Date: July 2, 2021  
Topic: COVID-19 Sequencing Update - Clinical Laboratories to Submit all Positive SARS-CoV-2 Samples to the Nevada State Public Health Laboratory  
Contact: Melissa Peek-Bullock, State Epidemiologist, Office of Public Health Investigations and Epidemiology  
To: Laboratories, Medical Facilities and Hospitals, State and Local Health Authorities

Due to the rapid and continuous emergence of highly infective new variants of the COVID-19, clinical laboratories that identify SARS-CoV-2 via a laboratory-based molecular testing mechanism, must submit all positive samples with a cycle threshold (Ct) < 30 to the Nevada State Public Health Laboratory (NSPHL) for genomic sequencing. Laboratory-based molecular testing mechanisms for SARS-CoV-2 include all nucleic acid amplification tests (NAATS):

- Reverse transcription polymerase chain reaction (RT-PCR)
- Isothermal amplification including:
  - Nicking endonuclease amplification reaction (NEAR)
  - Transcription mediated amplification (TMA)
  - Loop-mediated isothermal amplification (LAMP)
  - Helicase-dependent amplification (HDA)
  - Clustered regularly interspaced short palindromic repeats (CRISPR)
  - Strand displacement amplification (SDA)

Background:

Viruses are constantly changing, including SARS-CoV-2, the virus that causes COVID-19. Genomic sequencing of all positive cases identified in Nevada through molecular-based tests will provide more complete data on the variants circulating within the state. Nevada Administrative Code (NAC) 441A.235 requires clinical/medical laboratories to submit microbiological cultures, subcultures, or other specimens or clinical material to the State Public Health Laboratory or other laboratory designated by the health authority for confirmation or further testing if requested by the health authority.

Specimen Submission:

| **Preferred Specimen** | Original specimen in viral transport medium or saline. Specimen should be previously tested positive with a positive Ct value of 30 or lower.  
Extracted RNA is also acceptable if original specimen is no longer available |
| **Specimen Container** | Screw-cap viral transport tube; extracted RNA can also be submitted in any vessel type                                               |
| **Specimen Identification** | Label tube with patient’s first and last name, DOB and date/time of collection.                                                     |
| **Special Instructions** | Include the date the sample was collected.  
Please denote Ct values on requisition form if already known.                                           |
| **Shipping Requirements** | Store and transport original specimens refrigerated at 2-8° C. Frozen is also acceptable.  
Specimens can be transported frozen on cold packs/ice.                                                                 |
|                     | Shipping options include:                                                                                                           |
|                     | 1. Federal Express: Please use account number 1046-0029-8                                                                           |
|                     | 2. The Nevada State Public Health Laboratory Courier Service (call 775-688-1335 for details)                                           |
|                     | 3. Specimens can be brought to the NSPHL between 0800 and 1700 hrs., M-F                                                           |
| **Specimens should be shipped to:** | Nevada State Public Health Laboratory  
1660 N. Virginia St.  
Reno, NV  89557, Mail Stop 385  
(775) 688-1335 |
