomalies. None were detected. Dose rate readings on the cap remain about twice background as read on the access road.

USGS continues to maintain soil monitoring tubes that are used for the spring environmental sampling activities.

The erosion, settling, and subsidence of the cap are in the same condition as described in the previous inspection.

Jon Bakkedahl is preparing a request for a bid to repair the cap before the fiscal year end.
