MEMORANDUM

To: Beatty File

From: John Follette, Radiation Control Specialist

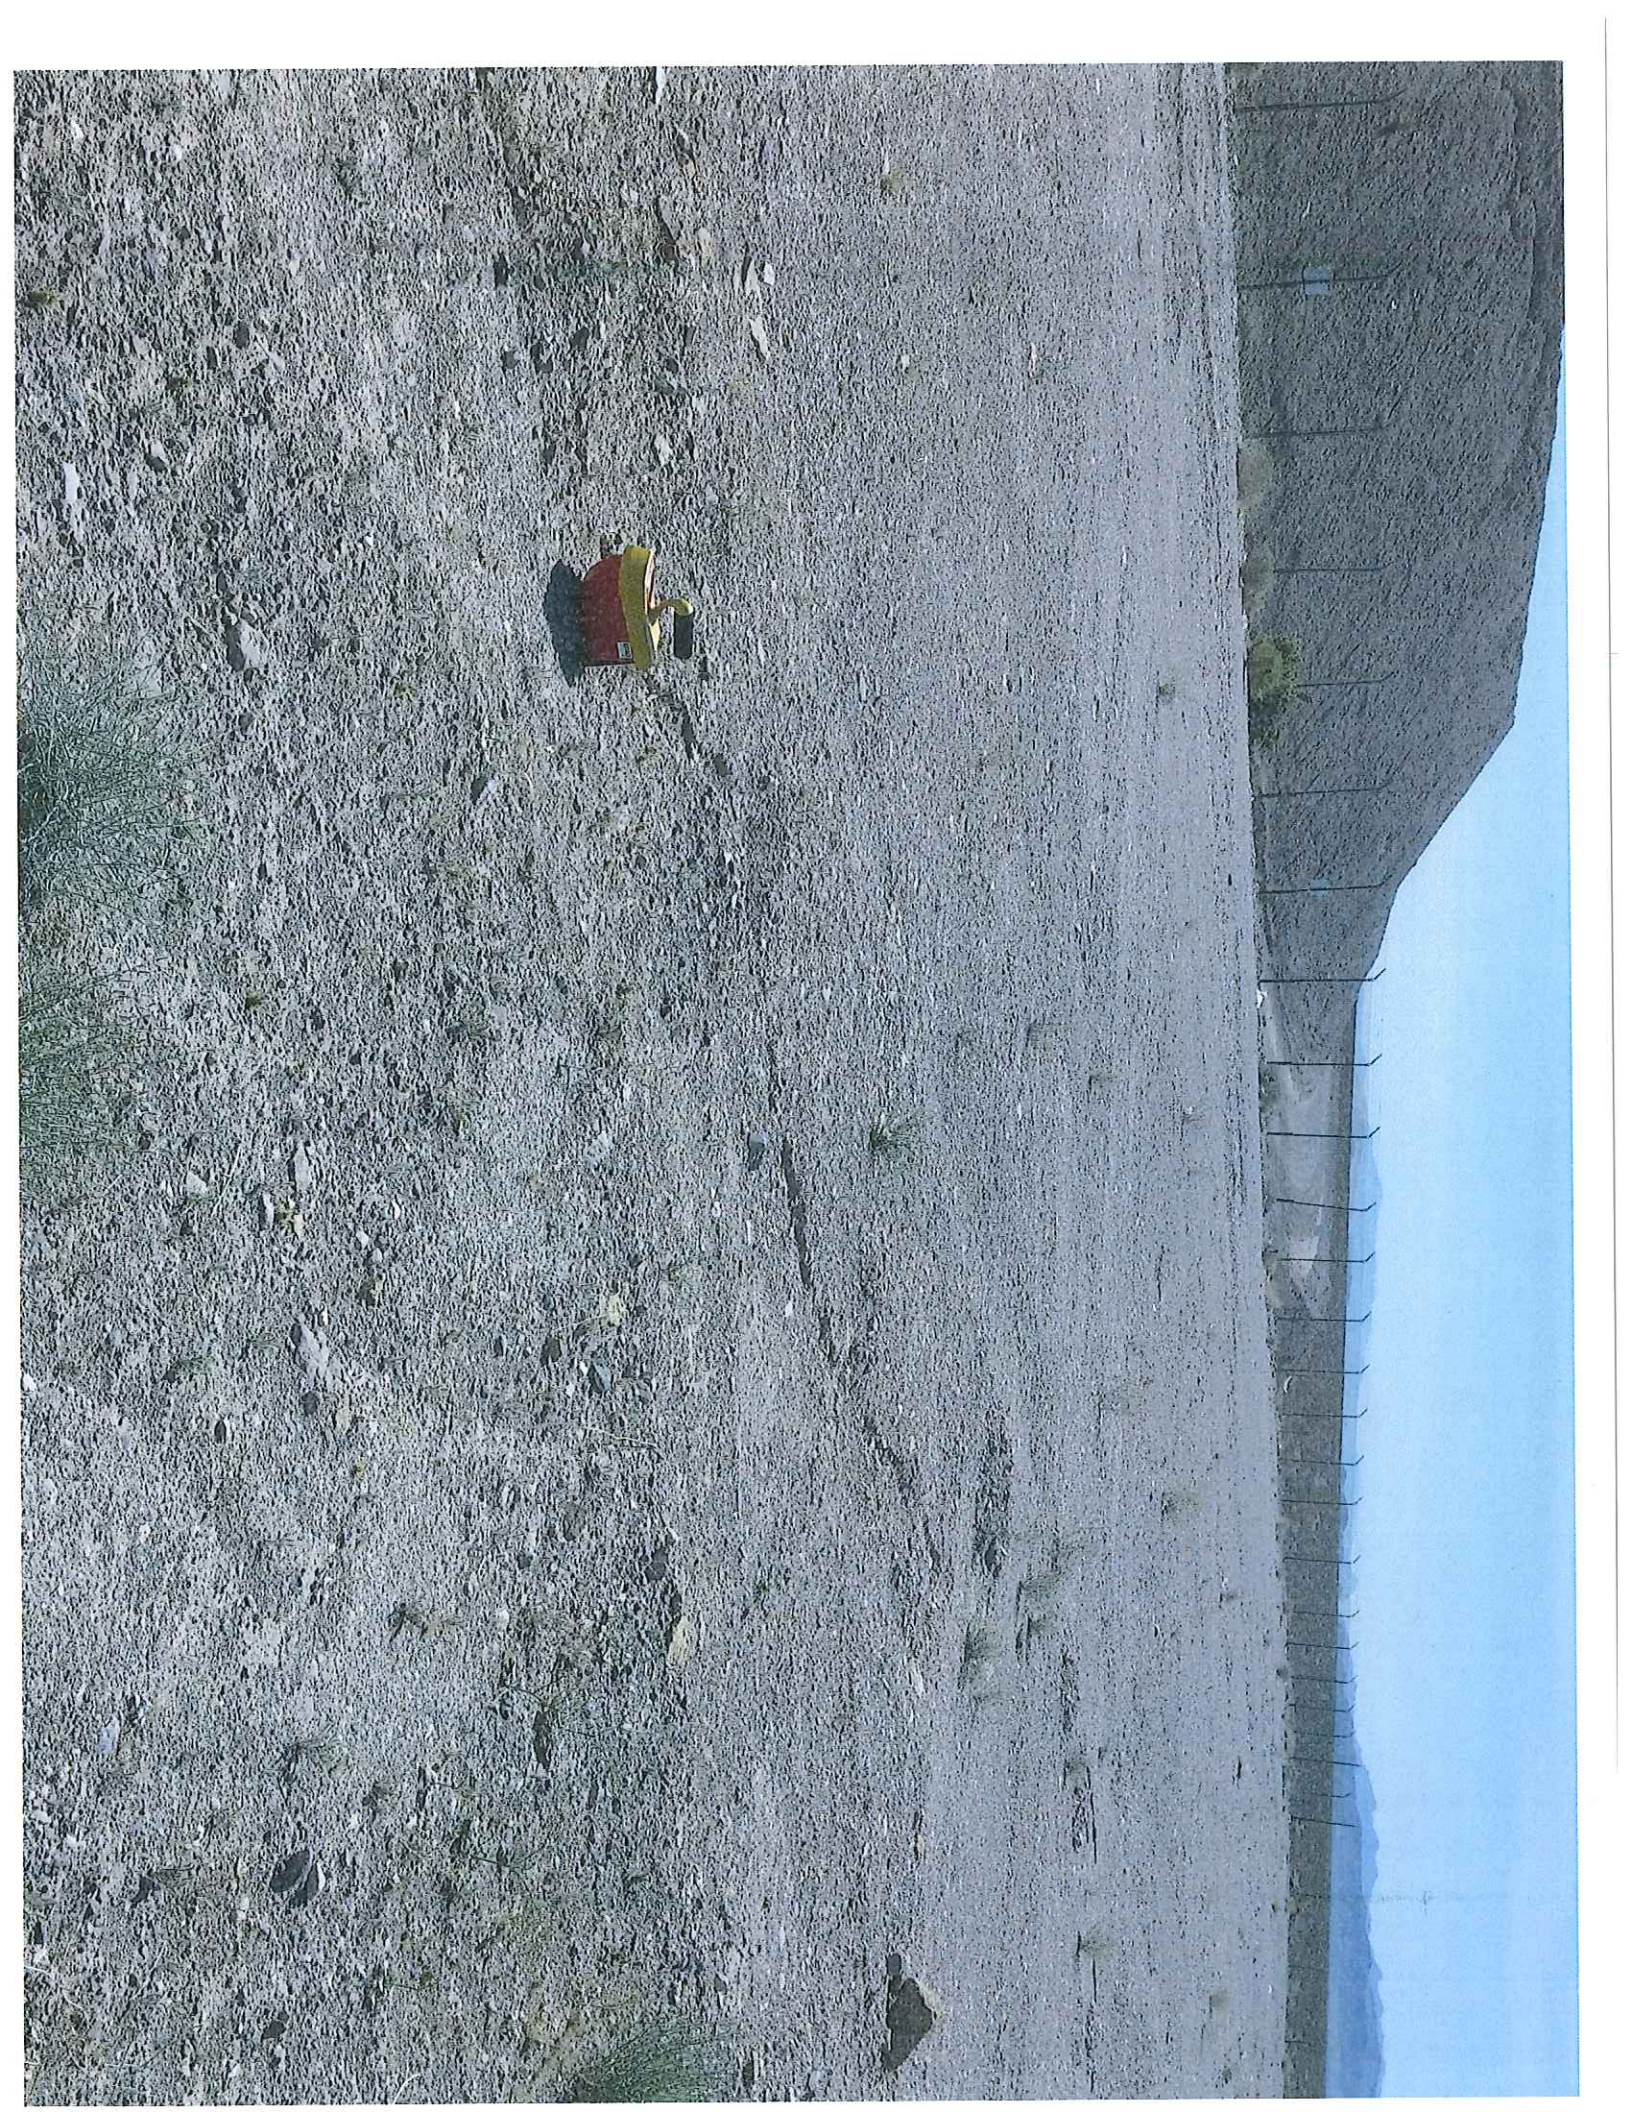

Subject: Beatty Inspection Summary 4th Quarter Fiscal Year 2015

The 4th quarter inspection for fiscal year 2015 of the Beatty Low-Level Waste landfill (closed) was conducted on April 29, 2015. The radiological survey was performed by driving the BNC Model RD-120 GN (SN 120008) backpack in a grid across the cap to detect radiological anomalies. None were detected. Dose rate readings on the cap remain about twice background as read on the access road.

Due to recent rains, minor erosion was identified on the North side of the waste site. The erosion was an L-shaped water channel about 10 feet long on each side and was a couple of inches deep. See attached pictures and map.

USGS continues to maintain soil monitoring tubes that are used for the spring environmental sampling activities. None of the USGS soil monitoring tubes were removed or destroyed during the cap repair.
